

Draft - Log of Telephone Call - Draft

Date of Telephone Call: June 25 2018
Commission Contact: Thomas E. Caton, ESMC

Non-Commission Participants: Chris J. Noveral,
ASTM F24.90 Evolution Task Group I Leader
and EVO I Task Group Members

Subject: Discuss the negative ballots:

From the minutes of the ASTM working group:

A number of negative votes on the ballot language sent out in the last round and those voters are going to be contacted to discuss their comments and concerns.

The working group is trying for a re-ballot of two items which had less significant voter conflicts with the possibility of being standalone changes by the end of the month. These are the items balloted for Section 5.1 and 8.32 of F2291 (the hazard analysis language and design for corrosion sections).

The new language is based on the original assigned tasks for EVO 1. The primary goal is to prepare the new text for balloting, not to address other EVO 1 corrosion issues that were discussed in the past (these other items will likely need group discussion at the next in person meeting).

The group is moving move ahead with providing additional standards/guides in the Appendix as part of this ballot in the Appendix of F2291.

Submittal of new language is planned for or re-ballot: 6/30

cc: Richard McCallion, Mark Kumagai, Patricia Edwards
