### Summary of Meeting:

This was a task group meeting to discuss updating the required warning statement on gasoline containers. ASTM F839 is the voluntary standard that covers gasoline containers in the US and CSA B376 is the voluntary standard that covers gasoline containers in Canada. This task group will look at revising the required language in ASTM F839 with the goal of creating common language and pictograms that could be used in both the US and Canada.

The meeting began with a review of the federal mandatory requirements. Gasoline containers are sold empty so they are not included in the FHSA regulations, so gasoline containers do not need to meet FHSA requirements, but the group would like to meet the spirit.

The group reviewed a draft mockup of the proposed warning statements. The group commented on that the draft mockup.

The group's input to the draft mockup will be used to create a new draft. That draft will be circulated to task group members for comments. If another meeting is necessary, the group will schedule a meeting for some time in December.
