General Water Safety Tips

• Maintain constant supervision. Watch children around any water environment (pool, stream, lake, tub, hot tub, toilet, bucket of water), no matter what skills your child has acquired and no matter how shallow the water.

• Don’t rely on substitutes. The use of bath seats, flotation devices and inflatable toys cannot replace parental/caregiver supervision. Such devices could suddenly shift position, lose air or slip out from underneath a child, creating a drowning hazard.

• Parents/caregivers should take an infant and child CPR (cardiopulmonary resuscitation) course. Knowing these skills is important around the water and will expand your capabilities to provide care for your child… it can be a lifesaver when seconds count.

Message for the Parents and Caregivers

While many of you are aware of the dangers a backyard pool poses to young children, not everyone knows about other drowning hazards around the home. The U.S. Consumer Product Safety Commission offers the information in this brochure to help prevent a child from drowning.

To learn more about Baby Safety, visit the following safety sources online:
www.jpma.org
www.cpsc.gov

When you buy a crib or other new nursery products, check for the safety certification seal from the Juvenile Products Manufacturers Association (JPMA). This ensures that the product meets national safety standards. See web address above.

If you borrow or use older nursery products or toys, make sure they have not been recalled for safety hazards. Call the U.S. Consumer Product Safety Commission’s toll-free hotline at 1-800-638-2772 or visit their web site (see above).
Bath Safety

- Before you begin bathing your child, have all supplies within arm’s reach and in front of you.
- DO NOT leave a baby unattended for even a second. If you need to leave the bathroom, take the baby with you. Do not rely on older children to watch the baby for you.
- Baby bath seats and baby bathtubs are not substitutes for supervision. They are only bathing aids, not safety devices. All warnings and manufacturer’s instructions should be strictly followed when using a baby bath seat.
- If the bath seat moves or tips while your child is in it, stop using it.
- Never leave a child unattended while filling the bathtub and always empty bath water immediately after use. Babies can drown in as little as one inch of water.
- Test water temperature with your elbow or a thermometer. Temperature should be between 90 and 100 degrees Fahrenheit.
- Consider placing a latch on the bathroom door to keep children out of the bathroom when unsupervised.
- Keep the toilet lid down to prevent access to the water, and consider using a toilet seat lock to stop children from opening the lid.

Safety Around the House

Never leave a container such as a bucket with even a small amount of liquid unattended. When finished using a container, empty it immediately. Do not leave empty containers outside in the yard or around the house where they may accumulate water and attract young children.

Other items that contain liquids that may be hazardous are sinks, coolers, fish tanks, and landscape ponds.

For Water Safety at Home

The items below are samples of safety products to consider for your home.

- Toilet seat lock
- Bath thermometer
- Cabinet locks
- Safety gates
- Door latch (not shown)
