Product: Adult Portable Bed Rails (APBR)

Prepared By: Vineed Dayal

Date of Log: 05/21/2021

Attendees: Contact the ASTM for a complete list of attendees

CPSC Attendees: Vineed Dayal, Zachary Foster & Angie Qin

Meeting Summary:

Contact ASTM for more details of this meeting.

CPSC staff provided the subcommittee chair with the updated APBR incident data on 01/07/2021, as requested at the last meeting.

CPSC staff requested this subcommittee meeting through a letter sent on 03/26/2021. The meeting was called to review the incident data provided by CPSC, address the remaining concerns staff identified in their previous 09/05/2019 letter, and ask any additional questions to staff regarding CPSC test results presented at the previous meeting.

During the meeting, CPSC staff broadly reviewed the incident data that was sent out to the group on 04/08/2021. Staff answered several questions regarding how the data was collected, and about staff's filtering methods. Staff also answered questions related to the recent briefing package (BP), submitted to the Commission last June. The subcommittee requested staff indicate what incident data was used for the BP and what was new data.

The subcommittee chair volunteered to organize the data by different categories such as age and injury type, prior to the next meeting in order to facilitate future task group work. The chair also said that staff's concerns listed in the September, 2019 letter would be addressed after the subcommittee determined if any task group work is needed.

The next subcommittee meeting will take place:

- (1) After the subcommittee chair completes an analysis of the CPSC incident data.
- (2) CPSC staff indicates what incident data was used in the BP.
