DATE: May 26, 1999

LOG ENTRY SOURCE: Mohammed Khan

ENTRY DATE: June 4, 1999

COMMISSION ATTENDEES: Mohammed Khan (ESEE)

NON-COMMISSION ATTENDEES: See attached attendance record (3 pages)

MEETING SUMMARY:

The purpose of the meeting was to discuss revision proposals for the ANSI Z21/CSA standards for vented gas-fired warm air heaters. This summary is limited to the discussion on the CPSC staff's revision proposal.

On May 4, 1999, the staff submitted its proposal (see attached letter) to effect performance requirements for flexible vent pipe connections. This proposal was placed on the Z21 Subcommittee meeting agenda as "Topic Item No. 21." The staff restated and clarified to all non-commission attendees the background and scope of the proposal. The staff explained the reasons for its proposal and discussed the design and failure mechanism of the product sited in the proposal letter. The staff also explained its laboratory test methods and test results that were used to establish the proposed performance specifications.

The staff responded to all questions and criticism posed by the non-commission attendees. The voting members of the Z21 Subcommittee recognized the significance of the staff's proposal and voted to forward the proposal to the subcommittee's Technical Working Group (TWG). The TWG was tasked to study the issue and determine if the staff's performance specifications should be refined.
