

U.S. Consumer Product Safety Commission

Log of Meeting

SUBJECT: Teleconference with the Test Weight Task Group for the ASTM Standard Consumer Safety Performance Specification for Carriages and Strollers

DATE OF MEETING: September 5, 2019

LOCATION: Teleconference

LOG ENTRY SOURCE: Kristen Talcott

DATE OF LOG ENTRY: October 7, 2019

CPSC ATTENDEES: Kristen Talcott, Brian Baker

NON-CPSC ATTENDEES: Contact ASTM for the list of attendees

SUMMARY OF MEETING:

The task group was led by the task group chair. Task group members discussed proposed changes to F833 Section 6.2.5 that were sent to the task group members prior to the meeting. These changes include moving Note 5 language into the main section and adding the condition that “the product shall continue to function as intended” and the failure mode “inability of locking mechanisms to function as intended.” Task group member discussion included whether “the product shall continue to function as intended” covers “inability of locking mechanisms to function as intended,” frame disengaging or folding, and whether additional definitions are needed.

The task group plans to have one more meeting to work out the final language, then present to subcommittee at October meeting to get feedback prior to balloting.
