Re: CPSC RP970157
Kadee Products Limited/Vitantonio Products
Kadee/Vitantonio Waffle Makers

Dear Zulma:

Enclosed is a copy of the Process Control Plan ("PCP") for the production of the Vitantonio Premier Waffle Makers.

As discussed earlier today, we modified the visual checks (Part/Process Numbers 30A and 40A in the PCP) to state "CLIPS COVER CHANNELS COMPLETELY."

We appreciate your assistance in arranging for the telephone conference call yesterday, providing us today with the serial numbers and the CPSC report, and arranging for Mr. Blythin to select the samples early tomorrow morning and to seal them for shipping. We will then arrange to have the package shipped aboard a Continental Airline flight that arrives in Washington, D.C. around 1:00 p.m., and to bring the package to your office immediately.

As you indicated, Aaron Banerjee will be available tomorrow to inspect the recently-produced samples, i.e., samples produced since Vitantonio changed its production process for the Vitantonio Premier Waffle Makers.

Subject: Full Report of Substantial Product Hazard

1. **Person informing the Commission:** George J. Bielert, 6225 Cochran Road, Solon, Ohio 44139 (216-519-1400 ext. 105).
2. **Manufacturer:** Kadee Products Limited, 6225 Cochran Road, Solon, Ohio 44139.
3. **An identification and description of product:** Serial numbers 17002057-17002908 of Kadee Products Model 1950 Waffler (852 items). Samples have been submitted. Labels and stampings pursuant to UL guidelines are on the bottom of the appliance. The retail cost of the unit is normally about \$ 55.00.
4. **The nature of the possible defect:** It was reported that serial numbers 17002649 and 17002694 exhibited a condition in which the metal casings became electrically charged with line voltage.
5. **The risk to injury:** No injuries have been reported. Shock from line voltage (115 VAC) is a risk.
6. **Date of initial customer complaint and chronology of analysis.** On May 8, 1997 Mr. Leeton Lee of Walt Disney (California) and Mr. Al Kaufman of Walt Disney (Florida) reported that two "Mickey Mouse Wafflers" had been identified as defective. Through their independent testing, the abraded insulation was discovered. Kadee Products inspected all finished goods in inventory and located 725 of the suspect lot. They were inspected for the defect, none that were inspected exhibited abraded insulation. 942 units of previous and following lots were also inspected; none that were inspected exhibited abraded insulation.
7. **Number of products/units.** Two units found to be defective of the lot consisting of 852.

KADEE

280

8. **Date of Manufacture.** First quarter of 1997.
9. **Product Distribution.** 2 defective units returned by Walt Disney Company; 725 units in factory warehouse at time of notification; 107 of suspect lot returned (unsold) by Walt Disney Company; 18 units sold at Disney Stores in Florida to unknown customers.
10. **Process changes.** Control plans have been modified to include specific "downstream" check for mis-routed wires. Kadee Products facilities align with UL and AIAG QS9000 process standards for Control Plan development and implementation.
11. **Communications.** See attached press release.
12. **Refund, replacement, repair actions.** Kadee Products will refund or replace any customer return in response to the press release and/or detection of product failure.
13. **Market Plan.** For the lot in question, product was sold directly to Walt Disney Company for customer retail sales by Disney. In general, product is sold worldwide through representatives and directly by Kadee Products to retailers and consumers.

Please contact me for any information that I may provide in addition to that which has been cited. I remain,

Sincerely,

KADEE PRODUCTS, LTD.

George J. Bielert
Vice President

NEWS RELEASE FROM KADEE PRODUCTS

Kadee Products Ltd., 6225 Cochran Road, Solon, Ohio 44139 - 216-519-1400

FOR IMMEDIATE RELEASE
July 08, 1997

CONTACT: G. BIELERT
216-519-1400 EX 105

Kadee Products announces the recall to inspect Model 1950 Mickey Mouse Wafflers.

Solon, OH - Kadee Products is recalling the remaining 18 units within serial number lot 17002057 through 17002908 of its Model 1950 Mickey Mouse Wafflers. This lot was found to have two units that exhibited a mis-routed wire, which could present a shock risk.

Though there were no injuries resulting from the discovery of the defective units, Kadee Products wishes to insure that its customers are not exposed to any risk. All but 18 of the units have been returned at the issue of this release.

The units would have been purchased at Disney Stores in Florida during a time period from March 1997 to July 1997.

Kadee Products will refund or replace the suspect units at the customer's request without charge for shipping.

Subject: Initial report of Substantial Product Hazard

1. **An identification and description of product:** Serial numbers 27002057-27002908 of Kadee Products Model 1950 Waffler (852 items). All but 125 items have been located.
2. **Manufacturer:** Kadee Products Limited, 6225 Cochran Road, Solon, Ohio 44139.
3. **The nature of the possible defect:** It was reported that serial numbers 27002649 and 27002694 exhibited a condition in which the bottom metal casings became electrically charged with line voltage.
4. **The risk to injury:** No injuries have been reported. Shock from line voltage (115 VAC) is a risk.
5. **Person informing the Commission:** George J. Bielert, 6225 Cochran Road, Solon, Ohio 44139 (216-519-1400 ext. 105)
6. **Section 1115.13d information available:**
 - a. It was reported that a misrouted wire exhibited abrasion of the insulation resulting in contact of the conductor and the metal casing.
 - b. On May 8, 1997 Mr. Lenton Lee of Walt Disney (California) and Mr. Al Kaufman of Walt Disney (Florida) reported that two "Mickey Mouse Wafflers" had been identified as defective. Through their independent testing, the abraded insulation was discovered. Kadee Products inspected all finished goods in inventory and located 725 of the suspect lot. They were inspected for the defect, none that were inspected exhibited abraded insulation. 942 units of previous and following lots were also inspected; none that were inspected exhibited abraded insulation.
 - c. The date of manufacture of the lot was April 3, 1997; the total lot size was 852.
 - d. Notifications to the retailers in possession of the 125 units will be distributed requesting that all units which are serial numbered within the suspect lot should be returned for inspection. The return will be at Kadee Products' cost and full refund or replacement will be made at the customers' discretion.

Kadee Products Limited

I, Henry C. Kassigkeit hereby certify that I am Chief Executive Officer of the above-named company and that as such I am authorized to sign documents and to certify on behalf of said company the accuracy and completeness of information in such documents.

Pursuant to the power vested in me, I hereby delegate all or, to the extent indicated below, a portion of that authority to the person listed below.

This delegation is effective until revoked in writing. Authority delegated to:

George J. Bielert
33667 Lisa Lane, Solon, Ohio 44139
Vice President

Extent of authority: Reporting requirements pursuant to Part 1115 of 16 CFR.

Signed:

Henry C. Kassigkeit
6225 Cochran Road, Solon, Ohio 44139
President and CEO

Author: Zulma Soto at CPSC-HQ2
Date: 5/1/98 2:10 PM
Priority: Urgent
Receipt Requested
TO: Edward Blythin at CPSC-HQ1
CC: Carlos L. Perez, Deborah J. Lewis
Subject: Kadee Products - On-site visit on May 4, 1998
Ed:

A. Sample Collection:

1. Determine how many units of each model waffle irons are in inventory. Let Compliance know what you find out [when you return to your home/office].
2. If they insist on charging us for the samples, determine how much they will charge us. Let Compliance know what you find out [when you return to your home/office].
3. Do not sample any units unless they are FREE.

Depending on what you find out concerning inventory and costs, Compliance will then decide whether CPSC will pay and how many units to sample.

B. Hand delivering the letter

If Mr. Bielert or the CEO are not in, or not expected to return while you are on-site, leave a copy of the letter with one of the other two staff persons we talked about. As we discussed, neither of these two other people will be authorized to provide you with information, so you may need to return when Mr. Bielert is in. Leave a message for Mr. Bielert to call you as soon as he returns to the office.

KADEE EIR 5/4/98
EB
EXHIBIT #1

SUMMARY OF FINDINGS

On 5/4/98 I inspected Kadee Products Limited (hereinafter Kadee) a manufacturer of waffle makers, pizzelle makers, griddles, krumkake makers, sandwich makers and tortilla makers under the Vitantonio brand name. The purpose for the inspection was to deliver a letter from the Office Of Compliance. The letter notifies Kadee that the Compliance Staff has made a preliminary determination that Vitantonio waffle makers present a substantial product hazard. The letter asks that Kadee stop production of waffle irons and recall or correct products in the chain of distribution.

This inspection was unannounced and upon my arrival at Kadee I asked to see Mr. George Bielert, Vice President, Kadee. Mr. Bielert greeted me in the reception area and I asked him if we could go to his office. In his office, I issued him a Notice of Inspection and offered to show my credentials, but Mr. Bielert acknowledged that he knew me. I then gave him the letter from the Office of Compliance and asked that he read the letter. After he had read the letter, I went over it with him. I pointed out the Commission had made a preliminary determination that Vitantonio waffle makers presented a substantial product hazard. Furthermore, the Commission was requesting that Kadee stop production of waffle makers and recall products in the chain of distribution. Finally, I pointed out that the Commission requests a response in three working days.

I then told Mr. Bielert that I would answer any questions that I could and I would give him the name of the Commission attorney handling the case for questions I couldn't answer.

Mr. Bielert asked what models of waffle makers were the subject of the letter. I told him that I had asked that question of Washington personnel and the answer was that the letter referred to all waffle makers. Mr. Bielert said that he thought the Commission's investigation involved the Premier line of waffle makers because the other models of waffle makers were wired differently than the Premier line. I told him that he could supply Washington with whatever information he had available to show that the various models are wired differently than the Premier line and that they don't present a hazard.

Mr. Bielert then asked why, if his waffle makers are so dangerous, it took the Commission several months to arrive at this conclusion. I told him he would have to ask someone else that question because I was not familiar with the process leading to a preliminary determination of a substantial product hazard. Mr. Bielert asked who he could talk to about the letter. I gave

him the pager number for Deborah Lewis and I also gave him Zulma Soto's number. Mr. Bielert didn't have any other questions.

I then told Mr. Bielert the Commission wanted to collect some samples and asked if he wanted to be paid for them. He said he did want to be paid. I told him that I wanted to isolate 12 units of each model of waffle maker that Kadee manufactured. He told me that I would have to go to the Kadee facility at 160 Northfield Road, Bedford, OH. Kadee has moved the Vitantonio operation to this address. He said they didn't have enough room at the Cochran Road facility.

Mr. Bielert phoned Mr. Hank Oberle, President, Kadee and told him about the letter and the samples that I wanted to set aside. (Mr. Oberle was at the 160 Northfield address.) Mr. Bielert made a copy of the letter and asked that I take to Mr. Oberle at 160 Northfield.

At 160 Northfield I met with Mr. Oberle and Mr. Robert LaSalvia, Controller, Kadee. I went over the letter with Messrs. Oberle and LaSalvia and answered a number of questions. Mr. LaSalvia then supplied me with a computer print-out of Vitantonio stock on hand. (Note: This document lists "UNIT COST" for each model number. This is Kadee's cost for manufacturing the unit.) This print-out is attached to this report as Exhibit #1. I went through this entire list to determine what each model number represented. That information is as follows:

Model #	Premier Line	Product Description
1250	No	Griddle.
* 1550	Yes	Belgium Waffle Maker.
1550-J	Yes	Belgium Waffle Maker for export
Japan.		
1550-3	Yes	Same as 1550, but colored
yellow.		
* 1600	Yes	Heart shaped waffle maker.
* 1800	Yes	Premier Classic Waffle Maker.
* 1950	Yes	Premier Mickey Mouse Waffle
Maker.		
1950-2	Yes	Same as 1950 except it is red.
300	No	Classic Pizzelle Maker.
300NS	No	Same as 300 except it has non-
stick surface.		
350NS	No	Krumkake Maker.
550NS	No	Non Premier Belgium Waffle
Maker.		
* 800CNS	No	Non Premier Classic Waffle

Maker.

EIR 5/4/1998

Page 3.

Kadee Products Limited

* 950NS	No	Non Premier Mickey Mouse Waffle Maker.
850NS	No	Sandwich Maker.
750G	No	Tortilla Maker.
750NS	No	Tortilla Maker, non-stick.
* 1500	No	Large Belgium Waffle Maker.
1800 White Box	Yes	Same as 1800 above except it has a white box.

NOTE: None in stock of 550NS.

After determining what was in stock, I asked if I could isolate 12 units of each of the waffle makers in stock. I went to the warehouse and was helped by Mr. Gene Smith, Warehouse Manager, and Mr. Tom Becker, Warehouse Employee. I isolated 12 units of each of the waffle makers listed above that has an asterisk to the left of the model number. I did this by selecting three different waffle makers from four different cases from pallets containing 12 cases (except for the model 1600 which had ten cases on the pallet). This resulted in two cases of six per case for each model isolated. I then placed official seals over the tops and bottoms of each case. I ran out of official seals on the second case of the model 1800 waffle maker. From that point on I sealed the cases with mailing labels containing my initials and the date. All of the cases were then placed on a single pallet and the pallet was set aside in the warehouse.

EXHIBITS

MEMORANDUM

to: Kadee Products Limited File
cc:
from: Edward Blythin, U.S. Consumer Product Safety Commission *EB*
re: Addendum to EIR of 10/27 & 11/4/97
date: December 30, 1997

Kadee Products Limited (hereinafter Kadee) was inspected in response to a request from Zulma Soto, CAA. The request asked that information be obtained about a Mickey Mouse Waffle Iron manufactured by Kadee. The inspection disclosed that wiring problems make exist in a number of different waffle irons.

During the inspection, I asked for information about the number of each type of waffle maker manufactured. Attached to this memo is manufacturing information for the Premier line of waffle irons. Listed is the model number of the waffle iron, the date of the production run, the number of units manufactured on a particular day and the serial numbers for the units manufactured.

This inspection was conducted at the request of CCA as a F/U to a Section 15 report filed by Kadee Products on 7-16-97 regarding their "Mickey Mouse" waffle iron. They reported that these waffle irons could present an electric shock hazard.

The inspection revealed that Kadee Products Limited purchased a bankrupt company named Vitantonio Products in 1995. Vitantonio Products was a manufacturer of a line of electric cooking appliances including waffle makers. After the purchase, Kadee continued to manufacture these products which included what they call their Premier line of waffle (cont'd)

20. REVIEW DATE 11-19-97	21. DISTRIBUTION O: FOCR; CC: CCA, Z. SOTO.
------------------------------------	---

ENDORSEMENT CONTINUED:

irons. The Premier line consists of the Mickey Mouse 1950 model and 3 other models of waffle irons, the 1550, 1600, and 1800. All of the models in the firm's Premier line of waffle makers share the same wiring design. The Mickey Mouse, 1950 model, waffle iron has been made since 1992 and its design has not changed since its inception. Since taking over Vitantonio Products, Kadee Products has made 21,995 model 1950 waffle makers, 65,285 model 1550 waffle makers, 25,361 model 1600 waffle makers, and 31,818 model 1800 waffle makers. The waffle makers are UL listed.

Kadee stated that they first learned of the potential problem with their Mickey Mouse Waffle Maker on 5-8-97 when Disney Company officials advised them that they had found a defect in the wiring of 2 of the waffle makers. The defect involved mis-routing of the waffle maker wiring so the it could become abraded by contact with the sharp edges of the waffle maker cover during opening and closing. This in turn could lead to the electrically charged bare wire coming in contact with the body of the waffle maker.

The firm stated that after receiving the report from Disney they examined their stock of waffle makers. This included 725 units of the same lot that the defective 1950 model units were in and 942 units from lots manufactured before and after the defective unit lot. In their Section 15 report and initially during our inspection Kadee stated that all of these 942 waffle makers were model 1950 units. After repeated questioning by our investigator, Kadee admitted that these 942 units included both 1950 and 1600 models. Kadee stated that this examination found no defective units meaning none had abraded wiring. However, review of the firm's records of this examination found that a number of the examined units were found to have the metal clips that are to protect the wiring in the wrong place or the wiring itself in the wrong place.

The firm stated that other than the Disney report, they have received no safety related complaints on their waffle makers. They also stated that there have been no insurance claims or lawsuits involving them.

A sample, 98-830-4327, consisting of 2 of the firm's waffle makers was collected.

F/U: REFER TO CCA.

EIR 10/27 & 11/4/1997

Kadee Products Limited
6225 Cochran Road
Solon, OH 44139

SUMMARY OF FINDINGS

This inspection of Kadee Products, Ltd. (hereinafter Kadee) was conducted in response to an inspection request from Zulma Soto, CCA. The assignment (971017CCA4659, Exhibit #1) asks that Kadee be inspected to obtain information about a "Mickey Mouse" waffle iron manufactured by the firm. Kadee had submitted a Section 15 report concerning two of the waffle irons that were discovered to have abraded wires that presented an electrocution hazard.

The inspection disclosed that the wiring problem with the waffle irons is more widespread than the firm originally reported. Records obtained from Kadee indicated that management at Kadee knew of widespread wiring problems on Kadee waffle irons when they filed a Section 15 report on two defective waffle irons on July 16, 1997. Kadee reports that the only safety-related complaints they have ever received about the Mickey Mouse waffle iron were the complaints covered in the Section 15 report submitted by the firm. Additionally, Kadee reports that there have been no lawsuits related to waffle irons and no insurance claims have been paid regarding Kadee waffle irons.

Sample 98-830-4327 consisting of two waffle irons was collected.

STRUCTURE AND TYPE OF BUSINESS

Kadee has an automotive and a consumer products division. The consumer division consists of Vitantonio Products and a catalog business that sells dishes. Vitantonio manufacturers a line of waffle makers, pizzelle makers, griddles, krumkake makers and pasta makers under the Vitantonio name. Catalog pages for these products are attached to this report as Exhibit #2.

The automotive division, Kadee Metalfab, fabricates aluminum components for the automotive industry.

In addition to the site of this inspection, Kadee also operates a warehouse located at 160 Northfield Road, Bedford, OH 44146.

Kadee purchased Vitantonio Products in 1995. Vitantonio had been located in Eastlake, OH and went bankrupt.

I discussed the corporate structure of Kadee on several different occasions with Mr. George Bielert. He wasn't very clear about the corporate structure. Combining information from Mr. Bielert and the state of Ohio this appears to be the corporate status of Kadee. Kadee and Vitantonio are "Limited Liability Corporations" incorporated in Ohio in 1995. (Mr. Bielert told me Vitantonio was a "division of Kadee.") The office

of the Secretary of State for Ohio reports that Kadee is a corporation in good standing that was incorporated in Ohio on 6/29/95. The charter number of the corporation is 910220. The Secretary's office also reports that Vitantonio is also an Ohio corporation in good standing that was incorporated on 6/29/95. Vitantonio's charter number is 909009. Neither firm has corporate officers listed with the state because they are limited liability corporations and that type of corporation does not have to list the corporate officers.

Mr. Bielert reports that the corporate officers of Kadee and Vitantonio are:

H.C. Kassigkeit - President/Treasurer
George Bielert - Vice President/Secretary

INDIVIDUAL RESPONSIBILITY - PERSONS INTERVIEWED

This inspection was done by appointment with Mr. George Bielert. On 10/27/97 credentials were shown and a Notice of Inspection was issued to Mr. George Bielert, Vice President, Kadee. Also present during the entire inspection was Mr. Brian Bianchi, Process Engineer, Kadee. Finally, Mr. Hank Oberle, Sales Manager was consulted at the end of the inspection to provide sales information. All information in this report was received from or at the direction of the above-mentioned persons.

Mr. Bielert's duties include management of the manufacturing, engineering and quality control departments for Kadee and Vitantonio. Mr. Oberle is in charge of sales and distribution for Vitantonio.

COMPLIANCE HISTORY

This was the first inspection of Kadee by CPSC.

THE PROBLEM/DEFECT

On July 16, 1997 Kadee filed a "Full Report of Substantial Product Hazard." (See Exhibit #3.) This report concerned two Mickey Mouse waffle irons, model #1950, manufactured by Vitantonio. Mr. Bielert reports that two of these waffle makers had been returned from Disney facilities in California and Florida because of defective wiring that presented an electrocution hazard. The defect involved the routing of wiring under metal clips that fit over the sharp edges of a cover of the waffle iron. If the wires aren't routed under these metal clips, the wires become abraded as the waffle iron is repeatedly opened and closed. The abraded wires then come in contact with the body of the waffle maker and present the possibility of a shock hazard.

Mr. Bielert said he first learned of this problem when he had a conference call with Disney officials on 5/8/97. Disney officials on the call were Leeton Lee, California (818-567-5430) and Al Kaufman, Florida.

ACTIONS TAKEN BY KADEE/VITANTONIO

During discussions on 5/8/97 with Disney Director of Technical Services Mr. Al Kaufman, Mr. Bielert learned that he was required to report this wiring defect to CPSC. Mr. Bielert had never heard of CPSC, so he went on the internet and paid some company for CPSC regulations outlining Section 15 reporting requirements and filed the above-mentioned Section 15 Report. Additionally, during my inspection of 10/27/97, Mr. Bielert said that he took the following steps in regard to this matter.

Mr. Bielert said that prior to filing the Section 15 report he had all of the stock of #1950 waffle irons examined to determine if the wires were abraded. He said this examination disclosed that none of the #1950 waffle makers exhibited abraded wires. The waffle irons Mr. Bielert examined included 725 units from the lot that the Disney waffle irons were in and an additional 942 units from lots manufactured before and after the Disney lot. (This information also appears in the Section 15 report.)

Mr. Bielert said he then sent out a news release. A copy of that news release is attached to this report as Exhibit #4. Attached to this report as Exhibit #5 is a mailing list showing where the press release was sent.

These were the actions taken by Kadee as reported to me during my inspection of 10/27/97. During my inspection of 11/4/97, this information changed.

DISCUSSION OF PROBLEM

I asked Mr. Bielert if there was any relationship between where the press release was sent and who purchased the waffle irons in question. Mr. Bielert said there was no such relationship. The mailing list is simply a list of magazines, etc. that Vitantonio would send a press release if they were, for example, marketing a new, improved waffle iron.

I asked Mr. Bielert if he kept any records relating to his examination of the #1950 waffle irons in stock. Mr. Bielert said he did have these records. He went into his office and returned with the three pages attached to this report as Exhibit #6. These three pages are the forms used in the returned-goods department for products that are returned for any reason. (The form is titled VITANTONIO MANUFACTURING RETURN/REPAIR FORM and it is discussed in "COMPLAINTS" section below.) Appearing on these three pages are the serial numbers of waffle irons that

were examined.

The first question I asked Mr. Bielert regarding this document concerned the date of 5/7/97 that appears on the top of each page. His Section 15 report states that Kadee first learned of the problem on 5/8/97. Therefore, he was examining waffle irons one day before he learned of the problem. Mr. Bielert said the date on the forms must have been incorrect.

I then asked Mr. Bielert what the handwriting at the top of each page meant. On two of the pages appears "Spacers on 1600NS moved over 1/4 inch" and "only 1/2 the order." On the third page appears "1600NS spacers." Mr. Bielert took the documents back and looked at them and said he didn't know what the writing meant. He then placed these documents under a pile of papers he had and he started talking about something else. After Mr. Bielert stopped talking, I asked him if he would give me copies of the documents he had taken back. Mr. Bielert shuffled through his documents and said he didn't know what I was talking about. I told him the documents I was interested in were on the bottom of his pile of documents. Mr. Bielert retrieved the documents and supplied me with copies of same.

Once again, I asked Mr. Bielert about the handwriting on the tops of these documents. He said he didn't know what it meant because these documents represented records for examining #1950 waffle makers. He then took me out to the production line where we talked to a supervisor about the documents. The supervisor repeated what Mr. Bielert had said about the documents. At that point I dropped the matter.

I asked Mr. Bielert what constituted a "lot" and why he thought the problem was limited to one lot. Mr. Bielert said a lot represented the number of units manufactured during a specific time period. These lots can be identified with the serial number. Two of the defective units exhibited serial numbers 17002649 and 17002694. In these numbers the first digit represents the quarter of the year in which the lot was manufactured. The second digit represents the year, e.g., 7 = 1997. The remaining six digits are a sequential number representing the number of units manufactured. Therefore, 17002649 means that the waffle maker was manufactured in the first quarter of 1997 and it was the 2,649 one manufactured that year. If a second lot was manufactured in the same quarter, the first two digits would be the same as the first lot and remaining sequential number would be started where the last lot ended.

Mr. Bielert said he thought the problem was limited to the two defective units because they examined 725 units in stock and 107 units returned from Disney and they didn't discover any additional defective units. Furthermore, 942 units of stock from previous and following lots were examine and no defective units were found. The examination consisted of removing components until the wiring running under the clips was exposed. The wires were then examined to make sure they ran under the clips. The unit was then put back together.

I asked Mr. Bielert if he could explain how this defect (wires not under clips) occurred. Mr. Bielert said he did not have an explanation for what happened. I went to the production line to view how the waffle makers are assembled. To ensure that the rounded clips are put in the right place on the sharp edge of the covers, production workers use what is referred to as jigs and fixtures. When a cover is placed over one of these jig/fixture devices, various protrusions on the jig/fixture force the worker to place the clips in the proper place. Photos of a jig/fixture are attached to this report as Exhibit #7. After the clips are installed on the covers, the covers are placed in a bin of stocked lids that are then used on the production line. On the production line the lids are placed on the waffle maker and the person who does this routes the wires under the clips. I suggested to Mr. Bielert that this worker could make a mistake and not route the wires under the clips. Mr. Bielert said that any problems would be found when they run the waffle maker through an electrical test at the end of the production line. I asked Mr. Bielert how the test could detect an abraded wire if the wire wouldn't be abraded until the waffle iron was repeatedly opened and closed. (It appears as if the abraded wire would result when the wires are not routed under the clips and, consequently, the wire repeatedly rubs back and forth on the sharp edge of the cover.) Mr. Bielert admitted that the electrical testing would not necessarily detect a wire that is not routed under a clip. Consequently, the defect could occur if the wire isn't properly routed during assembly of the waffle iron and none of the assembly personnel notice the problem.

As further evidence that this was an isolated incident, Mr. Bielert said Kadee had never received a similar complaint about the waffle maker and, in fact, they had never received any safety-related complaints about the waffle maker.

Mr. Bielert concluded that this was an instance where a production worker didn't route the wires under the clips when the lid was being assembled. He said the fix to this problem was to assemble the waffle maker properly.

PRODUCT HISTORY

The Mickey Mouse waffle maker has been manufactured since 1992 using the same design, according to Mr. Bielert. Attached to this report as Exhibit #8 is a UL Report from 1992 covering, among others, the model 1950 (Mickey Mouse) waffle maker. According to Mr. Bielert, everything in the 1950 waffle iron is the same as shown in the 1992 UL Report.

Mr. Bielert reports that no design changes have been made on the model #1950 waffle maker since 1992. From 1995, when Kadee purchased Vitantonio, until November of 1997, Vitantonio manufactured 21,995 model 1950 waffle irons. During that same period, Vitantonio has manufactured 65,285 model 1550 waffle

irons; 25,361 model 1600 waffle irons; and 31,818 model 1800 waffle irons. (See Exhibit #9, production figures received from Mr. Oberle.) The models 1550, 1600 and 1800 are in the "Premier" line of waffle irons and they are wired the same as the model 1950 and they use the same metal clips that fit over the sharp edges of the covers on the waffle irons.

Waffle irons from the lot of model #1950 waffle irons in question were shipped to Disney; Chef's Catalog, Chicago; Dillard's, Arkansas; and Sir LaTabee, Seattle. Approximately 50% went to Disney and 50% went to the other stores.

COMPLAINTS

Safety-related complaints would be routed to Mr. Hank Oberle, President of Vitantonio. He would then evaluate the complaint and if it was a product defect he would pass the complaint along to Mr. Bielert who is in charge of quality control and engineering. Mr. Bielert would then take the appropriate action.

I questioned Mr. Bielert and Mr. Oberle about safety-related complaints and both men said the Disney complaints were the first safety-related complaints that they had received on the Premier line of waffle irons. Neither man knew the name of their insurance carrier or if any claims had been paid. The man with this information was Bob Lasalvia, Controller. Mr. Lasalvia reports that there have been no insurance claims paid or lawsuits regarding the Premier line of waffle irons. Kadee's insurance carrier is Atlantic Mutual Company, 222 West Adams, Chicago, IL 60605.

I visited the returned goods department and observed the procedures followed with returned goods. A lady in that department examines the returned item and determines what was wrong with the item. She then fills out a "VITANTONIO MANUFACTURING RETURN/REPAIR FORM" and makes a determination as to what happens to the item. The item can be returned to stock, reworked, scraped or stored. She then sends the form up to accounting so that the appropriate action can be taken in that department. These forms are then filed in the accounting department. I went through about one half of this file and did not see anything of consequence.

Mr. Oberle reports that Kadee's insurance carrier is Atlantic Mutual Company, 222 West Adams, Chicago, IL 60605.

QUALITY CONTROL

Mr. Bielert, who is in charge of quality control, said Kadee has an extensive quality control program that is set out in a 300 page book. However, quality control as it relates to the waffle irons involves the electrical test (discussed previously)

conducted at the end of the production line. This test would not disclosed mis-routed wires.

The jigs and fixtures used to assemble the clips to the covers could also be considered a control on quality. However, during the return inspection on 11/4/97, it was learned that this control wasn't working.

Finally, I did not see any records being kept that related to quality control.

Mr. Bielert said Vitantonio subscribes to the UL service where unannounced inspections are conducted by UL. I asked if he had ever received a Variation Notice from one of these inspections. He said he never received any of these notices.

SEQUENCE OF EVENTS

I asked Mr. Bielert to give me the dates that the various events occurred. He said he first learned of the problem right around the day that he reported it to the Commission. (His Section 15 report is dated July 16, 1997.) This, obviously, wasn't correct since he reported in his Section 15 report that he learned of the problem on 5/8/97. He then said he learned of the problem on 5/8/97, during discussions with the Disney people. I asked him again about the date of 5/7/97 that appears of the previously discussed forms. (Exhibit #6) Once again he said the date on these forms (Exhibit #6) was wrong.

So, at the end of my 10/27/97 inspection the sequence of events, as described to me by Mr. Bielert, was as follows:

May 8, 1997 -- first learned of problem during "conference" call with Disney officials. Mr. Bielert said he also learned of his reporting responsibilities during this call.

After May 8, 1997 -- Date unknown -- Returned goods and stock of #1950 waffle irons were examined.

After May 8, 1997 -- Date unknown -- Mr. Bielert went on internet and obtained CPSC Section 15 reporting requirements. He said he paid \$250 for this information. I have requested a copy of the invoice covering this transaction.

July 8, 1997 -- News release issued. (Exhibit #4)

July 16, 1997 -- Section 15 report made. (Exhibit #3)

RETURN INSPECTION -- 11/4/97

After reviewing information obtained during the 10/27/97, I scheduled another inspection with Mr. Bielert. Additionally, CCA requested that a sample of the waffle irons be collected.

324

On 11/4/97, by appointment, I returned to Kadee and issued Mr. Bielert a Notice of Inspection. He had to leave for a couple of hours, so he had Mr. Oberle and Mr. Bianchi answer my questions and help me collect the sample. Mr. Bianchi helped me collect the sample and Mr. Oberle answered a number of additional questions I had about Kadee/Vitantonio operations.

When Mr. Bielert returned, I asked him again to explain the comments on the top of Exhibit #6. I told him that these documents appeared to cover the examination of model #1600NS waffle irons. Also, I told him that it appeared to me that some sort of adjustment was made on these irons. At this point Mr. Bielert handed me a notebook and told me that this was the book that he had showed me during my first inspection and in it were the serial numbers of all of the waffle irons that had been examined. I told Mr. Bielert that I hadn't seen this notebook before and asked what he meant by "all of the waffle irons that had been examined." Mr. Bielert said they examined all of the "Premier" line of waffle irons in stock, when they learned of the Disney problem. (The "Premier line includes models 1550, 1600, 1800 & 1950.) A brief examination of the notebook disclosed that each page listed about 40 serial numbers. Following the column of serial number are four additional columns with the following headings: "Clip Correct, Clip Not Cor, Wire Correct, Wire Not Cor." Additionally, to the left of the column of serial numbers is a column with a date at the top of the column and, in one instance, a model number. A brief examination of these records indicated that the problem of having the clips in the wrong place was extensive and, to a lesser degree, wires were in the wrong place. I asked for copies of these records and Mr. Bielert had an employee copy the notebook for me. See Exhibit #10.

According to Mr. Bielert, Exhibit #10 represents the records for all of the model #1950 waffle irons that were examined. Exhibit #6 represents the records for the model #1600 waffle irons that were examined. No other waffle irons in the Premier line were in stock when the Disney problem surfaced, according to Mr. Bielert.

On 11/17/97 I phoned Mr. Bielert and asked him if he thought the problems he discovered on the waffle irons he examined in stock, could also exist on waffle irons that had been distributed. Mr. Bielert said he didn't think this was possible because he hadn't received any other complaints.

I also asked Mr. Bielert what happened to the third waffle iron that Disney had tested. (Originally, Mr. Bielert had referred to this waffle iron as the one with "the broken foot." This waffle iron apparently did have a broken foot, but Disney had it tested and it failed the "...dielectric voltage withstand testing per UL 1026..." See Exhibit #11.) Mr. Bielert said he had no idea what happened to that waffle iron.

I asked Mr. Bielert if he knew what caused so many clips to be out of place (See Exhibit #10) if the jigs and fixtures were being used to put the clips on the covers. Mr. Bielert said he

didn't know, but he speculated that maybe employees were taking the lids out of the jigs to complete the installation of the clips because the clips are hard to push on the covers.

Finally, I asked Mr. Bielert if he found the internet bill for access to CPSC regulations. Mr. Bielert faxed me the document attached to this report as Exhibit #12. This document, along with his conversations with Disney officials, shows that Mr. Bielert should have know of his Section 15 reporting requirements on/about 5/8/97. However, he didn't file the Section 15 report until July 15, 1997 and the report did not include all of the information on defective products that Mr. Bielert had knowledge of in May, 1997.

SECOND PROBLEM

Mr. Bielert sent in two 1950 waffle irons (I don't know the date, but assume it was after his Section 15 report.) to Zulma Soto, CCA. One waffle iron had mis-routed wires and the other had wires routed properly. These waffle irons were examined by LSE and the report is attached as Exhibit #13. The report, as I understand it, confirms that the waffle iron with the mis-routed wires is a problem. On the waffle iron with the subject wire properly routed it was confirmed that this wire would not abrade. However, an examination of another wire (not the subject wire) disclosed that this wire could become abraded and present the same hazard as the original problem.

In discussing this problem with Zulma Soto, Mr. Bielert and Mr. Bianchi there appears to be a lot of confusion about exactly what everyone is talking about. Consequently, I photographed the problem and the fix as explained to me by Mr. Bielert and Mr. Bianchi. Those photos are attached to this report as Exhibit #14.

Remarks

Assignment

Conduct inspection and review files concerning the firm's distribution of a waffle iron in the shape of "Mickey Mouse". Obtain information on distribution and specific quantities sold. The "fix" provided by the firm was unacceptable by CCA. Determine also whether the firm has re-distributed the product with their proposed "fix" which is not acceptable.

Subject: Full Report of Substantial Product Hazard

1. **Person informing the Commission:** George J. Bielert, 6225 Cochran Road, Solon, Ohio 44139 (216-519-1400 ext. 105).
2. **Manufacturer:** Kadee Products Limited, 6225 Cochran Road, Solon, Ohio 44139.
3. **An identification and description of product:** Serial numbers 17002057-17002908 of Kades Products Model 1950 Waffler (852 items). Samples have been submitted. Labels and stampings pursuant to UL guidelines are on the bottom of the appliance. The retail cost of the unit is normally about \$ 55.00.
4. **The nature of the possible defect:** It was reported that serial numbers 17002649 and 17002694 exhibited a condition in which the metal casings became electrically charged with line voltage.
5. **The risk to injury:** No injuries have been reported. Shock from line voltage (115 VAC) is a risk.
6. **Date of initial customer complaint and chronology of analysis.** On May 8, 1997 Mr. Leston Lee of Walt Disney (California) and Mr. Al Kaufman of Walt Disney (Florida) reported that two "Mickey Mouse Wafflers" had been identified as defective. Through their independent testing, the abraded insulation was discovered. Kadee Products inspected all finished goods in inventory and located 725 of the suspect lot. They were inspected for the defect, none that were inspected exhibited abraded insulation. 942 units of previous and following lots were also inspected; none that were inspected exhibited abraded insulation.
7. **Number of products/units.** Two units found to be defective of the lot consisting of 852.

KADEE EIR 10/27/97
EB
EXHIBIT #3

KADEE

341

8. **Date of Manufacture.** First quarter of 1997.
9. **Product Distribution.** 2 defective units returned by Walt Disney Company, 725 units in factory warehouse at time of notification; 107 of suspect lot returned (unsold) by Walt Disney Company, 18 units sold at Disney Stores in Florida to unknown customers.
10. **Process changes.** Control plans have been modified to include specific "downstream" check for mis-routed wires. Kadee Products facilities align with UL and AIAG QS9000 process standards for Control Plan development and implementation.
11. **Communications.** See attached press release.
12. **Refund, replacement, repair actions.** Kadee Products will refund or replace any customer return in response to the press release and/or detection of product failure.
13. **Market Plan.** For the lot in question, product was sold directly to Walt Disney Company for customer retail sales by Disney. In general, product is sold worldwide through representatives and directly by Kadee Products to retailers and consumers.

Please contact me for any information that I may provide in addition to that which has been cited. I remain,

Sincerely,

KADEE PRODUCTS, LTD.

George J. Bielert
Vice President

NEWS RELEASE FROM KADEE PRODUCTS**Kadee Products Ltd., 6225 Cochran Road, Solon, Ohio 44139 - 216-519-1400****FOR IMMEDIATE RELEASE**
July 08, 1997**CONTACT: G. BIELERT**
216-519-1400 EX 105**Kadee Products announces the recall to inspect Model 1950 Mickey Mouse Wafflers.**

Solon, OH - Kadee Products is recalling the remaining 18 units within serial number lot 17002057 through 17002908 of its Model 1950 Mickey Mouse Wafflers. This lot was found to have two units that exhibited a mis-routed wire, which could present a shock risk.

Though there were no injuries resulting from the discovery of the defective units, Kadee Products wishes to insure that its customers are not exposed to any risk. All but 18 of the units have been returned at the issue of this release.

The units would have been purchased at Disney Stores in Florida during a time period from March 1997 to July 1997.

Kadee Products will refund or replace the suspect units at the customer's request without charge for shipping.
