

National Electronic Injury Surveillance System (NEISS) How Data Can Help Your Hospital

NEISS tracks emergency department (ED) visits related to recent injuries. NEISS gathers data for a variety of injuries including those associated with consumer products, adverse drug events, child poisonings, chemical burns, assaults, falls, and more. NEISS data are used by hospital quality, safety, injury, emergency, and research departments. Participating hospitals receive customized data reports prepared by the Consumer Product Safety Commission (CPSC). Such reports have presented data on fireworks, cribs, adverse drug events, falls, and bathtub water. Hospitals use NEISS data for clinical planning, staff training, research, and community outreach and education. Participating hospitals submit data requests at NEISSweb@CPSC.gov.

Top 5 Consumer Product Related Injuries, 2021 All Ages, Rates per 100,000

SPORTS & RECREATIONAL INJURIES

In 2021, there were **3.2 million** ED visits for injuries involving sports and recreational equipment.

40%

1,286,050

of these injuries
were related to

- Basketball
- Bicycles & Accessories
- Skateboards, Scooters, & Hoverboards
- Exercise, & Exercise Equipment

65%
of these
injuries
involved
males

The
majority
of these
injuries
occurred
in patients
ages **10-19**
