

**LOG OF MEETING
DIRECTORATE FOR ENGINEERING SCIENCES**

SUBJECT: Meeting of the ASTM Soft Infant Carriers (SITC) Fastener Task Group Meeting

DATE OF MEETING: 13 August 2019

PLACE OF MEETING: Virtual (teleconference)

LOG ENTRY SOURCE: Hope Nesteruk (ESMC)

COMMISSION ATTENDEES: Hope Nesteruk (ESMC)

NON-COMMISSION ATTENDEES: Contact ASTM for attendee list.

SUMMARY OF MEETING:

The task group discussed a change to the current standard to ensure a fastener disengagement found at the lab was included in the requirements. The task group reaches consensus to modify the definition of fastener so that it includes fabric attachment. In addition, the group discussed the dynamic test, and changing to a test that harmonizes with the EN standard. This test would require a change to the test torso and the number of cycles, but overall, the task group was in favor of the change. The existing dynamic test may then be seen as redundant, and the task group was considering removing it when the new test is implemented. The task group will report at the subcommittee meeting and then consider balloting the change.
