

Manufacturer: Berry Plastics Corporation  
Model: 211RCR  
ASTM Type: VIJK

Description:

This package consists of a one-piece plastic aerosol overcap (Figure 1), which fits over the rim on a straight walled aerosol container.

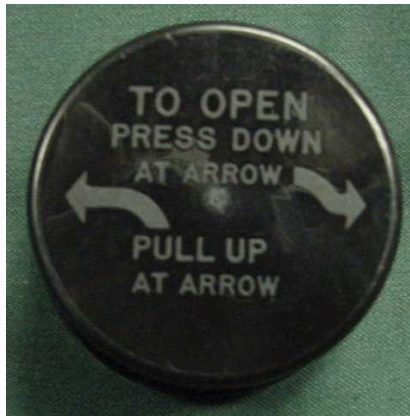

Figure 1

Inside the aerosol overcap there are four rims 90° apart (see arrows in Figure 2) and a triangle under three of the four rims (see one triangle with rim in Figure 3). The aerosol overcap is removed by pressing down at one location, which starts a seesaw-like action, followed by pulling up at another location 180° away and then removing the overcap.
