Meeting Log

Meeting: ASTM F15.22 – Discussion of Proposed Revisions to F963 on Requirements for Battery Operated Toys and Acoustic Requirements

Date: February, 10, 1999

Place: Marriott Marquis, New York, NY

Submitted By: Marilyn L. Wind, Ph.D.

A presentation was made by both the Chairman of the Battery Operated Toys Working Group and the Acoustics Working Group. There was a discussion of the changes proposed to the Battery Operated Toys portion of the voluntary standard. This was to be sent out for ballot vote in the spring.

The Chairman of the Acoustics Working group talked about the testing that was going on to try to validate a test methodology to test toys to an acoustic standard. Three laboratories are participating and they are having difficulty defining the protocol well enough to be able to get reproducible results across laboratories. Work is ongoing in this area.
