

**LOG OF MEETING
DIRECTORATE FOR ENGINEERING SCIENCES**

SUBJECT: Meeting of the ASTM Floor Seat Occupant Retention Task Group

DATE OF MEETING: 10 December 2018

PLACE OF MEETING: Virtual (teleconference)

LOG ENTRY SOURCE: Hope Nesteruk (ESMC),

COMMISSION ATTENDEES: Hope Nesteruk (ESMC), Lawrence Mella (ESMC)

NON-COMMISSION ATTENDEES: Contact ASTM for attendee list.

SUMMARY OF MEETING:

This meeting was to discuss modifications to the occupant retention test. Task group members reported on work done since the last meeting, including comparing occupant retention tests in stationary activity centers and walkers and testing products with a CAMI. The group discussed using the CAMI instead of the hinged weight gauge and potentially combining the stability and occupant retention test into one test that addresses both. This would be similar to incidents where the child began to come out of the seat and then the entire system (both the child and the seat) tipped or fell.

The group will continue working and meeting again before the next ASTM subcommittee meeting.
