Summary of Meeting:

Contact ASTM for more details of this meeting. This was a meeting of an ASTM F15.45 candle subcommittee working group focused on candle production and process issues.

Participants discussed developing possible new requirements for either ASTM F2417 or a new standard for candles in production. Staff offered the group some suggestions but otherwise monitored the discussion. The meeting focused on best manufacturing practices and how to develop requirements to capture those practices.

Next Steps:

Since production and quality control issues have been identified in some recent candle recalls, staff will monitor the progress of this working group.
