

SUBJECT: ASTM F15 Stationary Activity Centers task group meeting

DATE OF MEETING: May 2, 2019

PLACE OF MEETING: teleconference

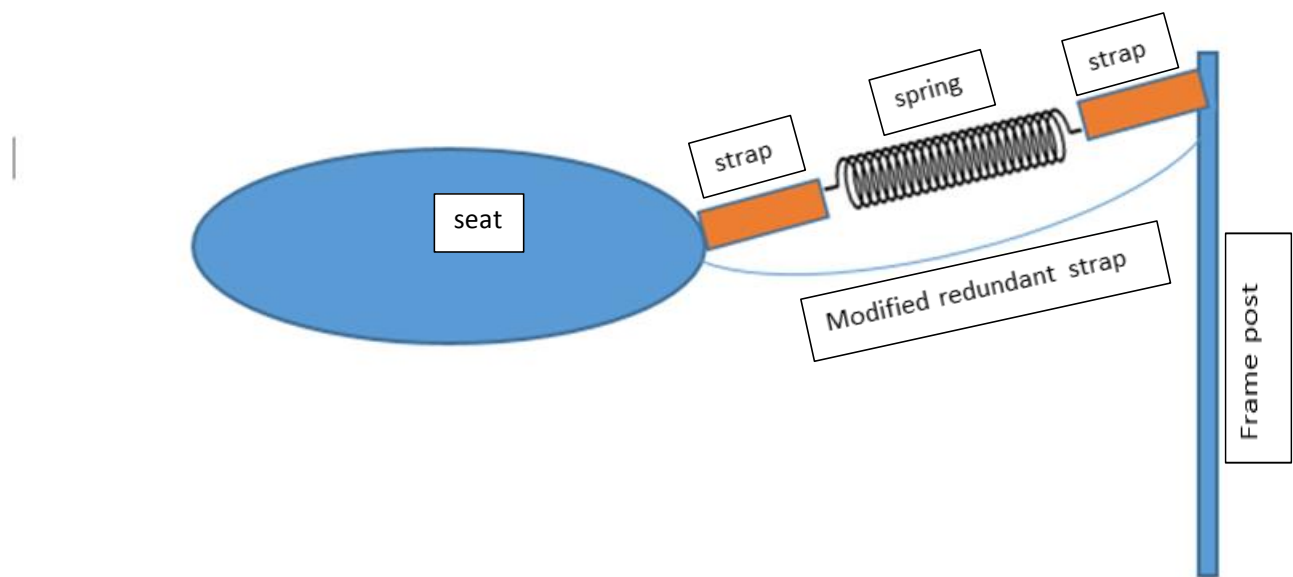

LOG ENTRY SOURCE: Kevin Lee (ESMC)

COMMISSION ATTENDEES: Kevin Lee (ESMC)

NON-COMMISSION ATTENDEES: Contact ASTM for attendee list.

SUMMARY OF MEETING: June 26, 2019

The task group agreed upon a redundant system that encapsulated the entire suspension system with a separate anchoring point. The following image was sent to the task group chair and will be considered by the subcommittee.

The manufacturer could either create:

- A fully redundant support system (that doesn't share the same attachment points as the main suspension system and prevents the seat from tipping more than 25 degrees should any part of the main suspension system fail) which isn't loaded during normal use
- Or use the current spring redundant system + life cycle testing
