DIRECTORATE FOR ENGINEERING SCIENCES**

SUBJECT: Meeting of the ASTM Floor Seat Occupant Retention Task Group

DATE OF MEETING: July 22, 2019

PLACE OF MEETING: Virtual (teleconference)

LOG ENTRY SOURCE: Lawrence Mella (ESMC)

COMMISSION ATTENDEES: Lawrence Mella (ESMC)

NON-COMMISSION ATTENDEES: Contact ASTM for attendee list.

SUMMARY OF MEETING:

This meeting was to discuss modifications to the stability and occupant retention tests. The task group discussed conclusions from the previous meeting and new test data.

The task group decided that the focus should be on products without active restraints. The task group proposed an additional rearward stability test for units without active restraints. Floor seats without active restraints would be subject to a 35 degree incline in the rearward direction.

The task group plans to present the proposal to the subcommittee and request feedback. In addition, the task group intends to inform the subcommittee on problems discovered such as repeatable placement of the infant weight gage during testing.
