

[illegible]

SUMMARY OF MEETING:

- Scientific Advisory Committee Activity
 - Update on recently published research papers on head impact that can be used to support the development of a youth football standard. Additional information was provided on studies that identified potential associations between beginning age of children playing tackle football and later life cognitive dysfunction.
 - Update on working with VT's ongoing youth football study and Neurotrauma Impact Science Laboratory to provide better information in areas that NOCSAE previously lacked including head impact exposure injury risk and head impact exposure.
 - Youth finite element (FE) brain model is currently going through validation process.
 - Head mass/helmet mass/neck strength relationship research plan is under consideration.
- Technical Standards Report
 - There were multiple standards that had minor changes or revisions that did not require a revision status update.
 - ND-081 – Ongoing research into the linear impactor that could result in an update to the end cap used for testing and improve repeatability.
