(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test results and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such

persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory.

52. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas do not and/or will not function in a "significant percentage" of instances:

(a) expressed in terms of a specific percentage, describe what constitutes "a significant percentage" regarding this allegation;

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) In the current case, CPSC's compilation of test data from various sources, including but not limited to Central, UL and FM, indicates that Omegas have an overall failure rate of approximately 40%.

(b) The factual basis for this allegation is the test data that indicates that

Omegas have an overall failure rate of approximately 40%.

(c) All non-privileged test data that forms the basis of Complaint Counsel's allegation will be produced to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omegas, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory.

53. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-l model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which

it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with

Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

54. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-l A model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function

in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce this evidence to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their

properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

55. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function

in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their

properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

56. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C- IA PRO ID model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has

requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who

have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

57. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate

to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s).

Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

58. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the EC-20A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate

at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers,

as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

59. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 AID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is

inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals

knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

60. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of

Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

61. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-I 2 ID model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the

failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel

will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

62. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC- 12 PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires

in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

63. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it

intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about

Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

64. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 RES model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) **describe in detail the substance of each such person's knowledge and/or information about any such contention.**

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention.

Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the

knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

65. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the HEC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would

reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas

that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

66. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the HEC-20 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on

these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

67. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the R-l model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate

at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers,

as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

68. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

If so:

(a) state whether Complainant contends that the R-1A model of the Omegas is defective;

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is

inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals

knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

69. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-IM model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of

Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

70. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the AC model of the Omegas

is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the

failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel

will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

71. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the M model of the Omegas is defective;

If so:

(b) identify and describe any such defect:

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will

produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

72. **With respect to the allegation of Paragraph 10 of the Complaint that the**

Omegas are "defective":

(a) state whether Complainant contends that the Flow Control model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a

significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint

Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

73. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel has already been asked and answered this Interrogatory. See Interrogatory No. 53, and Complaint Counsel's response thereto.

74. State whether the failure of any Omega to function has resulted in any bodily injury or injuries.

Response: Assuming that "failure of any Omega to function" is the failure of an Omega to activate when exposed to its activation/triggering temperature, Complaint Counsel responds that it has information at this time that would indicate that the failure of an Omega to function has resulted in injury or injuries. Complaint Counsel is continuing its investigation of this matter, and has requested this information from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding fires involving Omega sprinklers.

75. State whether the failure of any Omega to function has resulted in any death or deaths.

Response: Assuming that "failure of any Omega to function" is the failure of an Omega to activate when exposed to its activation/triggering temperature, Complaint Counsel responds that it has insufficient information at this time to respond to this Interrogatory. Complaint Counsel is continuing its investigation of this matter, and has requested this information from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding fires involving Omega sprinklers.

76. With respect to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) When an Omega sprinkler does not function in a fire situation, smoke and flames from the fire can cause injury and/or death.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. All persons who have knowledge of fires and/or fire behavior and/or the effects of fire on persons and property exposed to fire, have knowledge of the risk to which the public is exposed in a fire

situation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (c) is in part revealed in those documents.

77. **With respect to the allegation of Paragraph 15 of the Complaint that the defect or the defects in the Omegas create a "substantial risk of injury to the public":**

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) When an Omega sprinkler does not function in a fire situation, smoke and flames from the fire can cause injury and/or death.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. All persons who have knowledge of fires and/or fire behavior and/or the effects of fire on persons and property exposed to fire, have knowledge of the risk to which the public is exposed in a fire situation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (c) is in part revealed in those documents.

78. (a) **State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate in a fire.**

If so:

(b) **identify and describe any such failures;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

79. (a) **State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.**

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers.

80. (a) **State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate in a fire.**

If so:

(b) **identify and describe any such failures;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

81. (a) **State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate under any type of testing.**

If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers.

82. (a) **State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in a fire.**

If so:

(b) **identify and describe any such failures;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections,

Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

83. (a) **State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.**

If so:

(b) **identify and describe any such testing;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged and non-confidential information it has with respect to testing of Omega sprinklers. Complaint Counsel adds that one of the three Omega

sprinklers it received from Respondents in February, 1998, which had just been manufactured a few weeks earlier and had never yet been installed in a sprinkler system, did not activate (as that term is defined in Complaint Counsel's discovery requests to Respondents) when exposed to its activation/triggering temperature. The sprinkler partially deployed, releasing drips of water only, and then the fusible link cold soldered, preventing activation. Complaint Counsel has shared this knowledge with respondents, and asked for an explanation of what, why and how this occurred.

84. (a) **State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).**

If so:

(b) **identify and describe any such hazards;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel

responds that it contends that all Omega sprinklers are substantial product hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities

of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

85. (a) **State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).**

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel responds that it contends that all Omega sprinklers are substantial product

hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

86. (a) **State whether Complainant contends that any Omegas manufactured using silicone o-rings constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).**

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel contends that all Omega sprinklers, including those with silicone "o" rings, are substantial product hazards pursuant to 15 U.S.C. § 2064.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention.

Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

87. (a) **State whether the Complainant contends that the performance of**

Omegas declines or deteriorates over time.

If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the phrase "performance of Omegas declines or deteriorates over time" is undefined, unclear, vague and ambiguous and, without clarification of same, it is impossible to formulate a response to this Interrogatory. However, deterioration of o-ring material and corrosion, which available evidence suggest may contribute to failure of Omega sprinklers, may be progressive events.

88. With respect to the allegation of Paragraph 16 of the Complaint that the Omegas present a "substantial product hazard":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

Response: (a) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(b) The Complaint refers, relates to, and provides evidence of Complaint Counsel's allegation that Omegas present a substantial product hazard. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this allegation, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

89. **With respect to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest":**

(a) identify and describe all of the public interest factors which Complainant believes favor "action under these provisions";

(b) set forth the factual basis for such an allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Preservation of life, health and public safety, and avoidance of the risk of injury and death created by Omega sprinklers, which may fail in a fire situation.

(b) Taking Omegas out of service will abolish the risk of injury and/or death they pose to the public.

(c) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome, as all documents relating to fire behavior and injury

and death caused or potentially caused by fire are responsive. Without waiving its objection, Complaint Counsel responds that the Complaint refers, relates to, and provides evidence of Complaint Counsel's allegation that action under 15 U.S.C. § 2064 is in the public interest. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this allegation, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's allegation that action under this section is in the public interest. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection,

Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

90. With respect to the allegation of Paragraph B(1) of the Complaint that Respondent give prompt "public notice of the defect in the Omegas," identify and describe the "public notice" that the Complainant seeks to impose.

Response: Complaint Counsel would seek to impose public notice pursuant to 15 U.S.C. § 2064 (c), including the following: public notice of the defect; mailing of notice to each person who is a manufacturer, distributor or retailer of Omega sprinklers; notice to every person to whom Respondents know Omega sprinklers were delivered or sold.

91. With respect to the allegation of Paragraph C(3) of the Complaint regarding repair of all Omegas so they will "perform properly," identify and describe what would constitute "performs properly" for purposes of the Complainant.

Response: Proper performance of an Omega sprinkler is full (rather than partial or no) activation of the sprinkler upon exposure to its activation/triggering temperature, as defined in Complaint Counsel's discovery to Respondents.

92. With respect to the allegation of Paragraph C(3) of the Complaint regarding the replacement of all Omegas "with a like or equivalent product which performs properly":

(a) identify and describe any and all "like or equivalent product which performs properly";

(b) state whether Complainant believes that Omegas with a silicone o-ring

qualify as a "like or equivalent product which performs properly"; and

(c) state whether Complainant believes that Omegas with a spring collar qualify as a "like or equivalent product which performs properly."

Response: (a) "Like or equivalent product which performs properly" is a fire sprinkler that, upon exposure to its activation/triggering temperature, activates fully (rather than partially or not at all).

(b) No. Complaint Counsel believes that Omegas with silicone o rings also do not or will not perform properly.

(c) No. Complaint Counsel believes that Omegas with a spring collar also do not or will not perform properly. Moreover, use of a spring collar with a sprinkler is prohibited in a number of, if not most, jurisdictions.

93. With respect to the allegation of Paragraph C(3) of the Complaint regarding a "refund to consumers [of] the purchase price of the Omegas," identify and describe how Complainant would calculate or determine a "refund to consumers [of] of the purchase price of the Omegas."

Response: Complaint Counsel has insufficient information at this time to determine how a refund of the purchase price of Omegas would be calculated. Complaint Counsel has requested from Respondents in discovery information pertaining to sale and installation prices for Omega sprinklers.

94. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(1), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant

contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). At minimum, it can be expected that consumers would face costs associated with contacting Respondents, obtaining replacement sprinklers, and installing same. The details of any such effort by Respondents will determine these and other expenses.

95. **(a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(2), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.**

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or

information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). At minimum, it can be expected that consumers would face costs associated with contacting Respondents, obtaining replacement sprinklers, and installing same. The details of any such effort by Respondents will determine these and other expenses.

96. (a) **If the Commission orders Respondents to refund some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(3), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.**

(b) **identify all documents which describe, evidence, refer, support, or relate to any such contention;**

(c) **identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and**

(d) **describe in detail the substance of each such person's knowledge and/or information about any such contention.**

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). See also response to Interrogatory No. 94.

97. (a) **If the Commission orders Respondents to repair some or all of the**

Omegas pursuant to U.S.C. § 2064(d)(1), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

98. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to U.S.C. § 2064(d)(2), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or

believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

99. **(a) If the Commission orders Respondents to refund the purchase price to some or all of the Omegas pursuant to U.S.C. § 2064(d)(3), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.**

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d)[sic] identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e)[sic] describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

B. Potential Witnesses

100. Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the person's last known position with Respondents;

(e) the date of any such contacts;

(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);

(f)[sic] a detailed description of the subject matter of such communication; and

(g) the identity of any other persons who were present during such contacts.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

101. For each and every contact describe an [sic] response to Interrogatory No. 100,

identify each and every document that describes, evidences, refers, or relates to such contacts, including without limitation any notes of such contacts, documents shown during the course of such contacts, lists of questions or answers given, or any reports of such communications.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the corporate or government affiliation of the person;

(e) whether the Complainant has contacted such person; and

(f) the specific subject matter of the person's knowledge.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome -- there are thousands of people and entities who have information concerning or related to Omega sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in

anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it believes that Respondents and their current and former employees have such knowledge and information.

103. Identify each and every fact witness that Complainant expects to testify on its behalf at the hearing in this matter. For each such fact witness, identify and describe:

(a) the name, title, business address, and home address for each such witness; and

(b) the subject matter about which each witness is expected to testify.

Response: Complaint Counsel has not yet determined which witnesses it will call to testify at the hearing in this matter.

104. Identify each and every expert witness whom the Complainant expects to testify on its behalf at the hearing in this matter. For each such expert, identify and describe:

(a) the expert's name, title, home address, business address, education, employment since graduation from high school, and all publications authored or edited by the expert;

(b) the subject matter on which each expert is expected to testify;

(c) the substance and facts upon which the expert relies in forming his or her opinion;

(d) the opinions to which the expert is expected to testify;

(e) a summary of the grounds for each such opinion;

(f) and a statement and description of all information and documents upon which the expert relies or expects to rely.

Response: Complaint Counsel objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts. Without waiving its objection, Complaint Counsel responds that it has not yet determined which witnesses it will call to testify at the hearing in this matter. Complaint Counsel will supplement its response as such decisions are made.

105. Identify and describe any and all oral or written statements made by Respondents that the Complainant contends constitute an admission with reference to any of the issues raised in the Complaint. For each such statement, identify and describe:

(a) the person making the alleged statement;

(b) that person's relationship to Respondents;

(c) the content of the statement;

(d) the date, time, and place of the statement;

(e) the nature of the alleged statement (e.g., written or oral); and

(f) the identity of each person who heard the statement or otherwise has personal knowledge of the statement.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome, and requests information already in Respondents' possession. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery

by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel responds that any and all statements made by Respondents may constitute an admission by Respondents in this matter.

C. Other Allegations Made By the CPSC

106. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "based on multiple random inquiries of sprinkler contractors across the nation in the recent past, we believe that Central's proposed labor payment falls considerably short of what has been, and remains, customarily required to remove and install sprinklers ...." With respect to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to the "multiple random inquiries of sprinkler contractors";

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such "multiple random inquires of sprinkler contractors";

(e) describe in detail the substance of each such person's knowledge and/or information of such "multiple random inquiries of sprinkler contractors";

(f) identify and describe in terms of a specific monetary amount "what has been, and remains, customarily required to remove and install sprinklers";

(g) identify each and every document that constitutes, evidences, refers, or

relates in any way to "what has been, and remains, customarily required to remove and install sprinklers";

(h) identify each and every person whom Complainant knows and/or believes to have knowledge of "what has been, and remains, customarily required to remove and install sprinklers"; and

(i) describe in detail the substance of each such person's knowledge and/or information of "what has been, and remains, customarily required to remove and install sprinklers."

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege and . Without waiving its objection, Complaint Counsel responds that a labor payment of $5.00 per sprinkler, as suggested by Central's George Meyer in November, 1997, is inadequate to compensate consumers for the charge of replacing their Omega sprinklers.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that Complaint Counsel conducted inquiries of many sprinkler contractors as to the labor expense involved in removing and replacing sprinkler heads. In all

instances, sprinkler contractors indicated that the figure suggested by Central's President was grossly low, and that on average the cost may be three to six times that amount, depending on the facility.

(c) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that Counsel's written notes of its conversations relate to and evidence its inquiries of sprinkler contractors, as does an invoice from a sprinkler contractor relating to replacement of Omegas, which Complaint Counsel will produce to Respondents.

(d) Eric Singer has knowledge of such inquiries. To a lesser extent, Eric Stone, Catherine Anne Cumberland, Andrew Stadnik, Rohit Khanna, and Nicholas Marchica have knowledge of such inquiries.

(e) See response to (b), above.

(f) See response to (b), above. Please note that this cost does not include the cost for the replacement sprinkler, nor can it account for special reconstruction of the sprinkler system such as recutting the drop.

(g) Other than the letter to which Respondents refer, as well as notes reflecting its inquiries of sprinkler contractors, which are Complaint Counsel's work product, Complaint Counsel possesses one invoice from a sprinkler contractor relating to replacement of Omegas, which it will produce to

Respondents.

(h) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies the following individuals of whom it is aware:

1) David Dixon, Exec. V.P., David Dixon, 4495 Mendenhall Road South, Memphis, TN 38141

2) Jeffrey Larson, Viking Automatic Sprinkler Company, 3434 First Avenue South, Seattle, Washington 98134-1894

3) Fred Jackson, President, Jackson Fire Protection, 1906 Grace Ave., Ft. Myers, FL 33901.

4) William L. Oliver, President, Oliver Sprinkler Co., Inc., 501 Feheley Drive, King of Prussia, PA 19046

5) John C. Livingston, Jr. Chairman and CEO, Livingston Fire Protection, Inc., 5150 Lawrence Place, Hyattsville, MD 20781

6) Peter Miller, Miller Fire Protection, 2750 Marble Ct., Forestville, MD 20747

7) Thomas E. Strange, Vice President of Operations, Worsham Sprinkler Company, 400 East Arrowhead Drive, University Trade Center, Charlotte, North Carolina, 28213

8) James Lewis, American Fire Sprinkler Corp., 210 North 28A

Highway #B, Great Bend, Kansas 67530

Complaint Counsel believes that hundreds of other sprinkler contractors have knowledge of what has been and remains customarily required [in terms of labor costs] to remove and install sprinklers. At present, Complaint Counsel has insufficient information to identify them.

(i) Complaint Counsel objects to this subpart on the ground that it overbroad and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

107. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view that dezincification alone is the cause of above-required operating pressures in Omegas from plastic pipe ...." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or

believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that dezincification, Respondents' proposed explanation for the high activation pressures required to activate some Omegas that were installed in plastic pipe, cannot be the only explanation.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it has evidence of at least one fire (Kent Manor Inn) in which Omega sprinklers installed in a plastic piping system that contained no copper (which Respondents claim is a prerequisite to dezincification) did not activate, and showed no signs of dezincification upon visual inspection. A number of other Omegas that have required high activation pressures in order to activate in testing have also shown no sign of dezincification, e.g., a 1992 Omega from The Fairways at Piper Glen, N.C. As well, evidence

indicating dezincification in sprinklers that have activated tends to cast doubt on the existence of a causal connection between dezincification and high activation pressures required for, or non-activation of, Omegas. In one such instance (the Madison Park Condominiums), Central itself concluded that all eight Omegas that it tested showed signs "characteristic of dezincification," yet apparently four of eight Omegas that it tested failed to activate, in part, Central claimed, as a result of swollen "o" rings. At least one forensic study of which Complaint Counsel is aware has determined that dezincification is not the cause for failure of Omegas from plastic piping systems.

(c) See response to subpart (b), above.

(d) The letter to Ms. Sanzo constitutes and evidences the statement made therein. The results of tests of Omega sprinklers relate to the contention made therein, as does the evidence of the fire at the Kent Manor Inn, both of which will be produced to Respondents. The scientific study referred to above was supplied to Complaint Counsel under a claim of confidentiality; Complaint Counsel awaits authorization from a third party to release the documents to Respondents and, if necessary, a confidentiality stipulation by Respondents and/or protective order by the Presiding Officer.

(e) The letter to Ms. Sanzo is not a public document; Complaint Counsel, other members of the CPSC staff, and Respondents have knowledge of the statement made in the letter to which Respondents refer.

(f) Complaint Counsel objects to this subpart on the ground that it is overbroad

and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

108. **In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996." With regard to this statement:**

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product

privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that swollen "o" rings due to cutting oil exposure Respondents' proposed explanation for the high activation pressures required to activate some Omegas that were installed in steel pipe) cannot be the only explanation for non-activation of Omegas.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that:

1) it had (and still has) received no evidence from Respondents that Omegas were in fact exposed to excessive hydrocarbons, or that hydrocarbons were the source of any "o" ring swelling;

2) there is evidence of Omegas that showed no "o" ring swelling that did not activate when exposed to their activation/triggering temperature in testing;

3) there are at least two studies that have attributed failure of Omegas to causes other than swollen "o" rings;

4) Central's own public statement in May, 1996, that "the presence of high concentrations of hydrocarbons (found in petroleum based cutting fluids), in conjunction with varying degrees of corrosion," (emphasis added), suggests that swelling due to excessive

hydrocarbons is not the only cause of failure in these Omegas;

5) A number of Omegas that have activated properly in testing have exhibited swollen "o" rings.

(c) See response to subpart (b), above.

(d) The letter to Ms. Sanzo constitutes and evidences the statement made therein. The results of tests of Omega sprinklers relate to the contention made therein, and will be produced to Respondents. The scientific studies referred to above were supplied to Complaint Counsel under a claim of confidentiality; Complaint Counsel awaits authorization from a third party to release the documents to Respondents, the execution of an appropriate confidentiality stipulation by Respondents, and/or a protective order from the Presiding Officer.

(e) The letter to Ms. Sanzo is not a public document; Complaint Counsel, other members of the CPSC staff, and Respondents have knowledge of the statement made in the letter to which Respondents refer.

(f) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

109. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "rather, primarily, the data points to multiple failure modes rooted in

the design and construction of these sprinklers." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe the "multiple failure modes rooted in the design and construction of these sprinklers";

(d) identify and describe "the data" referenced in the statement;

(e) identify and describe each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(g) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it misquotes the letter from Complaint Counsel to Counsel for Respondents. The letter states that preliminarily the data points to multiple failure modes rooted in the design and construction of these sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to

the discovery of admissible evidence. Complaint Counsel's theories on the basis for the activation failure of Omega sprinklers is irrelevant, as it is the fact that the Omegas fail, and not why they fail, that is at issue herein. Without waiving its objection, Complaint Counsel responds that it contends that none of the proposed explanations that Respondents have suggested are, alone, sufficient to explain the activation failures of Omegas. See responses to Interrogatories 107 and 108 for an explanation of Complaint Counsel's position, and the bases therefor.

110. **In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC refuses to accept a "testing based corrective action proposal" from Respondents. With regard to this rejection:**

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for rejecting a "testing based corrective action proposal";

(c) identify and describe any and all reasons that the CPSC believes are correct in rejecting such a proposal;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the rejection of this proposal;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of the rejection of this proposal; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory No. 114, below.

111. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC states that "Central continues to insist on selling Omega sprinklers with silicone o-rings despite serious concerns about whether they will function in the long term." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all "serious concerns" that the CPSC has regarding the functioning of Omega sprinklers with silicone o-rings;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such "serious concerns"; and

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such "serious concerns."

Response: a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that Central continues to insist on selling Omega sprinklers with silicone o-rings, and that Complaint Counsel has serious concerns about whether those sprinklers will function both currently and in the long term.

b) Complaint Counsel has evidence that, and Respondents have admitted that Central is continuing to sell Omegas with silicone o rings. The basis for Complaint Counsel's concerns regarding silicone o ring Omegas is the same as its concern regarding other Omegas -- that they are a substantial product hazard, as they may fail in a fire situation, thus exposing the public to substantial risk of injury and/or death. Complaint Counsel points Respondents to its response to Interrogatory No. 112, below, for an explanation of the problem with a silicone o ring sprinkler manufactured in February, 1998, and tested by CPSC only a few weeks later and found not to activate properly, but instead to 'drip' and cold-solder. Complaint Counsel's concerns with respect to silicone o ring Omegas relate to the design of the sprinkler, Respondents' manufacturing (and quality control) procedures, and to the silicone material itself -- including but not limited to the possibility of adhesion, susceptibility to corrosion, inadequate or improper lubrication, inadequate clearances, and possible malfunctioning parts. Complaint Counsel has requested information from Respondents in discovery regarding each of these (and other) issues.

c) See response to subparts (a) and (b), above.

d) See responses to Interrogatories 86 and 112.

e) Complaint Counsel has insufficient information at this time to provide full identification for each person or organization whom Complaint Counsel knows or believes to know of the serious concerns that Complaint Counsel

has with respect to Omegas utilizing a silicone o-ring. Provisionally, however, in addition to Respondents, it provides the following list:

Underwriters Laboratories
333 Pfingsten Road
Northbrook, IL 60062-2096
847-272-8800

Factory Mutual Research Corporation
1151 Boston-Providence Turnpike
Norwood, MA 02062
781-762-4300

Parco, Inc.
2150 Parco Ave.
Ontario, CA 91761
909-923-0288

Loss Prevention Council
Melrose Avenue
Borehamwood
Hertfordshire WD6 2BJ
United Kingdom
011-44-0181-207-2345

112. In a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, Stone states, "x-ray examination of the unit showed that the internal shaft was cocked or tipped slightly and jammed in that position" and that the CPSC "plans to conduct non-destructive analysis of the unit ...." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe any evidence that Omegas may be "cocked or tipped slightly and jammed in that position";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the statement that Omegas are "cocked or tipped slightly and jammed in that position";

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of any such problems;

(f) describe in detail the substance of each such person's knowledge and/or information; and

(g) describe any "non-destructive analysis of the unit" performed by or on behalf of the CPSC.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that although it does not at this time intend to rely on a letter it wrote to Ms. Sanzo, Complaint Counsel may rely on the evidence that the letter to Ms. Sanzo discusses.

(b) The factual basis for the statement is stated in the phrase quoted by Respondents.

(c) The evidence that the Omega referred to in the letter was cocked or tipped is described in the letter -- it is the x-ray of the unit described.

(d) Complaint Counsel objects to this interrogatory on the ground that it misquotes the statement in the letter. The statement refers to a single

Omega, manufactured in February, 1998, and never installed in a sprinkler system, that, when tested by Complainant a few weeks after it was manufactured by Central, failed to activate, as that term is defined in Complaint Counsel's discovery to Respondents, when exposed to its activation/triggering temperature, and instead "leaked" or "wept," dripping water and then cold-soldering. When the sprinkler was x-rayed, it demonstrated what was described in the letter. Complaint Counsel shared this information with Respondents to demonstrate to Respondents that their various theories of what is wrong with Omegas, including the installation-based explanations that point to installer error and/or mishandling of the Omegas, cannot suffice to account for the problem with Omega sprinklers. The sprinkler that exhibited this activation failure had never been installed, nor had it ever been exposed to cutting oils, stop leak, or any other substance, by any sprinkler contractor or installer. Further, Complaint Counsel sought efforts by Respondents to ensure that the sprinklers they are currently manufacturing are safe and will function properly.

(e) Complaint Counsel objects to this subpart on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies Complaint Counsel, its staff and consultants, Respondents and Counsel for Underwriters Laboratories.

(f) See (a) through (d), above.

113. In a January 6, 1998 letter from Eric Singer of the CPSC to the state attorneys general, Singer states, "this contrasts with automatic fire sprinklers' historical rate of proving 99.5 percent effective." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all evidence that automatic fire sprinklers have an "historical rate of proving 99.5 percent effective";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such historical rate of effectiveness;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such historical rate of effectiveness; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence in this case. The effectiveness of sprinklers other than Omegas is irrelevant herein. Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence in this case. Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that statistics on the high reliability of other automatic fire sprinklers is in the public domain, and is available from the National Fire Protection Association and National Fire Sprinkler Association. Complaint Counsel is in the process of gathering evidence on the historical rate of effectiveness of automatic fire sprinklers, but offers the following list:

1) Rural/Metro Fire Department (Scottsdale, Arizona), Automatic Sprinklers: A 10 Year Study (1997);

2) Fire Sprinkler Advisory Board of Southern California, City of Los Angeles Civil Disturbance: Report on the Buildings Protected by Automatic Fire Sprinkler Systems and Their Performance Record (1992);

3) H.W. Marryatt, Fire: Automatic Sprinkler Performance in Australia and New Zealand, 1886-1968 (Melbourne: Australian Fire Protection Association, 1971);

4) "Sprinklers for Your Home," This Old House (magazine) (Jan./Feb.

1998);

5) Walter W. Maybee, "Sprinkler Performance Update: 1952- to 1986," Bulletin of the Society of Fire Protection Engineers (1988).

(c) See response to subpart (b).

(d) See response to subpart (b).

(e) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel identifies the following as having information pertaining to the high rate of effectiveness of automatic fire sprinklers:

1) Russell P. Fleming, P.E., Vice President of Engineering, National Fire Sprinkler Association, Inc., Robin Hill Corporate Park, Route 22 - P.O. Box 1000, Patterson, New York 12563;

2) John A. Viniello, President, National Fire Sprinkler Association, Inc., Robin Hill Corporate Park, Route 22- P.O. Box 1000, Paterson, New York 12563.

f) Complaint Counsel objects to this subpart on the ground that it requests information pertaining to entities other than Complainant. Without waiving its objection, Complaint Counsel responds that it has insufficient information at this time to describe in detail the complete substance of each person's knowledge and/or information on the high rate of effectiveness of automatic fire sprinklers.

114. (a) **State whether Complainant deems any corrective action proposal to be**

acceptable that is based in part on testing of a sample of sprinkler heads from a building and comparing the results of the sample to the hydraulically calculated operating pressure of that building.

If so:

(b) identify and describe such an acceptable corrective action proposal;

If not:

(c) identify and describe all reasons for such unacceptability;

(e)[sic] identify each and every document that constitutes, evidences, refers, or relates in any way to such unacceptability;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of such unacceptability; and

(g) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that the terms "hydraulically calculated operating pressure" are undefined, unclear, vague and ambiguous. Without waiving its objection, and assuming that Respondents ask whether Complainant deems acceptable any corrective action plan that would involve a one-time test of a sample of Omegas from buildings in which Omegas are installed, Complaint Counsel responds that such a corrective action plan is unacceptable to correct the substantial product hazard presented by Omegas.

(b) (inapplicable in light of response to (a); no response necessary pursuant to

instructions)

(c) Complaint Counsel incorporates its response to (a), above. Complaint Counsel further objects to this Interrogatory on the ground that it seeks privileged work product, and legal conclusions. Without waiving its objections, Complaint Counsel responds that it deems such a corrective action plan unacceptable because (1) the overall failure rate of Omegas in testing, based on thousands of samples tested to date, is so high, coupled with the fact that fires have been documented in which Omegas reportedly failed to activate, that removal of Omegas cannot be delayed; (2) testing in light of the high failure rate of Omegas to date would divert resources and time unnecessarily from correcting the hazard presented by Omegas; (3) testing in this manner has been shown to be an unreliable indicator of whether any given Omega (that was not one of the sample tested from a building) will operate when exposed to its activation/triggering temperature; (4) the water pressure in a building is not a constant - it is a variable, based on numerous factors, and therefore there is no "static pressure" that can be used as a standard; and (5) once one or more sprinklers activate in a fire situation, the water pressure "seen" by any other sprinkler will always be less than the building's water pressure prior to the opening of any sprinklers.

(d) (no subpart (d) is included in this Interrogatory)

(e) All results of tests of Omega sprinklers provide evidence of the reasons stated by Complaint Counsel in section (c), above. As well, all reports of

fires in which Omegas allegedly failed to activate support same.

(f) Complaint Counsel and its staff have knowledge of their contention that such proposed corrective action plans are unacceptable. Respondents and their attorneys also have knowledge of Complaint Counsel's position, as that position has been communicated to them.

(g) The substance of the knowledge possessed by Complaint Counsel and its staff, as well as by Respondents, regarding Complaint Counsel's position on the unacceptability of a testing-based corrective action plan is as stated in subpart (c), above.

D. CPSC Investigation

115. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's investigation of the Omegas. For each person identified, describe his or her role in the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that the term "participated in the CPSC's investigation of the Omegas" is unclear, vague and ambiguous, as the use of the past tense indicates an intent to limit the Interrogatory to some time in the past, and the Interrogatory fails to specify the time period to which it refers. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies the following staff who have participated in the CPSC's investigation of Omega sprinklers prior to the assignment of Complaint Counsel of record to the case: Catherine Cumberland, Marc

Schoem, Eric Stone, Andrew Stadnik, Rohit Khanna, Nicholas Marchica, Mark Kumagi, James Hoebel. Complaint Counsel objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts. Without waiving its objection, Complaint Counsel further responds that it has not yet determined which witnesses it will call to testify at the hearing in this matter. Complaint Counsel will supplement its response as such decisions are made.

116. Describe the circumstances surrounding, and the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date that the CPSC decided to investigate the Omegas;

(b) the identity of all persons at the CPSC involved in the decision to investigate the Omegas; and

(c) the identity of all information (including, but not limited to, any consumer complaints) available to or otherwise relied upon by the CPSC in deciding to initiate an investigation of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that it seek irrelevant information not reasonably calculated to lead to the discovery of admissible evidence, as the CPSC's investigation of Omega

sprinklers, and the propriety thereof and bases therefore, are not at issue in this litigation. Without waiving its objections, Complaint Counsel responds as follows:

(a) CPSC initiated its investigation of Omega sprinklers on or about May, 1996.

(b) Catherine A. Cumberland and Marc J. Schoem, in consultation with Eric L. Stone.

(c) CPSC initiated its investigation after receiving information regarding two fires in which Central Omega sprinklers reportedly failed to operate: one at a VA hospital in New York, and the other at a Marriott Hotel in Michigan.

117. Describe in detail any investigation by the CPSC relating to consumer complaints and/or consumer reports of personal injury, property damage, non-activation, or any other problems allegedly associated with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of all consumers with whom the CPSC communicated in connection with this aspect of the investigation;

(c) the identity of all consumers who complained of or reported an incident relating to the Omegas;

(d) the identification of any consumer questionnaires or other surveys used by the CPSC in conducting this aspect of the investigation; and

(e) the identification of any and all data, reports, survey results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "non-activation" and "consumer complaints" are undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence, as the CPSC's investigation of Omega sprinklers, and the propriety thereof and bases therefore, are not at issue in this litigation. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will supplement its response to this Interrogatory as additional information becomes available.

118. **Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:**

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a

result of or associated with the fire.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is vague, ambiguous, and unclear as worded. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, and assuming that a fire "in connection with use of the Omegas" means a fire in which one or more Omegas exposed to their activation/triggering temperature may not have activated, as that term is defined in Complaint Counsel's discovery to Respondents, Complaint Counsel identifies the following fires of which it is aware:

1. (a) Location: Marriott International, Inc., 10400 Fernwood Road, Bethesda, MD 20817

   (b) 1/26/95

   (c) damage to room

   (d) employee injured

2. (a) Department of Veteran's Affairs, Veteran's Health Administration, Washington, DC

   (b) 5/16/95

   (c) smoke and water damage

   (d) Complaint Counsel has insufficient information at this time with which to

respond to this subpart.

3. (a) Location: Uptown Manor, 1354 N. Harper, West Hollywood, CA

(b) 1/18/97

(c) damage to property and contents

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

4. (a) Location: Ft. Wayne Children's Home/Crossroads, 2525 Lake Avenue, Ft. Wayne, IN

(b) 4/6/97

(c) damage to bed, bedding, and room

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

5. (a) Location: Mel's Marina, 300 Pensacola Beach Road, Gulf Breeze, FL 32561

(b) 9/28/97

(c) property damage; contents damage; total on the order of $3 million

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

6. (a) Location: Kent Manor Inn, 500 Kent Manor Dr., Stevensville, MD 21666

(b) 10/27/97

(c) approx. $50,000 damage - structural and contents

(d) Complaint Counsel has insufficient information at this time with which to

respond to this subpart.

7. (a) Location: Lorene Lodge, 470 Lorene Dr., SW, Marietta, GA 30060

(b) 2/6/98

(c) damage to room and contents

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

8. (a) Location: Monserrat School of Art, 31 Elliott St., Beverly, MA 01915

(b) 3/1/98

(c) approx. $15,000 damage to contents and structure

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

Complaint Counsel is continuing its investigation into possible fires in which an Omega failed to activate, and will supplement its response to this Interrogatory as additional information becomes available. Further, Complaint Counsel has requested information responsive to this Interrogatory from Respondents in discovery.

119. To the extent not already identified in response to Interrogatory Nos. 117-118, identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage or personal injury in connection with the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the alleged property damage and/or personal injury;

(c) a description of the type of property damage allegedly sustained; and

(d) a description of any and all personal injury allegedly sustained.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will supplement its response to this Interrogatory as additional information becomes available.

120. Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other

information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

121. Describe in detail any and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected

from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

122. Describe in detail any and all communications between the CPSC and any state law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all state law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such state law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such state law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide

copies of all such communications that are in the public domain.

123. Describe in detail any and all communications between the CPSC and any federal law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all federal law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such federal law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such federal law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

E. Design and Testing

124. Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the Omegas;

(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;

(c) a description of the methodology employed during each and every test of the Omegas;

(d) the date of each and every test of the Omegas;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

125. Identify any and all outside consultants, experts, or other persons who assisted, advised, or otherwise communicated with the CPSC with respect to any testing of the Omegas. For each such person, describe his or her role in the testing, and the communications between that person and the CPSC.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in preparation for litigation, and therefore protected from discovery pursuant to the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts, and on the ground that it violates 16 C.F.R. 1025.31(c)(4)(ii). Without waiving its objections, Complaint Counsel will produce all non-privileged results of testing of Omega sprinklers, and will identify, in its supplemental response to Interrogatory No. 104, all experts whom it expects to call at trial in this matter, and all information required to be disclosed pursuant to 16 C.F.R. § 1025.31(c)(4), once it is determined who those experts will be.

126. For each test of the Omegas conducted by the CPSC, describe in detail the condition and age of the specific Omegas used in the test. Your response should include, without limitation, the following:

(a) an identification of each specific Omega by model number;

(b) a description of how and when the CPSC obtained each specific Omega used in the testing;

(c) a description of the condition of each specific Omega used in the testing (e.g., new, used, damaged, dented, etc. . .);

(d) a statement of the age of each specific Omega used in the testing;

(e) a statement of whether the CPSC has retained and the current location of each specific Omega used in the testing; and

(f) if the CPSC has since destroyed or discarded any Omegas used in its testing, a statement of the reasons for that action.

Response: See Response to Interrogatory No. 126. Complaint Counsel also objects to this interrogatory on the ground that the terms "condition" and "age" are undefined, unclear, vague and ambiguous.

127. For each test of the Omegas conducted by the CPSC, describe in detail the piping used in the sprinkler system from which the Omegas were removed. Your response should include, without limitation, the following:

(a) the material constituting the piping;

(b) the presence of any treatments or substances applied to the piping;

(c) the contents of any and all materials or substances inside the piping; and

(d) a description of the overall condition of the piping.

Response: See Response to Interrogatories 124, 125 and 126. Complaint Counsel also objects to this Interrogatory on the ground that the terms "materials or substances inside" and

"overall condition" are undefined, unclear, vague and ambiguous.

128. **For the time period 1990 through the present, identify and describe any and all testing of any non-Omega sprinkler heads conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:**

(a) a description of any testing protocols used by the CPSC in testing the non-Omega sprinkler heads;

(b) the identity of the person(s) who created or established any such testing protocols for the non-Omega sprinkler heads;

(c) a description of the methodology employed during each and every test of the non-Omega sprinkler heads;

(d) the dates of each and every test of the non-Omega sprinkler heads;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the non-Omega sprinkler heads;

(f) a description of the results of each and every test of the non-Omega sprinkler heads; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the non-Omega sprinkler heads.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the

extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it has not at this time conducted any testing on non-Omega sprinklers.

129. To the extent that you contend, or otherwise intend to present at the hearing in this matter, the feasibility and/or propriety of any alternative design features for the Omegas, identify and describe any such proposed alternative design features. Your response should include, without limitation, a description of all data, testing, reports, or other information supporting this contention.

Response: Complaint Counsel objects to this Request on the ground that the terms "feasibility and/or propriety of" (in the context of "alternative design features for the Omegas"), and "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, and that the question as a whole is unintelligible, and thus precludes Complaint Counsel from formulating a response without clarification of its meaning.

F. Risk Assessment

130. Set forth the factual basis of your contention in Paragraph 15 of the Complaint that the Omegas "create a substantial risk of injury to the public within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)." Your response should include, without limitation, the following:

(a) a description of the specific risks of injury that you contend are presented by the Omegas;

(b) a description of the criteria or factors used by the CPSC in determining that each risk allegedly associated with the Omegas constitutes a "substantial risk" within the meaning of 15 U.S.C. § 2064(a)(2); and

(c) an identification of any and all data, survey information, or testing relating to the alleged risks associated with the Omegas.

Response: See Complaint Counsel's Response to Interrogatory No. 77.

131. Describe in detail any and all measures taken by the CPSC to determine the severity of the risk allegedly associated with the Omegas, including, without limitation:

(a) a description of how the CPSC measures the severity of the risk allegedly associated with the Omegas;

(b) a statement of whether the measurement employed by the CPSC incorporates, considers, or is in any way adjusted to reflect the number of products in use and the frequency of use of the Omegas;

(c) a description of all efforts taken by the CPSC to measure the severity of the risk or probability of injury allegedly associated with the Omegas; and

(d) an identification of all data, studies, and reports that quantify or otherwise provide an assessment of the risk or probability of injury allegedly associated with the Omegas.

Response: a) Complaint Counsel objects to this Interrogatory on the ground that the term "measures" is undefined, unclear, vague and ambiguous as used herein. Complaint Counsel also objects to this Interrogatory on the ground that it

calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that CPSC does not measure severity of the risk created by consumer products as the term "measure" is defined by Webster's Dictionary, to which Respondents point for definition of terms not otherwise defined. Without waiving its objection, Complaint Counsel responds that it determined the severity of the risk posed by Omega sprinklers according to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.12. Pursuant to 15 U.S.C. § 2064(a)(2), severity of the risk is one of the factors the staff may consider in determining whether a product defect creates a substantial risk of injury to the public. According to 16 C.F.R. § 1115.12(g)(1)(iii), a risk is severe if the injury which might occur is serious and/or if the injury is likely to occur. When a sprinkler does not activate in a fire, it cannot suppress or contain the fire, thus exposing the public to the risk of injury and/or death that are both serious and likely to occur.

b) Complaint Counsel objects to this Interrogatory on the ground that the term "measurement" is undefined, unclear, vague and ambiguous, as used herein. Without waiving its objection, and by way of clarification, Complaint Counsel responds that CPSC does not engage in a measurement of the severity of the risk created by consumer products as the term "measurement" is defined by Webster's Dictionary, to which Respondents

point for definition of terms not otherwise defined. Moreover, pursuant to 15 U.S.C. § 2064(a)(2), the number of defective products distributed in commerce is one of the factors the staff may consider in determining whether a product defect creates a substantial risk of injury to the public, and that factor is a distinct factor from the severity of the risk, pursuant to 16 C.F.R. § 1115.12(g)(1). By way of further clarification, Complaint Counsel states that one defective product can present a substantial risk of injury to the public, if the injury which might occur is serious and/or if the injury is likely to occur. 16 C.F.R. § 1115.12(g)(1)(ii).

c) Complaint Counsel reiterates its objections and responses to subparts (a) and (b) of this Interrogatory. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it reviewed Central's test results, and the results of testing of and incidents related to Omegas, by or for UL, FM and CPSC, S.E.A., Hughes Associates, BodyCote Taussig, University of Maryland, governmental entities (Office of the Maryland State Fire Marshall; Farifax County Virginia Fire Prevention Division), independent entities (NFPA) and other third parties.

d) See Response to subpart (c), above. Complaint Counsel objects to this

Interrogatory to the extent that it seeks information provided to Complaint Counsel on a confidential basis by third parties. Complaint Counsel will produce all non-privileged and non-confidential documents pertaining to the tests and fires. Complaint Counsel will produce other responsive documents received by third parties subject to a confidentiality claim upon receipt of permission by those parties, execution of an appropriate confidentiality stipulation by Respondents, and/or protective order by the Presiding Officer.

132. **Describe the CPSC's preliminary determination of the alleged risks associated with the Omegas. Your response should include, without limitation, the following:**

(a) the date the CPSC Staff issued its preliminary determination of the alleged risks associated with the Omegas;

(b) the identity of all persons involved in the Staff's preliminary determination;

(c) the level of hazard assigned to the Omegas in accordance with the applicable provisions of the CPSC Recall Handbook; and

(d) an identification of all data, studies, reports, and/or testing upon which CPSC relied in making its preliminary determination.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of

admissible evidence. Without waiving its objection, Complaint Counsel responds as follows:

(a) 1/28/98

(b) Complaint Counsel objects to this subpart on the ground that the term "involved in the preliminary determination" is undefined, unclear, vague and ambiguous. Without waiving its objection, Complaint Counsel responds that Marc J. Schoem, Catherine A. Cumberland, and Eric H. Singer signed off on the preliminary determination. Eric Stone, Rohit Khanna, Nicholas Marchica, and Andrew Stadnik were all present for and/or contributed to the decision.

(c) Complaint Counsel objects to this subpart on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this subpart on the ground that it request irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this subpart on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not generally publicly disclosed. Without waiving its objections, Complaint Counsel responds that Omegas were classified as a class "a" hazard.

(d) See response to (c), above.

133. Explain the factual basis underlying the level of hazard assigned to the

Omegas in the CPSC Staffs preliminary determination of the alleged risks associated with the Omegas. Your response should include a statement of the specific factors considered, and the data or information relied upon, by the CPSC Staff in determining the level of hazard assigned to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "level of hazard assigned" are undefined, unclear, vague and ambiguous. Assuming that Respondents intend to refer to the Agency's internal hazard classification of Omega sprinklers, Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information protected from discovery by the work product and/or attorney client privileges. Complaint Counsel also objects to this Interrogatory on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not publicly disclosed. Without waiving its objections, Complaint Counsel responds that the basis for its hazard classification of Omega sprinklers was the results of testing by four organizations of a total of over 4,800 Omega sprinklers from sites around the nation, which yielded an approximately 40% failure rate, coupled with evidence of six fires in which Omegas reportedly failed to activate, and the fact that Omegas are designed to be a life safety device. When they do not function to suppress or contain a fire, the public is exposed to the risk of death or grievous injury.

134. State whether CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas has changed over time. If so, describe any such change and the information or testing giving rise to the change.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "initial assignment of the level of hazard" are undefined, unclear, vague and ambiguous. Assuming that Respondents intend to refer to the Agency's internal hazard classification of Omega sprinklers, Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information protected from discovery by the work product and/or attorney client privileges. Complaint Counsel also objects to this Interrogatory on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not generally publicly disclosed. Without waiving its objections, Complaint Counsel responds that its hazard classification for Omega sprinklers has not changed over time.

135. For the period from 1990 through the present, identify all consumer products classified by the CPSC as presenting a hazard level equal to, or greater than, the hazard level assigned to the Omegas. For example, if the Omegas have been classified as a "Class B" hazard, identify all other consumer products that have been classified as "Class B" hazards and all consumer products identified as "Class A" hazards. For each consumer

product identified in your response, you should provide the following:

(a) the identity of the consumer product by brand name or other description;

(b) the identification of the manufacturer of each such consumer product;

(c) the date of the CPSC's classification of the consumer product as presenting a hazard;

(d) the hazard level assigned each such consumer product;

(e) a description of the hazard presented by each such consumer product;

(f) for each such consumer product, the estimated total number of units manufactured as of the date the CPSC made its determination of the hazard level;

(g) for each such consumer product, the estimated total number of units in the hands of the consumers as of the date the CPSC made its determination of the hazard level;

(h) the number and severity of any and all personal injuries associated with each such consumer product;

(i) the number of deaths associated with each such consumer product; and

(j) the nature and number of property damage reports associated with each such consumer product.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

Information pertaining to other consumer products classified by the staff as presenting a hazard priority level equal to or greater than the hazard level assigned to the Omegas will not lead to the discovery of admissible evidence regarding the hazard presented by the Omegas. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks confidential and/or trade secret or other information whose disclosure is prohibited pursuant to 15 U.S.C. § 2074 and/or 15 U.S.C. § 2055. Plaintiffs also object to this question to the extent that it seeks information that is protected by the attorney-client and work product privileges. Without waiving its objections, Complaint Counsel will provide all non-privileged and non-confidential information pertaining to other consumer products classified at a level equal to or greater than the hazard level at which Omega sprinklers are classified.

G. Sufficiency of Corrective Action

136. For each consumer product identified in your response to Interrogatory No. 135, describe any and all corrective action taken with respect to that product. Your response should include, without limitation, the following:

(a) a statement of the CPSC's role in effecting the corrective action;

(b) a statement of whether the corrective action that was taken was completely voluntary on the part of the manufacturer, retailer, or distributor, was the result of a negotiated corrective action plan with the CPSC, or otherwise was compelled by the CPSC through the initiation of an adjudicative proceeding pursuant to 15 U.S.C. § 2064; and

(c) the identification of all documents evidencing the corrective action taken with respect to each such consumer product.

Response: See response to Interrogatory No. 135.

137. For each consumer product identified in your response to Interrogatory No. 135, describe the nature and extent of the public notice provided as part of the corrective action taken. Your response should include, without limitation, the following:

(a) the specific nature of the notice given (e.g., written notice to consumers and retailers, press releases, bill-boards, posters, etc. . .);

(b) a description of the media coverage associated with the corrective action (e.g., newspaper ads and reports, magazine ads and reports, wire services, other print media, television coverage, radio coverage, and/or internet exposure);

(c) a description of the extent of media coverage and exposure of the corrective action (e.g., a list of all newspapers, magazines, wire services, television stations, radio stations, and internet services that provided notice or otherwise covered the corrective action);

(d) a description of the frequency and amount of media coverage associated with the corrective action (e.g., the number of days newspapers carried a written notice, or the number of days the notice appeared on television); and

(e) a description of any and all point of purchase notification to consumers associated with the corrective action (e.g., posters and notices provided to retailers to

display at stores).

Response: See Response to Interrogatory No. 135.

138. For each consumer product identified in your response to Interrogatory No. 135, describe the nature of the recall component, if any, of the corrective action taken. Your response should include, without limitation, the following:

(a) the number of individual units recalled;

(b) the remedy options offered to consumers (e g., replacement, refund, substitute products);

(c) an assessment of consumer participation in the recall (e g, percentage of units in the hands of consumers that were actually received by the recall);

(d) identification of any and all documents revealing the level of consumer participation in the recall; and

(e) a description of any studies conducted by the manufacturer, distributor, or retailer of the consumer product, or by the CPSC, or by both, or by any other person or entity, assessing the effectiveness of the recall program.

Response: See Response to Interrogatory No. 135.

139. Explain the factual basis of your contention, if any, that the corrective action proposal of Respondents in connection with the Omegas is insufficient to protect the public or otherwise fails to provide adequate remedial measures under 15 U.S.C. § 2064.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Without waiving its objection, and assuming

that Respondents refer to their counsel's latest proposal for a testing-based corrective action program, Complaint Counsel reiterates its explanation in Response to Interrogatory No. 114.

140. Describe in detail the public notice, recall, and/or other remedial measures that you contend are necessary with respect to the Omegas to constitute a sufficient remedy and/or corrective action proposal under 15 U.S.C. § 2064.

Response: Complaint Counsel would seek to impose public notice pursuant to 15 U.S.C. § 2064 (c), including the following: public notice of the defect, including paid advertisements, video news releases, and other necessary and/or appropriate methods under the circumstances; mailing of notice to each person who is a manufacturer, distributor or retailer of Omega sprinklers; notice to every person to whom Respondents know Omega sprinklers were delivered or sold.

141. Identify and describe all efforts taken by the CPSC (including, without limitation, consumer surveys, press surveys, and public opinion polls) to evaluate, test, or otherwise determine the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, and assuming that Respondents refer to their counsel's latest

proposal for a testing-based corrective action program, Complaint Counsel refers Respondents to its Response to Interrogatory No. 114.

142. Identify and describe all criteria and factors considered by the CPSC in measuring the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its Response to Interrogatory No. 114.

143. Identify all public statements, press releases, or other information released to the public by the CPSC that in any way relates to or otherwise refers to the Omegas and/or Respondents.

Response: March 3, 1998 Administrative Complaint; March 4, 1998 press release and press statement; March 4, 1998 video news release relating to Omega sprinklers; Omega Sprinkler Questionnaire on CPSC web site; Omega Sprinkler Questionnaire on CPSC fax-on-demand service.

H. <u>Initiation of Adjudicative Proceedings</u>

144. For the time period beginning January 1, 1982 to the present, identify all

incidents in which the CPSC has filed an administrative complaint pursuant to Section 15 of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2064. Your response should include, without limitation, the following:

(a) the date the administrative action was filed;

(b) the identity of the manufacturers, distributors, or retailers of the consumer product named as respondents in the administrative action;

(c) the identity of the consumer product at issue;

(d) a description of the alleged "substantial product hazard" at issue in each case; and

(e) a description of the outcome of the administrative action and the nature of the remedy awarded.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Any other administrative litigation relating to any product other than the Omega is irrelevant to the instant action.

145. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

The propriety of the Commission's decision to initiate the instant adjudicative proceeding against Respondents is not at issue herein. Complaint Counsel further objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it fails to define "participated." Complaint Counsel also objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Without waiving its objections, Complaint Counsel responds that the Commissioners made the decision of whether to initiate the instant adjudicative proceeding, upon consultation with and advice of their staff and the Office of the General Counsel. Alan Schoem, Eric Singer, Eric Stone, Deborah Orlove and Catherine Cumberland could all be said to have participated in the decision to initiate the adjudicative proceeding.

146. State the date on which the CPSC authorized Complaint Counsel to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The timing of the Commission's decision to initiate the instant adjudicative proceeding, in relation to the filing of same, is not at issue herein. Without waiving its objections, Complaint Counsel responds that the Commissioners voted on whether to authorize the Complaint by ballot submitted on February 18, 1998, and voted on on February 18, 1998 (Chairman Ann Brown), February 26, 1998 (Commissioner Gall) and March 2, 1998 (Commissioner Moore).

147. Identify all communications and documents (including internal memoranda and correspondence) relating to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to disclosure of such information on the ground that it seeks information protected from discovery by the work-product and attorney-client privileges.

148. State the reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding are irrelevant to this action (though the basis for the staff's recommendation of same have been indicated herein). Complaint Counsel further objects to this Interrogatory on the ground that it calls for speculation on the part of Complaint Counsel as to the thoughts of the Commissioners. Complaint Counsel is unable to speak to the reasons for the individual Commissioner's authorizations of, and decisions to initiate, the instant adjudicative proceeding and, pursuant to proper agency procedure, is prohibited from making inquiry into such matters, other than to state that the Commission authorizes the issuance of administrative complaints upon information and belief that a product or products present a substantial product hazard. Complaint Counsel further responds that the Complaint speaks for itself.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

CONFIDENTIALITY AGREEMENT

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") and Petitioner the Consumer Product Safety Commission (the "CPSC"), through undersigned counsel, hereby agree:

1. Petitioner and Respondents shall have the right to limit access to any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness, to the undersigned outside counsel for the parties.

2. Such documents or other tangible items must be designated by conspicuously stamping the words "OUTSIDE COUNSEL ONLY" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may limit access to such testimony to the undersigned outside counsel by notifying the other party of the portion of testimony to be designated on the record at the deposition or in writing no later than two days after the transcript is received.

3. Information designated for "OUTSIDE COUNSEL ONLY" shall not be disclosed or disseminated to anyone, except:

a. the undersigned outside counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purposes of assisting in the preparation of this litigation, provided, however, that no such information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person, entity, or firm with the prior written consent of all parties.

4. Petitioner and Respondents shall have the right to designate as CONFIDENTIAL any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness.

5. Such documents or other tangible items must be designated by conspicuously stamping the words "CONFIDENTIAL" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may designate portions of the record CONFIDENTIAL by notifying the other party on the record at the deposition or in writing no later than two days after the transcript is received.

6. Information designated "CONFIDENTIAL" shall not be disclosed or disseminated to anyone, except:

a. a party, counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purpose of assisting in the preparation of this litigation, provided, however, that no CONFIDENTIAL information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person who was involved in the preparation of the document or information; or

d. any other person, entity, or firm with the prior written consent of all parties.

7. Any party that provides documents or other discovery obtained from the other party in the course of this litigation to any person (other than the Court, court personnel, and court reporters) will first obtain from such person, prior to any such dissemination, a written statement in the form attached as Exhibit "A" hereto, that such person agrees to be bound by this Confidentiality Agreement. The undersigned counsel shall maintain a list of all such persons along with the written agreement of each person. Upon request of any party at any time, counsel in possession of the written agreements shall immediately either: (a) provide copies of the written agreements to the requesting party; or (b) submit the written agreements to the Court to determine whether any aspect of the written agreements are protected from discovery by any privilege.

8. When any document or information designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY," or other pleadings or papers disclosing or referring to such information are used in connection with any motion, hearing, filing or other submission to the Court, they shall be filed in an envelope under seal pursuant to the rules of this Court and shall be marked as follows:

> CONFIDENTIAL/RESTRICTED:
> The contents of this envelope are not to be revealed to anyone except the Court, or with the prior consent of all the parties herein, or pursuant to any other Order of this Court. If the contents are thus revealed, they shall thereafter be resealed.

9. a. Nothing in this Agreement shall preclude any party from challenging a designation of "CONFIDENTIAL" OR "OUTSIDE COUNSEL ONLY" by another party. If any party elects to challenge a designation of any document, deposition testimony, or

information pursuant to this order, that party must provide at least five days advance notice to afford the designating party an opportunity to remove voluntarily such designation.

b. If, after the five-day period has expired, the designating party has not agreed to remove the designation and the parties are otherwise unable to resolve the challenge to the designation, the challenging and designating parties shall contact the Court for a determination of whether the challenged designation is appropriate. The challenging party shall provide the Court with one copy of each document, response, or portion of transcript challenged. The challenging party has the burden of proving the inapplicability and/or incorrectness of any designation.

c. If the challenge is not resolved by agreement, or by voluntary removal, and if the Court is not contacted, then the designation shall remain in effect and shall continue to apply to such document or information.

10. All documents and other discovery produced or obtained in the course of this litigation, whether designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" or not, shall be used for the sole and limited purpose of preparation for and trial of this action and shall not be used for any other purpose. "For purposes of preparation and trial of this action," as used in this Order, means that individuals obtaining access to discovery: (i) can read and review such discovery to become knowledgeable about this litigation; and (ii) can comment on such discovery to counsel for the parties if they so choose. All other uses, including but not limited to (1) making such discovery available to any person who has not signed Exhibit "A" hereto and (2) causing such discovery to be published in any trade journal, newspaper, or other written

publication other than filings with this Court connected with this litigation, shall fall outside the definition of "For purposes of preparation for and trial of this action." Nothing in this Confidentiality Agreement shall preclude persons wishing to use discovery from this litigation for purposes other than "For purposes of preparation for and trial of this action" from moving this Court, upon reasonable notice to the parties, for appropriate relief.

11. Within thirty days of the close of this litigation for any reason, each party shall retrieve all copies of materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" from his or its own files, and from experts or other persons to whom he or it has provided such materials consistent with this Confidentiality Agreement, and shall do one of the following: (1) return to the designating party all such materials, including all copies thereof, produced by such designating party during this action; or (2) certify in writing to the designating party that all materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" produced by such other party during this action have been destroyed. All material protected by this Confidentiality Agreement which has been placed in any computer databank, hard drive, or disk shall be completely erased, and any documents listing or summarizing information protected by this Confidentiality Agreement shall be destroyed within the same period.

12. Nothing herein contained shall be construed to preclude or limit any party from opposing any discovery on any grounds that would otherwise be available. This Agreement shall not, in and of itself, prejudice any contention of any party upon any motion, nor shall this Agreement constitute a waiver of any right to seek relief from the Court from any and all of the provisions hereof or other modifications of the terms hereof. This Agreement shall not limit any party's

right to seek judicial review or to seek further and additional protection against or limitation upon production or dissemination of information and documents or their contents.

13. Nothing herein shall be construed to preclude or limit the presence of any individual at any hearings in or the trial of this action.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

As we preliminarily indicated to you in my letter of May 1, the Staff's discovery responses are deficient. In fact, it appears either that the Staff is entirely lacking in any factual predicate for the Complaint or that the Staff is simply refusing to produce even the most fundamental information in its possession.

This letter will serve to detail the deficiencies in the Staff's discovery responses. Due to the 20 day limitation imposed by 16 C.F.R. § 1025.36, we will expect supplemental responses in hand on or before May 8, 1998. In the absence of such responses, we will file a motion to compel.[1/]

A. Interrogatories

1. Failure To Identify People -- Throughout the Staff's Interrogatory Responses, you have failed to provide the names of persons with knowledge of pertinent information (e.g., Response Nos. 5-24, 53-72). Such basic information is explicitly required by the discovery rules, and is necessary in order for Central to take the depositions of key witnesses. Given the

---

1/ Additionally, this letter will confirm that we finally received the actual documents from the Staff on May 4, 1998, a full week after such documents were due. In the future, please arrange for prompt delivery of all discovery responses and pleadings.

time limits imposed by the Administrative Regulations, the Staff's failure to provide the requested information severely prejudices Central.

2. Failure To Identify Documents -- Except in the most general and vague fashion, you have failed to identify documents related to key information (e.g., Response Nos. 5-24, 53-72). In addition, merely promising to produce relevant and responsive documents at some unspecified future date is inadequate (e.g., Response Nos. 78-83) -- documents identifiable and available now must be identified and produced now.

3. Failure To Respond -- For a large majority of the Staff's Interrogatory Responses, you have simply provided no response whatsoever (e.g., Response Nos. 5-40, 74-84, 102, 105, 124, 140-42). While repeating voluminous objections and half-answers, you fail to provide clear and concise responses to relatively simple and straightforward questions. If the Staff lacks the supporting information, it should state so plainly; otherwise, the Staff has a duty to provide responses and the support therefor.

4. Referring To Own Pleadings -- It is insufficient as a discovery response simply to reference your own self-serving pleadings (e.g., Response Nos. 5-24).

5. Documents In Respondents' Possession -- The mere fact that some requested information may also be contained in Respondents' files does not relieve the Staff from revealing information in its own files (e.g., Response Nos. 1-3).

6. Application Of Law To Facts -- Interrogatories seeking the application of law to the specific facts of the case are permissible; objections that such interrogatories call for conclusions of law are groundless (e.g., Response Nos. 5-25).

7. Failure To Differentiate Among Models And Piping Systems -- Throughout the Staff's Responses, you have refused to examine or provide information relevant to the differences between the various models of Omegas, different o-rings, and different piping systems (e.g., Response Nos. 5-24, 53-72, 78-86). The Staff must either admit that it has failed to examine and test for such differences, or it must provide Respondents with the Staff's differing analysis for each of these variations.

8. Purported Claims Of Privilege -- The Staff repeatedly refuses to provide information about its contacts with third parties (even contacts with Respondents' employees) and information underlying the Complaint based on a purported claim of privilege (e.g., Response Nos. 100-01, 106-14). Neither the attorney-client privilege nor the work product doctrine applies to such information. The Staff cannot hide information unfavorable to its

position behind a specious claim of privilege. Because it is charged with acting in the public interest and with due regard to Central's rights, the Staff must reveal even unfavorable information developed by its attorneys. Moreover, the Staff is required to produce a detailed privilege log addressing all claims of privilege.

B. Responses To Requests For Documents

1. Purported Claims Of Privilege -- As with the Interrogatory Responses, the Staff's Responses To Requests For Documents repeatedly refuse to provide information based upon a flawed claim to either attorney-client privilege or the work product doctrine (e.g., Response Nos. 8, 19-20). Such privileges have either been waived (in the context of contacts with third partes) or simply do not apply where the Staff is pursuing active, offensive litigation. Once the Staff decided to file the Complaint, it opened itself up to discovery.

2. Failure To Produce Identified Documents/ Administrative File -- The Staff has refused to produce the documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint and the Staff's administrative file (e.g., Response Nos. 1, 7). This is the most basic and fundamental discovery expected under the rules of procedure. Denying access to such documents after filing a Complaint is preposterous.

3. Miscellaneous Problems -- The Staff's other responses to the document requests suffer from many of the same problems as the Staff's responses to the interrogatories: (a) the Staff cannot delay producing available documents; (b) the Staff must admit where it knows of no supporting documents; (c) the Staff cannot refuse to produce documents by claiming that Respondents already possess the documents or by referring to the Staff's own self-serving pleadings; and (d) the Staff cannot refuse to respond to document requests by pretending not to understand simple requests or by providing only partial answers.

4. Completeness Of Responses -- Not withstanding the very serious charges that you have leveled against Central, the Staff's entire production consists of half of one box of documents. Most of these documents appear to be copies of documents supplied to you previously by Central. Your incomplete discovery responses suggest, however, that there may be other documents that you intend to use at trial that you have not yet produced. Moreover, during telephone and other conversations with Kathy Sanzo, members of the Staff have stated that you have documents in your possession that would prove harmful or embarrassing to Central if publicly revealed. Our review of the documents that you have produced reveals no such documents. Please produce any documents in your possession that are responsive to the

requests. Be advised that we will seek to have any documents that are not produced excluded from evidence at trial.

We will expect complete and responsive supplemental responses no later than May 8. Please advise us by the end of the day on May 5 whether the Staff intends to provide such responses, in order to avoid the unnecessary time and expense of preparing a motion to compel.

Regards,

Thomas P. Hogan, Jr.

Re: *In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2
Complaint Counsel's Responses to Respondents' First Discovery Requests

Dear Mr. Hogan:

I am writing in response to your May 1, 1998 and May 4, 1998 correspondence in the above-referenced matter. As you know, I attempted to call you immediately after receiving your fax at 2:00 p.m. last Friday, in which you informed us that you had received our written discovery responses without any attached documents. As your office informed me that you had left for the day, I left you a voice mail message expressing my concern and confusion that you had received our written responses without receiving the box of documents in which they were contained. I trust from your message yesterday, and letter today, that you have the box of documents. As you may have noted, the responses and documents were sent via certified mail, return receipt, to your office on April 27. Pursuant to the applicable regulations, service via certified mail is appropriate and acceptable.

As you know, Complaint Counsel sent a box with over 2000 Bates-stamped pages of documents, as well as a videotape, to Respondents with its discovery responses. As we indicated in those responses, a number of documents that Complaint Counsel has that may be responsive to Respondents' requests were provided to Complaint Counsel by third parties. As you know, Complaint Counsel is prohibited by statute from disclosing any information received from third parties that may be confidential commercial information or trade secret. To ensure speedy disclosure of information to Respondents, and to prevent unnecessarily calling upon the Presiding Officer to resolve such issues, Complaint Counsel has attempted to negotiate with the third parties directly to obtain permission to provide all such information to Central. At this time, we have received such permission from two parties - Marriott and

Sheraton. The Marriott documents were produced in the box of documents forwarded to you last week. Having just received final permission today from counsel for Sheraton, those documents are being Bates stamped and copied at this time, and will be sent to you immediately.

We also have voluminous documents from two testing laboratories, one of which has indicated preliminarily that they will agree to production of their documents as long as there is a protective order preventing public disclosure of same; however, their counsel has requested that it be given until the middle of this week to make a final determination on disclosure. We await review of documents and responses from the other laboratory, and will prepare those documents immediately upon receipt of permission to disclose. If you would prefer a resolution of this matter before the Presiding Officer, however, we would be pleased to copy and provide the documents to him immediately.

You suggested in your letter that the CPSC has been in contact with current Central employees without the presence of Respondents' counsel. CPSC staff has not engaged in any such *ex parte* contacts. As indicated in Complaint Counsel's responses to discovery, Complaint Counsel will submit a document that may be responsive to Respondents' Request for Production #20 to the Presiding Officer for *in camera* review for a determination of whether, and to what extent, this document should be produced.

You also indicated in your correspondence your desire to obtain a copy of the data compilation prepared by Complaint Counsel with respect to Omega failures. Although Complaint Counsel has provided you with the underlying test data upon which its compilation is based, and although the compilation is continually evolving and is Complaint Counsel and its staff's work product, in the interest of full disclosure, Complaint Counsel will produce its compilation as it existed at the time the complaint was filed.

Additionally, Complaint Counsel is in the process of preparing a privilege log of documents received or created that may be responsive to Respondents' requests, and for which a claim of privilege has been made.

We appreciate and share Respondents' perspectives on the importance of full disclosure in this matter, and trust that Respondents will apply such perspectives in responding to Complaint Counsel's discovery requests.

Sincerely,

Deborah S. Orlove

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter responds to your letter of May 6, 1998.

First, regarding the scope of discovery provided by the Staff, your letter fails to address the multiple deficiencies with the Staff's discovery responses raised in my letter of May 4. For example, you still refuse or fail to identify persons with knowledge regarding the key allegations in the Complaint. By failing to provide such information, you completely block Central's ability to take depositions of your witnesses and effectively shut down discovery. Moreover, you fail to address the large number of interrogatories and document requests for which the Staff has provided no response whatsoever. These are only two examples of your letter's failure to address the many deficiencies described in my letter of May 4. It would thus appear that the Staff is refusing to engage in any good faith attempt to resolve this discovery dispute. Therefore, in the absence of full and complete supplemental responses from the Staff as discussed in my letter of May 4, we will be forced to file a motion to compel.

Second, in your letter, you represented that the Staff will provide us with a privilege log. You have not indicated when you will provide it, however. Given the pervasive nature of your privilege objections, the timing requirements established for motions to compel by the CPSC rules of practice, and the fact that such a log already is tardy, we will expect to receive the Staff's privilege log no later than May 8, 1998, as we requested in my letter of May 4.

Your letter also represents that you will begin to provide the Staff's initial test results, but again you do not provide a set date for production. As indicated to you in my letter of May 4, we will expect to receive a full supplemental production by no later than May 8, 1998.

In addition, your letter reiterates a refusal to produce purportedly confidential documents from third parties absent a confidentiality agreement. In my letter to you of May 1, we provided you with a draft Confidentiality Agreement. Despite your stated willingness to produce the referenced documents pursuant to such an agreement, your letter does not comment on or otherwise address the proposed Confidentiality Agreement. In the absence of your comments, we will submit the Confidentiality Agreement for Court approval contemporaneously with any necessary motion to compel. Moreover, please be advised that if you refuse to produce any document for any reason, Central will oppose the admission of that document or class of documents into evidence at the trial of this matter.

Finally, we hereby reiterate our request that the Staff not attempt to engage in any ex parte contacts with the Court.

To date, the Staff has not provided any meaningful discovery to Respondents. Of the 2000 pages of documents produced, approximately 1500 consist of test results provided to you by Central, and many of the remaining 500 consist of publicly available documents. Your discovery provides no meaningful information to Central regarding the bases of your claims and substantially impairs Central's ability to prepare for trial. The Staff cannot and should not be permitted to file a public Complaint, but then refuse to provide the evidence purportedly supporting such claims. We hope that the Staff will choose to take a more reasonable and forthcoming approach going forward in this litigation.

Regards,

Thomas P. Hogan, Jr.

Re: *In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2
Complaint Counsel's Responses to Respondents' First Interrogatories and Request for Production of Documents

Dear Mr. Hogan:

I am writing to confirm my receipt of the United States Certified Mail return receipt for the box of documents we forwarded to you on April 27, 1998 in response to Respondents' First Request for Production of Documents. The return receipt confirms that the documents were received by you on Friday, May 1, 1998, and not on Monday, May 4, 1998, as your May 4 correspondence claims.

I am also writing in response to your telecopy of yesterday late afternoon, May 7, 1998, which reached my desk this morning. I assume that your letter was written prior to your receipt of our supplemental discovery, which was forwarded to your office via certified mail, return receipt, yesterday.

In your May 7 letter, you indicate that Respondents are unable to take depositions of Complaint Counsel's witnesses, as Complaint Counsel has "failed to identify persons with knowledge regarding the key allegations in the Complaint." However, please note that Complaint Counsel has identified numerous persons with such knowledge, in response to Interrogatories 106, 111, 113, 115, 132, and 145. As indicated in our responses to Respondents' Interrogatories, Complaint Counsel has not yet determined who it will call as witnesses, either factual or expert, in this matter. As we determine who our witnesses will be, we will be sure to supplement our responses to identify same in accordance with the Rules of Practice.

With respect to your concern regarding *ex parte* communications, please be assured that Complaint Counsel has no intention of engaging in any prohibited communications with the Presiding Officer or anyone else. Complaint Counsel will follow all applicable procedures, and will serve upon Respondents a copy of any and all motions it files regarding discovery and other matters. As you know, Respondents may, by motion, set forth their justification for desiring access to, or disclosure of, *in camera* materials for the preparation and presentation of their case.

Additionally, you stated in your May 7, 1998 letter that my letter of the previous day promised you the Staff's test results. In my letter, I indicated that we would provide the data compilation of test results compiled by the staff -- which you requested in discovery. Although Complaint Counsel considers the compilation its work product, and has provided you with the underlying data upon which the compilation is based, we agreed to (and did, in yesterday's production) provide you with the compilation in the spirit of full and open disclosure.

With respect to your conclusion that the 2200 documents provided by Complaint Counsel in response to Respondents' First Request are not "meaningful," we invite you to again review those documents, which, along with other documents that we are attempting to obtain permission to produce, form the foundation and basis of this case, and demonstrate that the Omega is defective and poses a substantial risk of injury to the public.

Please do not hesitate to contact me if you have any further concerns. Additionally, in order to avoid crossing of correspondence, it may be more effective for all concerned if you would kindly allowing sufficient time for my response and supplement to reach you via first class mail prior to sending further correspondence on the same topic.

Sincerely,

Deborah S. Orlove

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter is written in response to your letter of May 8, 1998.

We have received Complaint Counsel's supplemental production of documents. This production remains deficient, as it provides little more than the naked conclusions of Complaint Counsel regarding test results. Absent the underlying data and methodology, these results provide Central with little relevant information and no opportunity to examining the validity of the results.1/

Nevertheless, please clarify whether it is Complaint Counsel's position that you have produced all relevant and responsive documents, including all documents currently in your possession which you intend to introduce at trial. If so, Central will begin to prepare for the trial of this matter based on the documents already produced. For example, based on the test results produced in your supplemental production, this will mean, inter alia, that Complaint Counsel has no information that indicates any failures regarding Omegas using silicone o-rings, and no

---

1/ Contrary to the assertions in your letter, your discovery responses to date have not provided the underlying data supporting these test results, unless such results are compiled almost entirely from Respondents' own test results already produced to Complaint Counsel. In fact, your prior discovery responses and correspondence indicate that you have not produced the underlying data and methodology based on a claim to work product protection.

information that indicates failures in any post-1990 Omegas used in copper or plastic systems. If Complaint Counsel has not produced all relevant documents, please confirm this fact in writing by May 14, so that we can begin to prepare a motion to compel.

Regarding Complaint Counsel's identification of potential witnesses, your letter points to the fact that you have identified "numerous persons with . . . knowledge" in response to six of Respondents' interrogatories. It appears, however, that this represents a selective and incomplete disclosure of "persons with knowledge." Moreover, Complaint Counsel has not provided sufficient documents that would allow Respondents to identify other potential witnesses. If it is Complaint Counsel's position that the persons identified by Complaint Counsel in discovery responses to date represent the universe of potential fact witnesses for Complaint Counsel, please confirm this fact. On the other hand, if Complaint Counsel is aware of other "persons with knowledge" that Complaint Counsel has not disclosed, please confirm this fact in writing by May 14.

In addition, to date, Complaint Counsel continues to ignore several other pressing issues. Complaint Counsel has not addressed the multiple deficiencies in your discovery responses as described in my letters of May 4 and May 7. Moreover, Complaint Counsel has failed to produce a privilege log despite repeated requests from Respondents. Finally, despite several reminders, Complaint Counsel has neither commented on nor responded to the draft Confidentiality Agreement that Respondents sent to you two weeks ago.

Regards,

Thomas P. Hogan, Jr.

RESPONDENTS' RESPONSES AND OBJECTIONS TO COMPLAINT COUNSEL'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central"), pursuant to 16 C.F.R. § 1025.33, hereby provide responses and objections to Complaint Counsel's First Request For Production of Documents and Things. Central's responses may be supplemented in accordance with 16 C.F.R. § 1025.31(f).

PREFATORY STATEMENT

Complaint Counsel has made extremely broad discovery requests. The responses to Complaint Counsel's request will exceed 400 boxes of documents, and the copying to make the documents available for inspection will cost Central in excess of $100,000.00. Despite this extraordinary volume and expense, Central will make every effort to comply with Complaint Counsel's requests.

Pursuant to 16 C.F.R. § 1025.33, Central will permit Complaint Counsel to inspect and designate for copying the responsive documents described below. This inspection will take place at a mutually convenient time at the offices of Morgan, Lewis & Bockius LLP, 1800 M Street, N.W., Washington, DC 20036. Because of the extremely large volume of documents, such

documents will be made available for inspection on a "rolling basis," with the documents made available to Complaint Counsel at their request after Central's counsel has reviewed such documents. Central anticipates that it will be able to make available immediately approximately 100 boxes for review by Complaint Counsel, and Central's counsel will continue to review the remaining responsive documents, estimated to encompass 300 boxes, as quickly as possible. Central also anticipates providing Complaint Counsel with a privilege log corresponding to the documents produced on a rolling basis.[1/]

In addition to the approximately 400 boxes described above, Central is in possession of more than 1,000 additional boxes consisting of the following categories: accounts payable purchase journals, accounts payable cash disbursement journals, sales commission reports, accounts receivable trial balances, customer sales activity reports, flash reports, general ledger statements, inventory accounting summaries, accounts payable post reports, labor tickets, invoices and credits, vendor invoices, sales analyses, accounts payable batch files, and miscellaneous documents located in multiple field offices across the nation. Central does not regard these documents to be responsive or relevant to this matter. In addition, the time and expense of reviewing and producing these documents would be prohibitive. Nevertheless, if Complaint Counsel desires to inspect such documents, they should notify Central's counsel, and Central will attempt to provide Complaint Counsel an opportunity to inspect such documents.

1/ If Complaint Counsel desires an independent copy of all of the documents contained in the 400 boxes, and Complaint Counsel is willing to pay for the cost of copying and transporting such documents, Central will of course cooperate fully with Complaint Counsel to arrange for such copying.

As with Complaint Counsel's discovery responses, Central's production of documents is subject to the entry of a reasonable Confidentiality Agreement.

OBJECTIONS TO EACH AND EVERY DISCOVERY REQUEST

Central objects to each and every Interrogatory, Document Request, and/or Request for Admission (collectively, the "Discovery Requests") stated by Complaint Counsel for the reasons set forth herein, and each stated objection is incorporated into the response to each numbered sub-part of the Discovery Requests as if set forth fully therein.

1. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence, and thus exceed the scope of permissible discovery as defined by 16 C.F.R. § 1025.31(c)(1).

2. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that are not in the possession, custody, or control of Central.

3. Central objects to each and every Discovery Request on the ground and to the extent that they call for a conclusion of law.

4. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents protected from discovery by the attorney-client privilege pursuant to 16 C.F.R. § 1025.31(c)(2); specifically, any information or documents that contain, describe, refer, relate to, or reflect confidential communications between Central and their attorneys or their representatives regarding legal advice, opinions, counsel, or

confidential communications that were created, produced, written, prepared, typed, transcribed, copied, photographed, duplicated, or reproduced.

5. Central objects to each and every Discovery Request on the ground and to the extent they seek information and/or documents protected from discovery by the self-critical privilege or any other applicable privilege.

6. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents prepared in anticipation of litigation or for trial by or for Central, Central's counsel, or Central's representative, because such materials are protected from discovery pursuant to 16 C.F.R. § 1025.31(c)(3).

7. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that contain, report, describe, reflect, refer, or relate to facts or opinions held or known by an expert retained or specially employed by Central in anticipation of litigation or preparation for trial, and who is not expected to be called as a witness at trial, because such material is protected from discovery pursuant to 16 C.F.R. § 1025.31(c)(4).

8. Central objects to each and every Discovery Request on the grounds and to the extent that they are overly vague, unduly broad, and/or unnecessarily burdensome.

9. Central objects to each and every Discovery Request on the grounds and to the extent that they are duplicative of other discovery requests, request information already provided to Complaint Counsel by Central, and/or request information equally available to or ascertainable by Complaint Counsel.

10. Central objects to each and every Discovery Request on the grounds and to the extent that such requests seek documents or information that constitute a trade secret or other confidential research, development, or commercial information.

11. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that are not owned by Central and/or are documents in which other parties have a proprietary interest.

12. Central objects to each and every Discovery Request on the grounds and to the extent that it fails to distinguish between Central Sprinkler Corporation and Central Sprinkler Company.

13. To the extent that a document request refers to or incorporates an interrogatory, or any part thereof, Central hereby fully incorporates by reference into the response to the document request any objections raised in responding to the interrogatory.

14. Central objects to each and every Discovery Request on the ground and to the extent that they exceed the scope of discovery permitted under 16 C.F.R. § 1025.31.

15. Central objects to the instruction and definitions included in the Discovery Requests on the ground and to the extent that they exceed the scope of permissible discovery under 16 C.F.R. § 1025.31.

16. To the extent that Central objects to a particular Discovery Request on the basis of a specific objection, Central hereby states that they do not thereby waive the General Objections. To the extent that Central objects to a particular Discovery Request but then proceeds to answer said Discovery Request in whole or in part, Central hereby states that they do not thereby waive any objection to the Discovery Request in question.

RESPONSES

REQUEST NO. 1: Provide all records relating in any way to your sale of any Omega sprinkler, including but not limited to purchase orders, shipping documents, billing statements and sales receipts.

RESPONSE NO. 1: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: Central keeps records such as those requested for up to ten years. Thus, Central has an extremely large number of potentially responsive documents. Total compliance with this request would require production of approximately 900 boxes of invoices (each box containing 3000 to 5000 invoices), as well as similar numbers of shipping documents stored on-site at fourteen locations throughout the United States. In addition, Central generates multiple sales reports, including "flash reports" (total sales activity), sales by part, sales by product, sales by salesman, sales by region, and sales by warehouse. These weekly reports generally are kept for seven years and number in the thousands of boxes.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 2: Provide all records relating in any way to your provision of any Omega sprinkler as a free sample or promotional item.

RESPONSE NO. 2: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 3: Provide all records relating in any way to marketing and/or sale of Omega sprinklers by you.

RESPONSE NO. 3: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: Potentially responsive documents include all of the documents created by two entire

departments of Central: Technical Service and Sales. Technical Services creates all marketing documents, including product cut sheets, sales catalogues, pricebooks, and instructional videos. An entire floor of a building is dedicated to storage of current and obsolete Technical Services documents. Central's Sales Department is comprised of individuals working and creating documents on three continents, including every state in the United States.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 4: For each year in which you manufactured and/or distributed Omega sprinklers, provide all records relating in any way to

(a) your gross income;
(b) your net income;
(c) the amount in revenues generated from product sales;
(d) the amount in revenues generated from sales of Omega sprinklers.

RESPONSE NO. 4: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: There are thousands of potentially responsive reports created on a weekly or monthly basis over sixteen years. While many of these reports exist in paper form, most are stored as data on tape. To retrieve this data, each tape would have to be located, loaded, and queried for relevant information. Central's Information Services department estimates that it would take a person working full-time at least two months to complete this task. Moreover, this request alone could amount to well over a million pages.

Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. To the extent Central has any such information, pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 5: Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

(a) steel piping systems;
(b) copper piping systems;
(c) plastic piping systems;
(d) polybutylene piping systems;
(e) other piping systems not listed above (specify the type of piping system)?

RESPONSE NO. 5: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. To the extent Central has any

such information, pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 6: Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

a) private homes
b) apartment buildings
c) schools (including universities and colleges, public or private)
d) nursing homes
e) hospitals
f) detention facilities (including jails, juvenile detention facilities, etc.)
g) homeless shelters
h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)
i) hotels
j) museums
k) offices (including office buildings)
l) warehouses with no public access areas
m) industrial facilities with no public access areas

RESPONSE NO. 6: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. To the extent Central has any such information, pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 7: Provide all records relating in any way to the current sales price for each Omega make and/or model listed in your response to Complaint Counsel's Interrogatory No. 13.

RESPONSE NO. 7: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: The final price paid by a particular customer will vary because price is contingent on several factors, including negotiation, discounts for timely payment, credit, quantity and purchasing history.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 8: Provide the complete personnel files for all persons identified in your response to Complaint Counsel's Interrogatory No. 15.

RESPONSE NO. 8: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade

secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 9: Provide the complete personnel files for all persons involved in design and/or development of each make and/or model Omega sprinkler.

RESPONSE NO. 9: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 10: Provide all records relating in any way to the design of and/or specifications for each component part and each chemical (including lubricants), tool and/or substance used in the Omega manufacturing process.

RESPONSE NO. 10: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents

available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 11: Provide all records relating in any way to your acquisition of any component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

RESPONSE NO. 11: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: In addition to the documents Central will produce, there are at least 700 additional boxes of Accounts Payable documents called "batch files" that might contain minimally responsive documents. Batch files are created and stored in such a fashion that responsive documents cannot be separated from non-responsive documents without reading every file. Batch files are stored according to the day a vendor invoice was paid, rather than by a vendor or part. In addition, there are over 700 boxes of Purchase Orders that may contain some responsive materials.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents

available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 12: Provide the complete personnel files of any persons who were/are employed by you who in any way took part or were involved in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

RESPONSE NO. 12: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 13: Provide all records relating in any way to the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time, including all tools, chemicals and substances used in the manufacture of same, including but not limited to cut sheets, drawings, and manufacturing instructions.

RESPONSE NO. 13: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or

commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 14: Provide three samples of each make and model of Omega sprinkler that you have ever manufactured.

RESPONSE NO. 14: Central responds as follows: Because the design of many of the Omega models has changed over time, it is possible that samples of every make and model of Omega sprinkler ever manufactured may not still be in existence. Pursuant to 16 C.F.R. § 1025.33, to the extent available, Central will make responsive Omega models manufactured by Central Sprinkler Company available to Complaint Counsel for inspection, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 15: Provide three samples of each tool, chemical and/or substance used in the manufacture of each make and model of Omega sprinkler. (If any such tools, chemicals and/or substances are used for more than one make and/or model of Omega, you need only provide one set of three samples).

RESPONSE NO. 15: Central objects to this request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks things that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks things that constitute trade secrets or other confidential research, development, or commercial information; it is duplicative of other discovery requests; and it seeks things that are not in

Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel.

REQUEST NO. 16: Provide all records relating in any way to any chemical or substance used in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system.

RESPONSE NO. 16: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: to the extent that this document request is referring to products such as "Stop-Leak," no such documents are known to exist.

REQUEST NO. 17: Provide all records relating in any way to any tests performed by you or anyone else to assess whether and/or how each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23 affects the operation of Omega sprinkler(s) or any Omega component part.

RESPONSE NO. 17: Central hereby incorporates its response and objections to Interrogatory No. 23.

REQUEST NO. 18: Provide all records relating in any way to each communication between you and any persons and/or entities (including your employees, agents, and consultants) regarding each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23.

RESPONSE NO. 18: Central hereby incorporates its response and objections to Interrogatory No. 23.

REQUEST NO. 19: Provide all records relating in any way to each prototypes and/or precursors of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

RESPONSE NO. 19: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 20: Provide the complete personnel files of any and all employees who were in any way involved in designing, developing and/or reviewing any and all prototypes and/or precursors of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

RESPONSE NO. 20: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 21: Provide all records relating in any way to any and all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

RESPONSE NO. 21: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 22: Provide all records relating in any way to any actual or alleged problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas (including whether any component part has been or alleged to have been out of tolerance) of which you have knowledge or have been advised.

RESPONSE NO. 22: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the

foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 23: Provide all records relating in any way to the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

RESPONSE NO. 23: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 24: Provide all records relating in any way to whether pressure (not internal to or part of the Omega itself) is required for activation of any make and/or model of Omega sprinkler.

RESPONSE NO. 24: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or

other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 25: Provide all records relating in any way to the amount of pressure (not internal to or part of the Omega itself) required for activation of each make and/or model of Omega sprinkler.

RESPONSE NO. 25: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 26: Provide all records relating in any way to any non-Omega sprinklers that contain an "o" ring.

RESPONSE NO. 26: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome ; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from

discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it is duplicative of other discovery requests.

By way of further explanation of these objections, Central states as follows: Most of the sprinkler heads manufactured by Central contain an o-ring. However, only the Omegas use a dynamic o-ring. The remaining models use a static o-ring seal. In addition, there are sprinklers manufactured by other companies that contain o-rings.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 27: Provide all records relating in any way to the approval, listing and/or certification of each Omega make and/or model, and each adaptation or device to be used with any Omega make and/or model (such as the "helper spring"), including testing or submission for approval, listing and/or certification by a certifying laboratory or institution (such as LJL or FM), and including all records relating in any way to whether approval, listing or certification was ever refused, withdrawn, discontinued or canceled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler.

RESPONSE NO. 27: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or

work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 28: Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM.

RESPONSE NO. 28: Central hereby incorporates its response and objections to Interrogatory No. 32.

REQUEST NO. 29: Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or certified by UL are listed or certified by UL.

RESPONSE NO. 29: Central hereby incorporates its response and objections to Interrogatory No. 33.

REQUEST NO. 30: Provide all records relating in any way to any Omega that did not or allegedly did not activate in a fire.

RESPONSE NO. 30: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client

privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 31: Provide all records relating in any way to anyone who was injured or allegedly was injured as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

RESPONSE NO. 31: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 32: Provide all records relating in any way to anyone who died or allegedly died as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

RESPONSE NO. 32: Central responds as follows: no such documents are known to exist.

REQUEST NO. 33: Provide all records relating in any way to any property damage or allegedly property damage as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

RESPONSE NO. 33: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 34: Provide all records relating in any way to any testing and/or examination of each Omega that failed to activate or allegedly failed to activate in a fire, the system in which that Omega was installed, and/or any other sprinkler from the same site.

RESPONSE NO. 34: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central,

and/or are equally accessible to or ascertainable by Complaint Counsel; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 35: Provide all records relating in any way to each Omega sprinkler of which you are aware or have been notified that, when tested, did not activate at 7 psig or below when exposed to its activation/triggering temperature.

RESPONSE NO. 35: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it calls for a legal conclusion; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 36: Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate at 7 psig or below when exposed to its activation/triggering temperature in testing, the system in which it was installed, and/or any other sprinkler from the same site.

RESPONSE NO. 36: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it calls for a legal conclusion; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 37: Provide all records relating in any way to any Omega sprinkler of which you are aware that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature.

RESPONSE NO. 37: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 38: Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate when exposed to its activation/triggering temperature when tested in the field.

RESPONSE NO. 38: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 39: Provide all records relating in any way to the design and/or development of the Omega "helper spring," and/or specifications for the manufacture of the "helper spring."

RESPONSE NO. 39: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 40: If you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation (triggering) temperature for long enough for its fusible like to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega), provide all records that you claim or believe support your contention.

RESPONSE NO. 40: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 41: Provide all records relating in any way to the method of operation of "helper spring."

RESPONSE NO. 41: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 42: Provide all records relating in any way to any and all tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part.

RESPONSE NO. 42: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 43: Provide all records relating in any way to your communications with any persons and/or entities (including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring.

RESPONSE NO. 43: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 44: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has cracked or broken, or allegedly cracked or broken.

RESPONSE NO. 44: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 45: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has exhibited corrosion.

RESPONSE NO. 45: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 46: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has leaked and/or weeped when tested or in a fire.

RESPONSE NO. 46: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 47: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire.

RESPONSE NO. 47: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or

commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 48: If you contend that dezincification may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

RESPONSE NO. 48: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 49: Provide all records relating in any way to any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

RESPONSE NO. 49: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 50: Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 50: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 51: Provide all records relating in any way to any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

RESPONSE NO. 51: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 52: Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 52: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 53: Provide all records relating in any way to any Omega from a piping system that is neither copper or plastic that has exhibited or allegedly exhibited dezincification.

RESPONSE NO. 53: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 54: Provide all records relating in any way to testing and/or examination of the system in which any Omega from a piping system that is neither copper or plastic, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 54: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 55: Provide all records relating in any way to any Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

RESPONSE NO. 55: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 56: Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 56: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information

and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 57: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47.

RESPONSE NO. 57: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 58: Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47 exhibits dezincification.

RESPONSE NO. 58: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 59: Provide all records relating in any way to any and all substances that you contend have been used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems, that may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature).

RESPONSE NO. 59: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from

discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 60: If you contend that the use of stop leak or other sealant, leakage prevention substance or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature), provide all records that you claim or believe support your contention.

RESPONSE NO. 60: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents

available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 61: Provide all records relating in any way to any and all Omegas that were exposed or were allegedly exposed to stop leak or any other sealant, leakage prevention substance or pipe cement.

RESPONSE NO. 61: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 62: Provide all records relating in any way to testing and/or examination of the system in which any and all Omegas that have been exposed or allegedly have been exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, were installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 62: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing

objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 63: Provide all records relating in any way to any and all Omegas that were not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire?

RESPONSE NO. 63: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 64: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51.

RESPONSE NO. 64: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks

information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 65: Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51 was affected by the use of stop leak or any other sealant., leakage prevention substance or pipe cement.

RESPONSE NO. 65: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 66: If you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

RESPONSE NO. 66: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 67: Provide all records relating in any way to any Omega that was exposed or was allegedly exposed to cutting oils or other substances used to cut pipe.

RESPONSE NO. 67: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or

work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 68: Provide all records relating in any way to testing and/or examination of the system in which any Omega that has been exposed or allegedly has been exposed to cutting oils or other substances used to cut pipe, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 68: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 69: Provide all records relating in any way to any Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

RESPONSE NO. 69: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 70: Provide all records relating in any way to testing and/or examination of the system in which any Omega that was not exposed or allegedly exposed to cutting oils or other substances used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 70: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the

discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 71: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 55.

RESPONSE NO. 71: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 72: Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to

Complaint Counsel's Interrogatory No. 55, to determine whether it was exposed to cutting oil or other substance used to cut pipe.

RESPONSE NO. 72: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 73: If you contend that swelling of the "o" ring in an Omega sprinkler may cause the Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you believe or claim support your contention.

RESPONSE NO. 73: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information

and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 74: Provide all records relating in any way to any and all Omegas containing an EPDM "o" ring, from a steel piping system, that have exhibited or allegedly exhibited "o" ring swelling.

RESPONSE NO. 74: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 75: Provide all records relating in any way to testing and/or examination of the system in which any Omega containing an EPDM "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 75: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks

information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 76: Provide all records relating in any way to any Omega containing a silicone "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling.

RESPONSE NO. 76: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 77: Provide all records relating in any way to testing and/or examination of the system in which any Omega containing a silicone "o" ring, from a steel

piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 77: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 78: Provide all records relating in any way to any Omega from a piping system that is not steel that has exhibited or allegedly exhibited "o" ring swelling.

RESPONSE NO. 78: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 79: Provide all records relating in any way to testing and/or examination of the system in which any Omega, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 79: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 80: Provide all records relating in any way to any Omega from a steel piping system that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

RESPONSE NO. 80: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information

and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 81: Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 81: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 82: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61.

RESPONSE NO. 82: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 83: Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61, to determine whether it exhibits "o" ring swelling.

RESPONSE NO. 83: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 84: Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega has a swollen "o" ring.

RESPONSE NO. 84: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 85: If you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

RESPONSE NO. 85: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or

commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 86: Provide all records relating in any way to any Omega that has exhibited or allegedly exhibited "o" ring adhesion.

RESPONSE NO. 86: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 87: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64.

RESPONSE NO. 87: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or

other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 88: Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64, to determine whether the Omega exhibits "o" ring adhesion.

RESPONSE NO. 88: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 89: Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega exhibits "o" ring adhesion.

RESPONSE NO. 89: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from

discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 90: Provide all records relating in any way to any and all fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

RESPONSE NO. 90: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 91: Provide all records relating in any way to any testing and/or examination of any Omegas from sites in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

RESPONSE NO. 91: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 92: Provide all records relating in any way to any tests and/or examinations of Omega sprinklers conducted by you or anyone on your behalf.

RESPONSE NO. 92: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 93: Provide all records relating in any way to any and all tests and/or examinations of Omega sprinklers conducted pursuant to the protocol in UL 199 or UL 1626, that one or more Omegas did not pass (according to the criteria listed in UL 199 for that test).

RESPONSE NO. 93: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or

other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 94: Provide all records relating in any way to any testing of any Omega conducted by you or on your behalf in which the Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure.

RESPONSE NO. 94: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 95: Provide all records relating in any way to any meetings, discussions and/or communications in which you were in any way involved, and/or which you have received, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;

b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;
c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;
d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;
e) if o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;
f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;
g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;
h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;
k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;
1) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;
m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems.

RESPONSE NO. 95: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will

make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 96: Provide all records relating in any way to any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) or which you have been notified, regarding or in any way relating to an Omega sprinkler.

RESPONSE NO. 96: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 97: Provide all records relating in any way to your notification (or notification on your behalf) of any person and/or entity of any and all problems, potential problems, complaints or concerns (including any reports of nonactivation or possibility of nonactivation) regarding or in any way related to any Omega sprinkler.

RESPONSE NO. 97: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the

discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 98: Provide all records relating in any way to any and all requests for information by you (or on your behalf) to any sprinkler contractor or sprinkler owner regarding any Omega sprinkler, including the sprinkler contractor or owner's response.

RESPONSE NO. 98: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 99: Provide all records relating in any way to your (or anyone on your behalf) provision (either by sale or without charge) of sprinklers to anyone to replace some or all of the Omegas installed in a particular location.

RESPONSE NO. 99: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 100: Provide all records relating in any way to the cost of replacement of any and all Omega sprinklers.

RESPONSE NO. 100: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central

responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 101: Provide all records relating in any way to your testing (or testing on your behalf) of any Omega sprinklers from any building or structure in which Omega sprinklers are/were installed.

RESPONSE NO. 101: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

RESPONDENTS' RESPONSES AND OBJECTIONS TO COMPLAINT COUNSEL'S FIRST SET OF INTERROGATORIES

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central"), pursuant to 16 C.F.R. § 1025.32, hereby provide responses and objections to Complaint Counsel's First Set of Interrogatories. Central's responses may be supplemented in accordance with 16 C.F.R. § 1025.31(f).

PREFATORY STATEMENT

Central hereby fully incorporates by reference the Prefatory Statement set forth in Respondents' Responses and Objections to Complaint Counsel's First Request for Production of Documents and Things.

OBJECTIONS TO EACH AND EVERY DISCOVERY REQUEST

Central hereby full incorporates by reference the Objections To Each and Every Discovery Request set forth in Respondents' Responses and Objections to Complaint Counsel's First Set of Interrogatories.

INTERROGATORY RESPONSES

INTERROGATORY NO. 1: Identify the person(s) answering these Interrogatories.

RESPONSE NO. 1: Carmine Schiavone and counsel for Central.

INTERROGATORY NO. 2: Identify yourself.

RESPONSE NO. 2: Counsel for Central.

INTERROGATORY NO. 3: Identify all officers, directors and/or shareholders of your company since its formation. For each such person, specify all positions they have held, and the dates they held each position.

RESPONSE NO. 3: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, organizational charts.

INTERROGATORY NO. 4: Provide the date on which the first "Omega" sprinkler was sold or given away as a free sample or promotional item. Identify the fist [sic] "Omega" sprinkler sold or given away as a free sample.

RESPONSE NO. 4: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably

calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: The first Flow Control was sold in 1978, and the first Omega sprinkler was sold in 1982.

INTERROGATORY NO. 5: Identify all makes and/or models of "Omega" sprinklers you have ever designed, manufactured, and/or distributed. For each model, indicate the date(s) it was designed, manufactured and distributed.

RESPONSE NO. 5: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: cut sheets, product catalogues, engineering drawings.

INTERROGATORY NO. 6: Provide the total number of Omega sprinklers that:

a) have been sold;
b) have been given away as free samples or promotional items;
c) are installed in the United States and its territories. Of these, how many contain:
   i) EPDM "o" rings;
   ii) silicone "o" rings;
   iii) neither EPDM or silicone "o" rings (specify whether the model has an "o" ring, and if so, the composition of the "o" ring).

RESPONSE NO. 6: Central estimates that approximately 8.9 million Omegas have been sold and installed. All Omegas contain either EPDM or silicone o-rings. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: sales reports.

INTERROGATORY NO. 7: How many Omega sprinklers:

a) have been sold;
b) have been given away as free samples or promotional items;
c) are installed

in each state and territory of the United States.

RESPONSE NO. 7: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: Central estimates that approximately 8.9 million Omegas have been sold. Central is not able to provide precise information in response to the remaining questions in this interrogatory. Because Central generally does not sell to end-users and generally does not install sprinkler heads, Central lacks specific knowledge regarding the number of Omegas sold to end-users and installed for end-users. To the extent that Central has any such information, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 8: Provide the sales price for each Omega sold by you (or anyone on your behalf) in the United States and/or its territories.

RESPONSE NO. 8: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: price books, product catalogues.

INTERROGATORY NO. 9: For each year in which you manufactured and/or distributed Omega sprinklers, provide:

a) your gross income;
b) your net income;
c) the amount in revenues generated from product sales;
d) the amount in revenues generated from sales of Omega sprinklers.

RESPONSE NO. 9: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred

to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, sales reports.

INTERROGATORY NO. 10: How many total Omega sprinklers are installed in the United States and/or its territories in:

a) steel piping systems;
b) copper piping systems;
c) plastic piping systems;
d) polybutylene piping systems;
e) other piping systems not listed above (specify the type of piping system)?

RESPONSE NO. 10: Central responds as follows: Central is not able to provide precise information in response to this interrogatory. Because Central generally does not sell to end-users and generally does not install sprinkler heads, Central lacks specific knowledge regarding the number of Omegas installed in the various types of piping systems. Central has estimated that there are approximately 5.0 million Omegas installed in steel piping systems, and approximately 3.9 million Omegas installed in non-steel piping systems. To the extent that Central has any such information, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 11: How many Omega sprinklers are installed in each state and territory of the United States in:

a) steel piping systems;
b) copper piping systems;
c) plastic piping systems;
d) polybutylene piping systems;

e) other piping systems not listed above (specify the type of piping system)?

RESPONSE NO. 11: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10.

INTERROGATORY NO. 12: How many Omega sprinklers are installed in the United States and/or its territories in:

a) private homes
b) apartment buildings
c) schools (including universities and colleges, public or private)
d) nursing homes
e) hospitals
f) detention facilities (including jails, juvenile detention facilities, etc.)
g) homeless shelters
h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)
i) hotels
j) museums
k) offices (including office buildings)
1) warehouses with no public access areas
m) industrial facilities with no public access areas

RESPONSE NO. 12: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. In addition, to the extent that Central has any such information, pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 13: Identify which Omega makes and/or models you are currently manufacturing and/or selling.

RESPONSE NO. 13: Central responds as follows: C-1A; C-1A PRO; C-1A PRO ID; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12 RES; HEC-20 ID; R-1M; and Flow Control. In addition, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: product catalogues, cut sheets, price books.

INTERROGATORY NO. 14: What is the current sales price for each Omega make and/or model listed in your response to Interrogatory No. 13?

RESPONSE NO. 14: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome, it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: product catalogues, price books.

INTERROGATORY NO. 15: Identify all of your employees, agents, representatives or consultants who have held a supervisory, managerial, or executive position or role in the following areas of your company at any time:

1) sales;
2) marketing;
3) product design and/or development;
4) engineering and/or technical services;
5) customer service/customer relations;
6) public and/or governmental relations;
7) product manufacturing and/or production;
8) product sales, marketing and/or distribution;
9) corporate mergers and/or acquisitions;
10) quality assurance/control;
11) any divisions, subdivisions or areas that deal or dealt with Omega automatic fire sprinklers and/or any component parts of Omega automatic fire sprinklers.

For each employee, agent, representative or consultant, please state the position(s) and title(s) of those position(s), term(s) of employment, and salary. If the person is no longer in your employ, please indicate their reason for leaving and, if known, provide their current address and telephone number.

RESPONSE NO. 15: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, employee status reports.

INTERROGATORY NO. 16: Identify all persons and/or entities who were in any way involved in:

a) design and/or development;
b) testing
c) the UL listing process and/or submission of Omega sprinkler samples and/or prototypes for same;
d) marketing;
e) sale; or
f) manufacturing of any makes and/or models of each make and/or model Omega sprinkler.

For each such person and entity, indicate:

i) whether the person or entity is currently employed by your company;
ii) their position in your company (or, if not in your company, elsewhere) at the time of their involvement;
iii) which makes and/or models the involvement related to; and
iv) describe in detail the nature of their involvement.

RESPONSE NO. 16: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, employee status reports.

INTERROGATORY NO. 17: For each make and/or model of Omega sprinkler, identify and describe (including specifications for) each component part and each chemical (including lubricants), tool and/or substance used in the Omega manufacturing process.

RESPONSE NO. 17: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: bills of materials, sub-assembly drawings, work instructions.

INTERROGATORY NO. 18: Identify the manufacturer of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

RESPONSE NO. 18: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel

is specifically referred to the following categories of documents: bills of materials, purchase orders.

INTERROGATORY NO. 19: Identify the person and/or entity who supplied to you each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

RESPONSE NO. 19: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: bills of materials; purchase orders.

INTERROGATORY NO. 20: Identify all persons and/or entities who were involved in any way in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

RESPONSE NO. 20: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial

information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 21: Describe in detail the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time. Specify and describe all tools, chemicals and substances used, including when, how and in what amount they are used.

RESPONSE NO. 21: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: bills of materials, sub-assembly drawings, work instructions, engineering change notices, project proposals, corrective action reports.

INTERROGATORY NO. 22: For each change in procedure or specification identified in your response to Interrogatory No. 21:

a) explain the differences between the procedure or specification and its predecessor(s);
b) explain the reasons for the change;
c) identify all persons and/or entities involved in bringing about the change, and explain their role in same;
d) identify all persons and/or entities who implemented the change;

e) indicate whether any tests were done on the models before or after the change occurred. If so:
   i) describe the tests and provide a detailed protocol;
   ii) identify the persons and entities involved in setting up and/or conducting the tests;
   iii) describe and explain the results of the tests, including all observations and conclusions;
   iv) identify the persons and entities involved in evaluating the test results.

RESPONSE NO. 22: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: engineering change notices, project proposals, material review board minutes, first article reports, vendor certifications, corrective action reports.

INTERROGATORY NO. 23: Have you (or anyone on your behalf) ever utilized any chemical or substance in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system? If so, identify, for each such chemical or substance:

a) its name (and brand name, if applicable);
b) its chemical composition;
c) its manufacturer; and
d) the person and/or entity from whom you purchased and/or received the chemical or substance;
e) identify and describe any tests performed by you or anyone else to assess whether and/or how the substance affects the operation of Omega sprinkler(s) or any Omega component part, providing the following information:
   i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;
iii) describe and explain the results of the tests, including all observations and conclusions;
iv) identify the persons and entities involved in evaluating the test results.

f) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such chemical or substance. If so, provide the following information:
i) identify all such persons and/or entities;
ii) state the date of the communication;
iii) describe the content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 23: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: to the extent that this interrogatory is referring to products such as "Stop-Leak," Central has not utilized such substances.

INTERROGATORY NO. 24: Were/are there any prototypes or precursors of any of the Omega sprinklers listed in your response to Interrogatory No. 6? If so:

a) identify and describe each prototypes or precursor, including any modifications in composition or design;
b) indicate the date on which it was designed and/or developed;
c) identify all persons and entities who were in any way involved in designing, developing and/or reviewing the prototype or precursor;
d) identify the Omega model to which the prototype or precursor corresponds;
(e) describe all tests and evaluations performed on the prototype or precursor, providing the following information:
i) the date on which the test or evaluation was conducted;
ii) the protocol for the test or evaluation;
iii) identify all persons and entities who conducted, attended, reviewed, and/or supervised the test or evaluation;
f) indicate whether the prototype or precursor was ever submitted to a testing laboratory for review, certification or listing. If so, fully describe the circumstances and outcome of the submission and testing, and identify the laboratory;

g) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such prototype or precursor. If so, provide the following information:
   i) identify all such persons and/or entities;
   ii) state the date of the communication;
   iii) describe the content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 24: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 25: Identify and describe all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

RESPONSE NO. 25: A general, non-exhaustive description of such measures and procedures may be described as follows: Central maintains work instructions on its manufacturing floor to ensure that the employees know the process and procedure for assembly of Omega sprinklers. In addition, there is a quality plan for the assembly of Omegas, which is inspected by

quality control inspectors to ensure that it is being followed for proper assembly. The quality control inspectors may conduct visual and/or measurement tasks to verify that the heads coming from the production line meet or exceed the specifications in the quality plan. Moreover, quality control personnel conduct random bath tests of the eutectic to ensure proper temperature operation. UL inspections also are conducted by quality control personnel to ensure that the Omegas produced meet or exceed UL 199 and UL 1626 requirements.

For a more detailed description of such measures and procedures, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals, work instructions.

INTERROGATORY NO. 26: Have you ever known or been advised of any problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas, including whether any component part has been or alleged to have been out of tolerance? If so, for each such problem, flaw, defect and deficiency:

a) describe in full detail the problem, imperfection, flaw, defect, deficiency or extent to which the part was out of tolerance;

b) indicate the date on which you were notified or learned of the problem, flaw, defect or deficiency;

c) indicate how you became aware or were notified of the problem, flaw, defect or deficiency;

d) describe all actions, if any, you took as a result, indicating when those actions were taken; and

e) state whether the affected component part was ever delisted, recalled, discontinued. taken off the market, or requested to be returned to the manufacturer, supplier, distributor, etc. and, if so, explain the circumstances of same.

RESPONSE NO. 26: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: incoming inspection reports, first article reports, non-conformance reports.

INTERROGATORY NO. 27: Explain in full detail the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

RESPONSE NO. 27: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, the general mechanism of operation for most Omegas may be described as follows: A fusible alloy pellet is compressed by a bearing disc into a copper housing by a ball plunger. Heat is absorbed by the heat collecting fins and conducted to the alloy pellet. At the rated temperature, the alloy melts, causing the ball plunger to drop, freeing balls from the retaining groove. This movement allows system water pressure to force the orifice reeling mechanism and deflector assembly open. Water is then discharged in a designed flow pattern. For specific

information regarding each different make and models of Omega sprinklers, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 28: Once the activation (triggering) temperature has been reached, indicate whether water pressure or any other source of pressure (not internal to or part of the Omega itself) is a prerequisite to or requirement for activation of any make and/or model of Omega sprinkler(s). If so:

a) identify the Omega
b) indicate, for each make and/or model of Omega, what the necessary pressure is (in psig);
c) indicate the expected or required source of that pressure;
d) explain how the pressure activates or assists the Omega's activation;
e) explain why the sprinkler will not activate without that pressure.

RESPONSE NO. 28: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Water pressure is one element in the activation of Omegas. Central also incorporates its Response No. 27. The necessary pressure for activation varies depending on the Omega model and the specific building and system in which it is installed. The appropriate testing criteria is based on the hydraulically calculated operating pressure specific to the particular installed system in each individual building. In order to calculate that pressure, Complaint Counsel is referred to information and/or documents that are not in Central's possession, custody, or control; and/or pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 29: Are you aware of any non-Omega sprinklers that contain an "o" ring? If so:

a) identify the sprinkler make and/or model;
b) identify the manufacturer of the sprinkler;
c) indicate where in the sprinkler the "o" ring is located;
d) explain the mechanism of proper operation/activation of the sprinkler, including how the "o" ring is used; and
e) identify all persons and entities involved in any way in the design of each such sprinkler make and/or model;
f) indicate whether you are aware or have been notified of any instances in which a non-Omega sprinkler containing an "o" ring did not or allegedly did not activate, either in testing or in a fire, when exposed to its activation (triggering) temperature. If so, indicate when, how, and from whom you received such notification;
g) identify all tests of which you are aware that were conducted on the sprinkler to determine whether or not it operates properly, providing the following information:
    i) identify the sprinkler;
    ii) describe the tests and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests;
    iv) describe and explain the results of the tests, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
h) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding the operation of any non-Omega sprinklers containing an "o" ring. If so, provide the following information:
    i) identify all such persons and/or entities;
    ii) state the date of the communication;
    iii) describe the content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 29: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it seeks information and/or documents protected from discovery by the

attorney-client privilege and/or work product doctrine. Subject to and without waiver of the foregoing objections, Central responds as follows: Central is aware of non-Omega sprinklers that contain o-rings, including other sprinklers manufactured by Central Sprinkler Company and certain sprinkler models manufactured by other companies. For the remaining information requested by this interrogatory, Complaint Counsel is referred to information and/or documents that are not in Central's possession, custody, or control; and/or pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 30: Indicate which Omega makes and/or models, and which, if any, adaptations or devices to be used with any Omega make and/or model (such as the "helper spring"), have been tested or submitted for approval, listing and/or certification by a certifying laboratory or institution such as UL or FM? For each such Omega, for each testing and/or submission, and for each certifying laboratory or institution:

a) describe all efforts involved and steps taken in an effort to obtain approval, listing and/or certification;
b) indicate the date on which each such effort or step took place;
c) indicate the project number, if any, that each such effort or step related to or was part of,
d) identify all persons and/or entities involved in each effort or step;
e) with respect to any testing and/or examinations:
    i) describe the tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests;
    iii) describe and explain the results of the tests, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test results;
f) describe all communications regarding or relating in any way to the listing and/or certification, including the following information:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;

g) indicate whether and when listing and/or certification was granted, refused, or postponed by the certifying laboratory or institution.

RESPONSE NO. 30: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: correspondence from UL and/or FM, listing books, listing documents and cards.

INTERROGATORY NO. 31: Indicate whether approval, listing or certification was ever refused, withdrawn, discontinued or canceled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler. If so:

a) identify the Omega and/or Omega component part or allegedly assistive operating device;
b) explain the circumstances and date;
c) identify all persons and/or entities involved;
d) identify and describe all communications regarding or relating in any way to the refusal, withdrawal, discontinuation, cancellation, or objected to sale and/or distribution, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 31: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: correspondence from UL and/or FM, listing documents.

INTERROGATORY NO. 32: Have you ever advertised, represented, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM? If so:

a) identify the advertisement or marketing material;

b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:

i) how and from whom you received the notification;

ii) when you received the notification;

iii) describe the contents of the notification;

iv) describe your response to the notification.

RESPONSE NO. 32: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has never knowingly engaged in such actions.

INTERROGATORY NO. 33: Have you ever advertised, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by UL are listed or certified by UL? If so:

a) identify the advertisement or marketing material;
b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:
   i) how and from whom you received the notification;
   ii) when you received the notification;
   iii) describe the contents of the notification;
   iv) describe your response to the notification.

RESPONSE NO. 33: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has never knowingly engaged in such actions. Regarding the EC-20A model Omega, at one time, UL had completed the review process for the model and actually had issued a listing card for the corresponding commercial model, but, as an unintentional oversight, the actual listing card for the EC-20A was not issued at the same time. For more detailed information, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 34: Indicate whether you are aware or have ever been notified of an Omega that did not or allegedly did not activate in a fire? If so:

a) identify the Omega;
b) indicate when, where and how the fire occurred;
c) what was the system pressure was (in psig) at the time of the fire and/or nonactivation;
d) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:
    i) identify the injured person;
    ii) indicate how the injury was or was alleged to have been sustained;
    iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide details of same;
e) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:
    i) identify the decedent;
    ii) indicate how and where the death occurred;
    iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;
f) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:
    i) identify the owner of the property;
    ii) indicate how the property was or allegedly was damaged;
    iii) indicate the value or alleged value of the property;
    iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;
g) indicate whether the Omega was fitted with a "helper spring;"
h) indicate when and how you became aware of the fire and/or the nonactivation, including from whom you received the notification;
i) identify and describe all communications regarding or relating in any way to the fire and/or nonactivation, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

j) indicate whether you or anyone else tested and/or examined any Omega that failed to activate or allegedly failed to activate in a fire, the sprinkler system in which the Omega was installed, and/or any other sprinkler from the same site?
If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

k) indicate whether the Omega "o" ring was examined for swelling and/or adhesion.
If so:
   i) indicate whether swelling and/or adhesion was present;
   ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
   iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

l) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
   i) indicate whether "stop leak" or any other such substance was present;
   ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;
   iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

m) indicate whether the Omega was examined for dezincification. If so:
   i) indicate whether dezincification had occurred;
   ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
   iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

n) explain why the Omega failed to activate in the fire.

RESPONSE NO. 34: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that

constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion.

Subject to and without waiver of the foregoing objections, Central responds as follows: Following is a list of locations regarding which Central has "been notified of an Omega that did not or allegedly did not activate in a fire." By listing the locations below, Central does not concede that any Omega sprinkler involved did not activate properly or that any non-activation was caused by a defect in the sprinkler. To the contrary, for example, certain of the locations listed below involved fires that burned from outside the structure to the inside, systems that were contaminated with prohibited substances (e.g., Stop-Leak), or systems where the water supply may have been shut off or otherwise disabled. Central has not had an opportunity to investigate fully a number of locations listed below, and Central also is in the process of investigating other fires where Omegas were or allegedly were involved. To the extent that any responsive information is discovered during such ongoing investigations, Central will provide supplemental information in response to this interrogatory.

A. Jackson Memorial Hospital, Miami, Florida

B. Marriott Hotel, Romulus, Michigan

C. Veterans' Affairs Building, Lake Canandaqua, New York

D. Crossroads, Ft. Wayne, Indiana

E. Mel's Marina, Gulf Breeze, Florida

F. Kent Manor Inn, Annapolis, Maryland

G. Casa Reale Apartments, Los Angeles, California

H. Escondido Gardens, Escondido, California

I. Joshua Tree Apartments, Scottsdale, Arizona

J. Lorene Lodge, Marietta, Georgia

K. Yorba Residence, Riverside, California

L. Days Inn, Horsham, Pennsylvania

M. Monserrat School of Art, Beverly, Massachusetts

N. Boarding House, Milford, Massachusetts

O. Private Residence, Dallas, Texas

P. The Fairway at Piper Glen, Charlotte, North Carolina

Q. Lockemill Plaza, Concord, North Carolina

For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: For information responsive to the remaining questions in this interrogatory, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 35: Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested, did not activate or allegedly did not activate at 7 psig or below when exposed to its activation/triggering temperature? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received such notification;
c) describe and explain the circumstances of the nonactivation at 7 psig, including

i) when and where the testing and nonactivation at or below 7 psig took place;
ii) describe the tests and provide a detailed protocol:
iii) identify the persons and entities involved in setting up and/or conducting the tests;
iv) describe and explain the results of the tests, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test results.

d) indicate at what pressure, if any, the Omega activated (or if it failed to activate together, indicate the highest pressure to which the sprinkler was subjected);

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:
i) identify the sprinkler;
ii) describe the tests and/or examinations
iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing and/or examination, and/or the nonactivation at 7 psig or below, including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:
i) indicate whether swelling and/or adhesion was present;
ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
i) indicate whether "stop leak" or any other such substance was present;
ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:
   i) indicate whether dezincification had occurred;
   ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
   iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate at or below 7 psig.

RESPONSE NO. 35: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 36: Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received such notification;

c) describe and explain the circumstances of the nonactivation, including:
   i) when and where the testing and nonactivation took place;
   ii) describe the tests and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests;
   iv) describe and explain the results of the tests, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test results.

d) indicate what the pressure of the system (in which the Omega was installed) was at the time of the field test;

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing and/or examination, and/or the nonactivation, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:
   i) indicate whether swelling and/or adhesion was present;
   ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
   iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
   i) indicate whether "stop leak" or any other such substance was present;
   ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:
   i) indicate whether dezincification had occurred;
   ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
   iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate when field tested.

RESPONSE NO. 36: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 37: Do you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation triggering temperature for long enough for its fusible like [sic] to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega)? If so:

a) explain the basis for your contention;
b) describe in detail the method of operation of the "helper spring;"
c) describe in detail the specifications for the "helper spring;"
d) identify the manufacturer of the "helper spring;"

e) identify all persons and/or entities involved in the design and/or development of the "helper spring."

f) describe and any tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part, providing the following information:
   i) describe the tests and provide a detailed protocol;
   ii) identify the persons and entities involved in setting up and/or conducting the tests;
   iii) describe and explain the results of the tests, including all observations and conclusions;
   iv) identify the persons and entities involved in evaluating the test results.

g) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring. If so, provide the following information:
   i) identify all such persons and/or entities;
   ii) state the date of the communication;
   iii) describe the content of the communication;
   iv) identify all persons and/or entities present during the communication;

h) if you allege that an Omega sprinkler fitted with a helper spring will activate at a lower system pressure than an Omega without a helper spring, please indicate:
   i) how much lower the pressure required to activate the helper-spring fitted Omega is than the pressure required to activate an Omega not fitted with the helper spring; and
   ii) explain the basis for your allegation;
   iii) indicate what evidence supports your allegation.

RESPONSE NO. 37: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Omegas fitted with "helper springs" will activate at the appropriate

hydraulically calculated operating pressure specific to the particular installed system in each building. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports, activity reports, purchase orders, engineering reports, listing documents.

INTERROGATORY NO. 38: Have you ever been aware or been notified of an Omega sprinkler or component that has cracked or broken? If so:

a) identify the Omega and, if applicable, its component part;
b) describe the circumstances of the cracking and/or breakage, including the date on which it occurred;
c) identify the person and/or entity (including your employees and/or consultants) who notified you of the cracking and/or breakage;
d) detail when and how you became aware or received notification of the cracking and/or breakage;
e) describe and explain your response to the notification;
f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:
    i) describe all such tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iii) describe and explain the results of each test and/or examination, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test and/or examination results;
g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the cracking and/or breakage, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
h) explain in full detail why the cracking and/or breakage occurred.

RESPONSE NO. 38: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 39: Have you ever been aware or been notified of an Omega sprinkler or any sprinkler component that has exhibited corrosion? If so:

a) identify the Omega and, if applicable, its component part;
b) describe the circumstances of the corrosion, including the date on which it occurred;
c) identify the person and/or entity (including your employees and/or consultants) who notified you of the corrosion;
d) detail when and how you became aware or received notification of the corrosion;
e) describe and explain your response to the notification;
f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:
    i) describe all such tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iii) describe and explain the results of each test and/or examination, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test or examination results;

g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the corrosion, and/or tests and/or examinations relating thereto, indicating:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication;

h) explain in full detail how and why the corrosion occurred.

RESPONSE NO. 39: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 40: Indicate whether you are aware or have ever been notified of an Omega sprinkler that leaked and/or weeped when tested or in a fire? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received notification or became aware of the leakage and/or weeping;
c) describe and explain the circumstances of the leaking and/or weeping, including when and where the leakage and/or weeping took place. If the leakage and/or weeping took place in testing:
   i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;
iii) describe and explain the results of the tests, including all observations and conclusions (and including at what pressure the sprinkler leaked and/or wept);
iv) identify the persons and entities involved in evaluating the test and/or examination results.

d) indicate whether you or anyone else of whom you are aware tested and/or examined the Omega (after it leaked and/or wept), and/or any other sprinkler from the same site. If so:
i) identify the sprinkler;
ii) describe the tests and/or examinations, and provide a detailed protocol;
iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the leakage and/or weeping, including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

g) indicate whether the Omega that leaked or wept was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that leaked or wept was examined for swelling and/or adhesion. If so:
i) indicate whether swelling and/or adhesion was present;
ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

i) explain why the Omega leaked and/or wept.

RESPONSE NO. 40: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of

admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 41: Indicate whether you are aware or have ever been notified of an Omega sprinkler that activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received notification or became aware of the unnecessary or premature activation;
c) describe and explain the circumstances of the unnecessary and/or premature activation; including when and where the activation took place. If during testing:
    i) describe the tests and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests;
    iii) describe and explain the results of the tests, including all observations and conclusions (and including at what temperature and pressure the sprinkler activated);
    iv) identify the persons and entities involved in evaluating the test results.
d) indicate whether you or anyone else of which you are aware tested and/or examined the Omega (after it activated prematurely and/or unnecessarily), and/or any other sprinkler from the same site. If so:
    i) identify the sprinkler;
    ii) describe the tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;
f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the premature and/or unnecessary activation, including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication-
g) indicate whether the Omega that activated prematurely and/or unnecessarily was equipped or fitted with a "helper spring;"
h) indicate whether the "o" ring of the Omega that activated prematurely and/or unnecessarily was examined for swelling and/or adhesion. If so:
i) indicate whether swelling and/or adhesion was or was not present;
ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
iii) identify all persons and/or entities involved in determining whether the ,lo" ring was swollen and/or adhered;
i) explain why the Omega activated prematurely and/or unnecessarily.

RESPONSE NO. 41: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 42: Do you contend that dezincification may cause an Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which dezincification causes or may cause (a), (b), (c), and/or (d), above;
    iii) identify the systems in which dezincification causes or may cause (a), (b), (c) and/or (d), above;
    iv) describe the circumstances under which dezincification causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 42: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 43: Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of dezincification;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;
f) indicate how and when you were notified of the alleged dezincification;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega, the system in which it was installed and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.
j) With respect to each such Omega, indicate whether you contend that the dezincification caused the Omega to:
    i) leak and/or weep;
    ii) prematurely and/or unnecessarily activate;
    iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
    iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
    v) fail to activate in a fire (when exposed to its activation/triggering temperature).

    If so, explain fully the basis for your contention.

RESPONSE NO. 43: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 44: Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of dezincification;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;
f) indicate how and when you were notified of the alleged dezincification;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

j) With respect to each such Omega, indicate whether you or anyone else of whom you are aware contend that the dezincification caused the Omega to:
   i) leak and/or weep;
   ii) prematurely and/or unnecessarily activate;
   iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
   iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
   v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for their contention.

RESPONSE NO. 44: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence ; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 45: Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is neither copper or plastic exhibits dezincification? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of dezincification;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;
f) indicate how and when you were notified of the alleged dezincification;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 45: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential

research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 46: Are you aware or have you ever been notified of an Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether dezincification was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

j) explain in full detail why the Omega did not activate.

RESPONSE NO. 46: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 47: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to dezincification? If so:

a) describe the alleged change, and indicate which Omega makes and models were changed;
b) indicate the date on which the change was effected;
c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits dezincification? If so:
   i) identify the Omega;
   ii) describe all such tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 47: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: There is no brass material which is totally "unsusceptible to dezincification," as they all contain some percentage of zinc. This is an industry-wide issue. However, changes made to the Omega sprinklers during 1990 make for a more stable and resistive sprinkler when the brass alloy is exposed to conditions which promote dezincification. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents:

engineering change notices, bills of materials, diagnostic reports, return authorizations, project proposals, first article reports, vendor certifications, material review board minutes.

INTERROGATORY NO. 48: Do you contend that the use of stop leak or other sealant, leakage prevention substance or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c), and/or (d), above;
    iii) identify the systems in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above;
    iv) identify the substances you contend are used;
    v) describe the circumstances under which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 48: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: the use of "Stop-Leak" or other sealant materials, which are prohibited from use in sprinkler systems, may cause activation problems for Omegas. For the remainder of the information requested by this

interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 49: Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to stop leak or any other sealant, leakage prevention substance or pipe cement? If so:

a) identify the Omega;
b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;
c) identify the person and/or entity that made the determination or allegation;
d) indicate the date on which the determination or allegation was made;
e) describe the methods and criteria used to determine and confirm the existence of the stop leak or the other sealant, leak prevention substance or pipe cement;
f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;
g) indicate how and when you were notified of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;
h) detail your response to the notification or awareness;
i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

k) With respect to each such Omega, indicate whether you contend that the exposure to stop leak or any other sealant, leakage prevention substance or pipe cement caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature);

If so, explain fully the basis for your contention.

RESPONSE NO. 49: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Yes. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 50: Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether stop leak or any other sealant, leakage prevention substance or pipe cement was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) explain in full detail why the Omega did not activate.

RESPONSE NO. 50: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and

without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 51: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so, for each such substance (stop leak or any other sealant, leakage prevention substance or pipe cement):

a) identify the substance;
b) describe the alleged change, and identify the Omega makes and models to which the change applies;
c) indicate the date on which the change was effected;
d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 51: Central Sprinkler responds as follows: to the best of its knowledge, there are no changes in the manufacturing process that would render Omegas "unsusceptible" to the effects of "Stop-Leak" and similar materials expressly forbidden for use in sprinkler systems.

INTERROGATORY NO. 52: Do you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c), and/or (d), above;
    iii) identify the systems in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above;
    iv) identify the substances you contend are used;
    v) describe the circumstances under which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 52: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the use of cutting oils does not cause any of the stated effects in

currently manufactured Omegas, which use silicone o-rings. Testing of the sprinklers using silicone o-rings is ongoing. Cutting oils used by sprinkler installers may have some effect on activation of Omegas that use EPDM o-rings; any such effect may be ascertained through appropriate testing. For the rest of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 53: Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to cutting oils or other substances used to cut pipe? If so:

a) identify the Omega;
b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;
c) identify the person and/or entity that made the determination or allegation;
d) indicate the date on which the determination or allegation was made;
e) describe the methods and criteria used to determine and confirm the existence of the cutting oil or other substance used to cut pipe;
f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to cutting oil or other substance to cut pipe;
g) indicate how and when you were notified of the alleged exposure to cutting oil or other substance to cut pipe;
h) detail your response to the notification or awareness;
i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same sites If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to cutting oil or other substance to cut pipe, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication;

k) With respect to each such Omega, indicate whether you contend that the exposure to cutting oil or other substance to cut pipe caused the Omega to:
i) leak and/or weep;
ii) prematurely and/or unnecessarily activate;
iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
v) fail to activate in a fire (when exposed to its activation/triggering temperature).
If so, explain fully the basis for your contention.

RESPONSE NO. 53: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Yes. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 54: Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, and that when

exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants)who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether cutting oil or other substance to cut pipe was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) explain in full detail why the Omega did not activate.

RESPONSE NO. 54: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that

constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 55: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so, for each such substance (cutting oil or other substance used to cut pipe):

a) identify the substance;
b) describe the alleged change, and identify the Omega makes and models to which the change applies;
c) indicate the date on which the change was effected;
d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
f) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 55: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the use of cutting oils does not cause any of the stated effects in currently manufactured Omegas, which use silicone o-rings. Testing of the sprinklers using silicone o-rings is ongoing. For the rest of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 56: Do you contend that swelling of the "o" ring in an Omega sprinkler may cause the Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature), and/or
d) fall to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a Fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which "o" ring swelling causes or may cause (a), (b), (1c), and/or (d), above, indicating what type of "o" ring (EPDM, silicone, or other) is used in that Omega;
    iii) identify the systems in which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above;

iv) describe the circumstances under which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 56: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 57: Have you or anyone of whom you are aware ever determined or alleged that an Omega containing an EPDM "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;
f) indicate how and when you were notified of the alleged "o" ring swelling;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination,
iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you contend that the "o" ring swelling caused the Omega to:
i) leak and/or weep;
ii) prematurely and/or unnecessarily activate;
iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

RESPONSE NO. 57: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 58: Have you or anyone of whom you are aware ever determined or alleged that an Omega containing a silicone "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;
f) indicate how and when you were notified of the alleged "o" ring swelling;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) With respect to each such Omega, indicate whether you or anyone else of whom you are aware contend that the "o" ring swelling caused the Omega to:
    i) leak and/or weep;
    ii) prematurely and/or unnecessarily activate;

iii) fall to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
iv) fail to activate in field testing (when exposed to its activation/triggering temperature),
v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain f-ally the basis for your contention or, if not your contention, identify the person and/or entity who so contends, and explain your understanding of their basis for that contention.

RESPONSE NO. 58: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 59: Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is not steel exhibits "o" ring swelling? If so:

a) identify the Omega;
b) indicate what type of "o" ring the Omega contained (EPDM, silicone, or other type of "o" ring);
c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;
e) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;
f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;
g) indicate how and when you were notified of the alleged "o" ring swelling;
h) detail your response to the notification or awareness;
i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 59: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 60: Are you aware or have you ever been notified of an Omega sprinkler from a steel piping system that did not exhibit "o" ring swelling, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega and indicate what type of "o" ring it contained;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether "o" ring swelling was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) explain in full detail why the Omega did not activate.

RESPONSE NO. 60: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 61: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring swelling? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;
b) indicate the date on which the change was effected;
c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring swelling; If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 61: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the silicone o-rings currently used in Omegas render them "unsusceptible" to o-ring swelling. Testing of sprinklers using the silicone o-rings is ongoing. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: engineering change notices, bills of materials, project proposals, first article reports, vendor certifications, testing documents.

INTERROGATORY NO. 62: Do you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

v) describe the circumstances under which "o" ring adhesion causes or may cause (a), b), (c) and/or (d), above.

RESPONSE NO. 62: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 63: Have you or anyone of whom you are aware ever determined or alleged that an Omega exhibits "o" ring adhesion? If so:

a) identify the Omega, and indicate what type of "o" ring it contained (EPDM, silicone, or other);

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring adhesion;

e) identify the person and/or entity (including your employees or consultants) ,who notified vou of the alleged "o" ring adhesion;

f) indicate how and when you were notified of the alleged "o" ring adhesion;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring adhesion, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

   i) the date on which the communication took place;

   ii) the persons and/or entities to and from whom the communication was directed;

   iii) the nature and content of the communication;

   iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you or anyone of whom you are aware contend that the "o" ring adhesion caused the Omega to:

   i) leak and/or weep;

   ii) prematurely and/or unnecessarily activate;

   iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

   iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

   v) fail to activate in a fire (when exposed to its activation/triggering temperature).

   If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for that contention.

RESPONSE NO. 63: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of

admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 64: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring adhesion? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;
b) indicate the date on which the change was effected;
c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
d) indicate whether vou or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring adhesion; If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 64: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the silicone o-rings currently used in the Omegas may render them "unsusceptible" to o-ring adhesion. Testing of sprinklers using the silicone o-rings is ongoing. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: engineering change notices, bills of materials, project proposals, first article reports, vendor certifications, testing documents.

INTERROGATORY NO. 65: Do you contend or are you aware of any fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated? If so:

a) identify each Omega;
b) indicate when, where and how the fire occurred;
c) what was the system pressure was (in psig) at the time of the fire and/or activation;
d) indicate how long after the Omega was first exposed to its activation/triggering temperature it activated;
e) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:
    i) identify the injured person;
    ii) indicate how the injury was or was alleged to have been sustained;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide details of same;

f) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:
   i) identify the decedent;
   ii) indicate how and where the death occurred;
   iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;

g) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:
   i) identify the owner of the property;
   ii) indicate how the property was or allegedly was damaged;
   iii) indicate the value or alleged value of the property;
   iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;

h) indicate whether the Omega was fitted with a "helper spring;"

i) indicate when and how you became aware of the fire and/or the activation, including from whom you received the notification;

j) identify and describe all communications regarding or relating in any way to the fire and/or activation, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication;

k) indicate whether you or anyone else tested and/or examined any Omega that allegedly activated in a fire, or any other sprinkler from the same site? If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol-,
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

l) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;
ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen or adhered;
iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen or adhered;

m) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
i) indicate whether "stop leak" or any other such substance was present;
ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;
iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

n) indicate whether the Omega was examined for dezincification. If so:
i) indicate whether dezincification had occurred;
ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
iii) identify all persons and/or entities involved in determining whether dezincification had occurred.

RESPONSE NO. 65: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Over the course of the fifteen-plus years that the Omegas have been used, the Omegas have successfully activated and controlled many fires. Central is not in possession of all of the documentation regarding every fire in which Omegas activated and controlled a fire. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the

business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 66: Identify and describe all tests and/or examinations conducted by you or anyone on your behalf on Omega sprinklers. For each test:

a) identify the sprinklers tested;
b) describe the tests and provide a detailed protocol and the date on which each test was conducted;
c) identify the persons and entities involved in:
    i) drafting and/or conceiving the protocol;
    ii) setting up and/or conducting the tests;
d) describe and explain the results of the tests, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test results;
f) identify and describe all communications relating in any way to any such tests and/or test results, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 66: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 67: Have-you or anyone of whom you are aware ever performed the "load on heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 67: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 68: Have you or anyone of whom you are aware ever performed the "strength of heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 68: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 69: Have you or anyone of whom you are aware ever performed the "leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 69: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 70: Have you or anyone of whom you are aware ever performed the "hydrostatic strength test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 70: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 71: Have you or anyone of whom you are aware ever performed the "30-day leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 71: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 72: Have you or anyone of whom you are aware ever performed the "water hammer test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 72: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to

and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 73: Have you or anyone of whom you are aware ever performed the "operating temperature (bath) test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 73: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel

is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 74: Have you or anyone of whom you are aware ever performed the "sensitivity tests" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 74: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 75: Have you or anyone of whom you are aware ever performed the "operation - lodgement test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega,
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 75: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 76: Have you or anyone of whom you are aware ever performed the "flow endurance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 76: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 77: Have you or anyone of whom you are aware ever performed the "operation - cold soldering test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 77: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 78: Have you or anyone of whom you are aware ever performed the "high temperature test for uncoated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega,
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 78: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 79: Have you or anyone of whom you are aware ever performed the "high temperature test for coated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 79: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 80: Have you or anyone of whom you are aware ever performed the "strength of frame test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested. including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 80: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by

Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 81: Have you or anyone of whom you are aware ever performed the "impact resistance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 81: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 82: Have you or anyone of whom you are aware ever performed the "rough usage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 82: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 83: Have you or anyone of whom you are aware ever performed the "vibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 83: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 84: Have you or anyone of whom you are aware ever performed the "calibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test,
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 84: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 85: Have you or anyone of whom you are aware ever performed the "10 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 85: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 86: Have you or anyone of whom you are aware ever performed the "16 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place,
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 86: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 87: Have you or anyone of whom you are aware ever performed the "water distribution test - conventional (old style) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 87: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by

Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 88: Have you or anyone of whom you are aware ever performed the "100 pan distribution test - sidewall sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 88: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 89: Have you or anyone of whom you are aware ever performed the "350 pound wood crib fire test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 89: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 90: Have you or anyone of whom you are aware ever performed the "10-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 90: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 91: Have you or anyone of whom you are aware ever performed the "30-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 91: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 92: Have you or anyone of whom you are aware ever performed the "90-day moist air test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 92: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 93: Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of brass sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 93: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client

privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 94: Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of stainless sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place:
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 94: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16

C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 95: Have you or anyone of whom you are aware ever performed the "operational tests on sprinklers incorporating gaskets or "o" ring seals" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 95: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel

is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 96: Have you or anyone of whom you are aware ever performed the "vacuum test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 96: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 97: Have you or anyone of whom you are aware ever performed the "elastomeric parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 97: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 98: Have you or anyone of whom you are aware ever performed the "freezing test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 98: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 99: Have you or anyone of whom you are aware ever performed the "fire test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 99: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 100: Have you or anyone of whom you are aware ever performed the "wall wetting test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinklers If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 100: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 101: Have you or anyone of whom you are aware ever performed the "evaporation test for sprinkler coatings" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 101: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 102: Have you or anyone of whom you are aware ever performed the "cycling tests for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 102: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by

Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 103: Have you or anyone of whom you are aware ever performed the "piled stock fire test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 103: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 104: Have you or anyone of whom you are aware ever performed the "piled stock fire test for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 104: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 105: Have you or anyone of whom you are aware ever performed the "distribution tests for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 105: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 106: Have you or anyone of whom you are aware ever performed the "high temperature exposure test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 106: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 107: Have you or anyone of whom you are aware ever performed the "production leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega,
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 107: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 108: Have you ever tested an Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure? If so:

a) identify the Omega;
b) explain why it failed to activate;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 108: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents

protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports, quality control reports.

INTERROGATORY NO. 109: Indicate whether you have attended or been present at any meetings or discussions, or issued or received any communications, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;
b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;
c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;
d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;
e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;
f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;
g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;
h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;
k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;
l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;
m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems. if so, for each such meeting, discussion, and communication, provide:

i) the date on which the meeting, discussion or communication took place;
ii) the persons and/or entities to and from whom the communication was directed or, if a meeting or discussion, identify all persons who were present and/or participated;
iii) the nature and content of the communication;

RESPONSE NO. 109: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 110: Have you ever been notified of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who notified you;
b) indicate how and when you were notified;
c) describe and explain the contents of the notification;
d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern;
e) describe and explain your response to the notification;
f) did you or anyone else of whom you are aware examine and/or test the Omega about which you were notified of any problem, potential problem, complaint or concern, the system in which it was installed, and/or any other sprinkler from the same site? If so:
    i) identify the sprinkler;
    ii) describe the tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results,

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, and/or any the testing and/or examination in part f), including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 110: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 111: Have you notified any person and/or entity of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who you notified, and all persons and/or entities who received the notification or copies thereof,
b) indicate how and when you notified the persons and/or entities identified in your response to part (a) above;
c) describe and explain the contents of the notification;
d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern, including who drafted, reviewed and/or approved the notification;
e) did you receive any response to the notification? If so:
    i) identify the person and/or entity from whom you received a response;
    ii) indicate how and when you received the response;
    iii) describe and explain the contents of the response;
f) identify and describe all communications regarding or relating in any way to the notification and/or response, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 111: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 112: Indicate whether you ever requested any information from any sprinkler contractor or sprinkler owner regarding any Omega sprinkler. If so:

a) identify the persons and/or entities from whom you requested information;
b) indicate how and when you requested the information;
c) describe and explain what information you requested-,
d) identify all persons who have knowledge of the request for information, including those who drafted. reviewed and/or approved the request for information;
e) did you receive any response to the request for information? If so:
    i) identify the person and/or entity from whom you received a response;
    ii) indicate how and when you received the response;
    iii) describe and explain the contents of the response;
f) identify and describe all communications regarding or relating in any way to the request for information and/or the response to that request, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 112: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 113: Have you or anyone on your behalf provided (either by sale or without charge) sprinklers to anyone to replace some or all of the Omegas installed in a particular location? If so, indicate the total number of Omegas replaced, and the total value of the replacement (labor plus cost of sprinklers, and any other associated expenses).

RESPONSE NO. 113: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 114: With respect to each location in which you provided (either by sale or without charge) sprinklers to anyone to replace some or all of the Omegas that were installed there:

a) identify the location;
b) indicate what make and/or model Omegas were replaced, and the quantity of each replaced;
c) indicate what make and/or model sprinkler were provided as a replacement, and the quantity of each provided;
d) identify the person and/or entity to whom you provided the replacements;
e) describe and explain the circumstances under which you provided the replacements;
f) identify the person and/or entity who paid the cost of the replacement;
g) indicate the cost of the replacement;
h) describe and explain what the replacement involved;

i) did you or anyone else of whom you are aware examine and/or test the Omega that was replaced, the system in which it was installed, and/or any other sprinkler from the same site? If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the replacement of the sprinklers, the sprinkler that was replaced, the replacement sprinkler, and/or any the testing and/or examination the replaced sprinkler, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 114: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 115: Have you ever tested Omega sprinklers from a building or structure and indicated to the building owner/operator or anyone else that all Omegas activated properly? If so:

a) identify each Omega you tested;
b) identify the location in which the Omega had been installed;
c) for each location, indicate how many Omegas were installed there prior to testing, and how many were tested;
d) describe the tests and/or examinations, and provide a detailed protocol;
e) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
f) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
g) identify the persons and entities involved in evaluating the test and/or examination results;
h) did you or anyone else of whom you are aware examine and/or test the system in which it was installed? If so:
    i) describe the tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations,
    iii) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test and/or examination results;
i) did any person or entity other than you examine and/or test sprinklers from the same site? If so:
    i) identify the sprinkler;
    ii) describe the tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
    iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the sprinklers, the testing and/or the results, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 115: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 116: Identify each person whom you expect to call as an expert witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the expert is expected to testify;
b) the substance of the facts and opinions to which the expert is expected to testify;
c) provide a summary of the grounds for each opinion to which the expert is expected to testify.

RESPONSE NO. 116: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it is premature. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has not yet determined which witnesses it will call at trial. Central will provide supplemental information on a timely basis pursuant to the applicable rules of practice.

INTERROGATORY NO. 117: Identify each person whom you expect to call as a fact witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the witness is expected to testify;
b) the substance of the facts to which the witness is expected to testify.

RESPONSE NO. 117: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it is premature. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has not yet determined which witnesses it will call at trial. Central will provide supplemental information on a timely basis pursuant to the applicable rules of practice.

Respondents.	)	

COMPLAINT COUNSEL'S SUPPLEMENTAL RESPONSES TO RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby supplements its responses to Respondents' First Set of Interrogatories.

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a result of or associated with the fire.

Response: Complaint Counsel incorporates herein its objections and response to Interrogatory No. 118 as stated in its initial Response to Respondents' First Set of

Interrogatories. Without waiving its objections, Complaint Counsel provides the following information on fires and injuries due to failure of Omega sprinklers to function that have occurred since Complaint Counsel's initial Responses were filed, and/or of which Complaint Counsel has become aware since its initial Responses were filed:

9. (a) Location: Joshua Tree Apartments, 11545 N. Frank Lloyd Wright Blvd., Scottsdale, AZ

(b) 05/12/98

(c) several hundred thousand dollars damage to structure and contents (investigation continuing)

(d) burns and smoke inhalation to female victim

(investigation continuing into whether other injuries occurred)

10. (a) Location: Jackson Memorial Hospital, 1611 N.W. 12th Ave., Miami, FL 33136

(b) 07/31/90

(c) damage to hospital room and facilities (investigation continuing)

(d) burns and smoke inhalation to female victim, requiring emergency room treatment and amputation of right hand; injuries to male victim requiring emergency room treatment

(investigation continuing into whether other injuries occurred)

11. (a) Location: Escondido Gardens, 2500 South Escondido Blvd., Escondido, CA 92075

(b) Complaint Counsel has insufficient information at this time with which

to respond to this subpart.

(c) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

12. (a) Location: Escondido Gardens, 2500 South Escondido Blvd., Escondido, CA 92075

(b) Complaint Counsel has insufficient information at this time with which to respond to this subpart; however, Complaint Counsel adds that this fire and Omega nonactivation reportedly occurred several years prior to the fire and non-activation listed in #11.

(c) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

In the Matter of	)	
CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents.	)	

COMPLAINT COUNSEL'S SECOND SUPPLEMENTAL RESPONSES TO RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby supplements its responses to Respondents' First Set of Interrogatories, to include the following information on additional injuries reportedly sustained in a fire in which an Omega failed to activate, as well as information pertaining to a fire at the Department of the Treasury in which Omegas reportedly did activate, though Complaint Counsel has not confirmed this information. Additionally, Complaint Counsel amends its responses to Respondents' First Set of Interrogatories to include information pertaining to the failure in testing of an Omega manufactured after 1990, which had been installed in plastic piping. Amendments to Complaint Counsel's Responses are depicted in bold print.

Interrogatory

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a result of or associated with the fire.

Response: Complaint Counsel incorporates herein its objections and response to Interrogatory No. 118 as stated in its initial Response to Respondents' First Set of Interrogatories. Without waiving its objections, Complaint Counsel amends its Response to Interrogatory No. 118 to include the following additional information on injuries sustained in fires in which Omega sprinklers reportedly failed to function, of which Complaint Counsel has become aware since its initial Responses were filed:

10. (a) Location: Jackson Memorial Hospital, 1611 N.W. 12th Ave., Miami, FL 33136

(b) 07/31/90

(c) damage to hospital room and facilities (investigation continuing)

(d) burns and smoke inhalation to female victim, requiring emergency room treatment and amputation of right hand; injuries to male victim requiring emergency room treatment;

injuries to two fire-fighters

(investigation continuing into whether other injuries occurred)

Complaint Counsel also amends its response to this Interrogatory to add the

following information that may be responsive, regarding a fire in which Omegas reportedly did activate, though the staff has not confirmed the reported activation, nor has it confirmed that the alleged activation was complete, and that it occurred within the appropriate time after the sprinkler(s) were exposed to their activation/triggering temperature(s):

13. (a) Location: Treasury Department

(b) unknown at this time

(c) unknown at this time

(d) unknown at this time

Interrogatory

79. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear,

vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers. **Without waiving its objections, and assuming that Respondents refer to Omegas manufactured after 1990 that were installed in plastic piping systems, that failed to activate in testing as defined in Complaint Counsel's discovery to Respondents, Complaint Counsel responds that it has information pertaining to such failures, and has supplied such information to Respondents in its supplemental document production of this date.**

COMPLAINT COUNSEL'S MOTION FOR LEAVE TO SUBMIT REPLY BRIEF IN SUPPORT OF COMPLAINT COUNSEL'S MOTION FOR PROTECTIVE ORDER AND *IN CAMERA* SUBMISSION

COMES NOW Complaint Counsel, pursuant to 16 C.F.R. § 1025.23(c), and respectfully requests that the Presiding Officer grant leave to submit a Reply Brief in Support of Complaint Counsel's Motion for Protective Order and *In Camera* Submission.

On May 15, 1998, Complaint Counsel filed a Motion for Protective Order and *In Camera* Submission for a document which may be responsive to Respondents' First Request for Production of Documents. On May 19, 1998, Respondents filed their Opposition to Complaint Counsel's Motion.[1] Because discovery of this document may have a chilling effect on the free flow of information to the government concerning enforcement of its laws, because discovery of this document may enable Respondents[2] to identify the informant,

[1] Complaint Counsel has not yet been properly served with Respondents' Opposition.

[2] This document should be protected from discovery by Respondents *and* their counsel because of the relationship between Respondents and their counsel. It has recently come to Complaint Counsel's

because revelation of the informant's identity may expose the informant to retaliation by Respondents or within the industry, Complaint Counsel hereby seeks leave to file a Reply Brief.

CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S SECOND MOTION FOR PROTECTIVE ORDER AND *IN CAMERA* SUBMISSION

COMES NOW Complaint Counsel, pursuant to 16 C.F.R. § 1025.31 and 16 C.F.R. § 1025.45, and submits additional documents that may be responsive to Respondents' First Request for Production of Documents, requesting that those documents be protected from discovery herein.

The documents at issue are filed and submitted herewith *in camera* to the Secretary of the Commission and the Presiding Officer as Exhibits A - I (Complaint Counsel's Bates pages 0012903 - 0012976). Exhibits A - C and G - I are documents provided to the CPSC by former employees of Respondents who are serving as informants to the Agency. Exhibits D - F are letters sent by Complaint Counsel confirming meetings or conversations with those same informants.

All of these documents constitute or relate to confidential communications with informants regarding Omega sprinklers, Omega sprinkler failures, and Respondents' knowledge of same. The documents may be responsive to, among others, Respondents' First

Request for Production of Documents and Things Nos. 3 ("all documents that constitute the entirety of the CPSC administrative file regarding the Omegas"); 7 ("all documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents"); 14 ("all documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas"); 15 ("all documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly); 19 ("all documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents . . ."); 31 ("all documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents); 44 ("all documents that constitute, provide evidence of, refer, or relate to the allegation in Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products"); 46 ("all documents that constitute, provide evidence of, refer, or relate to the allegation in Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13"); 50 ("all documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death"); and/or 51 ("all documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a substantial risk of injury to the public . . .").

Complaint Counsel does not intend to use these documents at trial. In fact, Complaint Counsel has obtained much of the information contained in the documents independently from other sources or through its own research. In some cases, such as Exhibits G, H and I, the

information submitted to the staff by the former employee is publicly available, and can be obtained by Respondents as easily as it was obtained by Complaint Counsel. There is no need to sacrifice the well-being of an informant to provide the information to Respondents.

Similarly, Exhibit C, from a former employee of Respondents, relates to information that Respondents already have in their possession, and in fact should be producing to Complaint Counsel in response to Complaint Counsel's discovery requests. This exhibit also relates to several would-be informants, however, who, as is apparent from the document, prefer to remain anonymous, even with respect to the staff.

Exhibit B is a document written by a former employee to the staff in response to specific questions from Complaint Counsel relating to case preparation, expert consultants, and other items that are clearly work product. As with the anonymous letter received by Complaint Counsel that was the subject for its first such Motion for Protective Order in this case, Complaint Counsel is using the information contained in these documents to further its investigation into the Omega problem, and to channel its discovery in this matter. Complaint Counsel will disclose all information on the topics discussed in the documents that it obtains in its further investigation and intends to use at the hearing of this matter.

If the documents submitted *in camera* with this Motion are disclosed, the identity of the informants, even if redacted, may be readily determined by Respondents. Public policy dictates that informants be protected, both for their own well-being, and to prevent them, and others, from being discouraged from sharing information with the government. Congress recognized these policies in providing an exception to the Freedom of Information Act's general policy of disclosure. *See* 5 U.S.C. § 552(b)(7)(d). Courts have also recognized the

importance of protecting confidential informants, even when they are former employees of a party seeking discovery. *See, e.g., Hodgson v. Charles Martin Inspectors of Petroleum, Inc.*, 459 F.2d 303 (5th Cir. 1972) (Secretary of Labor entitled to assert informer's privilege, and not required to produce in discovery statements taken from employer's former employees, as disclosure of the statements may subject the employees to retaliation (1) in that employees' efforts to find new jobs could be handicapped if former employer should brand them as "informers" when references are sought; (2) by a new employer if that employer finds out that they have in the past cooperated with the (government); and/or (3) by their former employer, should the former employee find it desirable or necessary to seek reemployment with the original employer).

As is clear from the documents, Complaint Counsel is using its informants as non-testifying consultants who are assisting the staff in preparing its case in this matter. Not only should the identity of the informants be protected, but the entire content of the documents, to the extent Complaint Counsel does not intend to use them as evidence at trial, should be protected from discovery pursuant to the work product privilege and the regulations applicable to these proceedings. *See* Fed. R. Civ. P. 26(b)(3) (protecting from disclosure "documents and tangible things . . . prepared in anticipation of litigation or for trial by or for a party or that party's representative (including his attorney, consultant, surety, indemnitor, insurer, or agent)"); 16 C.F.R. § 1025.31(c)(4)(ii) ("a party may discover facts known or opinions held by an expert who has been retained or specially employed by another party in anticipation of litigation or preparation for trial and who is not expected to be called as a witness at trial only upon a showing of exceptional circumstances under which it is

impracticable for the party seeking discovery to obtain facts or opinions on the same subject by other means).

Based on the foregoing, Complaint Counsel respectfully requests that the documents submitted herewith *in camera* be fully protected from discovery in this matter.[1]

In the Matter of	)	
CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S SECOND MOTION FOR PROTECTIVE ORDER AND *IN CAMERA* SUBMISSION

COMES NOW Complaint Counsel, pursuant to 16 C.F.R. § 1025.31 and 16 C.F.R. § 1025.45, and submits additional documents that may be responsive to Respondents' First Request for Production of Documents, requesting that those documents be protected from discovery herein.

The documents at issue are filed and submitted herewith *in camera* to the Secretary of the Commission and the Presiding Officer as Exhibits A - I (Complaint Counsel's Bates pages 0012903 - 0012976). Exhibits A - C and G - I are documents provided to the CPSC by former employees of Respondents who are serving as informants to the Agency. Exhibits D - F are letters sent by Complaint Counsel confirming meetings or conversations with those same informants.

All of these documents constitute or relate to confidential communications with informants regarding Omega sprinklers, Omega sprinkler failures, and Respondents' knowledge of same. The documents may be responsive to, among others, Respondents' First

Request for Production of Documents and Things Nos. 3 ("all documents that constitute the entirety of the CPSC administrative file regarding the Omegas"); 7 ("all documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents"); 14 ("all documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas"); 15 ("all documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly); 19 ("all documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents . . ."); 31 ("all documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents); 44 ("all documents that constitute, provide evidence of, refer, or relate to the allegation in Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products"); 46 ("all documents that constitute, provide evidence of, refer, or relate to the allegation in Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13"); 50 ("all documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death"); and/or 51 ("all documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a substantial risk of injury to the public . . .").

Complaint Counsel does not intend to use these documents at trial. In fact, Complaint Counsel has obtained much of the information contained in the documents independently from other sources or through its own research. In some cases, such as Exhibits G, H and I, the

information submitted to the staff by the former employee is publicly available, and can be obtained by Respondents as easily as it was obtained by Complaint Counsel. There is no need to sacrifice the well-being of an informant to provide the information to Respondents.

Similarly, Exhibit C, from a former employee of Respondents, relates to information that Respondents already have in their possession, and in fact should be producing to Complaint Counsel in response to Complaint Counsel's discovery requests. This exhibit also relates to several would-be informants, however, who, as is apparent from the document, prefer to remain anonymous, even with respect to the staff.

Exhibit B is a document written by a former employee to the staff in response to specific questions from Complaint Counsel relating to case preparation, expert consultants, and other items that are clearly work product. As with the anonymous letter received by Complaint Counsel that was the subject for its first such Motion for Protective Order in this case, Complaint Counsel is using the information contained in these documents to further its investigation into the Omega problem, and to channel its discovery in this matter. Complaint Counsel will disclose all information on the topics discussed in the documents that it obtains in its further investigation and intends to use at the hearing of this matter.

If the documents submitted *in camera* with this Motion are disclosed, the identity of the informants, even if redacted, may be readily determined by Respondents. Public policy dictates that informants be protected, both for their own well-being, and to prevent them, and others, from being discouraged from sharing information with the government. Congress recognized these policies in providing an exception to the Freedom of Information Act's general policy of disclosure. *See* 5 U.S.C. § 552(b)(7)(d). Courts have also recognized the

importance of protecting confidential informants, even when they are former employees of a party seeking discovery. *See, e.g., Hodgson v. Charles Martin Inspectors of Petroleum, Inc.*, 459 F.2d 303 (5th Cir. 1972) (Secretary of Labor entitled to assert informer's privilege, and not required to produce in discovery statements taken from employer's former employees, as disclosure of the statements may subject the employees to retaliation (1) in that employees' efforts to find new jobs could be handicapped if former employer should brand them as "informers" when references are sought; (2) by a new employer if that employer finds out that they have in the past cooperated with the (government); and/or (3) by their former employer, should the former employee find it desirable or necessary to seek reemployment with the original employer).

As is clear from the documents, Complaint Counsel is using its informants as non-testifying consultants who are assisting the staff in preparing its case in this matter. Not only should the identity of the informants be protected, but the entire content of the documents, to the extent Complaint Counsel does not intend to use them as evidence at trial, should be protected from discovery pursuant to the work product privilege and the regulations applicable to these proceedings. *See* Fed. R. Civ. P. 26(b)(3) (protecting from disclosure "documents and tangible things . . . prepared in anticipation of litigation or for trial by or for a party or that party's representative (including his attorney, consultant, surety, indemnitor, insurer, or agent)"); 16 C.F.R. § 1025.31(c)(4)(ii) ("a party may discover facts known or opinions held by an expert who has been retained or specially employed by another party in anticipation of litigation or preparation for trial and who is not expected to be called as a witness at trial only upon a showing of exceptional circumstances under which it is

impracticable for the party seeking discovery to obtain facts or opinions on the same subject by other means).

Based on the foregoing, Complaint Counsel respectfully requests that the documents submitted herewith *in camera* be fully protected from discovery in this matter.[1]

MOTION OF RESPONDENTS CENTRAL SPRINKLER CORPORATION AND CENTRAL SPRINKLER COMPANY FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR CERTIFICATION PURSUANT TO 16 C.F.R. § 1025.24(b)(4)

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby move for reconsideration of the Order on Motion to Dismiss of May 15, 1998, of Administrative Law Judge Moran denying Central's Motion to Dismiss the Administrative Complaint in the above-captioned matter for lack of jurisdiction ("the Order"). Because the Order misapprehends the relevant statute and legislative history, as well as Central's arguments and unrefuted evidence, the Order should be reconsidered and Central's Motion to Dismiss granted.

In the alternative, Central moves pursuant to 16 C.F.R. § 1025.24(b)(4) for certification of the Order for interlocutory appeal to the Consumer Product Safety Commission.

WHEREFORE, Central respectfully requests that the Administrative Law Judge grant

this Motion for reconsideration or, in the alternative, for certification pursuant to 16 C.F.R. § 1025.24(b)(4).

Further support for this Motion is contained in the attached Memorandum Of Law, which is incorporated by reference herein.

Respectfully submitted,

MEMORANDUM OF LAW IN SUPPORT OF MOTION OF RESPONDENTS CENTRAL SPRINKLER CORPORATION AND CENTRAL SPRINKLER COMPANY FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR CERTIFICATION PURSUANT TO 16 C.F.R. § 1025.24(b)(4)

I. INTRODUCTION

On March 26, 1998, Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") filed a Motion to Dismiss Complaint Counsel's Administrative Complaint in the above-captioned matter. The Administrative Complaint seeks the recall of Central Sprinkler Company's Omega-brand fire sprinkler heads. Central's Motion to Dismiss was based, in part, on the ground that because Omega sprinkler heads are not consumer products within the meaning of the Consumer Product Safety Act, 15 U.S.C. § 2051 et seq. ("the Act"), the Consumer Product Safety Commission ("CPSC") lacks jurisdiction under the Act either to seek remedial measures or to regulate Omega sprinkler heads.

Following briefing, on May 15, 1998, Administrative Law Judge William B. Moran denied the Motion in an Order on Motion to Dismiss ("the Order"). Because Central believes

that the Order is based in part on errors of law and fact, Central moves for reconsideration of the Order. In the alternative, Central moves, pursuant to 16 C.F.R. § 1025.24(b)(4), for certification that the Order is appropriate for interlocutory appeal to the CPSC.

II. LEGAL ARGUMENT

The Order misapprehends several of Central's arguments and, with all due respect, incorrectly concludes that Omega sprinkler heads are consumer products subject to the CPSC's jurisdiction. In so doing, the Order does not fully consider the Act's language and legislative history, courts' analysis of the Act, and Central's supporting evidence. Therefore, the Administrative Law Judge should reconsider the Order and grant Central's Motion to Dismiss.

In the alternative, the Administrative Law Judge should, pursuant to 16 C.F.R. § 1025.24(b)(4), certify the Order for interlocutory appeal to the CPSC because the issue of the CPSC's jurisdiction over Omega sprinkler heads involves a controlling question of law or policy as to which there is substantial ground for a difference of opinion, and for which an immediate appeal could materially advance the ultimate termination of this matter.

A. The Order Should Be Reconsidered Because It Does Not Assess Properly The Act Or Its Legislative History And Does Not Take Into Account Unrebutted Evidence Establishing That Omega Sprinkler Heads Are Not Consumer Products.

The Order holding that Omega sprinkler heads are consumer products is incorrect and should be reconsidered for three reasons. First, the Order incorrectly eliminates the Act's requirement regarding the "use" of a consumer product. Second, the Order incorrectly divorces consideration of Omega sprinklers from consideration of fire sprinkler systems, thus relying on

Complaint Counsel's inappropriate distinction between them and minimizing the importance of Consumer Product Safety Commission v. Anaconda Company, 593 F.2d 1314 (D.C. Cir. 1979), in favor of Kaiser Aluminum and Chemical Corporation v. Consumer Product Safety Commission, 574 F.2d 178 (3d Cir.), cert. denied, 439 U.S. 881 (1978). Third, the Order ignores unrebutted evidence submitted by Central establishing that Omega sprinkler heads are exceptions to the Act's definition of "consumer product," as they are not "customarily produced or distributed for sale to, or use or consumption by, or enjoyment of, a consumer." 15 U.S.C. § 2052.

1. The Order Incorrectly Interprets The Act's Requirement Regarding Use Of A Consumer Product.

In the Order, the Administrative Law Judge recognizes that one of the Act's indicia of a consumer product is that it is used, consumed or enjoyed by consumers. (Order, p. 8.) As quoted by the Administrative Law Judge, the Act requires that a "consumer product" be produced or distributed "for sale to a consumer for use in or around" a household, residence or school, or "for the personal use, consumption or enjoyment of a consumer in or around" those places. 15 U.S.C. § 2052(a)(1). The Order cites Anaconda in emphasizing that it is not necessary that a product actually be sold to a consumer, "but only that it be produced or distributed for his use." (Order, p. 14.) In discussing the "use" requirement, however, the Order does not take into account both the legislative history of the Act and courts' interpretation of the requirement.

Central submits that the Act requires some active involvement by the consumer with the product. As Central explained on page 10 of its Memorandum of Law in support of its Motion to

Dismiss, the Senate originally had broadly defined "use" of a consumer product to include not only active use, but also mere "exposure to" the product. That sweeping definition failed to survive conference with the House of Representatives, however, and "exposure to" did not become part of the Act. The Order, however, incorrectly appears to have adopted the rejected Senate approach that would extend to products to which consumers merely are "exposed." (Order at 14.) Moreover, the cases cited in the Order, United States v. One Hazardous Product Consisting of a Refuse Bin, 487 F. Supp. 581 (D.N.J. 1980) and Consumer Product Safety Commission v. Chance Manufacturing Company, Inc., 441 F. Supp. 228 (D.D.C. 1977), do not support the "exposure" definition of use, because the products in those cases -- outdoor metal refuse bins and an amusement park ride, respectively -- are actively used, occupied, enjoyed or manipulated by consumers.

In One Hazardous Product Consisting of a Refuse Bin, the court referred to an affidavit establishing that "the refuse bins were easily accessible to members of the public," 487 F. Supp. at 583, and that "use of the facility [the bin] by consumers is actively facilitated and encouraged." Id. at 585 (emphasis added). Likewise, the court in Chance relied not simply on "exposure" to the dangers of amusement park rides, but, rather, on the riders' "occupancy of its cars and concomitant exposure to whatever dangers it may present . . . ." 441 F. Supp. at 233 (emphasis added). That riders might be "exposed" to the ride's dangers was simply an attendant factor to the riders' physical occupancy of the cars.

In contrast, Central presented affidavits -- unrefuted and undisputed -- establishing that consumers are not able to install Omega sprinkler heads, and that the sprinkler heads are expressly designed to be passive so that they are not accessible to, or occupied, maintained or

controlled by, consumers. (Central Mem. in Support of Mot. to Dismiss, hereinafter "Mot. to Dism.," Ex. A ¶¶ 22, 27; Ex. B ¶ 24.)

The Order cites no authority for its reasoning that simply because Omega sprinklers are fire safety-related, they must be within the Act's coverage. (Order at 15.) In carving out that new statutory definition of consumer product, the Order does not recognize the distinction between Omega sprinklers and items like smoke detectors and burglar alarms. Consumers purchase, install, test and change batteries on smoke detectors, which they cannot do with an Omega sprinkler, and consumers actively set and engage burglar alarms when they choose to have their alarms' protection turned on. These product uses are inapplicable to Omega sprinklers and are, indeed, impossible for consumers to effect. Consumers do not, for example, set or turn on either an Omega sprinkler or a sprinkler system.

Because the Order misapprehended the Act's "use" requirement and broadened the definition of "use" to include mere "exposure to," the Administrative Law Judge should reconsider the Order that incorrectly concluded that Omega sprinklers are consumer products.

2. The Order Makes An Improper And Incorrect Distinction Between Omega Sprinklers And Sprinkler Systems.

In addition to broadening the "use" requirement, the Order adopts the incorrect "distinction" advocated by Complaint Counsel regarding sprinklers and sprinkler systems. Specifically, Complaint Counsel asserts that they can and should be considered as wholly separate, such that the CPSC has jurisdiction over sprinklers, but -- as both Complaint Counsel and the Order seem to recognize -- not over sprinkler systems. Contrary to Complaint Counsel's assertion, however, Central did not confuse or blur the subject of the jurisdictional inquiry.

(Order at 6.) Despite Complaint Counsel's argument, the distinction between sprinkler systems and sprinklers is not crucial to the jurisdictional issue. Indeed, it is a classic "distinction without a difference."

The Order seeks to distinguish Anaconda from the case at bar by saying that Anaconda addressed aluminum wiring systems, while this matter involves only sprinklers, not sprinkler systems.[1/] (Order at 10 n.5, 11-12.) This approach, however, ignores the design, installation, integration and operation of sprinklers and sprinkler systems, as detailed in Central's Motion to Dismiss. (Mot. to Dism. at 3, Ex. B ¶¶ 10-20.) Because the sprinklers are but one integrated part of the overall system, which itself is a fundamental, integrated part of a building's construction, it is meaningless to consider regulating the sprinklers independently of the entire system. Indeed, the ultimate merits question identified by the Administrative Law Judge concerns whether Omega sprinklers will fail in a fire. This question, however, turns on a number of factors that are specific to the installed sprinkler system, including the system pressure designed for the particular building, the number of sprinklers in a given room, the type of piping in which the sprinklers are installed, whether certain materials were used by the maintenance or installation contractor that may impede the performance of the sprinkler, and so on. Indeed, the potential for "failure" can only be evaluated within the context of the entire system: the available water pressure and hydraulic design of the sprinkler system, the type of pipe used in the sprinkler system, and whether contaminants are present. Thus, the distinction between sprinklers and

---

1/ It is true that the Anaconda court addressed defendants' argument that aluminum wiring systems were not consumer products. Anaconda, 593 F.2d at 1317. As discussed further above, however, the so-called distinction between sprinklers and sprinkler systems is not a useful one.

sprinkler systems, and the resulting attempt to distinguish Anaconda, is unavailing and, more importantly, incorrect.

Moreover, the distinction is purely semantic. It is meaningless to concede, as Complaint Counsel and the Order appear to, that the CPSC cannot regulate sprinkler systems, but to accept that the CPSC can regulate sprinklers. Indeed, it follows from the logic of the Order that the CPSC has authority over each individual, albeit integrated, part of the overall sprinkler system -- the sprinkler, piping, valves, fittings, pumps, and so on -- but not over the whole. Given that any system can be alternatively considered in terms of its consolidated individual parts, the effective result of the Order is, simply, that the CPSC has jurisdiction over all items -- except, perhaps, for raw materials -- simply by breaking them down artificially into separate articles despite their design, construction and application as a consolidated whole. Such a result conflicts with Anaconda, where the court rejected the CPSC's expansive view that the CPSC's jurisdiction extends to component parts of dwelling, including wiring, plumbing and flooring systems and their various building components. [2/] Anaconda, 593 F.2d at 1320 (emphasis added.) The Order acknowledges that housing is not a consumer product, (Order at 10-11), but states that component parts of housing -- indeed, any product found in a home -- are consumer products. (Order at 11, 15.) By applying Kaiser's discussion of dishwashers and light fixtures, however, to a "component" analysis, the Order ignores consumers' obvious use of those products, in contrast

---

2/ According to the Order, therefore, even if a building itself is not a consumer product, per Anaconda, if the building were considered as "separate" components such as "foundation," "support beams," "roof trusses," and "bricks," then the CPSC could regulate each piece, but not the overall building. Such a result would effectively overrule Anaconda.

to consumers' non-use of a building's integrated components such as beams, foundation, and sprinklers.

Because the Order improperly distinguishes between sprinklers and sprinkler systems, the Administrative Law Judge should reconsider the Order that incorrectly concluded that Omega sprinklers are consumer products.

3. The Order Improperly Ignores Unrebutted Evidence Establishing That Omega Sprinkler Heads Are Exceptions To The Act's Definition Of "Consumer Product."

As the Order properly notes, Section 2052(a)(1)(A) of the Act excludes from the definition of "consumer product," and thus from the CPSC's jurisdiction, articles "not customarily produced or distributed for sale to, or use or consumption by, or enjoyment of, a consumer." (Order at 8.) The Order fails, however, to consider that a product cannot be considered as being customarily produced for sale to, or use by, consumers, if there is no "significant marketing of the product as a distinct article of commerce" for that purpose. ASG Indus., Inc. v. Consumer Product Safety Comm'n, 593 F.2d 1323, 1328 (D.C. Cir.), cert. denied, 444 U.S. 864 (1979). As Central explained in its Motion to Dismiss and in a detailed, unrefuted affidavit, Central does not market, advertise, distribute or sell Omega sprinklers to consumers or for use by consumers. (Mot. to Dism. at 8-10, Ex. A ¶¶ 8-20.) To the contrary, Central markets, advertises, distributes and sells Omega sprinklers to professional sprinkler installers for the purpose of regulatory code compliance. (Id., Ex. A ¶ 13.) Complaint Counsel has failed to establish that Central significantly markets Omega sprinklers to consumers. In fact, as Complaint Counsel admits in its response to Central's First Set of Interrogatories, it has no independent information refuting Central's affidavit concerning the lack of marketing or sales to

consumers. In response to Interrogatory No. 3, which asked Complaint Counsel to "State whether [Central] markets Omegas" and if so, to "identify and describe any such marketing" and related documents, Complaint Counsel admitted that it "is in the process of requesting from [Central] a description of such marketing. This information is within [Central's] possession." (Compl. Counsel Resp. to Resp. First Set of Interrog., No. 3.)

The Order also ignores that certain Omega sprinkler models are marketed and distributed for distinctly non-consumer locations for commercial/industrial use. (Mot. to Dism. at 9 n.3.) As such, they are, per the Act, industrial products not customarily produced for consumer use. The occasional "crossover" of industrial/commercial models into possible consumer use does not bring those models of Omega sprinklers into the Act's purview because they are not customarily produced for consumer sale or use. Anaconda, 593 F.2d at 1322; Kaiser, 574 F.2d at 181. Thus, the Order's conclusion that "once a product is found in a home, the ability to regulate it under the Act applies to all other locations where it is found," (Order at 15), is incorrect and contrary to established law. Under that ruling, the CPSC can regulate all products that happen to be in a home, even if the products are primarily found elsewhere. Such a broad sweep of CPSC jurisdiction is contrary to the Act's legislative history, policy and interpretive caselaw. Moreover, to the extent that Omega sprinklers are purchased and installed for commercial/industrial building owners, those owners are not within the class of persons subject to the protection of the Act, as the Act reflects that industrial purchasers are better able to protect themselves. Kaiser, 574 F.2d at 180-81.

Because the Order did not recognize that Omega sprinkler heads fit the Act's exception for products not routinely produced for consumer sale or use, the Administrative Law Judge

should reconsider the Order that incorrectly concluded that Omega sprinklers are not excepted from the Act's definition of "consumer product."

B. In The Alternative, If The Administrative Law Judge Does Not Reconsider The Order, He Should, Pursuant To 16 C.F.R. § 1025.24(b)(4), Certify The Order For Interlocutory Appeal To The CPSC.

As the Administrative Law Judge recognized, the Act's definition of "consumer product" is complex and ambiguous. (Order at 8.) Further, resolving jurisdictional questions is made more difficult by the Act's omission of a definition of "consumer." (Id.) Given both the importance and complexity of the jurisdictional question, if the Administrative Law Judge does not reconsider the Order and grant Central's Motion to Dismiss, he should, in the alternative, certify the Order for interlocutory appeal to the CPSC pursuant to 16 C.F.R. § 1025.24(b)(4).

The CPSC's regulations provide that an interlocutory appeal from an Administrative Law Judge to the CPSC may proceed on motion to the Administrative Law Judge and his or her determination in writing that the ruling

> . . . involves a controlling question of law or policy as to which there is substantial ground for differences of opinion and that an immediate appeal from the ruling may materially advance the ultimate termination of the litigation, or that subsequent review will be an inadequate remedy.

16 C.F.R. § 1025.24(b)(4).[3/]

3/ The regulation closely patterns 28 U.S.C. § 1292(b), providing for interlocutory appeal from a district court to a court of appeals. Therefore, cases discussing § 1292(b) are instructive in considering a motion under 16 C.F.R. § 1025.24(b)(4). The CPSC regulations contain two additions, however: the provision for a controlling question of policy, as well as law, and the possibility that a subsequent review of the ruling will be an inadequate remedy.

Thus, there are three factors to consider in determining whether to certify a ruling for interlocutory appeal: (1) whether the ruling involved a controlling question of law or policy; (2) whether a substantial ground for difference of opinion exists; and (3) whether an immediate appeal will materially advance the ultimate termination of the case or whether subsequent review will be inadequate. See Sofferin v. American Airlines, Inc., 788 F. Supp. 1010, 1011 (N.D. Ill. 1992) (discussing 28 U.S.C. § 1292(b)); American Ass'n of Cruise Passengers v. Cunard Line, Ltd., 1988 WL 120828, *2 (D.D.C. 1988) (same), aff'd in part, rev'd in part on diff. grounds, 911 F.2d 786 (D.C. Cir. 1990). The instant Order satisfies the three criteria and should, therefore, be certified for interlocutory appeal to the CPSC.

1. The Order Involves A Controlling Question Of Law Or Policy.

A controlling question of law includes all orders which, if erroneous, would be reversible error on final appeal. Katz. v. Carte Blanche Corp., 496 F.2d 747, 755 (3d Cir.), cert. denied, 419 U.S. 885 (1974); American Ass'n of Cruise Passengers, 1988 WL 120828 at *2 (issue of court's subject matter jurisdiction over action is appropriate for interlocutory appeal); see Consumer Product Safety Comm'n v. Anaconda Co., 445 F. Supp. 498, 503 (D.D.C. 1977) (certification that issue of CPSC's jurisdiction over wiring systems involves controlling question of law). The Order, holding that the CPSC has jurisdiction over Omega sprinklers because they are "consumer products" within the meaning of the Act, involves a controlling question of law because if the Order is incorrect, it would be reversible error once the CPSC reviews the Administrative Law Judge's initial decision. As in Anaconda, the instant Order involved the issue of whether a product is a "consumer product" under the Act. 445 F. Supp. at 500. Further, as in American Association of Cruise Passengers, the jurisdictional issue turns on interpretation

of a statutory definition. 1988 WL 120828 at *2 (whether cruise ships are "common carriers" under Shipping Act of 1984).

In addition to involving a controlling question of law, Central's Motion to Dismiss and the Order denying it involve a controlling question of policy: whether the CPSC's authority extends to building construction and code compliance, areas traditionally, and pervasively, regulated by state and local authorities. (Mot. to Dism. at 15-17; Central's Reply Brief, hereinafter "Reply," pp. 10-11.) As the court recognized in Anaconda, CPSC authority over building construction and building components raised significant problems of federalism. Anaconda, 593 F.2d at 1320. The important policy issue raised by Central's motion warrants interlocutory appeal.

Central's Motion to Dismiss raised the issue of whether Omega sprinklers are "consumer products" under the Act. Further, the Motion to Dismiss addressed the policy issue of the expansive reach of CPSC authority into areas extensively regulated by state and local authorities. Because the Order's ruling regarding these issues would be reversible by the CPSC upon its review of the Administrative Law Judge's initial decision, the Order involves a controlling question of law or policy.

2. There Exists A Substantial Ground For Differences Of Opinion Regarding The CPSC's Jurisdiction.

Where different courts have arrived at different conclusions regarding an issue, there exists a substantial ground for a difference of opinion. Sofferin, 788 F. Supp. at 1011 (different district courts had reached different results on issue of law's retroactivity); Stong v. Bucyrus-Erie Company, 476 F. Supp. 224, 225 (E.D. Wis. 1979) (substantial ground for difference of opinion

reflected in fact that three courts had upheld offset provision and three had invalidated it). In addition, where courts have considered analogous issues but the precise issue is a question of first impression, there is substantial ground for a difference of opinion. Mueller v. First Nat'l Bank of the Quad Cities, 797 F. Supp. 656, 664 (C.D. Ill. 1992); American Association of Cruise Passengers, 1988 WL 120828 at *3; Colon v. Tompkins Square Neighbors, Inc., 294 F. Supp. 134, 139-40 (S.D. N.Y. 1968).

As the Order acknowledges, determination of whether an item is a "consumer product" under the Act, and therefore subject to CPSC jurisdiction, is an ambiguous, complex question. Although the precise issue of whether fire sprinklers are within the Act's reach has not been addressed, and thus is a question of first impression, courts' determinations of CPSC jurisdiction and the various bases for the rulings indicate that there are substantial grounds for differences of opinion. For example, until Congress amended the Act to address amusement park rides, numerous courts considered whether such rides were consumer products, and arrived at very different results. See, e.g., Walt Disney Prod. v. United States CPSC, 1979 U.S. Dist. Lexis 12996 (C.D. Cal. 1979) (amusement rides not consumer products); Chance, 441 F. Supp. 228 (amusement ride is consumer product). More on point are the Anaconda and Kaiser cases, most analogous to the issue at bar, and for which the two circuits reached opposite results regarding aluminum wiring and aluminum wiring systems built into housing construction. Indeed, both appellate decisions reversed lower court rulings that had themselves conflicted with each other.

Given the conflicting opinions in Kaiser and Anaconda, which are most analogous to the question of CPSC jurisdiction over fire sprinklers integrated into building construction, as well as the fact that the precise issue has not been squarely addressed by any court, the Order involves

a controlling question of law or policy as to which there is substantial ground for differences of opinion.

3. Immediate Appeal Of The Order Will Materially Advance The Ultimate Termination Of This Case.

The third and final criteria to consider in certifying a ruling for interlocutory appeal to the CPSC is whether immediate appeal will materially advance the ultimate termination of the case. An interlocutory appeal of an underlying jurisdictional issue will speed ultimate termination of a case, for a reversal of a finding of jurisdiction will terminate otherwise protracted litigation. Anaconda, 445 F. Supp. at 501 (where court had previously held that CPSC had jurisdiction under Act to investigate aluminum wiring systems, protracted and expensive litigation would needlessly result if decision were ultimately overturned); see Mueller, 797 F. Supp. at 664 (reversal of decision would terminate case); Stong, 476 F. Supp. at 225 (reversal of order would be dispositive of case, and no further proceedings would be necessary).

Because the extent of the CPSC's jurisdiction is limited by the Act, determination of whether Omega sprinklers are "consumer products" under the Act is dispositive of the jurisdictional question. Therefore, if the CPSC reverses the Order, this matter will halt without further litigation, materially advancing the ultimate termination of the case.

III. CONCLUSION

For all of the reasons stated above, the Administrative Law Judge should reconsider the Order of May 15, 1998, and grant Central's Motion to Dismiss. In the alternative, the Administrative Law Judge should, pursuant to 16 C.F.R. § 1025.24(b)(4), certify the Order for

interlocutory appeal to the CPSC.

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' Interrogatories; Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

Pursuant to the parties' continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), enclosed please find Complaint Counsel's Privilege Log. Again, we apologize for the delay in providing the log to you. As we explained, our database became inoperable during the last stages of creating the log. We appreciate your patience as we reconstructed the log on a different database.

Sincerely,

Deborah S. Orlove

Deborah S. Orlove, Esq.
Complaint Counsel

CPSC/OFC OF THE SECRETARY
FREEDOM OF INFORMATION
1998 JUN -1 P 5:52

COMPLAINT COUNSEL'S MOTION TO EXCLUDE RESPONDENTS' UNFILED OPPOSITIONS

COMES NOW Complaint Counsel, pursuant to 16 C.F.R. § 1025.23(c), 16 C.F.R. § 1025.14 and 16 C.F.R. § 1025.16, and respectfully requests that documents submitted to the Presiding Officer by Respondents, but not filed with the Secretary of the Commission or served upon Complaint Counsel of record, be excluded from the record in this matter, and not be considered for purposes of the Motions to which they purport to respond.

I. THE OPPOSITIONS AT ISSUE

On May 15, 1998, Complaint Counsel filed and served on all counsel[1] and the Presiding Officer an *In Camera* Submission of Documents in Response to Discovery, and Request for Disclosure Determination. On or about May 19, 1998, Respondents forwarded a "Proposed Protective Order and Opposition of Respondents to Complaint Counsel's Submission of Documents *in Camera*," with exhibits, to the Presiding Officer. Respondents did not file the document with the Secretary of the Commission, and did not serve Complaint

1 Complaint Counsel's filing was both telecopied and deposited in the United States Mail, certified delivery, postage pre-paid, to all recipients on May 15, 1998.

Counsel of record with their purported opposition, despite their claim in a cover letter that "Complaint Counsel has been served with copies of these pleadings."[2] *See* Correspondence from Thomas P. Hogan, Jr. to The Hon. William B. Moran, dated May 19, 1998, purporting to copy Complaint Counsel, and Certificate of Service to Opposition, attached hereto as Exhibit A.

On May 15, 1998, Complaint Counsel also filed a Motion for Protective Order and *in Camera* Submission pertaining to a document received by the staff from a confidential informant. On or about May 19, 1998, Respondents allegedly forwarded to the Presiding Officer "Respondents' Opposition to Complaint Counsel's Motion for Protective Order Regarding Anonymous Letter." This document, like Respondents' other Opposition, was not filed with the Secretary of the Commission, and not served upon Complaint Counsel of Record, despite the cover letter stating that it was served.[3] *See* Exhibit A hereto.

II. THE RESPONSES WERE NOT PROPERLY FILED OR SERVED, AND SHOULD BE EXCLUDED FROM CONSIDERATION

Title 16 C.F.R. § 1025.14 requies an original and three copies of all documents submitted to the Commission or the Presiding Officer to be addressed to, and filed with, the Secretary of the Commission. 16 C.F.R. § 1025.14. Title 16 C.F.R. § 1025.16 provides

---

2 Respondents had sent the document via facsimile to the Director of the CPSC's Legal Division, and the Assistant Executive Director of the CPSC's Office of Compliance, both of whom are Of Counsel in this case, but not to Complaint Counsel. Although Complaint Counsel notified Respondents in writing of this error, it was never cured, nor was the document ever filed with the Secretary of the Commission.

3 As with Respondents' other Opposition, the document was forwarded to the Director of the CPSC's Legal Division, and to the Assistant Executive Director of the Office of Compliance (Of Counsel in the case), despite the fact that counsel for Respondents was aware that Ms. Orlove, Mr. Singer and Mr. Tarnoff are Complaint Counsel of record herein.

that service of documents (such as oppositions to motions) be made by registered or certified mail, delivery to an individual or, "when a party has appeared by an attorney or other representative, service upon that attorney or other representative shall constitute service upon the party." 16 C.F.R. § 1025.16.

Title 16 C.F.R. § 1025.23(c) requires oppositions to any written motions to be made in writing and filed within 10 days after service of any written motion or petition (unless otherwise designated by the rules of the Presiding Officer). 16 C.F.R. § 1025.23(c). That section also clearly and unambiguously provides that "failure to respond to a written motion may, in the discretion of the Presiding Officer, be considered as consent to the granting of the relief sought in the motion." 16 C.F.R. § 1025.23(c).

In the instant case, Respondents failed to file their Oppositions with the Secretary of the Commission. Respondents also failed to serve Complaint Counsel of record with same, despite Complaint Counsel's reiteration to counsel for Respondents that all documents must be served on counsel of record, Ms. Orlove, Mr. Singer and Mr. Tarnoff. *See* Letter from Deborah S. Orlove to Thomas P. Hogan, Jr., dated May 20, 1998, attached hereto as Exhibit B. The period for response to Complaint Counsel's motions has expired. Pursuant to the Rules of Practice governing this proceeding, both purported Oppositions must be excluded from consideration.

WHEREFORE Complaint Counsel respectfully requests that Respondents' submissions to the Presiding Officer, in the form of their "Proposed Protective Order and Opposition of Respondents to Complaint Counsel's Submission of Documents In Camera" and "Respondents' Opposition to Complaint Counsel's Motion for Protective Order Regarding

Anonymous Letter," be excluded from consideration, and the relief requested by Complaint Counsel in its Motions be GRANTED.

Dated: June 1, 1998

Respectfully submitted,

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Service of Documents; Complaint Counsel's Responses to Respondents' First Interrogatories and Request for Production of Documents

Dear Mr. Hogan:

I am writing to alert you that I and my co-counsel, Eric Singer and Howard Tarnoff, are the counsel of record in this matter, and that proper service of any pleadings or other documents in this matter requires service to us. As you know, I have been corresponding with you in this case for many weeks now, and have signed all motions since the Complaint issued. The pleading you telecopied only to the Director of the CPSC's Office of Compliance and to the Director of the Legal Division was not properly served, and the method by which it was transmitted cannot be relied upon to reach me and the other counsel of record in a timely manner.

Additionally, we have received conflicting requests from you and your co-counsel with respect to disclosure of our correspondence on these matters to Judge Moran. Yesterday, we received a fax from Gordon Cooney of your office requesting that we not copy the Judge on our correspondence re: discovery, nearly at the same time we received a fax from you to the Judge attaching your correspondence to us on discovery issues.

I am also writing in response to your letter dated May 13, 1998 which discusses Complaint Counsel's supplemental discovery responses. You allege in your letter that our discovery is deficient because the data compilation "provides little more than the naked conclusions of Complaint Counsel regarding test results." However, as you recall, you requested in discovery "all documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint" in this matter. *See* Request No. 1, Respondents' First

Request for Production of Documents and Things. The data compilation was the first item listed by Complaint Counsel in the List and Summary of Documentary Evidence. We initially objected to production of the compilation, choosing only to produce the raw data upon which it was based, as the compilation of the data was Complaint Counsel's work product. You voiced objections, indicating that you cannot defend this case without the documents in the List and Summary. Despite the privileged nature of the compilation, we provided it to you in a supplemental response, in the spirit of full disclosure. We have provided you with what you requested.

In your May 13 letter, you now claim that "absent the underlying data and methodology," the data compilation provides Central "with little relevant information and no opportunity to examining [sic] the validity of the results." However, the test data upon which the compilation is based has been produced to you where claims of confidentiality have not been made or have been waived, and, where such claims still apply, the documents have been submitted to the Presiding Officer for *in camera* review and determination of the circumstances and extent of disclosure. You were served with Complaint Counsel's Request for that determination earlier this week.

In your letter, you also suggest that the staff has "no information that indicates any failures regarding Omegas using silicone o-rings, and no information that indicates failures in any post-1990 Omegas used in copper or plastic systems." Our Interrogatory Responses and document production, as well as the numerous letters we have written to counsel for Central on issues such as the February, 1998 Omega failure, contradict your conclusions. Regardless, we do not intend to argue the evidence in letters; all argument will occur at the appropriate time before the Presiding Officer.

With respect to persons with knowledge, as we have indicated before, all persons whose names are reflected in the documents produced, as well as persons employed by Central, either now or in the past, and all persons who own, install, inspect or otherwise deal with Omega sprinklers may be knowledgeable about the Omega problem, and may be called by Complaint Counsel as fact witnesses. Upon receipt of Central's responses to our discovery, I expect that additional witnesses will be disclosed. Once we determine who we intend to call as witnesses in this matter, both fact and expert, we will make all necessary and appropriate disclosures.

As Complaint Counsel continues its investigation and preparation of this case, we expect that additional information will come to light. We will continue to supplement our discovery responses as required by the applicable rules. To that end, we are producing today under separate cover another supplement of documents responsive to Respondents' discovery requests. Additionally, we will be filing today an amended response to Respondents' Interrogatories in light of new evidence on a significant fire that occurred just last week, and other information that has developed in this case.

Please do not hesitate to contact me should you have any additional questions.

Sincerely,

Deborah S. Orlove, Esq.
Complaint Counsel

In the Matter of	
CENTRAL SPRINKLER CORP.,	CPSC DOCKET NO.: 98-2
and	
CENTRAL SPRINKLER CO.,	
Respondents	

FACTORY MUTUAL RESEARCH CORPORATION'S RESPONSE TO COMPLAINT COUNSEL'S REQUEST FOR DISCLOSURE DETERMINATION OF FACTORY MUTUAL RESEARCH CORPORATION DOCUMENTS

Non-party participant Factory Mutual Research Corporation ("FMRC") opposes any request by Complaint Counsel that any FMRC documents be placed in the public record. FMRC also objects to Complaint Counsel's request that any FMRC documents, other than those provided by or prepared at the request of Central Sprinkler Co., be disclosed to Central Sprinkler.

As set forth in the Affidavit of Peter H. Hachenburg filed herewith, in order for FMRC to maintain its status as an internationally recognized testing laboratory, inspection body, and approval body, FMRC must preserve the confidentiality of both information supplied by its customers and information generated during the testing of products for those customers. FMRC's duty of confidentiality stems not only from its contracts with its customers, but also from the very nature of FMRC as an internationally recognized testing laboratory and approval body.

To date, FMRC has cooperated with the Commission by providing confidential documents

in response to the Commission's subpoena. FMRC provided these documents with an express "request for confidentiality pursuant to 16 C.F.R. § 1015.18," a copy of which is attached hereto as Exhibit A. Now the Commission seeks to provide all of those documents to Respondent Central Sprinkler, and to place some or all of those documents in the public record. Any such violation of FMRC's obligations of confidentiality would seriously impair FMRC's continued ability to function as an internationally recognized testing laboratory. (Hachenburg Affidavit, ¶ 8). It would have a chilling effect on FMRC's future customers, leading some of them to either market or purchase fire protection products without any testing by FMRC. (*Id.*) This could place those customers and the general public at unnecessary risk. It would also limit the information that the Commission could access when it investigates any product that is related to fire safety or the other types of testing performed by FMRC and other testing laboratories.

The Commission has acknowledged that 18 U.S.C. § 1905 and/or 15 U.S.C. § 2055(a) bar disclosure of trade secret and confidential commercial information. In addition, 16 C.F.R. § 1025.31(d)(6) provides for the protection of trade secret and other confidential research, development, or commercial information. The procedures for *in camera* submission are not meant to abrogate the rights of FMRC and its customers to preserve the confidentiality of these documents, but rather to allow the Presiding Officer access to this information so that it may be considered in reaching a decision on the merits of this proceeding. 16 C.F.R. § 1025.45(2) places the burden on any party desiring access to *in camera* materials, such as Central Sprinkler, to make a motion setting forth its justification for such access. Neither Central Sprinkler nor any other party has yet filed such

a motion. Nonetheless, in the spirit of cooperation and efficiency, FMRC will describe below the documents for which it would not object to such a motion from Central Sprinkler.

FMRC's documents can generally be placed into two categories for the purposes of this motion. The first category consists of documents either provided to FMRC by Central Sprinkler or prepared by FMRC in response to Central Sprinkler's request that FMRC test its products. These documents are identified by the following in the lower right corner: 00233-01021, 01392-01402, and 01752-01753. The second category consists of all other documents produced by FMRC in response to the Commission's subpoena. These documents are identified by the numbers 00001-00232, 01022-01751, 01754-02152.

As to the first category, FMRC does not object to the Commission producing those documents to Central Sprinkler because such production is not inconsistent with FMRC's obligations of confidentiality. FMRC objects to placing these documents in the public record, however, to the extent that Central Sprinkler makes such objections. This is because FMRC's duty of confidentiality runs to Central Sprinkler for this category of documents.

As to the second category of documents, FMRC objects to any disclosure to either Central Sprinkler or anyone else. Producing these documents to Central Sprinkler or placing them in the public record would violate FMRC's obligations of confidentiality to the companies that either provided this information to FMRC or that retained FMRC to perform testing, or would destroy the proprietary and confidential nature of FMRC's own trade secrets and confidential business information. If the Presiding Officer determines that any of the documents in this second category should be produced, FMRC requests the opportunity to redact information identifying its customers

and other sources of confidential information.

Respectfully submitted,

REQUEST FOR CONFIDENTIALITY

Factory Mutual Research Corporation ("FMRC") hereby submits its written response to the Subpoena issued by the United States of America Consumer Product Safety Commission ("Commission") and requests confidentiality for the documents submitted in response to the subpoena as well as FMRC's written responses provided hereto.

This request for confidentiality is made pursuant to 16 C.F.R. §1015.18 because the responsive documents and information constitute confidential and proprietary business information between FMRC and its clients. Before undertaking to perform testing, FMRC promises its clients, implicitly or explicitly, that it will keep all information submitted by the client, as well as its testing results, confidential. FMRC's clients entrust FMRC with their proprietary and confidential information and often these clients are competitors in the same markets, thereby necessitating that FMRC maintain the strictest confidences with regard to the information and test results. FMRC has an important business interest to protect in maintaining the confidentiality of its clients' files and the results of FMRC's testing. FMRC therefore requests that the information provided to the Commission pursuant to this subpoena be exempt from disclosure including, but not limited to, disclosure pursuant to the Freedom of Information Act, 5 U.S.C. §1552.

Further, FMRC requests that should a request for disclosure or production of the information that FMRC has provided to the Commission in response to the subpoena be made, that FMRC be notified prior to the disclosure of such requested information so that FMRC may take appropriate action to protect the confidentiality of the information and its disclosure. Notification should be provided to: Peter H. Hachenburg, Esquire, Vice President, General Counsel and Secretary, Factory Mutual Research Corporation, 1151 Boston-Providence Turnpike, Norwood, Massachusetts 02062.

Respectfully submitted,

Dated: June 17, 1997

CPSC/OFC OF THE SECRETARY
FREEDOM OF INFORMATION
1998 JUN -2 A 9:02

In the Matter of CENTRAL SPRINKLER CORP., and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO.: 98-2

AFFIDAVIT OF PETER H. HACHENBURG

I, Peter H. Hachenburg, make the following declarations:

1. I am Vice President, General Counsel, and Secretary of non-party Factory Mutual Research Corporation ("FMRC").

2. FMRC is an internationally recognized testing laboratory, inspection body, and approval body. FMRC conducts basic and applied research on topics such as effectiveness of fire alarms and sprinklers, flammability, wind resistance, and other topics related to property loss prevention and control.

3. FMRC's relationships with its customers depend upon its ability to maintain the confidentiality of information provided by the customers and information developed during its testing. Before undertaking to perform tests, FMRC promises its customers that it will keep all information submitted by them, as well as the test results, confidential.

4. For FMRC to perform its testing and research functions, its needs technical data about the products it tests. Much of those data consists of confidential trade secrets and other proprietary

data of the products' manufacturers. Such data often amount to nothing less than a recipe for each product, revelation of which would permit a manufacturer's competitors to duplicate its products without making any substantial investment in research and development. Revelation of failed testing could also obviously damage a manufacturer's ability to market its products.

5. FMRC also conducts tests for customers who did not manufacture the product being tested, but rather intend to use that product under particular circumstances. In such cases, the testing and the details of those circumstances are confidential and proprietary to the customer.

6. This kind of confidentiality is critical to the performance of FMRC's role as an internationally recognized testing laboratory, inspection body and certification body. International standards governing the conduct of testing laboratories, inspection bodies, and certification bodies, such as FMRC, require such confidentiality. The International Standards Organization/International Electrotechnical Commission ("ISO/IEC") promulgates international requirements for the acceptance of inspection bodies, testing laboratories, and certification bodies such as FMRC. ISO/IEC Guide 39-1983, covering the requirements for acceptance of inspection bodies provides in pertinent part:

> **Confidentiality and Security.**
>
> The inspection body shall be willing to observe terms and conditions to provide for confidentiality and security of its practices as required by the users of its services.
>
> Inspection bodies may in the course of their duties receive information such as manufacturing processes, market information, volume or value of production, which is of a secret nature or confidential. It is of the greatest importance that this confidentiality is respected at all times and is the subject of a clear understanding

between the body granting recognition, the inspection body and the manufacturer subject to inspection.

All inspection staff shall be made aware of the need for confidentiality and security of their work. The distribution of confidential information within the staff shall be limited to those persons whose job requires that they have such information.

7. ISO/IEC Guide 38-1983, setting forth the general international requirements for the acceptance of testing laboratories, provides, "The testing laboratory shall be willing to observe terms and conditions to provide for confidentiality and security of its practices as required by the users of its services." ISO/IEC Guide 40-1983, stating the general international requirements for the acceptance of certification bodies, provides, "The Certification Body shall ensure the confidentiality of its activities and those of the testing an inspection bodies it commissions."

8. A breach in the confidentiality would harm FMRC and its customers:

- A loss of confidentiality would quickly lead to a loss of customers. FMRC's customers do not demand confidentiality just as a whim: they are very serious about it. If the confidentiality of their proprietary information is not respected, at least some of those customers will not submit their products for evaluation by FMRC.

- FMRC depends on its ready access to such confidential data to be able to conduct its property loss prevention and control research and provide other property conservation services. If its access to confidential data is impaired (as it would be if manufacturers stopped providing such data), FMRC's ability to conduct its business would be adversely affected. There would be a definite "chilling" effect from the unnecessary disclosure of its customers' trade secrets.

I declare under the penalty of perjury that the foregoing is true and correct.

Executed on May 27, 1998.

Peter H. Hachenburg

CONFIDENTIALITY ORDER AND ORDER REGARDING COMPLAINT COUNSEL'S *IN CAMERA* SUBMISSION OF DOCUMENTS AND REQUEST FOR DISCLOSURE DETERMINATION

On May 15, 1998, Complaint Counsel filed documents *in camera*, in response to Respondent's First Discovery Request, for a determination of "whether and to what extent such documents should be produced under 16 C.F.R. § 1025.33." Complaint Counsel's *In Camera* Submission of Documents In Response to Discovery and Request for Disclosure Determination ("Request"). The Bate stamped documents, some 9,540 pages, were provided to the Consumer Product Safety Commission ("CPSC") in response to subpoenas issued in May 1997, but they were not delivered to Respondents because the subpoenaed parties, Underwriters Laboratories Inc. ("UL") and Factory Mutual Research Corporation ("FMRC"), asserted confidentiality and trade secret claims and would not agree to their disclosure in discovery.

For that reason, Complaint Counsel has sought the Presiding Judge's determination of whether and to what extent, in accordance with 15 U.S.C. § 2055(a)(8) and 16 C.F.R. 1025.45, the documents may be produced. UL and FMRC, identified as "third parties" in the Request were served with copies of this filing.

The letters from the FMRC and UL, identified in the Request as Exhibits "A" and "B", and dated June 17, 1997 and August 29,1997, respectively, request that the subpoenaed documents be exempt from disclosure under the Freedom of Information Act ("FOIA") as confidential, proprietary, reflective of internal thought processes of the third parties, and on the basis that this release could harm the third parties' and/or the "applicant's" competitive position. Subsequently, FMRC has reiterated its opposition to any FMRC documents being placed in the public record as well as the disclosure of those documents to Central Sprinkler Corp. and Central Sprinkler Co. ("Central"), other than those provided by or prepared at the request of Central.[1] For its part, UL, in a letter dated May 27, 1998, has stated that it has no objection to disclosure to Respondents (subject to a confidentiality agreement) of the documents it has produced to the CPSC.

Central filed its opposition on May 19, 1998, to Complainant Counsel's *in camera* submission and request for disclosure determination, asserting that this amounted to conducting an *ex parte* trial, and that such material is subject to discovery under Title 15 U.S.C. § 2055(a)(8). Central asserts that the CPSC should have sought a negotiated confidentiality agreement with Respondents and in line with this approach, submitted a draft Confidentiality Agreement ("Draft Agreement") for this Court's approval[2]. The Draft Agreement is an elaborate

---

[1]On May 28, 1998, FMRC filed a request to participate as a non-party in this proceeding in order to protect its confidential documents from unwarranted disclosure. A ruling on this request is not being made at this time, pending responses to the request from the parties.

[2]Complaint Counsel filed, on June 1, 1998, a Motion to Exclude Respondents Unfiled Oppositions on the basis that they were not filed with the Secretary of the Commission nor upon Complaint Counsel. A ruling on this motion will be made at the first prehearing conference, now scheduled for June 16, 1998.

and broadly worded document which attempts to give the parties "the right to limit access to any document or other item relevant to this litigation . . . ," provides a dispute resolution mechanism for contested designations of limited access, including the allocation of the burden of proof, and calls for the return or destruction of all such material at the conclusion of the litigation.

Discussion

Some perspective is in order concerning these issues. It is not reasonable for counsel for Respondent to view Complaint Counsel's *in camera* submission of documents as an attempt to engage in an *"ex parte* trial of this matter." Rather, it is apparent that Complaint Counsel has made a good faith attempt to find a path between honoring Respondent's discovery requests and the third parties' request that the documents subpoenaed by the Consumer Product Safety Commission not be disclosed.

Counsel for Respondent has also lost sight of the consideration that, regardless of which documents are ultimately disclosed for purposes of discovery as part of the public record, in full or redacted form and with or without confidentiality orders, the determination of liability by the presiding judge, if liability is indeed established, will be made ***only*** on the basis of those documents which are submitted into evidence *at the hearing.*

As to the some 9,540 pages of materials in issue, it has been noted that the third parties have asserted FOIA claims as the basis for their nondisclosure request. Complaint Counsel observes that Title 18 U.S.C. § 1905 generally and 15 U.S.C. § 2055 more particularly, speak to the public disclosure of confidential information. Section 6 (a)(8) of the Consumer Product Safety Act, 15 U.S.C. 2055 (a)(8), provides that information shall be disclosed when relevant in

any administrative or judicial proceedings to which the Commission is a party, subject to *in camera* review of confidential material. With an appropriate confidentiality order, it is clear that the material provided by the third parties is disclosable to Respondent, Central. *See*, Culligan v. Yamaha Motor Corp., 110 F.R.D. 122, 127; 1986 U.S. Dist. LEXIS 26489, April 21, 1986. (". . . information that the statutes require the agency to keep confidential may nevertheless be subject to disclosure in litigation.")

This does not completely resolve the matter however, as two other aspects must be addressed. As mentioned, disclosure of all the documents to Central is now appropriate, given the confidentiality order set forth *infra*. However, resolving what Central may discover[3] does not resolve the appropriate content of the *public* record in this case. Central's attempt to entirely block from public disclosure, both for the present and at the conclusion of this litigation, permanently, all of the third party documents (and potentially any other documents) is rejected.

Rather, for purposes of determining the appropriate content of the public record in this proceeding, the third parties are directed within 45 days of this Order to identify by referencing the particular Bate stamped page(s) and separately identifying for each request for exemption from disclosure the trade secret or privileged or confidential commercial or financial information and:

1. Specifically identifying (by highlighting or red underlining) the ***exact*** portion(s) of the document claimed to be confidential;

---

[3] It is noted that Central may already have all of the materials it seeks. The third parties' request for confidentiality rests, in part, upon this relationship with the "applicant," to wit, Central.

2. State whether the information claimed to be confidential has ever been released in any manner to a person who was not an employee or in a confidential relationship with the company;

3. State whether the information so specified is commonly known within the industry or is readily ascertainable by outside persons with a minimum of time and effort;

4. State how release of the information so specified would be likely to cause substantial harm to the company's competitive position; and

5. State whether the submitter is authorized to make claims of confidentiality on behalf of the person or organization concerned.

Failure to comply with the specifics listed above will result in release of the documents in issue to the public record in this matter.

Conclusion and Confidentiality Order

For the foregoing reasons, the documents submitted by Complaint Counsel are directed to be delivered to Counsel for Central. Pending resolution of confidentiality issues as to the composition of the public record in this case, Counsel for Central is directed to not disseminate the documents and to use them only for purposes of this litigation. If Central's Counsel wishes to disclose these documents in connection with trial preparation to persons other than Central employees, Counsel shall provide ten (10) days notice to the third parties, who shall have the right to prevent such disclosure by submitting a motion to the Presiding Judge. Pending a determination of such a motion, no disclosure shall be made. A copy of this Order shall be

provided to all persons to whom confidential documents are disclosed and these persons shall be subject to its terms.

So Ordered.

Respondents	)	

ORDER GRANTING COMPLAINT COUNSEL'S
MOTION FOR PROTECTIVE ORDER

On May 18, 1998, Complaint Counsel for the Consumer Product Safety Commission ("CPSC") filed a motion requesting that a document, which may be within the ambit of Respondent's First Request for Production of Documents, be protected from discovery. The document was submitted to the Presiding Judge *in camera*. The document, authored by an unidentified informant, contains "information and suggestions regarding Omega sprinkler failures . . ." Motion at 1.

Complaint Counsel relates that the document will not be used at trial, although it is being used to further CPSC's investigation. Complaint Counsel assures that all information it obtains as a result of such further investigation stemming from the document will be disclosed to Respondents.

Respondents Central Sprinkler Corp. and Central Sprinkler Co. ("Central"), filing an opposition to the motion, assert that the informant's privilege protects only the identity of the informant, not the contents of the document. In addition, since the document is anonymous, Respondent contends that the informant's identity is unknowable.

Respondents also assert that the "privilege must give way" where disclosure of an informant's identity or the contents of the communication are either relevant and helpful to the defense of an accused or is essential to a fair determination. Respondents' Opposition at 4. Upon consideration of the Motion and Respondent's Opposition, Complaint Counsel's Motion is GRANTED

Discussion

The informant's privilege is a well established and sound doctrine. Sec. Of Labor v. Superior Care, Inc., 107 F.R.D. 395, 397 (E.D. N.Y. 1985). It applies to civil as well as criminal cases. Han v. Dept. Of Agriculture, 580 F. Supp. 1564, 1567 (D.N.J. 1984). The privilege is not absolute, but rather is qualified. A balancing test is employed which involves consideration of "the public's interest in efficient enforcement of the Act, the informer's right to be protected against possible retaliation, and the defendant's need to prepare for trial." Sec. of Labor v. Charles Martin 459 F.2d 303, 305 (5th Cir. 1972).

The Presiding Judge has closely reviewed the subject document and concludes that its disclosure bears no relationship to Central's need to prepare for trial. The author of the document is not a witness and Complaint Counsel only intends to use the document as a basis for possible leads in its investigation. Complaint Counsel further relates that it will disclose all information it develops from the document and intends to use in the hearing.

Further, Central's argument that the privilege is not applicable because the document is an anonymous letter is rejected. Sophisticated legal counsel, as Central's representatives clearly are, know full well that the identity of an author is not dependent solely upon affixing one's name to a document. The details of a document, and even expressions or phrases within it, can

provide markers which may reveal the identity of the author or narrow the group of possible authors to a few individuals who can be quizzed.[1] As noted in Massman-Johnson, 1980 OSAHRC LEXIS 467, at *12 (May 2, 1980), quoting from Quality Stamping Products Inc., 79 OSAHRC 28 /F11, "the identity of an informer might be revealed from the disclosure of even a basically factual statement relevant to an investigation . . ."

Accordingly, having conducted the required balancing of interests, Complaint Counsel's Motion for Protective Order is GRANTED; the document is protected from discovery.

So Ordered.

[1] The suggestion that Central needs the letter "[t]o the extent . . . [it] reveals or explains any potential problems with the Omegas . . . [to enable it to] address any potential problems appropriately" (Central Opposition at 5) is rejected. Central denies the gravamen of the Complaint and the document in issue does not "reveal or explain" any potential problems with the sprinklers beyond that which the Complaint and the documents delivered to Central through discovery have already provided.

ORDER GRANTING COMPLAINT COUNSEL'S
MOTION FOR PROTECTIVE ORDER

On May 18, 1998, Complaint Counsel for the Consumer Product Safety Commission ("CPSC") filed a motion requesting that a document, which may be within the ambit of Respondent's First Request for Production of Documents, be protected from discovery. The document was submitted to the Presiding Judge *in camera*. The document, authored by an unidentified informant, contains "information and suggestions regarding Omega sprinkler failures . . ." Motion at 1.

Complaint Counsel relates that the document will not be used at trial, although it is being used to further CPSC's investigation. Complaint Counsel assures that all information it obtains as a result of such further investigation stemming from the document will be disclosed to Respondents.

Respondents Central Sprinkler Corp. and Central Sprinkler Co. ("Central"), filing an opposition to the motion, assert that the informant's privilege protects only the identity of the informant, not the contents of the document. In addition, since the document is anonymous, Respondent contends that the informant's identity is unknowable.

Respondents also assert that the "privilege must give way" where disclosure of an informant's identity or the contents of the communication are either relevant and helpful to the defense of an accused or is essential to a fair determination. Respondents' Opposition at 4. Upon consideration of the Motion and Respondent's Opposition, Complaint Counsel's Motion is GRANTED

Discussion

The informant's privilege is a well established and sound doctrine. Sec. Of Labor v. Superior Care, Inc., 107 F.R.D. 395, 397 (E.D. N.Y. 1985). It applies to civil as well as criminal cases. Han v. Dept. Of Agriculture, 580 F. Supp. 1564, 1567 (D.N.J. 1984). The privilege is not absolute, but rather is qualified. A balancing test is employed which involves consideration of "the public's interest in efficient enforcement of the Act, the informer's right to be protected against possible retaliation, and the defendant's need to prepare for trial." Sec. of Labor v. Charles Martin 459 F.2d 303, 305 (5th Cir. 1972).

The Presiding Judge has closely reviewed the subject document and concludes that its disclosure bears no relationship to Central's need to prepare for trial. The author of the document is not a witness and Complaint Counsel only intends to use the document as a basis for possible leads in its investigation. Complaint Counsel further relates that it will disclose all information it develops from the document and intends to use in the hearing.

Further, Central's argument that the privilege is not applicable because the document is an anonymous letter is rejected. Sophisticated legal counsel, as Central's representatives clearly are, know full well that the identity of an author is not dependent solely upon affixing one's name to a document. The details of a document, and even expressions or phrases within it, can

provide markers which may reveal the identity of the author or narrow the group of possible authors to a few individuals who can be quizzed.[1] As noted in Massman-Johnson, 1980 OSAHRC LEXIS 467, at *12 (May 2, 1980), quoting from Quality Stamping Products Inc., 79 OSAHRC 28 /F11, "the identity of an informer might be revealed from the disclosure of even a basically factual statement relevant to an investigation . . ."

Accordingly, having conducted the required balancing of interests, Complaint Counsel's Motion for Protective Order is GRANTED; the document is protected from discovery.

RESPONDENTS' OPPOSITION TO
COMPLAINT COUNSEL'S MOTION TO EXCLUDE OPPOSITIONS

Presently before the Court is Complaint Counsel's Motion to exclude Respondents' oppositions to certain motions filed by Complaint Counsel.[1/] Complaint Counsel argues that the Presiding Officer should exclude Respondents' oppositions because, despite the fact that such oppositions were served on acting lead counsel for the CPSC and duly submitted to the Presiding Officer, such oppositions technically were not served on three other CPSC lawyers in the same office and/or formally filed with the Secretary of the CPSC.[2/] For reasons that follow, Respondents respectfully request that the Presiding Officer deny Complaint Counsel's Motion.

As an initial matter, counsel for the CPSC already has been effectively served with Respondents' Oppositions. Respondents' Oppositions were timely served on Eric Stone, the

---

1/ See Complaint Counsel's Motion To Exclude Respondents' Unfiled Oppositions ("Complaint Counsel's Motion"), filed June 1, 1998.

2/ The oppositions at issue are: (1) Proposed Protective Order and Opposition of Respondents To Complaint Counsel's Submission of Documents In Camera; and (2) Respondents' Opposition To Complaint Counsel's Motion For A Protective Order Regarding Anonymous Letter (collectively, "Respondents' Oppositions").

Director of Administrative Litigation for the CPSC.[3/] See Exhibit "A" to Complaint Counsel's Motion. Mr. Stone has been and continues to act as lead counsel for the CPSC in this matter in conferences with Respondents, and has participated in conferences with the Presiding Officer as counsel for the CPSC as recently as last Friday, May 28, 1998. Therefore, serving Mr. Stone was both appropriate and effective. Upon CPSC counsel's request that all further service copies be directed to Deborah Orlove, Eric Singer, or Howard Tarnoff, see Exhibit "B" to Complaint Counsel's Motion, Respondents complied and have served subsequent pleadings as requested.

In addition, no prejudice of any kind has been suffered by Complaint Counsel, nor does Complaint Counsel's Motion even attempt to claim any prejudice. Respondents' Oppositions were served May 19; by May 20, Complaint Counsel already had sent a letter to Respondents commenting on Respondents' Oppositions. See Exhibits "A" and "B" to Complaint Counsel's Motion. Thus, Complaint Counsel clearly received Respondents' Oppositions in a timely fashion. As further evidence that Complaint Counsel timely received Respondents' Oppositions, on May 22, 1998, Complaint Counsel filed a request for leave to submit a reply brief to one of Respondents' Oppositions.[4/]

Finally, to the extent that any administrative confusion could have resulted based on the fact that Respondents' Oppositions were not filed with the Secretary of the CPSC, Respondents already have cured any such potential problem. Respondents have sent the appropriate

---

3/ Respondents' Oppositions also were served on the Hon. William B. Moran, Presiding Officer, and Alan Schoem, the Assistant Executive Director for the CPSC Division of Compliance. See Exhibit "A" to Complaint Counsel's Motion.

4/ See Complaint Counsel's Motion For Leave To Submit Reply Brief In Support Of Complaint Counsel's Motion For Protective Order and In Camera Submission.

documents to the Secretary, with a complete explanation of the original service dates. See Letter to Secretary, attached hereto as Exhibit "A". Counsel will make sure that all subsequent pleadings are forwarded directly to the Secretary.

Thus, counsel for the CPSC has been effectively served, Complaint Counsel has suffered no prejudice, and Respondents have taken appropriate steps to assure that the Secretary's file regarding this matter is complete. All of this could have been accomplished via a letter or telephone call between counsel, rather than burdening the Court with another motion.

Based on all of the foregoing, Respondents respectfully request that the Presiding Officer enter the attached Order, denying Complaint Counsel's Motion. Given their actual receipt of a formal response opposing their motions, their request to file a reply memorandum, and their failure to allege any prejudice whatsoever, Complaint Counsel cannot plausibly contend that the Presiding Officer should view Respondents as having consented to Complaint Counsel's motions. See 15 C.F.R. § 1025.23(c).

Respectfully submitted,

COMPLAINT COUNSEL'S NOTICE OF SERVICE OF FOURTH SET OF SUPPLEMENTAL DOCUMENTS IN RESPONSE TO RESPONDENTS' FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Pursuant to its continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), and pursuant to the Presiding Officer's June 5, 1998 Confidentiality Order and Order Regarding Complaint Counsel's *In Camera* Submission of Documents and Request for Disclosure Determination, Complaint Counsel hereby provides supplemental documents in response to Respondents' First Request for Production of Documents and Things. The documents are Bates-stamped documents 2228 - 11768, with an intentional gap at Bates pages 8701 - 8999. These documents may be responsive to Respondents' First Request for Production of Documents and Things Nos. 2, 3, 5, 7, 9, 12, 13, 14, 23, 24, 25, 27, 31, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 56, 57, 58, 60, 66, 68, 69, 70 and/or 71. Complaint Counsel provides these documents without waiving objections stated in Complaint Counsel's Responses to Respondents' First Set of Interrogatories and Complaint Counsel's Responses to Respondents' First Request for Production of Documents. Complaint Counsel provides these documents to Counsel for Respondents subject to the Presiding Officer's Confidentiality Order, dated June 5, 1998.

COMPLAINT COUNSEL'S OPPOSITION TO RESPONDENTS' MOTION FOR CERTIFICATION FOR INTERLOCUTORY APPEAL

COMES NOW Complaint Counsel and respectfully submits its Opposition to Respondents' Motion for Certification for Interlocutory Appeal to the CPSC.

I. INTRODUCTION

On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. The Complaint seeks a nationwide recall of approximately 10 million "Omega" automatic fire sprinklers manufactured by Respondents since 1982.

On March 26, 1998, Respondents filed a Motion to Dismiss and Supporting Memorandum. On April 6, 1998, Complaint Counsel filed its Opposition to Respondents' Motion to Dismiss. On May 15, 1998, Respondents' Motion to Dismiss was denied by Order of the Presiding Officer (hereinafter, "Judge Moran's Order"). On May 26, 1998, Respondents filed a Motion for Reconsideration of the Presiding Officer's Order or, in the

alternative, for Certification Pursuant to 16 C.F.R. § 1025.24(b)(4) (interlocutory appeal). Via teleconference on May 29, 1998, the Presiding Officer informed the parties that Respondents' Motion for Reconsideration was denied. Therefore, Complaint Counsel files this Opposition to Respondents' Motion for Certification.

As detailed below, Respondents' Motion should be denied because it does not meet the narrowly construed requirements for interlocutory appeal certification specified in 16 C.F.R. § 1025.24(b)(4).

II. THE ORDER ON THE JURISDICTIONAL QUESTION SHOULD NOT BE CERTIFIED FOR INTERLOCUTORY APPEAL

A. An Adjudication for Remedial Action on a Defective Product that Creates a Substantial Risk of Injury to the Public Under the CPSA Must Proceed Without Unnecessary Delay

The general rule under the CPSC's Rules of Practice for Adjudicative Proceedings (hereinafter, "Rules of Practice"), 16 C.F.R. § 1025 *et seq.*, is that rulings of the Presiding Officer may not be appealed to the Commission prior to the Initial Decision. *See* 16 C.F.R. § 1025.24(a) (emphasis added). The policy underlying this rule is akin to the final judgment rule applied by the federal court system, which the Supreme Court has stated "serves the important purpose of promoting efficient judicial administration." *Firestone Tire & Rubber Co. v. Risjord*, 449 U.S. 368, 374 (1981) (holding that Order denying motions to disqualify party's opposing counsel was not appealable final decision under 28 U.S.C. § 1291 and did not fall within collateral order exception because petitioners had not shown that such Order was unreviewable on appeal from final judgment on the merits).

The need for efficient judicial administration is magnified in an adjudicative proceeding under the Consumer Product Safety Act (hereinafter, "CPSA"), 15 U.S.C. § 2051

et seq., because Congress intended the CPSA to "protect the public against unreasonable risks of injury associated with consumer products." 15 U.S.C. § 2051(b)(1) (1997). The Commission's Rules of Practice recognize the need for efficient judicial administration. *See* 16 C.F.R. § 1025.1 ("A major concern of the Commission is that all matters in adjudication move forward in a timely manner, consistent with the Constitutional right of all parties . . . ."); 16 C.F.R. § 1025.2 ("[T]he Presiding Officer and all parties shall make every effort at each stage of any proceeding to avoid unnecessary delay.").

Interlocutory appeals often cause a significant delay in litigation. Charles A. Wright, *The Law of Federal Courts*, § 101, at 697 (4th ed. 1983); *See Long Island Lighting Co. v. Transamerica Delaval, Inc.*, 648 F. Supp. 988, 991 (interlocutory appeal more likely to delay its conclusion than to materially advance the ultimate termination of the litigation). In the instant matter, the staff is seeking to compel public notice and remedial action necessary to protect the public from a substantial risk of injury and/or death created by Respondents' defective Omega fire sprinklers. Certainly, this proceeding involves a matter of considerable national concern that needs to be addressed expeditiously.

B. This Is Not One Of The Rare Circumstances Where An Interlocutory Appeal Should Be Certified

Respondents have moved for an interlocutory appeal pursuant to 16 C.F.R. § 1025.24(b)(4), which provides an exception to the general rule regarding appeal of the Presiding Officer's rulings to the Commission prior to the Initial Decision. Complaint Counsel agrees with Respondents that 16 C.F.R. § 1025.24(b)(b) closely patterns The Interlocutory Appeals Act of 1958, 28 U.S.C. § 1292(b) (hereinafter, "the IAA"), providing for interlocutory appeal from a district court to a court of appeals. The case law interpreting

the IAA and the policies underlying it prove instructive in considering a motion under 16 C.F.R. § 1025.24(b)(4).

The IAA was not designed as a broad loophole to the final judgment rule, and the courts have allowed certification only in rare circumstances.[1,2] The Supreme Court has stated that even if a district court judge certifies an order under 28 U.S.C. § 1292(b), the appellant "has the burden of persuading the court of appeals that exceptional circumstances justify a departure from the basic policy of postponing appellate review until after entry of a final judgment." *Coopers & Lybrand v. Livesay*, 437 U.S. 463, 475 (1978) (quoting *Fisons, Ltd. v. United States*, 458 F.2d 1241, 1248 (7th Cir. 1972)). The CPSC's interlocutory appeal exception, 16 C.F.R. § 1025.24(b)(4), was written with a similar intention: interlocutory appeals are to be granted only under exceptional circumstances in order to prevent unnecessary delay in the protection of the American public from the unreasonable risks of injury associated with consumer products. *See* 16 C.F.R. §§ 1025.1-.2; 15 U.S.C. § 2051(b)(1) (1997).

---

[1]Statistics reveal that only a few more than a hundred cases per year seek permission to appeal under Section 1292(b) and that review is granted for only about one half the applications. Jack H. Friedenthal et al., *Civil Procedure*, § 13.3, at 596 n.18 (2d ed. 1993).

[2]*Katz v. Carte Blanche Corp.*, 496 F.2d 747, (3d Cir.), *cert. denied*, 419 U.S. 885 (1974), is a case where the Third Circuit allowed an interlocutory appeal, pursuant to 28 U.S.C. § 1292(b). Other courts commenting on *Katz* have stated that it should be limited to the type of unique circumstances and prejudices that would have befallen the defendant had class certification been allowed. *See Bates v. Tenco Services, Inc.*, 132 F.R.D. 165, 166 (D.S.C. 1990) ("[T]he prejudice found to have befallen on the defendant in Katz was of a nature unique to the defendant's type of business and to the particular cause of action"); *See also Kramer v. Scientific Control Corp.*, 534 F.2d 1085, 1087 (3d Cir. 1976) (emphasizing the limited scope of *Katz*, holding that "[t]o qualify for interlocutory review in this circuit, a class certification must be attended by special factors which take it outside the ambit of the general rule").

C. The Requirements For Certification Specified By 16 C.F.R. § 1025.24(b)(4) Are Not Met

In order to qualify for interlocutory appeal certification, Respondents bear the heavy burden of proving that Judge Moran's Order falls within the bounds of the narrow exception provided by 16 C.F.R. § 1025.24(b)(4).[3] This exception provides:

> Interlocutory appeals from all other rulings by the Presiding Officer may proceed only upon motion to the Presiding Officer and a determination by the Presiding Officer in writing that the ruling involves a controlling question of law or policy as to which there is substantial ground for differences of opinion and that an immediate appeal from the ruling may materially advance the ultimate termination of the litigation, or that subsequent review will be an inadequate remedy. The Presiding Officer's certification shall state the reasons for the determination.

16 C.F.R. § 1025.24(b)(4).

1. The Jurisdictional Ruling Does Not Involve A Controlling Question Of Law Or Policy As To Which There Is Substantial Ground For Differences Of Opinion

The jurisdictional ruling in this case does not satisfy the requirements of the first criterion of the interlocutory appeal exception, as stated in 16 C.F.R. § 1025.24(b)(4). Simply, there is not a "substantial ground for differences of opinion" regarding whether Omegas are "consumer products" under 15 U.S.C. § 2052 (1997).[4] Respondents have not

---

[3]*See Department of Labor v. Greenwich Collieries*, 512 U.S. 267, 280-281 (1994) (holding that under section 7(c) of the APA, 5 U.S.C. § 556(c), the proponent of an order bears both the burden of production and the burden of persuasion).

[4]Moreover, contrary to Respondents' assertion, the jurisdictional question does not involve a controlling question of policy relating to federalism. As Complaint Counsel demonstrated in its Opposition and Surreply to Respondents' Motion to Dismiss, the CPSC's jurisdiction over defective consumer products that create a substantial risk of injury to the public preempts state and local authority. *See* Complaint Counsel's Opposition to Respondents' Motion to Dismiss at 18-21; Complaint Counsel's Surreply in Opposition to Respondents' Motion to Dismiss at 9-12; *see also* Judge Moran's Order at 15-16.

cited any authority finding that a similarly-situated article, or component part thereof, is not a consumer product under the CPSA.

Respondents cite the distinction between the holdings of *Consumer Prod. Safety Comm'n v. The Anaconda Co.*, 593 F.2d 1314 (D.C. Cir. 1979) and *Kaiser Alum. & Chem. Corp. v. Consumer Prod. Safety Comm'n*, 574 F.2d 178 (3rd Cir.), *cert. denied*, 439 U.S. 881 (1978), to support their premise that there exists a substantial ground for differences of opinion regarding whether fire sprinklers are consumer products. However, as the *Anaconda* and *Kaiser* opinions demonstrate, the distinction between their holdings lies in the different articles they consider -- aluminum wiring systems (*Anaconda)*, versus aluminum wiring (*Kaiser)*. Respondents acknowledge this distinction. See Memorandum in Support of Respondents' Motion for Certification (hereinafter, "Respondents' Memorandum") at 13. That the cases are not contradictory is best demonstrated by the fact that *Anaconda* cites *Kaiser* and explains the different holdings as a difference between the system and its components. *See Anaconda*, 593 F.2d at 1322 (stating that "the jurisdictional question in this case is whether aluminum branch circuit wiring systems are "consumer products." This was not the issue before the Delaware district court. A fair reading of Judge Stapleton's decision makes clear that the only issue actually litigated in Delaware related to aluminum wiring, a distinct product from the one involved in this case.") In the instant case, there is simply no substantial ground for differences of opinion on the question of jurisdiction. In fact, the case law overwhelmingly supports the Commission's jurisdiction over fire sprinklers.

2. An Immediate Appeal Of Judge Moran's Order Will Not Materially Advance The Ultimate Termination Of The Litigation

An immediate appeal from Judge Moran's Order also fails to satisfy the requirements of the second criterion of the interlocutory appeal exception provided by 16 C.F.R. § 1025.24(b)(4) -- that an immediate appeal from the ruling may materially advance the ultimate termination of the litigaiton, or that subsequent review will be an inadequate remedy. *See* 16 C.F.R. § 1025.24(b)(4). Application of this criterion involves a balancing of whether allowing piecemeal review may delay or hinder a trial against the need for immediate appellate guidance on the issue presented by the order. Friedenthal et al., *Civil Procedure*, § 13.3, at 597 (2d ed. 1993). In the instant matter, where the Commission staff has conducted nearly a two-year investigation of Respondents, reviewed thousands of pages of documents, and produced substantial discovery, certification for an interlocutory appeal "is not likely to stem the flow of paper or bring the case to a speedy conclusion." *Long Island Lighting Co.* at 991. Moreover, and most importantly, the Commission, through its General Counsel and by voting to issue the Complaint against Respondents herein, made a preliminary determination of the existence of its jurisdiction over automatic fire sprinklers. Respondents' appeal to the Commission is highly ulikely to terminate this case.

III. CONCLUSION

Based on the foregoing, Complaint Counsel respectfully requests that Respondents' Motion for Certification Pursuant to 16 C.F.R. § 1025.24(b)(4) be DENIED.[5]

---

[5]If Respondents' Motion is granted, Complaint Counsel respectfully requests that the proceedings not be stayed, as provided by 16 C.F.R. § 1025.24(c), because any delay in the preceedings may pose a threat to public safety.

COMPLAINT COUNSEL'S OPPOSITION TO RESPONDENTS' MOTION FOR CERTIFICATION FOR INTERLOCUTORY APPEAL

COMES NOW Complaint Counsel and respectfully submits its Opposition to Respondents' Motion for Certification for Interlocutory Appeal to the CPSC.

I. INTRODUCTION

On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. The Complaint seeks a nationwide recall of approximately 10 million "Omega" automatic fire sprinklers manufactured by Respondents since 1982.

On March 26, 1998, Respondents filed a Motion to Dismiss and Supporting Memorandum. On April 6, 1998, Complaint Counsel filed its Opposition to Respondents' Motion to Dismiss. On May 15, 1998, Respondents' Motion to Dismiss was denied by Order of the Presiding Officer (hereinafter, "Judge Moran's Order"). On May 26, 1998, Respondents filed a Motion for Reconsideration of the Presiding Officer's Order or, in the

alternative, for Certification Pursuant to 16 C.F.R. § 1025.24(b)(4) (interlocutory appeal). Via teleconference on May 29, 1998, the Presiding Officer informed the parties that Respondents' Motion for Reconsideration was denied. Therefore, Complaint Counsel files this Opposition to Respondents' Motion for Certification.

As detailed below, Respondents' Motion should be denied because it does not meet the narrowly construed requirements for interlocutory appeal certification specified in 16 C.F.R. § 1025.24(b)(4).

II. THE ORDER ON THE JURISDICTIONAL QUESTION SHOULD NOT BE CERTIFIED FOR INTERLOCUTORY APPEAL

A. An Adjudication for Remedial Action on a Defective Product that Creates a Substantial Risk of Injury to the Public Under the CPSA Must Proceed Without Unnecessary Delay

The general rule under the CPSC's Rules of Practice for Adjudicative Proceedings (hereinafter, "Rules of Practice"), 16 C.F.R. § 1025 *et seq.*, is that rulings of the Presiding Officer may not be appealed to the Commission prior to the Initial Decision. *See* 16 C.F.R. § 1025.24(a) (emphasis added). The policy underlying this rule is akin to the final judgment rule applied by the federal court system, which the Supreme Court has stated "serves the important purpose of promoting efficient judicial administration." *Firestone Tire & Rubber Co. v. Risjord*, 449 U.S. 368, 374 (1981) (holding that Order denying motions to disqualify party's opposing counsel was not appealable final decision under 28 U.S.C. § 1291 and did not fall within collateral order exception because petitioners had not shown that such Order was unreviewable on appeal from final judgment on the merits).

The need for efficient judicial administration is magnified in an adjudicative proceeding under the Consumer Product Safety Act (hereinafter, "CPSA"), 15 U.S.C. § 2051

et seq., because Congress intended the CPSA to "protect the public against unreasonable risks of injury associated with consumer products." 15 U.S.C. § 2051(b)(1) (1997). The Commission's Rules of Practice recognize the need for efficient judicial administration. *See* 16 C.F.R. § 1025.1 ("A major concern of the Commission is that all matters in adjudication move forward in a timely manner, consistent with the Constitutional right of all parties . . . ."); 16 C.F.R. § 1025.2 ("[T]he Presiding Officer and all parties shall make every effort at each stage of any proceeding to avoid unnecessary delay.").

Interlocutory appeals often cause a significant delay in litigation. Charles A. Wright, *The Law of Federal Courts*, § 101, at 697 (4th ed. 1983); *See Long Island Lighting Co. v. Transamerica Delaval, Inc.*, 648 F. Supp. 988, 991 (interlocutory appeal more likely to delay its conclusion than to materially advance the ultimate termination of the litigation). In the instant matter, the staff is seeking to compel public notice and remedial action necessary to protect the public from a substantial risk of injury and/or death created by Respondents' defective Omega fire sprinklers. Certainly, this proceeding involves a matter of considerable national concern that needs to be addressed expeditiously.

B. This Is Not One Of The Rare Circumstances Where An Interlocutory Appeal Should Be Certified

Respondents have moved for an interlocutory appeal pursuant to 16 C.F.R. § 1025.24(b)(4), which provides an exception to the general rule regarding appeal of the Presiding Officer's rulings to the Commission prior to the Initial Decision. Complaint Counsel agrees with Respondents that 16 C.F.R. § 1025.24(b)(b) closely patterns The Interlocutory Appeals Act of 1958, 28 U.S.C. § 1292(b) (hereinafter, "the IAA"), providing for interlocutory appeal from a district court to a court of appeals. The case law interpreting

the IAA and the policies underlying it prove instructive in considering a motion under 16 C.F.R. § 1025.24(b)(4).

The IAA was not designed as a broad loophole to the final judgment rule, and the courts have allowed certification only in rare circumstances.[1,2] The Supreme Court has stated that even if a district court judge certifies an order under 28 U.S.C. § 1292(b), the appellant "has the burden of persuading the court of appeals that exceptional circumstances justify a departure from the basic policy of postponing appellate review until after entry of a final judgment." *Coopers & Lybrand v. Livesay*, 437 U.S. 463, 475 (1978) (quoting *Fisons, Ltd. v. United States*, 458 F.2d 1241, 1248 (7th Cir. 1972)). The CPSC's interlocutory appeal exception, 16 C.F.R. § 1025.24(b)(4), was written with a similar intention: interlocutory appeals are to be granted only under exceptional circumstances in order to prevent unnecessary delay in the protection of the American public from the unreasonable risks of injury associated with consumer products. *See* 16 C.F.R. §§ 1025.1-.2; 15 U.S.C. § 2051(b)(1) (1997).

---

[1]Statistics reveal that only a few more than a hundred cases per year seek permission to appeal under Section 1292(b) and that review is granted for only about one half the applications. Jack H. Friedenthal et al., *Civil Procedure*, § 13.3, at 596 n.18 (2d ed. 1993).

[2]*Katz v. Carte Blanche Corp.*, 496 F.2d 747, (3d Cir.), *cert. denied*, 419 U.S. 885 (1974), is a case where the Third Circuit allowed an interlocutory appeal, pursuant to 28 U.S.C. § 1292(b). Other courts commenting on *Katz* have stated that it should be limited to the type of unique circumstances and prejudices that would have befallen the defendant had class certification been allowed. *See Bates v. Tenco Services, Inc.*, 132 F.R.D. 165, 166 (D.S.C. 1990) ("[T]he prejudice found to have befallen on the defendant in Katz was of a nature unique to the defendant's type of business and to the particular cause of action"); *See also Kramer v. Scientific Control Corp.*, 534 F.2d 1085, 1087 (3d Cir. 1976) (emphasizing the limited scope of *Katz*, holding that "[t]o qualify for interlocutory review in this circuit, a class certification must be attended by special factors which take it outside the ambit of the general rule").

C. The Requirements For Certification Specified By 16 C.F.R. § 1025.24(b)(4) Are Not Met

In order to qualify for interlocutory appeal certification, Respondents bear the heavy burden of proving that Judge Moran's Order falls within the bounds of the narrow exception provided by 16 C.F.R. § 1025.24(b)(4).[3] This exception provides:

> Interlocutory appeals from all other rulings by the Presiding Officer may proceed only upon motion to the Presiding Officer and a determination by the Presiding Officer in writing that the ruling involves a controlling question of law or policy as to which there is substantial ground for differences of opinion and that an immediate appeal from the ruling may materially advance the ultimate termination of the litigation, or that subsequent review will be an inadequate remedy. The Presiding Officer's certification shall state the reasons for the determination.

16 C.F.R. § 1025.24(b)(4).

1. The Jurisdictional Ruling Does Not Involve A Controlling Question Of Law Or Policy As To Which There Is Substantial Ground For Differences Of Opinion

The jurisdictional ruling in this case does not satisfy the requirements of the first criterion of the interlocutory appeal exception, as stated in 16 C.F.R. § 1025.24(b)(4). Simply, there is not a "substantial ground for differences of opinion" regarding whether Omegas are "consumer products" under 15 U.S.C. § 2052 (1997).[4] Respondents have not

---

[3]*See Department of Labor v. Greenwich Collieries*, 512 U.S. 267, 280-281 (1994) (holding that under section 7(c) of the APA, 5 U.S.C. § 556(c), the proponent of an order bears both the burden of production and the burden of persuasion).

[4]Moreover, contrary to Respondents' assertion, the jurisdictional question does not involve a controlling question of policy relating to federalism. As Complaint Counsel demonstrated in its Opposition and Surreply to Respondents' Motion to Dismiss, the CPSC's jurisdiction over defective consumer products that create a substantial risk of injury to the public preempts state and local authority. *See* Complaint Counsel's Opposition to Respondents' Motion to Dismiss at 18-21; Complaint Counsel's Surreply in Opposition to Respondents' Motion to Dismiss at 9-12; *see also* Judge Moran's Order at 15-16.

cited any authority finding that a similarly-situated article, or component part thereof, is not a consumer product under the CPSA.

Respondents cite the distinction between the holdings of *Consumer Prod. Safety Comm'n v. The Anaconda Co.*, 593 F.2d 1314 (D.C. Cir. 1979) and *Kaiser Alum. & Chem. Corp. v. Consumer Prod. Safety Comm'n*, 574 F.2d 178 (3rd Cir.), *cert. denied*, 439 U.S. 881 (1978), to support their premise that there exists a substantial ground for differences of opinion regarding whether fire sprinklers are consumer products. However, as the *Anaconda* and *Kaiser* opinions demonstrate, the distinction between their holdings lies in the different articles they consider -- aluminum wiring systems (*Anaconda)*, versus aluminum wiring (*Kaiser)*. Respondents acknowledge this distinction. See Memorandum in Support of Respondents' Motion for Certification (hereinafter, "Respondents' Memorandum") at 13. That the cases are not contradictory is best demonstrated by the fact that *Anaconda* cites *Kaiser* and explains the different holdings as a difference between the system and its components. *See Anaconda*, 593 F.2d at 1322 (stating that "the jurisdictional question in this case is whether aluminum branch circuit wiring systems are "consumer products." This was not the issue before the Delaware district court. A fair reading of Judge Stapleton's decision makes clear that the only issue actually litigated in Delaware related to aluminum wiring, a distinct product from the one involved in this case.") In the instant case, there is simply no substantial ground for differences of opinion on the question of jurisdiction. In fact, the case law overwhelmingly supports the Commission's jurisdiction over fire sprinklers.

2. An Immediate Appeal Of Judge Moran's Order Will Not Materially Advance The Ultimate Termination Of The Litigation

An immediate appeal from Judge Moran's Order also fails to satisfy the requirements of the second criterion of the interlocutory appeal exception provided by 16 C.F.R. § 1025.24(b)(4) -- that an immediate appeal from the ruling may materially advance the ultimate termination of the litigaiton, or that subsequent review will be an inadequate remedy. *See* 16 C.F.R. § 1025.24(b)(4). Application of this criterion involves a balancing of whether allowing piecemeal review may delay or hinder a trial against the need for immediate appellate guidance on the issue presented by the order. Friedenthal et al., *Civil Procedure*, § 13.3, at 597 (2d ed. 1993). In the instant matter, where the Commission staff has conducted nearly a two-year investigation of Respondents, reviewed thousands of pages of documents, and produced substantial discovery, certification for an interlocutory appeal "is not likely to stem the flow of paper or bring the case to a speedy conclusion." *Long Island Lighting Co.* at 991. Moreover, and most importantly, the Commission, through its General Counsel and by voting to issue the Complaint against Respondents herein, made a preliminary determination of the existence of its jurisdiction over automatic fire sprinklers. Respondents' appeal to the Commission is highly ulikely to terminate this case.

III. CONCLUSION

Based on the foregoing, Complaint Counsel respectfully requests that Respondents' Motion for Certification Pursuant to 16 C.F.R. § 1025.24(b)(4) be DENIED.[5]

---

[5]If Respondents' Motion is granted, Complaint Counsel respectfully requests that the proceedings not be stayed, as provided by 16 C.F.R. § 1025.24(c), because any delay in the preceedings may pose a threat to public safety.

RESPONDENTS' OPPOSITION TO
COMPLAINT COUNSEL'S SECOND MOTION
FOR PROTECTIVE ORDER AND IN CAMERA SUBMISSION

Presently before the Presiding Officer is Complaint Counsel's Second Motion For Protective Order And In Camera Submission ("Complaint Counsel's Motion"). Pursuant to this motion, Complaint Counsel has submitted certain materials in camera to the Presiding Officer. These materials allegedly are comprised of documents provided to Complaint Counsel by former employees of Respondents regarding Omega sprinklers and letters sent by Complaint Counsel to such former employees (collectively, the "Withheld Materials"). See Complaint Counsel's Motion, p. 1.

Complaint Counsel's Motion requests that the Presiding Officer order these materials shielded from Respondents in discovery. Complaint Counsel argues that the Withheld Materials are protected from discovery by the "informant's privilege," or that the former employees should be considered non-testifying expert consultants who are protected from discovery by the work product doctrine and the rules governing discovery of experts. See Complaint Counsel's Motion, pp. 3-5.

Pursuant to 16 C.F.R. § 1045(c)(2), Respondents Central Sprinkler Corporation and Central Sprinkler Company hereby request that the Court order Complaint Counsel to produce the Withheld Materials. As conceded in Complaint Counsel's Motion, the Withheld Materials are both relevant and responsive to Respondents' discovery requests. Moreover, the Withheld Materials are not protected from discovery by the "informant's privilege" for several reasons: (1) the former employees are not "informants," they are simply fact witnesses; (2) Complaint Counsel's invocation of the privilege is based on a claim of potential retaliation which is unsupported by any evidence; (3) the "informant's privilege" is overcome here by the critical nature of the information allegedly contained in the Withheld Materials; and (4) under any legal or factual scenario, the information contained in the Withheld Materials must be produced. In addition, the Withheld Materials are not covered by the rules regarding discovery from experts or the work product doctrine -- Respondents' former employees are simply fact witnesses, not "experts" or agents of Complaint Counsel. Therefore the Court should order Complaint Counsel to produce the Withheld Materials.

II. ARGUMENT

A. Complaint Counsel's Repeated Submission Of Documents In Camera Is Impermissible and Highly Prejudicial.

Complaint Counsel's Motion represents the fourth time in the last two weeks that Complaint Counsel has submitted documents to the Presiding Officer on an in camera basis. According to the Bates numbering of Complaint Counsel's documents, Complaint Counsel has produced approximately 3,000 pages of documents to Respondents, and has submitted approximately 10,000 pages of documents in camera to the Presiding Officer.

Respondents hereby renew their objections to Complaint Counsel's improper and impermissible tactic of presenting their case in camera. Complaint Counsel is attempting to conduct an ex parte trial of this matter by slowly exposing the Presiding Officer to Complaint Counsel's substantive evidence, without permitting Respondents to oppose, comment on, or even know the contents of the documents submitted. Complaint Counsel's refusal even to consider a Confidentiality Agreement proposed by Respondents, which addresses all of Complaint Counsel's concerns regarding the documents submitted in camera, reveals that Complaint Counsel's stated concerns about confidentiality are thinly veiled excuses to prejudice the Presiding Officer while providing Respondents no opportunity to respond.

That Complaint Counsel adopted this strategy for purposes of prejudicing the Presiding Officer is clear from comparing the manner in which Complaint Counsel approached these documents as opposed to other documents for which they have asserted a claim of privilege. On June 1, 1998, Complaint Counsel provided Respondents' counsel with a privilege log, identifying 118 documents that they are withholding on some claim of privilege. Obviously, the

overwhelming majority of these documents were not provided to the Presiding Officer. There was absolutely no reason for Complaint Counsel to treat these so-called "informant's documents" any differently from other allegedly privileged documents, apart from Complaint Counsel's desire to place them before the Presiding Officer on an ex parte basis. Particularily since Respondents expressly requested Complaint Counsel not to engage in such improper tactics, the conduct at issue is inexcusable.

Respondents' objections to Complaint Counsel's improper tactics are expressed at greater length in the Proposed Protective Order and Opposition of Respondents To Complaint Counsel's Submission of Documents In Camera, served May 19, 1998. Respondents hereby reiterate those objections.

B. Complaint Counsel Concedes That The Withheld Material Is Both Relevant And Responsive To Respondents' Discovery Requests.

The CPSC rules of practice define the scope of acceptable discovery very broadly. The rules provide that parties may obtain discovery regarding any information "relevant to the subject matter involved in the proceedings," or any information that "appears reasonably calculated to lead to the discovery of admissible evidence." 16 C.F.R. § 1025.31(c)(1).

In the instant case, the Withheld Materials clearly constitute discoverable information. Complaint Counsel describes the Withheld Materials as information "regarding Omega sprinklers, Omega sprinkler failures, and Respondents' knowledge of same." Complaint Counsel's Motion, p. 1. Thus, Complaint Counsel essentially concedes that the Withheld Materials are directly relevant to matters centrally in dispute in this case. This point is reinforced when Complaint Counsel admits that "Complaint Counsel is using the information contained in

[the Withheld Materials] to further its investigation into the Omega problem, and to channel its discovery in this matter." Id. at p. 3. Thus, it appears that the Withheld Materials are not merely relevant, they are sufficiently important that Complaint Counsel is using such materials to guide their own litigation efforts.

Complaint Counsel's Motion also admits that the Withheld Materials are responsive to Respondents' discovery requests. Complaint Counsel states that the Withheld Materials are responsive to at least 10 of Respondents' document requests, without even addressing Respondents' interrogatories. See Complaint Counsel's Motion, pp. 1-2.

Therefore, Complaint Counsel's Motion has made critical admissions regarding the Withheld Materials. Complaint Counsel admits that the information is relevant in general and important to Complaint Counsel's case specifically. Complaint Counsel also concedes that the Withheld Materials are responsive to Respondents' discovery requests.

Nevertheless, Complaint Counsel is refusing to produce the Withheld Materials. Complaint Counsel makes several baseless arguments for refusing to produce this material.

C. The Withheld Materials Are Not Protected By The "Informant's Privilege."

Complaint Counsel's first argument for not making the Withheld Materials available to Respondents is reliance on the so-called "informant's privilege." See Complaint Counsel's Motion, pp. 3-4. This is the same argument raised by Complaint Counsel in an attempt to withhold from Respondents an anonymous letter from a current employee of Respondents. See Respondents' Opposition To Complaint Counsel's Motion For Protective Order Regarding Anonymous Letter, served May 19, 1998.

The "informant's privilege" is not a valid objection regarding the Withheld Materials for a number of reasons. First, the former employees of Respondents are not "informants," they are simply fact witnesses. Second, the informant's privilege cannot be invoked here because Complaint Counsel has introduced no evidence of potential retaliation; furthermore, any such concern easily could be addressed if Complaint Counsel merely agreed to the Confidentiality Agreement proposed by Respondents. Third, the informant's privilege, which is a qualified privilege, has been easily overcome in this case by the admitted importance of the Withheld Materials. Finally, because the informant's privilege only protects the identity of an informant, at the very least Complaint Counsel should be required to produce all of the information contained in the Withheld Materials.

1. The Former Employees Are Fact Witnesses, Not "Informants."

As an initial matter, Complaint Counsel's invocation of the informant's privilege is invalid here because the former employees of Respondents who supplied the Withheld Materials do not qualify as informants. The former employees are simply potential fact witnesses in this case, subject to discovery like any other fact witness.

"Informants" are generally considered to be persons with whom law enforcement officials have an established relationship for the purposes of obtaining confidential information. In the instant case, it appears that Complaint Counsel is attempting to classify any person who provides information to Complaint Counsel as an "informant." This is simply a misdirected attempt to obstruct discovery in this case.

If Complaint Counsel is permitted to classify as an "informant" anyone who has provided information to them and who had any type of past commercial relationship with Respondents,

then the "informant's privilege" effectively would cover every potential witness for Complaint Counsel. Such a result and such an interpretation of the "informant's privilege" would be absurd.

The former employees who supplied the Withheld Materials to Complaint Counsel are mere fact witnesses here. Complaint Counsel cannot shield such materials from discovery simply by calling the former employees "informants." Therefore, Complaint Counsel's Motion should be denied.

2. Complaint Counsel Has Provided No Evidence Of Potential Retaliation.

Complaint Counsel attempts to justify invoking the informant's privilege based on protecting the former employees at issue from any potential retaliation by Respondents. See Complaint Counsel's Motion, p. 3. However, this argument lacks any validity because Complaint Counsel has presented no evidence of potential retaliation, and any such concern easily is cured under Respondents' proposed Confidentiality Agreement.

As an initial matter, Complaint Counsel has presented no credible evidence of any potential retaliation in this case. Complaint Counsel has not provided any indication that Respondents ever have engaged in such retaliatory activities. Nor has Complaint Counsel provided any evidence that would demonstrate that the former employees at issue are peculiarly vulnerable to any retaliation. Moreover, Respondents previously have assured the Presiding Officer, and hereby restate those assurances, that Respondents will not "retaliate" against any person for providing truthful information to the CPSC.

Moreover, Complaint Counsel's refusal to enter into a Confidentiality Agreement demonstrates that Complaint Counsel is more concerned about withholding pertinent information

from Respondents than protecting the former employees from any hypothetical retaliation. Respondents provided a draft Confidentiality Agreement to Complaint Counsel on May 1. See Exhibit "A", attached hereto. Complaint Counsel refused to enter into or even comment on this Confidentiality Agreement.[1/] However, the Confidentiality Agreement contains the solution to Complaint Counsel's concerns about "retaliation."

The Confidentiality Agreement contains provisions that would permit Complaint Counsel to designate the Withheld Materials as "Outside Counsel Only." See Exhibit "A", ¶¶ 1-3. Such a designation would limit those who could view the Withheld Materials to "the undersigned outside counsel" for Respondents, which does not include any counsel with any relationship to Respondents besides lawyer-client. Id., ¶ 3.[2/] Thus, any threat of potential "retaliation" against the former employees would be nullified, as Respondents would not be aware of the identity of these former employees; only Respondents' outside counsel would have such information.

However, Complaint Counsel has refused to consider the Confidentiality Agreement and/or this course of action. Thus, it is apparent that Complaint Counsel is simply attempting to delay and limit discovery for Respondents, not acting out of concern for the well-being of the former employees.

1/ Not having received any response from Complaint Counsel, Respondents have submitted the Confidentiality Agreement to the Presiding Officer as a proposed protective order. See Proposed Protective Order and Opposition of Respondents to Complaint Counsel's Submission of Documents In Camera, served May 19, 1998.

2/ Outside counsel could then review the materials, and if appropriate, seek permission from the Court to share the documents with their client if necessary to prepare a defense. Id., ¶ 9.

Because Complaint Counsel has produced no evidence of potential retaliation and has refused to consider a reasonable resolution to this issue via a Confidentiality Agreement, there is no basis for Complaint Counsel to invoke the "informant's privilege." Therefore, the Presiding Officer should order Complaint Counsel to produce the Withheld Materials to Respondents.

3. The Informant's Privilege Is Easily Overcome Based On The Admitted Importance Of The Withheld Materials.

The "informant's privilege" is not absolute -- it is, at most, a qualified privilege. The Supreme Court has clearly stated: "Where the disclosure of an informant's identity, or the contents of his communication, is relevant and helpful to the defense of an accused, or is essential to a fair determination of a cause, the privilege must give way. In these situations the trial court may require disclosure and, if the government withholds the information, dismiss the action." Rovario v. United States, 353 U.S. 56, 60-61 (1957) (emphasis added).

As admitted by Complaint Counsel, the contents of the Withheld Materials fall squarely within the circumstances where "the privilege must give way." Complaint Counsel concedes that they are "using the information contained in these documents to further its investigation . . . and to channel its discovery in this matter." Complaint Counsel's Motion, p. 3. Thus, Complaint Counsel is treating the contents of the Withheld Materials as extremely important information for purposes of this case. There should be little doubt that knowledge of this information would be "relevant and helpful" in the defense of this case for Respondents, and that giving Respondents equal access to this important information would be "essential to a fair determination" of this case. Rovario, 353 U.S. at 60-61.

Moreover, given the fact that Complaint Counsel has now provided these documents to the fact-finder in this case (and deprived Respondents and the Presiding Officer of the opportunity to develop a means of resolving this issue without providing the fact-finder with the documents at issue), Respondents must have access to the documents to enable them to address any factual or other inaccuracies in those documents.

Complaint Counsel argues that it still should not be required to produce the Withheld Materials because it does not intend to use the documents themselves at trial. See Complaint Counsel's Motion, p. 2. This argument simply misses the point. The proper issue is whether Complaint Counsel intends to use the information contained in the Withheld Materials and the investigatory fruits of that information in the trial of this case. The answer to that question clearly is "Yes," as Complaint Counsel had stated that it is using the information for investigatory and discovery purposes. Id. at p. 3. Therefore, Respondents should have equal access to these documents, to be given an equal opportunity to use such documents to "further [Respondents'] investigation" and "channel [Respondents'] discovery," in order to prepare for trial. Id.[3/]

Furthermore, public safety dictates that Respondents and their counsel be advised of the contents of the Withheld Materials. Central Sprinkler Company manufactures the Omega sprinkler heads in question. To the extent that the Withheld Materials reveal or explain any

---

3/ If, on the other hand, Complaint Counsel successfully maintained a claim to the informant's privilege here, such a ruling logically would restrict Complaint Counsel's use of such information. Complaint Counsel would not be permitted to use the information contained in the Withheld Materials at trial, and certainly could not call the former employees in question as witnesses.

potential problems with the Omegas, Central, its Board of Directors, and its counsel affirmatively want to receive such information to address any potential problems appropriately. Central, its Board of Directors, and its counsel are committed to addressing properly any problems with the Omegas. If there are any identifiable problems with the Omegas, nobody has a greater interest in or right to address those problems than Respondents. Complaint Counsel's decision to deny Respondents access to the Withheld Materials is thus both procedurally unsound and contrary to Complaint Counsel's statutory mandate.[4/]

As was the case with the "anonymous letter," when viewed from an objective perspective, the course of action requested by Complaint Counsel here should not be followed. Complaint Counsel requests that documents in their possession be withheld from Respondents even though such documents admittedly are important, will be used to prepare for trial, and have been provided to the fact-finding Presiding Officer. Thus, everyone involved in the trial of this matter with the exception of Respondents, who are defending their product, would have access to these materials. Such a situation would be highly prejudicial to Respondents, a basic denial of due process rights, and fundamentally unfair.

Thus, in the instant case, the qualified "informant's privilege" is easily overcome. The contents of the Withheld Materials, as conceded by Complaint Counsel, are important enough to

---

4/ The Court should not assume that Respondents are unwilling to take corrective action. To the contrary, Respondents have proposed to Complaint Counsel several alternative corrective action proposals, the future cost of which has been estimated to exceed $13.2 million. Complaint Counsel has rejected these proposals. Nor should the Court assume that Central, its counsel, or its Board of Directors are aware of each alleged fact claimed to be known by a third party. To the extent a third party has provided important information to Complaint Counsel, Respondents should be given the opportunity to address that information and take it into account in resolving this matter.

Respondents' defense in this matter and a fair determination of this case that "the privilege must give way." Rovario, 353 U.S. at 60-61. Therefore, the Court should order Complaint Counsel to produce the Withheld Materials to Respondents.[5/]

4. The Informant's Privilege Does Not Protect The Contents Of The Withheld Materials.

The "informant's privilege" is not a total shield to discovery. This privilege protects only the identity of an informant, not the information provided by the informant. Rovario, 353 U.S. at 60; see also Wright & Graham, Federal Practice and Procedure: Evidence § 5740 (The privilege does not protect "information provided by the informer . . . . Communications of an informant are not privileged . . . .").

Thus, under any factual or legal scenario, Complaint Counsel should be required to produce to Respondents all of the information contained in the Withheld Materials. This could be accomplished simply by redacting the name of the author, if necessary. The informant's privilege, even where applicable, does not protect the information provided by an informant.[6/]

5/ To the extent that any work product protection applied to such materials, the same logic applies -- the work product doctrine would be overcome by Respondents' "substantial need" for the materials. See 16 C.F.R. § 1025.31(c)(3).

6/ This same legal analysis also applies to Complaint Counsel's assertion of the work product doctrine. Because the work product doctrine only protects "documents and tangible things," 16 C.F.R. § 1025.31(c)(3), Complaint Counsel would be required to produce the information contained in the Withheld Materials regardless of such an objection.

D. The Withheld Materials Are Not Protected By The Work Product Doctrine Or As Materials Provided By Non-Testifying Experts.

Perhaps realizing that the informant's privilege does not shield the Withheld Materials from discovery, Complaint Counsel makes an entirely different argument in an attempt to deny Respondents access to such documents. In a move that is wholly at odds with their characterization of the authors as "informants," Complaint Counsel alternatively argues that the former employees are "non-testifying consultants" who are acting as experts for and/or agents of Complaint Counsel. See Complaint Counsel's Motion, p. 4. Thus, argues Complaint Counsel, the Withheld Materials are protected from discovery by the work product doctrine (Fed. R. Civ. P. 26(b)(3)) and special discovery rules applying to non-testifying experts (16 C.F.R. § 1025.31(c)(4)(ii)). Id.

This argument is both specious and reinforces the baseless nature of Complaint Counsel's attempt to label the former employees at issue "informants." The former employees at issue are not "experts" under 16 C.F.R. § 1025.31(c)(4)(ii). An expert offers opinions "involving scientific or technical knowledge" based on the expert's unique training or technical expertise. 16 C.F.R. § 1025.44(a). Complaint Counsel are not using the former employees as experts, but as fact witnesses regarding "Omega sprinklers, Omega sprinkler failures, and Respondents' knowledge of same." Complaint Counsel's Motion, p. 1. There is no indication in Complaint Counsel's Motion and no conceivable factual or legal basis for classifying the former employees at issue as non-testifying experts pursuant to 16 C.F.R. § 1025.31(c)(4)(ii). Complaint Counsel's attempt to make this argument is a disingenuous and desperate effort to avoid producing the Withheld Materials.

Similarly, Complaint Counsel's attempt to rely upon Fed. R. Civ. P. 26(b)(3) for some sort of work product protection is invalid. First, this rule does not apply to the instant administrative proceedings, which are governed by the CPSC rules of practice. Second, for purposes of the instant dispute, Rule 26(b)(3) would only provide work product protection for documents and tangible things prepared for trial by the CPSC or the CPSC's representatives, such as the CPSC's "attorney, consultant, surety, indemnitor, insurer, or agent." See Fed. R. Civ. P. 26(b)(3). The former employees at issue are mere fact witnesses, not the CPSC's representatives. Once again, there is no basis in Complaint Counsel's Motion and no conceivable factual or legal basis for arguing that the former employees are some sort of legal agent for the CPSC. In essence, Complaint Counsel is attempting to obtain the same work product protection for the materials generated by the former employees as is afforded the mental impressions and strategies of the CPSC's lawyers, Complaint Counsel. Such an argument is unprecedented, unsupported, and simply incredible.

Complaint Counsel is willing to raise any argument in an attempt to prevent Respondents from gaining crucial information via discovery. Complaint Counsel attempts to classify the former employees at issue here first as independent "informants," then as non-testifying "experts," then as some sort of agents of the CPSC. These arguments are internally inconsistent and fundamentally unsound. The former employees are simply potential fact witnesses, and materials related to them are discoverable.

III. CONCLUSION

At present, Complaint Counsel is engaging in a carefully choreographed two-pronged strategy. First, Complaint Counsel is periodically submitting inflammatory and highly prejudicial materials on an in camera basis to the Presiding Officer, thereby attempting to engage in an ex parte trial of this matter and unfairly influence the Presiding Officer. Second, Complaint Counsel is withholding materials from Respondents based on spurious objections. This course of action by Complaint Counsel is delaying these proceedings, causing tremendous prejudice to Respondents, and imperiling the appearance of propriety of these proceedings.

Complaint Counsel's Motion is a further example of this strategy. Complaint Counsel admits that the Withheld Materials are relevant and responsive, but insisted on submitting them for in camera review based on a series of specious objections. Because the former employees in question are simply fact witnesses, Complaint Counsel cannot shield from discovery the materials related to them by pretending that the former employees are informants, experts, or employees of the CPSC.

Based on all of the foregoing, pursuant to 16 C.F.R. § 1045(c)(2), Respondents respectfully request that the Court deny Complaint Counsel's Motion and order Complaint Counsel to produce the Withheld Materials to Respondents. At a minimum, Respondents request that the Court direct Complaint Counsel to state with specificity the factual or other information provided in the Withheld Materials so that Respondents may prepare for trial and address any public safety issues raised in the materials.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

CONFIDENTIALITY AGREEMENT

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") and Petitioner the Consumer Product Safety Commission (the "CPSC"), through undersigned counsel, hereby agree:

1. Petitioner and Respondents shall have the right to limit access to any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness, to the undersigned outside counsel for the parties.

2. Such documents or other tangible items must be designated by conspicuously stamping the words "OUTSIDE COUNSEL ONLY" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may limit access to such testimony to the undersigned outside counsel by notifying the other party of the portion of testimony to be designated on the record at the deposition or in writing no later than two days after the transcript is received.

3. Information designated for "OUTSIDE COUNSEL ONLY" shall not be disclosed or disseminated to anyone, except:

a. the undersigned outside counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purposes of assisting in the preparation of this litigation, provided, however, that no such information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person, entity, or firm with the prior written consent of all parties.

4. Petitioner and Respondents shall have the right to designate as CONFIDENTIAL any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness.

5. Such documents or other tangible items must be designated by conspicuously stamping the words "CONFIDENTIAL" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may designate portions of the record CONFIDENTIAL by notifying the other party on the record at the deposition or in writing no later than two days after the transcript is received.

6. Information designated "CONFIDENTIAL" shall not be disclosed or disseminated to anyone, except:

a. a party, counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purpose of assisting in the preparation of this litigation, provided, however, that no CONFIDENTIAL information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person who was involved in the preparation of the document or information; or

d. any other person, entity, or firm with the prior written consent of all parties.

7. Any party that provides documents or other discovery obtained from the other party in the course of this litigation to any person (other than the Court, court personnel, and court reporters) will first obtain from such person, prior to any such dissemination, a written statement in the form attached as Exhibit "A" hereto, that such person agrees to be bound by this Confidentiality Agreement. The undersigned counsel shall maintain a list of all such persons along with the written agreement of each person. Upon request of any party at any time, counsel in possession of the written agreements shall immediately either: (a) provide copies of the written agreements to the requesting party; or (b) submit the written agreements to the Court to determine whether any aspect of the written agreements are protected from discovery by any privilege.

8. When any document or information designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY," or other pleadings or papers disclosing or referring to such information are used in connection with any motion, hearing, filing or other submission to the Court, they shall be filed in an envelope under seal pursuant to the rules of this Court and shall be marked as follows:

> CONFIDENTIAL/RESTRICTED:
> The contents of this envelope are not to be revealed to anyone except the Court, or with the prior consent of all the parties herein, or pursuant to any other Order of this Court. If the contents are thus revealed, they shall thereafter be resealed.

9. a. Nothing in this Agreement shall preclude any party from challenging a designation of "CONFIDENTIAL" OR "OUTSIDE COUNSEL ONLY" by another party. If any party elects to challenge a designation of any document, deposition testimony, or

information pursuant to this order, that party must provide at least five days advance notice to afford the designating party an opportunity to remove voluntarily such designation.

b. If, after the five-day period has expired, the designating party has not agreed to remove the designation and the parties are otherwise unable to resolve the challenge to the designation, the challenging and designating parties shall contact the Court for a determination of whether the challenged designation is appropriate. The challenging party shall provide the Court with one copy of each document, response, or portion of transcript challenged. The challenging party has the burden of proving the inapplicability and/or incorrectness of any designation.

c. If the challenge is not resolved by agreement, or by voluntary removal, and if the Court is not contacted, then the designation shall remain in effect and shall continue to apply to such document or information.

10. All documents and other discovery produced or obtained in the course of this litigation, whether designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" or not, shall be used for the sole and limited purpose of preparation for and trial of this action and shall not be used for any other purpose. "For purposes of preparation and trial of this action," as used in this Order, means that individuals obtaining access to discovery: (i) can read and review such discovery to become knowledgeable about this litigation; and (ii) can comment on such discovery to counsel for the parties if they so choose. All other uses, including but not limited to (1) making such discovery available to any person who has not signed Exhibit "A" hereto and (2) causing such discovery to be published in any trade journal, newspaper, or other written

publication other than filings with this Court connected with this litigation, shall fall outside the definition of "For purposes of preparation for and trial of this action." Nothing in this Confidentiality Agreement shall preclude persons wishing to use discovery from this litigation for purposes other than "For purposes of preparation for and trial of this action" from moving this Court, upon reasonable notice to the parties, for appropriate relief.

11. Within thirty days of the close of this litigation for any reason, each party shall retrieve all copies of materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" from his or its own files, and from experts or other persons to whom he or it has provided such materials consistent with this Confidentiality Agreement, and shall do one of the following: (1) return to the designating party all such materials, including all copies thereof, produced by such designating party during this action; or (2) certify in writing to the designating party that all materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" produced by such other party during this action have been destroyed. All material protected by this Confidentiality Agreement which has been placed in any computer databank, hard drive, or disk shall be completely erased, and any documents listing or summarizing information protected by this Confidentiality Agreement shall be destroyed within the same period.

12. Nothing herein contained shall be construed to preclude or limit any party from opposing any discovery on any grounds that would otherwise be available. This Agreement shall not, in and of itself, prejudice any contention of any party upon any motion, nor shall this Agreement constitute a waiver of any right to seek relief from the Court from any and all of the provisions hereof or other modifications of the terms hereof. This Agreement shall not limit any party's

right to seek judicial review or to seek further and additional protection against or limitation upon production or dissemination of information and documents or their contents.

13. Nothing herein shall be construed to preclude or limit the presence of any individual at any hearings in or the trial of this action.

RESPONDENTS' OPPOSITION TO
COMPLAINT COUNSEL'S SECOND MOTION
FOR PROTECTIVE ORDER AND IN CAMERA SUBMISSION

Presently before the Presiding Officer is Complaint Counsel's Second Motion For Protective Order And In Camera Submission ("Complaint Counsel's Motion"). Pursuant to this motion, Complaint Counsel has submitted certain materials in camera to the Presiding Officer. These materials allegedly are comprised of documents provided to Complaint Counsel by former employees of Respondents regarding Omega sprinklers and letters sent by Complaint Counsel to such former employees (collectively, the "Withheld Materials"). See Complaint Counsel's Motion, p. 1.

Complaint Counsel's Motion requests that the Presiding Officer order these materials shielded from Respondents in discovery. Complaint Counsel argues that the Withheld Materials are protected from discovery by the "informant's privilege," or that the former employees should be considered non-testifying expert consultants who are protected from discovery by the work product doctrine and the rules governing discovery of experts. See Complaint Counsel's Motion, pp. 3-5.

Pursuant to 16 C.F.R. § 1045(c)(2), Respondents Central Sprinkler Corporation and Central Sprinkler Company hereby request that the Court order Complaint Counsel to produce the Withheld Materials. As conceded in Complaint Counsel's Motion, the Withheld Materials are both relevant and responsive to Respondents' discovery requests. Moreover, the Withheld Materials are not protected from discovery by the "informant's privilege" for several reasons: (1) the former employees are not "informants," they are simply fact witnesses; (2) Complaint Counsel's invocation of the privilege is based on a claim of potential retaliation which is unsupported by any evidence; (3) the "informant's privilege" is overcome here by the critical nature of the information allegedly contained in the Withheld Materials; and (4) under any legal or factual scenario, the information contained in the Withheld Materials must be produced. In addition, the Withheld Materials are not covered by the rules regarding discovery from experts or the work product doctrine -- Respondents' former employees are simply fact witnesses, not "experts" or agents of Complaint Counsel. Therefore the Court should order Complaint Counsel to produce the Withheld Materials.

II. ARGUMENT

A. Complaint Counsel's Repeated Submission Of Documents In Camera Is Impermissible and Highly Prejudicial.

Complaint Counsel's Motion represents the fourth time in the last two weeks that Complaint Counsel has submitted documents to the Presiding Officer on an in camera basis. According to the Bates numbering of Complaint Counsel's documents, Complaint Counsel has produced approximately 3,000 pages of documents to Respondents, and has submitted approximately 10,000 pages of documents in camera to the Presiding Officer.

Respondents hereby renew their objections to Complaint Counsel's improper and impermissible tactic of presenting their case in camera. Complaint Counsel is attempting to conduct an ex parte trial of this matter by slowly exposing the Presiding Officer to Complaint Counsel's substantive evidence, without permitting Respondents to oppose, comment on, or even know the contents of the documents submitted. Complaint Counsel's refusal even to consider a Confidentiality Agreement proposed by Respondents, which addresses all of Complaint Counsel's concerns regarding the documents submitted in camera, reveals that Complaint Counsel's stated concerns about confidentiality are thinly veiled excuses to prejudice the Presiding Officer while providing Respondents no opportunity to respond.

That Complaint Counsel adopted this strategy for purposes of prejudicing the Presiding Officer is clear from comparing the manner in which Complaint Counsel approached these documents as opposed to other documents for which they have asserted a claim of privilege. On June 1, 1998, Complaint Counsel provided Respondents' counsel with a privilege log, identifying 118 documents that they are withholding on some claim of privilege. Obviously, the

overwhelming majority of these documents were not provided to the Presiding Officer. There was absolutely no reason for Complaint Counsel to treat these so-called "informant's documents" any differently from other allegedly privileged documents, apart from Complaint Counsel's desire to place them before the Presiding Officer on an ex parte basis. Particularily since Respondents expressly requested Complaint Counsel not to engage in such improper tactics, the conduct at issue is inexcusable.

Respondents' objections to Complaint Counsel's improper tactics are expressed at greater length in the Proposed Protective Order and Opposition of Respondents To Complaint Counsel's Submission of Documents In Camera, served May 19, 1998. Respondents hereby reiterate those objections.

B. Complaint Counsel Concedes That The Withheld Material Is Both Relevant And Responsive To Respondents' Discovery Requests.

The CPSC rules of practice define the scope of acceptable discovery very broadly. The rules provide that parties may obtain discovery regarding any information "relevant to the subject matter involved in the proceedings," or any information that "appears reasonably calculated to lead to the discovery of admissible evidence." 16 C.F.R. § 1025.31(c)(1).

In the instant case, the Withheld Materials clearly constitute discoverable information. Complaint Counsel describes the Withheld Materials as information "regarding Omega sprinklers, Omega sprinkler failures, and Respondents' knowledge of same." Complaint Counsel's Motion, p. 1. Thus, Complaint Counsel essentially concedes that the Withheld Materials are directly relevant to matters centrally in dispute in this case. This point is reinforced when Complaint Counsel admits that "Complaint Counsel is using the information contained in

[the Withheld Materials] to further its investigation into the Omega problem, and to channel its discovery in this matter." Id. at p. 3. Thus, it appears that the Withheld Materials are not merely relevant, they are sufficiently important that Complaint Counsel is using such materials to guide their own litigation efforts.

Complaint Counsel's Motion also admits that the Withheld Materials are responsive to Respondents' discovery requests. Complaint Counsel states that the Withheld Materials are responsive to at least 10 of Respondents' document requests, without even addressing Respondents' interrogatories. See Complaint Counsel's Motion, pp. 1-2.

Therefore, Complaint Counsel's Motion has made critical admissions regarding the Withheld Materials. Complaint Counsel admits that the information is relevant in general and important to Complaint Counsel's case specifically. Complaint Counsel also concedes that the Withheld Materials are responsive to Respondents' discovery requests.

Nevertheless, Complaint Counsel is refusing to produce the Withheld Materials. Complaint Counsel makes several baseless arguments for refusing to produce this material.

C. The Withheld Materials Are Not Protected By The "Informant's Privilege."

Complaint Counsel's first argument for not making the Withheld Materials available to Respondents is reliance on the so-called "informant's privilege." See Complaint Counsel's Motion, pp. 3-4. This is the same argument raised by Complaint Counsel in an attempt to withhold from Respondents an anonymous letter from a current employee of Respondents. See Respondents' Opposition To Complaint Counsel's Motion For Protective Order Regarding Anonymous Letter, served May 19, 1998.

The "informant's privilege" is not a valid objection regarding the Withheld Materials for a number of reasons. First, the former employees of Respondents are not "informants," they are simply fact witnesses. Second, the informant's privilege cannot be invoked here because Complaint Counsel has introduced no evidence of potential retaliation; furthermore, any such concern easily could be addressed if Complaint Counsel merely agreed to the Confidentiality Agreement proposed by Respondents. Third, the informant's privilege, which is a qualified privilege, has been easily overcome in this case by the admitted importance of the Withheld Materials. Finally, because the informant's privilege only protects the identity of an informant, at the very least Complaint Counsel should be required to produce all of the information contained in the Withheld Materials.

1. The Former Employees Are Fact Witnesses, Not "Informants."

As an initial matter, Complaint Counsel's invocation of the informant's privilege is invalid here because the former employees of Respondents who supplied the Withheld Materials do not qualify as informants. The former employees are simply potential fact witnesses in this case, subject to discovery like any other fact witness.

"Informants" are generally considered to be persons with whom law enforcement officials have an established relationship for the purposes of obtaining confidential information. In the instant case, it appears that Complaint Counsel is attempting to classify any person who provides information to Complaint Counsel as an "informant." This is simply a misdirected attempt to obstruct discovery in this case.

If Complaint Counsel is permitted to classify as an "informant" anyone who has provided information to them and who had any type of past commercial relationship with Respondents,

then the "informant's privilege" effectively would cover every potential witness for Complaint Counsel. Such a result and such an interpretation of the "informant's privilege" would be absurd.

The former employees who supplied the Withheld Materials to Complaint Counsel are mere fact witnesses here. Complaint Counsel cannot shield such materials from discovery simply by calling the former employees "informants." Therefore, Complaint Counsel's Motion should be denied.

2. Complaint Counsel Has Provided No Evidence Of Potential Retaliation.

Complaint Counsel attempts to justify invoking the informant's privilege based on protecting the former employees at issue from any potential retaliation by Respondents. See Complaint Counsel's Motion, p. 3. However, this argument lacks any validity because Complaint Counsel has presented no evidence of potential retaliation, and any such concern easily is cured under Respondents' proposed Confidentiality Agreement.

As an initial matter, Complaint Counsel has presented no credible evidence of any potential retaliation in this case. Complaint Counsel has not provided any indication that Respondents ever have engaged in such retaliatory activities. Nor has Complaint Counsel provided any evidence that would demonstrate that the former employees at issue are peculiarly vulnerable to any retaliation. Moreover, Respondents previously have assured the Presiding Officer, and hereby restate those assurances, that Respondents will not "retaliate" against any person for providing truthful information to the CPSC.

Moreover, Complaint Counsel's refusal to enter into a Confidentiality Agreement demonstrates that Complaint Counsel is more concerned about withholding pertinent information

from Respondents than protecting the former employees from any hypothetical retaliation. Respondents provided a draft Confidentiality Agreement to Complaint Counsel on May 1. See Exhibit "A", attached hereto. Complaint Counsel refused to enter into or even comment on this Confidentiality Agreement.[1/] However, the Confidentiality Agreement contains the solution to Complaint Counsel's concerns about "retaliation."

The Confidentiality Agreement contains provisions that would permit Complaint Counsel to designate the Withheld Materials as "Outside Counsel Only." See Exhibit "A", ¶¶ 1-3. Such a designation would limit those who could view the Withheld Materials to "the undersigned outside counsel" for Respondents, which does not include any counsel with any relationship to Respondents besides lawyer-client. Id., ¶ 3.[2/] Thus, any threat of potential "retaliation" against the former employees would be nullified, as Respondents would not be aware of the identity of these former employees; only Respondents' outside counsel would have such information.

However, Complaint Counsel has refused to consider the Confidentiality Agreement and/or this course of action. Thus, it is apparent that Complaint Counsel is simply attempting to delay and limit discovery for Respondents, not acting out of concern for the well-being of the former employees.

1/ Not having received any response from Complaint Counsel, Respondents have submitted the Confidentiality Agreement to the Presiding Officer as a proposed protective order. See Proposed Protective Order and Opposition of Respondents to Complaint Counsel's Submission of Documents In Camera, served May 19, 1998.

2/ Outside counsel could then review the materials, and if appropriate, seek permission from the Court to share the documents with their client if necessary to prepare a defense. Id., ¶ 9.

Because Complaint Counsel has produced no evidence of potential retaliation and has refused to consider a reasonable resolution to this issue via a Confidentiality Agreement, there is no basis for Complaint Counsel to invoke the "informant's privilege." Therefore, the Presiding Officer should order Complaint Counsel to produce the Withheld Materials to Respondents.

3. The Informant's Privilege Is Easily Overcome Based On The Admitted Importance Of The Withheld Materials.

The "informant's privilege" is not absolute -- it is, at most, a qualified privilege. The Supreme Court has clearly stated: "Where the disclosure of an informant's identity, or the contents of his communication, is relevant and helpful to the defense of an accused, or is essential to a fair determination of a cause, the privilege must give way. In these situations the trial court may require disclosure and, if the government withholds the information, dismiss the action." Rovario v. United States, 353 U.S. 56, 60-61 (1957) (emphasis added).

As admitted by Complaint Counsel, the contents of the Withheld Materials fall squarely within the circumstances where "the privilege must give way." Complaint Counsel concedes that they are "using the information contained in these documents to further its investigation . . . and to channel its discovery in this matter." Complaint Counsel's Motion, p. 3. Thus, Complaint Counsel is treating the contents of the Withheld Materials as extremely important information for purposes of this case. There should be little doubt that knowledge of this information would be "relevant and helpful" in the defense of this case for Respondents, and that giving Respondents equal access to this important information would be "essential to a fair determination" of this case. Rovario, 353 U.S. at 60-61.

Moreover, given the fact that Complaint Counsel has now provided these documents to the fact-finder in this case (and deprived Respondents and the Presiding Officer of the opportunity to develop a means of resolving this issue without providing the fact-finder with the documents at issue), Respondents must have access to the documents to enable them to address any factual or other inaccuracies in those documents.

Complaint Counsel argues that it still should not be required to produce the Withheld Materials because it does not intend to use the documents themselves at trial. See Complaint Counsel's Motion, p. 2. This argument simply misses the point. The proper issue is whether Complaint Counsel intends to use the information contained in the Withheld Materials and the investigatory fruits of that information in the trial of this case. The answer to that question clearly is "Yes," as Complaint Counsel had stated that it is using the information for investigatory and discovery purposes. Id. at p. 3. Therefore, Respondents should have equal access to these documents, to be given an equal opportunity to use such documents to "further [Respondents'] investigation" and "channel [Respondents'] discovery," in order to prepare for trial. Id.[3/]

Furthermore, public safety dictates that Respondents and their counsel be advised of the contents of the Withheld Materials. Central Sprinkler Company manufactures the Omega sprinkler heads in question. To the extent that the Withheld Materials reveal or explain any

---

3/ If, on the other hand, Complaint Counsel successfully maintained a claim to the informant's privilege here, such a ruling logically would restrict Complaint Counsel's use of such information. Complaint Counsel would not be permitted to use the information contained in the Withheld Materials at trial, and certainly could not call the former employees in question as witnesses.

potential problems with the Omegas, Central, its Board of Directors, and its counsel affirmatively want to receive such information to address any potential problems appropriately. Central, its Board of Directors, and its counsel are committed to addressing properly any problems with the Omegas. If there are any identifiable problems with the Omegas, nobody has a greater interest in or right to address those problems than Respondents. Complaint Counsel's decision to deny Respondents access to the Withheld Materials is thus both procedurally unsound and contrary to Complaint Counsel's statutory mandate.[4/]

As was the case with the "anonymous letter," when viewed from an objective perspective, the course of action requested by Complaint Counsel here should not be followed. Complaint Counsel requests that documents in their possession be withheld from Respondents even though such documents admittedly are important, will be used to prepare for trial, and have been provided to the fact-finding Presiding Officer. Thus, everyone involved in the trial of this matter with the exception of Respondents, who are defending their product, would have access to these materials. Such a situation would be highly prejudicial to Respondents, a basic denial of due process rights, and fundamentally unfair.

Thus, in the instant case, the qualified "informant's privilege" is easily overcome. The contents of the Withheld Materials, as conceded by Complaint Counsel, are important enough to

---

4/ The Court should not assume that Respondents are unwilling to take corrective action. To the contrary, Respondents have proposed to Complaint Counsel several alternative corrective action proposals, the future cost of which has been estimated to exceed $13.2 million. Complaint Counsel has rejected these proposals. Nor should the Court assume that Central, its counsel, or its Board of Directors are aware of each alleged fact claimed to be known by a third party. To the extent a third party has provided important information to Complaint Counsel, Respondents should be given the opportunity to address that information and take it into account in resolving this matter.

Respondents' defense in this matter and a fair determination of this case that "the privilege must give way." Rovario, 353 U.S. at 60-61. Therefore, the Court should order Complaint Counsel to produce the Withheld Materials to Respondents.[5/]

4. The Informant's Privilege Does Not Protect The Contents Of The Withheld Materials.

The "informant's privilege" is not a total shield to discovery. This privilege protects only the identity of an informant, not the information provided by the informant. Rovario, 353 U.S. at 60; see also Wright & Graham, Federal Practice and Procedure: Evidence § 5740 (The privilege does not protect "information provided by the informer . . . . Communications of an informant are not privileged . . . .").

Thus, under any factual or legal scenario, Complaint Counsel should be required to produce to Respondents all of the information contained in the Withheld Materials. This could be accomplished simply by redacting the name of the author, if necessary. The informant's privilege, even where applicable, does not protect the information provided by an informant.[6/]

5/ To the extent that any work product protection applied to such materials, the same logic applies -- the work product doctrine would be overcome by Respondents' "substantial need" for the materials. See 16 C.F.R. § 1025.31(c)(3).

6/ This same legal analysis also applies to Complaint Counsel's assertion of the work product doctrine. Because the work product doctrine only protects "documents and tangible things," 16 C.F.R. § 1025.31(c)(3), Complaint Counsel would be required to produce the information contained in the Withheld Materials regardless of such an objection.

D. The Withheld Materials Are Not Protected By The Work Product Doctrine Or As Materials Provided By Non-Testifying Experts.

Perhaps realizing that the informant's privilege does not shield the Withheld Materials from discovery, Complaint Counsel makes an entirely different argument in an attempt to deny Respondents access to such documents. In a move that is wholly at odds with their characterization of the authors as "informants," Complaint Counsel alternatively argues that the former employees are "non-testifying consultants" who are acting as experts for and/or agents of Complaint Counsel. See Complaint Counsel's Motion, p. 4. Thus, argues Complaint Counsel, the Withheld Materials are protected from discovery by the work product doctrine (Fed. R. Civ. P. 26(b)(3)) and special discovery rules applying to non-testifying experts (16 C.F.R. § 1025.31(c)(4)(ii)). Id.

This argument is both specious and reinforces the baseless nature of Complaint Counsel's attempt to label the former employees at issue "informants." The former employees at issue are not "experts" under 16 C.F.R. § 1025.31(c)(4)(ii). An expert offers opinions "involving scientific or technical knowledge" based on the expert's unique training or technical expertise. 16 C.F.R. § 1025.44(a). Complaint Counsel are not using the former employees as experts, but as fact witnesses regarding "Omega sprinklers, Omega sprinkler failures, and Respondents' knowledge of same." Complaint Counsel's Motion, p. 1. There is no indication in Complaint Counsel's Motion and no conceivable factual or legal basis for classifying the former employees at issue as non-testifying experts pursuant to 16 C.F.R. § 1025.31(c)(4)(ii). Complaint Counsel's attempt to make this argument is a disingenuous and desperate effort to avoid producing the Withheld Materials.

Similarly, Complaint Counsel's attempt to rely upon Fed. R. Civ. P. 26(b)(3) for some sort of work product protection is invalid. First, this rule does not apply to the instant administrative proceedings, which are governed by the CPSC rules of practice. Second, for purposes of the instant dispute, Rule 26(b)(3) would only provide work product protection for documents and tangible things prepared for trial by the CPSC or the CPSC's representatives, such as the CPSC's "attorney, consultant, surety, indemnitor, insurer, or agent." See Fed. R. Civ. P. 26(b)(3). The former employees at issue are mere fact witnesses, not the CPSC's representatives. Once again, there is no basis in Complaint Counsel's Motion and no conceivable factual or legal basis for arguing that the former employees are some sort of legal agent for the CPSC. In essence, Complaint Counsel is attempting to obtain the same work product protection for the materials generated by the former employees as is afforded the mental impressions and strategies of the CPSC's lawyers, Complaint Counsel. Such an argument is unprecedented, unsupported, and simply incredible.

Complaint Counsel is willing to raise any argument in an attempt to prevent Respondents from gaining crucial information via discovery. Complaint Counsel attempts to classify the former employees at issue here first as independent "informants," then as non-testifying "experts," then as some sort of agents of the CPSC. These arguments are internally inconsistent and fundamentally unsound. The former employees are simply potential fact witnesses, and materials related to them are discoverable.

III. CONCLUSION

At present, Complaint Counsel is engaging in a carefully choreographed two-pronged strategy. First, Complaint Counsel is periodically submitting inflammatory and highly prejudicial materials on an in camera basis to the Presiding Officer, thereby attempting to engage in an ex parte trial of this matter and unfairly influence the Presiding Officer. Second, Complaint Counsel is withholding materials from Respondents based on spurious objections. This course of action by Complaint Counsel is delaying these proceedings, causing tremendous prejudice to Respondents, and imperiling the appearance of propriety of these proceedings.

Complaint Counsel's Motion is a further example of this strategy. Complaint Counsel admits that the Withheld Materials are relevant and responsive, but insisted on submitting them for in camera review based on a series of specious objections. Because the former employees in question are simply fact witnesses, Complaint Counsel cannot shield from discovery the materials related to them by pretending that the former employees are informants, experts, or employees of the CPSC.

Based on all of the foregoing, pursuant to 16 C.F.R. § 1045(c)(2), Respondents respectfully request that the Court deny Complaint Counsel's Motion and order Complaint Counsel to produce the Withheld Materials to Respondents. At a minimum, Respondents request that the Court direct Complaint Counsel to state with specificity the factual or other information provided in the Withheld Materials so that Respondents may prepare for trial and address any public safety issues raised in the materials.

Respectfully submitted,

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

CONFIDENTIALITY AGREEMENT

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") and Petitioner the Consumer Product Safety Commission (the "CPSC"), through undersigned counsel, hereby agree:

1. Petitioner and Respondents shall have the right to limit access to any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness, to the undersigned outside counsel for the parties.

2. Such documents or other tangible items must be designated by conspicuously stamping the words "OUTSIDE COUNSEL ONLY" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may limit access to such testimony to the undersigned outside counsel by notifying the other party of the portion of testimony to be designated on the record at the deposition or in writing no later than two days after the transcript is received.

3. Information designated for "OUTSIDE COUNSEL ONLY" shall not be disclosed or disseminated to anyone, except:

a. the undersigned outside counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purposes of assisting in the preparation of this litigation, provided, however, that no such information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person, entity, or firm with the prior written consent of all parties.

4. Petitioner and Respondents shall have the right to designate as CONFIDENTIAL any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness.

5. Such documents or other tangible items must be designated by conspicuously stamping the words "CONFIDENTIAL" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may designate portions of the record CONFIDENTIAL by notifying the other party on the record at the deposition or in writing no later than two days after the transcript is received.

6. Information designated "CONFIDENTIAL" shall not be disclosed or disseminated to anyone, except:

a. a party, counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purpose of assisting in the preparation of this litigation, provided, however, that no CONFIDENTIAL information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person who was involved in the preparation of the document or information; or

d. any other person, entity, or firm with the prior written consent of all parties.

7. Any party that provides documents or other discovery obtained from the other party in the course of this litigation to any person (other than the Court, court personnel, and court reporters) will first obtain from such person, prior to any such dissemination, a written statement in the form attached as Exhibit "A" hereto, that such person agrees to be bound by this Confidentiality Agreement. The undersigned counsel shall maintain a list of all such persons along with the written agreement of each person. Upon request of any party at any time, counsel in possession of the written agreements shall immediately either: (a) provide copies of the written agreements to the requesting party; or (b) submit the written agreements to the Court to determine whether any aspect of the written agreements are protected from discovery by any privilege.

8. When any document or information designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY," or other pleadings or papers disclosing or referring to such information are used in connection with any motion, hearing, filing or other submission to the Court, they shall be filed in an envelope under seal pursuant to the rules of this Court and shall be marked as follows:

> CONFIDENTIAL/RESTRICTED:
> The contents of this envelope are not to be revealed to anyone except the Court, or with the prior consent of all the parties herein, or pursuant to any other Order of this Court. If the contents are thus revealed, they shall thereafter be resealed.

9. a. Nothing in this Agreement shall preclude any party from challenging a designation of "CONFIDENTIAL" OR "OUTSIDE COUNSEL ONLY" by another party. If any party elects to challenge a designation of any document, deposition testimony, or

information pursuant to this order, that party must provide at least five days advance notice to afford the designating party an opportunity to remove voluntarily such designation.

b. If, after the five-day period has expired, the designating party has not agreed to remove the designation and the parties are otherwise unable to resolve the challenge to the designation, the challenging and designating parties shall contact the Court for a determination of whether the challenged designation is appropriate. The challenging party shall provide the Court with one copy of each document, response, or portion of transcript challenged. The challenging party has the burden of proving the inapplicability and/or incorrectness of any designation.

c. If the challenge is not resolved by agreement, or by voluntary removal, and if the Court is not contacted, then the designation shall remain in effect and shall continue to apply to such document or information.

10. All documents and other discovery produced or obtained in the course of this litigation, whether designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" or not, shall be used for the sole and limited purpose of preparation for and trial of this action and shall not be used for any other purpose. "For purposes of preparation and trial of this action," as used in this Order, means that individuals obtaining access to discovery: (i) can read and review such discovery to become knowledgeable about this litigation; and (ii) can comment on such discovery to counsel for the parties if they so choose. All other uses, including but not limited to (1) making such discovery available to any person who has not signed Exhibit "A" hereto and (2) causing such discovery to be published in any trade journal, newspaper, or other written

publication other than filings with this Court connected with this litigation, shall fall outside the definition of "For purposes of preparation for and trial of this action." Nothing in this Confidentiality Agreement shall preclude persons wishing to use discovery from this litigation for purposes other than "For purposes of preparation for and trial of this action" from moving this Court, upon reasonable notice to the parties, for appropriate relief.

11. Within thirty days of the close of this litigation for any reason, each party shall retrieve all copies of materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" from his or its own files, and from experts or other persons to whom he or it has provided such materials consistent with this Confidentiality Agreement, and shall do one of the following: (1) return to the designating party all such materials, including all copies thereof, produced by such designating party during this action; or (2) certify in writing to the designating party that all materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" produced by such other party during this action have been destroyed. All material protected by this Confidentiality Agreement which has been placed in any computer databank, hard drive, or disk shall be completely erased, and any documents listing or summarizing information protected by this Confidentiality Agreement shall be destroyed within the same period.

12. Nothing herein contained shall be construed to preclude or limit any party from opposing any discovery on any grounds that would otherwise be available. This Agreement shall not, in and of itself, prejudice any contention of any party upon any motion, nor shall this Agreement constitute a waiver of any right to seek relief from the Court from any and all of the provisions hereof or other modifications of the terms hereof. This Agreement shall not limit any party's

right to seek judicial review or to seek further and additional protection against or limitation upon production or dissemination of information and documents or their contents.

13. Nothing herein shall be construed to preclude or limit the presence of any individual at any hearings in or the trial of this action.

RESPONSE OF CENTRAL SPRINKLER CORPORATION AND CENTRAL SPRINKLER COMPANY TO RESPONSE OF FACTORY MUTUAL RESEARCH CORPORATION IN REGARD TO DISCLOSURE OF DOCUMENTS

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby respond to Factory Mutual Research Corporation's Response To Complaint Counsel's Request For Disclosure Determination Of Factory Mutual Research Corporation Documents. Central concurs with Factory Mutual Research Corporation ("Factory Mutual") that Factory Mutual's documents produced to the Consumer Product Safety Commission ("CPSC") pursuant to subpoena and pertaining to Central should be produced to Central. Further, Factory Mutual's documents produced to the CPSC and pertaining to companies other than Central should also be produced to Central in response to Central's document requests served on the CPSC.

With regard to disclosure to the public of Factory Mutual's documents, Central does not take a position regarding public disclosure of other companies' documents. With regard to Central's documents, however, no public disclosure of either the documents or information

pertaining to them should be made unless in accordance with law and regulations; to wit, that the documents or information are provided to Central, Central is given the opportunity to comment on the proposed disclosure, and the CPSC has taken reasonable steps to assure that the information to be disclosed is accurate.

Further support for this Response is contained in the attached Memorandum Of Law, which is incorporated by reference herein.

Respectfully submitted,

MEMORANDUM OF LAW IN SUPPORT OF RESPONSE OF CENTRAL SPRINKLER CORPORATION AND CENTRAL SPRINKLER COMPANY TO RESPONSE OF FACTORY MUTUAL RESEARCH CORPORATION IN REGARD TO DISCLOSURE OF DOCUMENTS

I. INTRODUCTION

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") concur with Factory Mutual Research Corporation's ("Factory Mutual") position that Factory Mutual's documents produced to the Consumer Product Safety Commission ("CPSC") pursuant to subpoena served on Factory Mutual by the CPSC, and pertaining to Central, should be produced to Central. Further, Factory Mutual's documents produced to the CPSC and pertaining to companies other than Central should also be produced to Central in response to Central's document requests served on the CPSC. Not only does the Consumer Product Safety Act not prohibit disclosure of information when relevant to administrative proceedings before the CPSC, but the Protective Order proposed by Central, with provisions for "Outside Counsel

Only" and "Confidential" designations, more than sufficiently protects any trade secret or confidential information contained within the documents.

With regard to public dissemination of Factory Mutual's information regarding Central or any other company, neither Complaint Counsel nor the CPSC can make such public disclosure unless it is in accordance with statutory and regulatory law. In particular, no disclosure should take place until and unless the documents or information are provided to Central, Central has had the opportunity to comment on the proposed disclosure, and the CPSC has taken reasonable steps to assure that the information to be disclosed is accurate.

II. FACTUAL BACKGROUND

It would appear that, in May 1997, the CPSC issued subpoenas to various third parties, including Factory Mutual. On April 27, 1998, following Complaint Counsel's filing an Administrative Complaint against Central in the above-captioned matter, Central served Complaint Counsel with Central's First Request for Production of Documents. Among the documents requested were, inter alia, (a) all documents in the CPSC's administrative file regarding Central's Omega fire sprinklers; (b) all documents produced to the CPSC in response to CPSC subpoenas regarding Omega sprinklers; (c) all documents produced to the CPSC regarding Omega sprinklers; (d) all documents regarding testing of Omega sprinklers; (e) all documents regarding the manufacture, sale or marketing of Omega sprinklers; (f) all documents regarding certain allegations of the Administrative Complaint filed by Complaint Counsel; and (g) and all documents concerning silicone or EPDM o-rings. Complaint Counsel objected to the document requests, in part because of alleged confidentiality concerns.

On May 1, 1998, Central submitted a proposed Confidentiality Agreement to Complaint Counsel. The proposed Confidentiality Agreement provided for two kinds of confidentiality designation: "Outside Counsel Only," which would preclude disclosure to the parties, and "Confidential," which would permit disclosure to the parties, but would place restrictions on how the parties could use that information. Documents with either designation could be used only for the purpose of preparation and trial of this action, and would be required to be returned to the designating party or destroyed at the end of the litigation.[1/] Without responding to Central regarding the proposed Confidentiality Agreement, Complaint Counsel on May 15, 1998 instead submitted documents in camera and requested a disclosure determination from the Administrative Law Judge. On May 19, 1998, Central filed a motion requesting that the proposed Confidentiality Agreement be entered as a protective order.

On May 28, 1998, Factory Mutual filed a Response to Complaint Counsel's Request For Disclosure Determination Of Factory Mutual Research Corporation Documents. In its Response and supporting affidavit, Factory Mutual explained that it must preserve the confidentiality of information supplied by its customers, as well as testing information generated while testing customers' products. Factory Mutual stated that it had no objection to Complaint Counsel's

---

1/ This type of Confidentiality Agreement is widely used in large-scale document productions where the withholding and designation of individual documents is neither preferred nor feasible due to the large number of documents that would therefore be withheld. Proceeding with an "umbrella" confidentiality agreement that provides for specific designations and a method for challenging any designation is an acceptable and regular way of proceeding when a massive volume of documents is produced, as it enables the attorneys or parties to use the documents in the prosecution or defense of the case, protects the designating party, and enables a receiving party to challenge any claim of confidentiality with full knowledge of the contents of the documents. Complaint Counsel's refusal to so proceed is surprising and unwarranted.

producing to Central documents that Central had provided to Factory Mutual in the first place, or that Factory Mutual had prepared regarding Central's products. Factory Mutual objected, however, to Complaint Counsel's producing to Central or to the public all other documents that Factory Mutual provided to the CPSC in response to the CPSC's subpoena.

III. LEGAL ARGUMENT

As Factory Mutual has explained in its Response, there are two types of documents that it has produced to the CPSC: (1) those regarding Central; and (2) those regarding other customers of Factory Mutual. Likewise, there are two possible recipients of the documents from Complaint Counsel or the CPSC: (1) Central, in response to its document requests in the above-captioned action; and (2) the public, either through CPSC dissemination or, perhaps, in response to requests under the Freedom of Information Act ("FOIA"), 5 U.S.C. § 552.

For the reasons stated in further detail below, Central is entitled to all of the documents provided to the CPSC by Factory Mutual. Further, it is inappropriate for the CPSC to disclose to the public, either through CPSC dissemination or in response to FOIA requests, trade secret or confidential information received from either Central or Factory Mutual. Complaint Counsel or the CPSC must adhere to the Act's requirements before any public disclosure of any other information can take place outside of these judicial proceedings.

A. Complaint Counsel Must Immediately Produce To Central All Documents Received From Factory Mutual That Concern Central Or Central's Products.

When Complaint Counsel refused to produce documents to Central in response to Central's document requests, one of the bases for its refusal was that it had received confidential

documents from third parties and was not at liberty to disclose the documents. Central recognized that its, and others', documents relevant to this matter may contain confidential or trade secret information. Therefore, Central proposed to Complaint Counsel a Confidentiality Agreement that would address confidentiality concerns by providing for a two-tier designation of confidentiality, with the more restrictive designation prohibiting disclosure to parties and allowing for disclosure only to outside counsel, experts, or persons to whom all parties consent to disclosure. Complaint Counsel failed to respond to Central's proposed agreement.

Although Complaint Counsel purported to be protecting the confidential nature of third parties' documents, one of those third parties, Factory Mutual, has now stated that it "does not object to the Commission producing those documents [those either provided to Factory Mutual by Central or prepared by Factory Mutual in response to Central's request for Factory Mutual testing of its products] to Central Sprinkler because such production is not inconsistent with [Factory Mutual's] obligations of confidentiality." (Factory Mutual Response, p. 3.) Given Factory Mutual's acquiescence to disclosure of its Central-related documents to Central, Complaint Counsel has no basis for not immediately producing those documents to Central.

B. Central Is Entitled To Receive All Other Documents Provided To The CPSC By Factory Mutual In Response To The CPSC's Subpoena.

Citing confidentiality concerns, Factory Mutual objects to Complaint Counsel's production to Central of information provided to the CPSC by Factory Mutual regarding non-Central products or testing. In contrast to Complaint Counsel, however, Factory Mutual may be willing to discuss with Central the proposed Confidentiality Agreement, as well as redaction of customer identification. Thus, this entire issue may be obviated if Factory Mutual, like

Underwriters Laboratories ("UL"), agrees that documents can be produced to Central subject to Central's proposed Confidentiality Agreement. Indeed, as UL stated in a letter to Judge Moran dated May 27, 1998,

> UL has no objection to the disclosure to Respondents of the documents that UL has produced to the CPSC . . . . Complaint Counsel's statement in its motion that 'the staff has been unable to obtain the third's party's (i.e., UL) agreement to disclose the documents in discovery in this matter' is incorrect . . . . It is UL's understanding that Central is willing to enter into a Confidentiality Agreement with the CPSC which it has rejected.

(Ltr. to Hon. William B. Moran, May 27, 1998, p. 2.) (emphasis added).

If Factory Mutual, like UL, accepts Central's proposed Confidentiality Agreement regarding disclosure of Factory Mutual documents to Central, Complaint Counsel will have no basis for refusing to produce to Central the documents produced to the CPSC by Factory Mutual.

Even without Factory Mutual's acquiescence, however, Central is still entitled to all other documents produced by Factory Mutual to the CPSC. The Consumer Product Safety Act, 15 U.S.C. § 2051 et seq., ("the Act") does not prohibit disclosure of information when relevant to administrative proceedings before the CPSC. To the contrary, the Act provides that

> The provisions of paragraphs (2) through (6) shall not prohibit the disclosure of information . . . when relevant in any administrative proceeding under this Act . . . . Any disclosure of relevant information --
>
> (A) in Commission administrative proceedings . . .
>
> shall be governed by the rules of the Commission . . . .

15 U.S.C. § 2055(a)(8).

Paragraph (2), cited in the passage above, provides that all information "reported to or otherwise obtained by the Commission or its representative under this Act which information

contains or relates to trade secret or other matter referred to in section 1905 of Title 18 [the Trade Secrets Act] or subject to section 552(b)(4) of Title 5 [FOIA] shall be considered confidential and shall not be disclosed." 15 U.S.C. § 2055(a)(2). The Trade Secrets Act, in turn, prohibits any United States employee, under penalty of imprisonment or a fine, from disclosing "in any manner or to any extent not authorized by law" information relating to trade secrets. 18 U.S.C. § 1905. Similarly, FOIA, while mandating open disclosure from government agencies of agency information, states that its disclosure provisions do not apply to matters that are "trade secrets and commercial or financial information obtained from a person and privileged or confidential." 5 U.S.C. § 552(b)(4).

By specifically providing in Section 2055(a)(8) that these provisions "shall not prohibit the disclosure" of relevant information, the Act recognizes that such disclosures are required when relevant to administrative proceedings before the CPSC. Statutory provisions protecting information from publication are meant to address disclosure of sensitive information to the general public. They are not intended to restrict the limited kind of disclosure experienced in judicial proceedings. See Culligan v. Yamaha Motor Corp., 110 F.R.D. 122, 127 (S.D.N.Y. 1986) (although Yamaha could expect that its communication of trade secrets to the CPSC would not be disseminated by the CPSC, it could not expect that they would be insulated from the discovery process).

The documents requested by Central are clearly relevant to the proceedings at bar. For example, to the extent that information contained in non-Central documents from Factory Mutual shows that other companies' sprinklers experienced similar issues, the documents are relevant to Central's defense. Similarly, Factory Mutual's documents concerning test results from other

companies' sprinklers are relevant to addressing whether Complaint Counsel's assertions of high "failure rates" with Omega sprinklers are based on correct standards. In short, even if Complaint Counsel does not intend to use the Factory Mutual documents in the case against Central, Central is nonetheless entitled to the documents because they are relevant to Central's defense of its sprinklers against allegations that they pose a substantial product hazard to consumers.

Complaint Counsel cannot seriously claim that the Factory Mutual documents are not relevant to this matter. Were that the case, then there is no need for Complaint Counsel to have submitted them for in camera review and, likewise, no reason for Complaint Counsel to use the documents in its case against Central. As stated above, Central is entitled to the documents whether or not Complaint Counsel intend to use the documents against Central, because the documents are relevant to Central's defense. Moreover, especially if Complaint Counsel intends to use the documents, they must be produced to Central. Simply, it exceeds the limits of procedural fairness and due process for Complaint Counsel to use against Central documents that it has refused to produce to Central.

Central does not disagree with Factory Mutual that Factory Mutual's information should not be widely disseminated. The Confidentiality Agreement/Protective Order proposed by Central, with its provisions for "Outside Counsel Only" and "Confidential" designations and its restrictions on use of the designated documents, more than sufficiently protects the trade secret or confidential information contained within the documents. Indeed, Underwriters Laboratories ("UL"), a testing organization similar to Factory Mutual, has indicated that the two-tier confidentiality designations and provisions for post-litigation return or destruction of designated

documents adequately protects its documents that have been produced to the CPSC and which are responsive to Central's documents requests.

Because Factory Mutual has agreed that the Central-related documents it has provided to the CPSC should be produced to Central, those documents must be immediately produced by Complaint Counsel to Central. In addition, Factory Mutual's non-Central documents must be produced to Central because they are relevant to the administrative proceedings against Central before the CPSC, and the proposed Confidentiality Agreement/Protective Order provides sufficient protection against disclosure to competing clients of Factory Mutual.

C. Although Complaint Counsel Must Produce The Documents To Central In This Administrative Proceeding, The CPSC Cannot Disclose The Documents To The Public Without Adhering To Applicable Law And Regulations.

As discussed above, the Act does not prohibit disclosure of trade secret or confidential information when relevant in administrative proceedings before the Commission. With regard to disclosures to the public at large, however -- as opposed to disclosures to a party in an administrative proceedings -- the Act recognizes and incorporates the disclosure limitations of FOIA.

Thus, the Act provides that "[n]othing contained in this Act shall be construed to require the release of any information described by subsection (b) of section 552 of Title 5 [FOIA] or which is otherwise protected by law from disclosure to the public." 15 U.S.C. § 2055(a)(1). Therefore, if the CPSC is called upon to release Central-related documents under FOIA, it is not required to release information contained within FOIA's exemptions. GTE Sylvania, Inc. v. Consumer Product Safety Comm'n, 598 F.2d 790, 803 (3d Cir. 1979), aff'd, 447 U.S. 102, 100 S.Ct. 2051 (1980). Among those exemptions are trade secret and commercial or financial

information. 5 U.S.C. § 552(b)(4). Hence, the CPSC is not required -- and is, indeed, prohibited by the Trade Secrets Act -- to release to the public Central's trade secret or commercial and financial information in response to a FOIA request.[2/]

With regard to information pertaining to Central that is not a trade secret or confidential, the Act nonetheless governs disclosure to the public of the information. 15 U.S.C. § 2055(b). The section applies to any CPSC disclosures, whether initiated by the CPSC or in response to a FOIA request. See Consumer Product Safety Comm'n v. GET Sylvania, Inc., 447 U.S. 102, 108, 100 S.Ct. 2051, 2056 (1980) (nothing in the Act supports CPSC's claim that section applies only to disclosures initiated by the CPSC). Thus, Complaint Counsel or the CPSC must provide Central with adequate notice and opportunity to comment before disclosing any Central documents to the public. 15 U.S.C. § 2055(b)(1). At a minimum, this requires that Complaint Counsel provide Central with the actual documents it seeks to release to the public in order to enable Central to comment on the propriety of such release. Indeed, it is quite ironic that Complaint Counsel has denied Central the opportunity to review the documents while simultaneously taking the position that the same documents should be provided to the general public.[3/]

2/ Central takes no position regarding the CPSC's disclosure to the public of Factory Mutual information concerning other companies, but notes that provisions regarding the dissemination of information to the public at large, where such information is not constrained by judicial proceedings and are not protected by a confidentiality agreement, must adhere to statutory and regulatory requirements described previously.

3/ Moreover, to the extent that the CPSC intends to comment on, or provide information regarding, Central's documents, the CPSC "shall take reasonable steps to assure, prior to its public disclosure thereof, that information from which the identity of such manufacturer . . . may (continued...)

III. CONCLUSION

For all of the reasons stated herein, Complaint Counsel must immediately produce to Central all information concerning Central that Factory Mutual provided to the CPSC. Further, Complaint Counsel must produce Factory Mutual's non-Central information with an appropriate Confidentiality Agreement/Protective Order in place, as the Act's provisions regarding "public" disclosure do not apply to disclosures to Central during this administrative proceeding. With regard to public disclosures, however, either initiated by the CPSC or in response to FOIA requests, no trade secret or confidential or financial information can be disseminated, and public disclosure of any other information must adhere to the pre-disclosure requirements of the Act.

RESPONDENTS' PROPOSED DISCOVERY SCHEDULE AND SUPPORTING MEMORANDUM

I. INTRODUCTION

The Presiding Officer has scheduled a pre-hearing conference in this matter for June 16, 1998. In anticipation of the pre-hearing conference, counsel for both parties participated in a conference call on May 28, 1998, to discuss issues relevant to the pre-hearing conference. Counsel mutually agreed to exchange proposed discovery schedules on June 3, 1998, and promised to work together thereafter in an attempt to reach agreement on such scheduling issues before the pre-hearing conference.

On June 3, as agreed, Respondents submitted a proposed discovery schedule to Complaint Counsel. See Letter of June 3 and Respondents' Proposed Discovery Schedule (the "Discovery Schedule"), attached hereto as Exhibit "A". The Discovery Schedule set forth in detail proposed obligations and corresponding dates for each party regarding discovery issues; the accompanying letter summarized the rationale for these obligations and dates. Id.

Complaint Counsel did not provide a proposed discovery schedule on June 3. On June 9, Respondents reminded Complaint Counsel via a letter of their agreement to exchange proposed discovery schedules. See Letter of May 9, attached hereto as Exhibit "B". To date, Complaint Counsel has neither submitted a proposed discovery schedule to Respondents nor offered any explanation for failing to do so.

In the absence of any comments from Complaint Counsel, and in anticipation of the pre-hearing conference, Respondents hereby submit the Discovery Schedule for consideration by the Presiding Officer. Respondents briefly explain the purpose of each suggested element of the Discovery Schedule in the following discussion. The overall time-line represented by the Discovery Schedule is summarized at Exhibit "C".

II. DISCUSSION

A. Identification/Clarification of Issues

Rule 1025.21 of the CPSC rules of practice provides that the pre-hearing conference should address "[i]dentification, simplification and clarification of the issues," 16 C.F.R. § 1025.21(a)(3), and the Presiding Officer specifically stated during the May 29, 1998 telephone conference that this is one of the matters to be addressed during the June 16, 1998 pre-hearing conference. Section 1 of the Discovery Schedule proposes such identification/clarification of the issues presented in the instant case. See Discovery Schedule, § 1.

Section 1 proposes that Complaint Counsel will advise Respondents by June 15, 1998 of the issues and contentions that Complaint Counsel intend to attempt to prove at trial.[1/] Such potential issues includes: (1) whether Complaint Counsel intend to establish the cause of any alleged Omega defect; (2) whether Omega sprinklers "fail" at a comparably greater rate than other brands of sprinkler heads; (3) whether any of the small number of non-activations by an Omega sprinkler in a fire was the result of an alleged defect; (4) whether any personal injuries resulted from an alleged Omega non-activation; (5) whether Central's proposed remediation program is adequate; and (6) whether Omegas using silicone o-rings are defective. Id.

Identification and/or clarification of whether Complaint Counsel intends to put any of these subjects into issue in this case is a crucial first step in shaping discovery and the eventual trial in this matter. To date, Complaint Counsel's allegations and discovery responses have focused on a relatively narrow issue -- whether laboratory test results allegedly demonstrate that Omegas do not activate at a certain minimal amount of water pressure (5 or 7 psi). If this is the sole issue that Complaint Counsel intends to attempt to prove in support of their case, then discovery proceedings and the trial of this matter may be relatively simple.[2/]

1/ By selecting June 15, Respondents had hoped that the scope of the issues to be raised by Complaint Counsel would be clarified before the pre-hearing conference in order to allow for a more meaningful discussion at the conference. Because such a date will have passed by the time of the pre-hearing conference, Respondents respectfully suggest that Complaint Counsel make the identification/clarification of issues within one week of the pre-hearing conference, by June 23, 1998.

2/ Respondents do not suggest that Complaint Counsel can meet their burden of proof through this evidence alone. Indeed, Complaint Counsel's burden of proof is a complex legal issue that should be resolved at an appropriate stage only after thorough briefing and argument.

On the other hand, if Complaint Counsel plans to address or offer proof regarding any of the other issues mentioned in Section 1 of the Discovery Schedule, it will have a dramatic impact on discovery, trial preparation, and the hearing in this matter. Such expanded allegations would require Respondents to seek further discovery from Complaint Counsel, and would require more extensive third party discovery. Such allegations would critically affect the affirmative defenses offered by Respondents, the type and number of experts required, and the particular fact witnesses involved. Obviously, all of these issues also would then affect the required length of discovery and trial.

Respondents have been pressing Complaint Counsel to clarify the issues in this matter from the outset. Fairness and efficiency dictate that this be done properly. Just by way of example, if Complaint Counsel intend to prove that any of the relatively small number of alleged inactivations of an Omega was caused by a defect, discovery will need to focus on the circumstances of the particular inactivation. This discovery would include an evaluation of the propriety of the design of the sprinkler system, whether the sprinkler was properly installed, whether prohibited substances were introduced into the sprinkler system or water supply, whether the water supply was particularly corrosive or filled with sludge, whether the water supply was shut down or impaired, and whether adjacent sprinklers controlled the fire. If Complaint Counsel identifies and/or clarifies the subjects that are at issue in this case, it will dramatically improve the ability of the parties and the Presiding Officer to establish a reasonable plan for discovery and trial. Therefore, Respondents respectfully request that the Court include Section 1 of the Discovery Schedule as part of any scheduling order in this matter.

B. Identification Of Persons Having Knowledge

Section 1025.21 of the CPSC rules of practice anticipates that the pre-hearing conference will address the identification of witnesses. See 16 C.F.R. § 1025.21(a)(11). Section 2 of the Discovery Schedule addresses such identification, proposing that "By June 15, 1998, Complaint Counsel shall identify the names of all persons having knowledge about the allegations they intend to prove at trial that are not identified in the documents produced by Respondents to date." See Discovery Schedule, § 2.[3/]

The identification of "persons having knowledge" of any potentially relevant information is explicitly required by the rules of practice, where a party requests such information. See 16 C.F.R. § 1025.31(c)(1). Respondents have requested this information in discovery, but Complaint Counsel has not identified such "persons having knowledge" to date, aside from referring Respondents to the documents that have been produced. A proper identification is vital in order to permit Respondents to proceed with depositions in this case. It is self-evident that Respondents cannot depose potential witnesses known only to Complaint Counsel -- in order to discover the nature of their knowledge, test the validity of their information, and consider their credibility -- unless Respondents know exactly who such persons are.

The CPSC rules of practice require the identification of "persons having knowledge" of potentially relevant information. Respondents have requested such information from Complaint

---

3/ As with the identification/clarification of issues, Respondents selected June 15 in the hope that this threshold issue could be resolved prior to the pre-hearing conference, thereby providing important information for that conference. Respondents now suggest that Complaint Counsel make their identification of persons having knowledge on the same newly proposed date for the identification/clarification of issues -- June 23. See supra n.1.

Counsel, and this information is necessary in establishing a discovery schedule and trial plan in this matter. Therefore, as part of a comprehensive discovery plan, Respondents request that the Presiding Officer order Complaint Counsel to identify such persons with knowledge by June 15, or be barred from presenting at trial any witnesses not disclosed in this list of persons with knowledge.[4/]

C. Production Of Documents By Respondents

Respondents are in the process of conducting an exhaustive review of documents, spanning a period of more than 15 years, in response to Complaint Counsel's very broad discovery requests. Section 3 of the Discovery Schedule sets forth procedures for the completion of Respondents' document production to Complaint Counsel. See Discovery Schedule, § 3. This section recites that Respondents already have made available for inspection by Complaint Counsel an initial set of 100 boxes of documents, subject to execution of a confidentiality agreement. Respondents are making their best efforts to make available the remaining additional 300 boxes (approximately) by June 24, 1998.

D. Fact Discovery Period

Sections 4 - 7 of the Discovery Schedule propose procedures for the identification of witnesses and documents to be introduced at trial, third party discovery, and fact depositions. Under the Discovery Schedule, this "fact discovery period" takes place June 29 - August 3, 1998.

4/ Respondents are prepared to provide names of persons with knowledge regarding the issues to be tried in this case as well. Respondents submit, however, that they should not be required to do so until after Complaint Counsel specifies the issues that it intends to try in this case.

See Discovery Schedule, §§ 4-7.[5/] Such issues are properly considered at a pre-hearing conference. See 16 C.F.R. § 1025.21(8), (11), (14).

Sections 6 and 7 of the Discovery Schedule provide for an orderly process of third party discovery and deposition scheduling. It has come to Respondents' attention that Complaint Counsel apparently has been serving subpoenas and attempting to schedule deposition testimony from third parties without serving or otherwise notifying Respondents. The Discovery Schedule provides for notice to all parties, a reasonable period of time to conduct depositions (June 24 - August 3), and an orderly procedure for counsel to meet and confer in order to establish a mutually convenient schedule for depositions. Given the complexity and tight deadlines involved in this litigation, these provisions are designed to keep the proceedings efficient, timely, and fair.

Regarding the disclosure of witnesses and documents, the Discovery Schedule proposes a phased plan that will occur after the fact discovery period has closed. Since Complaint Counsel has the burden of proof to substantiate their Complaint, 16 C.F.R. § 1025.43(b)(1), Complaint Counsel first discloses their proposed witnesses and documents for trial use. Respondents then can evaluate Complaint Counsel's list and avoid duplication and/or repetition in producing Respondents' disclosures, which are due one week after Complaint Counsel's disclosures. If a witness or document is not disclosed by a party during this procedure, that party may not introduce the non-disclosed witness or document at trial. See Discovery Schedule, §§ 4-5.

5/ The proposal is based, however, on the assumption that the trial will be limited to issues relating to test results and whether these test results establish the existence of a "product defect which poses a substantial product hazard." If Complaint Counsel intends to broaden the issues, the Discovery Schedule should be adjusted accordingly.

E. Expert Discovery Period

The CPSC rules of practice anticipate that the Presiding Officer may address at the pre-hearing conference issues related to the testimony of expert witnesses. See 16 C.F.R. § 1025.21(a)(9), (13), (14). Sections 8 - 12 of the Discovery Schedule address discovery and testimony of experts in this matter. The "expert discovery period" anticipated in the Discovery Schedule occurs July 1 - September 25. See Discovery Schedule, §§ 8-12.

Similar to the fact discovery period, the expert discovery period would be a phased procedure under the Discovery Schedule. First, on July 1, Complaint Counsel identifies their experts and provides basic background information on such experts. Id. at § 8. Then, on July 15, Respondents provide reciprocal information. Again, since Complaint Counsel has the burden of proof and can control the issues it intends to raise, it is appropriate to require Complaint Counsel to identify their experts before Respondents are required to do so. This phased procedure prevents duplicate expert witnesses and allows Respondents the opportunity to decide what experts appropriately respond to the experts proposed by Complaint Counsel. Such a procedure also avoids the supplemental designation of experts that usually occurs when parties are forced to designate expert witnesses simultaneously.

After the experts have been designated, the Discovery Schedule sets forth a procedure for the exchange of expert testimony and supporting materials. See Discovery Schedule, §§ 10-11. Pursuant to 16 C.F.R. § 1025.44, the testimony of the experts shall be reduced to writing. Under the Discovery Schedule, Complaint Counsel submits their experts' testimony to Respondents after the close of fact discovery, by August 10. Respondents are required to respond with their experts' testimony by August 24. Then, with both parties fully informed regarding the expert

testimony, the Discovery Schedule provides for a reasonable period of time for the depositions of all experts: August 24 - September 25.

This procedure assures that the parties will have all relevant information before expert depositions commence. It also provides for an efficient and concise submission of prepared expert testimony at trial. Accordingly, Respondents request that the Presiding Officer adopt the procedures set forth in Sections 8-12 of the Discovery Schedule.

F. Exchange Of Final Witness and Exhibit Lists

Pursuant to 16 C.F.R. § 1025.21(a)(13), the Discovery Schedule proposes that the parties exchange final trial witness and exhibit lists on or before October 5, 1998. See Discovery Schedule, § 13. This date allows a sufficient period of time after the close of all discovery (September 25) for the parties to prepare a final list of witnesses and exhibits.

G. Location of Hearing

The CPSC rules of practice provide that the Presiding Officer may determine the location of the hearing at the pre-hearing conference, "with due regard to the convenience of the parties." 16 C.F.R. § 1025.21(a)(13). The Discovery Schedule designates Philadelphia, Pennsylvania as the location of the hearing. See Discovery Schedule, § 14.

Respondents respectfully maintain that a Philadelphia location would be most convenient for the parties. Respondents are located in the Philadelphia area, as, presumably, are most of Respondents' potential witnesses. Complaint Counsel's witnesses either are from the Philadelphia area or are from a diverse set of locations around the country, all of which are easily accessible to Philadelphia by plane, train, or automobile. Therefore, Philadelphia represents a logical and convenient location for the hearing of this matter.

III. CONCLUSION

For all of the foregoing reasons, Respondents respectfully request that the Presiding Officer adopt and incorporate the provisions contained in the Discovery Schedule into any comprehensive discovery order in this matter. Respondents will be prepared to discuss any of these proposed provisions and any other matters deemed relevant by the Presiding Officer at the pre-hearing conference.

Re: In the Matter of Central Sprinkler Corporation, et al.
CPSC Docket No. 98-2

Dear Eric and Deborah:

Pursuant to our conversation of last week, attached is Respondents' Proposed Discovery Schedule. In presenting this proposal to you, we believe some preliminary observations are appropriate.

First, the scope of discovery in this matter--including the amount of time required, the identity of witnesses that need to be deposed and the areas in which expert testimony will be required--is heavily dependent upon the scope of matters you intend to put at issue in this matter. Nearly all of the discovery we have received from you to date has concerned laboratory test results. If your proof at trial will concern only those test results and testimony regarding their significance, that should enable us to complete discovery within the time periods set forth in Respondents' Proposal. On the other hand, the scope of discovery will be very different if you intend to prove such matters as: (a) the cause or causes of the alleged defect; (b) that some or all of the actual alleged inactivations in the handful of fires were caused by a defect as opposed to some other system-related issue; (c) that personal injuries actually resulted from an alleged defect; (d) that Omega sprinklers "fail" at a rate greater than other sprinklers; (e) the bases, if any, for concluding that Central's remediation program does not constitute a complete remedy under the Act; or (f) any of the other areas identified in

paragraph 1 of our Proposal. For obvious reasons, it is imperative that we understand the scope of your contentions at the earliest possible date so that fact and expert discovery can proceed accordingly. See, e.g., 16 C.F.R. § 1025.21(a)(3) (requiring the Presiding Officer to consider at the Prehearing Conference means to identify, simplify and clarify the issues).

Second, in order to proceed with depositions, respondents need information from Complaint Counsel regarding the names of persons having knowledge of matters that Complaint Counsel intends to prove at trial. For the most part, your discovery responses to date concern only test results and requests for information by Complaint Counsel to third parties. These discovery responses shed little light on the names of persons with knowledge in this matter. Our concern in this regard is particularly amplified by two of your in camera motions which suggest that you may be developing witnesses and areas of proof about which we have received no information. In order to enable us to prepare for trial, we believe that Complaint Counsel must identify persons with relevant knowledge or be barred from using those persons as witnesses at trial. See, e.g., 16 C.F.R. § 1025.21(a)(11) (requiring the Presiding Officer to consider requiring the parties to disclose the names of witnesses and physical evidence prior to the submission of final witness and exhibit lists).

We look forward to receiving your proposal by the end of the day today and hearing from you about resolving any of our differences as soon as possible, so that we can prepare for, and make a clear presentation of the issues during our June 16, 1998 prehearing conference.

Very truly yours,

J. Gordon Cooney, Jr.

RESPONDENTS' PROPOSED DISCOVERY SCHEDULE

Subject to the statements set forth in the June 3, 1998 letter from J. Gordon Cooney, Jr. to Eric L. Stone, Respondents Central Sprinkler Corporation and Central Sprinkler Co. hereby propose the following discovery schedule:

1. By June 15, 1998, Complaint Counsel will advise Respondents whether they intend to attempt to establish facts in addition to those relating to results from laboratory tests, and, if so, they will articulate those facts and contentions they intend to prove. Without limitation, this will include whether Complaint Counsel intend to prove:

a. The cause or causes that they believe underlie their contention that Omega sprinklers contain a defect which poses a substantial product hazard;

b. Whether Omega sprinklers "fail" at a rate that is greater than comparable quick response or other sprinklers;

c. Whether they intend to establish that any of the instances where an Omega sprinkler allegedly did not activate in a fire was the result of a product defect as opposed to some other system-related or other problem, and, if so, which such instances;

d. Whether they intend to establish that, in any of the above instances, they intend to prove that the alleged defect resulted in personal injury, and, if so, shall identify the person allegedly injured and the alleged injuries suffered;

e. Whether Complaint Counsel contend that the remediation program established by Central in the Settlement Agreement dated May 11, 1998 constitutes an inadequate program of replacement and repair, and, if so, they shall specify the reasons for such a contention;

f. Whether Complaint Counsel contend that Omega sprinklers containing silicone o-rings contain a defect which poses a substantial product hazard, and if so, the bases upon which this contention rests in light of the test data produced to date showing no test failures for such products.

2. By June 15, 1998, Complaint Counsel shall identify the names of all persons having knowledge about the allegations they intend to prove at trial that are not identified in the documents produced to Respondents to date.

3. Respondents have identified and are prepared to produce for inspection by Complaint Counsel approximately 100 boxes of documents upon the execution of the Confidentiality Agreement forwarded to Complaint Counsel on May 1, 1998. Respondents estimate that they will produce an additional 300 boxes of documents and will make additional documents available for inspection on a rolling basis. By June 24, 1998, Respondents intend to

produce all documents referenced in their Response to Complaint Counsel's Request for Production of Documents, dated May 26, 1998.

4. On or before June 29, 1998, Complaint Counsel shall disclose the names of witnesses and of documents or other physical evidence which they intend to introduce into evidence. Failure to provide such information by June 29, 1998 shall result in Complaint Counsel's being precluded from offering the testimony of any such non-identified person at the administrative trial.

5. On or before July 6, 1998, Respondents shall disclose the names of witnesses and of documents or other physical evidence which they intend to introduce into evidence. Failure to provide such information by July 6, 1998 shall result in Respondents' being precluded from offering the testimony of any such non-identified person at the administrative trial.

6. Complaint Counsel and Respondents must comply with, inter alia, 16 C.F.R. §§ 1025.35 and 1025.38 regarding notice to all parties regarding depositions and subpoenas directed to non-parties.

7. The parties shall conduct fact depositions in this matter between June 24, 1998 and August 3, 1998. As soon as Complaint Counsel have provided the information set forth in paragraph 1 above, the parties shall meet and confer on the identity of fact witnesses to be deposed and shall attempt to agree on a schedule for taking those depositions. Depending on the scope of issues that Complaint Counsel intend to raise pursuant to paragraph 1 above, the deadline of August 3, 1998 may be extended.

8. On or before July 1, 1998, Complaint Counsel shall identify each expert witness they intend to call at trial, including for each such expert a curriculum vitae and a brief

description of the areas in which that expert is expected to testify sufficient to enable Respondents to determine whether to counter-designate their own experts in those areas.

9. On or before July 15, 1998, Respondents shall identify each expert witness they intend to call at trial, including for each such witness a curriculum vitae and a brief description of the areas in which that expert is expected to testify.

10. On or before August 10, 1998, Complaint Counsel shall furnish Respondents with the prepared testimony of each expert witness they intend to call at trial, together with: all data or other information considered by the witness in forming the opinions; any exhibits to be used as a summary or support for the opinions; the qualifications of the witness, including a list of all publications authored by the witness within the preceding ten years; the compensation to be paid for the study and testimony; and a listing of any other cases in which the witness has testified as an expert at trial or by deposition within the preceding four years.

11. On or before August 24, 1998, Respondents shall furnish Complaint Counsel with the prepared testimony of each expert witness they intend to call at trial, together with: all data or other information considered by the witness in forming the opinions; any exhibits to be used as a summary or support for the opinions; the qualifications of the witness, including a list of all publications authored by the witness within the preceding ten years; the compensation to be paid for the study and testimony; and a listing of any other cases in which the witness has testified as an expert at trial or by deposition within the preceding four years.

12. The parties shall conduct expert witness depositions between August 24, 1998 and September 25, 1998. Prior to doing so, the parties shall meet and confer in an attempt to arrive at a mutually agreeable expert deposition schedule.

13. On or before October 5, 1998, the parties shall exchange final witness and exhibit lists. Only those witnesses and exhibits that are listed will be permitted in each party's case-in-chief.

14. The hearing in this matter should be held in the Philadelphia, Pennsylvania area.

15. Respondents reserve the right to modify this Proposed Discovery Schedule upon review of Complaint Counsel's Proposed Discovery Schedule.

Re: In the Matter of Central Sprinkler Corporation, et al.
CPSC Docket No. 98-2

Dear Eric and Deborah:

On Thursday, May 28, 1998, we participated in a telephone conference in which we each agreed to exchange proposed discovery plans on Wednesday, June 3. As you know, on that date, Respondents provided you with such a discovery plan and expected to receive Complaint Counsel's version on that same date.

To date, we have not received Complaint Counsel's proposed discovery plan. Complaint Counsel's failure to provide Respondents with such a plan in accordance with our agreement has substantially impaired our ability to meet with you to discuss an intelligent discovery program prior to the June 16, 1998 pre-hearing conference. Please provide us with Complaint Counsel's proposed discovery plan immediately.

We look forward to hearing from you.

Very truly yours,

J. Gordon Cooney, Jr.

RESPONDENTS' PROPOSED DISCOVERY SCHEDULE AND SUPPORTING MEMORANDUM

I. INTRODUCTION

The Presiding Officer has scheduled a pre-hearing conference in this matter for June 16, 1998. In anticipation of the pre-hearing conference, counsel for both parties participated in a conference call on May 28, 1998, to discuss issues relevant to the pre-hearing conference. Counsel mutually agreed to exchange proposed discovery schedules on June 3, 1998, and promised to work together thereafter in an attempt to reach agreement on such scheduling issues before the pre-hearing conference.

On June 3, as agreed, Respondents submitted a proposed discovery schedule to Complaint Counsel. See Letter of June 3 and Respondents' Proposed Discovery Schedule (the "Discovery Schedule"), attached hereto as Exhibit "A". The Discovery Schedule set forth in detail proposed obligations and corresponding dates for each party regarding discovery issues; the accompanying letter summarized the rationale for these obligations and dates. Id.

Complaint Counsel did not provide a proposed discovery schedule on June 3. On June 9, Respondents reminded Complaint Counsel via a letter of their agreement to exchange proposed discovery schedules. See Letter of May 9, attached hereto as Exhibit "B". To date, Complaint Counsel has neither submitted a proposed discovery schedule to Respondents nor offered any explanation for failing to do so.

In the absence of any comments from Complaint Counsel, and in anticipation of the pre-hearing conference, Respondents hereby submit the Discovery Schedule for consideration by the Presiding Officer. Respondents briefly explain the purpose of each suggested element of the Discovery Schedule in the following discussion. The overall time-line represented by the Discovery Schedule is summarized at Exhibit "C".

II. DISCUSSION

A. Identification/Clarification of Issues

Rule 1025.21 of the CPSC rules of practice provides that the pre-hearing conference should address "[i]dentification, simplification and clarification of the issues," 16 C.F.R. § 1025.21(a)(3), and the Presiding Officer specifically stated during the May 29, 1998 telephone conference that this is one of the matters to be addressed during the June 16, 1998 pre-hearing conference. Section 1 of the Discovery Schedule proposes such identification/clarification of the issues presented in the instant case. See Discovery Schedule, § 1.

Section 1 proposes that Complaint Counsel will advise Respondents by June 15, 1998 of the issues and contentions that Complaint Counsel intend to attempt to prove at trial.[1/] Such potential issues includes: (1) whether Complaint Counsel intend to establish the cause of any alleged Omega defect; (2) whether Omega sprinklers "fail" at a comparably greater rate than other brands of sprinkler heads; (3) whether any of the small number of non-activations by an Omega sprinkler in a fire was the result of an alleged defect; (4) whether any personal injuries resulted from an alleged Omega non-activation; (5) whether Central's proposed remediation program is adequate; and (6) whether Omegas using silicone o-rings are defective. Id.

Identification and/or clarification of whether Complaint Counsel intends to put any of these subjects into issue in this case is a crucial first step in shaping discovery and the eventual trial in this matter. To date, Complaint Counsel's allegations and discovery responses have focused on a relatively narrow issue -- whether laboratory test results allegedly demonstrate that Omegas do not activate at a certain minimal amount of water pressure (5 or 7 psi). If this is the sole issue that Complaint Counsel intends to attempt to prove in support of their case, then discovery proceedings and the trial of this matter may be relatively simple.[2/]

1/ By selecting June 15, Respondents had hoped that the scope of the issues to be raised by Complaint Counsel would be clarified before the pre-hearing conference in order to allow for a more meaningful discussion at the conference. Because such a date will have passed by the time of the pre-hearing conference, Respondents respectfully suggest that Complaint Counsel make the identification/clarification of issues within one week of the pre-hearing conference, by June 23, 1998.

2/ Respondents do not suggest that Complaint Counsel can meet their burden of proof through this evidence alone. Indeed, Complaint Counsel's burden of proof is a complex legal issue that should be resolved at an appropriate stage only after thorough briefing and argument.

On the other hand, if Complaint Counsel plans to address or offer proof regarding any of the other issues mentioned in Section 1 of the Discovery Schedule, it will have a dramatic impact on discovery, trial preparation, and the hearing in this matter. Such expanded allegations would require Respondents to seek further discovery from Complaint Counsel, and would require more extensive third party discovery. Such allegations would critically affect the affirmative defenses offered by Respondents, the type and number of experts required, and the particular fact witnesses involved. Obviously, all of these issues also would then affect the required length of discovery and trial.

Respondents have been pressing Complaint Counsel to clarify the issues in this matter from the outset. Fairness and efficiency dictate that this be done properly. Just by way of example, if Complaint Counsel intend to prove that any of the relatively small number of alleged inactivations of an Omega was caused by a defect, discovery will need to focus on the circumstances of the particular inactivation. This discovery would include an evaluation of the propriety of the design of the sprinkler system, whether the sprinkler was properly installed, whether prohibited substances were introduced into the sprinkler system or water supply, whether the water supply was particularly corrosive or filled with sludge, whether the water supply was shut down or impaired, and whether adjacent sprinklers controlled the fire. If Complaint Counsel identifies and/or clarifies the subjects that are at issue in this case, it will dramatically improve the ability of the parties and the Presiding Officer to establish a reasonable plan for discovery and trial. Therefore, Respondents respectfully request that the Court include Section 1 of the Discovery Schedule as part of any scheduling order in this matter.

B. Identification Of Persons Having Knowledge

Section 1025.21 of the CPSC rules of practice anticipates that the pre-hearing conference will address the identification of witnesses. See 16 C.F.R. § 1025.21(a)(11). Section 2 of the Discovery Schedule addresses such identification, proposing that "By June 15, 1998, Complaint Counsel shall identify the names of all persons having knowledge about the allegations they intend to prove at trial that are not identified in the documents produced by Respondents to date." See Discovery Schedule, § 2.[3/]

The identification of "persons having knowledge" of any potentially relevant information is explicitly required by the rules of practice, where a party requests such information. See 16 C.F.R. § 1025.31(c)(1). Respondents have requested this information in discovery, but Complaint Counsel has not identified such "persons having knowledge" to date, aside from referring Respondents to the documents that have been produced. A proper identification is vital in order to permit Respondents to proceed with depositions in this case. It is self-evident that Respondents cannot depose potential witnesses known only to Complaint Counsel -- in order to discover the nature of their knowledge, test the validity of their information, and consider their credibility -- unless Respondents know exactly who such persons are.

The CPSC rules of practice require the identification of "persons having knowledge" of potentially relevant information. Respondents have requested such information from Complaint

---

3/ As with the identification/clarification of issues, Respondents selected June 15 in the hope that this threshold issue could be resolved prior to the pre-hearing conference, thereby providing important information for that conference. Respondents now suggest that Complaint Counsel make their identification of persons having knowledge on the same newly proposed date for the identification/clarification of issues -- June 23. See supra n.1.

Counsel, and this information is necessary in establishing a discovery schedule and trial plan in this matter. Therefore, as part of a comprehensive discovery plan, Respondents request that the Presiding Officer order Complaint Counsel to identify such persons with knowledge by June 15, or be barred from presenting at trial any witnesses not disclosed in this list of persons with knowledge.[4/]

C. Production Of Documents By Respondents

Respondents are in the process of conducting an exhaustive review of documents, spanning a period of more than 15 years, in response to Complaint Counsel's very broad discovery requests. Section 3 of the Discovery Schedule sets forth procedures for the completion of Respondents' document production to Complaint Counsel. See Discovery Schedule, § 3. This section recites that Respondents already have made available for inspection by Complaint Counsel an initial set of 100 boxes of documents, subject to execution of a confidentiality agreement. Respondents are making their best efforts to make available the remaining additional 300 boxes (approximately) by June 24, 1998.

D. Fact Discovery Period

Sections 4 - 7 of the Discovery Schedule propose procedures for the identification of witnesses and documents to be introduced at trial, third party discovery, and fact depositions. Under the Discovery Schedule, this "fact discovery period" takes place June 29 - August 3, 1998.

4/ Respondents are prepared to provide names of persons with knowledge regarding the issues to be tried in this case as well. Respondents submit, however, that they should not be required to do so until after Complaint Counsel specifies the issues that it intends to try in this case.

See Discovery Schedule, §§ 4-7.[5/] Such issues are properly considered at a pre-hearing conference. See 16 C.F.R. § 1025.21(8), (11), (14).

Sections 6 and 7 of the Discovery Schedule provide for an orderly process of third party discovery and deposition scheduling. It has come to Respondents' attention that Complaint Counsel apparently has been serving subpoenas and attempting to schedule deposition testimony from third parties without serving or otherwise notifying Respondents. The Discovery Schedule provides for notice to all parties, a reasonable period of time to conduct depositions (June 24 - August 3), and an orderly procedure for counsel to meet and confer in order to establish a mutually convenient schedule for depositions. Given the complexity and tight deadlines involved in this litigation, these provisions are designed to keep the proceedings efficient, timely, and fair.

Regarding the disclosure of witnesses and documents, the Discovery Schedule proposes a phased plan that will occur after the fact discovery period has closed. Since Complaint Counsel has the burden of proof to substantiate their Complaint, 16 C.F.R. § 1025.43(b)(1), Complaint Counsel first discloses their proposed witnesses and documents for trial use. Respondents then can evaluate Complaint Counsel's list and avoid duplication and/or repetition in producing Respondents' disclosures, which are due one week after Complaint Counsel's disclosures. If a witness or document is not disclosed by a party during this procedure, that party may not introduce the non-disclosed witness or document at trial. See Discovery Schedule, §§ 4-5.

5/ The proposal is based, however, on the assumption that the trial will be limited to issues relating to test results and whether these test results establish the existence of a "product defect which poses a substantial product hazard." If Complaint Counsel intends to broaden the issues, the Discovery Schedule should be adjusted accordingly.

E. Expert Discovery Period

The CPSC rules of practice anticipate that the Presiding Officer may address at the pre-hearing conference issues related to the testimony of expert witnesses. See 16 C.F.R. § 1025.21(a)(9), (13), (14). Sections 8 - 12 of the Discovery Schedule address discovery and testimony of experts in this matter. The "expert discovery period" anticipated in the Discovery Schedule occurs July 1 - September 25. See Discovery Schedule, §§ 8-12.

Similar to the fact discovery period, the expert discovery period would be a phased procedure under the Discovery Schedule. First, on July 1, Complaint Counsel identifies their experts and provides basic background information on such experts. Id. at § 8. Then, on July 15, Respondents provide reciprocal information. Again, since Complaint Counsel has the burden of proof and can control the issues it intends to raise, it is appropriate to require Complaint Counsel to identify their experts before Respondents are required to do so. This phased procedure prevents duplicate expert witnesses and allows Respondents the opportunity to decide what experts appropriately respond to the experts proposed by Complaint Counsel. Such a procedure also avoids the supplemental designation of experts that usually occurs when parties are forced to designate expert witnesses simultaneously.

After the experts have been designated, the Discovery Schedule sets forth a procedure for the exchange of expert testimony and supporting materials. See Discovery Schedule, §§ 10-11. Pursuant to 16 C.F.R. § 1025.44, the testimony of the experts shall be reduced to writing. Under the Discovery Schedule, Complaint Counsel submits their experts' testimony to Respondents after the close of fact discovery, by August 10. Respondents are required to respond with their experts' testimony by August 24. Then, with both parties fully informed regarding the expert

testimony, the Discovery Schedule provides for a reasonable period of time for the depositions of all experts: August 24 - September 25.

This procedure assures that the parties will have all relevant information before expert depositions commence. It also provides for an efficient and concise submission of prepared expert testimony at trial. Accordingly, Respondents request that the Presiding Officer adopt the procedures set forth in Sections 8-12 of the Discovery Schedule.

F. Exchange Of Final Witness and Exhibit Lists

Pursuant to 16 C.F.R. § 1025.21(a)(13), the Discovery Schedule proposes that the parties exchange final trial witness and exhibit lists on or before October 5, 1998. See Discovery Schedule, § 13. This date allows a sufficient period of time after the close of all discovery (September 25) for the parties to prepare a final list of witnesses and exhibits.

G. Location of Hearing

The CPSC rules of practice provide that the Presiding Officer may determine the location of the hearing at the pre-hearing conference, "with due regard to the convenience of the parties." 16 C.F.R. § 1025.21(a)(13). The Discovery Schedule designates Philadelphia, Pennsylvania as the location of the hearing. See Discovery Schedule, § 14.

Respondents respectfully maintain that a Philadelphia location would be most convenient for the parties. Respondents are located in the Philadelphia area, as, presumably, are most of Respondents' potential witnesses. Complaint Counsel's witnesses either are from the Philadelphia area or are from a diverse set of locations around the country, all of which are easily accessible to Philadelphia by plane, train, or automobile. Therefore, Philadelphia represents a logical and convenient location for the hearing of this matter.

III. CONCLUSION

For all of the foregoing reasons, Respondents respectfully request that the Presiding Officer adopt and incorporate the provisions contained in the Discovery Schedule into any comprehensive discovery order in this matter. Respondents will be prepared to discuss any of these proposed provisions and any other matters deemed relevant by the Presiding Officer at the pre-hearing conference.

Respectfully submitted,

Re: In the Matter of Central Sprinkler Corporation, et al.
CPSC Docket No. 98-2

Dear Eric and Deborah:

Pursuant to our conversation of last week, attached is Respondents' Proposed Discovery Schedule. In presenting this proposal to you, we believe some preliminary observations are appropriate.

First, the scope of discovery in this matter--including the amount of time required, the identity of witnesses that need to be deposed and the areas in which expert testimony will be required--is heavily dependent upon the scope of matters you intend to put at issue in this matter. Nearly all of the discovery we have received from you to date has concerned laboratory test results. If your proof at trial will concern only those test results and testimony regarding their significance, that should enable us to complete discovery within the time periods set forth in Respondents' Proposal. On the other hand, the scope of discovery will be very different if you intend to prove such matters as: (a) the cause or causes of the alleged defect; (b) that some or all of the actual alleged inactivations in the handful of fires were caused by a defect as opposed to some other system-related issue; (c) that personal injuries actually resulted from an alleged defect; (d) that Omega sprinklers "fail" at a rate greater than other sprinklers; (e) the bases, if any, for concluding that Central's remediation program does not constitute a complete remedy under the Act; or (f) any of the other areas identified in

paragraph 1 of our Proposal. For obvious reasons, it is imperative that we understand the scope of your contentions at the earliest possible date so that fact and expert discovery can proceed accordingly. See, e.g., 16 C.F.R. § 1025.21(a)(3) (requiring the Presiding Officer to consider at the Prehearing Conference means to identify, simplify and clarify the issues).

Second, in order to proceed with depositions, respondents need information from Complaint Counsel regarding the names of persons having knowledge of matters that Complaint Counsel intends to prove at trial. For the most part, your discovery responses to date concern only test results and requests for information by Complaint Counsel to third parties. These discovery responses shed little light on the names of persons with knowledge in this matter. Our concern in this regard is particularly amplified by two of your in camera motions which suggest that you may be developing witnesses and areas of proof about which we have received no information. In order to enable us to prepare for trial, we believe that Complaint Counsel must identify persons with relevant knowledge or be barred from using those persons as witnesses at trial. See, e.g., 16 C.F.R. § 1025.21(a)(11) (requiring the Presiding Officer to consider requiring the parties to disclose the names of witnesses and physical evidence prior to the submission of final witness and exhibit lists).

We look forward to receiving your proposal by the end of the day today and hearing from you about resolving any of our differences as soon as possible, so that we can prepare for, and make a clear presentation of the issues during our June 16, 1998 prehearing conference.

Very truly yours,

J. Gordon Cooney, Jr.

RESPONDENTS' PROPOSED DISCOVERY SCHEDULE

Subject to the statements set forth in the June 3, 1998 letter from J. Gordon Cooney, Jr. to Eric L. Stone, Respondents Central Sprinkler Corporation and Central Sprinkler Co. hereby propose the following discovery schedule:

1. By June 15, 1998, Complaint Counsel will advise Respondents whether they intend to attempt to establish facts in addition to those relating to results from laboratory tests, and, if so, they will articulate those facts and contentions they intend to prove. Without limitation, this will include whether Complaint Counsel intend to prove:

a. The cause or causes that they believe underlie their contention that Omega sprinklers contain a defect which poses a substantial product hazard;

b. Whether Omega sprinklers "fail" at a rate that is greater than comparable quick response or other sprinklers;

c. Whether they intend to establish that any of the instances where an Omega sprinkler allegedly did not activate in a fire was the result of a product defect as opposed to some other system-related or other problem, and, if so, which such instances;

d. Whether they intend to establish that, in any of the above instances, they intend to prove that the alleged defect resulted in personal injury, and, if so, shall identify the person allegedly injured and the alleged injuries suffered;

e. Whether Complaint Counsel contend that the remediation program established by Central in the Settlement Agreement dated May 11, 1998 constitutes an inadequate program of replacement and repair, and, if so, they shall specify the reasons for such a contention;

f. Whether Complaint Counsel contend that Omega sprinklers containing silicone o-rings contain a defect which poses a substantial product hazard, and if so, the bases upon which this contention rests in light of the test data produced to date showing no test failures for such products.

2. By June 15, 1998, Complaint Counsel shall identify the names of all persons having knowledge about the allegations they intend to prove at trial that are not identified in the documents produced to Respondents to date.

3. Respondents have identified and are prepared to produce for inspection by Complaint Counsel approximately 100 boxes of documents upon the execution of the Confidentiality Agreement forwarded to Complaint Counsel on May 1, 1998. Respondents estimate that they will produce an additional 300 boxes of documents and will make additional documents available for inspection on a rolling basis. By June 24, 1998, Respondents intend to

produce all documents referenced in their Response to Complaint Counsel's Request for Production of Documents, dated May 26, 1998.

4. On or before June 29, 1998, Complaint Counsel shall disclose the names of witnesses and of documents or other physical evidence which they intend to introduce into evidence. Failure to provide such information by June 29, 1998 shall result in Complaint Counsel's being precluded from offering the testimony of any such non-identified person at the administrative trial.

5. On or before July 6, 1998, Respondents shall disclose the names of witnesses and of documents or other physical evidence which they intend to introduce into evidence. Failure to provide such information by July 6, 1998 shall result in Respondents' being precluded from offering the testimony of any such non-identified person at the administrative trial.

6. Complaint Counsel and Respondents must comply with, inter alia, 16 C.F.R. §§ 1025.35 and 1025.38 regarding notice to all parties regarding depositions and subpoenas directed to non-parties.

7. The parties shall conduct fact depositions in this matter between June 24, 1998 and August 3, 1998. As soon as Complaint Counsel have provided the information set forth in paragraph 1 above, the parties shall meet and confer on the identity of fact witnesses to be deposed and shall attempt to agree on a schedule for taking those depositions. Depending on the scope of issues that Complaint Counsel intend to raise pursuant to paragraph 1 above, the deadline of August 3, 1998 may be extended.

8. On or before July 1, 1998, Complaint Counsel shall identify each expert witness they intend to call at trial, including for each such expert a curriculum vitae and a brief

description of the areas in which that expert is expected to testify sufficient to enable Respondents to determine whether to counter-designate their own experts in those areas.

9. On or before July 15, 1998, Respondents shall identify each expert witness they intend to call at trial, including for each such witness a curriculum vitae and a brief description of the areas in which that expert is expected to testify.

10. On or before August 10, 1998, Complaint Counsel shall furnish Respondents with the prepared testimony of each expert witness they intend to call at trial, together with: all data or other information considered by the witness in forming the opinions; any exhibits to be used as a summary or support for the opinions; the qualifications of the witness, including a list of all publications authored by the witness within the preceding ten years; the compensation to be paid for the study and testimony; and a listing of any other cases in which the witness has testified as an expert at trial or by deposition within the preceding four years.

11. On or before August 24, 1998, Respondents shall furnish Complaint Counsel with the prepared testimony of each expert witness they intend to call at trial, together with: all data or other information considered by the witness in forming the opinions; any exhibits to be used as a summary or support for the opinions; the qualifications of the witness, including a list of all publications authored by the witness within the preceding ten years; the compensation to be paid for the study and testimony; and a listing of any other cases in which the witness has testified as an expert at trial or by deposition within the preceding four years.

12. The parties shall conduct expert witness depositions between August 24, 1998 and September 25, 1998. Prior to doing so, the parties shall meet and confer in an attempt to arrive at a mutually agreeable expert deposition schedule.

13. On or before October 5, 1998, the parties shall exchange final witness and exhibit lists. Only those witnesses and exhibits that are listed will be permitted in each party's case-in-chief.

14. The hearing in this matter should be held in the Philadelphia, Pennsylvania area.

15. Respondents reserve the right to modify this Proposed Discovery Schedule upon review of Complaint Counsel's Proposed Discovery Schedule.

Re: In the Matter of Central Sprinkler Corporation, et al.
CPSC Docket No. 98-2

Dear Eric and Deborah:

On Thursday, May 28, 1998, we participated in a telephone conference in which we each agreed to exchange proposed discovery plans on Wednesday, June 3. As you know, on that date, Respondents provided you with such a discovery plan and expected to receive Complaint Counsel's version on that same date.

To date, we have not received Complaint Counsel's proposed discovery plan. Complaint Counsel's failure to provide Respondents with such a plan in accordance with our agreement has substantially impaired our ability to meet with you to discuss an intelligent discovery program prior to the June 16, 1998 pre-hearing conference. Please provide us with Complaint Counsel's proposed discovery plan immediately.

We look forward to hearing from you.

Very truly yours,

J. Gordon Cooney, Jr.

CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S PRELIMINARY PROPOSED DISCOVERY SCHEDULE AND INTERIM CONFIDENTIALITY AGREEMENT

COMES NOW Complaint Counsel, and submits its Preliminary Proposed Discovery Schedule in this matter. *See* Exhibit A, attached. Without having received proper responses to its Interrogatories and Requests for Production, and without having seen a proper index, much less any documents that Respondents have in response to Complaint Counsel's discovery, Complaint Counsel is unable, at this time, to propose a more definite discovery schedule, or to narrow the issues more than as stated herein.

Complaint Counsel telecopied its Proposed Discovery Schedule, as well as its Interim Confidentiality Agreement, to counsel for Respondents on June 12, 1998. *See* Letter from Deborah S. Orlove, Esq. to J. Gordon Cooney, Jr., Esq., June 12, 1998, Exhibit A. Several hours later, Respondents forwarded to Complaint Counsel and the Presiding Officer a Proposed Discovery Schedule and Supporting Memorandum. In their Schedule and Supporting Memorandum, Respondents request that Complaint Counsel advise them by today

of the issues and contentions we "intend to attempt to prove at trial." In Respondents' words, Respondents wish to know whether:

> (1) Complaint Counsel intend to establish the cause of any alleged Omega defect; (2) whether Omega sprinklers "fail" at a comparably greater rate than other brands of sprinkler heads; (3) whether any of the small number of non-activations by an Omega sprinkler in a fire was the result of an alleged defect; (4) whether any personal injuries resulted form an alleged Omega non-activation; (5) whether Central's proposed remediation program is adequate; and (6) whether Omegas using silicone o-rings are defective.

Although Complaint Counsel has not received complete or appropriate discovery responses from Respondents, and has been given no documents of the 400 boxes Respondents allegedly have, Complaint Counsel reiterates herein its previously-stated responses to Respondents' questions.[1]

First, under the statutes and regulations applicable to this proceeding, Complaint Counsel need only prove that Omega sprinklers are defective, and that the defect creates a substantial risk of injury to the public. If the documents that Respondents have (which Complaint Counsel has not seen), or any other information, tends to indicate what the source

---

1 Respondents indicate that Complaint Counsel's allegations and discovery responses "have focused on a relatively narrow issue -- whether laboratory test results allegedly demonstrate that Omegas do not activate at a certain minimal amount of water pressure . . . " Complaint Counsel disagrees. The complaint in this matter, as well as the discovery herein, is not narrowly focused only upon laboratory tests. Complaint Counsel's complaint and discovery responses discuss the numerous fires and other evidence relating to defect and substantial hazard, and speak for themselves.

of the defect is, Complaint Counsel reserves its right to present such evidence at the hearing in this matter.

Second, Complaint Counsel does not believe that it is relevant whether Omegas fail more than other sprinklers. What is relevant herein is whether Omegas fail, and whether that failure creates a substantial risk of injury to the public. Respondents indicated to Complaint Counsel today via teleconference that they believe that to make a *prima facie* case, Complaint Counsel must prove that Omegas fail at a rate greater than other sprinklers. Complaint Counsel has suggested that the parties brief this issue to the Presiding Officer, and then focus their discovery according to the Judge's ruling.

Third, Respondents wish to know whether Complaint Counsel intends to prove that any of the Omega non-activations in fires resulted from a defect. Complaint Counsel has suggested to Respondents that they should include in their discovery efforts (and responses) all situations in which Omegas failed to activate in fires.

Fourth, Respondents wish to know whether Complaint Counsel intends to prove whether any personal injuries resulted from an alleged Omega non-activation. Complaint Counsel has suggested to Respondents that they should include this in their discovery efforts (and responses) as well.

Fifth, Respondents wish to know whether Complaint Counsel intends to prove whether Central's proposed remediation program is adequate. Complaint Counsel need not prove this element herein. Complaint Counsel adds, however, that Respondents have proposed numerous remediation programs to different parties in different litigations, and none of these of which Complaint Counsel is aware are an acceptable remedy.

Respondents also wish to know whether Complaint Counsel intends to prove whether Omegas with silicone o-rings are defective. Complaint Counsel has alleged in its Complaint, and, therefore, intends to prove, that all Omegas are defective, and create a substantial risk of injury to the public. The foregoing responses should assist Respondents in focusing their discovery in this matter.

Respondents have refused to supply to Complaint Counsel any documents responsive to discovery unless Complaint Counsel signs Respondents' proposed Confidentiality Stipulation -- the same Stipulation that has already been considered by the Judge. *See* Confidentiality Order and Order Regarding Complaint Counsel's *In Camera* Submission of Documents and Request for Disclosure Determination, June 5, 1998. Respondents wish Complaint Counsel, by today, to identify persons having knowledge about the allegations in the Complaint. Complaint Counsel has identified in its discovery responses numerous of its staff who have knowledge about the allegations in the Complaint, and will provide, with fact witness disclosures, the names of witnesses it intends to call at trial. Complaint Counsel has also provided numerous documents to Respondents, which contain scores of additional names of persons knowledgeable about the Omega and the problems associated therewith. Complaint Counsel expects that additional persons will be named in the documents Respondents have that are responsive to discovery, and plans to file a motion to compel Respondents to turn over those documents to Complaint Counsel immediately. In the interest of time, Complaint Counsel has drafted the attached Interim Confidentiality Stipulation in order to preserve the confidentiality of documents over which Respondents make claims of

trade secret and/or confidentiality, and asks Respondents to submit those documents to the Presiding Officer for *in camera* review and determination.

Complaint Counsel's proposed schedule provides a tight schedule for fact witness depositions (60 days). Respondents' proposed schedule, which allows only 8 business days to conduct depositions, cannot be realistic in light of the number of fires that have occurred to date, and the many witnesses involved in the Omega's design, investigation of the defect, testing of buildings, etc. Like their proposed confidentiality stipulation, which they have tried to force upon Complaint Counsel as a precondition to Respondents' compliance with discovery, Respondents' schedule appears to be an effort to thwart discovery, not enable it.

Respondents' effort to preclude the parties from introducing witnesses and documents that may arise after June 29 is also an attempt to keep pertinent information out of this proceeding. Even <u>if</u> Respondents were forced to give Complaint Counsel the responsive discovery documents and an appropriate index today, Complaint Counsel would have only 14 days under Respondents' proposed schedule to review 400 boxes, before being barred from noting additional names or documents. This is oppressive and obstructive.

Respondents also request that the hearing be held in Philadelphia, Pennsylvania, "for the convenience of the parties." Respondents are located in the Philadelphia area; however, they have counsel in the District of Columbia, not far from Complaint Counsel. All of the documents (400 boxes) have already been delivered to the District. Respondents have insisted that Complaint Counsel name all persons on its staff that are knowledgeable about the Omega and the problems associated therewith. These employees are all located in the Washington, DC area. Moreover, one of the fires in which an Omega failed to activate occurred in

Maryland. Further, Complaint Counsel has witnesses on its staff who are in the process of testing Omegas, and who assembled the data compilation of Omega failures, who Respondents have suggested they intend to cross examine, and who Complaint Counsel will likely call to testify at trial. Complaint Counsel also has consultants in the DC metropolitan area who have tested hundreds of Omegas and overseen the replacement of thousands of Omega sprinklers, as well as investigated the problem with these sprinklers, and who may be called to testify at trial. Holding the hearing in this matter in the District of Columbia will be convenient for both the parties and their witnesses.

Complaint Counsel agrees with Respondents that this case cannot be delayed, and that a steady and expedited progression to trial is necessary to protect the public. Assuming that Complaint Counsel received Respondents' documents, an index, and appropriate responses to discovery by today, Complaint Counsel's proposed schedule would take this case to trial by December.

Dated: June 15, 1998

Respectfully submitted,

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*****, CPSC Docket No. 98-2**
Service of Documents; Respondents' Responses to Complaint Counsel's First Interrogatories and First Requests for Production of Documents

Dear Gordon:

I am writing in response to your letter of June 9, 1998, and Mr. Hogan's letter of June 8, 1998.

In our prior conversations, Respondents had promised to submit to Complaint Counsel an index of the documents contained in Respondents' approximately 400 boxes of documents that may be responsive to Complaint Counsel's discovery herein. Respondents forwarded an index of documents that stated merely "operations" next to Boxes 1-29 (approximately 40,000 Bates pages); "purchasing" with respect to Boxes 30 - 46 (approximately 6500 Bates pages); "accounting" for boxes 133 - 140 (and no explanation of where boxes 47 - 132 are, or what is in them); "customer service" (boxes 220; boxes 1 - 5 second set); and other such broad descriptions as "engineering," "customer service," "quality control," "production" and "operations." As I am sure you understand, these terms provide no useful information that would point Complaint Counsel to which boxes of documents, and which Bates pages, are responsive to which of Complaint Counsel's Interrogatories and Requests for Production.

As Mr. Stone highlighted in his June 3, 1998 letter to you, the rules applicable to this proceeding provide that Respondents may only submit business records in response to Interrogatories if the burden of ascertaining the answer to the interrogatory from the business record is the same for the party serving the interrogatory as for the party served. Mr. Hogan stated in his June 8 letter that Respondents have conducted a "labor-intensive" and

"expensive" document search. Your index indicates that you have Bates-stamped each of the documents in the 400 boxes at issue. Respondents have also made claims of confidentiality and trade secret for some of the documents (though without specifying to which documents these claims apply). These representations indicate that Respondents have reviewed the documents, and that the issue of equal burden is moot -- the burden of discerning the response is much greater on Complaint Counsel than on Respondents (particularly without the benefit of a proper index), as Respondents have already reviewed the documents.

Your discovery responses were due to us on May 26th. It is now June 11, and we still have not received an appropriate index of documents, much less any documents, from Respondents. Considerable time has been lost. In light of the seriousness of the issues at hand, and of the hazards associated with defective fire sprinklers, we cannot afford to take any additional time to argue with Respondents about the improprieties of their discovery techniques. Additionally, as I am sure you understand, we also cannot agree to unnecessarily overbroad confidentiality stipulations such as that which you have proposed. We are a government agency whose mandate is to protect the public. Our processes and procedures are purposefully made public, and we cannot and will not block from the public information that pertains to a product that is neither privileged nor confidential, merely because Respondents would prefer it to be so. The Commission's rules regarding confidential financial and trade secret information are clear -- if you wish documents to be kept confidential and excluded from the public record, you must submit the documents with a request to the Presiding Officer for *in camera* treatment. 16 C.F.R. § 1025.45(b).

We request that you immediately submit those documents for which you make confidentiality and trade secret claims to the Presiding Officer for determination of whether and to what extent the information should be placed in the public record. In the interim, while we await a determination by the Presiding Officer, please forward a proper index of documents, as well as all responsive documents, to us under the attached confidentiality agreement in which we agree not to disclose them, except to counsel, our employees and our consultants, pending a decision by the Presiding Officer. We would be pleased to arrange for pickup of the index and the documents from your D.C. office, where I understand they are being held, this afternoon or on Monday, June 15. Please indicate what day and time you prefer, and to whom our drivers should report for the pickup.

Until we are able to examine the documents, we cannot provide you with a detailed proposed discovery and litigation schedule. However, in the interest of cooperation, we have attached a preliminary proposed schedule for your review.

Additionally, on June 2, 1998, we received a fax copy of a letter to Ms. Sadye Dunn, Secretary of the Commission, that purported to enclose the following documents: (1) Respondents' Opposition To Complaint Counsel's Motion for Protective Order Regarding Anonymous Letter; (2) Proposed Protective Order and Opposition of Respondents to

Complaint Counsel's Submission of Documents *In Camera*; (3) Respondents' Motion to Compel Full and Complete Responses to Interrogatories and Documents Requests (which the letter indicates was served May 20, 1998); (4) Respondents' Responses and Objections to Complaint Counsel's First Request for Production of Documents and Things; (5) Respondents' Responses and Objections to Complaint Counsel's First Set of Interrogatories; and (6) Respondents' Privilege Log. Our copy of the letter came without any of the documents purportedly sent to the Secretary for filing. The letter indicates that all the documents sent to Ms. Dunn for filing were previously served upon us. We therefore assume that the Motion to Compel filed June 2 with the letter is the same Motion to Compel that was served upon Complaint Counsel on or about May 20, 1998, and that it was filed on June 2 to cure the fact that it was never filed when originally served. If, however, you intended the June 2 filing to be a "resubmission" of your Motion to Compel, as requested by the Judge during our teleconference, please advise us immediately of such intention, and properly serve us with the refiled Motion at once.

Lastly, please be advised that we have received preliminary notice that a hotel guest suffered a heart attack when the Omega sprinkler in the guest's hotel room improperly and spontaneously activated. According to the information received by the staff, Central responded to this and other incidents by sending teams of employees to inject "Locktite" into over 12,000 Omega sprinklers to prevent leakage and premature activation. We are investigating this incident and others, and intend to supplement our responses to Respondents' Interrogatories with same. We would expect Respondents to have provided this information (and copies of the complaints filed against Central relating thereto) in submissions to the staff, and in response to Complaint Counsel's Interrogatories (including, but not limited to, Nos. 26, 30, 38, 49, 66, 110, 111, 113 and 114) and Requests for Production (including, but not limited to, Nos. 2, 13, 17, 21, 22, 27, 44, 62, 96, 97, 99 and 101) in this matter. We cannot afford to lose any additional time before reviewing Respondents' documents, and request immediate responses to our Interrogatories on these and all other issues addressed.

Please contact me at your earliest convenience regarding your document production.

Sincerely,

Deborah S. Orlove

Deborah S. Orlove, Esq.

INTERIM CONFIDENTIALITY STIPULATION

This interim confidentiality stipulation is entered into this date between Complaint Counsel for the staff of the Consumer Product Safety Commission and the undersigned counsel for Respondents, Central Sprinkler Corp. and Central Sprinkler Co.

WHEREAS the undersigned represent litigants in the action *In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, pending before the Commission as Docket No. 98-2; and

WHEREAS Complaint Counsel served upon Respondents its First Interrogatories and First Requests for Production of Documents on April 20, 1998;

WHEREAS Respondents' responses to Complaint Counsel's First Interrogatories and First Requests for Production of Documents were due on May 26, 1998;

WHEREAS Respondents wish to provide business records in lieu of responses to Complaint Counsel's Interrogatories, and assuming that Respondents' provision of such records complies with 16 C.F.R. 1025.32(d); and

WHEREAS Respondents claim that certain documents responsive to Complaint Counsel's Interrogatories and Requests for Production contain confidential financial information and trade secret information regarding or belonging to Respondents;

THEREFORE Complaint Counsel and Respondents agree that:

1) Respondents will submit within five days of the date of this agreement all responsive documents that they claim contain confidential financial and trade secret information to the Presiding Officer for determination of whether and to what extent those documents shall be placed in the public record; and

2) Respondents will immediately provide to Complaint Counsel a proper index of all documents responsive to Complaint Counsel's Requests for Production and Interrogatories; and

3) Respondents will immediately provide to Complaint Counsel all responsive documents for which no claims of confidential financial information or trade secret are being made; and

4) Respondents will immediately provide to Complaint Counsel all responsive documents for which claims of confidential financial information or trade secret are being made, clearly indicating on those documents that such claims are made. Pending a determination on the claims by the Presiding Officer (see No. 1, above), Complaint Counsel agrees that it will not share the documents for which such claims are indicated with anyone but counsel, its employees, and consultants in this matter. Once a determination is made by the Presiding Officer as to the claims, Complaint Counsel will be bound by that determination; and

5) By signing this agreement and accepting documents from Respondents for review, Complaint Counsel does not in any way waive or limit any right it has or may have to object to any claims of confidentiality or trade secret Respondents make or may make with respect to the responsive documents. By signing this agreement and accepting documents from Respondents for review, Complaint Counsel does not in any way waive or limit any right it has or may have to move to compel Respondents to provide complete and proper responses to Complaint Counsel's discovery requests in this matter.

COMPLAINT COUNSEL'S PRELIMINARY PROPOSED DISCOVERY AND LITIGATION SCHEDULE

Having not received any documents in discovery from Respondents, Complaint Counsel submits to Counsel for Respondents this Preliminary Proposed Discovery and Litigation Schedule:

Production of Documents by Respondents to Complaint Counsel:

immediately (by June 15, 1998)

Respondents' Submission of Complete (and Meaningful) Index of Documents to Complaint Counsel:

immediately (by June 15, 1998)

Preliminary Disclosures of Fact Witnesses:

to be exchanged 14 days after receipt of all documents by Complaint Counsel (June 29, 1998), and supplemented thereafter in accordance with the rules of discovery

Depositions of fact witnesses:

to commence 45 days after documents are produced to Complaint Counsel (July 30, 1998), and continue for 60 days thereafter (ending September 28, 1998)

Preliminary Disclosure of Expert Witnesses:

(in accordance with applicable rules) to be exchanged 75 days after documents are produced to Complaint Counsel (Sat., August 29; therefore, Monday, August 31)

Depositions of expert witnesses:

to commence the day after the period for depositions of fact witnesses expires (Sept. 29, 1998), and continue for 30 days thereafter (October 29, 1998)

Motions in Limine: Due on or before November 10, 1998

Dispositive Motions: Due on or before November 25, 1998

Exchange of Final Exhibit Lists: November 25, 1998

Exchange of Final Witness Lists: November 25, 1998

Submission of Expert Testimony to be used at Trial:

December 1, 1998

Submission of Final Pre-Hearing Briefs:

December 1, 1998

Final Pre-Hearing Conference: December 7, 1998

Trial: to commence December 14, 1998
to take place in Washington, DC

Respondents	)	

ORDER REGARDING COMPLAINT COUNSEL'S SECOND MOTION FOR PROTECTIVE ORDER AND *IN CAMERA* SUBMISSION

Having considered Complaint Counsel's Motion and Respondent's Opposition, the Motion is GRANTED, in part and DENIED, in part.

In various degrees of redacted form, ranging from no redaction to substantial redaction, pages Bate stamped 0012903-0012975 are being released to Respondent. Bate stamped pages 0012939 through 0012975 have no redactions. As reflected by the documents themselves, many of the pages clearly do not qualify for protection from discovery as they are published documents: a NFRA Safety Code; and a text on automatic sprinkler systems. In addition, the following observations and Orders are made:

- Bate stamped pages 0012909 and 0012910 appear to be duplicates of pages 0012907 and 0012908. Complaint Counsel should advise the Court as to the correctness of this assumption.

- With reference to Bate stamped pages 0012911, 0012912, 0012913, 0012914, 0012915, 0012916, 0012917, 0012931, Complaint Counsel is directed, within seven (7) days of this Order, to more particularly set forth the reason(s) for protecting discovery of the remaining

redacted portions of the pages identified above. A particularized and separate response must be made for each page. This submission is to be provided *in camera.*

MEMORANDUM

~~*****FOR OFFICIAL USE ONLY*****~~

DATE: May 8, 1998

TO:

SUBJECT: Central Sprinkler Corporation

called the Hotline to provide additional information regarding Central Sprinkler.

Central Sprinkler Corporation was aware of problems with their Omega series sprinkler systems as early as 1983.

after receiving over 60 individual court lawsuits from former Hilton Hotel guests who had been awaken in the middle of the night from Omega sprinkler systems erroneously going off, claims that Central Sprinkler Corporation paid each individual --settling out of court.

Central Sprinkler's team flown to 25 different Hilton Hotels across the United States, and to the Library of Congress to repair Omega sprinkler units. the team was instructed to inject a sealant with a syringe into the sprinkler head threads. The sealant was designed to then rise to the retaining nut and seal it along with the fiberglass bearing disk. This procedure would keep the fiberglass bearing disk and retaining nut locked so they would not prematurely open.

Central Sprinkler Corporation redesigned the sprinkler units with a ceramic bearing disk and installed approximately 50,000 units at $50 each at the Library of Congress in Washington, DC. believes the ceramic bearing disks are too hard which prevents them from properly activating in the event of a fire.

Subject: Omega Discovery Ideas

Section I –NFPA Standards:

- NFPA-13 – Installation Standards

Question – does code expect all heads to operate at 7 psi when samples are taken from installed systems and tested? Ask following:

1. Rolf Jenson – Rolf Jenson and Associates – Past chairman of NFPA-13
2. Chet Shirmer – Shirmer Engineering – Past chairman of NFPA-13
3. Joe Hankins – Factory Mutual Insurance
4. Ken Linder – IRI Insurance
5. Kerry Bell – UL Laboratories
6. Other Manufacturers – Viking, Grinnell, Globe or Reliable

- NFPA-25 – Inspection, Testing and Maintenance of Water based Fire Protection systems

Question – The NFPA-25 committee added the following paragraph to the new 1998 addition of this standard. (1-2 Purpose) – added following: ***"In those cases where it is determined that an existing situation can involve a distinct hazard to life or property, the authority having jurisdiction shall be permitted to require inspection, testing and maintenance methods in excess of those required by the standard."*** Did the committee make this addition to the code to allow AHJ's to require appropriate testing for Omega? Was this done at a special NFPA-25 meeting that addressed the members concern over Central Sprinkler inappropriate use of the 1-% sample size for testing? Did the committee feel there was a real concern with the statistical validity of a 1-% sample size for testing?

1. Ken Linder – IRI – new chairman of NFPA-25 and past recording secretary of committee during special meeting
2. Dave Hague – NFPA staff laison to committee

3. Joe Hankins – Factory Mutual – committee member
4. George Laverick – UL – committee member
5. Carl Maurice – Fairfax County – attended meeting

Section II –Central Sprinkler

- **Reporting of Omega Problems**

Question –Since Omega first installed others reported any problems with omega sprinklers failure to operate totally or partially? Ask following:

1. Buck Buccanan – As VP of sales we know that at least one report was made to him of omega's not going off.
2. Bill Pardue – handled all product claims during 1980's. Was out of favor for a long time but has made comeback. Appears to be close to O'Leary and Churchill. and seems to be on winning side. There is a real rift between George and his people and the O'Leary group.
3. Steve Meyer – just hoping to find something

- **Key Central Personnel**
  1. Bill Pardue – Executive Vice President – all operations reported to Bill including manufacturing and engineering.
  2. Ed McKelvey – VP of finance – was pushed aside when Bradford Group brought in Al Sable. Ed knows were all the bodies are buried.
  3. Jim McCann – Purchasing manager – purchased all parts of all products
  4. Jim McHugh – Worked in manufacturing under Al Schoenburger. he worked on some of original omega problems from production side. He set up X-ray machine for omega heads.

- **Key EX-Central Personnel**
  1. Tom Deegan – VP product development at Viking. Tom worked for Central during early days-manger of Chicago region.
  2. Bob Worthington – now president of Globe Sprinkler but was Bill Meyer's right hand man until he was pushed aside so George Meyer could become president. He knows a lot about how the family operates. He specifically was very involved with early Omega and knows about early problems.
  3. Kathy Slack – handled all early marketing of Omega to government, Hilton, Marriott etc. She worked directly with Bill Meyer.
  4. Bryan Hoening – Now VP of Engineering at Globe. He was very involved in early omega.

5. Anderson – VP of engineering retired. Relative of Meyer family. He ran engineering when omega introduced.
6. Al Shoenburger – VP Manufacturing – ran all production until retired.

- **UL Additional Questions**
  1. Was Omega de-listed or its operation questioned by UL in mid 80's?
  2. Do they concur with Central Sprinkler testing approach?
  3. Do they believe "site specific" discussion and if yes, can it be predetermined based on a site profile?
  4. In the late 80's UL caught Central red handed. Central was caught making a change on a letter from UL regarding an Omega listing. Tom Deegan has this story.

- **Jurisdiction Issue:**
  1. CPSC is the Authority Having Jurisdiction by NFPA definition any entity which has an interest can be AHJ
  2. Agreed that states adopt codes. The Omega operation issue is not a code issue but a product safety issue. You are not trying to change the code but making sure the product will meet the intent of the code and provide the performance implied by the code.
  3. JCAHO - HFA (Federal) (Replaces hand-written notation)
- **Questions for Factory Mutual**
  1. Over the past 50 years have they had any heads of any make not operate because of waterglass, excess hydrocarbons or stop leak products? Please comment on this question.
  2. Have there been any problems with other sprinkler heads similar in magnitude to the problems we are having with Omega?
  3. Do you consider properties with Omega sprinklers as non-sprinklered from an insurance standpoint?
  4. Has FM done any statistical revue of appropriate testing requirements for properties with Omega's? What do they feel is appropriate if any?

* HFA - Hospital Finance Administration
  Federal - Requires Compliance with NFPA - 101
  (Replaces hand-written notation)

* JCAHO - Same
  Joint Campaign for Accrediation of Hospital Organizations
  (Replaces hand-written notation)

February 10, 1998

Thanks for your time and effort in speaking with me and members of the CPSC engineering staff last Tuesday in regard to the Omega fire sprinkler. As I mentioned previously and again in that conversation, we would certainly like to have a follow-up phone conference to discuss more specific items on the Omega. We would be interested in speaking to you again some time between Wednesday, February 18 and Tuesday, February 23, 1998, if possible.

If you happen to be in the Washington, D.C. area in the next month and would prefer to meet with us in person for a follow-up discussion in lieu of a phone conference, that would be fine as well.

I will call shortly to follow up. Please call me with any questions in the meantime.

Sincerely,

Eric H. Singer

Re: Central Sprinkler Corp; Omega Series Fire Sprinklers

This will serve to confirm that I am, as I indentified myself over the phone with you yesterday, Eric Singer, an attorney with U.S. Consumer Product Safety Commission.

As you may know, the CPSC is the federal agency responsible for the enforcement of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2051, et. seq. The agency has jurisdiction over consumer products, and automatic fire sprinklers are consumer products because they are used and enjoyed by consumers in homes, apartments, nursing homes, hospitals, health clubs, hotels, motels, and office buildings. The agency is authorized to conduct studies, testing, and investigations of consumer products that raise safety issues, 15 U.S.C. § 2054(b)(1); to compel, if necessary, reports, answers to questions, and production of physical and documentary evidence pursuant to those investigations, 15 U.S.C. §§ 2076(b)(1)&(4); and to order the recall and/or stop-sale of a product shown to have a defect creating a substantial product hazard, 15 U.S.C. §§ 2064(c) & (d), 2061.

As you may also know, the agency staff has been investigating why "Omega" series fire sprinklers, produced by Central Sprinkler Corporation ("Central") of Lansdale, Pennsylvania, may fail to activate properly. Some 8-10 million Omega sprinklers utilizing an o-ring made of EPDM are in service; there are no estimates for the number of Omegas in service that contain the newer silicon o-ring. To date, six fires have been reported in which an Omega

sprinkler or sprinklers containing EPDM o-rings failed to activate.

Assuming I can speak with you at a time when I am not interrupting your dinner, I would like to encourage you to continue the conversation we began the other day. You yourself certainly are not a target of the staff's investigation. However, the staff has reason to believe that you possess information which could help the staff determine whether the Omega contains, or contained, a defect that creates a substantial product hazard to the public.

Please call or write me indicating whether you wish to continue our discussion voluntarily.

Sincerely,

Eric H. Singer

Dear

We look forward to meeting and talking with you on May 29.

I recommend using the following shuttle service both from Dulles Airport and to BWI:

Royal Airport Shuttle
1-800-653-0888
301-657-0888

They require reservations with one day advance notice. The rate from Dulles to our office should be $17. The rate from our office to BWI should be $27. For the return flight, they will probably insist on picking you up two hours before your departure time.

0012914

The Commission headquarters office address, where we will be meeting, is:

U.S. Consumer Product Safety Commission
4330 East West Highway, Rm. 610
Bethesda, MD 20814

The office is in downtown Bethesda in the East West Towers complex -- three long blocks east of the Bethesda metro stop and the Hyatt Hotel, which is at the intersection of East West Highway and Wisconsin Avenue. When you arrive, please go the 4th floor CPSC public information room and dial my extension and I will come downstairs to meet you.

I do not believe any of our staff will be able to receive you at Dulles. I will find out whether one of my colleagues is able to give you a ride to BWI for your return, but will not know for another week. In the meantime, please call the shuttle service above to make arrangements.

Thanks, and please call me with any questions in the meantime.

Sincerely,

Eric H. Singer

Subject: NFPA-101 Life Safety Code

Following are some excerpts from this code. You will see that the quick response and residential type heads have been part of a major change in building codes. There are many trade offs that would not been allowed before these heads were developed.

Sprinklers are now a part of the whole building system and if they do not work properly results in a situation that is less safe than older non sprinklered buildings that had not allowed current trade offs.

12-3.5 Extinguishment Requirements.

12-3.5.1* Buildings containing health care facilities shall be protected throughout by an approved, supervised automatic sprinkler system installed in accordance with Section 7-7.

Exception: In Type I and Type II construction, where approved by the authority having jurisdiction, alternative protection measures shall be permitted to be substituted for sprinkler protection in specified areas where the authority having jurisdiction has prohibited sprinklers, without causing a building to be classified as nonsprinklered.

12-3.5.2* Listed quick response or listed residential sprinklers shall be used throughout smoke compartments containing patient sleeping rooms.

12-3.5.3* Sprinklers in areas where cubicle curtains are installed shall be installed in accordance with NFPA 13, *Standard for the Installation of Sprinkler Systems.*

12-3.5.4 Portable fire extinguishers shall be provided in all health care occupancies in accordance with 7-7.4.1.

12-3.6 Corridors.

12-3.6.1 Corridors shall be separated from all other areas by partitions complying with 12-3.6.2 through 12-3.6.5. (*See also 12-2.5.8.*)

Exception No. 1: Spaces shall be permitted to be unlimited in area and open to the corridor, provided that

(a) The spaces are not used for patient sleeping rooms, treatment rooms, or hazardous areas; and

(b) The corridors onto which the spaces open in the same smoke compartment are protected by an electrically supervised, automatic smoke detection system installed in accordance with 12-3.4, or the smoke compartment in which the space is located is protected throughout by quick response sprinklers; and

(c) The open space is protected by an electrically supervised, automatic smoke detection system installed in accordance with 12-3.4, or the entire space is arranged and located to permit direct supervision by the facility staff from a nursing station or similar space; and

(d) The space does not obstruct access to required exits.

Exception No. 2: Waiting areas shall be permitted to be open to the corridor, provided that

(a) The aggregate waiting area in each smoke compartment does not exceed 600 sq ft (55.7 sq m); and

(b) Each area is protected by an electrically supervised, automatic smoke detection system installed in accordance with 12-3.4, or each area is arranged and located to permit direct supervision by the facility staff from a nursing station or similar space; and

(c) The area does not obstruct access to required exits.

Exception No. 3: Space for nurses' stations.*

Exception No. 4: Gift shops open to the corridor where protected in accordance with 12-3.2.5.

Exception No. 5: In a limited care facility, group meeting or multipurpose therapeutic spaces shall be permitted to open to the corridor, provided that

Copyright NFPA

coverage, the system shall be installed in accordance with Section 7-7. In buildings up to and including four stories in height, systems installed in accordance with NFPA 13R, *Standard for the Installation of Sprinkler Systems in Residential Occupancies Up to and Including Four Stories in Height*, shall be permitted.

Exception: The draft stop and closely spaced sprinkler requirements of NFPA 13, Standard for the Installation of Sprinkler Systems, shall not be required for convenience openings complying with 6-2.4.8 where the convenience opening is within the guest room or guest suite.

16-3.5.2 All buildings shall be protected throughout by an approved, supervised automatic sprinkler system installed in accordance with 16-3.5.1.

Exception: Buildings other than high rise, where all guest sleeping rooms have a door that opens directly to the outside at street or ground level or to exterior exit access arranged in accordance with 5-5.3.

16-3.5.3 Listed quick response or listed residential sprinklers shall be used throughout guest rooms and guest room suites.

16-3.5.4 Open air parking structures complying with NFPA 88A, *Standard for Parking Structures*, shall not be required to be sprinklered under this *Code*.

16-3.5.5 Portable fire extinguishers shall be provided in hazardous areas. Where provided, portable fire extinguishers shall be installed and maintained in accordance with 7-7.4.1.

18-3.5 Extinguishment Requirements.

18-3.5.1 Where an automatic sprinkler system is installed, either for total or partial building coverage, the system shall be installed in accordance with Section 7-7. In buildings up to and including four stories in height, systems installed in accordance with NFPA 13R, *Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height*, shall be permitted.

Exception No. 1: In individual dwelling units, sprinkler installation shall not be required in closets not over 12 sq ft (1.1 sq m). Closets that contain equipment such as washers, dryers, furnaces, or water heaters shall be sprinklered regardless of size.

Exception No. 2: The draft stop and closely spaced sprinkler requirements of NFPA 13, Standard for the Installation of Sprinkler Systems, shall not be required for convenience openings complying with 6-2.4.8 where the convenience opening is within the dwelling unit.

18-3.5.2 All buildings shall be protected throughout by an approved, supervised automatic sprinkler system installed in accordance with 18-3.5.1.

Exception: Buildings where every dwelling unit has either:

(a) An exit door opening directly to the street or yard at ground level, or

(b) Direct access to an outside stair complying with 5-2.2 that serves a maximum of two units both of which are located on the same floor, or

(c) Direct access to an interior stair serving only that unit and separated from all other portions of the building by fire barriers having a 1-hr fire resistance rating with no openings therein.

Copyright NFPA

approved, supervised automatic sprinkler system installed in accordance with Section 7-7.

Exception: In Type I and Type II construction, where approved by the authority having jurisdiction, alternative protection measures shall be permitted to be substituted for sprinkler protection in specified areas where the authority having jurisdiction has prohibited sprinklers, without causing a building to be classified as nonsprinklered.

13-3.5.2* Where this *Code* permits exceptions for fully sprinklered buildings or smoke compartments, the sprinkler system shall be

(a) In complete accordance with Section 7-7,

(b) Electrically connected to the fire alarm system, and

(c) Fully supervised.

Exception: In Type I and Type II construction, where approved by the authority having jurisdiction, alternative protection measures shall be permitted to be substituted for sprinkler protection in specified areas where the authority having jurisdiction has prohibited sprinklers, without causing a building to be classified as nonsprinklered.

13-3.5.3* Where this *Code* permits exceptions for fully sprinklered buildings or smoke compartments and specifically references this paragraph, the sprinkler system shall be

(a) Installed throughout the building in accordance with Section 7-7, and

(b) Electrically connected to the fire alarm system, and

(c) Fully supervised, and

(d) Equipped with listed quick response or listed residential sprinklers throughout all smoke compartments containing patient sleeping rooms.

Exception No. 1 to (d): Standard response sprinklers shall be permitted to be continued to be used in existing approved sprinkler systems where quick response and residential sprinklers were not listed for use in that location at the time of installation.

Exception No. 2 to (d): Standard response sprinklers shall be permitted for use in hazardous areas protected in accordance with Section 13-3.2.1.

13-3.5.4 Isolated hazardous areas shall be permitted to be protected in accordance with 7-7.1.2. For new installations in existing buildings, where more than two sprinklers are installed in a single area, water flow detection shall be provided to sound the building fire alarm or notify by a signal any constantly attended location, such as PBX, security, or emergency room, whereby necessary corrective action shall be directed.

13-3.5.5* Newly introduced cubicle curtains in sprinklered areas shall be installed in accordance with NFPA 13, *Standard for the Installation of Sprinkler Systems.*

13-3.5.6 Portable fire extinguishers shall be provided in all health care occupancies in accordance with 7-7.4.1.

13-3.6 Corridors.

13-3.6.1 Corridors shall be separated from all other areas by partitions complying with 13-3.6.2 through 13-3.6.5. (*See also 13-2.5.8.*)

Exception No. 1: Smoke compartments protected throughout by an approved, supervised

Copyright NFPA

18-3.5.3 Listed quick response or listed residential sprinklers shall be used throughout all dwelling units.

18-3.5.4 Portable fire extinguishers shall be provided in hazardous areas. Where provided, portable fire extinguishers shall be installed and maintained as specified in 7-7.4.1.

18-3.5.5 Open air parking structures complying with NFPA 88A, *Standard for Parking Structures*, shall not be required to be sprinklered under this *Code*.

22-2.2 Means of Escape.

22-2.2.1 Number of Means of Escape. Each normally occupied story of the facility shall have at least two remotely located means of escape that do not involve using windows. At least one of these means of escape shall comply with 22-2.2.2. The provisions of Chapter 5 shall not apply to means of escape unless specifically referenced in this chapter.

Exception No. 1: In prompt evacuation capability facilities, one means of escape shall be permitted to involve windows complying with 22-2.2.3(c).

Exception No. 2: A second means of escape from each story shall not be required where the entire building is protected throughout by an approved, automatic sprinkler system complying with 22-2.3.5 and the facility has two means of escape.

22-2.2.2 Primary Means of Escape. Every sleeping room and living area shall have access to a primary means of escape located to provide a safe path of travel to the outside. Where sleeping rooms or living areas are above or below the level of exit discharge, the primary means of escape shall be an interior stair in accordance with 22-2.2.4, an exterior stair, a horizontal exit, or an existing fire escape stair.

22-2.2.3 Secondary Means of Escape. In addition to the primary route, each sleeping room in facilities that utilize Exception No. 1 to 22-2.3.5.1 shall have a second means of escape that consists of one of the following:

(a) A door, stairway, passage, or hall providing a way of unobstructed travel to the outside of the dwelling at street or ground level that is independent of and remotely located from the primary means of escape;

(b) A passage through an adjacent nonlockable space, independent of and remotely located from the primary means of escape, to any approved means of escape;

(c)* An outside window or door operable from the inside without the use of tools, keys, or special effort, and providing a clear opening of not less than 5.7 sq ft (0.53 sq m) with the width not less than 20 in. (51 cm) and the height not less than 24 in. (61 cm). The bottom of the opening shall be not more than 44 in. (112 cm) above the floor. Such means of escape shall be acceptable if

1. The window is within 20 ft (6.1 m) of grade, or

2. The window is directly accessible to fire department rescue apparatus as approved by the authority having jurisdiction, or

3. The window or door opens onto an exterior balcony.

Exception: If the sleeping room has a door leading directly to the outside of the building with

Copyright NFPA

access to grade or to a stairway that meets the requirements of exterior stairs in 22-2.3.1.2, that means of escape shall be considered as meeting all the escape requirements for the sleeping room.

22-2.2.4 Interior Stairs Used for Primary Means of Escape. Interior stairs shall be enclosed with $^1/_2$-hr fire barriers with all openings equipped with smoke-actuated automatic-closing or self-closing doors having a fire protection rating comparable to that required for the enclosure. Stairs shall comply with 5-2.2.5.3. The entire primary means of escape shall be arranged so that occupants are not required to pass through a portion of a lower story unless that route is separated from all spaces on that story by construction having a minimum $^1/_2$-hr fire resistance rating.

The supporting construction shall be protected to afford the required fire resistance rating of the wall supported in buildings of other than construction Type II(000), Type III(200), or Type V(000).

Exception No. 1: Stairs that connect a story at street level to only one other story shall be permitted to be open to the story that is not the street level.

Exception No. 2: For prompt and slow evacuation capability facilities in buildings three or fewer stories in height, having an approved, automatic sprinkler system using quick response or residential sprinklers, stair enclosures shall not be required provided there still remains a primary means of escape from each sleeping area that does not require occupants to pass through a portion of a lower floor, unless that route is separated from all spaces on that floor by construction having a $^1/_2$-hr fire resistance rating.

Exception No. 3: In buildings two or fewer stories in height that house prompt evacuation capability facilities with not more than eight residents, stair enclosures shall not be required. Exceptions to 22-2.3.4.3.1 and 22-2.3.4.3.2 shall not be used in conjunction with this exception. Exception No. 1 to 22-2.3.5.1 shall not be used in conjunction with this exception.

22-2.2.5 Doors.

22-2.2.5.1 No door or path of travel to a means of escape shall be less than 32 in. (81 cm) wide.

Exception No. 1: In conversions (see definition in 22-1.3), 28-in. (71-cm) doors shall be permitted to continue to be used.

Exception No. 2: Bathroom doors shall be a minimum of 24 in. (61 cm) wide.

22-2.2.5.2 Doors shall be swinging or sliding.

22-2.2.5.3 Every closet door latch shall be readily opened from the inside in case of an emergency.

22-2.2.5.4 Every bathroom door shall be designed to allow opening from the outside during an emergency when locked.

22-2.2.5.5 No door in any means of escape shall be locked against egress when the building is occupied.

Exception: Delayed egress locks complying with 5-2.1.6.1 shall be permitted on exterior doors.

22-2.2.5.6 Doors shall comply with 5-2.1.4.5.

22-2.2.5.7 Doors shall comply with 5-2.1.5.3.

Copyright NFPA

22-2.2.6 Stairs.

22-2-2.6.1 Stairs shall comply with 5-2.2.

22-2.2.6.2 Winders complying with 5-2.2.2.5 shall be permitted.

22-2.3 Protection.

22-2.3.1 Protection of Vertical Openings.

22-2.3.1.1 Vertical openings shall be protected so as not to expose a primary means of escape. Vertical openings shall be considered protected if the opening is cut off such that barriers prevent the passage of smoke from one story to any primary means of escape on another story. Barriers shall resist the passage of smoke and shall have a fire resistance rating of not less than $^1/_2$ hr. Any doors or openings to the vertical opening shall be capable of resisting fire for not less than 20 min, shall resist the passage of smoke, and shall be self-closing or automatic-closing in accordance with 5-2.1.8.

Exception: Stairs shall be permitted to be open where complying with Exception No. 2 or No. 3 to 22-2.2.4.

22-2.3.1.2 Exterior stairs shall be reasonably protected against blockage caused by fire that would simultaneously expose both the interior and the exterior means of escape. This shall be accomplished through separation by physical distance, arrangement of the stairs, protection of the openings exposing the stairs, or other means acceptable to the authority having jurisdiction.

22-2.3.2 Hazardous Areas. Any hazardous area shall be protected in accordance with 22-2.3.2.1 and 22-2.3.2.2.

22-2.3.2.1 Any hazardous area that is on the same floor as, and is in or abuts, a primary means of escape or a sleeping room shall be protected by either

(a) An enclosure with a fire resistance rating of at least 1 hr with a self-closing or automatic-closing fire door in accordance with 5-2.1.8 having a fire protection rating of at least $^3/_4$ hr and protected by an automatic fire detection system connected to the fire alarm system provided in 22-2.3.4.1; or

(b) Automatic sprinkler protection, in accordance with 22-2.3.5, of the hazardous area and a separation that will resist the passage of smoke between the hazardous area and the sleeping area or primary escape route. Any doors in such separation shall be self-closing or automatic-closing in accordance with 5-2.1.8.

22-2.3.2.2 Other hazardous areas shall be protected by either

(a) An enclosure having a fire resistance rating of at least $^1/_2$ hr, with a self-closing or automatic-closing door in accordance with 5-2.1.8, equivalent to at least a $1^3/_4$-in. (4.4-cm) thick, solid bonded wood core construction and protected by an automatic fire detection system connected to the fire alarm system provided in 22-2.3.4.1, or

(b) Automatic sprinkler protection, in accordance with 22-2.3.5, of the hazardous area regardless of enclosure.

22-2.3.3 Interior Finish.

Copyright NFPA

22-2.3.3.1 Interior finish shall be in accordance with Section 6-5.

22-2.3.3.2 Interior Wall and Ceiling Finish. Interior wall and ceiling finish materials complying with 6-5.5 shall be Class or Class B.

Exception: Class C interior wall and ceiling finish shall be permitted in prompt evacuation capability facilities.

22-2.3.3.3 Interior Floor Finish. (No requirements.)

22-2.3.4 Detection, Alarm, and Communication Systems.

22-2.3.4.1 Fire Alarm Systems. A manual fire alarm system shall be provided in accordance with Section 7-6.

22-2.3.4.2 Occupant Notification. Occupant notification shall be provided automatically, without delay, in accordance with 7-6.3. Presignal systems shall be prohibited.

22-2.3.4.3 Smoke Detectors.

22-2.3.4.3.1 Approved smoke detectors shall be provided in accordance with 7-6.2.10. Detectors shall be installed on all levels, including basements, but excluding crawl spaces and unfinished attics. Additional detectors shall be installed for living areas as defined in Section 3-2.

Exception: Detectors shall not be required in buildings protected throughout by an approved, automatic sprinkler system installed in accordance with 22-2.3.5 using quick response or residential sprinklers.

22-2.3.4.3.2 Each sleeping room shall be provided with an approved, listed single-station smoke detector in accordance with 7-6.2.10.

Exception: Rooms protected by quick response or residential sprinklers in buildings protected throughout by an approved, supervised automatic sprinkler system installed in accordance with 22-2.3.5. The Exception to 22-2.3.4.3.1 shall not be used in conjunction with this exception.

22-2.3.5 Automatic Extinguishing Systems.

22-2.3.5.1 All facilities shall be protected throughout by an approved, automatic sprinkler system installed in accordance with 22-2.3.5.2. Quick response or residential sprinklers shall be provided.

Exception No. 1: Sprinklers shall not be required in small board and care homes serving eight or fewer residents with a rating of prompt evacuation capability.

Exception No. 2: Standard response sprinklers shall be permitted for use in hazardous areas in accordance with 22-2.3.2.

22-2.3.5.2* Where an automatic sprinkler system is installed, for either total or partial building coverage, the system shall be in accordance with Section 7-7 and shall initiate the fire alarm system in accordance with 22-2.3.4.1. The adequacy of the water supply shall be documented to the authority having jurisdiction.

Exception No. 1: * *In prompt and slow evacuation capability facilities, a sprinkler system complying with NFPA 13D, Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes, shall be permitted. Facilities with more than eight residents shall be treated as two-family dwellings with regard to water supply. Additionally, entrance foyers shall be sprinklered.*

Copyright NFPA

Exception No. 2: In impractical evacuation capability facilities, a sprinkler system complying with NFPA 13D, Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes, with a 30-min water supply shall be permitted. All habitable areas and closets shall be sprinklered. Facilities with more than eight residents shall be treated as two-family dwellings with regard to water supply.

Exception No. 3: In prompt and slow evacuation capability facilities, where an automatic sprinkler system is installed in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, automatic sprinklers shall not be required in closets not exceeding 24 sq ft (2.7 sq m) and bathrooms not exceeding 55 sq ft (5.1 sq m), provided such spaces are finished with lath and plaster or material providing a 15-min thermal barrier.

Exception No. 4: In prompt and slow evacuation capability facilities up to and including four stories in height, systems installed in accordance with NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height, shall be permitted.

Exception No. 5: In impractical evacuation capability facilities up to and including four stories in height, systems installed in accordance with NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height, shall be permitted. All habitable areas and closets shall be sprinklered.

22-2.3.5.3 Automatic sprinkler systems installed in impractical evacuation capability facilities shall be supervised in accordance with Section 7-7.

22-2.3.5.4 Sprinkler piping serving not more than six sprinklers for any isolated hazardous area shall be permitted to be installed in accordance with 7-7.1.2. In new installations, where more than two sprinklers are installed in a single area, water flow detection shall be provided to initiate the fire alarm system required by 22-2.3.4.1. Duration of water supplies shall be as required by 22-2.3.5.2.

22-2.3.6 Construction of Corridor Walls.

22-2.3.6.1 The separation walls of sleeping rooms shall be capable of resisting fire for at least $^1/_2$ hr, which is considered to be achieved if the partitioning is finished on both sides with lath and plaster or material providing a 15-min thermal barrier. Sleeping room doors shall be substantial doors, such as those of $1^3/_4$-in. (4.4-cm) thick, solid bonded wood core construction or of other construction of equal or greater stability and fire integrity. Any vision panels shall be fixed fire window assemblies in accordance with 6-2.3.2.2 or shall be wired glass not exceeding 1296 sq in. (0.84 sq m) each in area and installed in approved frames.

Exception No. 1: In prompt evacuation capability facilities, all sleeping rooms shall be separated from the escape route by walls and doors that are at least smoke resistant.

Exception No. 2: Corridor walls and doors that are capable of resisting the passage of smoke and that are protected by automatic sprinklers in accordance with 22-2.3.5 on both sides of the wall and door. In such instances, there shall be no limitation on the type or size of glass panels.

Exception No. 3: Sleeping arrangements that are not located in sleeping rooms shall be permitted for nonresident staff members, provided the audibility of the alarm in the sleeping area is sufficient to awaken staff who might be sleeping.

Copyright NFPA

22-3.3.4.1 General. A fire alarm system in accordance with Section 7-6 shall be provided.

22-3.3.4.2 Initiation. The required fire alarm system shall be initiated by

(a) Manual means in accordance with 7-6.2, and

(b) A manual fire alarm station located at a convenient central control point under continuous supervision of responsible employees, and

(c) The automatic sprinkler system, and

(d) Any required detection system.

22-3.3.4.3 Annunciator Panel. An annunciator panel connected with the fire alarm system shall be provided. The location of the annunciator shall be approved by the authority having jurisdiction.

Exception: Buildings not more than two stories in height and with not more than 50 sleeping rooms.

22-3.3.4.4 Occupant Notification. Occupant notification shall be provided automatically, without delay, in accordance with 7-6.3. Presignal systems shall be prohibited.

22-3.3.4.5 High-rise buildings shall be provided with an approved means of voice communication in accordance with 7-6.3.

Exception: Buildings equipped with a public address system.

22-3.3.4.6* Fire Department Notification. In case of a fire, provisions shall be made for the immediate notification of the public fire department by either telephone or other means. Where there is no public fire department, this notification shall be made to the private fire brigade.

22-3.3.4.7 Smoke Detectors. Each sleeping room shall be provided with an approved, single-station smoke detector in accordance with 7-6.2.10, powered from the building electrical system.

22-3.3.4.8 Smoke Detection Systems. All living areas as defined in Section 3-2 and corridors shall be provided with smoke detectors in accordance with NFPA 72, *National Fire Alarm Code*, arranged to initiate an alarm that is audible in all sleeping areas.

Exception No. 1: Detectors shall not be required in living areas in facilities protected throughout by an approved, automatic sprinkler system installed in accordance with 22-3.3.5.

Exception No. 2: Unenclosed corridors, passageways, balconies, colonnades, or other arrangements with one or more sides along the long dimension fully or extensively open to the exterior at all times.

22-3.3.5 Extinguishment Requirements.

22-3.3.5.1* All buildings shall be protected throughout by an approved, automatic sprinkler system installed in accordance with Section 7-7. Quick response or residential sprinklers shall be provided throughout. Such systems shall initiate the fire alarm system in accordance with Section 7-6.

Exception No. 1: In buildings not more than four stories in height, a sprinkler system complying with NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies

Copyright NFPA

23-2.2 Means of Escape.

23-2.2.1 Number of Means of Escape. Each normally occupied story of the facility shall have at least two remotely located means of escape that do not involve windows. At least one of these means of escape shall comply with 23-2.2.2. The provisions of Chapter 5 shall not apply to means of escape unless specifically referenced in this chapter.

Exception No. 1: In prompt evacuation capability facilities, one means of escape shall be permitted to involve windows complying with 23-2.2.3(c).

Exception No. 2: A second means of escape from each story shall not be required where the entire building is protected throughout by an approved, automatic sprinkler system complying with 23-2.3.5 and the facility has two means of escape. This exception shall not be permitted to be used in conjunction with Exception No. 2 to 23-2.2.3.

23-2.2.2 Primary Means of Escape.

23-2.2.2.1 Every sleeping room and living area shall have access to a primary means of escape located to provide a safe path of travel to the outside. Where sleeping rooms or living areas are above or below the level of exit discharge, the primary means of escape shall be an interior stair in accordance with 23-2.2.4, an exterior stair, a horizontal exit, or an existing fire escape stair.

23-2.2.2.2 In slow and impractical evacuation capability facilities, the primary means of escape for each sleeping room shall not be exposed to living areas and kitchens.

Exception: Buildings equipped with quick response or residential sprinklers throughout. Standard response sprinklers shall be permitted for use in hazardous areas in accordance with 23-2.3.2.

23-2.2.3 Secondary Means of Escape. In addition to the primary route, each sleeping room shall have a second means of escape that consists of one of the following:

(a) A door, stairway, passage, or hall providing a way of unobstructed travel to the outside of the dwelling at street or ground level that is independent of and remotely located from the primary means of escape;

(b) A passage through an adjacent nonlockable space, independent of and remotely located from the primary means of escape, to any approved means of escape;

(c)* An outside window or door operable from the inside without the use of tools, keys, or special effort, and providing a clear opening of not less than 5.7 sq ft (0.53 sq m) with the width not less than 20 in. (51 cm) and the height not less than 24 in. (61 cm). The bottom of the opening shall be not more than 44 in. (112 cm) above the floor. Such means of escape shall be acceptable if

1. The window is within 20 ft (6.1 m) of grade, or
2. The window is directly accessible to fire department rescue apparatus as approved by the authority having jurisdiction, or
3. The window or door opens onto an exterior balcony.

Exception No. 1: If the sleeping room has a door leading directly to the outside of the building with access to grade or to a stairway that meets the requirements of exterior stairs in 23-2.3.1.2, that means of escape shall be considered as meeting all the escape requirements for the sleeping

Copyright NFPA

room.

Exception No. 2: A second means of escape from each sleeping room shall not be required where the facility is protected throughout by an approved, automatic sprinkler system complying with 23-2.3.5.

Exception No. 3: Existing approved means of escape shall be permitted to continue to be used.

23-2.2.4 Interior Stairs Used for Primary Means of Escape. Interior stairs shall be enclosed with $^1/_2$-hr fire barriers with all openings equipped with smoke-actuated automatic-closing or self-closing doors having a fire protection rating comparable to that required for the enclosure. Stairs shall comply with 5-2.2.5.3. The entire primary means of escape shall be arranged so that occupants are not required to pass through a portion of a lower story unless that route is separated from all spaces on that story by construction having a minimum $^1/_2$-hr fire resistance rating. The supporting construction shall be protected to afford the required fire resistance rating of the wall supported in buildings of other than construction Type II(000), Type III(200), or Type V(000).

Exception No. 1: Stairs that connect a story at street level to only one other story shall be permitted to be open to the story that is not the street level.

Exception No. 2: In buildings three or fewer stories in height that house prompt or slow evacuation capability facilities protected throughout by an approved, automatic sprinkler system installed in accordance with 23-2.3.5 using quick response or residential sprinklers, stair enclosures shall not be required provided there remains a primary means of escape from each sleeping area that does not require occupants to pass through a portion of a lower floor, unless that route is separated from all spaces on that floor by construction having a $^1/_2$-hr fire resistance rating.

Exception No. 3: In buildings two or fewer stories in height that house prompt evacuation capability facilities with not more than eight residents and that are protected by an approved automatic sprinkler system installed in accordance with 23-2.3.5 using quick response or residential sprinklers, stair enclosures shall not be required. Exception No. 2 to 23-2.3.4.3 shall not be used in conjunction with this exception. Exceptions to 23-2.4.3 shall not be used in conjunction with this exception.

Exception No. 4: In buildings three or fewer stories in height that house prompt or slow evacuation capability facilities protected by an approved automatic sprinkler system in accordance with 23-2.3.5, stairs shall be permitted to be open at the topmost story only. The entire primary means of escape of which the stairs are a part shall be separated from all portions of lower stories.

23-2.2.5 Doors.

23-2.2.5.1 No door or path of travel to a means of escape shall be less than 28 in. (71 cm) wide.

Exception: Bathroom doors shall be a minimum of 24 in. (61 cm) wide.

23-2.2.5.2 Doors shall be swinging or sliding.

23-2.2.5.3 Every closet door latch shall be readily opened from the inside in case of an emergency.

Copyright NFPA

automatic-closing door in accordance with 5-2.1.8 equivalent to at least a $1^3/_4$-in. (4.4-cm) thick, solid bonded wood core construction, or

(b) Automatic sprinkler protection, in accordance with 23-2.3.5, of the hazardous area regardless of enclosure.

23-2.3.3 Interior Finish. Interior wall and ceiling finish shall be Class A or Class B in accordance with Section 6-5. There shall be no requirements for interior floor finish.

Exception: Class C interior wall and ceiling finish shall be permitted in prompt evacuation capability facilities.

23-2.3.4 Detection, Alarm, and Communication Systems.

23-2.3.4.1 Fire Alarm Systems. A manual fire alarm system shall be provided in accordance with Section 7-6.

Exception No. 1: If there are interconnected smoke detectors meeting the requirements of 23-2.3.4.3 and there is at least one manual fire alarm station per floor arranged to continuously sound the smoke detector alarms.

Exception No. 2: Other manually activated continuously sounding alarms acceptable to the authority having jurisdiction.

23-2.3.4.2 Occupant Notification. Occupant notification shall be in accordance with 7-6.3. Presignal systems shall be prohibited.

23-2.3.4.3* Smoke Detectors. Approved smoke detectors shall be provided in accordance with 7-6.2.10. These detectors shall be powered from the building electrical system and, when activated, shall initiate an alarm that is audible in all sleeping areas. Detectors shall be installed on all levels, including basements, but excluding crawlspaces and unfinished attics. Additional detectors shall be installed for living rooms, dens, day rooms, and similar spaces.

Exception No. 1: Buildings protected throughout by an approved, automatic sprinkler system installed in accordance with 23-2.3.5 using quick response or residential sprinklers with approved, single-station smoke detectors installed in each sleeping room in accordance with 7-6.2.10 and powered by the building electrical system.

Exception No. 2: Buildings protected throughout by an approved, automatic sprinkler system installed in accordance with 23-2.3.5 using quick response or residential sprinklers with existing battery-powered detectors in each sleeping room and where, in the opinion of the authority having jurisdiction, the facility has demonstrated testing, maintenance, and a battery replacement program that ensures the reliability of power to the detectors.

23-2.3.5 Automatic Extinguishing Systems.

23-2.3.5.1* Where an automatic sprinkler system is installed, for either total or partial building coverage, the system shall be in accordance with Section 7-7 and shall activate the fire alarm system in accordance with 23-2.3.4.1. The adequacy of the water supply shall be documented to the authority having jurisdiction.

Exception No. 1: In prompt and slow evacuation capability facilities, a sprinkler system complying with NFPA 13D, Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes, shall be permitted. Automatic sprinklers shall

Copyright NFPA

not be required in closets not exceeding 24 sq ft (2.2 sq m) and bathrooms not exceeding 55 sq ft (5.1 sq m), provided such spaces are finished with lath and plaster or materials providing a 15-min thermal barrier.

Exception No. 2: In impractical evacuation capability facilities, a sprinkler system complying with NFPA 13D, Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes, with a 30-min water supply shall be permitted. All habitable areas and closets shall be sprinklered. Automatic sprinklers shall not be required in bathrooms not exceeding 55 sq ft (5.1 sq m), provided such spaces are finished with lath and plaster or material providing a 15-min thermal barrier.

Exception No. 3: In prompt and slow evacuation facilities, where an automatic sprinkler system is installed in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, sprinklers shall not be required in closets not exceeding 24 sq ft (2.2 sq m) and bathrooms not exceeding 55 sq ft (5.1 sq m), provided such spaces are finished with lath and plaster or materials providing a 15-min thermal barrier.

Exception No. 4: In prompt and slow evacuation capability facilities up to and including four stories in height, systems installed in accordance with NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height, shall be permitted.

Exception No. 5: In impractical evacuation capability facilities up to and including four stories in height, systems installed in accordance with NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height, shall be permitted. All habitable areas and closets shall be sprinklered. Automatic sprinklers shall not be required in bathrooms not exceeding 55 sq ft (5.1 sq m), provided such spaces are finished with lath and plaster or material providing a 15-min thermal barrier.

23-2.3.5.2 Impractical Evacuation Capability. All impractical evacuation capability facilities shall be protected throughout by an approved, supervised automatic sprinkler system installed in accordance with 23-2.3.5.1.

23-2.3.5.3 Sprinkler piping serving not more than six sprinklers for any isolated hazardous area shall be permitted to be installed in accordance with 7-7.1.2. In new installations, where more than two sprinklers are installed in a single area, water flow detection shall be provided to initiate the fire alarm system required by 23-2.3.4.1. Duration of water supplies shall be as required by 23-2.3.5.1.

23-2.3.6 Construction of Corridor Walls.

23-2.3.6.1 The separation walls of sleeping rooms shall be capable of resisting fire for at least $^1/_2$ hr, which is considered to be achieved if the partitioning is finished on both sides with the lath and plaster or material providing a 15-min thermal barrier. Sleeping room doors shall be substantial doors, such as those of $1^3/_4$-in. (4.4-cm) thick, solid bonded wood core construction or of other construction of equal or greater stability and fire integrity. Any vision panels shall be fixed fire window assemblies in accordance with 6-2.3.2.2 or shall be wired glass not exceeding 1296 sq in. (0.84 sq m) each in area and installed in approved frames.

Exception No. 1: In prompt evacuation capability facilities, all sleeping rooms shall be separated from the escape route by walls and doors that are at least smoke resistant.

Subject: Residential & Quick Response

is putting some more info together for you but I believe the attached will get you a better idea of what is talking about – the degradation of sensitivity with delayed action.

1-4.5 Sprinkler Definitions.

1-4.5.1* The characteristics of a sprinkler that define its ability to control or extinguish a fire are:

(a) *Thermal Sensitivity.* A measure of the rapidity with which the thermal element operates as installed in a specific sprinkler or sprinkler assembly. One measure of thermal sensitivity is the Response Time Index (RTI) as measured under standardized test conditions.

1. Sprinklers defined as fast response have a thermal element with an RTI of 50 (meters-seconds)$^{1/2}$ or less, or

2. Sprinklers defined as standard response have a thermal element with an RTI of 80 (meters-seconds)$^{1/2}$ or more.

(b) *Temperature Rating.*

(c) *Orifice Size.* See Chapter 2.

(d) *Installation Orientation (see 1-4.5.3).*

(e) *Water Distribution Characteristics* (i.e., application rate, wall wetting).

(f) *Special Service Conditions (see 1-4.5.4).*

1-4.5.2 Sprinklers defined according to design and performance characteristics:

A-1-4.5.1 The Response Time Index is a measure of the sensitivity of the sprinkler's thermal element as installed in a specific sprinkler. It is usually determined by plunging a sprinkler into a heated laminar airflow within a test oven. The plunge test is not currently applicable to certain sprinklers. These sprinklers must have their thermal sensitivity determined by other standardized test methods.

The RTI is calculated using:

1. The operating time of the sprinkler,
2. The operating temperature of the sprinkler's heat-responsive element (as determined in a bath test),
3. The air temperature of the test oven,
4. The air velocity of the test oven, and
5. The sprinkler's conductivity (c) factor, which is the measure of conductance between the sprinkler's heat-responsive element and the sprinkler oven mount.

Other factors affecting response include temperature rating, sprinkler position, fire exposure, and radiation.

ISO standard 6182-1 currently recognizes the RTI range of greater than 50 (meters - seconds)$^{1/2}$ and less than 80 (meters - seconds)$^{1/2}$ as special response. Such sprinklers can be recognized as special sprinklers under 4-4.9.1.

A-1-4.5.2 ESFR Sprinkler. It is important to realize that the effectiveness of these highly tested and engineered sprinklers depends on the combination of fast response and the quality and uniformity of the sprinkler discharge. It should also be realized that ESFR sprinklers cannot be relied upon to provide fire control, let alone suppression, if they are used outside the guidelines specified in 5-3.5.

Copyright NFPA

Old-Style/Conventional Sprinkler. Sprinklers that direct from 40 to 60 percent of the total water initially in a downward direction and that are designed to be installed with the deflector either upright or pendent.

Open Sprinklers. Sprinkler that do not have actuators or heat-responsive elements.

Quick-Response (QR) Sprinkler. A type of spray sprinkler that meets the criteria of 1-4.5.1(a)1 and is listed as a quick-response sprinkler for its intended use.

Quick-Response Early Suppression (QRES) Sprinkler.* A type of quick-response sprinkler that meets the criteria of 1-4.5.1(a)1 and is listed for its capability to provide fire suppression of specific fire hazards.

Quick-Response Extended Coverage Sprinkler. A type of quick-response sprinkler that meets the criteria of 1-4.5.1(a)1 and complies with the extended protection areas defined in Chapter 4.

Residential Sprinkler. A type of fast-response sprinkler that meets the criteria of 1-4.5.1(a)1 that has been specifically investigated for its ability to enhance survivability in the room of fire origin and is listed for use in the protection of dwelling units.

Special Sprinkler. Sprinklers that have been tested and listed as prescribed in 4-4.9.

1996 Edition

This edition of NFPA 13D, *Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes*, was prepared by the Technical Committee on Automatic Sprinklers and acted on by the National Fire Protection Association, Inc., at its Annual Meeting held May 20-23, 1996, in Boston, MA. It was issued by the Standards Council on July 18, 1996, with an effective date of August 9, 1996, and supersedes all previous editions.

Changes other than editorial are indicated by a vertical rule in the margin of the pages on which they appear. These lines are included as an aid to the user in identifying changes from the previous edition.

This edition of NFPA 13D was approved as an American National Standard on July 26, 1996.

Origin and Development of NFPA 13D

Recognizing the need to reduce the annual life loss from fire in residential occupancies (about 50 percent of total loss of life by fire), the Committee on Automatic Sprinklers appointed a subcommittee in May 1973 to prepare a *Standard on the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*. The subcommittee was composed of members of the Committee on Automatic Sprinklers and other technically competent experts. The standard was submitted and adopted at the NFPA Annual Meeting in Chicago, Illinois, on May 12-16, 1975.

The 1980 edition was a complete rewrite of the 1975 edition, including SI units where appropriate. The 1980 edition incorporated the results of the residential sprinkler test program administered by the National Fire Protection Association and funded by a research grant from the United States Fire Administration. Factory Mutual Research Corporation and the Los Angeles City Fire Department conducted the dwelling tests. Factory Mutual Research Corporation, McNeary Insurance Consulting Services, and the Charlotte, North Carolina, Fire Department conducted the mobile home tests.

After gaining practical experience using the 1980 edition, modifications to the standard,

1-5 Devices, Materials, Design, and Installation.

1-5.1*

Only new residential sprinklers shall be employed in the installation of sprinkler systems.

1-5.2

Only listed and approved devices and approved materials shall be used in sprinkler systems.

Exception: Listing shall be permitted to be waived for tanks, pumps, hangers, waterflow detection devices, and waterflow valves.

3-5 Sprinklers.

3-5.1

Listed residential sprinklers shall be used. Listing shall be based on tests to establish the ability of the sprinklers to control residential fires under standardized fire test conditions. The standardized room fires shall be based on a residential array of furnishings and finishes.

Exception No. 1: Residential sprinklers shall not be used in dry systems unless specifically listed for that purpose.

3-6* Alarms.

Local waterflow alarms with facilities for flow testing, such as alarm devices, shall be provided on all sprinkler systems.

Exception: Dwellings or manufactured homes having smoke detectors in accordance with NFPA 72, National Fire Alarm Code, shall not be required to be provided with a waterflow alarm.

Chapter 4 System Design

4-1 Design Criteria.

4-1.1 Design Discharge.

The system shall provide a discharge of not less than 18 gpm (68 L/min) to any single operating sprinkler and not less than 13 gpm (49 L/min) per sprinkler to the number of design sprinklers, but the discharge shall not be less than the listing of the sprinkler. The minimum operating pressure of any residential sprinkler shall be 7 psi (0.5 bar).

Design to this #
(Replaces hand-written notation)

4-1.2* Number of Design Sprinklers.

The number of design sprinklers shall include all sprinklers within a compartment, up to a maximum of two sprinklers, under a flat, smooth, horizontal ceiling. For compartments containing two or more sprinklers, calculations shall be provided to verify the single operating sprinkler criteria and the multiple (two) operating sprinkler criteria.

4-1.2.1 The definition of "compartment" as used in 4-1.2 for determining the number of design sprinklers is a space that is completely enclosed by walls and a ceiling. The compartment enclosure shall be permitted to have openings to an adjoining space, provided the openings have a minimum lintel depth of 8 in. (203 mm) from the ceiling.

5-3 Components.

5-3.1* Sprinklers.

Sprinklers for use in this type of system shall be specifically listed for use in the conditions described in Section 5-1. All sprinklers installed in a compartment shall have the same thermal response characteristics.

A-5-1 The concept of this sprinkler system is the result of testing conducted by the United States Fire Administration. One of the goals of these tests was to determine if a smaller quantity of water could be used to protect smaller dwellings. The purpose of the system is to enhance life safety and make installation economically feasible for smaller dwellings.

Design items in this chapter assume that egress times from smaller dwellings are minimal, since the units are single-story at grade level and occupants would be made aware of a fire in the unit almost immediately. This approach is considered in permitting the reduction of the water supply, in some instances, to 7 minutes.

A-5-3.1 The criteria used to list a sprinkler for this use should include, but should not be limited to:

(a) Temperature rating: 155°F to 165°F (68°C to 74°C)

(b) RTI: nominal 60 $(ft\text{-}s)^{1/2}$

(c) Droplet size

(d) Distribution patterns

(e) Areas of coverage

(f) Flow rates

(g) Operating pressures

(h) K Factor = nominal 2.0

(i) Ceiling slope.

All sprinklers within a compartment, as defined in 5-4.5, should be within 10°F (5.5°C) of one another in temperature rating.

A-5-3.2 These alarms should be located within the dwelling and should be of sufficient intensity to be clearly audible in all bedrooms over background noise levels with all intervening doors closed.

A-5-4.3 Sample areas of coverage for a sprinkler where listed for this design approach are provided in Table A-5-4.3.

Table A-5-4.3 Sample Areas of Coverage

Compartment Size		Number of Sprinklers
ft	(m)	
10 × 10	3 × 3	1
10 × 12	3 × 3.6	2
12 × 12	3.6 × 3.6	4
16 × 16	4.8 × 4.8	4
16 × 20	4.8 × 6	6

Copyright NFPA

Residential Occupancies. Occupancies, as specified in the scope of this standard, that include the following, as defined in NFPA *101®*, *Life Safety Code®*:

(a) Apartment buildings;

(b) Lodging and rooming houses;

(c) Board and care facilities (slow evacuation type with 16 or fewer occupants and prompt evacuation type);

(d) Hotels, motels, and dormitories.

Residential Sprinkler. A type of sprinkler that meets the definition of fast-response as defined by NFPA 13, *Standard for the Installation of Sprinkler Systems*, and that has been specifically investigated for its ability to enhance survivability in the room of fire origin and that is listed for use in the protection of dwelling units.

Shall. Indicates a mandatory requirement.

Fast-Response Sprinklers: A Technical Analysis

Russell P. Fleming, P.E.

Introduction

In 1984, the National Fire Protection Research Foundation undertook the Quick-Response Sprinkler (QRS) Research Project, intended to develop usable data to provide for a timely yet orderly introduction of quick-response sprinkler technology into standards and codes. It is believed that this will ultimately result in improved life and property safety.

The project was divided into two parts. Group 1 tests addressing high challenge fires were conducted by the Factory Mutual Research Corporation in conjunction with the ESFR (early suppression fast-response) sprinkler test program. The Group 2 program was to address the broad range of occupancies between residential and industrial.

At the start of the program, the National Fire Protection Research Foundation and its Technical Advisory Committee recognized a need for a literature survey and analysis of fast response sprinkler technology to assist in planning the Group 2 test program. This report represents the result of that effort. Originally published in April of 1985 as "Quick-Response Sprinklers: A Technical Analysis," it was updated for republication with the 1991 edition of the NFPA *Automatic Sprinkler Systems Handbook*.

How Quick-Response Sprinklers Perform and What It Means for Their Application

Edward K. Budnick, P.E. and Russell P. Fleming, P.E.

The evolution of quick-response sprinkler (QRS) technology is recognized as the most significant development in automatic sprinkler systems since the introduction of the spray sprinkler in the 1950s. In fact, many believe it is the most important advance in front-line fire protection in some time, providing potentially significant improvements in life safety and fire safety and reducing the cost of fixed fire protection.

Along with such attractive advantages comes the responsibility of ensuring that QRS technology performs up to expectations. This means that we must understand how this technology performs well enough to identify performance limits and failure modes, provide critical design and installation guidance, and develop appropriate approval texts and standards. If we address it carefully and competently, the resulting applications of QRS technology should provide improved, highly effective, and reliable fire suppression.

For the past several years, the National Fire Protection Research Foundation has conducted the research necessary to address these issues. The principal focus of its Quick-Response Sprinkler Research Project has been to develop the technical basis necessary to establish installation and approval standards for broad application of quick-response sprinkler technology. Support for the project has come from a diverse group of private sector organizations.

4

Developing an Early Suppression Design Procedure for Quick-Response Sprinklers

Edward K. Budnick, P.E. and Russell P. Fleming, P.E.

The investigation of the free-burn heat-release rates of typical fuel packages found in occupancies governed by NFPA 13, *Standard for the Installation of Automatic Sprinklers,* was funded by the National Fire Protection Research Foundation as part of its Group 2 quick-response sprinkler (QRS) effort. The Research Foundation also funded the subsequent required delivered density (RDD) testing of some of these fuel packages and the actual delivered density (ADD) testing of sprinklers that are representative of those currently listed. The goal of this research program is to develop a design method that will incorporate the use of quick-response sprinkler technology into NFPA 13.

For purposes of this article, the term *design approach* refers to the conceptual manner in which sprinklers are used in an engineering solution to the fire problem. Use of spray sprinklers in the fire control mode, for example, is a design approach. The term *design method* is used to describe a particular manner of codifying a design approach. The area/density method and the room design method are both currently recognized in NFPA 13 for use with spray sprinklers. Finally, the term *design procedure* refers to the specific steps to be taken when carrying out a design method.

Early in the Group 2 effort, it was decided that quick-response sprinklers could be used to their best advantage through the development of a design method based on the early suppression concept. This concept, originated by Factory Mutual Research Corporation, had previously served as the basis for

FAST RESPONSE SPRINKLER TECHNOLOGY

Arthur E. Cote and Russell P. Fleming

The ability to evaluate and control sprinkler sensitivity was the single most significant development in sprinkler technology in the 1980s. This ability has led to the development of new fast response sprinkler technology that holds the promise of improved fire protection for both life and property.

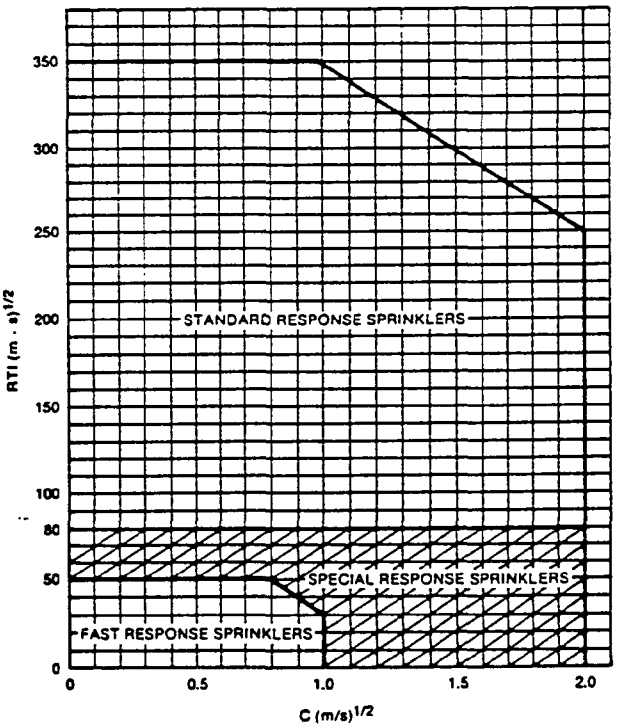
This chapter covers the development of residential and other fast response sprinklers, first for the residential environment and later for other applications. It also discusses the specific types of fast response sprinklers currently available and some of the incentives that have been considered to encourage the widespread use of residential sprinklers.

General information on fire sprinklers can be found in Section 5, Chapter 9, "Automatic Sprinkler Systems," and Section 5, Chapter 12, "Automatic Sprinklers." A discussion of the theory of fire sprinkler performance is in Section 5, Chapter 10, "Theory of Automatic Sprinkler Performance."

MEASURING SPRINKLER SENSITIVITY

Much of the original work in the area of measuring sprinkler sensitivity was done at Factory Mutual Research Corporation (FMRC) under the sponsorship of the United States Fire Administration (USFA) during the development of the residential sprinkler. Important contributing research was also performed at the British Fire Research Station and the National Institute of Standards and Technology (NIST).

The decade of progress in this area climaxed late in 1990, when tentative agreement was reached within the working group on sprinkler and water spray equipment of the International Standards Organization (ISO) for a standardized approach to sprinkler sensitivity requirements and testing. The agreement, which is expected to be processed as an amendment to Draft International Standard 6182/1, "Requirements and Methods of Tests for Sprinklers," uses the information of sprinkler test procedures developed by laboratories in the United States and Europe and establishes the three ranges of sprinkler sensitivity characteristics shown in Figure 5-13A.



5-13A. Tentative international sprinkler sensitivity ranges, RTI vs conductivity.

These ranges of sensitivity are based both on the response time index (RTI) of the device and on its conductivity (C). RTI is a measure of pure thermal sensitivity, which indicates how fast the sprinkler can absorb heat from its surroundings sufficient to cause activation. The conductivity factor is important in measuring how much of the heat

Arthur E. Cote, P.E., is assistant vice president and chief engineer of the NFPA. Russell P. Fleming, P.E., is vice president of engineering of the National Fire Sprinkler Association.

0012945

picked up from the surrounding air will be lost to the sprinkler fittings and waterway.

Figure 5-13A shows three broad ranges of sprinkler sensitivity: standard, special, and fast response. Traditional sprinkler hardware falls into the standard-response category. The fast response category is being used for new types of sprinklers for which fast response is considered important. The special-response category is being used in some countries for special types of sprinkler that may be installed in conformance with appropriate national installation standards. In the United States, this includes some of the extended coverage sprinklers that are listed as special sprinklers.

Sprinkler response time as a function of the temperature rating of the operating element is well understood, - that is, a 165°F (74°C) rated sprinkler would operate when its temperature reaches 165°F (74°C), plus or minus a few degrees. Because of the "thermal lag" of the link or bulb mass, however, the air temperature may be as high as 1000°F (538°C) before the element operates. The smaller mass of the operating element of a fast response sprinkler permits it to follow a temperature rise in the surrounding air more rapidly, resulting in faster operation.The actual sensitivity requirements of the first fast-response sprinklers, intended as residential sprinklers, were arrived at somewhat by trial and error during developmental test work. To measure sensitivity, FMRC researchers first applied the concept of the "tau" factor and later developed the RTI.

Both the tau factor and RTI refer to the performance of a sprinkler or link in a standardized air oven tunnel test. The test is known as a "plunge" test because a sprinkler at room temperature is plunged into a heated air stream of known constant temperature and velocity.[3,4] In the plunge test, the tau factor is the time the excess temperature of the sensing element of the sprinkler is approximately 63 percent of the excess gas temperature. In other words, the tau factor is the time the temperature of the sprinkler link has risen 63 percent of the way to the higher temperature of the heated air. The smaller the tau factor, the faster the sprinkler sensing element heats up and operates.

The tau factor is independent of the air temperature used in the plunge test, but is inversely proportional to the square root of the air velocity. During the early development of the residential sprinkler, a tau factor of 21 sec was considered to indicate the needed level of sensitivity, but this was associated with a specific velocity - 5 ft/sec (1.52 m/sec) used in the FMRC plunge test. Since the tau factor changes with the velocity of heated air past the sprinkler, it is a fairly inconvenient measure of sprinkler sensitivity.

The RTI has replaced the tau factor as the measure of sensitivity and is determined simply by multiplying the tau factor by the square root of the air velocity at which it is found. The RTI is therefore practically independent of both air temperature and air velocity. Comparisons of RTI give a good indication of relative sprinkler sensitivity.

The smaller the RTI, the faster the sprinkler operation. Standard response sprinklers have RTIs in the range of 225 to 700 $sec^{1/2}ft^{1/2}$ (100 to 400 $sec^{1/2}m^{1/2}$), while the RTI range for residential sprinklers is about 50 to 90 $sec^{1/2}ft^{1/2}$ (28 to 50 $sec^{1/2}m^{1/2}$).

The need to add a conductivity term to the model of sprinkler response was recognized in 1986.[5,6] This term accounts for the loss of heat from the sprinkler operating element to the sprinkler frame, its mounting, and [illegible] water in the pipe. These losses can become sig[illegible] under low-velocity conditions, particularly for som[illegible] flush-type sprinkler designs with little insulation b[illegible] the operating element and the sprinkler body.[illegible]

HISTORICAL DEVELOPMENT

Sensitivity was recognized as a key attribute of aut[illegible] sprinklers almost from the start. An evaluation of [illegible] tiveness" was included among the first comprehens[illegible] ever performed by C.J.H. Woodbury of the Factory [illegible] Fire Insurance Companies in 1884. Many of the [illegible] ments to the automatic sprinkler during its first cen[illegible] use were made with thermal sensitivity in mind.

Yet the standard sprinkler of the 1970s was rea[illegible] tle changed from its ancestors. Except for the introd[illegible] of the spray sprinkler in the early 1950s to improv[illegible] sprinkler discharge pattern, sprinkler design, including sensitivity of release mechanisms, remained about the same. Sprinklers were essentially devices intended to protect property, although their effectiveness in providing safety from fires was outstanding.

Development of NFPA 13D

In 1973, in response to recommendations in the Presidential Commission report, "America Burning," the NFPA Committee on Automatic Sprinklers appointed a Subcommittee on Residential and Light-Hazard Occupancies to prepare a residential sprinkler standard. In 1975, the first edition of NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*, was published, based on expert judgment and the best information available at that time.

The purpose of the standard was "to provide a sprinkler system that will aid in the detection and control of dwelling fires and thus provide improved protection against injury, life loss, and property damage." The standard required the use of an NFPA 13, *Installation of Sprinkler Systems*, light-hazard water application density of 0.10 gpm/ft^2 [4 L/min)/m^2], but it permitted other concessions. The water supply could be based on the area of the largest room or 25 gpm (95 L/min), whichever was less; the total water supply required was to be only 250 gal (946 L); and sprinkler spacing of 256 sq ft (23.7 m^2) was permitted, although NFPA 13 allowed only 225 sq ft (20.9 m^2). Further, 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*, permitted sprinklers to be omitted from certain areas where the incidence of life loss from fires was shown statistically to be low. NFPA 13 had always required complete sprinkler protection in order to safeguard property properly. In departing from the ideal, the 1975 edition of NFPA 13D became the first attempt at a "life safety" sprinkler standard. In spite of these concessions, actual installations based on this standard were rare, primarily due to cost.

Residential Sprinkler Research

Beginning in 1976, the National Fire Prevention and Control Administration (NFPCA), which was later renamed the U.S. Fire Administration (USFA), acted on its mandate to reduce the nation's fire losses and funded research programs focusing on the residential fire problem in general and residential sprinkler protection in particular. The NFPCA/USFA programs included studies to assess the

0012946

...pact sprinklers would have on reducing deaths and injuries in residential fires.[7] Other studies evaluated the design, installation, practical usage, and water acceptance factors that would have an impact on achieving reliable and acceptable systems[8]; the minimum water discharge rates and automatic sprinkler flow required, and response sensitivity and design criteria[9,10,11]; and full-scale tests of prototype residential sprinkler systems.[12,13,14,15,16]

The research showed that a more sensitive sprinkler was needed to respond faster to both smoldering and fast-developing residential fires for two reasons. First, fires had to be controlled quickly in order to prevent the development of lethal conditions in small residential compartments. In addition, fires had to be attacked while still small if they were to be controlled with the water supplies typically available in residences, - 20 to 30 gpm (76 to 114 L/min) - and if low costs were to be achieved.

Full-scale tests conducted by FMRC resulted in the development of a prototype fast response sprinkler that could control or suppress typical residential fires with the operation of not more than two sprinklers. It could also operate fast enough to maintain survivable conditions within the room of fire origin.[12] Survivable conditions were established as follows:

1. Maximum gas temperature at eye level of 200°F (93°C).
2. Maximum ceiling surface temperature of 500°F (260°C).
3. Maximum carbon monoxide concentration of 1,500 parts per million.

Thus, the sprinkler concept expanded from the traditional role of property protection to include life safety. Full-scale field tests were then conducted in Los Angeles to establish system design parameters using the new prototype fast response "residential sprinkler."[13,14,15,16]

The data from these tests were studied by the National Fire Protection Association Technical Committee on Automatic Sprinklers and used to establish the criteria for the 1980 edition of NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*.

Revised NFPA 13D Design Requirements

The design criteria in the 1980 edition of NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*, included for the first time the requirement that all sprinklers be "listed residential sprinklers." Figure 5-13B shows the first two listed residential sprinklers.

Other initial basic design requirements in the revamped NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*, were as follows:

Performance criteria: To prevent flashover in the room of fire origin, when sprinklered, and to improve the chance for occupants to escape or be evacuated.

Design criteria:

1. Only listed residential sprinklers to be used.
2. Minimum 18 gpm (68 L/min) to any single operating sprinkler and 13 gpm (49 L/min) to all operating sprinklers in the design area up to a maximum of two sprinklers.
3. Maximum area protected by a single sprinkler of 144 sq ft (13.4 m²).

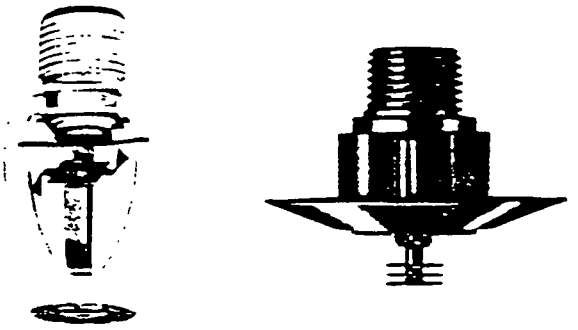


FIG. 5-13B. The first two listed residential "quick response" sprinklers. Shown are the Grinnell Model F954 (left) and Central "Omega" Model R-1 (right) pendent sprinklers.

4. Maximum distance between sprinklers of 12 ft (3.7 m).
5. Minimum distance between sprinklers of 8 ft (2.4 m).
6. Maximum distance from a sprinkler to a wall or partition of 6 ft (1.8 m).

Application rates, design areas, areas of coverage, and minimum design pressures other than those specified above were permitted to be used with special sprinklers listed for such special residential installation conditions.

Sprinkler coverage: Sprinklers to be installed in all areas with the following exceptions.

Exception No. 1: Sprinklers allowed to be omitted from bathrooms no larger than 55 sq ft (5.1 m²).

Exception No. 2: Sprinklers allowed to be omitted from closets where the least dimension does not exceed 3 ft (0.9 m), the area does not exceed 24 sq ft (2.2 m²), and the walls and ceiling are surfaced with noncombustible materials.

Exception No. 3: Sprinklers allowed to be omitted from open-attached porches, garages, carports, and similar structures.

Exception No. 4: Sprinklers allowed to be omitted from attics and crawl spaces that are not used or intended for living purposes or storage.

Exception No. 5: Sprinklers allowed to be omitted from entrance foyers that are not the only means of egress.

TYPES OF FAST RESPONSE SPRINKLERS

Today, fast response sprinkler technology has been incorporated into several different types of sprinklers, each with unique attributes and applications.

Residential Sprinklers

In the ten years following the development of the residential sprinkler, the special listings proliferated, to the point where the original sprinkler flow and spacing criteria have almost become obsolete. Residential sprinklers are now listed for coverage areas up to 400 sq ft (37.2 m²) per sprinkler. Table 5-13A contains a 1990 compilation of residential sprinklers listed by Underwriters Laboratories Inc. (UL), along with their pressure and flow requirements.

0012947

l is important to recognize that, in addition to their response characteristics, residential sprinklers have a al water distribution pattern.[12] Because the effective rol of residential fires often depends on a single sprin- the room of fire origin, the distribution of residen- sprinklers is required to be more uniform than that of spray sprinklers, which in large areas can rely e overlapping patterns of several sprinklers to make or voids. Additionally, residential sprinklers are ired to protect sofas, drapes, and similar furnishings e periphery of the room. In their discharge patterns, fore, the sprinklers must not only be capable of throw- ater to the walls of their assigned areas, but high gh up on the walls to prevent the fire from getting ve the sprinklers. The water delivered close to the ing not only protects the portion of the wall close to eiling, but also enhances the capacity of the spray to ases at the ceiling level, thus reducing the likelihood essive sprinkler openings.[12]

Because of their differences, residential sprinklers are sted by product evaluation organizations under the product standards as standard sprinklers. Underwrit- aboratories Inc., for example, has developed UL 1626 idential sprinklers, and FMRC has published its al Standard FM 2030 for residential sprinklers. Both standards include a plunge test with specific sen- requirements and a distribution test that checks the pattern in the vertical plane, as well as the horizon- ne. The product standards for standard spray sprin- ontain neither test.

oth UL 1626 and FM 2030 also include a fire test that nded to simulate a residential fire in the corner of containing combustible materials representative of a living room environment. The fire test arrangements for UL 1626 are shown in Figure 5-13C.

The UL 1626 test procedure contains a time-temperature curve that is reproducible in actual tests. The curve parallels the time-temperature relationship developed during the tests of the prototype residential sprinkler in Los Angeles that was part of the on-going residential sprinkler research effort.[13,15,16]

In summary, to meet the UL 1626 test criteria, residential sprinklers, installed in a fire test enclosure with an 8-ft (2.4 m) ceiling are required to control a fire for 10 min with the following limits:

1. The maximum gas or air temperature adjacent to the sprinkler—3 in. (76.2 mm) below the ceiling and 8 in. (203 mm) horizontally away from the sprinkler—must not exceed 600°F (316°C).
2. The maximum temperature—5 ft, 3 in. (1.6 m) above the floor and half the room length away from each wall— must be less than 200°F (93°C) during the entire test. This temperature must not exceed 130°F (54°C) for more than a 2-min period.
3. The maximum temperature ¼ in. (6.3 mm) behind the finished surface of the ceiling material directly above the test fire must not exceed 500°F (260°C).
4. No more than two residential sprinklers in a test area can operate.

The test enclosure is twice the size of the proposed maximum spacing of the residential sprinkler. In a typical test, the walls of one corner of the test enclosure are covered with combustible cellulosic acoustical panels ⅛ in. (3.2 mm) thick . Two combustible structures with urethane foam, representing stuffed furniture, are positioned

0012949

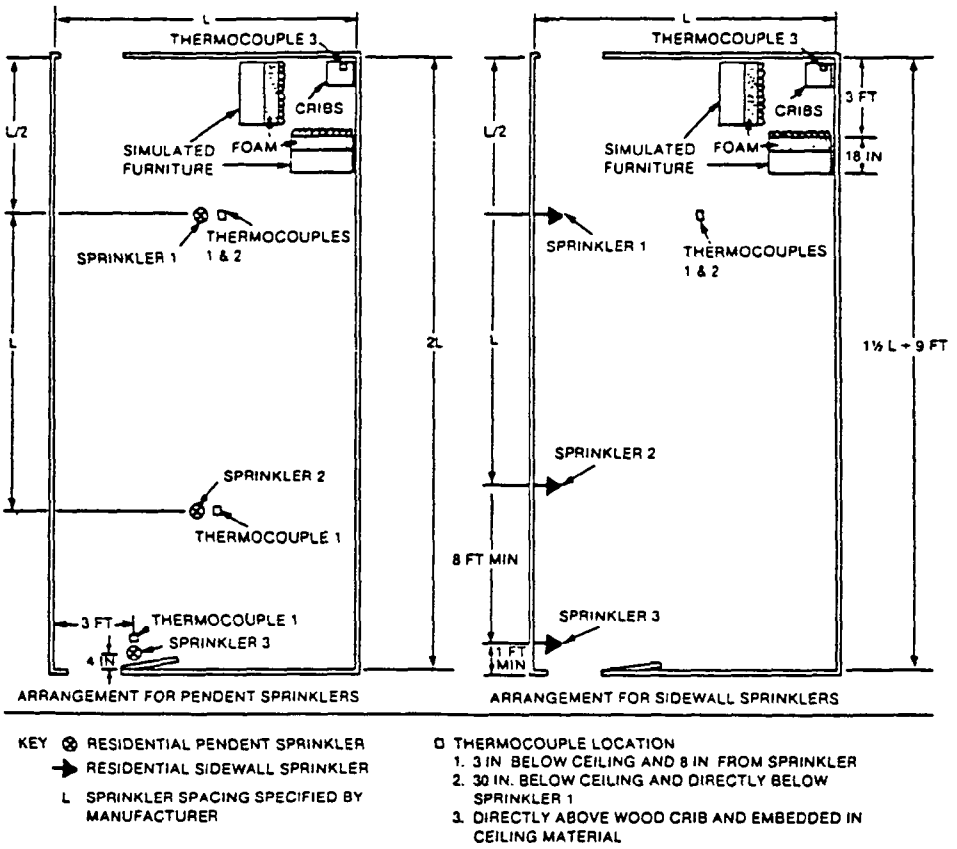

FIG. 5-13C. Fire test arrangements for UL 1626 for pendent sprinklers (left) and sidewall sprinklers (right). The simulated furniture consists of 3 in. (76 mm) thick uncovered urethane foam cushions 30 in. (762 mm) high by 30 in. (762 mm) wide. The foam has a density of 1.25 lbs/ft³ (6.1 kg/m³) and is attached to a wood frame. The walls of the test room are covered with 4 by 8 ft by ⅛ in. (1.2 × 2.4 m × 3.2 mm) decorative plywood paneling (flame spread rating 200) attached to wood furring strips. The fire source consists of 12 by 12 by 12 in. (0.3 × 0.3 × 0.3 m) wood cribs weighing 12 to 13 lbs (5.4 to 5.9 kg). The ceiling of the test room is 8 ft (2.4 m) high and covered with 2 × 4 ft × ½ in. (6.1 × 1.2 m × 12.7 mm) thick acousticalpanels attached to wood furring strips.

at the same corner. (See Figure 5-13C.) The enclosure is kept at an initial ambient temperature of 80°F (27°C) ± 5°F (3°C), and it is ventilated through two door openings on opposite walls. The fire source is a wood crib of 12 to 13 lb (5.4 to 5.9 kg) mass, measuring approximately 12 by 12 by 12 in. (0.3 by 0.3 by 0.3 m).

The wood crib is ignited by 8 oz. (24 mL) of N-heptane in a pan directly below the crib. Forty sec after ignition, the excelsior [¼ lb (0.11 kg)] on the floor next to the simulated furniture is ignited.

The fire test is conducted for 10 min after the ignition of the wood crib. The water flow to the first sprinkler that operates and the total water flow when the second sprinkler operates are specified as part of the listing limitations for the sprinklers in the test. The total water flow for two sprinklers must be a minimum of 1.2 times the minimum flow for a single sprinkler.

The water distribution test requirements are based on the distribution pattern of the prototype residential sprinkler used in the Los Angeles test fires.[16] The distribution requirements involve collections in both the horizontal and vertical planes.

All residential sprinklers in the test must discharge water at the flow rate specified by the manufacturer for a 10-min period simulating one sprinkler operating and two sprinklers operating. The quantity of water collected on both the horizontal and vertical surfaces is measured and recorded.

Sprinklers being tested are required to discharge a minimum of 0.02 gpm per sq ft [0.8(L/min)/m²] at both flow rates over the entire design area, plus an area 2 ft (0.61 m) beyond the listed coverage area in each direction (only three directions for horizontal sidewall-type sprinklers). They must also wet the walls of the test enclosure to a height not less than 28 in. (711 mm) below the ceiling with one sprinkler operating and not less than 36 in. (914 mm) with two sprinklers operating. Each wall surrounding the coverage area is required to be wetted with a minimum of 5 percent of the sprinkler application densities at both flow rates.

Since 1983, the use of residential sprinklers has also been permitted under some conditions in accordance with NFPA 13, *Installation of Sprinkler Systems*. Essentially, NFPA 13 allows residential sprinklers in dwelling units located in any occupancy provided they are installed in conformance with the requirements of their listing and the positioning requirements of NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*. A dwelling unit is defined as one or more rooms arranged for the use of one or more individuals living together, as in a single housekeeping unit normally having cooking, living, sanitary, and sleeping facilities. Dwelling units include hotel rooms, dormitory rooms,

0012950

ping rooms in nursing homes, and similar living units. Occupancies encompassing dwelling units include apartment buildings, board and care facilities, dormitories, condominiums, lodging and rooming houses, and other multiple-family dwellings.

For NFPA 13, applications involving residential sprinklers in dwelling units, the design area is required to consist of the four most hydraulically demanding sprinklers. See Figure 5-13D).

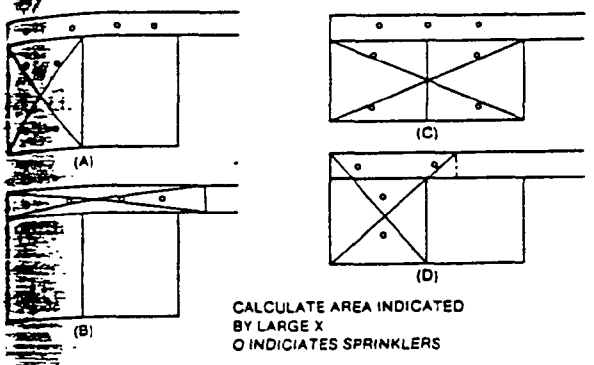

FIG. 5-13D. Examples of design areas for dwelling units within NFPA 13 occupancies.

Other areas, such as attics, basements, or other types of occupancies outside of dwelling units but within the same structure, are required to be protected in accordance with regular provisions of NFPA 13, *Installation of Sprinkler Systems*, including the appropriate water supply requirements. The decision as to which areas are to be protected with sprinklers is also regulated in accordance with the normal provisions of NFPA 13. This means, for example, that combustible concealed spaces generally require sprinklers, although the four-sprinkler design area is extended to such spaces above dwelling units when protected with residential sprinklers.

Residential sprinklers installed in systems designed to NFPA 13 requirements are spaced and positioned in accordance with their residential listings, not with the spacing requirements of NFPA 13. The water demands for the residential sprinklers are the same as in NFPA 13 applications, except that the multiple sprinkler flow requirement is extended to four sprinklers rather than the two stipulated for one- and two-family dwellings and mobile homes in NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*. The more liberal timing, component, hanger, and water supply duration allowances of NFPA 13D are not permitted in these systems.

In summary, NFPA 13, *Installation of Sprinkler Systems*, does not require residential sprinklers in residential occupancies, but it encourages their use through the four-sprinkler design area.

In 1989, a new standard was developed to bridge the gap between NFPA 13, *Installation of Sprinkler Systems*, and NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*. The new standard is NFPA 13R, *Installation of Sprinkler Systems in Residential Occupancies Up to Four Stories in Height*. Like NFPA 13D, NFPA 13R is oriented toward economical life safety protection. Sprinklers are omitted from building areas that have been found to have a low incidence of fatal fires, including combustible concealed spaces, small bathrooms and closets, and attached porches. As with NFPA 13D, residential sprinklers are required throughout dwelling units, with some minor exceptions. A four-sprinkler design area is required unless the largest compartment contains fewer sprinklers.

In recognition of the greater risk associated with multifamily occupancies, however, NFPA 13R, is more conservative than NFPA 13D, in some areas. Requirements for plans, hydraulic calculations, and system acceptance certificates parallel those of NFPA 13, *Installation of Sprinkler Systems*. Unlike NFPA 13D, NFPA 13R requires a consideration of the likelihood that simultaneous domestic flows might occur through combined service piping. In addition, pumps and other key equipment are required to be listed.

In NFPA 13R, *Installation of Sprinkler Systems in Residential Occupancies Up to Four Stories in Height* systems, areas outside dwelling units can be protected with standard spray sprinklers, using NFPA 13 design criteria.

Quick Response Sprinklers

Quick response sprinklers are designed to be used in hotels, motels, offices, and other buildings where faster sprinkler operation could enhance life safety. UL first listed these sprinklers as quick response sprinklers based on performance comparable to a standard response sprinkler equipped with a quick response electronic squib actuator, a device marketed by one sprinkler manufacturer in the 1970s.

Quick response sprinklers, which are essentially standard spray sprinklers equipped with fast response operating mechanisms, were first introduced in 1983. They were developed by manufacturers in two different ways. One was to replace the actuating mechanism of standard spray sprinklers with the more sensitive heat responsive element used in residential sprinklers. This sprinkler was then resubmitted to a testing laboratory for testing and listing under the product standard for standard spray sprinklers. The other way was to simply submit a residential sprinkler to a testing laboratory for testing and listing under the provisions of a product standard for standard spray sprinklers.

It was not until 1988 that full-scale testing showed that quick response sprinklers could be used effectively with the traditional area/density design approaches found in sprinkler installation standards.[17,18] In "control-mode" testing of a 6 ft, 8-in. (2.0 m) arrangement of a standard plastic commodity under a 20-ft (6.1 m) ceiling, multiple tests involving sprinklers identical in all respects except sensitivity indicated that fewer average quick response sprinklers activated to control the fire than standard response sprinklers.

Current NFPA standards permit the use of quick-response sprinklers throughout buildings of light- and ordinary-hazard occupancy, but they have not yet recognized their use in extra-hazard occupancies or occupancies involving high-piled storage. Research is currently underway to determine if quick response sprinklers can be used successfully in dry systems as well as wet systems.

0012951

Early Suppression Fast Response Sprinklers

The early suppression fast response (ESFR) sprinklers were first envisioned by the Factory Mutual Research Corporation.[19,20] Working with FMRC, the National Fire Protection Research Foundation funded full-scale testing to prove that fast response sprinklers made suppression of a high-challenge fire feasible.[21]

Like its predecessor, the large drop sprinkler, the ESFR sprinkler is intended to prevail against the strong fire plumes associated with fires in industrial and warehouse occupancies. However, its delivery of water to the burning fuel surfaces is accomplished by means of spray momentum rather than the gravitational effects of large droplets.

Operating at a minimum pressure of 50 psi (7.25 kPa) so as to produce a minimum flow per sprinkler of 100 gpm (380 L/min), the ESFR sprinkler can protect challenges up to and including 25 ft (7.6 m) of plastics storage under a 30-ft (9.1 m) ceiling, without the use of in-rack sprinklers. The sprinkler has also been tested successfully for use in protecting aerosols and other special hazards, and it is currently being evaluated for use with storage more than 30 ft (9.1 m) high.

"Quick Response, High-Challenge" Large-Drop Sprinklers

The "quick response, high-challenge" sprinkler resulted from one manufacturer's insertion of a fast response link into an approved large-drop sprinkler. The large-drop sprinkler concept, pioneered during the 1970s by FMRC, was based on the theory that larger spray droplets would be more capable of achieving gravitational penetration of a strong upward fire plume.

Product approval and installation standards were developed, and specialized system design criteria found its way into NFPA standards beginning with the 1985 edition of NFPA 13, *Installation of Sprinkler Systems*. The large-drop sprinkler has a characteristic large deflector and is an upright sprinkler with a 0.64-in. (1.6 cm) diameter orifice.

The concept of combining the penetration capabilities of the large-drop sprinkler with fast response was basic to the development of the ESFR sprinkler program. In tests of the large-drop sprinklers with and without fast response links, the addition of fast response to the penetration abilities of the sprinkler provided superior protection against a high-challenge fire.

This particular sprinkler, however, later referred to as the "quick response, high-challenge" sprinkler, fell by the wayside during the screening for the ESFR prototype sprinkler due to its inability to provide sufficient water directly under the sprinkler. As an upright sprinkler, it could not handle the scenario in which a fire is started directly under a single sprinkler with 5 to 15 ft (1.5 to 4.6 m) of clearance below a 30-ft (9.1 m) ceiling. The sprinkler's water penetration capability was considered insufficient, due to an opening of the spray umbrella. The ESFR prototype eventually selected was a pendent with a larger orifice.

Nevertheless, this sprinkler had already established its worth in the eyes of many. A variation of that sprinkler is now listed by UL as a "specific application" sprinkler, intended for use within the constraints of demonstrated performance in full-scale fire tests.[22]

Quick Response, Early Suppression Sprin

Quick response, early suppression (QRES) sprinkl currently being developed in the United States.[18] W QRES sprinkler, the same principles used in the d ment of the ESFR sprinkler are being applied to a s orifice sprinkler, which could be used in a wide of business, mercantile, public assembly, educationa other applications. The proposed NFPA definition of sprinklers is "fast response sprinklers that are listed f ability to provide fire suppression of specific haza is expected that the final development of such spri is still several years away.

INCENTIVES TO MORE WIDESPREAD OF RESIDENTIAL SPRINKLERS

There are certain incentives that can stimulate int residential sprinklers. These incentives are discuss the following paragraphs.

Reduction in Government Spending

Reduction in all forms of government spending, res from public pressure to reduce property taxes, is a factor in the future growth of the residential sprinkle cept. Many fire departments are forced to protect areas and more subdivisions with the same numbe even fewer people since financial restrictions hamper department's ability to grow with the community result, alternates to traditional fire fighting techniques be found. One of them is the use of residential sprink

San Clemente, CA, was the first community in United States to pass a residential sprinkler ordinance 1980 as part of the fire department's master plan. This nance requires automatic sprinkler systems to be insta in all new residential construction. The prime moti for the passage of this ordinance was San Clemente's backs in government spending brought about by Propo tion 13, the state's tax-capping measure. Many commun across the country face similar situations. Automatic spr klers in residences may be the answer to fewer fire fig ers and longer response times from the fire departm

Insurance Savings

Although the greatest benefit from widespread instal of residential sprinklers will be the lives saved and ries prevented, lower property losses will be a seco and substantial benefit. An ad-hoc committee from insurance industry sponsored a number of the test fi Los Angeles and concluded that residential sprinkler the potential for reducing homeowners' claim pay expenses.[23] As a result, the Insurance Services Office Personal Lines Committee recommended that a 15-per reduction in the homeowner's policy premium be g for installation of an NFPA 13D, *Installation of Spri Systems in One- and Two-Family Dwelling and Mob Homes*, residential sprinkler system. While this would pay for the system over a short period of time, as is the in many commercial installations, the continuing incre in the cost of insuring a single-family home make this a nificant incentive nonetheless.

Real Estate Tax Reductions

In 1981, the State of Alaska enacted into law a signifi piece of legislation that has a dramatic impact on the in lation of sprinkler systems throughout that state. The

0012952

provides that 2 percent of the assessed value of any structure is exempt from taxation if the structure is protected with a fire protection system. The word "structure" is significant in the law, since it also applies to homes. In effect, if a home were assessed at $100,000 for purposes of taxation, the assessed value would be computed at $98,000, provided that it contained a fire protection system.

Buyers' Attitude

While one study indicated that 30 percent of the people interviewed perceived no need for a residential sprinkler system," a survey published by the National Association of Home Builders on luxury features that buyers want in a new home showed that 14.3 percent indicated "fire suppression systems" as a choice. For potential buyers with incomes over $50,000, the percentage rose to over 20 percent.

Zoning

Greater land use may be possible with zoning changes that would permit fully sprinklered residences to be built on smaller parcels of land. The assumption is that the space between houses will not be as important from a fire protection standpoint if an entire street or neighborhood is fully sprinklered. One could argue, however, that if the sprinkler system fails, the resultant fire involving a number of residences could be much greater.

Sprinkler Legislation

In addition to the San Clemente, a number of other California communities have passed residential sprinkler legislation, including Orange County and Los Angeles County.

Since 1982, Greenburgh, NY, and several surrounding communities have enacted sprinkler ordinances that require the installation of automatic sprinklers in virtually all new construction, including all new multiple- and one- and two-family dwellings.

The State of Florida in 1983 passed a law requiring that all public lodging and time-share units three stories or more high in the state be sprinklered. It also required that all existing units be sprinklered by 1988.

In 1983, the City of Honolulu, HI, adopted legislation that required all new and existing high-rise hotels, which are those more than 75 ft (23 m) above grade, to be sprinklered.

In the late 1980s, additional jurisdictions, including Atlanta, GA, the State of Connecticut, and the Commonwealth of Massachusetts, acted to retroactively require the installation of sprinkler systems in high-rise residential buildings.

In 1990, the federal government enacted the Hotel and Motel Fire Safety Act, which contains strong incentives for complete sprinkler protection of hotels, since only hotels with satisfactory levels of fire protection will be eligible for federal employee travel.

Trade-Offs

Many "authorities having jurisdiction" have used building code trade-offs as an incentive to install sprinklers. Cobb County, GA, was one of the first communities to amend its Buildings and Construction Code to include trade-offs for multi-family structures equipped with residential sprinkler systems.

While these trade-offs can be a major incentive to install residential sprinklers, the disaster potential must always be considered if a fire, for whatever reason, should overpower the sprinkler system. This is especially true if the system is designed with the minimal water supplies required by NFPA 13D, *Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes*.

The City of Dallas, TX, adopted a building code that requires all new buildings or those undergoing major renovation, having an area greater than 7500 sq ft (697 m^2), to have automatic sprinklers. At the same time, this building code encourages trade-offs by allowing design options that trade "passive" fire protection features for "active" automatic sprinkler alternatives.

Mobile Homes

At least one major mobile home manufacturer is installing residential sprinkler systems in all of its mobile homes at the factory.

THE COMMERCIAL OMEGA™ SPRINKLER COLLECTION

Dramatically Beautiful—Elegantly Subtle

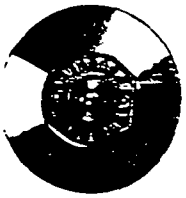
Central's Commercial Omega Sprinklers are a unique blend of futuristic aesthetics and impressive performance characteristics.

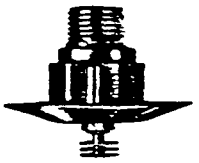
The Commercial Omega Sprinkler, available in pendent and horizontal sidewall design, is at least five times faster in operation than standard commercial sprinklers. Its genesis is rooted in the new standards of sensitivity necessary for life-safety. It is listed by the Underwriters Laboratories for light and ordinary hazard in accordance with N.F.P.A. 13, "Installation of Sprinkler Systems." This sprinkler is also listed by Underwriters Laboratories in accordance with N.F.P.A. 13-D "Sprinkler Systems—One and Two Family Dwellings." The Omega sprinkler is the first to satisfy and combine both Underwriters Laboratories listing requirements.

The Omega sprinkler will react to a fire before it has a chance to spread, effectively minimizing preburn and avoiding flashover, thereby limiting the involved area.

The smallest semi-concealed sprinkler made today, the Omega projects only 5/8" from any finished surface. Standard finishes available are polished chrome, polished brass, and natural brass. In addition, the escutcheon plates can be plated or painted to your specifications.

The Extended Coverage Omega Sidewall and the Extended Coverage Omega Pendent Sprinklers add a new dimension to the Omega Sprinkler Collection. These extended coverage sprinklers are listed by Underwriters Laboratories for light hazard occupancies and add to the overall economics and aesthetics of the sprinkler installation.





COMMERCIAL PENDENT—MODEL C-1

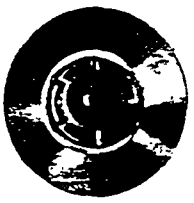
"K" FACTOR: 5.32 • **NOMINAL ORIFICE SIZE:** 1/2" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°, 200°F (63°, 71°, 93°C) • **APPROVALS:** U.L. listed for light and ordinary hazard per N.F.P.A. 13 • **SPACING AND FLOW REQUIREMENTS:** See N.F.P.A. 13 • **SERVICE RATING:** 175 p.s.i.

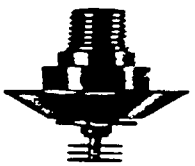
SPECIAL LISTINGS FOR EXTENDED COVERAGE

Authorities have made provisions in standards for sprinklers which satisfy basic design requirements but are listed by a recognized testing laboratory for specific conditions which may exceed or differ from the basic design with respect to flow rates, design areas, areas of coverage and minimum design pressures. The Omega Pendent with EC-20 deflector and the Omega Horizontal Sidewall with HEC-12 deflector have satisfied the requirements to allow for extended areas of coverage under the following conditions:

COMMERCIAL EXTENDED COVERAGE PENDENT—MODEL EC-20

"K" FACTOR: 5.32 • **NOMINAL ORIFICE SIZE:** 1/2" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°F (63°, 71°C) • **APPROVALS:** U.L. listed for light hazard applications per N.F.P.A. 13 • **SERVICE RATING:** 175 p.s.i.





MODEL EC-20 PENDENT

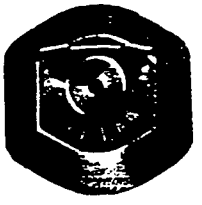
MAXIMUM WIDTH (FT)	MAXIMUM LENGTH (FT)	MINIMUM FLOW (GPM)	MINIMUM PRESSURE AT SPRINKLER (PSI)
20	20	40.0	56.5
18	18	32.5	37.3
16	22	35.5	44.5
*16	20	32.0	36.2
16	18	29.0	29.7
16	16	26.0	23.9

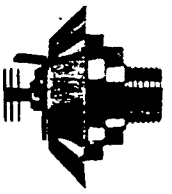
*Exception: 16x20 ft. spacing also qualifies for a 16 ft. ceiling height allowance when more than one sprinkler is installed in one room.

SPECIAL NOTE: 9' ceiling height restriction when more than one sprinkler is installed in one room

COMMERCIAL EXTENDED COVERAGE HORIZONTAL SIDEWALL—MODEL HEC-12

"K" FACTOR: 5.56 • **NOMINAL ORIFICE SIZE:** 1/2" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°F (63°, 71°C) • **APPROVALS:** U.L. listed for light hazard applications per N.F.P.A. 13 • **SERVICE RATING:** 175 p.s.i.





MODEL HEC-12 HORIZONTAL SIDEWALL

MAXIMUM DEFLECTOR DISTANCE FROM CEILING	MAXIMUM WIDTH (FT)	MAXIMUM LENGTH (FT)	MINIMUM FLOW (GPM)	MINIMUM PRESSURE AT SPRINKLER (PSI)
4" - 12"	16	20	32.0	33.1
	16	18	29.0	27.2
	16	16	26.0	21.9
	14	14	20.0	12.9

SPECIAL NOTE: This sprinkler is listed for installation up to 20" maximum deflector distance from ceiling in 145° temperature rating with special HEC-20 deflector.

THE RESIDENTIAL OMEGA™ SPRINKLER COLLECTION

Dramatically Beautiful—Elegantly Subtle

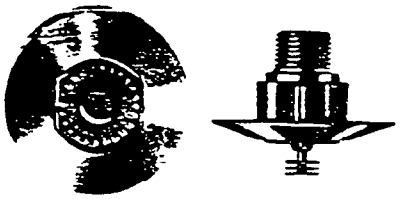
Central's Residential Omega Sprinkler is the successful culmination of years of careful thought, engineering research and development, and extensive testing. It is the most dramatic sprinkler advance in over half a century and is the forerunner of the entire Omega Sprinkler Collection.

The Residential Omega sprinkler, available in both pendent and horizontal sidewall design is at least five times faster in operation than standard commercial sprinklers. The Residential Omega sprinkler is U.L. listed in accordance with N.F.P.A. 13-D, "Sprinkler Systems—One and Two Family Dwellings, 1980."

These sprinklers have been designed to accommodate the water pressures normally found in residential areas. The semi-recessed design of the Residential Omega blends beautifully into the most discriminating homeowner's decor, with minimal potential for physical damage.

Standard finishes available are polished chrome, polished brass, and natural brass. In addition, the escutcheon plates can be plated or painted to your specifications.

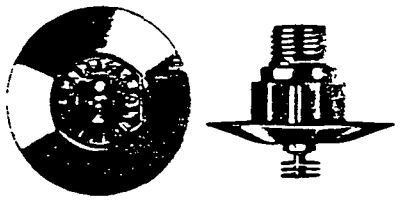
RESIDENTIAL PENDENT—MODEL R-1



"K" FACTOR: 3.85 • **NOMINAL ORIFICE SIZE:** 3/8" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°F (63°, 71°C) • **APPROVALS:** U.L. listed per N.F.P.A. 13-D, "Sprinkler Systems—One and Two Family Dwellings" (1980). See Chapter 4, "System Design" special sprinkler listing reference in Paragraph 4-1.6. • **SERVICE RATING:** 175 p.s.i.

MAXIMUM LOCATION FROM ANY WALL (FT)	MAXIMUM SPACING BETWEEN SPRINKLERS (FT)	REQUIRED SPRINKLER DESIGN AREA AND DISCHARGE—PRESSURE REQUIREMENTS ONE SPRINKLER	TWO OR MORE SPRINKLERS
6	12	18 GPM-21.9 PSI	13 GPM Each-11.4 PSI Each
7	14	18 GPM-21.9 PSI	13 GPM Each-11.4 PSI Each
8	16	24 GPM-38.9 PSI	17 GPM Each-19.5 PSI Each

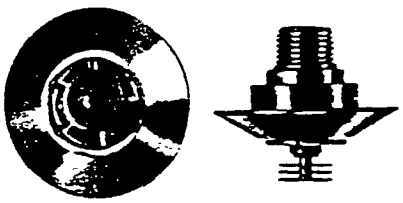
RESIDENTIAL PENDENT—MODEL C-1



"K" FACTOR: 5.32 • **NOMINAL ORIFICE SIZE:** 1/2" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°F (63°, 71°C) • **APPROVALS:** U.L. listed per N.F.P.A. 13-D • **SERVICE RATING:** 175 p.s.i.

MAXIMUM LOCATION FROM ANY WALL (FT)	MAXIMUM SPACING BETWEEN SPRINKLERS (FT)	REQUIRED SPRINKLER DESIGN AREA AND DISCHARGE—PRESSURE REQUIREMENTS ONE SPRINKLER	TWO OR MORE SPRINKLERS
6	12	25 GPM-22.1 PSI	18 GPM Each-11.4 PSI Each
7	14	30 GPM-31.8 PSI	21 GPM Each-15.6 PSI Each

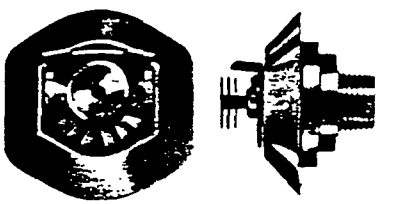
RESIDENTIAL EXTENDED COVERAGE PENDENT—MODEL EC-20



"K" FACTOR: 5.32 • **NOMINAL ORIFICE SIZE:** 1/2" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°F (63°, 71°C) • **APPROVALS:** U.L. listed per N.F.P.A. 13—D • **SERVICE RATING:** 175 p.s.i.

MAXIMUM LOCATION FROM ANY WALL (FT)	MAXIMUM SPACING BETWEEN SPRINKLERS (FT)	REQUIRED SPRINKLER DESIGN AREA AND DISCHARGE—PRESSURE REQUIREMENTS ONE SPRINKLER	TWO OR MORE SPRINKLERS
7	14	23 GPM-18.7 PSI	16.0 GPM Each-9.1 PSI Each
8	16	26.0 GPM-23.9 PSI	18.0 GPM Each-11.5 PSI Each
9	18	32.5 GPM-37.3 PSI	22.5 GPM Each-17.9 PSI Each

RESIDENTIAL HORIZONTAL SIDEWALL—MODEL HEC-12



"K" FACTOR: 5.56 • **NOMINAL ORIFICE SIZE:** 1/2" • **THREAD SIZE:** 1/2" N.P.T. • **TEMPERATURE RATINGS:** 145°, 160°F (63°, 71°C) • **APPROVALS:** U.L. listed per N.F.P.A. 13—D • **SERVICE RATING:** 175 p.s.i.

MAXIMUM DEFLECTOR DISTANCE FROM CEILING	MAXIMUM WIDTH (FT)	MAXIMUM LENGTH (FT)	MAXIMUM DISTANCE FROM ADJACENT WALL (FT)	REQUIRED SPRINKLER DESIGN AREA AND DISCHARGE PRESSURE REQUIREMENTS ONE SPRINKLER	TWO OR MORE SPRINKLERS

	14	14	7	30 GPM-29.1 PSI	21 GPM-14.3 PSI

0012955

FLOW AND PRESSURE REQUIREMENTS

As indicated in NFPA 13-D, water application rates and areas of coverage other than those specified in NFPA 13-D may be used with special sprinklers which have been listed for such specific conditions. Omega residential sprinklers have been so listed. Each requires a specific minimum available water flow rate and pressure in order to adequately protect a specified area of coverage, as follows:

ADDENDUM A

Model	Max. Distance From Any Wall	Maximum Spacing Between Sprinklers	Maximum Area of Coverage	Min. Flow Requirement Per Sprinkler		Min. Pressure Requirement At Sprinkler	
				One Spkr.	Two Spkrs.	One Spkr.	Two Spkrs.
R-1	6 ft.	12 ft.	144 sq. ft.	18 gpm	13 gpm	21.9 psi	11.4 psi
	7 ft.	14 ft.	196 sq. ft.	18 gpm	13 gpm	21.9 psi	11.4 psi
	8 ft.	16 ft.	256 sq. ft.	24 gpm	17 gpm	38.9 psi	19.5 psi
C-1	6 ft.	12 ft.	144 sq. ft.	25 gpm	18 gpm	22.1 psi	11.4 psi
	7 ft.	14 ft.	196 sq. ft.	30 gpm	21 gpm	31.8 psi	15.6 psi
EC-20	7 ft.	14 ft.	196 sq. ft.	23 gpm	16 gpm	18.7 psi	9.1 psi
	8 ft.	16 ft.	256 sq. ft.	26 gpm	18 gpm	23.9 psi	11.5 psi
	9 ft.	18 ft.	324 sq. ft.	32.5 gpm	22.5 gpm	37.3 psi	17.9 psi

Model	Max. Width of Coverage	Max. Length of Coverage	Maximum Distance from Adjacent Wall	Min. Flow Requirement Per Sprinkler		Min. Pressure Requirement At Sprinkler	
				One Spkr.	Two Spkrs.	One Spkr.	Two Spkrs.
HEC-12	12 ft.	12 ft.	6 ft.	27 gpm	19 gpm	23.6 psi	11.7 psi
	14 ft.	14 ft.	7 ft.	30 gpm	21 gpm	29.1 psi	14.3 psi

Thus, the spacing of these sprinklers is determined by characteristics of the water supply available to the sprinklers, and the number of design sprinklers. (See Chap. 4 in NFPA 13-D for a discussion of the number of design sprinklers.)

APPLICABILITY OF CSC RESIDENTIAL SPRINKLERS

Omega residential sprinklers are applicable only to:

- wet pipe sprinkler systems (see Chap. 5 in NFPA 13)
- occupancies where residential sprinklers are required or permitted by NFPA 13-D or NFPA 13
- at maximum service pressures of 175 psi.
- at maximum ambient temperatures of 110°F (for sprinklers rated at 145°F) and 125°F (for sprinklers rated at 160°F)
- where neither system piping nor the sprinklers will be exposed to freezing temperatures.

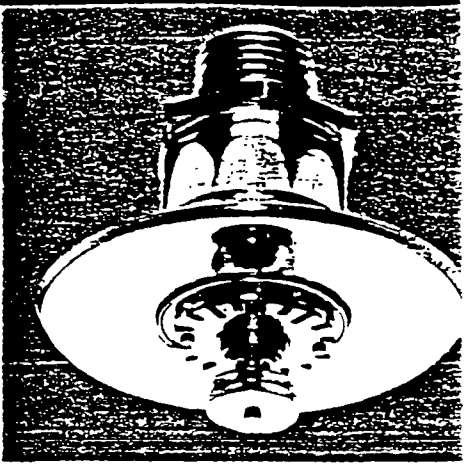
HYDRAULIC DESIGN

Omega residential sprinklers must be installed in a hydraulically designed piping system: a pipe schedule system is not applicable. This is because proper functioning of the sprinklers requires their being provided with at least the minimum flows and pressures specified above in "FLOW AND PRESSURE REQUIREMENTS".

Omega C-1A

Residential
Quick Response Commercial
Standard Commercial
Automatic Sprinkler

Manufactured by: Central Sprinkler Corporation
451 North Cannon Avenue, Lansdale, Pennsylvania 19446



1/2" Orifice Adjustable Pendent Automatic Sprinkler

Product Description

The Omega model C-1A Quick Response Commercial/Residential Pendent Automatic Sprinkler is a low profile, aesthetically pleasing, ceiling mounted sprinkler that offers a high degree of protection for human life. It operates five to six times faster than a standard sprinkler and features a spray pattern that has been shown to be effective in the control or extinguishment of commercial and residential fires.

The model C-1A incorporates a significant cost saving feature: a special escutcheon assembly that provides for 7/8" of field adjustment resulting in an easily accomplished, tight fit against the ceiling.

The Model C-1A carries a triple Listing* by Underwriters Laboratories for use as:

1. A Residential Sprinkler that qualifies for installation in residential occupancies in accordance with current NFPA 13D or NFPA 13 (160°F temperature rating only).
2. A Quick Response Commercial Sprinkler that qualifies for installation in accordance with current NFPA 13 (160 °F temperature rating only).
3. A Standard Commercial Sprinkler that qualifies for installation in accordance with current NFPA 13.

The model C-1A has a K factor of 5.56, a temperature rating of 160°F 71°C or 200°F/93°C and a maximum working pressure of 175 psi.

The model C-1A is available in two standard finishes. Its mating escutcheon plate is available in three standard finishes with additional special finishes available.

Operation: A fusible alloy pellet is compressed with a bearing disc into a copper housing by a ball plunger. Heat is absorbed by the heat collecting fins and conducted to the alloy pellet. At the rated temperature the alloy melts, causing the ball plunger to drop, freeing balls from the retaining groove. This movement allows system water pressure to force the orifice sealing mechanism and deflector assembly open. Water is then discharged in a designed flow pattern.

Technical Data

Model number: C-1A
Style: Pendent (adjustable)
Orifice size: 1/2"
K factor: 5.56
Thread size: 1/2" N.P.T.
Temperature rating:
  160°F/71°C
  200°F/93°C (not Listed for Residential or Quick Response)
Approvals: U.L., B.S. & A.
  (Cal. No. 375-75-SA)
Maximum working pressure: 175 psi
Factory hydro test: 500 psi
Standard finishes:
  Sprinkler: chrome, factory brass
  Escutcheon plate: chrome plated, brass plated, white
Length: 2 7/16"
Width: 1 1/4"
Adjustable range below ceiling:
  3/8" to 1 1/4"
Highest allowable ambient temperature:
  100°F/38°C for 160°F rating
  150°F 66°C for 200° F rating
Weight: 4.7 oz.

*For specific listing requirements see the appropriate information contained in this brochure.

AN OLD IDEA WITH A NEW TECHNOLOGY

by

JOHN A. VINIELLO
Manager, Residential Fire Protection

GRINNELL FIRE PROTECTION SYSTEMS COMPANY, INC.

0012958

AN OLD IDEA WITH A NEW TECHNOLOGY

I Historical Background

Automatic sprinkler systems have enjoyed an enviable record of protecting life and property for over one hundred years. Statistics demonstrate there has never been any multiple death fire in a completely sprinklered building where the system was properly operating.

According to National Fire Protection Association (NFPA) statistics, the only fatalities in fully sprinklered and properly supervised properties have been the result of explosions or flash fires. Self immolation by a person who was too young, too old, too intoxicated or too handicapped in some other way to protect himself properly, has been the cause of death. Unfortunately, the inadvertent closure of a valve controlling the water supply to the the sprinkler system has also rendered the system ineffective in some fire conditions.

During the mid 1970s, the National Commission on Fire Prevention and Control conducted exhaustive research in examining the fire problems in the United States. They published "America Burning" which concluded that this nation, a world leader in technological advancement, suffered from one of the highest death rates and injuries due to fire. As a result of the Commission's work, legislation was enacted in the Congress of the United States which created the U.S. Fire Administration. This Administration's objective was to reduce deaths from fire by 50% before the decade of the 1990s. Although large life loss fires, such as those occurring in hotels and motels, become national media events, statistics clearly show that the residential fire has been, and presently is, what we have characterized as the fire protection community's public enemy No. 1. From 1977 to 1981 the National Fire Protection Association (NFPA) reported that there was an average of 7,700 civilian fatalities annually attributed to fire. This would be comparable to having two 747's crash in midair each month. As one fire protection expert commented: "In the course of a normal lifetime, almost a 1/2 million people will die in the United States from fire."

II A New Technology

In cooperation with the U.S. Fire Administration, Factory Mutual Research Corporation conducted a series of fire tests during 1978 in an effort to study current sprinkler technology and its application to residential type fires. Factory Mutual concluded as a result of this research that the then available commercial/industrial type sprinkler devices were simply not adequate to protect against the type of fire loadings expected in residences. The commercial/industrial sprinklers were too slow in their operation and did not provide the high enough wall wetting pattern which was needed to cut off the perimeter fire which could be commonly expected in homes. Additional test

II A New Technology - Continued

programs, funded by the U.S. Fire Administration, in cooperation with the National Fire Protection Association and Factory Mutual, were conducted. These tests substantiated the initial research conducted at Factory Mutual and demonstrated, without question, the need for a sprinkler device with a faster response time and the capability of delivering water which provides wetting higher on the walls to help counter the perimeter fire which is common in residential fire scenarios. Grinnell Fire Protection Systems Company, Inc., in cooperating with these agencies, developed prototype sprinkler heads for these test programs.

The National Fire Protection Association established a subcommittee of N.F.P.A. 13, which developed a new residential standard for one- and two-family dwellings and mobile homes. In November of 1980, at the N.F.P.A. meeting in San Diego, N.F.P.A. 13D, Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes, was adopted. This new standard, which was based on the results of the fire test program, called for only listed new residential sprinklers for installation in accordance with the criteria established by the N.F.P.A. 13D Committee. Underwriters Laboratories (U.L.) established a new manufacturing standard, U.L. 1626, which set very stringent sensitivity, water distribution, and fire test requirements for manufacturers seeking a listing for newly designed residential hardware. In May of 1981, Grinnell Fire Protection Systems Company, Inc. became the world's first sprinkler manufacturer to successfully pass all of the U.L. tests and obtain a listing for the world's first residential fire sprinkler.

An old idea, utilizing a new technology whose time had come, was now a reality.

III Rationale

N.F.P.A. #13D Sprinkler Systems, One- and Two-Family Dwellings and Mobile Homes (1980) is "intended to provide a method for those individuals wishing to install a sprinkler system for additional life safety and property protection. It is not the purpose of this standard to require the installation of an automatic sprinkler system."

Simply stated, "where" fire protection systems are required is generally covered in building and fire codes, or local ordinances. N.F.P.A. standards, on the other hand, outline the design criteria for "how" the system should be installed in order to protect against particular potential hazard. A subtle, but important difference. Since the present scope of application of N.F.P.A. #13D (1980) deals with the design installation of automatic sprinkler systems for one and two-family dwellings and mobile homes, any system design for occupancies

0012960

III Rationale - Continued

which fall outside the scope of this standard should only be permitted with written authorization from the "authority having jurisdiction." Based on the research conducted in developing this new residential sprinkler technology, as well as fire tests and demonstrations coordinated by the U.S. Fire Administration and Factory Mutual Research Corporation, a number of "authorities having jurisdiction" are in the process of considering residential fire sprinkler ordinances. The concept of "access trade-offs", as well as "construction trade-offs" is gaining in popularity. As an example, such ordinances may include, but not be limited to, requiring the installation of residential fire protection systems in accordance with N.F.P.A. #13D (1980) in low rise, high density tyoe construction as a means of mitigating one or more of the following fire protection specifications.

Access Trade-offs

Without Residential Fire Protection	With Residential Fire Protection
Units must be within 5 minute response of nearest fire station	Waived
Units must not be located more than 150 feet from closest vehicular access way.	Waived
Standard street widths required	Reductions permitted
Street grade of 15% or greater not permitted	Waived
Must adhere to hydrant spacing requirements	Greater hydrant spacing permitted
Fire flow requirements must be met	50% reduction in required fire flow
Hazardous areas - 75 units for single means of ingress or egress	Number may increase
Nonhazardous areas - 150 units for single means of ingress or egress	Number may increase
Access for ladder trucks - 50' from rear of parking stalls to face of unit	Extended to 75' or 100'

0012961

Access Trade Offs - Continued

When any portion of a building is in excess of 150' from a water supply, it may be required that on-site fire hydrants and mains capable of supplying the required fire flow be installed.	Waived

CONSTRUCTION TRADE-OFFS

Without Residential Fire Protection	With Residential Fire Protection	Savings/ Advantage*
Tenant separation walls must be made of 5/8" Type X Fire Rated Gypsum Wallboard.	Half-inch standard Gypsum Wallboard may be substituted.	$23.00 per 1,000 sq. ft.
5/8" Type X Rated Gypsum Wallboard and 3/4" plywood must be used in one-hour floor/ceiling assemblies.	Half-inch standard Gypsum Wallboard and 5/8" plywood may be substituted in floor/ceiling assemblies.	$55.00 per 1,000 sq. ft.
Fire stops are required in the attic at every unit.	Fire stops in attic required every 3,000 square feet.	$123.00 each fire stop.
Maximum tenant travel to a fire exit must not exceed 20 feet.	Exits may exceed the maximum required travel from a tenant with one exit may be exceeded by 15 feet for a maximum travel of 35 feet.	Design Freedom
Tenants may not travel by other tenants' doors unless those doors are 3/4-hour fire rated doors in 20 minute frames with 3 UL listed spring hinge closers.	Standard doors and frames with no closers may be used.	$111.70 each door.
Interior finish must be Class "A".	Interior finish may be Class "C" or better.	Design Freedom
One-hour rating on walls and doors of hazardous areas.	No one-hour rating of doors or walls of hazardous areas.	$23.00 per 1,000 sq. ft. (walls). $111.70 each door.

0012962

Hazardous area must be one-hour rated walls with 3/4-hour rated doors with 3 UL spring hinge closers. (Hazardous areas are: common storage, common mech. rooms, etc.)	Standard 1/2 inch sheetrock and standard doors with no closers may be used.	$23.00 per 1,000 sq. ft. on walls. $55.00 per 1,000 sq. ft. on ceilings. $111.70 each door.
Every 6,000 square feet a four-hour masonry fire separation is required.	The fire rated separation would not be required until 10,000 square feet and after 8,000 square feet a two-hour separation would be permitted.	$8,345 each 4-hour wall. Note: Cost of 2-hour sheetrock wall-$750.
Buildings must be placed on property to not exceed 50' from paved parking area for aerial rescue operations.	Buildings allowed up to 125' from street or parking area.	Allows maximum use of site and landscaping.
There can be no windows within 15 feet of other tenants travel.	Windows may be placed anywhere desired.	Design Freedom

*Builder/Developer, Cobb County, Georgia. (1982 Dollars)

IV Housing Trends

America is facing a severe housing crisis. If the demographic demands of the fertile 50s are not met, this country will face, during the decade of the 80s, a housing shortage unparalleled in the annals of the residential construction industry. Because of rising construction costs, coupled with high interest rates, affordable housing is beyond the economic reach of the majority of our population. Many builders believe that the days of the "sprawling single family dwelling" are coming to an end. In an effort to make greater utilization of skyrocketing land costs, many builders/developers are turning to "high density" construction in the form of low-rise condominiums, townhouses, triplexes, four-plexes, and garden apartments. It is hoped that this type of residential construction will make housing more affordable and provide a salvation for a severely depressed housing industry. Unfortunately, the extra burdens that this type of construction is placing on local fire departments is becoming very real indeed.

0012963

IV Housing Trends - Continued

It is well known that the tax reform legislation presently sweeping the country has caused substantive cutbacks in many municipal budgets. These fiscal constraints are dramatically affecting fire department funding in many cities and towns. Manpower reductions and the lack of ample funding for additional fire stations, new equipment and training programs has the potential of seriously hampering the fire fighting effectiveness in many municipalities; and high density type construction will not help the situation. Financially beleaguered fire departments simply do not have the necessary resources needed to fully protect these properties. As a result, many municipalities are turning to private fire protection in the form of residential fire sprinklers to supplement already strained public protection.

V Financial Motivations for Residential Fire Sprinkler Systems

In addition to access and construction trade-offs which are gaining popularity among the fire services, a number of financial inducements are being enacted which will provide financial motivation for individuals to install residential fire sprinkler systems.

Insurance Savings

Following the 1979 test program in Los Angeles, an Ad-hoc Committee composed of the insurance industry conducted a series of fire tests to consider the impact of residential sprinklers on fire losses in dwelling properties. Although it was acknowleged that the greatest benefit of residential fire sprinklers will be in the saving of lives and preventing injuries from fire, the major focus of this test program was on the single factor of determining the impact on property loss reduction.

Based on the results of this test program, it was the observation of the Ad-hoc Committee that residential fire sprinkler systems definitely had the ability to reduce claim payment expenses. The committee further recognized that an earlier (1977) I.S.O. discount was less than what seemed to be appropriate as a result of those tests.

Since 1977, the Insurance Services Office has had filings in many states providing a 5% discount on a total homeowner policy premium covering a dwelling with an approved and properly maintained sprinkler system that covers all areas of the insured structure. Their filings also allowed a 2% discount for a similar system that omits specified areas such as closets, attics and bathrooms.

After considering the report from the Ad-hoc Insurance Committee, and the U.S. Fire Administration's sprinkler comparison test program, the Homeowner's Committee of I.S.O. made a recommendation that could result in a tripling of the

0012961

Insurance Savings - Continued

discount for residential sprinkler systems installed in accordance with N.F.P.A. 13D (1980). Discounts of up to 15% would be applied to the entire homeowner policy premium for single family residences protected in accordance with N.F.P.A. 13D (1980). Since a homeowner premium is multi-peril in nature, it is estimated that the fire protection portion of the premium usually accounts for 40% of the entire policy. A 15% discount applied to the total homeowner premium translates into a fire insurance discount of almost 37%.

Water Damage

It has been suggested that the installation of a residential fire sprinkler system in a home would cause an insurance company to penalize a homeowner because of the threat of water damage due to inadvertent sprinkler leakage. Insurance statistics from commercial underwriting departments of several large insurance companies demonstrate that sprinkler leakage is one of the most profitable lines of coverage that insurance carriers underwrite. The payment of claims for the inadvertent discharge of sprinklers is minimal considering the number of exposure units (large numbers of sprinkler installations in commercial/industrial properties) carriers underwrite. As a result of this excellent experience, the ISO recommendation of a 15% reduction on a total homeowner premium when a residence is protected with a system installed in accordance with N.F.P.A. 13D (1980), does not include a penalty for sprinkler leakage.

Since I.S.O. provides rate making advice for its subscribing membership, the implementation of these recommendations will depend on individual carriers. I.S.O. has proceeded with state filings with a number of Superintendents of Insurance and several adoptions of this credit have already taken place. (See Table I enclosed)

Real Estate Tax Reductions

On January 1, 1981, the State of Alaska enacted into law a significant piece of legislation which will impact dramatically the installation of sprinkler systems throughout the state.

The law provides that 2% of the assessed value of any structure would be exempt from taxation if the structure is protected with a fire protection system. The word "structure" is significant in the law since it also applies to homes.

In effect, if a home was assessed for $100,000, for purposes of taxation, the assessed value would be computed at $98,000, provided it had a fire protection system.

This law has received widespread attention, particularly among the fire services and a number of jurisdictions are studying its implications for potential adoption in other states. (Copy of law is included)

0012966

Homeowner Insurance

Insurance paid by an individual who owns and occupies a dwelling. The ISO recommendation would allow a total premium credit of up to 15% if the dwelling has complete sprinkler protection and smoke detectors are installed.

Fire Dwelling Insurance

A fire dwelling policy is normally issued to an individual who owns but does not occupy a dwelling. The ISO recommendation would allow a premium credit of up to 20% if the unit is completely sprinklered and smoke detectors are installed.

Mobile Home Supplement

Sometime in 1983 ISO will be recommending to its member companies additional credits for owners of mobile homes.

A BILL

For an Act entitled: "An Act relating to fire prevention."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*SECTION 1. AS 18.70 is amended by adding a new section to read:

Sec. 18.70.081. APPROVAL OF FIRE PROTECTION SYSTEMS. Before October 30 of each year the Department of Public Safety shall prepare and make available a list of approved fire protection systems to the Department of Community and Regional Affairs, the Department of Commerce and Economic Development, and the public.

*SECTION 2. AS 29.53.020(a) is amended by adding a new paragraph to read:

(7) real property to the extent and subject to the conditions provided in (j) of this section.

*SECTION 3. AS 29.53.020 is amended by adding a new subsection to read:

(j) Two percent of the assessed value of a structure is exempt from taxation if the structure contains a fire protection system approved under AS 18.70.081, in operating condition, and incorporated as a fixture or part of the structure. The exemption granted by this subsection is limited to

(1) an amount equal to two percent of the value of the structure based on the assessment for 1981, if the fire protection system is a fixture of the structure on January 1, 1981; or

(2) an amount equal to two percent of the value of the structure based on the assessment as of January 1 of the year immediately following the installation of the fire protection system if the fire protection system becomes a fixture of the structure after January 1, 1981.

***SECTION 4. AS 42.05.381 is amended by adding a new subsection to read:**

(d) A utility shall provide for a reduced fee or surcharge for standby water for fire protection systems approved under AS 18.70.081 which use hydraulic sprinklers.

***SECTION 5. AS 44.33.170 is amended by adding a new subsection to read:**

(b) Tourist attraction development matching money may also be obtained for the purpose of purchasing and installing a fire protection system approved under AS 18.70.081 for a building used or to be used for the purposes described in (a) of this section.

***SECTION 6. AS 45.95.020(a) is amended to read:**

(a) The commissioner shall, under regulations and policies adopted by him, make small business loans to acquire, finance or refinance or equip businesses, including farming equipment, fire protection systems approved under AS 18.70.081, mining and fishing, not exceeding $500,000. The loans shall be secured by acceptable collateral and may not exceed 75 percent of the appraised value of the collateral offered as security. The rate of interest may not exceed nine and one-half percent a year on the unpaid balance.

***SECTION 7. AS 45.95.020 is amended by adding a new subsection to read:**

(a) The commissioner may not disqualify an applicant for, or prejudice an applicant's priviledge to receive, a loan to purchase and install a fire protection system solely because of a loan already made to the applicant under this chapter.

New sprinkler system sparks interest in small-home fire protection

Next month, Grinnell Fire Protection Systems Company, Inc. will introduce the nation's first U.L. listed residential sprinkler. The product, according to a Grinnell spokesman, is the "first of a new generation of sprinklers".

It was designed to meet National Fire Protection Association (NFPA) standard 13D, which prescribes the installation and maintenance procedures for such systems in one- and two-family dwellings and mobile homes — and was developed over years of research sponsored by the Federal government.

Grim statistics clearly indicate a need for improved residential fire protection. In 1980, 5,446 civilians died as a result of residential fires; fires in one- and two-family homes accounted for 4,175 of those deaths. Although fatalities were down from 1979, according to Marion Cole at NFPA, the number of residential fires rose 5% over 1979. And property loss, estimated at over $3 billion last year, showed a 20% increase over the previous year.

A major drawback to getting popular acceptance for residential sprinklers: sprinkler head appearance. According to a study prepared by several organizations, home-owners seem to care more about esthetics than safety. And while Grinnell hasn't completely been able to overcome that snag, the new product has, according to Fire Marshall Gary Carmichael of San Clemente, California*, "taken all the benefits of a commercial system and fit them into residential needs."

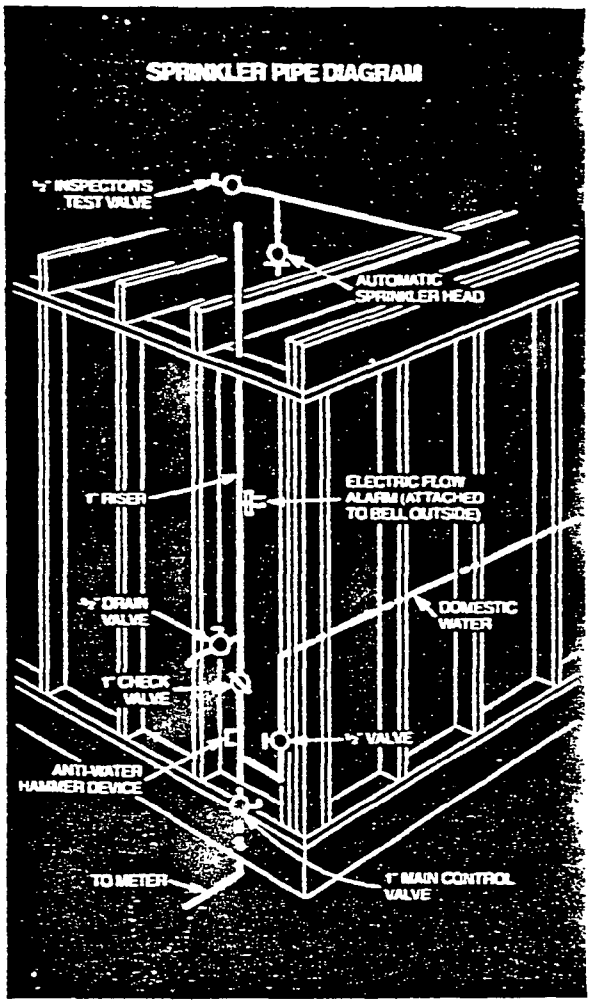
Sensitivity. A major obstacle, says Carmichael, was finding a head sensitive enough to extinguish flames before lethal toxic fumes build up, yet not so sensitive as to be affected by heat or smoke from stoves or cigarettes.

Recent technological developments now permit the new head to achieve the crucial balance between under- and over-sensitivity so that it reacts up to five times faster, than a commercial head, the manufacturer says.

Low Cost. A 2,000 square foot home, says the manufacturer, should be adequately served by a $1,700 to $2,000 system. Ideally, the system will be connected directly to domestic water supplies *(see diagram above right)*. Where that supply is insufficient, storage tanks can be installed in basements or elsewhere.

Esthetics. The head is small, and although it must be exposed to be effective, the manufacturer has developed as inconspicuous a unit as possible. Grinnell is working on other devices to improve the appearance.

Coverage. Each head covers a 144 square foot area. A 12'x12' room requires one head in the center of the ceiling; a 12'x24' space takes two heads set at specified distance from each other



Low Water Requirements. The system requires 18 gal./min. for one head, 26 gal./min. for two. The head distributes a fine spray in a pattern designed to extinguish "perimeter fires" — fires that occur on the walls. This type of fire is common in residential spaces.

Incentives for the Homebuilder. Fire Marshall Carmichael as well as others concerned with fire safety expect an increasing number of communities to require residential sprinklers in accordance with the recently revised standard from NFPA. Some communities are already making it advantageous by offering builders "access to trade-offs" — that is, allowing builders to increase density, to narrow streets, to build beyond the range of a fire station — if they install a residential sprinkler system

According to U S. Fire Administration's Harry Shaw, "as far as the solution to the residential fire problem is concerned, the residential sprinkler system, working off the domestic water supply, is probably the ultimate answer to residential fire protection."

For more information on the Grinnell fire sprinkler system, *circle* 200 *on the reader service card*. Also see the Literature section on Page 95 for agencies to contact for details and statistics

— JENNIFER A. WAGNER

*San Clemente, California is the first community in the U S to mandate residential sprinklers

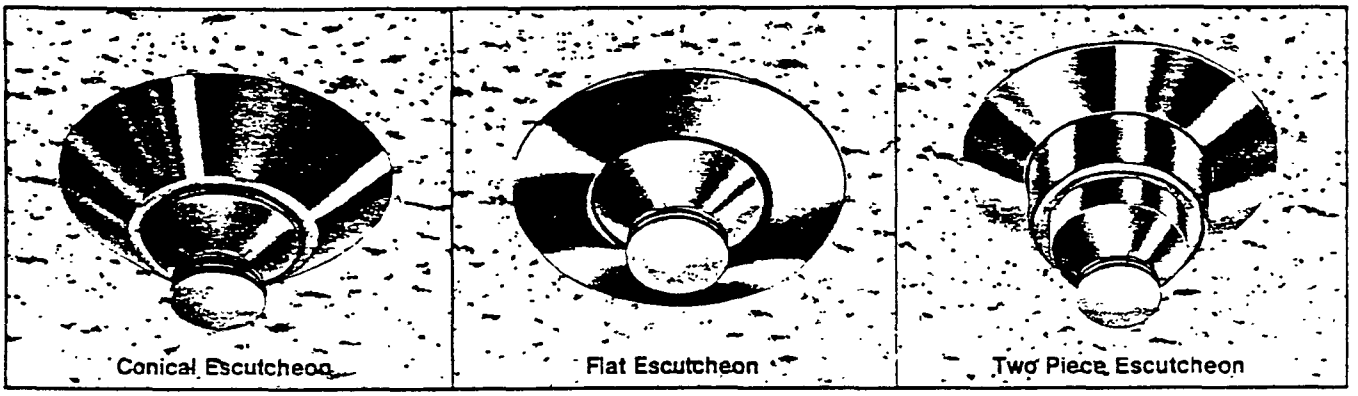
Reliable®

Model ZX-1 Mach 1 Quick Response Flush Pendent Horizontal Sidewall Automatic Sprinkler

Bulletin 134A

RTI 55.8 / 30.8 (FM)



Product Description

The Model ZX-1 Mach 1 Quick Response Sprinkler is a fusible solder pellet type automatic sprinkler.

This sprinkler has demonstrated a response time in laboratory tests which is five to ten times faster than standard response sprinklers.

This quick response enables Model ZX-1 Mach 1 Sprinklers to apply water to a fire much faster than standard response sprinklers of the same temperature rating.

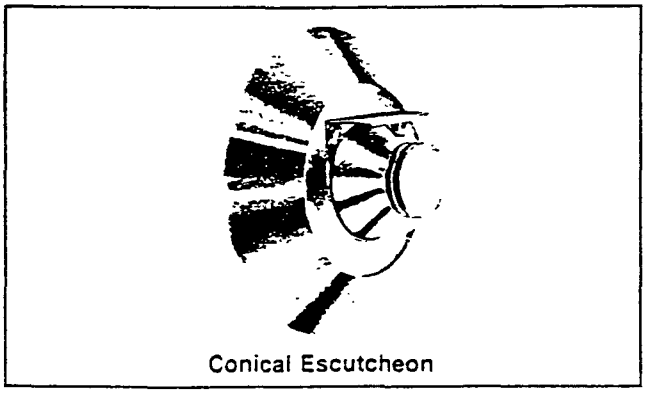
Modern architectural designs require sprinklers that provide not only the best fire protection but also an attractive appearance. The Model ZX-1 Mach 1 meets both criteria. The flush style of this sprinkler provides for an aesthetically pleasing installation by concealing all of the sprinkler operating parts with the exception of the finned sensor. Only when the solder pellet melts does the operating mechanism release from the sprinkler allowing the deflector to be extended for distributing the discharging water.

The Model ZX-1 Mach 1 Flush Pendent Sprinkler is to be ordered with one of three escutcheons—a conical, a flat or a two piece conical that is highly adjustable—all of which appeal to aesthetic concerns while resolving difficult ceiling installations.

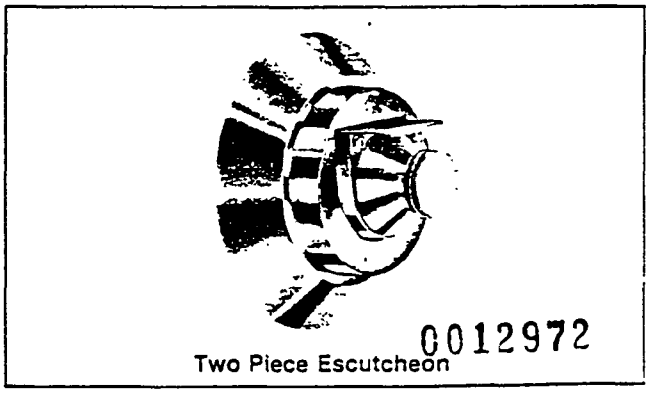
The Model ZX-1 Mach 1 Horizontal Sidewall Sprinkler is to be ordered with either of two escutcheons—a conical or a two piece that is highly adjustable—both of which resolve aesthetic concerns.

Application and Installation

The Model ZX-1 Mach 1 is a UL Listed Quick Response Sprinkler for use with fixed fire protection systems: Wet, Dry, Deluge or Preaction. Care must be exercised that the orifice sizes, temperature ratings, and sprinkler spacings are in accordance with this bulletin and the latest published standards of the National Fire Protection Association or the approving authority having jurisdiction. Quick response sprinklers are intended for standard area coverage and standard water densities as specified in NFPA 13. Quick response sprinklers and standard response sprinklers should not be intermixed.



Conical Escutcheon



Two Piece Escutcheon

0012972

These sprinklers must be installed with a Reliable Model ZX Sprinkler Wrench. Any other type of wrench may damage the sprinkler which is designed to allow wrenching with the shipping cap installed, thereby providing further sprinkler protection. Shipping caps should be removed only after ceilings and walls are finished and when escutcheons are being installed. When Model ZX-1 Mach 1 sprinklers are ordered, sprinklers and escutcheons are packaged separately. Model ZX escutcheons are the only escutcheons that can be used with these sprinklers. The use of any other escutcheon will void all approvals and negate all warranties. Also, each installed sprinkler must include one of the escutcheons.

Use care to avoid damaging the sprinklers before, during and after installation. Inspect all installed sprinklers to insure the sensor fins and the horizontal sidewall deflector shelf have not been damaged. Refer to Figs. 4 and 5 for the correct horizontal sidewall deflector shelf angles. Replace all sprinklers which have any sign of damage.

Maintenance

Model ZX-1 Mach 1 Quick Response Sprinklers should be inspected quarterly, and the sprinkler system maintained in accordance with NFPA-13A. Do not clean the sprinklers with soap and water, ammonia or other cleaning fluids. Remove any sprinkler which has been painted (other than factory applied) or damaged in any way. A stock of spare sprinklers should be maintained to allow quick replacement of damaged or operated sprinklers.

Reliable...For Complete Protection

Reliable offers a wide selection of sprinkler components. Following are some of the many precision-made Reliable products that guard life and property from fire around the clock.

- Automatic sprinklers
- Flush automatic sprinklers
- Recessed automatic sprinklers
- Concealed automatic sprinklers
- Adjustable automatic sprinklers
- Dry automatic sprinklers
- Intermediate level sprinklers
- Open sprinklers
- Spray nozzles
- Alarm valves
- Retarding chambers
- Dry pipe valves
- Accelerators for dry pipe valves
- Mechanical sprinkler alarms
- Electrical sprinkler alarm switches
- Water flow detectors
- Deluge valves
- Detector check valves
- Check valves
- Supertrol electrical system
- Sprinkler emergency cabinets
- Sprinkler wrenches
- Sprinkler escutcheons and guards
- Inspectors test connections
- Sight drains
- Ball drips and drum drips
- Control valve seals
- Air maintenance devices
- Air compressors
- Pressure gauges
- Identification signs
- Fire department connection

The equipment presented in this bulletin is to be installed in accordance with the latest published Standards of the National Fire Protection Association, Factory Mutual Research Corporation, or other similar organizations and also with the provisions of governmental codes or ordinances whenever applicable.

Reliable Sprinkler Devices, protecting life and property for over 70 years, are approved by all fire insurance and government agencies, and are installed and serviced by Reliable's chain of representatives.
Reliable representatives, located throughout the United States, Canada and foreign countries, have a life-time of experience and are as near as your telephone

Model ZX-1 Quick Response Institutional Automatic Sprinkler

Product Description

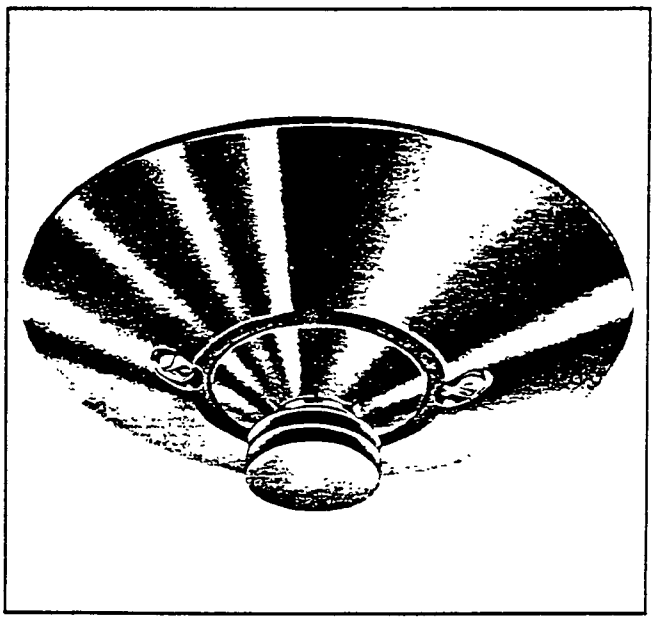
The Model ZX-1 Quick Response Institutional Sprinkler is a fusible solder pellet type of automatic sprinkler.

This sprinkler has demonstrated a response time in laboratory tests which is five to ten times faster than standard response sprinklers.

This quick response enables Model ZX-1 Mach 1 Institutional Sprinklers to apply water to a fire much sooner than standard response sprinklers of the same temperature rating. Only when the solder pellet melts does the operating mechanism release from the sprinkler allowing the deflector to be extended for distributing the discharging water.

Modern architectural designs require sprinklers that provide not only the best fire protection but also an attractive appearance. The Model ZX-1 meets both criteria. The flush style of this sprinkler provides for an aesthetically pleasing installation by concealing all of the sprinkler's operating parts with the exception of the finned sensor.

The Model ZX-1 Quick Response Institutional Sprinkler has been designed for use in correctional and mental facilities, and in any other type of institution where attempts by an occupant at self injury might involve the use of a fire sprinkler. The heat sensor is designed to release any type of suspended load that exceeds 80 lbs. The conical escutcheon assembly is firmly attached to the sprinkler body with tamper resistant fasteners.



Application and Installation

The Model ZX-1 is a UL Listed Quick Response Sprinkler for use with fixed fire protection systems: Wet, Dry, Deluge or Preaction. Care must be exercised that the orifice sizes, temperature ratings, and sprinkler spacings are in accordance with this bulletin and the latest published standards of the National Fire Protection Association or the approving authority having jurisdiction. Quick response sprinklers are intended for standard area coverage and standard water densities as specified in NFPA 13. Quick response sprinklers and standard response sprinklers should not be intermixed.

These sprinklers must be installed with a Reliable Model ZX Sprinkler Wrench. Any other type of wrench may damage the sprinkler which is designed to allow wrenching with the shipping cap installed, thereby providing further sprinkler protection. Shipping caps should be removed only after ceilings and walls are finished and when escutcheons are being installed. When Model ZX-1 sprinklers are ordered, sprinklers and escutcheons are packaged separately. Model ZX Institutional Escutcheons are the only escutcheons that can be used with these sprinklers. The use of any other escutcheon will void all approvals and negate all warranties. Also, each installed sprinkler must include one of the escutcheons.

Use care to avoid damaging the sprinklers before, during and after installation. Install them according to Caution Sheets CA-24 and -30, and inspect all installed sprinklers to insure the sensor fins have not been damaged. Replace all sprinklers which have any sign of damage.

TERMS AND CONDITIONS OF SALE

General

All sales by Central shall be subject to the terms and conditions stated herein. The placement of orders with Central shall constitute acceptance of these terms and conditions. If buyers' purchase orders or confirmations are at a variance with the terms and conditions herein, they shall not be binding upon Central and Central's terms and conditions shall take precedence.

Prices

All selling prices are F.O.B. point of shipment.

Price Changes

Prices are subject to change without prior notice.

Late Charges

Domestic, including Canada and Puerto Rico — A charge of 1½% per month will be added to all amounts owed Central beyond terms. This represents 18% interest on an annual basis.
Overseas — Irrevocable Letter of Credit.

Minimum Charge

$50.00 per order.

Export Packing

An extra charge will be made for special packaging in the amount of 1% of the cost of the goods being shipped for air and ocean shipments. If it is required that we fully crate a shipment at customer's request, the charge for this crating will be 3% of the cost of the goods being shipped.

Special Handling & Packaging

An extra charge may be made for special handling and packaging.

Special Terms

Special material orders and made-to-order products may not be cancelled unless agreed to by Central in writing, and upon agreement for compensation for work already performed.

Method of Shipment

Unless shipment method is designated by the Buyer, Central will make this selection at Buyer's risk.

Return Shipments

There shall be no credit given for material returned without written authorization. Requests for such returns shall include the date and invoice number of the original purchase. Returns will be credited for the amount of the purchase price less 20% for handling, inspection, and retesting provided the goods are in resaleable condition. Returns must be shipped freight prepaid. Omega's, dry pendents, and dry horizontal sidewall sprinklers are non-returnable. Materials purchased for you from other manufacturers are subject to their return policy terms.

Liability

Shipping or delivery dates are approximate only. Central assumes no penalty or liability for delays under any circumstances.

Warranty

Central manufactured products are warranted against defects in material and workmanship solely to original purchasers from Central. This warranty will continue for a period of one year from the shipping date. Materials found to be defective by Central shall be repaired or replaced at Central's option. *Central will not be responsible for labor charges or consequential expenses or damages incurred as a result of defective products.*

This warranty is expressly made in lieu of any and all other warranties, expressed or implied, including the warranties of merchantability and fitness.

Complaint Counsel's Responses to Respondents' Interrogatories; Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

Pursuant to the parties' continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), enclosed please find a supplemental response to Respondents' Interrogatories, as well as a package of documents responsive to Respondents' First Request for Production of Documents.

With respect to the documents, Bates pages 11769 - 11919, and 12157 - 12170 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 40, 44, 45 and 60, and may also be responsive to Respondents' Interrogatory No. 122. Bates pages 11920 - 12156, and 12363 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 41, 44, 45 and 60, and may also be responsive to Respondents' Interrogatory No. 123. Bates pages 12171 - 12361 are or may be responsive to Request Nos. 3, 5, 7, 12, 14, 15, and may also contain information responsive to, among others, Request Nos. 9, 23, 24, 25 and 27, and may also be responsive to Respondents' Interrogatory No. 122. Bates page 12362 is or may be responsive to Request Nos. 3, 5, 7, 12 and 41, and Respondents' Interrogatory No. 123. Bates pages 12364 - 12430, and pages 12438 - 12450 are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 15, 23, 37, 38, 40, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 61 and 69, and may also be responsive to Respondents' Interrogatory No. 119. Please note that portions of the documents including consumer names, addresses, and telephone numbers have been redacted in accordance with 16 C.F.R. § 1015.17 and 15 U.S.C. § 2074(c). Bates pages 12431 - 12437, and 12451 - 12456

are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 21, 22, 25, 26, 27, 37, 39, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 57, 58, 68, 69 and 70, and may also be responsive to Respondents' Interrogatory No. 120. Bates pages 12457 - 12479 are or may be responsive to Request Nos. 3, 7, 14, 15, 38, 40, 46, 47, 48, 49, 50, 51, 52, 53, 61, 62 and 69, and may also be responsive to, among others, Respondents' Interrogatories 46, 51, 52, 53 - 73, 74, 76, 77, 88, 89 and 118. Please be advised that all documents are provided without waiving objections stated in Complaint Counsel's Responses to Respondents' First Set of Interrogatories and Complaint Counsel's Responses to Respondents' First Request for Production of Documents.

Sincerely,

Deborah S. Orlove

Re: In the Matter of Central Sprinkler Corp., and Central Sprinkler Co.
Docket No. CPSC 98-2

Dear Ms. Dunn:

This is in response to your inquiry of September 21, 1998, regarding documents pertaining to Underwriters' Laboratories ("UL") and a request for information under the Freedom of Information Act, 5 U.S.C. § 552.

Release of the UL documents to the public record first requires the issuance of an Order. On August 5, 1998, I issued the first of five temporary stays of these proceedings. In my view, a stay of the proceedings affects all aspects of the case, including the issuance of an Order directing release of UL (and other) documents to the public record.

I am on record, with my most recent Order granting a stay to September 29, 1998, that further extensions will be disfavored. Please be assured that should settlement not be reached and proceedings resume, an Order pertaining to the UL (and other) documents will be issued expeditiously.

Sincerely,

William B. Moran

ORDER REGARDING FIRST PREHEARING CONFERENCE

The First Prehearing Conference ("First Conference") in this matter was held on June 16, 1998. This Order relates to issues raised during the First Conference.

1. **Other sprinkler systems and establishment of a Section 15 violation.**

Central Sprinkler Corp. and Central Sprinkler Co. ("Respondents" or "Central") asserted that in order to establish a Section 15 (15 U.S.C. § 2064) violation under the Consumer Product Safety Act ("CPSA"), Complaint Counsel must show not only that Omega Sprinklers ("Omega" or "Omegas") fail at a particular, but yet to be determined, rate but also that such rate is greater than the rate of comparable competitive sprinklers in the same kind of environment. Thus, Central asserts that the failure rate (in the field or under laboratory testing) of its sprinklers must be judged by "reference to what other sprinklers would do under . . . similar circumstances." Tr. 8.

It is the Court's view that such a standard would create several sub-trials and, attendant with such an approach, expand the number of parties from Central to the entire sprinkler industry. Not only would this be unwieldy, it also would be irrelevant to the issues here. Other

sprinkler systems may or may not present a substantial product hazard, but such determinations are appropriate only for another day in the wake of some other possible investigations, if they are ever warranted and after they occur.

In short, issues pertaining to other sprinkler systems are speculative and a distraction from the matter at hand. This case is very simply about Central's Omega sprinklers and only about them. For the same reasons, Central will not be permitted to introduce evidence in its defense that its sprinklers fail no more often than those of other manufacturers. Accordingly, the Court will not permit evidence pertaining to what other sprinkler systems may or may not do, their failure rates, etc.[1]

2. **Central's non-litigation related remediation efforts.**

At the First Conference, the Court alluded to Central's remedial and testing program, noting that such a program carries with it a possible implication that there is something wrong with Omegas. It was observed that companies do not undertake remediation programs when there is nothing wrong with their product.[2] While a manufacturer may undertake an "education program" to dispel concerns and misconceptions, a "remediation program" involves much more. Respondent suggests that it is being a responsible "proactive" manufacturer and no inference should be drawn from its actions.

The Court appreciates that *in the context of specific litigation*, efforts at remediation may

---

[1] Should Central wish to argue these points further it may file a motion for reconsideration within thirty (30) days of this Order.

[2] The Court assumes that Complaint Counsel has inquired in detail through discovery about Central's remediation program.

not be considered in determining liability. However, a separate question is the extent to which it is appropriate and fair for the Court to consider Central's remediation program to establish a Section 15 violation if such remediation occurs when there is no litigation. The parties should specifically address the attendant public policy aspects of considering such non-litigation related remediation efforts and direct the Court to applicable precedent.

Simultaneous briefing on this issue shall be submitted by September 30, 1998.

3. **Respondent's Motion for Reconsideration of my May 15, 1998, Order regarding jurisdiction and certification for interlocutory review.**

During the May 29, 1998, conference call, I informed the parties that I had reconsidered my May 15th Order and reaffirmed that the Consumer Product Safety Act applies to the sprinklers in issue. At the First Conference, I denied certification for interlocutory review, finding that granting such review would not materially advance the ultimate termination of this litigation as the Consumer Product Safety Commission has already considered the issue of jurisdiction in voting to issue the Complaint. In addition, the General Counsel's office which advised the Commission on the issue of jurisdiction originally would again be advising it.[3] Finally, and independent of this basis, I noted that Complaint Counsel intends to provide evidence that Omegas are/have been installed in residences, including apartments. Thus, at a minimum,[4] it cannot be reasonably argued that the Consumer Product Safety Act does not apply

---

[3] Complaint Counsel explained at the First Conference that the General Counsel is shielded from Complaint Counsel. Thus, Complaint Counsel would be filing a brief before the Commission and the General Counsel again would be advising the Commission.

[4] This observation should not be interpreted as a retrenchment, in any manner, from the scope of my original Order upholding jurisdiction.

to such sprinklers. Central, to some degree, appears to concede at least this much, as it presented in its brief an alternative limited jurisdiction argument confined to residences.

4. **Factory Mutual Research Corporation's ("FMRC") request to participate as a non-party.**

Neither Central nor Complaint Counsel object to FMRC's request to participate as a non-party. Accordingly, FMRC's request is GRANTED. However, FMRC is directed to disclose all communications, oral or written, that it has had in the past, currently or has in the future to the other party, relating to the matters in issue. Thus, within seven (7) days of this Order, any communications between FMRC and Central are to be disclosed to Complaint Counsel and any communications between FMRC and Complaint Counsel are to be disclosed to Central. As indicated, this is a continuing obligation for FMRC.

5. **Establishment of a *prima facie* case.**

As stated in the First Conference, Complaint Counsel is not obligated to establish the cause of the alleged defect(s) with the Omegas. Section 15 makes clear that what must be shown is the presence of "a product defect which (because of the pattern of defect, the number of defective products distributed in commerce, the severity of the risk or otherwise) creates a substantial risk of injury to the public." Complaint Counsel is obligated to show that the Omegas in issue have a substantial defect which occurs in a significant percentage of the sprinklers. Complaint Counsel is directed to brief the issue of the showing necessary to establish a *prima facie* case, including its opinion of the percentage of Omegas which must be shown to be defective. The brief shall be filed within thirty (30) days of this Order. Thereafter, Central shall file its reply. Should Complaint Counsel also intend to introduce evidence of the alleged *cause* of

the defect(s), Central is entitled to be so informed. Similarly, should Complaint Counsel intend to assert that any alleged instances of Omega's non-activation in fires is attributable to Omega defect(s), Respondent is entitled to know this.

On the other hand, the Court ruled and reaffirms here that the absence of personal injuries is not probative of whether Omegas have a substantial defect.

6. **The adequacy of Central's proposed remediation plan.**

At the First Conference, the Court rejected Central's suggested approach that the adequacy of its remediation plan be considered first. The Court affirms that the hearing will proceed first with evidence regarding whether or not the the Omegas present a substantial product hazard, with the second phase (assuming sufficient evidence is presented in the first phase) addressing the appropriate remedy.

While counsel for Central has asked that briefing be permitted by the Court to consider having the hearing begin by addressing the remediation issue first, this request is DENIED. The statute envisions determination of a defect first and remedy second. This makes sense, absent a complete stipulation by the parties, as the adequacy of the remedy may hinge upon the evidence presented and the magnitude of the problem, assuming one is shown. Thus, evaluation of whether a "full and complete remedy" has been provided may not be adequately assessed until after the evidence is produced.

Discovery Issues

At the time of the First Conference, Central had yet to deliver some 500,000 pages of documents (alternatively described as "some 400 boxes" of documents) to Complaint Counsel.

Central wanted Complaint Counsel to sign its confidentiality agreement, an agreement which would severely limit the public record, before providing the documents.

The Court ordered that all of the documents be delivered to Complaint Counsel by June 18, 1998, followed by a **"complete index similar to the index that Complaint Counsel has provided to Central"** . . . with the first 100 boxes due on June 26 and the remaining 300 boxes and indexes due by July 3, 1998. The terms of the confidentiality order set forth in my June 3, 1998, Order at pages 5 and 6 were made applicable to Complaint Counsel. Central shall be informed prior to the disclosure of these documents to consultants for Complaint Counsel and have an opportunity to object to disclosure to those documents on grounds such as whether they would reveal trade secrets to a competitor.

As to the public record itself, the Court agrees with the general principle that the public record should be as open as possible, save for legitimate claims of confidentiality. The Court directed that, prior to presenting any documents for resolution of disputes, the parties are to confer in order to determine which documents can, by agreement, be entered into the public record, leaving as a remainder only those documents over which there is a *legitimate* dispute for inclusion in the public record. As to those documents which may remain in dispute, Central is directed to provide very specific reasoning as to why they should be shielded from the public record, in the same manner as the June 3rd Order to Underwriters Laboratory and Factory Mutual Research Corporation. This means that each item attempted to be shielded, line by line, must be supported by substantial reasons, and as more particularly set forth in that June 3rd Order at pages 4 and 5.

Witnesses

While the parties' witness list is evolving, both sides were directed to identify to the other those fact witnesses presently known, other than those witnesses covered under some privilege, who do not need to be identified yet. Any witnesses that either side feels need not be disclosed to the other side should be identified to the Court by an *in camera* motion, which submission completely sets forth the grounds for withholding the witnesses' identification at this time.

Simultaneous Disclosures

The Court rejected Central's suggestion that there be a staggered disclosure of witnesses and documents and directed that these disclosures be simultaneous. The parties agreed to disclose fact witnesses, identifying anyone who is knowledgeable about the case.

Discovery Schedule

The Court, after considering the parties proposed discovery schedules, adopted that proposed by Complaint Counsel, as modified by the particular orders made during the First Conference.

Hearing Location and Witnesses

At the First Conference the Court raised the possibility of accommodating both parties with their respective preferred hearing location, with the first phase being conducted in Washington, D.C. and the second being conducted in Philadelphia, Pennsylvania. The parties are directed to provide the Court by November 6, 1998, their updated witness list, indicating where

the witnesses are located, and an estimation of the time needed for direct testimony in order that the Court may issue an Order directing the hearing dates and locations.

ORDER DIRECTING REPLIES

Pending before this Court are two matters. The first is Consumer Product Safety Commission's ("Complaint Counsel") Motion to Compel Answers to Interrogatories and Central Sprinkler Corp. and Central Sprinkler Co.'s ("Respondents") opposition thereto. The second matter is Respondents' Renewed Motion to Compel Full and Complete Responses to Interrogatories and Document Requests.

Upon consideration of the first matter, the Court desires the benefit of a reply to Respondents' opposition. Such reply shall not exceed fifteen (15) pages and shall be submitted to the Court by facsimile within five (5) days (Monday, July 13, 1998). No further responses shall be permitted.[1]

Similarly, in anticipation that Complaint Counsel will file an opposition to the second matter, Respondents are afforded the opportunity to file with the Court (by facsimile) a reply to such opposition within five (5) days of service. Such reply shall also be limited to fifteen (15)

COMPLAINT COUNSEL'S MOTION FOR EXTENSION OF TIME TO FILE REPLY BRIEF TO UNRECEIVED OPPOSITION, AND OPPOSITION TO UNRECEIVED MOTION

COMES NOW Complaint Counsel, and respectfully requests a seven-day extension of time to file its reply to Respondents' Opposition to Complaint Counsel's Motion to Compel Discovery, and an extension of time to allow it 10 days from receipt of Respondents' Renewed Motion to Compel to file a response thereto.

Yesterday, July 8, 1998, Complaint Counsel was served by hand with the Judge's *Order Regarding First Prehearing Conference*, as well as the Judge's *Order Directing Replies* in the above-captioned litigation. In the *Order Directing Replies*, the Court directs Complaint Counsel to reply to Respondents' Opposition to Complaint Counsel's Motion to Compel Answers to Interrogatories by Monday, July 13, 1998. Complaint Counsel has never received service of any such Opposition. The Judge's Order is the first that Complaint Counsel has heard of such Opposition.

The *Order Directing Replies* also references a Renewed Motion to Compel Full and Complete Responses to Interrogatories and Document Requests, allegedly filed and served by

Respondents. As with the Opposition to Complaint Counsel's Motion to Compel, Complaint Counsel has never received any such document. Complaint Counsel's first notice of the filing was in receiving the Judge's *Order Directing Replies*.

Complaint Counsel immediately informed counsel for Respondents that Complaint Counsel has not received service of any such filings. Counsel for Respondents indicated that they had mailed the documents, but would now federal express them to Complaint Counsel.

At this time (12:30 p.m., Thursday, July 9, 1998), Complaint Counsel still has not received the filings. Complaint Counsel expects to receive a copy of the filings by this afternoon or tomorrow, July 10, at the latest. Under the Judge's current *Order Directing Replies*, Complaint Counsel's Reply would be required in one or, at the most, two business days after the Opposition is received. Complaint Counsel respectfully requests that it be given ten days from receipt of Respondents' Opposition to file its reply.

Furthermore, according to the applicable rules of practice, Complaint Counsel would only have until July 14 to file its Opposition to Respondents' Renewed Motion to Compel. At this time, Complaint Counsel has not received Respondents' Motion. Again, assuming delivery by July 10, this would allow Complaint Counsel approximately two business days after receipt of the Motion to draft and file an opposition. As such, Complaint Counsel respectfully requests that it be given ten days from the date of receipt of the pleading to file its Opposition.

Complaint Counsel does not wish to further delay these proceedings by requesting such extensions. However, in this instance, because it never received the documents to which it must respond, Complaint Counsel is left with no choice other than to request an extension.

Dated: July 9, 1998

Respectfully submitted,

COMPLAINT COUNSEL'S REPLY TO RESPONDENTS' OPPOSITION TO COMPLAINT COUNSEL'S MOTION TO COMPEL ANSWERS TO INTERROGATORIES

Pursuant to the Administrative Law Judge's Orders of July 8 and 10, 1998, Complaint Counsel submits this Reply to Respondents' Opposition to Complaint Counsel's Motion to Compel ("Respondents' Opposition").

Central contends in its Opposition that Complaint Counsel's interrogatories are "unduly burdensome" and "oppressive," and, therefore, the Judge should refuse to order Respondents to answer them on that basis altogether.[1] See Respondents' Opposition at 10-15. Yet, according to Central's Opposition, Respondents have spent an average of eight

[1]Respondents' contention is unfounded in light of their own interrogatories, which number 148, not including multiple subparts.

hours reviewing each box of materials it has served upon Complaint Counsel in response to interrogatories. Central has compiled and delivered to Complaint Counsel approximately 460 boxes of responsive documents. It has allegedly reviewed these documents for privileged and confidential material, created a privilege log, Bates-stamped the documents and, pursuant to the Judge's recent Order, created what it claims are highly detailed indexes to the documents. Central claims it has expended in excess of $200,000 and 3,700 man hours to gather information responsive to discovery.

In light of the efforts in which Central has already allegedly engaged, one must question whether some of Central's 127 employees, whom Respondents' counsel consulted in this process, or some of the twenty counsel and twenty administrative staff that Respondent's counsel has employed, could not have spent some of that time actually answering Complaint Counsel's interrogatories.

Central contends that it has adequately responded to Complaint Counsel's interrogatories by producing 600,000 pages of business records. Central claims that such action is permissible because the burdens on both parties in this matter are "substantially the same" in deriving the answer from the documents, and, further, that its references to categories of documents and its indexes are more than specific. Id. at 16, 19, 23.

Central's argument is unfounded. The burden placed on Complaint Counsel to find the responses in the documents far exceeds that on Respondents. Respondents have screened the documents and reviewed them for responsiveness, as well as privileged and confidential matters. Id. Respondents seek to 'equalize' the burden by arguing that their counsel is not familiar with the contents of the documents. Id. at 20 n.6.

According to Central's Opposition:

> Although such an index is not required by any rule, regulation, law, or even Complaint Counsel's discovery requests, Central has been creating and providing to Complaint a detailed description of all the documents produced. . . . [T]he creation of this index has been tremendously time-consuming and expensive. For each box produced, this index provides the Bates-number range of each discrete set of documents within each box, the employee who is the source of the documents, the department relevant to such documents. These descriptions not only correspond to the categories of documents described in Central's Interrogatory Responses, they provide even more detail regarding the enclosed documents. Thus, Central has provided Complaint Counsel with a veritable "road map" to describe the documents produced and the manner in which they are responsive to Complaint Counsel's Interrogatories.

Id. at 24 (citations to Opposition exhibits omitted). How Respondents and their counsel were able to establish privilege logs and "detailed" indexes without some knowledge of the documents is uncertain.

Moreover, Respondents' familiarity with the documents says nothing of the familiarity of Central's own supervisors, managers and executives. Those members of the "Omega team" and those engineers who have worked with and on the Omega over the years, in particular, should know their product, and be able to answer Complaint Counsel's interrogatories.

Furthermore, neither Central original responses to Complaint Counsel's interrogatories, which pointed to broad categories of supposedly responsive documents, or their most recent indexes, "equalize" the burden. The broad categories of business records in which "answers" supposedly can be found, which Respondents seek to represent as "specific" or "particular", are, indeed, overbroad. The indexes merely match up documents

to these ubiquitous categories. Id. at 8. In sum, Central remains far more able to derive answers from its own documents and employees than can Complaint Counsel.

Central simply attempts to avoid its primary responsibility: answering, in whole or in part, interrogatories in narrative form. Instead, it has given Complaint Counsel over 400 boxes of documents, under the guise of responding to Complaint Counsel's interrogatories. Central claims that "the only accurate and truthful manner to respond to Complaint Counsel's interrogatories is by reference to documents." Id. at 23. However, such a claim presumes -- erroneously -- that all answers to Complaint Counsel's specific questions are somehow memorialized in writing or can be divined from written material, and also that it would place an equal burden on Complaint Counsel to find the answer as it would on Respondents. Complaint Counsel suspects that Central's senior staff and engineers could easily answer the interrogatories without sifting through 460 boxes to find the answers.

Moreover, Respondents are actually or virtually silent regarding many contention and other fact interrogatories listed in Appendix A that often go the heart of defenses Central has raised publicly over the last three years. Respondents should be compelled to properly respond to Complaint Counsel's interrogatories.

For example, Central executives and engineers should be able to describe how each Omega model works (not just how "most" work) (Interrogatory No. 27). They should also be able to identify those who designed and developed each model Omega (Interrogatory No. 16(a)). They can undoubtedly explain the procedure for assembling and manufacturing the Omega (Interrogatory No.21); in fact, according to Respondents, Central's own work instructions ensure that employees know the process and procedure for assembly of Omegas.

See Respondents' Response to Interrogatory No. 25. Respondents can, but have not, described their own non-Omega sprinkler products utilizing o-rings (Interrogatory No. 29). It is difficult to believe that Respondents cannot answer whether or not dezincification causes an Omega not to activate (Interrogatory No. 42), whether Omegas from non-steel systems have swollen o-rings (Interrogatory No. 59), and whether Omegas exhibit o-ring adhesion (Interrogatory No. 63). Central's counsel, who has actually visited fire sites and coordinated investigations of those fires for product liability purposes, should easily be able to answer any questions about those fire incidents (Interrogatory No. 34).

III. CONCLUSION

Complaint Counsel respectfully requests that its Motion to Compel be granted. Should the Presiding Officer not grant Complaint Counsel's motion to compel, Complaint Counsel respectfully requests in the alternative that Respondents be directed to provide full and complete narrative responses to at least the Interrogatories listed in Appendix A.[2]

[2]Central has represented to the Judge that it has made no other copy of the documents it has produced to Complaint Counsel. Therefore, if Central requires the return of certain boxes for reference to answer Complaint Counsel's interrogatories, Complaint Counsel will agree to return the boxes for a limited time, for that purpose.

Respectfully submitted,

Complaint Counsel

COMPLAINT COUNSEL'S REPLY TO RESPONDENTS' OPPOSITION TO COMPLAINT COUNSEL'S MOTION TO COMPEL ANSWERS TO INTERROGATORIES

Pursuant to the Administrative Law Judge's Orders of July 8 and 10, 1998, Complaint Counsel submits this Reply to Respondents' Opposition to Complaint Counsel's Motion to Compel ("Respondents' Opposition").

Central contends in its Opposition that Complaint Counsel's interrogatories are "unduly burdensome" and "oppressive," and, therefore, the Judge should refuse to order Respondents to answer them on that basis altogether.[1] See Respondents' Opposition at 10-15. Yet, according to Central's Opposition, Respondents have spent an average of eight

[1]Respondents' contention is unfounded in light of their own interrogatories, which number 148, not including multiple subparts.

hours reviewing each box of materials it has served upon Complaint Counsel in response to interrogatories. Central has compiled and delivered to Complaint Counsel approximately 460 boxes of responsive documents. It has allegedly reviewed these documents for privileged and confidential material, created a privilege log, Bates-stamped the documents and, pursuant to the Judge's recent Order, created what it claims are highly detailed indexes to the documents. Central claims it has expended in excess of $200,000 and 3,700 man hours to gather information responsive to discovery.

In light of the efforts in which Central has already allegedly engaged, one must question whether some of Central's 127 employees, whom Respondents' counsel consulted in this process, or some of the twenty counsel and twenty administrative staff that Respondent's counsel has employed, could not have spent some of that time actually answering Complaint Counsel's interrogatories.

Central contends that it has adequately responded to Complaint Counsel's interrogatories by producing 600,000 pages of business records. Central claims that such action is permissible because the burdens on both parties in this matter are "substantially the same" in deriving the answer from the documents, and, further, that its references to categories of documents and its indexes are more than specific. Id. at 16, 19, 23.

Central's argument is unfounded. The burden placed on Complaint Counsel to find the responses in the documents far exceeds that on Respondents. Respondents have screened the documents and reviewed them for responsiveness, as well as privileged and confidential matters. Id. Respondents seek to 'equalize' the burden by arguing that their counsel is not familiar with the contents of the documents. Id. at 20 n.6.

According to Central's Opposition:

> Although such an index is not required by any rule, regulation, law, or even Complaint Counsel's discovery requests, Central has been creating and providing to Complaint a detailed description of all the documents produced. . . . [T]he creation of this index has been tremendously time-consuming and expensive. For each box produced, this index provides the Bates-number range of each discrete set of documents within each box, the employee who is the source of the documents, the department relevant to such documents. These descriptions not only correspond to the categories of documents described in Central's Interrogatory Responses, they provide even more detail regarding the enclosed documents. Thus, Central has provided Complaint Counsel with a veritable "road map" to describe the documents produced and the manner in which they are responsive to Complaint Counsel's Interrogatories.

Id. at 24 (citations to Opposition exhibits omitted). How Respondents and their counsel were able to establish privilege logs and "detailed" indexes without some knowledge of the documents is uncertain.

Moreover, Respondents' familiarity with the documents says nothing of the familiarity of Central's own supervisors, managers and executives. Those members of the "Omega team" and those engineers who have worked with and on the Omega over the years, in particular, should know their product, and be able to answer Complaint Counsel's interrogatories.

Furthermore, neither Central original responses to Complaint Counsel's interrogatories, which pointed to broad categories of supposedly responsive documents, or their most recent indexes, "equalize" the burden. The broad categories of business records in which "answers" supposedly can be found, which Respondents seek to represent as "specific" or "particular", are, indeed, overbroad. The indexes merely match up documents

to these ubiquitous categories. Id. at 8. In sum, Central remains far more able to derive answers from its own documents and employees than can Complaint Counsel.

Central simply attempts to avoid its primary responsibility: answering, in whole or in part, interrogatories in narrative form. Instead, it has given Complaint Counsel over 400 boxes of documents, under the guise of responding to Complaint Counsel's interrogatories. Central claims that "the only accurate and truthful manner to respond to Complaint Counsel's interrogatories is by reference to documents." Id. at 23. However, such a claim presumes -- erroneously -- that all answers to Complaint Counsel's specific questions are somehow memorialized in writing or can be divined from written material, and also that it would place an equal burden on Complaint Counsel to find the answer as it would on Respondents. Complaint Counsel suspects that Central's senior staff and engineers could easily answer the interrogatories without sifting through 460 boxes to find the answers.

Moreover, Respondents are actually or virtually silent regarding many contention and other fact interrogatories listed in Appendix A that often go the heart of defenses Central has raised publicly over the last three years. Respondents should be compelled to properly respond to Complaint Counsel's interrogatories.

For example, Central executives and engineers should be able to describe how each Omega model works (not just how "most" work) (Interrogatory No. 27). They should also be able to identify those who designed and developed each model Omega (Interrogatory No. 16(a)). They can undoubtedly explain the procedure for assembling and manufacturing the Omega (Interrogatory No.21); in fact, according to Respondents, Central's own work instructions ensure that employees know the process and procedure for assembly of Omegas.

See Respondents' Response to Interrogatory No. 25. Respondents can, but have not, described their own non-Omega sprinkler products utilizing o-rings (Interrogatory No. 29). It is difficult to believe that Respondents cannot answer whether or not dezincification causes an Omega not to activate (Interrogatory No. 42), whether Omegas from non-steel systems have swollen o-rings (Interrogatory No. 59), and whether Omegas exhibit o-ring adhesion (Interrogatory No. 63). Central's counsel, who has actually visited fire sites and coordinated investigations of those fires for product liability purposes, should easily be able to answer any questions about those fire incidents (Interrogatory No. 34).

III. CONCLUSION

Complaint Counsel respectfully requests that its Motion to Compel be granted. Should the Presiding Officer not grant Complaint Counsel's motion to compel, Complaint Counsel respectfully requests in the alternative that Respondents be directed to provide full and complete narrative responses to at least the Interrogatories listed in Appendix A.[2]

[2]Central has represented to the Judge that it has made no other copy of the documents it has produced to Complaint Counsel. Therefore, if Central requires the return of certain boxes for reference to answer Complaint Counsel's interrogatories, Complaint Counsel will agree to return the boxes for a limited time, for that purpose.

ORDER GRANTING COMPLAINT COUNSEL'S JUNE 18, 1998 MOTION REGARDING DISCOVERY

On June 18, 1998, the Consumer Product Safety Commission ("Complaint Counsel" or "CPSC") filed a Motion seeking an Order requiring that Central Sprinkler Corp. and Central Sprinkler Co. ("Central" or "Respondents") answer CPSC's First Set of Interrogatories ("First Set") and provide documents responsive to Complaint Counsel's First Request for Production of Documents ("First Request"). Respondents' Opposition to the motion was filed on July 1st. The Court then directed that Complaint Counsel file a Reply to Respondents' Opposition, which Reply was received on July 16, 1998. For the reasons set forth herein and to the extent set forth more particularly below, the Motion is GRANTED.

Complaint Counsel states that for 109 of its interrogatories, Respondent raised blanket objections and that, for 88 responses, the answers referenced broad categories of index-less business records wherein the answers sought could be found. On May 29, 1998, the response was supplemented by two indexes which listed the department from which the records emanated. On this basis, Complaint Counsel asserts that it has not received appropriate responses to its

interrogatories, nor documents associated with them, nor a meaningful index to the documents. Significantly, Complaint Counsel relates that all of the documents have Bates stamps and most have been reviewed. Motion at 4.

Discussion

I. Overview

It is expected that the parties will comply not only with the letter of discovery but also with its spirit. The Court notes that, while the representatives owe fidelity to their clients, all due fidelity is also owed to the Court. Cyphers v. Fuji Heavy Industries Co., Ltd., 1998 U.S. Dist. LEXIS 3526 *8 -*9. Answers to interrogatories should be responsive and where relevant questions are posed, the fact that answering them is burdensome is not a bar. Further, this Court subscribes to the view that a response directing that an answer *may* be found upon inspection of records "is little more than an offer to play the discredited game of blindman's bluff . . ." Clark v General Motors Corp., 1975 U.S. Dist. LEXIS 12095 *3 -*4.

Motions to compel discovery are addressed at 16 C.F.R. 1025.36. Responses that are inadequate, either by being incomplete or evasive, in whole or in part, are treated as failures to respond. While Section 1025.32(d) offers the option to produce business records, its availability is not unqualified. The burden of deriving the answer sought must be "substantially the same" for the party propounding the interrogatory as for the party served and, even if the burdens are roughly equivalent, the party served must "specify" the records which supply the answer.

II. Cases cited by Respondent in its opposition.

Respondent has referred to several cases in support of its position. In re U.S. Financial Securities Litigation, 74 F.R.D. 497 (S.D. Cal. 1975), was cited for the proposition that a party

need not answer unduly burdensome, unreasonable or oppressive interrogatories, but Respondent omits that the decision also held that, in general, the frequency and scope of interrogatories are not limited, and it recognized that "unfettered discovery of all materials relevant to the case should be permitted and that discovery need not be limited to the facts admissible at trial." Id. at 498. The court, in granting leave to serve interrogatories, noted that the test for discovery is that which is "reasonable and necessary to the litigation at hand" as opposed to "numerous and minor evidentiary details." Id. Breeland v. Yale and Towne Mfg., 26 F.R.D. 119 (E.D.N.Y. 1960), cited by Respondent for the same principle, miscasts the Court's holding, which determined that the plaintiff's use of *two* procedures (voluminous interrogatories of minute details *and* examination of the defendant before trial, *together* constituted abuse of the interrogatory procedure). Id. at 120.

In United States v. Proctor & Gamble Co., 25 F.R.D. 252, (D.N.J. 1960), cited by Central for the proposition that even in an antitrust matter, 2,500 interrogatories were unnecessary and unduly burdensome, the Court observed that, among the thousands of documents, the party served had "assigned such documents to the specific issues to which they . . . pertain." Id. at 253. Thus, plaintiff had keyed all its documents to the general topics discussed. Id. at 254. Further, the Court considered specifying which defendants were represented at a conference and participated to be more than a mere evidentiary detail and that it was reasonable to require plaintiff to specify "the general nature of the topics discussed on such occasions or events," while furnishing "in *specific* detail the *exact* nature and limits of the topics discussed on such occasions or events," was deemed unduly burdensome. Id. at 254 (italics added). Such evidentiary details, the Court concluded, were best left to the vehicles of deposition or personal inquiry. Id.

In Krantz v. United States, 56 F.R.D. 555, 558 (W.D. VA 1972), quoted by Central for the proposition that interrogatories should be "relatively few and limited to important facts rather than numerous and concerned with minor evidentiary details," the Court observed that "[g]enerally the fact that interrogatories are burdensome is alone not sufficient to excuse a party from answering them, nor will mere numbers excuse a party." Rather, the Court stated, the inquiry should be whether the interrogatories are "unreasonable under the facts and circumstances of the particular case." Id. at 556, 557. In that particular case, the Court, which ruled that the 1,500 questions were unreasonable, was influenced by the fact that the interrogating party already had the precise information it sought and even under those circumstances, the Court still allowed the government to submit a reasonable number of new interrogatories or to pick a reasonable number from its original list. Id. at 557, 558.

While the Court in Milsen Co. v. Southland Corp., 16 Fed. R. Serv. 2d, 116 (N.D., Ill. 1972), 1972 U.S. Dist. LEXIS 14071, found that forcing the defendant to further specify pages would create an undue burden, underlying this was its determination that the burden of ascertaining the information from the records was "substantially the same for either party" and the Court was influenced by the fact that the defendant "has offered to cooperate with the plaintiffs in their research." Id. at *3 -*4.

In Halder v. Int'l Telephone and Telegraph Co., 75 F.R.D. 657 (E.D.N.Y. 1977), the Court balanced the burden placed upon the defendant against the value of the answers to the plaintiff's case, and determined that the particular contested interrogatories involved information of limited probative value. Id. at 658. In this context, the Court held that the defendant should not be forced to engage in extensive research and compilation, when the purpose is to assist

plaintiff in the preparation of his case. Id.

Petroleum Insurance Agency, Inc. v. Hartford Accident and Indem. Co., 11 F.R.D. 318 (D. Mass 1983) ("Petroleum"), cited by Central for the proposition that the party seeking answers has the burden of showing that the answering party's burden is less, also makes clear that the party invoking the business records exception must *specify* the records from which the answer may be derived. The specification must "be in sufficient detail to permit the interrogating party to locate and to identify, *as readily as can be the party served*, the records from which the answer may be ascertained." Id. at 319. Particularly pertinent to the case at hand, the Court in Petroleum noted a "*respondent may not impose on an interrogating party a mass of records as to which research is feasible only for one familiar with the records*," and observed that such a tactic was specifically addressed by the Advisory Committee as "an abuse of the option." Id. at 319, 320 (italics added). Thus, the responding party must "specify, by category and location, the location of records from which answers to interrogatories may be derived." **In blunt terms, this means the responding party must "point to the place in the record where the answer is found" and if they cannot, then they must provide a written answer to the interrogatory**. Id. In fact, in the context of one particular disputed interrogatory, the court noted that the defendants already had done considerable work to gather the information requested and it followed that it would not be equally burdensome for the plaintiff to search the records as defendants had already done so. Id. at 321.

III. Conclusions and Specific Orders

With each page having a Bates stamp number, the Respondents' duty is to identify the specific page(s) that provide a complete response. If a corporate party could simply claim that the

burden of deriving "information from the records is substantially the same," discovery would be thwarted at every turn, and simply referring to a document in order to answer an interrogatory is not the kind of burden contemplated by the rule. Pascale v. G.D. Searle & Co., 90 F.R.D. 55,60 (D. RI 1981). Thus, it is totally inadequate to simply refer to a mass of documents and direct the interrogating party to find the information.

In evaluating the relative burdens of the parties, at the outset Central is presumed to have greater familiarity with its own documents. The fact that the interrogated party merely has to examine its own documents in order to divine the answers sought is not considered in measuring the burdens. In addition, each document has already received a degree of attention by Central as each page has been Bates-stamped. Other factors, each considered independent, are the presumption that the Respondent would, in its normal course of operations, maintain some sort of index to retrieve its own documents and the acknowledgment by Central that it has been/is involved in other law suits regarding its Omega sprinklers as well as the fact that Central has been aware of and engaged with the CPSC's investigation for the past two years. Of significance is the admission that it has already made a detailed review of the more than 600,000 pages of documents: ***"Central then reviewed these documents for privileged information and confidential documents."*** Respondents' Opposition to Complaint Counsel's Motion to Compel at 7 (emphasis added). The Court observes that, of necessity, such a review had to involve extremely close scrutiny of these documents.

Each of these considerations independently lead the Court to conclude that there is no *bona fide* claim of an equal burden between Complaint Counsel and Central in determining the answers to the questions by the CPSC. As 16 C.F.R. 1025.32(b) makes clear, each interrogatory

is to be answered. Answers in turn require a meaningful response and thus, evasive or incomplete responses are not answers. Respondents cannot discharge its duty to answer interrogatories by simply delivering a tidal wave of documents to Complaint Counsel, the effect of which makes the information exceedingly difficult to locate.

Accordingly, within 7 (seven) days of service, Respondents are ordered to answer[1] the following interrogatories, either by providing a complete written response to the questions or by identifying the *particular* Bates-stamped page(s) corresponding to each question and subpart thereof:

I-3 (Interrogatory No. 3)[2] Answer, covering the period 1978 to the present.[3]

I-5 Answer.

I-6 Answer.

I-7 No further answer required.

I-8 No further answer required.

I-9 Answer.

I-10 Answer to the extent Respondents' business records provide answers.

I-11 Answer to the extent Respondents' business records provide answers.

I-12 Answer to the extent Respondents' business records provide answers.

---

[1]Unless directed otherwise, all questions are to be answered fully.

[2]For brevity, all subsequent references to particular interrogatories will be identified by an "I," followed by the applicable number. Thus interrogatory number 5 is identified as "I - 5."

[3]To the extent that Complaint Counsel disagrees with the limitations on discovery in this Order, it will have to file a supplemental motion, particularly identifying the need for the information still sought.

I-13 Answer to the extent Respondents' business records provide answers.

I-15 Answer, since 1978, items 1), 2), 3), 4), 5), 6), 7), 10) and 11). For those no longer employed, provide, if known, address and telephone number.

I -16 Answer.

I-17 Answer.

I-18 Answer.

I-19 Answer.

I-20 Answer.

I-21 Answer.

I-22 Answer.

I-23 Answer without implied limitation to "Stop-leak."

I-24 No further answer required.

I-25 Answer.

I-26 Answer.

I-27 Answer.

I-28 Answer more completely by identifying specific Bates-stamped pages in business records.

I-29 No further answer required.

I-30 Answer by identifying the specific Bates-stamped pages for each model and with a written answer to (g).

I-31 Answer generally, and for subparts (a) - (d), by identifying the specific Bates-stamped pages for each.

I-32 Answer.

I-33 Answer.

I-34[4] Answer by identifying the specific Bates-stamped pages.

I-35 Answer generally and by identifying the specific Bates-stamped pages for subparts (a) - (l).

I-36 Answer generally and by identifying the specific Bates-stamped pages for subparts (a) - (l).

I-37 Answer. Parts (b)- (h) may be answered by identifying the particular Bates-stamped pages.

I-38 Answer. Parts (b)-(h) may be answered by identifying the particular Bates-stamped pages.

I-39 Answer. Parts (b)-(h) may be answered by identifying the particular Bates-stamped pages.

I-40 Answer. Parts (b)-(i) may be answered by identifying the particular Bates-stamped pages.

I-41 Answer. Parts (b)-(i) may be answered by identifying the particular Bates-stamped pages.

I-42 Answer.

I-43 Answer. Parts (b)-(j) may be answered by identifying the particular Bates-stamped pages.

---

[4] The answer requires a general written response and identification, by Bates-stamped pages, of the other instances alluded to, beyond the 17 instances specifically listed.

I-44 Answer (a) and (j). Parts (b)-(i) may be answered by identifying the particular Bates-stamped pages.

I-45 Answer (a). Parts (b)-(i) may be answered by identifying the particular Bates-stamped pages.

I-46 Answer (a). Parts (b)-(j) may be answered by identifying the particular Bates-stamped pages.

I-47 Answer. Parts (d)-(e) may be answered by identifying the particular Bates-stamped pages.

I-48 Answer.

I-49 Answer (a)-(f), (k), (g), (h) and (i); subparts (i)-(v) of (i) may be answered by identifying the particular Bates-stamped pages. The initial general question for (j) must be answered with subparts (i)-(iv) of (j) answered by referring to the particular Bates-stamped pages.

I-50 Answer (a), (b), (c), (d), (e), (f) and (j); however (g)-(i) may be answered by identifying the particular Bates-stamped pages.

I-51 Answer; however, after answering (e) and (f) generally, subparts (i)-(v) of (e) and (i)-(iv) of (f) may be answered by identifying the particular Bates-stamped pages.

I-52 Answer, but after answering (e) generally, subparts (i)-(v) may be answered by identifying the particular Bates-stamped pages.

I-53 Answer, but (e), (f), (h), (k) and, after answering (i) and (j) generally, subparts (i)-(v) of (i) and (i)-(iv) of (j) may be answered by identifying

the particular Bates-stamped pages.

I-54 Answer, but (g) and after answering (h) generally, subparts (i)-(v) and (i) may be answered by identifying the particular Bates-stamped pages.

I-55 Answer, but (e), after being answered generally, subparts (i)-(v) and (f) may be answered by identifying the particular Bates-stamped pages.

I-56 Answer.

I-57 Answer, but (d), (f) and (g) and after answering (h) generally, subparts (i)-(v) of (h) and (i) may be answered by identifying the particular Bates-stamped pages.

I-58 After answering the initial question, and subparts (a), (b), (c) and (j), subparts (d)-(i) may be answered by identifying the specific Bates-stamped pages.

I-59 After answering the initial question and subparts (a)-(d), (f), (g) and the initial question for (i), (e) and (h), subparts (i)-(v) of (i) and (j) may be answered by identifying the specific Bates-stamped pages.

I-60 After answering the initial question and (a), (d), (e) and the initial question for (h), subparts (b), (c), (f) and (g), the subparts of (h), (i)-(v) and (i), (i)-(iv) and (j) may be answered by identifying the specific Bates-stamped pages.

I-61 After answering the initial question and (b) and the initial question for (d), the remaining questions may be answered by identifying the specific Bates-stamped pages.

I-62 Answer. However, after answering the initial question of (e) and (e)(i), (e)(ii)-(e)(v) may be answered by identifying the specific Bates-stamped pages.

I-63 Answer the initial question and (a), (b), (c) and the initial questions for (h) and (j). The remaining questions and subparts may be answered by identifying the specific Bates-stamped pages.

I-64 After answering the initial question, and (a), (b) and the initial question for (d), the remaining questions may be answered by identifying the specific Bates-stamped pages.

I-65 After answering the initial question and (a), (b) and (h), and the initial question for (e), (f), (k), (l), (m) and (n), the remaining questions may be answered by identifying the specific Bates-stamped pages.

I-66 Answer by identifying the specific Bates-stamped pages.

I-67 After answering the initial question and (a), the remaining questions may be answered by identifying the specific Bates-stamped pages.

I-68 through I-107

After answering the initial question for each of these and their respective subparts (a), the remaining questions may be answered by identifying the particular Bates-stamped pages.

I-108 After answering the initial question and (a) and (b), the remaining questions may be answered by identifying the specific Bates-stamped pages.

I-109 After answering (a)-(m), the remaining subparts (i)-(iii) (each of which apply to (a)-(m)) may be answered by identifying the specific Bates-stamped pages.

I-110 After answering the initial question and (a), (d) and the initial question for (f), the remaining questions may be answered by identifying the particular Bates-stamped pages.

I-111 After answering the initial question and (a), the remaining questions may be answered by identifying the particular Bates-stamped pages.

I-112 After answering the initial question and (a), the remaining questions may be answered by identifying the particular Bates-stamped pages.

I-113 Answer.

I-114 After answering (a) and (b) and the initial question for (i), the remaining questions may be answered by identifying the particular Bates-stamped pages.

I-115 After answering the initial question and (a), (b), and the initial question for (h) and (i), the remaining questions may be answered by identifying the particular Bates-stamped pages.

I-116 Addressed in July 7, 1998 Order Regarding First Prehearing Conference.

I-117 Addressed in July 7, 1998 Order Regarding First Prehearing Conference.

Last, it is observed that Central's answer, at least taken at face value, presents significant issues, denying generally that its Omegas are defective and also denying that the Omegas have a significant malfunction rate. Certainly, the adequacy and reliability of the CPSC testing of

Omegas has been challenged, and Central asserts that there can be a host of innocuous reasons why sprinkler heads may fail to activate, ranging from inadequate temperatures to abuse of the heads, or conditions affecting the water supply to the system. Given Respondents' stance on the charges, it should be forthcoming in its responses, anxious to meet the core charges of the Complaint, and to proceed to having its hearing opportunity in order to clear its name of the charges it asserts are unfounded.

COMPLAINT COUNSEL'S OPPOSITION TO
TO RESPONDENTS' RENEWED MOTION TO COMPEL

COMES NOW Complaint Counsel and files its Opposition to Respondents' Renewed Motion to Compel Discovery in this matter, and requests that it be protected from further discovery on certain irrelevant issues in this matter.

I. INTRODUCTION

On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. The Complaint seeks a nationwide recall of approximately 10 million "Omega" automatic fire sprinklers manufactured by Respondents since 1982.

On March 26, Respondents served their First Request for Production of Documents and Things, and First Set of Interrogatories, upon Complaint Counsel.

On April 27, Complaint Counsel served its Responses to Respondents' discovery requests, as well as over 2000 Bates-stamped and copied documents. Complaint Counsel has

since sent Respondents six additional supplements, for a total of over thirteen thousand Bates-stamped pages.

Despite the fact that some of the information Complaint Counsel possesses regarding this case is its work product, in the spirit of full and fair disclosure, Complaint Counsel has produced to Respondents nearly everything in the Agency's files pertaining to this case, except results of testing of Omega sprinklers by CPSC engineering consultants that are currently in progress and as yet incomplete, and e-mails between the attorneys in this matter regarding the litigation. Complaint Counsel has, and will continue to, supplement its responses as additional information becomes available. Complaint Counsel has responded to all inquiries presented by Respondents. There is nothing at this time to compel Complaint Counsel to produce.

II. ARGUMENT

A. Complaint Counsel has Produced all Documents Listed in the List and Summary of Documentary Evidence

Respondents claim that Complaint Counsel has failed to produce the documents listed in its List and Summary of Documentary Evidence, filed with the Complaint in this matter. However, all documents listed in the List and Summary have been produced to Respondents.

Complaint Counsel's List and Summary included two items: documents evidencing failure of Omega sprinklers in actual fire situations, and a data compilation depicting over 40% failure rates in testing of Central's Omega sprinklers. Information pertaining to all fires of which the staff is aware, in which Omega sprinklers failed to operate, has been produced to Respondents. In fact, Complaint Counsel immediately supplemented its Interrogatory Responses on May 20 to list a fire that occurred just a few days prior in Scottsdale, Arizona,

that spread to cause hundreds of thousands of dollars worth of property damage, and in which a female victim reportedly suffered burns and smoke inhalation. Complaint Counsel has, and continues to, share with Respondents everything it knows of the Omega problem in the field, including test results and fire data.[1]

As noted above, Complaint Counsel also named in its List and Summary a data compilation that showed an approximate 40% failure rate for Omegas in testing. Complaint Counsel has specifically referred to the document as a data compilation. Complaint Counsel compiled the test results from numerous testing facilities into a database. Complaint Counsel has submitted to Respondents the underlying test data used by the staff to create its compilation. All claims of confidentiality by some of the testing facilities have now been resolved by the Presiding Officer, and the information has been forwarded to Respondents.

Complaint Counsel has been more than open, and more than fair with respect to its compilation. Rather than adhering to a claim of work product, and simply providing the data it used to create the compilation and requesting that Respondents create their own compilation if they wish to determine the aggregate failure rate from testing of Omegas, Complaint

---

1 The same cannot be said for Respondents, whom Complaint Counsel have just been informed knew about the Scottsdale fire and attempted to have the failed sprinklers sent to them, and failed to report the incident to the Commission. Moreover, Respondents only recently disclosed to Complaint Counsel by letter dated June 26, 1998, information pertaining to three fires, two of which they have known about for four and five years, respectively. Respondents failed to disclose these fires in their Interrogatory Responses, and failed to supplement their Responses with this information until this past week, after Complaint Counsel submitted a written request asking Respondents to do so.

Counsel produced the staff's compilation, in the spirit of full disclosure. Complaint Counsel cannot do more than give Respondents what they have requested.[2]

B. Complaint Counsel has Provided Documents that Identify Persons Having Knowledge of Discoverable Materials

Respondents requested the names of all persons at the CPSC who investigated the Omega problem, the names of all persons familiar with the allegations of the complaint, and the names of people familiar with the Omega problem. Despite the fact that many of Respondents' identification requests improperly focus upon the propriety of Complaint Counsel's investigation into the Omega matter, Complaint Counsel provided a list of persons in response to Interrogatory Nos. 106 [Eric Singer, Eric Stone, Catherine Anne Cumberland, Andrew Stadnik, Rohit Khanna, Nicholas Marchica]; 107 [David Dixon (David Dixon), Jeffrey Larson (Viking Automatic Sprinkler Company), Fred Jackson (Jackson Fire Protection), William L. Oliver (Oliver Sprinkler Co., Inc.), John C. Livingston, Jr. (Livingston Fire Protection, Inc.), Peter Miller (Miller Fire Protection), Thomas E. Strange (Worsham Sprinkler Company), James Lewis (American Fire Sprinkler Corp.)]; 115 [Catherine Cumberland, Marc Schoem, Eric Stone, Andrew Stadnik, Rohit Khanna, Nicholas Marchica, Mark Kumagi, James Hoebel]; 116 [Catherine A. Cumberland, Marc J. Schoem, Eric L. Stone]; 132 [Marc J. Schoem, Catherine A. Cumberland, Eric H. Singer, Eric Stone, Rohit Khanna, Nicholas Marchica, and Andrew Stadnik]; 145 [the CPSC Commissioners, their staff, the Office of the General Counsel, Alan Schoem, Eric Singer, Eric Stone, Deborah Orlove and Catherine Cumberland].

---

2 It appears that Respondents have misunderstood the compilation, and assumed that it is a compilation of the staff's test results. *See* Respondents' Renewed Motion at 27.

Complaint Counsel has also provided nearly all documents it has about this case to Respondents, with the exception of the relatively few communications with its consultants in preparation for litigation. Hundreds of names are contained in the documents Complaint Counsel has produced to Respondents. Having just received approximately 460 boxes of documents from Respondents' counsel, which Complaint Counsel expects will provide hundreds more names of people knowledgeable about the Omegas, Complaint Counsel is still in the process of determining who else is knowledgeable about the Omega problem. Given that there are somewhere between eight and 10 million Omegas in service, the list of those who have or may have knowledge about the Omegas is potentially endless. Complaint Counsel will continue to supplement its responses as additional persons with knowledge are discovered, and will provide the names of those it intends to call as witnesses as soon as those names are available.[3]

Complaint Counsel has produced nearly all of the documents it has gathered for this case to Central. Hundreds of persons are identified in those documents. Complaint Counsel has in no way left Central unable to commence its depositions.

---

3 Respondents claim that Complaint Counsel has refused to identify persons with knowledge in response to Interrogatories 83, 87 and 51. *See* Respondents' Renewed Motion at 9 - 10. Complaint Counsel objected to Interrogatories 83 and 87 (although, in the interest of full disclosure, gave information pertaining to the preliminary results of sprinkler testing by its own consultants, done at the request of Complaint Counsel in preparation for litigation, in response to Interrogatory No. 83. Complaint Counsel has not yet determined which of its consultants, if any, it will use as testifying experts in this matter, nor what of its own testing evidence it intends to present at trial). Moreover, all three of the Interrogatories Respondents cite relate to Complaint Counsel's proof of the underlying cause of Omega inactivation in testing -- which Complaint Counsel contends it need not prove at trial, and will brief according to the Presiding Officer's recent Order.

C. Complaint Counsel has Appropriately Responded to Central's Discovery Requests

Respondents claim that Complaint Counsel has refused to respond to certain of its Interrogatories. *See* Respondents' Renewed Motion at 13, *et seq.* For instance, Respondents cite Interrogatory No. 43, which asks whether Complaint Counsel contends that there is a "single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard." Despite the fact that the question is unclear and overbroad, Complaint Counsel attempted to answer it by stating that (according to Respondents) Omega sprinklers are designed to activate at particularly-defined activation/triggering temperatures, based on the temperature at which the fusible link in their heat collector is intended to convert from solid to liquid form. The question is unanswerable because each sprinkler must activate at its activation/triggering temperature, which is not the same for all sprinklers. It is Complaint Counsel's understanding that the activation/triggering temperature for Omegas are listed on the Omega heads themselves. The temperature at which a sprinkler should operate in testing is the activation/triggering temperature for that sprinkler, which in Omegas, is presumably based on the temperature at which its fusible link in its heat collector unit "melts." Complaint Counsel gave a complete and correct answer to Respondents' Interrogatory. No other answer to this question is possible.

Likewise, Respondents claim that Complaint Counsel has not responded to its Interrogatory No. 42, which asks:

> **42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the**

Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Complaint Counsel objected to Respondents' Interrogatory on the grounds that it is vague, ambiguous, confusing, and overbroad. The question asks whether Complaint Counsel deems there to be a single standard of water pressure at which a sprinkler that has been removed from service must activate to be deemed as not presenting a substantial risk of injury to the public. Complaint Counsel does not contend that a sprinkler removed from service presents a substantial risk of injury to the public, and so stated in its response. Respondents now claim that the question they were really asking is what pressure Complaint Counsel deems is the "benchmark to establish a failure" in testing. This is an entirely different question than asked by Respondents. Complaint Counsel agrees that Respondents are entitled to know, if statistical test results are being used to prove sprinkler failure, what the pressure that determines a "failure" is. Complaint Counsel responds to this question that it contends that the pressure that determines a failure may be either 5 or 7 psig, depending on the type of sprinkler and its use. Had Respondents made clear in their Interrogatory that this is the question they were asking, rather than relating it to whether the sprinkler was previously installed and under what standards such a sprinkler

would not present a substantial risk of injury to the public, Complaint Counsel would have been able to respond.[4]

Respondents claim that their questions are "extremely straightforward," "basic" and "fundamental." Respondents' Motion at 13, 16. Several of Respondents' allegedly "basic" and "relevant" questions, such as that cited above, ask what would not constitute a substantial product hazard. Complaint Counsel has provided information to Respondents demonstrating a 40% failure rate for Omegas, data which includes Central's own testing of Omegas, as well as that of several other reputable testing laboratories (none of whom did their testing at the prompting or request of the CPSC). Complaint Counsel has provided to Respondents information pertaining to at least 13 fires in which Omegas did not activate. New fires are occurring, and Complaint Counsel is now hearing about older fires in which Omegas failed to function on a regular basis. *See* Complaint Counsel's Supplemental Interrogatory Responses, May 20, 1998. It is only a matter of time before additional injuries, and even death, occur as a result of Omega failures. Complaint Counsel has notified Respondents that Omegas create a substantial risk of injury to the public, and are a substantial product hazard, and provided supporting documentation of

---

4 Respondents also object to the fact that Complaint Counsel has not articulated the contentions it intends to prove at trial. *See* Respondents' Renewed Motion at 15. Respondents cite, for instance, their Interrogatory Nos. 53 - 73, which ask whether Complaint Counsel contends that there are specific causes responsible for the alleged defect in Omegas. Complaint Counsel has filed responses to this question in this litigation, and the Presiding Officer has indicated that it is not Complaint Counsel's duty to prove the underlying cause of the defect in Respondents' product for Respondents; Complaint Counsel need only show that the sprinklers do not work in a sufficient percentage of instances. Pursuant to the Judge's Order, Complaint Counsel will brief what is required to prove its *prima facie* case.

both the test results and the fires. Asking Complaint Counsel to speculate on what failure rate in testing would lead to the opposite conclusion (i.e., that a product is not be a substantial product hazard) is rather irrelevant at this time, in light of what we know to be the actual failure rate of Omegas.

Respondents list Complaint Counsel's Response to Interrogatory No. 57 as an example of a response that is "materially incomplete," *see* Respondents' Renewed Motion at 18, and makes an "invalid relevance and/or vagueness objection." *Id.* at 34. Respondents' Request No. 57 asks for all documents that "constitute, provide evidence of, refer, or relate to the use of silicone o-rings in sprinkler heads." The question encompasses any and all sprinklers, including non-Omegas. As Omegas sprinklers are at issue in this litigation, Complaint Counsel provided responsive information pertaining to silicone "o" ring Omega failures. However, Complaint Counsel preserved a relevance objection for documents that pertain to the use of silicone o-rings in sprinkler heads other than Omegas, which are not at issue herein. Complaint Counsel's relevance objection is well-grounded, and made in good faith.[5]

Respondents further claim that several of Complaint Counsel's responses to their Interrogatories are insufficient because they "refer Central to Complaint Counsel's own self-serving pleadings." *See* Respondents' Renewed Motion at 32. Respondents

---

5 Ignoring the information Complaint Counsel has repeatedly provided to Respondents regarding the recent failure of a brand new Omega with a silicone o-ring that was manufactured in February, Respondents continue to allege that Complaint Counsel has no evidence of silicone o-ring Omega failures, and that Complaint Counsel has provided Respondents with no such evidence. *See* Correspondence from Thomas Hogan to Deborah Orlove, May 13, 1998, attached as Exhibit G to Respondents' Renewed Motion.

specifically list Complaint Counsel's responses to Interrogatories 85 and 86. *Id.* Both of these questions are contention interrogatories, and ask in one subsection what documents evidence Complaint Counsel's contention. As the Complaint is such a document, Complaint Counsel listed it in addition to Omega test results and documents pertaining to fires involving Omegas. Respondents' Interrogatory No. 85 asked, for example:

> **85. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a). If so:**
> **(b) identify and describe any such hazards;**
> **(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**
> **(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**
> **(e) describe in detail the substance of each such person's knowledge and/or information.**

Complaint Counsel indicated in its response that the Interrogatory is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel explained that it "contends that all Omega sprinklers are substantial product hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used." *See* Complaint Counsel's Response to Respondents' Interrogatory No. 85. Complaint Counsel further explained that it contends that "Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public." *Id.* Complaint Counsel identified the Complaint as a document that "refers, relates to, and provides evidence of" Complaint Counsel's

contention." Complaint Counsel also listed in its response "Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC," as well as evidence of fires in which Omegas have reportedly failed to activate, as evidence "supporting and relating to this contention." Complaint Counsel has produced to Respondents all testing and fire data in its possession, except results of testing by its own engineering consultants, which is not yet complete.

D. Complaint Counsel has a Valid Claim of Work Product Privilege for Communications by and between the Attorneys and Consultants on this Case

Most of Respondents' discovery requests are so broad that the information they seek includes privileged communications between the attorneys in this case, and between the attorneys and their consultants, in the investigation of this case and preparation of it for litigation. For example, although Respondents claim that Request #7 requests information provided to Complaint Counsel by "independent" third parties, the Request actually asks for "all documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents." *See* Respondents' Renewed Motion at 20. Complaint Counsel has provided voluminous documents responsive to this Request, despite the fact that it is overbroad and unduly burdensome. Complaint Counsel preserved a work product privilege, however, for documents prepared by or for Complaint Counsel in anticipation of litigation, such as by consultants. Complaint Counsel's claim of privilege is legitimate.[6]

---

6 A number of the documents for which Complaint Counsel has made claims of privilege have been submitted to the Presiding Officer for determination of whether and to what extent they should be produced. Complaint Counsel would be pleased to provide the remaining

Moreover, despite its claim of work product, Complaint Counsel has produced most documents that may be subject to the privilege, in the spirit of full disclosure. A prime example of such disclosure is Complaint Counsel's data compilation, which, as noted above, Respondents could themselves have prepared with the same effort as Complaint Counsel, from the underlying data. However, Complaint Counsel gave even its trial preparation materials -- its compilation -- to Respondents in discovery, after Respondents repeatedly claimed that they could not possibly defend this case without it. Respondents now have the compilation. That it does not help them defend their case is merely a reflection of the weight of the evidence that demonstrates that it is imperative that these sprinklers be taken out of service to protect the public.

Complaint Counsel has not refused, as Respondents claim, to produce "virtually all materials in its possession" on claims of work product. *See* Respondents' Renewed Motion at 19. In fact, Complaint Counsel has done the opposite -- it has produced nearly all of the documents in its possession, including some of its work product. Contrary to Respondents' suggestions, Complaint Counsel has produced documents such as those relating to CPSC's communications with sprinkler contractors (responsive to Interrogatory #120, cited in Respondents' Renewed Motion at 18, *et seq.*) and Authorities Having Jurisdiction (responsive to Interrogatory #121, cited in Respondents' Renewed Motion at 18, *et seq.*).

---

documents listed in its Privilege Log to the Presiding Officer *in camera* for such a determination, if necessary.

Complaint Counsel has produced substantial evidence in this case. Because Respondents' requests are so broad, and there exists a continuing duty to supplement discovery, Complaint Counsel has preserved any work product privilege it may have by so stating it in its response. Complaint Counsel is not hiding any evidence, as Respondents have suggested in their correspondence, and in fact has no evidence that would demonstrate that Omegas are not a substantial product hazard. Respondents are looking for something that does not exist.

E. Complaint Counsel has not Delayed Producing Information

Respondents claim that Complaint Counsel has "delayed producing information and documents for no apparent reason." Respondents' Renewed Motion at 30.[7] Respondents cite Complaint Counsel's Response to its Interrogatory No. 124:

> **124. Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:**
>
> **(a) a description of any testing protocols used by the CPSC in testing the Omegas;**
>
> **(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;**
>
> **(c) a description of the methodology employed during each and every test of the Omegas;**
>
> **(d) the date of each and every test of the Omegas;**
>
> **(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;**

7 Respondents base their delay claim, in part, on Complaint Counsel's statement, in response to certain Interrogatories and Requests, that it "will produce" responsive documents. Complaint Counsel has explained to Respondents that this statement was intended to indicate that the documents will be produced **WITH THESE RESPONSES** (except where indicated in the response that the documents were not yet available). The responsive documents have been produced. Complaint Counsel will continue to supplement its responses as additional information is received.

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

Complaint Counsel's engineering consultants began testing Omega sprinklers at the request of Complaint Counsel, in preparation for trial of this matter. As such, Complaint Counsel objected to Respondents' Request No. 124 on the ground that the test results are Complaint Counsel's privileged work product. However, regardless of their status as work product, Complaint Counsel indicated that in the interest of full disclosure, it would provide to Respondents its test results as soon as those are available. Complaint Counsel's engineers' testing is still in progress, and Complaint Counsel has not received the final test results. Complaint Counsel is not withholding information from Respondents and, in fact, is told preliminarily by its engineers that they are finding a failure rate of Omegas commensurate with Complaint Counsel's data compilation of other testing results (30 to 40% failure rate). Complaint Counsel has, in fact, already shared some of the preliminary results with Respondents, including the failure in testing of a brand new Omega manufactured just a few months ago, and never even placed in service. Complaint Counsel offered on numerous occasions to share the x-ray that it took of that sprinkler, and even invited Respondents and their counsel to CPSC's offices

at their convenience for that purpose. Respondents only recently responded to Complaint Counsel's many offers, and are now reviewing the x-rays.

Complaint Counsel has wanted for some time to test the sprinklers from fire sites that it has received. Again, in an effort toward full disclosure and fairness, Complaint Counsel informed Respondents months ago that it has the sprinklers, and has preserved them for joint testing by Complaint Counsel and Respondents. In an effort to ensure that the parties have equal input into the testing methodology, Complaint Counsel asked for, and Respondents submitted, a testing proposal. *See* Omega Inspection Protocol from Respondents' Counsel to Complaint Counsel, dated March 17, 1998, attached hereto as Exhibit I. Complaint Counsel requested scientific clarification of several aspects of Respondents' proposal three months ago. *See* Correspondence from Deborah S. Orlove, Esq. to Frank A. Mazzeo and John C. Fenningham, dated April 21, 1998, attached hereto as Exhibit J. Respondents still have not submitted a response so that joint testing of these units may begin, yet they continue to claim that the staff is unwilling to share test results. Respondents are the sole reason why the staff has been unable to secure (much less provide) test results with respect to the fire site sprinklers.

F. Complaint Counsel Should be Protected From Respondents' Irrelevant Interrogatories and Document Requests, and From Providing to Respondents the Very Documents Respondents Provided to Complaint Counsel

Respondents' Motion, as well as their position during this entire investigation and litigation to date, has been to attempt to force the United States Government to do

Central's work -- to figure out what is wrong with the Omegas, to come up with a solution, and now, to do its trial preparation.

Respondents request that Complaint Counsel be compelled to answer a number of Interrogatories, including ones that are completely irrelevant. Respondents accuse Complaint Counsel of making illegitimate relevance objections, and "treating discovery to date as a game of 'hide-and-seek'." Respondents' Renewed Motion at 34.

Complaint Counsel's objections to Respondents' discovery are entirely valid. For instance, in Interrogatory No. 129, cited by Respondents in their Motion as an example of such alleged "gamesmanship," Respondents ask Complaint Counsel to identify "proposed alterative design features" for the Omega. Respondents' Renewed Motion at 34. Respondents leave these terms completely undefined. More significantly, though, this question, like so many others in Respondents' discovery requests, asks Complaint Counsel to tell Central what Central itself should know or attempt to find out, not what Complaint Counsel needs to prove its case. Respondents ask Complaint Counsel to devise alternative sprinklers, and to speculate about what Central should do to change its sprinklers to make them work. It is not Complaint Counsel's place to solve this problem for Respondents. Complaint Counsel's role under the CPSA is to protect consumers from defective products, not to devise alternative designs for products that do not work. *See* 15 U.S.C. § 2064, *et seq.*

Respondents claim that they are entitled to determine via discovery what documents and information are in the staff's possession. As explained above, with very

few and specific exceptions, Complaint Counsel has given Respondents everything in its possession regarding this case. Respondents claim that Complaint Counsel has provided responsive documents to only 12 of its Requests for Production. *See* Respondents' Renewed Motion at 13. Complaint Counsel's discovery responses, and supplements thereto, prove otherwise. *See* Complaint Counsel's First, Second, Third, Fourth, Fifth and Sixth Notices of Service of Supplemental Documents (with letters to Respondents' counsel), and Complaint Counsel's Supplemental and Second Supplemental Responses to Respondents' Interrogatories, attached hereto as Exhibits A through H. Complaint Counsel has provided Respondents and/or the Presiding Officer with all responsive information to Respondents' discovery requests, and will continue to supplement its responses as appropriate.

Complaint Counsel should not be required to respond to Respondents' Request for Production No. 6, however, which requests "all documents provided to the CPSC by Respondents regarding the Omegas." This request is unnecessary, unduly burdensome, and violates the spirit of discovery. However, if Respondents have lost any specific information submitted to the staff, the staff will respond to any focused requests for such information.

G. Verification of Interrogatory Responses

Complaint Counsel attaches hereto, and serves herewith, a verification of its Interrogatory Responses, and apologizes that this was inadvertently omitted from its original responses.

III. CONCLUSION

Respondents served upon Complaint Counsel **148** Interrogatories and **71** Requests for Production. Complaint Counsel served timely and complete responses to these Interrogatories and Requests, and has supplemented its Responses regularly as additional information was discovered or became available. Complaint Counsel has given Respondents Bates-stamped copies of nearly everything in its files, except correspondence with consultants and internal memoranda between the attorneys regarding the litigation. Respondents have claimed on numerous occasions that they have not received any discovery that is "meaningful to them." Perhaps this is because Omegas are so clearly problematic that everything that Complaint Counsel has gathered in its investigation and for trial in this matter only provides more proof that Omegas are a substantial product hazard.

Respondents claim that "Complaint Counsel's discovery responses provided little information to Central." *See* Respondents' Renewed Motion at 4. Perhaps this is because Complaint Counsel had little or, and in some cases, no information that Respondents did not already have regarding the fire sites, fire investigations, and testing done on Omegas. In fact, most of the testing of Omegas was done by Central itself, or by others on Central's behalf. Central is familiar with most, if not all, persons who have information pertaining to the Omega problem. Complaint Counsel's preliminary review of the documents provided by Respondents demonstrates that Respondents have known for many years about Omega failures, and many of the reasons for those failures --

information they withheld from the Commission and the public. Yet, in what can only be seen as another effort to distract from the true issues in this litigation, Respondents now attempt to portray Complaint Counsel as non-forthcoming and evasive.

Based on the foregoing, Complaint Counsel requests that it be protected from further response to Respondents' Interrogatories, other than providing additional responsive information as that becomes available in its continuing investigation of this matter, and that Respondents' Motion to Compel be DENIED.

Dated: July 20, 1998

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*****, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

Pursuant to the parties' continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), enclosed please find a supplemental package of documents responsive to Respondents' First Request for Production of Documents. Bates pages 2141 - 2212 are or may be responsive to Request Nos. 1, 9, 48, 49, 50, 51, 52, 53 and 60; Bates page 2213 may be responsive to Request Nos. 42 and/or 43; Bates pages 2214 - 2215 are responsive to Request No. 4; Bates page 2216 is responsive to Request No. 5; and Bates pages 2217 - 2227 are or may be responsive to Request Nos. 1, 9, 48, 49, 50, 51, 52, 53 and 60. All documents are provided without waiving objections stated in Complaint Counsel's Responses to Respondents' First Request for Production of Documents.

As we indicated in our letter yesterday, a number of documents that Complaint Counsel has that may be responsive to Respondents' requests were provided to Complaint Counsel by third parties. As you know, Complaint Counsel is prohibited by statute from disclosing any information received from third parties that may be confidential commercial information or trade secret. To ensure speedy disclosure of information to Respondents, Complaint Counsel has attempted to negotiate with the third parties directly to obtain permission to provide all such information to Central.

At this time, we have received such permission from two parties - Marriott and Sheraton. The Marriott documents were produced in the box of documents forwarded to you

last week. Having just received final permission from counsel for Sheraton, those documents have been Bates stamped and copied, and are being produced to you at this time.

We continue to await a final response regarding possible claims of confidentiality and/or trade secret from counsel for a testing laboratory that has provided information to Complaint Counsel regarding the Omega. Complaint Counsel will prepare and forward those documents to Respondents immediately upon receipt of permission to disclose. If such permission is not granted by next Wednesday, May 13, 1998, we will forward the documents to the Presiding Officer for a determination of whether the third party's claims are valid, and for appropriate disclosure procedures.

You indicated in your correspondence your desire to obtain a copy of the data compilation prepared by Complaint Counsel with respect to Omega failures. Although Complaint Counsel has provided you with the underlying test data upon which its compilation is based, and although the compilation is continually evolving and is Complaint Counsel and its staff's work product, in the interest of full disclosure, Complaint Counsel has included in this supplemental response a copy of its compilation as it existed at the time the complaint was filed, with probability range categories (which are Complaint Counsel's analysis of the compilation) redacted.

Sincerely,

Deborah S. Orlove

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' Interrogatories; Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

Pursuant to the parties' continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), enclosed please find a supplemental response to Respondents' Interrogatories, as well as a package of documents responsive to Respondents' First Request for Production of Documents.

With respect to the documents, Bates pages 11769 - 11919, and 12157 - 12170 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 40, 44, 45 and 60, and may also be responsive to Respondents' Interrogatory No. 122. Bates pages 11920 - 12156, and 12363 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 41, 44, 45 and 60, and may also be responsive to Respondents' Interrogatory No. 123. Bates pages 12171 - 12361 are or may be responsive to Request Nos. 3, 5, 7, 12, 14, 15, and may also contain information responsive to, among others, Request Nos. 9, 23, 24, 25 and 27, and may also be responsive to Respondents' Interrogatory No. 122. Bates page 12362 is or may be responsive to Request Nos. 3, 5, 7, 12 and 41, and Respondents' Interrogatory No. 123. Bates pages 12364 - 12430, and pages 12438 - 12450 are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 15, 23, 37, 38, 40, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 61 and 69, and may also be responsive to Respondents' Interrogatory No. 119. Please note that portions of the documents including consumer names, addresses, and telephone numbers have been redacted in accordance with 16 C.F.R. § 1015.17 and 15 U.S.C. § 2074(c). Bates pages 12431 - 12437, and 12451 - 12456

are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 21, 22, 25, 26, 27, 37, 39, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 57, 58, 68, 69 and 70, and may also be responsive to Respondents' Interrogatory No. 120. Bates pages 12457 - 12479 are or may be responsive to Request Nos. 3, 7, 14, 15, 38, 40, 46, 47, 48, 49, 50, 51, 52, 53, 61, 62 and 69, and may also be responsive to, among others, Respondents' Interrogatories 46, 51, 52, 53 - 73, 74, 76, 77, 88, 89 and 118. Please be advised that all documents are provided without waiving objections stated in Complaint Counsel's Responses to Respondents' First Set of Interrogatories and Complaint Counsel's Responses to Respondents' First Request for Production of Documents.

Sincerely,

Deborah S. Orlove

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*****, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' Interrogatories; Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

Pursuant to the parties' continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), enclosed please find a second supplemental response to Respondents' Interrogatories, as well as an additional package of documents responsive to Respondents' First Request for Production of Documents.

With respect to the documents, Bates pages 12480 - 12527, 12537 - 12540, 12555 - 12573, 12598 - 12666, 12667 - 12809, 12834 - 12849, and 12853 - 12859 are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 15, 23, 37, 38, 40, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 61 and 69. Bates pages 12529 - 12535, 12818 - 12833, and 12860 - 12861 are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 21, 22, 25, 26, 27, 37, 39, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 57, 58, 68, 69 and 70, and may also be responsive to Respondents' Interrogatory Nos. 114 and 120. Bates pages 12549 - 12554 are or may be responsive to Request Nos. 3, 4, 5, 7, 9, 14, 15, 19, 20, 31, 44, 46, 50, 51, and 57. Bates pages 12551 - 12552 may also be responsive to Request No. 58. Bates pages 12810 - 12817, and Bates page 12902 (which belongs between Bates pages 12814 and 12815, and has been so placed, as it was mistakenly not initially Bates-stamped), and Bates pages 12890 - 12900 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 40, 44, 45 and 60, and may also be responsive to Respondents' Interrogatory Nos. 79 and 121. Bates pages 12574 - 12597 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 40, 44, 45 and 60, and may also be

responsive to Respondents' Interrogatory No. 122. Bates pages 12536, 12541 - 12548, and 12850 - 12851 are or may be responsive to, among other Requests, Request Nos. 3, 4, 5, 6, 9, 12, 14, 15, 31, and 56. Bates page 12528 is or may be responsive to Request Nos. 3, 7, 14, 15, 38, 40, 46, 47, 48, 49, 50, 51, 52, 53, 61, 62 and 69, and may also be responsive to, among others, Respondents' Interrogatories 46, 51, 52, 53 - 73, 74, 76, 77, 88, 89 and 118. Bates pages 12852, 12862 - 12889, and 12901 are or may be responsive to Request Nos. 3, 4, 9, 12, 14, 38, 41, 44, 45 and 60, and may also be responsive to Respondents' Interrogatory No. 123. Bates page 12901 may also be responsive to Respondents' Request No. 16. Please be advised that all documents are provided without waiving objections stated in Complaint Counsel's Responses to Respondents' First Set of Interrogatories and Complaint Counsel's Responses to Respondents' First Request for Production of Documents.

Sincerely,

Deborah S. Orlove, Esq.

COMPLAINT COUNSEL'S NOTICE OF SERVICE OF FOURTH SET OF SUPPLEMENTAL DOCUMENTS IN RESPONSE TO RESPONDENTS' FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Pursuant to its continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), and pursuant to the Presiding Officer's June 5, 1998 Confidentiality Order and Order Regarding Complaint Counsel's *In Camera* Submission of Documents and Request for Disclosure Determination, Complaint Counsel hereby provides supplemental documents in response to Respondents' First Request for Production of Documents and Things. The documents are Bates-stamped documents 2228 - 11768, with an intentional gap at Bates pages 8701 - 8999. These documents may be responsive to Respondents' First Request for Production of Documents and Things Nos. 2, 3, 5, 7, 9, 12, 13, 14, 23, 24, 25, 27, 31, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 56, 57, 58, 60, 66, 68, 69, 70 and/or 71. Complaint Counsel provides these documents without waiving objections stated in Complaint Counsel's Responses to Respondents' First Set of Interrogatories and Complaint Counsel's Responses to Respondents' First Request for Production of Documents. Complaint Counsel provides these documents to Counsel for Respondents subject to the Presiding Officer's Confidentiality Order, dated June 5, 1998.

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*****, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' Interrogatories; Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

We are in receipt of your letter dated June 8, 1998, advising us that certain Bates numbered pages were missing from our latest production of documents. We have searched our files, and determined the following:

1. Bates pages 12199, 12242, 12361, 12370 and 12874 do not exist (there was an error in Bates-stamping, such that the stamp accidently skipped forward);

2. Bates pages 12234, 12244, 12246, 12335, 12337, 12345 and 12353 were located in our original set, but were also missing from our copy; it appears that they were inadvertently missed in the copying process. They are attached hereto;

3. The document attached to the fax cover page at Bates No. 12316 was inadvertently omitted from stamping altogether; we have stamped and attached the entire document as Bates pages 12977 - 12988.

Please accept our apologies for these unintentional oversights.

Sincerely,

Deborah S. Orlove

COMPLAINT COUNSEL'S SUPPLEMENTAL RESPONSES TO RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby supplements its responses to Respondents' First Set of Interrogatories.

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a result of or associated with the fire.

Response: Complaint Counsel incorporates herein its objections and response to Interrogatory No. 118 as stated in its initial Response to Respondents' First Set of

Interrogatories. Without waiving its objections, Complaint Counsel provides the following information on fires and injuries due to failure of Omega sprinklers to function that have occurred since Complaint Counsel's initial Responses were filed, and/or of which Complaint Counsel has become aware since its initial Responses were filed:

9. (a) Location: Joshua Tree Apartments, 11545 N. Frank Lloyd Wright Blvd., Scottsdale, AZ

(b) 05/12/98

(c) several hundred thousand dollars damage to structure and contents (investigation continuing)

(d) burns and smoke inhalation to female victim (investigation continuing into whether other injuries occurred)

10. (a) Location: Jackson Memorial Hospital, 1611 N.W. 12th Ave., Miami, FL 33136

(b) 07/31/90

(c) damage to hospital room and facilities (investigation continuing)

(d) burns and smoke inhalation to female victim, requiring emergency room treatment and amputation of right hand; injuries to male victim requiring emergency room treatment (investigation continuing into whether other injuries occurred)

11. (a) Location: Escondido Gardens, 2500 South Escondido Blvd., Escondido, CA 92075

(b) Complaint Counsel has insufficient information at this time with which

to respond to this subpart.

(c) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

12. (a) Location: Escondido Gardens, 2500 South Escondido Blvd., Escondido, CA 92075

(b) Complaint Counsel has insufficient information at this time with which to respond to this subpart; however, Complaint Counsel adds that this fire and Omega nonactivation reportedly occurred several years prior to the fire and non-activation listed in #11.

(c) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents.	)	

COMPLAINT COUNSEL'S SECOND SUPPLEMENTAL RESPONSES TO RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby supplements its responses to Respondents' First Set of Interrogatories, to include the following information on additional injuries reportedly sustained in a fire in which an Omega failed to activate, as well as information pertaining to a fire at the Department of the Treasury in which Omegas reportedly did activate, though Complaint Counsel has not confirmed this information. Additionally, Complaint Counsel amends its responses to Respondents' First Set of Interrogatories to include information pertaining to the failure in testing of an Omega manufactured after 1990, which had been installed in plastic piping. Amendments to Complaint Counsel's Responses are depicted in bold print.

Interrogatory

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a result of or associated with the fire.

Response: Complaint Counsel incorporates herein its objections and response to Interrogatory No. 118 as stated in its initial Response to Respondents' First Set of Interrogatories. Without waiving its objections, Complaint Counsel amends its Response to Interrogatory No. 118 to include the following additional information on injuries sustained in fires in which Omega sprinklers reportedly failed to function, of which Complaint Counsel has become aware since its initial Responses were filed:

10. (a) Location: Jackson Memorial Hospital, 1611 N.W. 12th Ave., Miami, FL 33136

(b) 07/31/90

(c) damage to hospital room and facilities (investigation continuing)

(d) burns and smoke inhalation to female victim, requiring emergency room treatment and amputation of right hand; injuries to male victim requiring emergency room treatment;

injuries to two fire-fighters

(investigation continuing into whether other injuries occurred)

Complaint Counsel also amends its response to this Interrogatory to add the

following information that may be responsive, regarding a fire in which Omegas reportedly did activate, though the staff has not confirmed the reported activation, nor has it confirmed that the alleged activation was complete, and that it occurred within the appropriate time after the sprinkler(s) were exposed to their activation/triggering temperature(s):

13. (a) Location: Treasury Department

(b) unknown at this time

(c) unknown at this time

(d) unknown at this time

Interrogatory

79. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear,

vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers. **Without waiving its objections, and assuming that Respondents refer to Omegas manufactured after 1990 that were installed in plastic piping systems, that failed to activate in testing as defined in Complaint Counsel's discovery to Respondents, Complaint Counsel responds that it has information pertaining to such failures, and has supplied such information to Respondents in its supplemental document production of this date.**

Omega Inspection Protocol

For sprinkler heads damaged in fires and undamaged.

1. Visual examination of the head. Record the model, temperature rating, date of manufacture and finish (i.e. chrome, brass, white).

2. Look for thread sealant on the NPT threads - this may be Teflon Tape, Pipe dope, or some type of hardening sealant. Note and record the type of sealant and relative amount.

3. Look for damage or tool marks on the dust cover, wrench bosses, deflector and heat collector. Note and record any damage found. *Damage may have affected activation.*

4. Look for paint, plaster, or other foreign material on the sprinkler body, deflector and heat collector. Preserve deposits as found for later evaluation. If possible, remove samples for further evaluation. *Foreign material may have affected activation.*

5. Look in the bore for foreign material, corrosion. Note and record any material found. Preserve deposits as found for later evaluation. *Foreign material may have affected activation.*

6. Count the number of exposed threads on the retaining nut. Typically 1-1/2 to 2-1/2 threads will be exposed. *More or less may indicate a tampering problem.*

7. Check the heat collector, is the heat collector "tight"? *A loose heat collector may indicate that the head was exposed to heat above its rating.* Are the heat fins bent? *Bent heat fins could indicate field damage to the heat collector.* Is the heat collector generally parallel to the main axis of the sprinkler? Record all observations.

8. If the deflector has deployed:

   a) Look for balls and springs. *In a normal activation the balls are lost. The springs may be lost.* Look for damage/tool marks at the heat collector and deflector. Look for any visible ball marks at the plunger and body groove. *The heat collector should be "loose", if not, look for cause.*

9. If the deflector has not deployed (*typically the case when a sprinkler has not activated*):

   a) Check the tightness of the heat collector. *A loose heat collector may indicate exposure to heat above the rating.*

   b) Look for ejector springs (*these should be visible between the deflector and the body*).

10. Remove the retaining nut (only using the special wrench for this purpose), note the number of threads which are engaged. Is Loctite / Stake present? (*The retaining nut should have either Loctite or a mechanical stake present)*

11. Check for visible eutectic. Is any eutectic visible in the plunger housing or on the Plunger? *This is usually "splatter" of eutectic pellet from a heat activation.* Is the plunger retained in the heat collector? *This is usually a result of molten eutectic pellet from heat activation.*

12. Count the number of ball impressions on the plunger, ½" heads should have 6 ball impressions. 7/16" heads should have 3 ball impressions. *Shape and depth of impresssions may indicate cause of activation, or various types of abuse. Impressions which are overly deep can indicate excessive pressure. Note and record (both quantitatively and qualitatively) all information regarding the ball impressions.*

13. Examine the plunger.

   a) If plunger falls freely from heat collector: measure the assembled height of the heat collector. This should be checked against the relevant assembly drawing(s) for the year of manufacture. *The heat collector should be sectioned to examine the eutectic pellet and bearing disc.*

   b) If the plunger is retained in the heat collector: this usually indicates that the eutectic pellet has melted and flowed around the shaft of the plunger.

14. Check the shaft of the plunger for straightness. If this is bent, check to direction of bend in relation to the shape of the ball impressions for clues to the cause of activation. *If the ball impressions are regular and consistent the bending probably occurred after activation (when the balls were already out).* Measure and record the angle of any bend.

15. Remove and examine the insulator ring. Check the bore of the heat collector for straightness and damage.

16. If the deflector did not deploy when the heat collector was removed, pry the plunger housing loose from the waterway. Look for any deposits in the waterway or on the plunger housing. *There may be deposits adhering the o-ring / plunger housing to the waterway, or the o-ring may be adhered directly to the waterway.* Preserve deposits as found for later evaluation.

17. Check straightness of the guide pins, see if they interfere with the dust cover. *Tight or bent guide pins may impede activation.* Measure and record the angle of any bend.

18. Look at the condition of the o-ring with the naked eye, then examine under magnification. Look for signs of attack, extrusion, deterioration, etc. Note and record all observations. If necessary, remove from the plunger housing. Measure the o-ring inner diameter and cross-section. Several measurements may be required to ensure accurate measurement. *The o-ring may be swollen, or portions may have remained adhered to the bore or plunger housing.*

19. Examine any visible ball impressions in the body. *Impressions through the retaining flange may indicate excess pressure.*

20. If necessary, section the body to look at corrosion, deposits, adhered portions of the o-ring or ball impressions.

General Notes

1. Take photographs at various stages of the examination.
2. Measure dimensions and locations of parts whenever possible.
3. Suitable document all observations, measurements, etc.
4. Suitably preserve any materials (i.e. foreign substances) for further analysis.

Re: *In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2
Testing Protocol for Omega fire sprinklers: Fort Wayne Children's Home and Kent Manor Inn

Dear Mr. Mazzeo and Mr. Fenningham:

As you know, the CPSC staff has obtained Omega sprinklers from the above-referenced fire sites, and has offered to test these jointly with Respondents. We are in receipt of your proposed "Omega Inspection Protocol," and appreciate your submission. However, in order to ensure that the investigation is fruitful, additional details regarding the protocol are required. Toward that end, we offer the following questions and comments:

1. Paragraph 2: What is meant by "relative amount" of sealant - how does one measure and determine this amount?

2. Paragraph 3: What is meant by "damage" and "tool marks," and how is this determined? How are "tool marks" distinguished from other "damage," and to what "tools" does your protocol refer?

3. Please delete all conclusions, legal or scientific, from your proposed protocol, e.g., "damage may have affected activation."

4.	Paragraph 4:	How does one determine what substance may be on the heat collector? What is meant by "foreign material?" How do you propose to "remove" samples; how do you propose the samples be analyzed and/or preserved?
5.	Paragraph 5:	What is meant by "foreign material?" Please define and describe "corrosion." How are deposits to be collected? Preserved? Evaluated?
6.	Paragraph 6:	How are threads on the retaining nut to be counted (they are angled)?
7.	Paragraph 7:	Please provide the protocol and suggested list of tools for measuring whether a heat collector is "tight." Please provide the protocol and suggested list of tools for measuring whether the heat fins are "bent." Please provide the protocol and suggested list of tools for measuring whether the heat collector is "generally parallel" to the main axis of the sprinkler. Please define "generally parallel" and "main axis of the sprinkler."
8.	Paragraph 8:	Define "deployed." Where and how does one "look for" "balls and springs?" What is meant by "damage" and "tool marks" at the heat collector and deflector? How is the tester to "look" for damage and/or tool marks? What is meant by "visible ball marks?" How is the tester to determine whether the heat collector is "loose?" What does "look for cause" refer to? Please provide protocol and list of equipment/tools for determining cause of "non-loose" heat collector.
9.	Paragraph 9:	Again, define "deployed." How does one check the "tightness of the heat collector?" Additionally, what do you propose if the ejector springs cannot be seen because the sprinkler has not activated?
10.	Paragraph 10:	What is meant by "number of threads which are "engaged?"" How is this to be determined/measured? Please provide protocol for determining whether "Loctite" or "Stake" is present, including comparison chemical analyses of all forms of "Loctite" and "Stake" you wish to have tester analyze for.

11. Paragraph 11: What is meant by "visible eutectic?" How is it to be determined/measured? Only with the naked eye? Please define "splatter" and indicate the scientific measurement therefor.

12. Paragraph 12: Please provide protocol for determining how "ball impressions" are to be counted/measured. What is "all information" that is to be "noted and recorded" regarding the ball impressions; how is the information to be noted and/or recorded?

13. Paragraph 13: What does "fall freely" from the heat collector mean? Please provide detailed scientific protocol for determining whether this occurs. What constitutes "assembled height of the heat collector?" How and with what is it to be measured? Please provide detailed protocol. Provide "relevant" assembly drawing(s) for the "year of manufacture" that the assembled height of the heat collector is to be measured against.

13a: How and in what plane is the heat collector to be "sectioned" to examine the eutectic pellet and bearing disc? Provide detailed protocol for sectioning, and for any and all examinations and/or measurements to be done on the eutectic pellet and bearing disc.

13b: How does one conclude why the plunger is retained in the heat collector?

14. Paragraph 14: What is "straightness" of the shaft of the plunger? How does one "check" for it? Please provide detailed scientific protocol to be used by the tester. How does one determine if it is "bent;" how does one determine and measure the "shape" of "ball impressions?" How is the examination conducted? What is meant by "check to [sic] direction of the bend in relation to the shape of the ball impressions? Please provide more specific definitions of what the tester is to examine, and what testing methods and procedures should be followed. What bearing do these measurements have on "cause of activation?" n.b. - are only shafts that activated to be examined? Why not the ones that did not activate? How is the angle of the "bend" to be measured and/or recorded?

15. Paragraph 15: Has the insulator ring been sectioned (paragraph 13(a))? If so, it cannot be properly removed and examined. How is it to be examined, and what is to be evaluated? Please provide detailed protocol. How is the bore of the heat collector to be checked for "straightness and damage," and how is this to be determined when sectioning by definition will have "damaged" the bore?

16. Paragraph 16: How is "deployment" determined? How is the plunger housing to be "pried?" Please provide a detailed protocol. What "deposits" are being "looked for" in the waterway; how are these identified and/or quantified? What are the ramifications of measuring deposits in the waterway if the system is altered and some of those deposits are removed in "prying" the plunger housing? How are the "deposits" to be preserved for later evaluation? What evaluation is to be done? Please provide detailed protocol for all preservation and evaluation.

17. Paragraph 17: What is "straightness" of the guide pins, and how does the tester "check" for it or "see" if the pins "interfere" with the dust cover? Please provide detailed protocol of what the tester is to do, what is to be analyzed, and exactly how it is to be analyzed.

18. Paragraph 18: What type of microscope, and what magnification is the tester to look at the "condition" of the o ring with? What is to be seen and/or recorded in the "naked eye" analysis? What are the criteria for determining the "signs of attack, extrusion, deterioration, etc."? What is the "etc.?" How is its existence determined and/or confirmed? What are the "several measurements" that "may be required" with respect to the o ring diameter and cross-section? How are they measured, how many measurements are "several," and is the mean, median, or most-frequently measured diameter and cross section the one that is recorded? Please provide a scientific protocol for review and analysis of the o ring.

19. Paragraph 19: How are "visible" ball impressions to be examined and/or determined? With the naked eye? Please provide detailed protocol for the examination.

20. Paragraph 20: Please provide detailed instructions for determining whether and when sectioning of the body is "necessary" to "look" at corrosion, "deposits," "adhered portions" of the o ring, or "ball impressions. Please provide detailed protocol for sectioning. Please define "corrosion," "deposits," "adhered portions," and "ball impressions."

21. General Notes: What are the "various stages" of the examination during which photographs should be taken?

What dimensions and/or "locations" or what parts are referred to; what determines when measurement of a "dimension" or "location" is possible? How does one measure these locations? What is the measurement in relation to?

What is meant by "suitabl[e] [sic] documentation? Please provide details on what documentation is requested, and to what extent each component of each analysis should be so documented.

What is meant by "suitably preserve" any materials; what qualifies as a "foreign substance?" Please provide protocol for preservation of all materials and substances that you request be preserved.

Please contact me if you have any questions regarding the foregoing. We look forward to hearing from you at your earliest convenience.

Sincerely,

Deborah S. Orlove, Esq.
Eric H. Singer, Esq.

RE: *In the Matter of Central Sprinkler Corp.*
CPSC Docket No. 98-2

Dead Judge Moran,

This firm represents Factory Mutual Research Corporation ("FMRC") in connection with the above pending action. Per an order of this court dated June 3, 1998 FMRC hereby submits the attached Log in which FMRC identifies the documents and portions of documents that it requests be exempted from public disclosure should FMRC's documents be placed in the public domain. As instructed in the court's order we hereby submit:

1. A copy of each document with highlighting to indicate the portions of the document that FMRC seeks to redact and/or exempt;

2. Attached to each highlighted document is a redacted and/or exempted version of the document to illustrate how the document would read in its proposed redacted and or exempted state, and

3. A log explaining the reason for seeking redaction and or exemption for each document.

Due to the volume of materials we have not served the CPSC or Central Sprinkler with copies of the individually highlighted pages of the redactions and or exemptions. However, via Federal Express for delivery on Tuesday, July 21, 1998, FMRC has served the CPSC and Central

Sprinkler ("Central") with a copy of the Log along with a set of the documents as they would appear if redacted and or exempted. FMRC proposes that the CPSC and Central discuss the redactions and or exemptions sought by FMRC and then advise the court whether there is agreement among the parties regarding the requested redactions and exemptions from public disclosure and, further, to identify those redactions and or exemptions that the parties dispute.

Thank you for your attention to this matter.

Very Truly Yours,

ROBINS, KAPLAN, MILLER & CIRESI L.L.P.

COMPLAINT COUNSEL'S NOTICE OF SERVICE OF SEVENTH SET OF SUPPLEMENTAL DOCUMENTS IN RESPONSE TO RESPONDENTS' FIRST INTERROGATORIES AND FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Pursuant to its continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), Complaint Counsel hereby provides the following supplemental documents in response to Respondents' First Interrogatories and First Request for Production of Documents and Things. The documents, Bates-stamped pages 12,989 through 13,816, are Hilton Hotels Corporation's response to the Commission's subpoena in this litigation. The documents are responsive to Respondents' Request for Production No. 5. The documents are or may also be responsive to Respondents' Interrogatory Nos. 1, 2, 3, 5 - 24, 25, 37, 40, 41, 51, 52, 53 - 72, 73, 76, 77, 79, 81, 84, 85, 87, 88, 89, 94, 95, 96, 102, 105, 114, 117, 130, 131, 141 and/or 142, as well as Respondents' Request for Production of Documents Nos. 1 (to the extent that copies of some of the test results included in Complaint Counsel's data compilation are contained in the subpoena response), 2, 3, 4, 7, 9, 12, 13, 14, 39, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 56, 57, 58, 69 and/or 70.

	:	
Respondents.	:	
	:	

RESPONDENTS' MOTION FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR AN EXTENSION OF TIME

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby move for reconsideration of the July 17, 1998 Order Granting Complaint Counsel's June 18, 1998 Motion Regarding Discovery. Central respectfully submits that the Order should be reconsidered because: (1) the Order did not give proper regard to the authorities which demonstrate that Complaint Counsel's interrogatories are oppressive and unduly burdensome; (2) the Order erroneously rejected Central's reliance on of 16 C.F.R. § 1025.32(d) based on erroneous factual assumptions about the parties' respective burdens; and (3) the Order should not have required Central to cite documents by Bates number in order to comply with § 1025.32(d). At the very least, the Order should be modified to require answers only to the interrogatories identified by Complaint Counsel in Appendix "A" of its Reply memorandum as the ones of greatest interest to Complaint Counsel.

In the alternative, Central moves for an extension of time in which to comply with the Order. Simply stated, it is impossible for Central to complete the task mandated by the Order within the prescribed seven (7) days, particularly where Complaint Counsel possess the full production set of pertinent documents.

WHEREFORE, Central respectfully requests that the Presiding Officer grant this Motion For Reconsideration Or, In The Alternative, For An Extension Of Time.

Further support for this Motion is contained in the attached Memorandum Of Law, which is incorporated by reference herein.

Respectfully submitted,

Dated: July 24, 1998

MEMORANDUM OF LAW IN SUPPORT OF RESPONDENTS' MOTION FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR AN EXTENSION OF TIME

I. INTRODUCTION

On July 17, 1998, the Presiding Officer issued an Order Granting Complaint Counsel's June 18, 1998 Motion Regarding Discovery (the "Order"). Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby move for reconsideration of the Order. At a minimum, Central requests the Court to modify the Order to limit it to the interrogatories Complaint Counsel has identified as most pertinent.

In the alternative, the Presiding Officer should grant Central an extension of time in which to comply with the Order, as it is not physically possible to comply with the Order within seven days.

II. FACTS

As detailed in Central's Opposition To Complaint Counsel's Motion, Complaint Counsel served nearly 1,500 interrogatories and subparts on Central. (See Central's Opp. to Compl. Counsel's Mot., pp. 3-10.) Complaint Counsel also served Central with document requests, the breadth of which required Central to conduct an exhaustive search and produce more than 450 boxes of documents. Because of the breadth and scope of Complaint Counsel's document requests, completing the initial sweep of the documents required almost 1,500 hours of work by Central's counsel and employees.

After the initial sweep and gathering of documents, Central reviewed the documents for privileged and confidential information. Such a review, however, did not and could not include a detailed review of subject matter and content that would have been sufficient to address to Complaint Counsel's 1,500 interrogatories. Rather, the focus was on readily identifiable confidential and trade secret information, identification of documents protected by the attorney-client privilege and work-product doctrine, and determination of the general subject matter of the documents. Even so, 16 lawyers worked 1,346 hours on this preliminary stage of document production. Nearly all of those lawyers were temporary staff hired for the sole task of complying with Complaint Counsel's document requests in the limited time permitted. They were not, and are not, engaged in the full extent of this or related litigation. Nor were they, or are they, familiar with Central's files, facilities, organization or employees. Once the privilege/confidential stage of production was completed, the documents were Bates-stamped and copied by several outside copy services. Central employees or counsel were not present when the documents were Bates-stamped and copied. Central provided all 450 or so boxes of documents to Complaint Counsel.

Although the Order refers to "a mass" or "tidal wave" of documents, it is important to recognize that Central produced the documents at significant expense and great effort in response to Complaint Counsel's extraordinarily broad document requests. In addition, in order to comply with the Presiding Officer's directive, Central prepared a detailed, extensive index of the approximately 450 boxes of documents, two examples of which are attached as Exhibits "B" and "C" to Central's Opposition to Complaint Counsel's Motion To Compel. The index identifies the source, department and Bates range of the documents in Central's document production. More importantly, the index describes the contents of the documents. In total, Central's comprehensive index provided to Complaint Counsel totaled 5,000 pages. As stated in the Declaration of Stephanie A. Graboyes, indexing just the first 100 boxes of documents required the work of 19 attorneys, 20 legal staff members and approximately 1,000 hours. (See Central's Opp. to Compl. Counsel's Mot., ex. A, ¶ 11.) As with the initial stage of production, nearly all of the lawyers involved in indexing were temporary staff hired for that task; administrative staff typed the index but did not review or even see the documents.

III. ARGUMENT

Although the Order granting Complaint Counsel's Motion To Compel refers to cases on which Central relied in support of its view that the interrogatories were unduly burdensome, Central respectfully submits that the Order does not focus on the courts' holdings or the main principles underlying those holdings. Further, the Order incorrectly concludes that the burden on Central would be less significant than that borne by Complaint Counsel in reviewing the documents to answer Complaint Counsel's interrogatories. Further, the Order imposes a

deadline with which it is impossible for Central to comply. Therefore, the Presiding Officer should reconsider the Order and deny Complaint Counsel's Motion, or, at a minimum, modify the Order to address only the interrogatories listed in Appendix "A" of Complaint Counsel's Reply memorandum. If Complaint Counsel's Motion is not denied, the Presiding Officer should, at the very least, grant Central's Motion for an extension of time.

A. The Cases Cited In The Order Do Not Support Its Conclusions.

The Order refers primarily to cases cited by Central in opposition to Complaint Counsel's Motion. Rather than relying on the holdings and the overall import of those cases, however, the Order focuses either on isolated sentences in the courts' general commentary, or on seemingly distinct facts which, upon closer inspection, actually mirror those in this matter.

For example, as the Order notes, Central cited In re U.S. Financial Securities Litigation, 74 F.R.D. 497 (S.D. Cal. 1975), and Breeland v. Yale and Towne Manufacturing Company, 26 F.R.D. 119 (E.D.N.Y. 1960), for the proposition that excessively long interrogatories are burdensome, an abuse of discovery and need not be answered. In discussing In re U.S. Financial Securities Litigation, the Order does not reflect the Court's holding that excessively long and detailed interrogatories are an abuse of the discovery process. Instead, the Order refers to the U.S. Financial Court's observation that, "in general, the frequency and scope of interrogatories are not limited." (July 17, 1998 Order, p. 3.) (hereinafter "Order").

Moreover, even with respect to that general observation by the U.S. Financial court, the Order does not take into account that, due to the very type of interrogatory abuse present here, the "frequency" of interrogatories has, in fact, been limited under the Federal Rules since the date of the case. As amended in 1993, Federal Rule of Civil Procedure 33(a) provides that without

leave of court or stipulation, "any party may serve upon any other party written interrogatories, not exceeding 25 in number including all discrete subparts . . . ." Fed. R. Civ. P. 33(a) (emphasis added). The limit on the number of interrogatories was added after federal courts' experience confirmed that limitations were necessary to avoid abuse. As the Advisory Committee observed, "because the device [interrogatories] can be costly and may be used as a means of harassment, it is desirable to subject its use to the control of the court . . . ." Id. (Advisory Comm. Notes to 1993 Amends.)

Likewise, the Order distinguishes Breeland, in which the court sustained the defendant's exceptions to answering more than 200 interrogatories, on the basis that the plaintiff sought both to depose defendant's witnesses and to receive interrogatory answers. (Order at p. 3.) In this regard, the Breeland court noted that "an adverse party should not be required to perform burdensome labors or to execute difficult tasks, in searching for facts, and classifying and compiling data." 26 F.R.D. at 120 (quotations omitted). In the instant matter, however, Complaint Counsel, like the Breeland plaintiff, also intends to use multiple discovery procedures. As Complaint Counsel's Preliminary Proposed Discovery And Litigation Schedule indicates, Complaint Counsel anticipates depositions of fact witnesses to commence after document production and to continue for a specified length of time thereafter. Thus, there is no basis to distinguish Breeland on this ground.

The Order next discusses United States v. Procter & Gamble Company, 25 F.R.D. 252, 254 (D.N.J. 1960), in which the Court held that compelling the plaintiff to provide specific detail about the topics discussed on certain occasions by individual persons was unduly burdensome and unnecessary The Order sought to distinguish the case by pointing out that the plaintiff

objecting to interrogatories had "already furnished defendants with all its documents, properly keyed to the general topic discussed." Id. at 254-55. In the instant matter, Central, like the objecting plaintiff in Procter & Gamble, has already furnished Complaint Counsel with all of its documents and a detailed and costly index specifying the source, department and topic description of each document. In addition, the interrogatory answers refer Complaint Counsel to particular categories of documents that are responsive to the interrogatory and that correspond to the descriptions in the index. Moreover, the Order cites Procter & Gamble for the proposition that it was reasonable to require the plaintiff to specify the "general nature" of certain subjects, but that providing specific details would be unduly burdensome. Id. at 254. Complaint Counsel's Interrogatories, however, seek the very kind of detailed information that the Court rejected in Procter & Gamble. The relevance of Complaint Counsel's exacting, detailed and overarching interrogatories is dubious at best. See Hilt v. SFC, Inc., 170 F.R.D. 182, 188 (D. Kan. 1997) (defendant provided no reason or justification for indiscriminate sweep of interrogatories requiring plaintiff to provide a "running narrative or description of the entire case, together with identifications of all knowledgeable persons and supporting documents").

Moreover, as the Procter & Gamble court recognized, certain discovery details are best left to depositions or personal inquiry. (Order at p. 3 (citing Procter & Gamble, 25 F.R.D. at 255.)) As Complaint Counsel clearly intends to depose Central employees and others, has already admitted that it has conducted an investigation and inquiry with former and current Central employees, and has received the voluminous documents they requested with a detailed index, requiring Central to answer Complaint Counsel's voluminous and detailed interrogatories is unduly burdensome and duplicative.

The Order also discussed Krantz v. United States, 56 F.R.D. 555, 558 (W.D. Va. 1972), where the Court found that the government's propounding of 1,500 interrogatories was "unreasonable, harsh, oppressive and unnecessary in light of the fact that the government already has the information which it seeks." In its discussion of Krantz, the Order noted that the requesting party already had the information sought by the interrogatories and that the court permitted the government to select a few of the interrogatories for answers. Here, however, Complaint Counsel also has conducted a lengthy investigation of Central that has included subpoenas to Central and third parties, as well as interviews of third parties and (apparently) for new Central employees. In addition, Complaint Counsel has received additional information from Central in the recent document productions.

In Milsen v. Southland Corporation, 1972 U.S. Dist. Lexis 14071, *4 (N.D. Ill. Apr. 21, 1972), the court denied plaintiffs' attempt to compel the defendant to respond to an interrogatory where the requested information was contained in business records already produced. The Order acknowledges that the Court reached its conclusion because "the burden of locating the requested information from Open Pantry's records would be substantially the same for either party." The same is true here. The Milsen court also rejected the contention that Rule 33 requires a party to specify the documents responsive to interrogatories by Bates number, stating that requiring the defendant to identify specific page numbers where interrogatory answers may be found would frustrate the Federal Rules' purpose of placing the burden of research "on the party who seeks the information." Id. at *4. Nonetheless, the Order distinguishes Milsen on the ground that the defendant offered to cooperate with plaintiffs in their research. (Order at p. 4 (citing Milsen, 1972 U.S. Dist. Lexis 14071 at *4.)) Although Milsen does not specify the nature of the offered

cooperation, it is important to note that Central also has cooperated with Complaint Counsel's discovery requests by providing a detailed, extensive person- and department-specific index.

The Order also cites Petroleum Insurance Agency v. Hartford Accident and Indemnity Company, 111 F.R.D. 318 (D. Mass. 1983), to support its mandate that Central must "point to the place in the record where the answer is found" and if it cannot, it must provide a written answer to the interrogatory. (Order at p. 5 (citing Petroleum Insurance Agency, 111 F.R.D. at 319, 320.)) The preceding language of the court in Petroleum Insurance Agency, however, makes clear that the initial burden of searching the business records for interrogatory answers lies with the interrogating party:

> if the defendants claim that the answers are in the records, and the plaintiffs disagree, counsel for the plaintiffs shall notify counsel for the defendants in writing as to what specific items called for in the interrogatories he cannot find in the records which the defendants have specified. If the defendants cannot then point to the place in the record where the answer is found, the defendants shall provide the answer in the from of a written answer to the interrogatory.

Petroleum Insurance Agency, 111 F.R.D. at 320 (emphasis added).

Central respectfully submits that, as Petroleum Insurance Agency shows, Complaint Counsel should first peruse the documents with the assistance of the index and interrogatory answers already provided by Central, and then, if it cannot find the responsive documents, then work with Central to locate the responsive information. Indeed, as the Order acknowledged with its citation to Halder v. International Telephone and Telegraph Company, 75 F.R.D. 657, 658 (E.D.N.Y. 1977), a defendant "should not be forced to engage in extensive research and compilation, particularly when the purpose of the effort is to assist plaintiff in the preparation of his case."

Consequently, the Presiding Officer should grant Central's motion for reconsideration and deny Complaint Counsel's Motion To Compel.

B. The Order Is Based On Erroneous Determinations About The Parties' Respective Burdens.

Both 16 C.F.R. § 1025.32(d) and its Federal Rules counterpart, Rule 33(d), expressly permit a party to respond to an interrogatory by specifying the records from which an answer may be derived from the business records of the party where the burden of deriving the answer "is substantially the same" for both parties. In reaching its conclusions in this matter, however, the Order mistakenly concludes that the parties' burdens are not substantially the same. The Order is based on six determinations that are either factually inaccurate or, if adopted, would completely eviscerate the Rule: (1) the effort required by an interrogated party to examine its own documents to divine the answers should not be considered in weighing burdens; (2) because they are Central's own documents, Central is presumed to have greater familiarity with them; (3) each document has been Bates-stamped; (4) that Central maintains an index to retrieve its own documents; (5) that Central has been engaged in litigation over Omega sprinklers for two years and has digested the documents in this matter pursuant to other litigation; and (6) that Central conducted a privilege review of the documents. (Order at p. 6.)

First, the Order incorrectly concludes that the burden on a party to glean detailed information from its own business record documents is not the sort of burden contemplated by 16 C.F.R. § 1025.32(d) or Federal Rule 33. To the contrary, the burden of reviewing one's own documents to fashion an interrogatory answer is precisely the burden to which the Rules refer. See 7 Moore's Fed. Practice § 33.105 (Matthew Bender 3d ed.) (purpose of the business records

option is to place burden of research on party seeking information "instead of requiring the responding party to conduct a burdensome or expensive search of its own records"). The Advisory Committee Notes to Rule 33 also explains that this was the purpose of the Rule, noting that a party may opt to "place the burden of research of [sic] the party who seeks the information." Fed. R. Civ. P. 33 (Adv. Comm. Notes, 1970 Amend.). In addition, the Committee stated that a party offering documents in lieu of interrogatory answers "should offer them in a manner that permits the same direct and economical access that is available to the party." Id., 1980 Amend. Complaint Counsel seeks to place on Central the considerable burden of researching the documents currently in Complaint Counsel's possession and fashioning Complaint Counsel's case for it. The Rule does not require Central to undertake that burden, particularly where the business records were offered to Complaint Counsel in the same manner and with the same index that Central would use to attempt to answer the interrogatories.

The Order's reference to Pascale v. G.D. Searle & Company, 90 F.R.D. 55 (D.R.I. 1981), does not support the Order's conclusion. In Pascale, the court stated that answering interrogatories "often requires the interrogated party to refer to written documents," and that "[r]eferring to a document in order to answer an interrogatory is not the kind of burden contemplated by the rule [Federal Rule 33(c)]." Id. at 60. "Referring" to a document, however, is not the same as searching through hundreds of thousands of documents to extract and compile information. For example, a responding party might refer to a letter to answer an interrogatory about from and to whom the letter was sent, as no one would be expected to memorize their correspondence by date, sender and recipient. It is a different matter, however, going far beyond simply referring to a document or looking something up, to answer interrogatories about "each

make and model of Omega sprinkler" and its parts, specifications, chemicals, tools and substances used in its manufacture, (Compl. Counsel Interrogatory No. 17), about meetings or discussions on specific, narrow topics, (Compl. Counsel Interrogatory No. 109), and about information requests to contractors, (Compl. Counsel Interrogatory No. 112).

Second, the Order does not provide any explanation of why a presumption that Central has greater familiarity with the documents should serve as a disqualifying factor under the Rule. Were that the case, then the business records option provided in 16 C.F.R. § 1025.32(d) and Federal Rule 33 would never apply, because the producing party would always be more knowledgeable about its documents than the requesting party. Moreover, as Central's counsel stated in her unrefuted declaration, the documents came from 127 employees in 17 departments and from six separate storage facilities. (Central's Opp. to Compl. Counsel's Mot., ex. A, ¶ 4.) Given the numerous sources and sites from which the documents were gathered, no single Central employee or group of employees is familiar with all of the documents produced. Moreover, given the tremendous number of attorneys used to perform the document production, and the fact that, due to the exigencies of time, almost of all of them were temporary attorneys, there is no basis to suggest that Central's counsel have any greater familiarity with the documents than do Complaint Counsel.

Third, the Order is incorrect in stating that "each document has already received a degree of attention by Central as each page has been Bates-stamped." (Order at p. 6.) Bates-stamping is a purely mechanical process, however, involving no perusal or review of the page being stamped.

Moreover, Central employees and counsel did not perform the Bates-stamping. To the contrary, employees of various copy services had the documents stamped as part of the copying process.

Fourth, despite the Order's assumption, Central does not "maintain some sort of index to retrieve its own documents." (Order at p. 6.) To the contrary, in the ordinary course of its business, Central neither organizes nor maintains its documents by subject matters that correspond to the interrogatories and it does not keep an overall index of the documents it retains. (Central's Opp. to Compl. Counsel's Mot., ex. A, ¶¶ 12, 13.) Indeed, the only comprehensive index compiled or maintained by Central regarding the documents at issue in this litigation is the index produced specifically for this litigation with the CPSC. That index has been provided to Complaint Counsel with Central's documents. The parties are thus on equal footing with regard to the organization and indexing of Central's documents.[1/]

Fifth, the fact that Central has been recently involved in other Omega-related lawsuits has no bearing on its supposed familiarity with the documents. To the contrary, the document sweep for the Hart class action litigation involved only 40 boxes of documents; the remaining 410 or so boxes of documents were gathered after the sweeping document requests made by Complaint Counsel. Indeed, as the Declaration points out, Complaint Counsel's discovery requests were the precipatory causes for the massive document search and there is simply no basis to conclude otherwise. (Central's Opp. to Compl. Counsel's Mot., ex. A ¶ 3). In fact, although the Order refers to a "mass of documents" or a "tidal wave of documents" produced by Central, it was

---

1/ With regard to access to the documents, however, Complaint Counsel is in a better position than Central to study the documents because Complaint Counsel has the only complete production set of documents. Making spare copies of a complete production totaling 800,000 pages was prohibitively expensive.

Complaint Counsel's very broad document requests that required Central to undertake massive production efforts.

Finally, the Order erroneously assumes that Central's review of documents for privilege and work product involved the kind of scrutiny of the documents that would justify a determination that Central should now provide textual answers. (Order at p. 6.) Although a privilege review certainly requires care and attention, such attention necessarily focuses on ascertaining whether the documents are protected by the attorney-client privilege or the work product doctrine, not to whether a particular document is responsive to a particular Interrogatory.[2/] Thus, Central's privilege review cannot be viewed as a substantive review of the documents that would be particularly useful with regard to answering interrogatories. Moreover, there is nothing in either § 1025.32 or Rule 33 that suggests that the option to produce business records is lost if the responding party exercises its right to invoke the attorney-client privilege with respect to documents being produced to its adversary.

Because the Order erroneously presumes that the burden of deriving answers from Central's documents is not substantially the same for both Central and Complaint Counsel, the Presiding Officer should grant Central's Motion For Reconsideration and deny Complaint Counsel's Motion To Compel.

2/ A privilege review does not necessarily involve the close scrutiny of each document. (Order at 6.) For example, an engineering blueprint of an Omega part would clearly not involve attorney advice or work product; thus, no scrutiny or inspection of the blueprint is necessary to make a privilege determination. In contrast, close scrutiny would be necessary -- but would be equally burdensome for Central as for Complaint Counsel -- to ascertain in which make and/or model of sprinkler the piece is used, as well as the specifications, chemicals, tools and substances used in manufacturing the piece in the blueprint. See Compl. Counsel Interrogatory. No. 17.

At the very least, the Presiding Officer should modify its Order to include only those interrogatories specified in Appendix "A" to Complaint Counsel's Reply memorandum as going to the heart of Central's defenses: Interrogatory Nos. 5, 6, 16, 18, 21, 25, 27, 28, 29, 34, 37, 38, 39, 42, 43, 45, 46, 47, 48, 49, 52, 55, 56, 58, 59, 60, 62 and 115. Although that modification would still pose a burden that is substantially the same for both Central and Complaint Counsel, the modification would at least pose a slightly more manageable task, albeit one for which more time will be necessary.

C. It Is Not Possible To Comply With The Mandates Of The Order Within Seven Days.

If Central's Motion For Reconsideration is denied, and even if it is only modified as described above, then Central's Motion For An Extension Of Time should be granted. The Order directed Central to provide textual answers and/or particular Bates-stamped page numbers from a potential universe of 800,000 pages, for almost all of Complaint Counsel's 1,500 interrogatories within seven days of service of the Order. Respectfully, it is not possible for Central to comply with that order. As an initial matter, Central does not possess the produced documents. Complaint Counsel has received more than 450 boxes, the full set of which Central did not retain.[3/] Moreover, as detailed above, 19 attorneys worked for an estimated 4,000 hours

---

3/ Central could have insisted that Complaint Counsel inspect the documents in its counsel's offices. See 16 C.F.R. § 1025.33 (responding party produces the document for inspection and copying). As a courtesy and a sign of cooperation, however, Central agreed to loan Complaint Counsel its only full set of documents produced, so long as Complaint Counsel returned them on a rolling basis as quickly as possible and with a list of documents copied by Complaint Counsel. See June 19, 1998 Ltr. from J. Gordon Cooney, Jr. (attached hereto as Exhibit "A.") To date, Complaint Counsel has not produced to Central a list of documents it has selected for copying, although it has agreed to have Central pick up 50 boxes and return them to Philadelphia.

to compile the 5,000-page comprehensive index to Central's 800,000 pages of documents. Answering Complaint Counsel's interrogatories will require an even more significant effort, since compliance will require Central to consider which of the 800,000 pages respond to each of the nearly 1,500 questions that the Order requires Central to answer. The index alone stands nearly two feet high. Perusing it to find specific Bates ranges of documents will require a considerable investment in time and money.[4/]

Although Central submits that its Motion is well-founded and should be granted for the reasons stated above, Central nonetheless immediately sought to comply with the Order as written. Counsel have met with Central personnel to outline supplemental interrogatory answers and to assign responsibilities of gathering, organizing and verifying raw data needed to draft answers; more meetings are scheduled in the coming week. Central's employees have begun to collect the requested data and forward it to counsel, who will then begin drafting textual supplemental answers. In addition, counsel has begun the lengthy process of perusing the 5,000-page index to locate specific Bates ranges of the document categories already identified to Complaint Counsel in Central's interrogatory responses. These efforts confirm that the task Central faces to Comply with the Order as written is monumental.

Therefore, if Central's Motion For Reconsideration is denied, or even if it is only modified as discussed above, the Presiding Officer should grant Central's Motion For An

---

4/ As Emily J. Lawrence, Esquire explained to Complaint Counsel by telephone, Central did not scan its documents into a database because of the expense to do so and the delay it would have caused in producing the documents to Complaint Counsel.

Extension Of Time to enable Central to produce the answers on a rolling basis as promptly as is reasonably possible.

IV. CONCLUSION

For the reasons stated herein, the Order should be reconsidered and Complaint Counsel's Motion To Compel denied or modified. In the alternative, or even if the Order is modified, Central's Motion For An Extension Of Time should be granted.

Respectfully submitted,

Re: In the Matter of Central Sprinkler Corporation, et al.
CPSC Docket No. 98-2

Dear Deborah and Eric:

This letter confirms our conversation of June 17, 1998 with regard to the production and indexing of the first 100 boxes of Respondents' documents in the above matter. Given the volume of documents involved, you agreed that Central could produce its first 50 boxes of documents by the end of the day today, with the index for those documents to follow on Tuesday, June 23, 1998. We will produce to you the remaining 50 boxes on Wednesday, June 24, 1998, with the index to follow on Friday, June 26. We are doing our utmost to deliver the remaining 300 or so boxes, as well as the index for those boxes, within the times specified by Judge Moran.

As we have previously advised you, these copies represent our only complete set of the Company's original documents, which have been returned to the numerous individuals and departments from whom and which they were obtained at the Company. Although it would have been proper for us to insist that you visit our offices to inspect and copy the documents, we agreed to your request that we provide you with temporary custody of the documents so that you may review them in your own offices. We are doing so, however, based on your agreement that you will provide us with a listing, by Bates number, of the documents that you have selected for copying, and that you will return the documents to us on a rolling basis as quickly as possible and in the same manner in which they are being provided to you. The prompt return of the documents and listing of Bates numbers is essential both so that we can

EXHIBIT "A"

conduct the confidentiality analysis required by the Court and so that we may continue to prepare our defense.

Thank you for your courtesy regarding the schedule for the 100 boxes of documents, and please call me if you have any questions.

Very truly yours,

J. Gordon Cooney, Jr.

RESPONDENTS' MOTION FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR AN EXTENSION OF TIME

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby move for reconsideration of the July 17, 1998 Order Granting Complaint Counsel's June 18, 1998 Motion Regarding Discovery. Central respectfully submits that the Order should be reconsidered because: (1) the Order did not give proper regard to the authorities which demonstrate that Complaint Counsel's interrogatories are oppressive and unduly burdensome; (2) the Order erroneously rejected Central's reliance on of 16 C.F.R. § 1025.32(d) based on erroneous factual assumptions about the parties' respective burdens; and (3) the Order should not have required Central to cite documents by Bates number in order to comply with § 1025.32(d). At the very least, the Order should be modified to require answers only to the interrogatories identified by Complaint Counsel in Appendix "A" of its Reply memorandum as the ones of greatest interest to Complaint Counsel.

In the alternative, Central moves for an extension of time in which to comply with the Order. Simply stated, it is impossible for Central to complete the task mandated by the Order within the prescribed seven (7) days, particularly where Complaint Counsel possess the full production set of pertinent documents.

WHEREFORE, Central respectfully requests that the Presiding Officer grant this Motion For Reconsideration Or, In The Alternative, For An Extension Of Time.

Further support for this Motion is contained in the attached Memorandum Of Law, which is incorporated by reference herein.

Respectfully submitted,

Dated: July 24, 1998

MEMORANDUM OF LAW IN SUPPORT OF RESPONDENTS' MOTION FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR AN EXTENSION OF TIME

I. INTRODUCTION

On July 17, 1998, the Presiding Officer issued an Order Granting Complaint Counsel's June 18, 1998 Motion Regarding Discovery (the "Order"). Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby move for reconsideration of the Order. At a minimum, Central requests the Court to modify the Order to limit it to the interrogatories Complaint Counsel has identified as most pertinent.

In the alternative, the Presiding Officer should grant Central an extension of time in which to comply with the Order, as it is not physically possible to comply with the Order within seven days.

II. FACTS

As detailed in Central's Opposition To Complaint Counsel's Motion, Complaint Counsel served nearly 1,500 interrogatories and subparts on Central. (See Central's Opp. to Compl. Counsel's Mot., pp. 3-10.) Complaint Counsel also served Central with document requests, the breadth of which required Central to conduct an exhaustive search and produce more than 450 boxes of documents. Because of the breadth and scope of Complaint Counsel's document requests, completing the initial sweep of the documents required almost 1,500 hours of work by Central's counsel and employees.

After the initial sweep and gathering of documents, Central reviewed the documents for privileged and confidential information. Such a review, however, did not and could not include a detailed review of subject matter and content that would have been sufficient to address to Complaint Counsel's 1,500 interrogatories. Rather, the focus was on readily identifiable confidential and trade secret information, identification of documents protected by the attorney-client privilege and work-product doctrine, and determination of the general subject matter of the documents. Even so, 16 lawyers worked 1,346 hours on this preliminary stage of document production. Nearly all of those lawyers were temporary staff hired for the sole task of complying with Complaint Counsel's document requests in the limited time permitted. They were not, and are not, engaged in the full extent of this or related litigation. Nor were they, or are they, familiar with Central's files, facilities, organization or employees. Once the privilege/confidential stage of production was completed, the documents were Bates-stamped and copied by several outside copy services. Central employees or counsel were not present when the documents were Bates-stamped and copied. Central provided all 450 or so boxes of documents to Complaint Counsel.

Although the Order refers to "a mass" or "tidal wave" of documents, it is important to recognize that Central produced the documents at significant expense and great effort in response to Complaint Counsel's extraordinarily broad document requests. In addition, in order to comply with the Presiding Officer's directive, Central prepared a detailed, extensive index of the approximately 450 boxes of documents, two examples of which are attached as Exhibits "B" and "C" to Central's Opposition to Complaint Counsel's Motion To Compel. The index identifies the source, department and Bates range of the documents in Central's document production. More importantly, the index describes the contents of the documents. In total, Central's comprehensive index provided to Complaint Counsel totaled 5,000 pages. As stated in the Declaration of Stephanie A. Graboyes, indexing just the first 100 boxes of documents required the work of 19 attorneys, 20 legal staff members and approximately 1,000 hours. (See Central's Opp. to Compl. Counsel's Mot., ex. A, ¶ 11.) As with the initial stage of production, nearly all of the lawyers involved in indexing were temporary staff hired for that task; administrative staff typed the index but did not review or even see the documents.

III. ARGUMENT

Although the Order granting Complaint Counsel's Motion To Compel refers to cases on which Central relied in support of its view that the interrogatories were unduly burdensome, Central respectfully submits that the Order does not focus on the courts' holdings or the main principles underlying those holdings. Further, the Order incorrectly concludes that the burden on Central would be less significant than that borne by Complaint Counsel in reviewing the documents to answer Complaint Counsel's interrogatories. Further, the Order imposes a

deadline with which it is impossible for Central to comply. Therefore, the Presiding Officer should reconsider the Order and deny Complaint Counsel's Motion, or, at a minimum, modify the Order to address only the interrogatories listed in Appendix "A" of Complaint Counsel's Reply memorandum. If Complaint Counsel's Motion is not denied, the Presiding Officer should, at the very least, grant Central's Motion for an extension of time.

A. The Cases Cited In The Order Do Not Support Its Conclusions.

The Order refers primarily to cases cited by Central in opposition to Complaint Counsel's Motion. Rather than relying on the holdings and the overall import of those cases, however, the Order focuses either on isolated sentences in the courts' general commentary, or on seemingly distinct facts which, upon closer inspection, actually mirror those in this matter.

For example, as the Order notes, Central cited In re U.S. Financial Securities Litigation, 74 F.R.D. 497 (S.D. Cal. 1975), and Breeland v. Yale and Towne Manufacturing Company, 26 F.R.D. 119 (E.D.N.Y. 1960), for the proposition that excessively long interrogatories are burdensome, an abuse of discovery and need not be answered. In discussing In re U.S. Financial Securities Litigation, the Order does not reflect the Court's holding that excessively long and detailed interrogatories are an abuse of the discovery process. Instead, the Order refers to the U.S. Financial Court's observation that, "in general, the frequency and scope of interrogatories are not limited." (July 17, 1998 Order, p. 3.) (hereinafter "Order").

Moreover, even with respect to that general observation by the U.S. Financial court, the Order does not take into account that, due to the very type of interrogatory abuse present here, the "frequency" of interrogatories has, in fact, been limited under the Federal Rules since the date of the case. As amended in 1993, Federal Rule of Civil Procedure 33(a) provides that without

leave of court or stipulation, "any party may serve upon any other party written interrogatories, not exceeding 25 in number including all discrete subparts . . . ." Fed. R. Civ. P. 33(a) (emphasis added). The limit on the number of interrogatories was added after federal courts' experience confirmed that limitations were necessary to avoid abuse. As the Advisory Committee observed, "because the device [interrogatories] can be costly and may be used as a means of harassment, it is desirable to subject its use to the control of the court . . . ." Id. (Advisory Comm. Notes to 1993 Amends.)

Likewise, the Order distinguishes Breeland, in which the court sustained the defendant's exceptions to answering more than 200 interrogatories, on the basis that the plaintiff sought both to depose defendant's witnesses and to receive interrogatory answers. (Order at p. 3.) In this regard, the Breeland court noted that "an adverse party should not be required to perform burdensome labors or to execute difficult tasks, in searching for facts, and classifying and compiling data." 26 F.R.D. at 120 (quotations omitted). In the instant matter, however, Complaint Counsel, like the Breeland plaintiff, also intends to use multiple discovery procedures. As Complaint Counsel's Preliminary Proposed Discovery And Litigation Schedule indicates, Complaint Counsel anticipates depositions of fact witnesses to commence after document production and to continue for a specified length of time thereafter. Thus, there is no basis to distinguish Breeland on this ground.

The Order next discusses United States v. Procter & Gamble Company, 25 F.R.D. 252, 254 (D.N.J. 1960), in which the Court held that compelling the plaintiff to provide specific detail about the topics discussed on certain occasions by individual persons was unduly burdensome and unnecessary The Order sought to distinguish the case by pointing out that the plaintiff

objecting to interrogatories had "already furnished defendants with all its documents, properly keyed to the general topic discussed." Id. at 254-55. In the instant matter, Central, like the objecting plaintiff in Procter & Gamble, has already furnished Complaint Counsel with all of its documents and a detailed and costly index specifying the source, department and topic description of each document. In addition, the interrogatory answers refer Complaint Counsel to particular categories of documents that are responsive to the interrogatory and that correspond to the descriptions in the index. Moreover, the Order cites Procter & Gamble for the proposition that it was reasonable to require the plaintiff to specify the "general nature" of certain subjects, but that providing specific details would be unduly burdensome. Id. at 254. Complaint Counsel's Interrogatories, however, seek the very kind of detailed information that the Court rejected in Procter & Gamble. The relevance of Complaint Counsel's exacting, detailed and overarching interrogatories is dubious at best. See Hilt v. SFC, Inc., 170 F.R.D. 182, 188 (D. Kan. 1997) (defendant provided no reason or justification for indiscriminate sweep of interrogatories requiring plaintiff to provide a "running narrative or description of the entire case, together with identifications of all knowledgeable persons and supporting documents").

Moreover, as the Procter & Gamble court recognized, certain discovery details are best left to depositions or personal inquiry. (Order at p. 3 (citing Procter & Gamble, 25 F.R.D. at 255.)) As Complaint Counsel clearly intends to depose Central employees and others, has already admitted that it has conducted an investigation and inquiry with former and current Central employees, and has received the voluminous documents they requested with a detailed index, requiring Central to answer Complaint Counsel's voluminous and detailed interrogatories is unduly burdensome and duplicative.

The Order also discussed Krantz v. United States, 56 F.R.D. 555, 558 (W.D. Va. 1972), where the Court found that the government's propounding of 1,500 interrogatories was "unreasonable, harsh, oppressive and unnecessary in light of the fact that the government already has the information which it seeks." In its discussion of Krantz, the Order noted that the requesting party already had the information sought by the interrogatories and that the court permitted the government to select a few of the interrogatories for answers. Here, however, Complaint Counsel also has conducted a lengthy investigation of Central that has included subpoenas to Central and third parties, as well as interviews of third parties and (apparently) for new Central employees. In addition, Complaint Counsel has received additional information from Central in the recent document productions.

In Milsen v. Southland Corporation, 1972 U.S. Dist. Lexis 14071, *4 (N.D. Ill. Apr. 21, 1972), the court denied plaintiffs' attempt to compel the defendant to respond to an interrogatory where the requested information was contained in business records already produced. The Order acknowledges that the Court reached its conclusion because "the burden of locating the requested information from Open Pantry's records would be substantially the same for either party." The same is true here. The Milsen court also rejected the contention that Rule 33 requires a party to specify the documents responsive to interrogatories by Bates number, stating that requiring the defendant to identify specific page numbers where interrogatory answers may be found would frustrate the Federal Rules' purpose of placing the burden of research "on the party who seeks the information." Id. at *4. Nonetheless, the Order distinguishes Milsen on the ground that the defendant offered to cooperate with plaintiffs in their research. (Order at p. 4 (citing Milsen, 1972 U.S. Dist. Lexis 14071 at *4.)) Although Milsen does not specify the nature of the offered

cooperation, it is important to note that Central also has cooperated with Complaint Counsel's discovery requests by providing a detailed, extensive person- and department-specific index.

The Order also cites Petroleum Insurance Agency v. Hartford Accident and Indemnity Company, 111 F.R.D. 318 (D. Mass. 1983), to support its mandate that Central must "point to the place in the record where the answer is found" and if it cannot, it must provide a written answer to the interrogatory. (Order at p. 5 (citing Petroleum Insurance Agency, 111 F.R.D. at 319, 320.)) The preceding language of the court in Petroleum Insurance Agency, however, makes clear that the initial burden of searching the business records for interrogatory answers lies with the interrogating party:

> if the defendants claim that the answers are in the records, and the plaintiffs disagree, counsel for the plaintiffs shall notify counsel for the defendants in writing as to what specific items called for in the interrogatories he cannot find in the records which the defendants have specified. If the defendants cannot then point to the place in the record where the answer is found, the defendants shall provide the answer in the from of a written answer to the interrogatory.

Petroleum Insurance Agency, 111 F.R.D. at 320 (emphasis added).

Central respectfully submits that, as Petroleum Insurance Agency shows, Complaint Counsel should first peruse the documents with the assistance of the index and interrogatory answers already provided by Central, and then, if it cannot find the responsive documents, then work with Central to locate the responsive information. Indeed, as the Order acknowledged with its citation to Halder v. International Telephone and Telegraph Company, 75 F.R.D. 657, 658 (E.D.N.Y. 1977), a defendant "should not be forced to engage in extensive research and compilation, particularly when the purpose of the effort is to assist plaintiff in the preparation of his case."

Consequently, the Presiding Officer should grant Central's motion for reconsideration and deny Complaint Counsel's Motion To Compel.

B. The Order Is Based On Erroneous Determinations About The Parties' Respective Burdens.

Both 16 C.F.R. § 1025.32(d) and its Federal Rules counterpart, Rule 33(d), expressly permit a party to respond to an interrogatory by specifying the records from which an answer may be derived from the business records of the party where the burden of deriving the answer "is substantially the same" for both parties. In reaching its conclusions in this matter, however, the Order mistakenly concludes that the parties' burdens are not substantially the same. The Order is based on six determinations that are either factually inaccurate or, if adopted, would completely eviscerate the Rule: (1) the effort required by an interrogated party to examine its own documents to divine the answers should not be considered in weighing burdens; (2) because they are Central's own documents, Central is presumed to have greater familiarity with them; (3) each document has been Bates-stamped; (4) that Central maintains an index to retrieve its own documents; (5) that Central has been engaged in litigation over Omega sprinklers for two years and has digested the documents in this matter pursuant to other litigation; and (6) that Central conducted a privilege review of the documents. (Order at p. 6.)

First, the Order incorrectly concludes that the burden on a party to glean detailed information from its own business record documents is not the sort of burden contemplated by 16 C.F.R. § 1025.32(d) or Federal Rule 33. To the contrary, the burden of reviewing one's own documents to fashion an interrogatory answer is precisely the burden to which the Rules refer. See 7 Moore's Fed. Practice § 33.105 (Matthew Bender 3d ed.) (purpose of the business records

option is to place burden of research on party seeking information "instead of requiring the responding party to conduct a burdensome or expensive search of its own records"). The Advisory Committee Notes to Rule 33 also explains that this was the purpose of the Rule, noting that a party may opt to "place the burden of research of [sic] the party who seeks the information." Fed. R. Civ. P. 33 (Adv. Comm. Notes, 1970 Amend.). In addition, the Committee stated that a party offering documents in lieu of interrogatory answers "should offer them in a manner that permits the same direct and economical access that is available to the party." Id., 1980 Amend. Complaint Counsel seeks to place on Central the considerable burden of researching the documents currently in Complaint Counsel's possession and fashioning Complaint Counsel's case for it. The Rule does not require Central to undertake that burden, particularly where the business records were offered to Complaint Counsel in the same manner and with the same index that Central would use to attempt to answer the interrogatories.

The Order's reference to Pascale v. G.D. Searle & Company, 90 F.R.D. 55 (D.R.I. 1981), does not support the Order's conclusion. In Pascale, the court stated that answering interrogatories "often requires the interrogated party to refer to written documents," and that "[r]eferring to a document in order to answer an interrogatory is not the kind of burden contemplated by the rule [Federal Rule 33(c)]." Id. at 60. "Referring" to a document, however, is not the same as searching through hundreds of thousands of documents to extract and compile information. For example, a responding party might refer to a letter to answer an interrogatory about from and to whom the letter was sent, as no one would be expected to memorize their correspondence by date, sender and recipient. It is a different matter, however, going far beyond simply referring to a document or looking something up, to answer interrogatories about "each

make and model of Omega sprinkler" and its parts, specifications, chemicals, tools and substances used in its manufacture, (Compl. Counsel Interrogatory No. 17), about meetings or discussions on specific, narrow topics, (Compl. Counsel Interrogatory No. 109), and about information requests to contractors, (Compl. Counsel Interrogatory No. 112).

Second, the Order does not provide any explanation of why a presumption that Central has greater familiarity with the documents should serve as a disqualifying factor under the Rule. Were that the case, then the business records option provided in 16 C.F.R. § 1025.32(d) and Federal Rule 33 would never apply, because the producing party would always be more knowledgeable about its documents than the requesting party. Moreover, as Central's counsel stated in her unrefuted declaration, the documents came from 127 employees in 17 departments and from six separate storage facilities. (Central's Opp. to Compl. Counsel's Mot., ex. A, ¶ 4.) Given the numerous sources and sites from which the documents were gathered, no single Central employee or group of employees is familiar with all of the documents produced. Moreover, given the tremendous number of attorneys used to perform the document production, and the fact that, due to the exigencies of time, almost of all of them were temporary attorneys, there is no basis to suggest that Central's counsel have any greater familiarity with the documents than do Complaint Counsel.

Third, the Order is incorrect in stating that "each document has already received a degree of attention by Central as each page has been Bates-stamped." (Order at p. 6.) Bates-stamping is a purely mechanical process, however, involving no perusal or review of the page being stamped.

Moreover, Central employees and counsel did not perform the Bates-stamping. To the contrary, employees of various copy services had the documents stamped as part of the copying process.

Fourth, despite the Order's assumption, Central does not "maintain some sort of index to retrieve its own documents." (Order at p. 6.) To the contrary, in the ordinary course of its business, Central neither organizes nor maintains its documents by subject matters that correspond to the interrogatories and it does not keep an overall index of the documents it retains. (Central's Opp. to Compl. Counsel's Mot., ex. A, ¶¶ 12, 13.) Indeed, the only comprehensive index compiled or maintained by Central regarding the documents at issue in this litigation is the index produced specifically for this litigation with the CPSC. That index has been provided to Complaint Counsel with Central's documents. The parties are thus on equal footing with regard to the organization and indexing of Central's documents.[1/]

Fifth, the fact that Central has been recently involved in other Omega-related lawsuits has no bearing on its supposed familiarity with the documents. To the contrary, the document sweep for the Hart class action litigation involved only 40 boxes of documents; the remaining 410 or so boxes of documents were gathered after the sweeping document requests made by Complaint Counsel. Indeed, as the Declaration points out, Complaint Counsel's discovery requests were the precipatory causes for the massive document search and there is simply no basis to conclude otherwise. (Central's Opp. to Compl. Counsel's Mot., ex. A ¶ 3). In fact, although the Order refers to a "mass of documents" or a "tidal wave of documents" produced by Central, it was

---

1/ With regard to access to the documents, however, Complaint Counsel is in a better position than Central to study the documents because Complaint Counsel has the only complete production set of documents. Making spare copies of a complete production totaling 800,000 pages was prohibitively expensive.

Complaint Counsel's very broad document requests that required Central to undertake massive production efforts.

Finally, the Order erroneously assumes that Central's review of documents for privilege and work product involved the kind of scrutiny of the documents that would justify a determination that Central should now provide textual answers. (Order at p. 6.) Although a privilege review certainly requires care and attention, such attention necessarily focuses on ascertaining whether the documents are protected by the attorney-client privilege or the work product doctrine, not to whether a particular document is responsive to a particular Interrogatory.[2/] Thus, Central's privilege review cannot be viewed as a substantive review of the documents that would be particularly useful with regard to answering interrogatories. Moreover, there is nothing in either § 1025.32 or Rule 33 that suggests that the option to produce business records is lost if the responding party exercises its right to invoke the attorney-client privilege with respect to documents being produced to its adversary.

Because the Order erroneously presumes that the burden of deriving answers from Central's documents is not substantially the same for both Central and Complaint Counsel, the Presiding Officer should grant Central's Motion For Reconsideration and deny Complaint Counsel's Motion To Compel.

2/ A privilege review does not necessarily involve the close scrutiny of each document. (Order at 6.) For example, an engineering blueprint of an Omega part would clearly not involve attorney advice or work product; thus, no scrutiny or inspection of the blueprint is necessary to make a privilege determination. In contrast, close scrutiny would be necessary -- but would be equally burdensome for Central as for Complaint Counsel -- to ascertain in which make and/or model of sprinkler the piece is used, as well as the specifications, chemicals, tools and substances used in manufacturing the piece in the blueprint. See Compl. Counsel Interrogatory. No. 17.

At the very least, the Presiding Officer should modify its Order to include only those interrogatories specified in Appendix "A" to Complaint Counsel's Reply memorandum as going to the heart of Central's defenses: Interrogatory Nos. 5, 6, 16, 18, 21, 25, 27, 28, 29, 34, 37, 38, 39, 42, 43, 45, 46, 47, 48, 49, 52, 55, 56, 58, 59, 60, 62 and 115. Although that modification would still pose a burden that is substantially the same for both Central and Complaint Counsel, the modification would at least pose a slightly more manageable task, albeit one for which more time will be necessary.

C. It Is Not Possible To Comply With The Mandates Of The Order Within Seven Days.

If Central's Motion For Reconsideration is denied, and even if it is only modified as described above, then Central's Motion For An Extension Of Time should be granted. The Order directed Central to provide textual answers and/or particular Bates-stamped page numbers from a potential universe of 800,000 pages, for almost all of Complaint Counsel's 1,500 interrogatories within seven days of service of the Order. Respectfully, it is not possible for Central to comply with that order. As an initial matter, Central does not possess the produced documents. Complaint Counsel has received more than 450 boxes, the full set of which Central did not retain.[3/] Moreover, as detailed above, 19 attorneys worked for an estimated 4,000 hours

---

3/ Central could have insisted that Complaint Counsel inspect the documents in its counsel's offices. See 16 C.F.R. § 1025.33 (responding party produces the document for inspection and copying). As a courtesy and a sign of cooperation, however, Central agreed to loan Complaint Counsel its only full set of documents produced, so long as Complaint Counsel returned them on a rolling basis as quickly as possible and with a list of documents copied by Complaint Counsel. See June 19, 1998 Ltr. from J. Gordon Cooney, Jr. (attached hereto as Exhibit "A.") To date, Complaint Counsel has not produced to Central a list of documents it has selected for copying, although it has agreed to have Central pick up 50 boxes and return them to Philadelphia.

to compile the 5,000-page comprehensive index to Central's 800,000 pages of documents. Answering Complaint Counsel's interrogatories will require an even more significant effort, since compliance will require Central to consider which of the 800,000 pages respond to each of the nearly 1,500 questions that the Order requires Central to answer. The index alone stands nearly two feet high. Perusing it to find specific Bates ranges of documents will require a considerable investment in time and money.[4/]

Although Central submits that its Motion is well-founded and should be granted for the reasons stated above, Central nonetheless immediately sought to comply with the Order as written. Counsel have met with Central personnel to outline supplemental interrogatory answers and to assign responsibilities of gathering, organizing and verifying raw data needed to draft answers; more meetings are scheduled in the coming week. Central's employees have begun to collect the requested data and forward it to counsel, who will then begin drafting textual supplemental answers. In addition, counsel has begun the lengthy process of perusing the 5,000-page index to locate specific Bates ranges of the document categories already identified to Complaint Counsel in Central's interrogatory responses. These efforts confirm that the task Central faces to Comply with the Order as written is monumental.

Therefore, if Central's Motion For Reconsideration is denied, or even if it is only modified as discussed above, the Presiding Officer should grant Central's Motion For An

---

4/ As Emily J. Lawrence, Esquire explained to Complaint Counsel by telephone, Central did not scan its documents into a database because of the expense to do so and the delay it would have caused in producing the documents to Complaint Counsel.

Extension Of Time to enable Central to produce the answers on a rolling basis as promptly as is reasonably possible.

IV. CONCLUSION

For the reasons stated herein, the Order should be reconsidered and Complaint Counsel's Motion To Compel denied or modified. In the alternative, or even if the Order is modified, Central's Motion For An Extension Of Time should be granted.

Respectfully submitted,

Re: In the Matter of Central Sprinkler Corporation, et al.
CPSC Docket No. 98-2

Dear Deborah and Eric:

This letter confirms our conversation of June 17, 1998 with regard to the production and indexing of the first 100 boxes of Respondents' documents in the above matter. Given the volume of documents involved, you agreed that Central could produce its first 50 boxes of documents by the end of the day today, with the index for those documents to follow on Tuesday, June 23, 1998. We will produce to you the remaining 50 boxes on Wednesday, June 24, 1998, with the index to follow on Friday, June 26. We are doing our utmost to deliver the remaining 300 or so boxes, as well as the index for those boxes, within the times specified by Judge Moran.

As we have previously advised you, these copies represent our only complete set of the Company's original documents, which have been returned to the numerous individuals and departments from whom and which they were obtained at the Company. Although it would have been proper for us to insist that you visit our offices to inspect and copy the documents, we agreed to your request that we provide you with temporary custody of the documents so that you may review them in your own offices. We are doing so, however, based on your agreement that you will provide us with a listing, by Bates number, of the documents that you have selected for copying, and that you will return the documents to us on a rolling basis as quickly as possible and in the same manner in which they are being provided to you. The prompt return of the documents and listing of Bates numbers is essential both so that we can

EXHIBIT "A"

conduct the confidentiality analysis required by the Court and so that we may continue to prepare our defense.

Thank you for your courtesy regarding the schedule for the 100 boxes of documents, and please call me if you have any questions.

Very truly yours,

J. Gordon Cooney, Jr.

REPLY BRIEF IN SUPPORT OF RESPONDENTS' RENEWED MOTION TO COMPEL FULL AND COMPLETE RESPONSES TO INTERROGATORIES AND DOCUMENT REQUESTS

I. INTRODUCTION

Pursuant to the July 8, 1998 Order Directing Replies, Respondents Central Sprinkler Company and Central Sprinkler Corporation (collectively, "Central") hereby file their Reply to Complaint Counsel's Opposition to Central's Renewed Motion To Compel. Because Complaint Counsel has failed to provide critical documents and interrogatory responses requested by Central, and because there is no basis for Complaint Counsel's non-production, the Presiding Officer should grant Central's Renewed Motion To Compel.

II. ARGUMENT

A. Complaint Counsel Has Failed To Identify Persons Having Knowledge Of Relevant Information.

As reflected in the CPSC's own regulations, a basic foundation of any discovery in litigation is identification of the people having knowledge of relevant information. See 16

C.F.R. § 1025.31(c)(1). Complaint Counsel has refused to provide a complete list of such persons in response to Central's Interrogatories, claiming in part that the information is protected by the work product doctrine. See Central's Renewed Mot., p. 11 (citing Complaint Counsel's Response to Interrogatory No. 102); see also, e.g., Nos. 83 and 87. Moreover, as indicated in the examples provided in Complaint Counsel's Opposition, most of the people named are the CPSC's own employees, including several counsel working on this matter. (Compl. Counsel Opp., p. 4.) Further, Complaint Counsel's opposition repeats many names in an attempt to make it appear that they have provided more information than they actually have furnished to Central. For example, Eric Stone, a CPSC attorney, is listed five times on page 4 of Complaint Counsel's Response, as is Catherine Cumberland, albeit as "Catherine Anne Cumberland," "Catherine Cumberland," and "Catherine A. Cumberland." CPSC attorneys and staff presumably are not fact witnesses, however; indeed, Complaint Counsel would surely object to any attempt to depose any of the CPSC attorneys who are prosecuting this matter. Rather, if those people have knowledge of pertinent information, which CPSC admits they do, their information must have been derived during the CPSC's 18-month investigation from people who do have relevant factual knowledge. It is the latter persons who must be identified -- not the CPSC employees and attorneys who were made aware of such information.

Moreover, of the persons identified in Complaint Counsel's Opposition who are not CPSC employees, virtually all appear to be contractors with knowledge of issues relating to remedy such as sprinkler change-out procedures and/or the labor and costs involved. (Compl. Counsel Opp. at 4.) Complaint Counsel has identified virtually no one with purported knowledge about the alleged defect issues, including alleged sprinkler failures, testing of Omega

sprinklers, sprinkler standards, or alleged hazards from Omega sprinklers. Given that these topics form the basis of the Administrative Complaint, it is incumbent upon Complaint Counsel to identify all persons with factual knowledge regarding Complaint Counsel's allegations.

Further, referring Central to people identified in Complaint Counsel's and Central's own documents is not a sufficient response. Indeed, as the Presiding Officer has stated in the Order granting Complaint Counsel's Motion To Compel, the option to refer to business records in lieu of providing textual answers to interrogatories "is not unqualified." (Order of July 17, 1998, p. 2.) Nor can an answering party "discharge its duty to answer interrogatories by simply delivering a tidal wave of documents, the effect of which makes the information exceedingly difficult to locate." (Id. at 7.) Although Central has filed a motion For Reconsideration of the July 17 Order, Complaint Counsel must be held to at least the same standard in providing textual, rather than documentary, interrogatory responses. Complaint Counsel's duty to provide meaningful textual answers is particularly compelling where, as here, it has to review only a small fraction of the huge volume of documents the Presiding Officer has directed Central to review in providing answers. In any event, Complaint Counsel cannot invoke the business records option by referring to information they "believe" may be found in Central's documents, as the documents are, by definition, not Complaint Counsel's own business records. See 7 Moore's § 33.105[1] (Matthew Bender 3d ed.) ("when the answer to an interrogatory may be derived from business records of the responding party, it may, in lieu of answering, specify the records from which the answer may be derived or ascertained . . . ." (emphasis added)). Moreover, information obtained during Complaint Counsel's investigation, which presumably included discussions and interviews, would not necessarily be contained within documents.

Likewise, Complaint Counsel's explanation that "the list of those who have or may have knowledge about the Omegas is potentially endless" due to the millions of sprinklers in service is unavailing. (Compl. Counsel Opp. at 5.) As an initial matter, Central did not ask Complaint Counsel to identify everyone who has or may have knowledge about Omega sprinklers generally. Rather, Central sought identification of each and every person whom Complainant knows and/or believes to have such knowledge of specific matters raised by Complaint Counsel in this matter. See, e.g., Interrogatory Nos. 53-72. This litigation is not about how many sprinklers a building owner has, who installed them, or whether they have ever leaked. Rather, as Complaint Counsel repeatedly asserts, this matter concerns alleged defects in Omega-model sprinklers, purported product hazards, and consumer protection. It is those topics that go to the heart of this matter, and it is those topics about which Central served Complaint Counsel with interrogatories. Unless Complaint Counsel provides Central with the most basic information Central seeks -- identification of persons with knowledge about the particular topics and allegations of Complaint Counsel's investigation and Complaint, Central will not be able to take the necessary depositions and prepare adequately for the hearing in this matter.

B. Complaint Counsel Has Failed To Provide Complete Discovery Responses.

A critical issue in this litigation is what constitutes a "failure" of an Omega sprinkler and whether Omega sprinklers are "defective" within the meaning of the Consumer Product Safety Act. Complaint Counsel's coy answer that it "does not contend that a sprinkler removed from service presents a substantial risk of injury to the public" is a non-response. Although Complaint Counsel has finally admitted that Central is entitled to know what pressure Complaint Counsel

considers in determining a sprinkler "failure," and has further suggested that a pressure of 5 or 7 psig establishes sprinkler failure, (Compl. Counsel Opp. at 7), Complaint Counsel has not answered the rest of Interrogatory 42, which seeks identification of: whether those pressures are based on a standard, documents relating to such a standard, the identity of persons with knowledge of any such standard, and the substance of each person's knowledge.

Similarly, Complaint Counsel has failed to answer interrogatories seeking evidence of Complaint Counsel's factual contentions. It is obvious from the Administrative Complaint that Complaint Counsel made certain contentions. Referring to the Complaint in a discovery response, however, does nothing to inform Central of the factual bases behind the contentions in the Complaint. If Complaint Counsel has factual information it believes support its contentions, it must provide the information to Central. If Complaint Counsel has no such information, it must inform Central of that fact as well. Pleadings are not proof, and Complaint Counsel will not be able to rely on its Complaint as factual evidence of defect or product hazard. If Complaint Counsel has factual support for its allegations, it must provide it to Central.

In addition, Complaint Counsel's general, boilerplate objections obfuscate their discovery responses. It is not clear from the objections whether Complaint Counsel is merely preserving its objections, or actually has information that it is withholding on some asserted ground. Thus, Complaint Counsel's objections fail to reveal the full extent of what Complaint Counsel has withheld information from production. The Presiding Officer noted in his July 17, 1998 Order that Complaint Counsel had criticized Central for, inter alia, raising "blanket objections." (Order at 1.) If such objections are unsatisfactory when made by Central, they are, similarly, unacceptable when made by Complaint Counsel.

C. Complaint Counsel Has Improperly Claimed Privilege And Work Product Protection Rather Than Providing Responsive Discovery.

Despite Complaint Counsel's representation that they have produced "nearly all" of the documents in their possession "with very few and specific exceptions," (Compl. Counsel Opp. at 12, 16-17), in fact, Complaint Counsel has withheld nearly 320 pages (plus audiotapes) of relevant documents. As argued in Central's Renewed Motion To Compel, Complaint Counsel has improperly invoked the attorney-client privilege and work product doctrine rather than respond to Central's discovery requests.

In their response, Complaint Counsel has offered no factual or legal justification for their designation of documents on its privilege log. See Montgomery v. Leftwich, Moore & Douglas, 161 F.R.D. 224, 225 (D.D.C. 1995) (burden is on party asserting the privilege). For example, Complaint Counsel has not established that the individuals named in their privilege log are CPSC attorneys or "clients" providing or seeking legal advice. Indeed, with the exception of the few individuals known to be litigating this matter, the majority of individuals are not identified as attorneys or CPSC employee-"clients," and the descriptions in Complaint Counsel's privilege log do not evince confidential communications made outside the presence of strangers for the purpose of obtaining legal advice. See, e.g., Doc. No. 8 ("meeting with UL and Central Sprinkler"); No. 18 ("notes, third-party subpoena"); 21 ("teleconference with state fire marshal's office).

Further, Complaint Counsel has not established that the documents for which it claims the work product protection are properly exempt from discovery, because documents prepared for or by non-parties to litigation are not protected by the work product doctrine. 6 Moore's Fed.

Practice, § 26.70 [4] (Matthew Bender 3d ed.) Therefore, as discussed in Central's renewed Motion, information created by independent entities and supplied to Complaint Counsel, or provided to independent non-parties by Complaint Counsel, are not protected from discovery. Moreover, even if such documents or compilations were somehow protected, the facts and data within them are not. Complaint Counsel's attempt to hide its case behind the attorney-client privilege and work product doctrine is contrary to the purpose of discovery and to the Commission's own regulations.

Complaint Counsel claims that it has produced "most documents that may be subject to the [work product] privilege." (Compl. Counsel Opp. at 12.) This argument is disingenuous, as it is precisely the withheld documents on Complaint Counsel's privilege log about which Central is arguing. More importantly, in admitting that it advertently produced some of its work product documents -- purportedly "in the spirit of full disclosure," -- Complaint Counsel has waived any claim of work product protection for any of its documents, and all such documents must be produced to Central forthwith. In re Chrysler Motors Corp., 860 F.2d 844, 846 (8th Cir. 1988) (Chrysler voluntarily waived any work product protection by voluntarily disclosing computer tape to its adversary); Fujisawa Pharm. Cp., Ltd. v. Kapoor, 162 F.R.D. 539, 541 (N.D. Ill. 1995) (voluntary disclosure of privileged information about a matter waives privilege as to all information on the same subject matter). Complaint Counsel is not permitted to pick and choose which "protected" documents it will disclose -- presumably those helpful to its case -- while continuing to withhold others. Hercules, Inc. v. Exxon Corp., 434 F. Supp. 136, 156 (D. Del. 1977) (party cannot disclose only facts beneficial to its case and refuse to disclose, on grounds of privilege, related facts adverse to its position). Therefore, Complaint Counsel must produce to

Central all documents for which it has claimed the work product protection, which protection it has now waived by its own admission.

D. Complaint Counsel Has Refused To Provide Relevant Discovery And Textual Responses To Central's Discovery Requests.

Complaint Counsel argues that Central's discovery requests are irrelevant because they seek discovery from Complaint Counsel about, inter alia, sprinkler design features, alleged design defects and Central-related information provided to the CPSC. (Compl. Counsel Opp. at 16, 17.) Contrary to Complaint Counsel's very narrow view of relevance, Central's discovery requests are relevant and also "reasonably calculated to lead to the discovery of admissible evidence." 16 C.F.R. § 1025.31(c)(1). For example, Complaint Counsel objects to Interrogatory No. 129 as requiring Complaint Counsel "to solve this problem for Respondents." (Compl. Counsel Opp. at 16). To the contrary, this Interrogatory seeks information from Complaint Counsel about the perceived design flaws in Omega sprinklers, designs that Complaint Counsel would consider not to be defective -- which designs may or may not already be incorporated into Omega sprinklers, -- and the state of the art of sprinkler design. In addition, although the Presiding Officer's Order Regarding First Prehearing Conference stated that Complaint Counsel "is not obligated to establish the cause" of the alleged Omega defect, that Order also provided that "should Complaint Counsel also intend to introduce evidence of the alleged *cause* of the defect(s), Central is entitled to be so informed." (Order Regarding First Prehearing Conf., pp. 4-5.) Complaint Counsel's interrogatory responses fail to disclose even whether Complaint Counsel intends to introduce evidence of the alleged cause of alleged defects, much less what Complaint Counsel alleges the defect is. At a minimum, Complaint Counsel must answer, with

regard to interrogatories concerning Complaint Counsel's contentions of defect, if it intends to try to prove the alleged cause of any defect.

Moreover, Complaint Counsel must provide textual responses to Central in response to Central's discovery requests. As Complaint Counsel has argued so vehemently with regard to Central's responses to Complaint Counsel's discovery requests, it is not sufficient to refer to documents one has produced where the producing party has carefully examined each of those documents over a length of time. This is particularly true where Complaint Counsel has conducted its investigation over a substantial period of time, has produced relatively few documents to Central (13,000, as opposed to the 800,000 pages that Central produced) and can fashion answers to Central's interrogatories relatively easily. As the Presiding Officer's July 17 Order states with regard to Central, one's duty to answer interrogatories is not discharged simply by delivering documents to the opposing party. (Order at 7.) Just as the Presiding Officer directed Central to answer Complaint Counsel's interrogatories by "providing a complete written response to the questions or by identifying the *particular* Bates-stamped page(s) corresponding to each question and subpart," so too must Complaint Counsel answer Central's interrogatories with complete written responses or identification of specific document pages. (Id. at 7.)

III. CONCLUSION

Discovery must be a two-way street. Both the letter and the purpose of the Commission's regulations is violated by Complaint Counsel's continued refusal to provide documents and interrogatory answers responsive to Central's discovery requests, all while hiding behind ill-claimed objections of privilege, work product, relevance and vagueness. Particularly where Complaint Counsel has initiated an administrative action that threatens Central's continued

existence and ability to address any perceived problems with Omega sprinklers, Complaint Counsel has a duty to produce information regarding the factual bases for, and the information supporting, the allegations charged in its Administrative Complaint. Central therefore respectfully requests that this court grant its Renewed Motion To Compel Full And Complete Responses To Interrogatories And Document Requests.

In the Matter of	)	
CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S OPPOSITION TO RESPONDENTS' MOTION FOR RECONSIDERATION OR, IN THE ALTERNATIVE, FOR AN EXTENSION OF TIME

COMES NOW Complaint Counsel and respectfully submits its Opposition to Respondents' Motion for Reconsideration or, in the Alternative, for an Extension of Time.

I. INTRODUCTION

On June 18, 1998, Complaint Counsel in this action filed a Motion to Compel Respondents to answer the staff's First Set of Interrogatories and to provide documents responsive to the staff's First Requests for Production of Documents. After full briefing of the matter by the parties, the Presiding Officer issued an order, dated July 17, 1998, granting Complaint Counsel's Motion to Compel. *See* Order Granting Complaint Counsel's June 18, 1998 Motion Regarding Discovery. The Presiding Officer directed Respondents to answer the Interrogatories specifically listed in the Order within seven (7) days of service of the Order.

On July 24, 1998, the day the responses were due, Respondents filed a Motion for Reconsideration or, in the Alternative, for an Extension of Time to respond to Complaint Counsel's discovery. Respondents have not provided Complaint Counsel with responses to any of the Interrogatories listed in the Judge's Order.

II. RESPONDENTS SHOULD BE COMPELLED TO PROVIDE COMPLAINT COUNSEL WITH FULL AND COMPLETE DISCOVERY RESPONSES

In a continuing effort to block discovery in this case, Respondents now request that the Presiding Officer reconsider his Order compelling Central to provide responses to Complaint Counsel's discovery requests. In the alternative, Respondents request that they be given additional time to complete the task of answering the questions. There is no justification for a ruling other than that expressed in the Judge's July 17, 1998 Order, nor is there any reason to give Central additional time to answer.

A. THERE IS NO LEGAL JUSTIFICATION FOR RECONSIDERATION OF THE JUDGE'S ORDER ON COMPLAINT COUNSEL'S MOTION TO COMPEL

Respondents request that the Presiding Officer reconsider his July 17, 1998 Order because it allegedly "does not focus on the courts' holdings [of the cases it cites] or the main principles underlying those holdings." Respondents' Motion at 3. Respondents further claim that "the Order incorrectly concludes that the burden on Central would be less significant than that borne by Complaint Counsel in reviewing the documents to answer Complaint Counsel's interrogatories." *Id.* Respondents' arguments on both counts must fail.

Central claims that the Order fails to reflect the court's holding in *In re U.S. Financial Securities Litigation*, 74 F.R.D. 497 (S.D. Cal. 1975), "that excessively long and detailed interrogatories are an abuse of the discovery process." Respondents' Motion at 4.

Respondents claim that the Order addresses only the *U.S. Financial* Court's statement that "the frequency and scope of interrogatories are not limited." Respondents' Motion at 4. However, the Order in this case, and the Court in *U.S. Financial*, both pointed out that "unfettered discovery of all materials relevant to the case should be permitted . . ." Order on Motion to Compel at 3; *U.S. Financial*, 74 F.R.D. at 498.

Respondents further claim that the staff has engaged in "interrogatory abuse" by serving too many interrogatories. Respondents cite the current limitation on the number of written interrogatories in the Federal Rules of Civil Procedure, claiming that the limitation was necessary to avoid abuse. However, as the rule and the Advisory Committee notes that Respondents cite point out, more interrogatories are allowed by agreement of the parties, or by leave of court. Fed. R. Civ. P. 33, and Advisory Comm. Notes. The limitation in the Federal Rules was imposed to "allow judicial scrutiny" of the discovery process, to ensure that interrogatories are not used as harassment. Fed. R. Civ. P. 33, Advisory Comm. Notes to 1993 Amendments. In the instant case, the rules applicable to discovery do not limit the number of interrogatories. *See* 16 C.F.R. 1025.32. Moreover, Complaint Counsel's Interrogatories are clearly not designed or intended to harass Respondents, nor are they of "dubious relevance," *see* Respondents' Motion at 6, as Respondents claim; they are legitimate requests for information that is or would lead to discoverable evidence regarding Omega sprinklers.

Respondents maintain that compelling them to "answer Complaint Counsel's voluminous and detailed interrogatories is unduly burdensome and duplicative." Respondents'

Motion at 6. Complaint Counsel's interrogatories may be comprehensive and detailed. However, they are not unduly burdensome, nor are they duplicative.[1]

Central claims that it has satisfied the requirements of responding to Complaint Counsel's interrogatories, and has "cooperated" with Complaint Counsel by furnishing "all of its documents and a detailed and costly index . . . of each document." Respondents' Motion at 6 (citing *Procter & Gamble Co.*, 25 F.R.D. 252, 254 (D.N.J. 1960); Respondents' Motion at 8. Respondents claim that the burden of locating the requested information from those documents "would be substantially the same for either party," Respondents' Motion at 7 (citing *Milsen v. Southland Corp.*, 1972 U.S. Dist. Lexis 14071, *4 (N.D. Ill., Apr. 21, 1972), and argue that the Judge's Order is based on "erroneous determinations about the parties' respective burdens." Respondents' Motion for Reconsideration at 9.

Complaint Counsel incorporates herein its arguments in support of its Motion to Compel with respect to the burden on the parties, and adds here a practical and instructive example of how the burdens are clearly unequal. During a telephone conversation with Complaint Counsel shortly after the documents were delivered, Respondents' Counsel referenced documents (that had allegedly been provided to Complaint Counsel) relating to actions taken by Central in response to an Omega inactivation in a 1990 fire in which a hospital patient lost her hand. Complaint Counsel has received 460 boxes of documents from

---

[1] Respondents, who have served upon Complaint Counsel 148 interrogatories (many of which seek irrelevant information about the Agency's investigation), as compared to Complaint Counsel's 117 interrogatories, cannot complain that Complaint Counsel's interrogatories are unduly burdensome. *Cf. Precision Instrument Mfg. Co. v. Automotive Maintenance Machinery Co.*, 324 U.S. 806, 814 (1945) (denying relief on the ground that "the unclean hands doctrine closes the door of a court of equity to one tainted with inequitableness or bad faith relative to the matter in which he seeks relief . . .").

Respondents. Complaint Counsel has initially reviewed most of the volumes of indexes received from Respondents. Complaint Counsel has conducted a detailed page-by-page search through the first hundred of the 460 boxes looking for the documents (as counsel for Respondents thought the documents relating to this incident were in the first delivery phase). Complaint Counsel and its staff has now spent over three weeks looking through the boxes for those specific documents. Complaint Counsel has **still** not located the relevant documents.

Respondents, on the other hand, have possessed documents relating to this incident for approximately 8 years, and were involved in litigation regarding the incident. Their counsel has reviewed the documents and, in fact, one of the attorneys of record in this case may have been involved in the investigation and litigation surrounding the incident, and allegedly made recommendations to Central regarding whether to change their sprinkler design. Respondents do not need to sift through 460 boxes to find the answer. Given what they know, Respondents and their counsel could easily have answered Complaint Counsel's questions, with very little effort. Yet, they still claim that it is as easy for Complaint Counsel to search through 460 boxes to find the answer to its interrogatories that ask about fire incidents, injuries and changes to the sprinkler design, as it is for Respondents to simply provide the answer.[2]

---

[2] Rather than simply asking Central's principals to answer the questions, Respondents' counsel hired staff to sift through documents and create an index. Respondents admit in their Motion that "nearly all of the lawyers involved in indexing [the documents] were temporary staff hired for that task," Respondents' Motion at 3, and that the lawyers tasked with complying with Complaint Counsel's document requests "were not, and are not, engaged in the full extent of this or related litigation." Respondents' Motion at 2. Given this information, it is not surprising that the documents often do not comport with their descriptions in the index, that the documents are disorganized, and that even a focused search over several weeks for a particular set of documents has failed to unearth them.

But for the incredible burden placed on Complaint Counsel, Complaint Counsel could have scheduled depositions for today to further inquire about the 1990 failure and injury, and explore defenses that Respondents posed to that claim that they have also posed here -- defenses that Complaint Counsel believes evidence in the 1990 case may disprove. The Judge's Order made no mistake about the relative burdens on Complaint Counsel and Respondents with respect to finding answers to Interrogatories in an "tidal wave" of documents. *See* Order on Motion to Compel at 7. There is absolutely no reason why Central should not be compelled to answer Complaint Counsel's Interrogatories.[3]

B. RESPONDENTS SHOULD BE COMPELLED TO ANSWER COMPLAINT COUNSEL'S DISCOVERY IMMEDIATELY

Complaint Counsel filed and served its Interrogatories and Requests for Production to Respondents on **April 20, 1998, three months ago**. Before the litigation was filed, Central had undergone an extensive governmental investigation over the Omega, and had been sued by several property owners and others over problems with Omegas. Yet, in all the time they have had to do their due diligence and provide answers to the questions posed in Complaint Counsel's discovery requests (most of which are readily available from corporate sources with knowledge about the Omega problem), Respondents have not done so. Respondents now claim that it is "not physically possible to comply" with the Judge's Order, and have not attempted to provide Complaint Counsel **with even a single answer to a single**

---

[3] Respondents explain in their Motion that once the documents were marked privileged and confidential, they were Bates-stamped and copied by several outside copy services. *See* Respondents' Motion at 2. Some of the documents submitted to Complaint Counsel are clearly copies of Bates-stamped documents -- i.e., copies of Respondents' copies, which Respondents claimed at the Pre-Hearing Conference of this matter that they did not possess.

Interrogatory in the two weeks that have elapsed since being ordered to do so. *See* Respondents' Motion for Reconsideration at 1. Respondents are obstructing discovery in this case, and should not be given additional time to continue along this course. Trial of this matter is scheduled to begin in December. **Depositions were scheduled to begin today. Complaint Counsel has only a mass of boxes in which to find answers to its questions, evidence for its case, and identities of persons with knowledge.** Respondents should be compelled to answer Complaint Counsel's discovery immediately.

III. CONCLUSION

Based on the foregoing, Complaint Counsel respectfully requests that Respondents' Motion for Reconsideration or, in the Alternative, for Extension of Time, be DENIED.

Dated: July 31, 1998

Respectfully submitted,

ORDER

On July 17, 1998, this Court issued an Order granting the June 18, 1998, Motion of the Consumer Product Safety Commission regarding discovery. Central Sprinkler Corp. and Central Sprinkler Co. ("Central" or "Respondents") was ordered to answer the interrogatories within seven (7) days of service. The answers were due July 24, 1998.

Respondents have not complied with the Order. Instead, on July 24, 1998, Central filed a Motion for Reconsideration or, In the Alternative, for an Extension of Time. Complaint Counsel filed an Opposition to Central's Motion on July 3, 1998.

Having considered the Motion, it is DENIED. Central is directed to immediately comply with the Court's July 17th Order.[1]

SO ORDERED.

William B. Moran

ORDER GRANTING TEMPORARY STAY

The parties have submitted a joint motion seeking a two (2) week stay of the administrative proceedings in this matter and they represent that they intend to engage in "serious settlement discussions" during this time.

For good cause shown, the joint motion is GRANTED. The parties shall file an *in camera* status report with the Court, via facsimile, by August 20, 1998.

ORDER GRANTING ADDITIONAL TWO-WEEK EXTENSION OF TEMPORARY STAY OF PROCEEDINGS

Upon Joint Motion made by the parties to this Administrative Proceeding, it is hereby ORDERED that the cause be temporarily stayed for an additional two-week period in order to allow the parties to continue their efforts to negotiate a settlement of this action. This represents the fifth stay of this proceeding on the basis of efforts to negotiate a settlement. Extension can not be indefinitely granted. Further extensions will be disfavored. Absent settlement, this case must proceed. The parties shall file an *in camera* status report with the Court, via facsimile, by September 29, 1998.

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of CENTRAL SPRINKLER CORP., and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

ORDER

UPON CONSIDERATION of the Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. (collectively, "Central") issued on or about March 3, 1998, and the Consent Agreement between the parties;

UPON CONSIDERATION of Central's concession that "Omega" fire sprinklers are "consumer products" under the CPSA, 15 U.S.C. § 2052;

UPON CONSIDERATION of Central's decision not to contest the allegations in the Complaint that "Omega" fire sprinklers contain a defect which creates a "substantial product hazard;" and

Pursuant to Sections 15(c) and (d) of the CPSA, 15 U.S.C. § 2064(c) and (d), IT IS HEREBY ORDERED THAT:

1. The Consent Agreement between Central Sprinkler Corp. and Central Sprinkler Co. (collectively, "Central") and the Commission staff is accepted and incorporated by reference herein, and Central shall comply with all of its obligations thereunder.

2. All allegations of the Administrative Complaint are resolved by this Consent Agreement and Order. Based on the Consent Agreement, including Central's admissions and agreement not to contest certain allegations of the Administrative Complaint for settlement purposes, the Commission finds that the Consent Agreement and this Order are necessary to protect the public from the hazard the Commission believes is presented by Omega sprinklers.

3. To remedy the alleged substantial product hazard created by Omega sprinklers, Central shall remove from service and replace all Omega sprinklers with replacement glass bulb sprinklers containing a Belleville Washer-Type Seal ("Replacement Sprinklers"), pursuant to, and in accordance with, the terms of Paragraphs 4 through 21 below and all of its obligations under the Consent Agreement incorporated by reference herein.

4. Central shall immediately cease and desist manufacturing, selling, distributing, marketing, exporting, importing, and/or attempting to distribute or sell any Omega sprinkler, whether by itself or through its subsidiaries, affiliates, Central-owned distribution centers, or any other persons or entities over whom Central has control, whether in the United States or any other foreign state, country, or territory.

5. Central shall provide notice to the public, its customers, and Omega owners, of the alleged hazard posed by Omega sprinklers, and the remedy to which Omega owners are entitled, which notice shall include the elements set forth in Appendix A of this Order. All notices, including all script(s) for operators of the toll-free numbers set forth in Appendix A, must be approved by the Commission staff prior to dissemination.

6. Central shall provide Replacement Sprinklers to all owners of Omega sprinklers, at no cost to the Omega owners, according to the provisions set forth in Appendix C of this

Order. A listing of the Replacement Sprinkler(s) for each Omega is set forth in Appendix B of this Order.

7. Central shall provide replacement escutcheons, extensions, and any and all other fittings, fixtures and/or appurtenances necessary for proper replacement of Omegas with the Replacement Sprinklers ("Replacement Parts") at no cost to the Omega owners.

8. Beginning in November, 1998, and for 48 months thereafter, Central shall make best efforts to manufacture and distribute to Omega owners at least 100,000 Replacement Sprinklers, and the accompanying Replacement Parts, per month for as long as the demand for Replacement Sprinklers equals or exceeds 100,000 per month.

9. If Central receives requests for Replacement Sprinklers and Replacement Parts at a rate that exceeds its monthly capacity to manufacture and ship the Replacement Sprinklers and Replacement Parts, Central shall devise a plan for sprinkler and parts distribution to ensure priority replacement of sprinklers in buildings where members of the public are particularly vulnerable. Central's plan for sprinkler distribution shall be submitted to the Commission staff for approval prior to implementation. In the event the staff disagrees with Central's plan for sprinkler distribution, Central shall implement the plan as amended or devised by the staff.

10. In addition to providing Replacement Sprinklers and Replacement Parts as stated in Paragraphs 6 through 9 herein, Central shall pay, into a Trust for the benefit of Omega owners, a monetary contribution toward the labor costs of replacing their Omega sprinklers in accordance with the procedures set forth in Appendix C of this Order. The monetary contribution is for the purpose of assisting Omega owners in paying the costs associated with

removing and replacing their existing Omegas, and thus encouraging Omega owners to participate in the remediation program provided herein, in order to remedy the hazard the Commission believes is presented by the Omegas, and protect the public health and safety.

11. In order to obtain Replacement Sprinklers and Replacement Parts, and the monetary contribution provided for in Paragraph 10 herein, Omega owners must follow the procedures required by Appendix C of this Order.

12. Recognizing that suitable Replacement Sprinklers are not currently available for all Omega sprinkler models, Central shall pay $5.00 per Omega sprinkler to any owner of Omega sprinklers who does not want or cannot use Central's Replacement Sprinklers, provided such owner gives Central reasonable proof of removal and replacement of Omegas. Central shall also pay to all such Omega owners a monetary contribution toward the costs of removing and replacing their Omega sprinklers in accordance with the procedures set forth in Appendix C of this Order. This payment is for the purpose of assisting Omega owners in paying the costs associated with removing and replacing their existing Omegas, and thus encouraging Omega owners to remove and replace their existing Omega sprinklers, in order to remedy the hazard the Commission believes is presented by the Omegas, and protect the public health and safety.

13. For those Omega owners who, after May 1, 1996, but prior to the effective date of this Order, 1) already replaced or contracted to replace their Omegas with non-Omega sprinklers and 2) who received in value from Central less than what they would have received under Paragraph 12 of this Order, Central shall pay such owners the difference between what they have already paid and the amount they would have paid under Paragraph 12 of this

Order. This payment shall be made for the purpose of encouraging owners of products that present or may present a substantial product hazard to take immediate action to remove and, where appropriate, replace that product. This payment assists in the fulfillment of the Commission's mandate to protect the public health and safety from the risks associated with products that present a substantial product hazard.

14. If Central fails to make timely contributions to the Trust as required by Appendix C hereto, Central shall be liable for additional contributions to the Trust, separate from any penalty it may incur pursuant to Paragraph 17 of the Consent Agreement. Such additional contribution(s) shall include the following:

a. Interest at the percentage rate established by the Department of the Treasury pursuant to 31 U.S.C. § 3717, for any period after the due date;

b. A handling charge of $10,000 at the end of each 30 day late period; and

c. A 7% (seven percent) per annum penalty charge if the deposit is not made within 30 days of the due date.

These additional contributions are intended to encourage Respondents to fulfill their obligations to remedy the hazard the Commission believes is presented by Omega sprinklers, and protect the public health and safety.

15. Central shall devise procedures to ensure the destruction of the Omega sprinklers. Central shall destroy all finished goods inventory and returned Omegas, from whatever source, and will not use any component parts of any returned or finished goods Omega for the manufacture or sale of any other product. Central must provide to the staff a monthly accounting of all returned and destroyed sprinklers for the first three months after the

effective date of this Order, and a quarterly accounting of all returned and destroyed sprinklers thereafter, for four years. Such reports shall be provided in a format approved by the Commission staff.

16. Central shall not, without first both notifying and consulting with the staff, manufacture for sale, offer for sale, distribute in commerce, export, or import into the United States any automatic sprinkler containing all of the following elements: (a) a body or body portion housing a dynamic valve plug (whether or not utilizing an elastomeric seal) that controls the release of water or other extinguishing agent; (b) a retaining groove within the body of the sprinkler housing locking ball bearings; (c) a plunger; and (d) a cylindrical chimney (whether or not utilizing external heat collecting fins) housing a fusible element, bearing disk, and part or all of the plunger. Central shall notify the Commission staff at least 90 calendar days before it begins manufacturing, offering, distributing, exporting, or importing any such sprinkler(s). Central shall provide the staff prompt access to all design, testing, and listing documents pertaining to any and all such sprinklers.

17. Beginning December 1, 1998, and by 5:00 p.m. on the first business day of every month thereafter, Central must provide to the staff a monthly status report, in a form acceptable to the staff, of the progress of the remediation program for the Omegas.

18. Central must immediately notify the staff of the Consumer Product Safety Commission in writing if:

a. Factory Mutual Research Corporation (FMRC) or Underwriters Laboratories Inc. (UL) does not approve or list, withdraws or discontinues its approval or

listing, no longer approves or lists, or modifies its approval or listing of any of the Replacement Sprinklers at any time, for any reason whatsoever;

b. the Replacement Sprinklers fail any test conducted by FMRC or UL and indicated in Appendix E of this Order; or

c. Central obtains information with respect to Replacement Sprinklers that is reportable under Section 15(b) of the CPSA.

19. Central shall provide to the staff a copy of all filings it makes with the Securities and Exchange Commission (SEC) within five business days of making such filings. Central shall also notify the staff in writing of any changes in corporate officers and directors within five business days of such changes.

20. Central shall allow the Commission and/or staff to inspect any and all records that are not subject to the attorney-client privilege or attorney work-product doctrine, regarding the Replacement Sprinklers and Parts, remediation program, any class action lawsuits regarding Omega sprinklers, and any claims or lawsuits against its insurers or other third parties relating to Omega sprinklers, and to inspect all manufacturing, design and/or receiving facilities regarding Replacement Sprinklers at any time during normal business hours, upon reasonable notice.

21. This Order, and all of the obligations it imposes on Central, shall terminate in its entirety upon the final distribution of all funds required to be placed in the Trust pursuant to

Appendix C of this Order, unless Central has not completely fulfilled its obligations under the Consent Agreement and Order.

BY ORDER OF THE CONSUMER PRODUCT SAFETY COMMISSION

CPSC/OFFICE OF
THE SECRETARY

1998 OCT -2 P 5:10

In the Matter of	
CENTRAL SPRINKLER CORP.,	
and	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	
Respondents	

CONSENT AGREEMENT

This Consent Agreement is made by and between the staff of the Consumer Product Safety Commission and Respondents, Central Sprinkler Corp. and Central Sprinkler Co., to settle the above-captioned administrative action. The parties agree as follows:

Parties

1. The "staff" is the staff of the United States Consumer Product Safety Commission ("CPSC" or "the Commission"), an independent regulatory agency of the United States, established by Congress pursuant to Section 4 of the Consumer Product Safety Act ("CPSA"), 15 U.S.C. § 2053.

2. Respondents Central Sprinkler Corporation and Central Sprinkler Company (hereinafter collectively "Central") are corporations organized and existing under the laws of

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co.
and Central Sprinkler Corp.

the Commonwealth of Pennsylvania, with their principal place of business at 451 North Cannon Ave., Lansdale, PA 19446.

Subject Matter

3. From 1982 to July, 1998, Central manufactured and sold and/or distributed between 9 and 10 million "Omega" brand automatic fire sprinklers. On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint ("Complaint") against Central, seeking recall and replacement of Central's Omega fire sprinklers pursuant to 15 U.S.C. § 2064. The Complaint alleges that Central's Omega sprinklers are defective and will not function in certain fire situations, creating a substantial risk of bodily injury and/or death.

4. To date, the staff has received reports that from 1990 to the present, Omega sprinklers did not function in 20 fires.

5. Central has filed an answer to the Complaint in which it avers, *inter alia*, that its Omega sprinklers are not defective within the meaning of 15 U.S.C. § 2064.

6. The staff also contends that Central obtained information which reasonably supported the conclusion that Omega sprinklers contained a defect or defects that could create a substantial risk of injury to the public but failed to report such information in a timely manner pursuant to 15 U.S.C. § 2064(b). Central denies any wrongdoing under 15 U.S.C. § 2064(b).

Agreement of the Parties

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

7. It is the express purpose of the parties in entering into this Agreement to protect the public safety by carrying out the recall and replacement of Omega sprinklers.

8. The parties intend for this Consent Agreement and the attached Order (hereinafter "Order" or "the Order"), which is hereby incorporated by reference, to resolve all allegations and requests for relief set forth in the Administrative Complaint in this proceeding and to bar the initiation or referral by the CPSC of any administrative, civil, or criminal claims within the CPSC's jurisdiction arising from the conduct of Central, its officers, directors and/or employees regarding Omega sprinklers. This resolution shall not apply to any actions arising from non-compliance with or disputes pertaining to this Agreement or the Order.

9. For purposes of this settlement only, Central admits that "Omega" fire sprinklers are "consumer products" under Section 3 of the CPSA, 15 U.S.C. § 2052, subject to the jurisdiction of the Consumer Product Safety Commission.

10. For purposes of this settlement only, Central agrees not to contest the allegations in the Complaint that "Omega" fire sprinklers contain a "defect which creates a substantial product hazard," as those terms are defined in Section 15(a) of the CPSA, 15 U.S.C. § 2064(a). Central has agreed not to contest these allegations in order to avoid the expense, inconvenience and risks associated with further litigation, and the parties recognize that this resolution and this Consent Agreement may not be used or introduced as evidence of defect or hazard against Central in other litigation not involving the Commission or its staff. Entry of the Order will neither impair nor assist the bringing of any other action.

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

11. As part of the amounts referenced in 1.a and 1.b of Appendix C of the Order, Central shall deposit, without any adjudication or admission of fact or law, $1.3 million into the Trust established in Appendix C of the Order, in settlement of the staff's contention that Central failed to report to the Commission problems with the Omega pursuant to 15 U.S.C. § 2064(b). Central has agreed to do so solely to avoid the inconvenience and burden of litigation of this issue.

12. Upon acceptance by the Consumer Product Safety Commission of this Consent Agreement, and entry of the Order, Central knowingly, voluntarily and completely waives and relinquishes any past, present and/or future right or rights in this matter: (1) to an administrative or judicial hearing and to all further procedural steps, including findings of fact, conclusions of law and/or further determination of whether Omega sprinklers contain a defect which creates a substantial product hazard within the meaning of Section 15 of the CPSA; (2) to seek judicial review or otherwise contest the validity of this Consent Agreement and/or Order as issued and entered; and (3) to seek judicial review of this or any past orders, findings and/or determinations of the Commission or the Presiding Officer in this matter, except as set forth in the provisions regarding review in Paragraph 28 of this Agreement.

13. Central agrees to fulfill all requirements of the Order.

14. Central agrees to immediately cease and desist manufacturing, selling, distributing, marketing, exporting, importing, and/or attempting to distribute or sell any

Accepted and Approved:

CPSC Office of Compliance

Respondents Central Sprinkler Co. and General Sprinkler Corp.

Omega sprinkler, whether by itself or through its subsidiaries, affiliates, Central-owned distribution centers, or any other persons or entities over whom Central has control, whether in the United States or any other foreign state, country, or territory.

15. Central shall request that Underwriters Laboratories, Inc. withdraw its listing of approval for all Omega sprinklers.

16. Central shall provide the staff with thirty days written notice of any transfer of property rights it holds in the following U.S. Patents: 4,465,141; 4,491,182; 4,508,175; 4,553,602; 5,094,298; 4,619,327; 3,734,191, 3,802,510; 3,877,527, 3,911,940; 3,991,829, and 4,359,098.

17. A violation of this Consent Agreement or the Order is a prohibited act within the meaning of Section 19 of the CPSA, 15 U.S.C. § 2068.

18. The Commission or Central may disclose terms of this Consent Agreement and Order to the public.

19. This Consent Agreement shall take effect upon its final acceptance by the Consumer Product Safety Commission.

20. This Consent Agreement and Order shall be binding upon the parties hereto and their successors, assigns, and receivers. If, prior to the termination of this Consent Agreement and Order, Central merges with any other corporation or sells, assigns, or otherwise transfers substantially all of its assets, Central shall provide reasonable prior notice to the surviving corporation or, in the case of an asset sale, assignment, or transfer, the

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

purchaser, transferee, or assignee of substantially all of Central's assets, of this Consent Agreement and Order, and of its binding effect upon said surviving corporation, purchaser, assignee, or transferee. The existence of this Consent Agreement and Order and their binding effect shall be noted in any agreement between Central and such surviving corporation, purchaser, transferee, or assignee. It shall be a condition of any such merger, sale, assignment, or transfer that the surviving corporation or, in the case of an asset sale, the purchaser, assignee, or transferee, execute a document agreeing to be bound by the provisions of this Consent Agreement and Order, and to submit to the jurisdiction of the Commission for purposes of enforcement of this Consent Agreement and Order. In the event of any merger or sale, transfer, or assignment of substantially all of Central's assets, notice shall be provided to the staff no later than 15 days prior to any such merger or asset sale, transfer, or assignment.

21. This Consent Agreement and Order have been negotiated by the parties. Central is not relying on the advice of the staff, nor anyone associated with the staff, as to legal, tax, or other consequences of any kind arising out of this Consent Agreement and Order, and Central specifically assumes the risk of all such legal, tax and other consequences.

22. For all purposes, this Consent Agreement and Order shall constitute an enforceable judgment obtained in an action or proceeding by a governmental unit to enforce its police or regulatory power. Central acknowledges and agrees that this Agreement and Order are pursuant to the Commission's police or regulatory power to remedy the risk

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

created by and protect the public from a substantial product hazard which the Commission believes is presented by Omega sprinklers, and that the Agreement and Order are not subject to an automatic stay if Central becomes the subject of a bankruptcy proceeding.

23. If all of the Replacement Sprinklers are not listed or approved by Underwriters' Laboratories Inc. ("UL") and all of the exclusively non-residential Replacement Sprinklers are not listed or approved by Factory Mutual Research Corporation ("FMRC") by November 1, 1998, or if the listing or approval of any of the Replacement Sprinklers by UL or FMRC is withdrawn, discontinued or modified at any time, for any reason whatsoever, the Commission, at its sole discretion and upon reasonable notice to Central, may void, suspend, or rescind all or any part of this Consent Agreement and Order.

24. The Commission, at its sole discretion and upon reasonable notice to Central, may void, suspend, or rescind all or any part of this Consent Agreement and Order if Central has made material misrepresentations regarding its current financial condition, manufacturing and shipping costs for Replacement Sprinklers and Replacement Parts, the number of Omega sprinklers remaining to be remediated (approximately 8.4 million), and/or the projected costs of administering the recall and replacement program in this Agreement and Order, and the staff has relied on those misrepresentations in entering into this Agreement. Appendix D of the Order lists those documents containing representations deemed material by the parties.

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

25. Beginning 3 months after the effective date of the Commission's Order, and for every 3 months thereafter until the expiration or final determination of the Claims as defined in Paragraph 1.c of Appendix C of the Order, Central shall provide to the staff a full report on the progress and status of the Claims as defined in Paragraph 1.c of Appendix C of the Order, and the progress and status of the remediation program set forth in this Agreement and Order, including but not limited to the payments made to the Trust as defined in Appendix C of the Order, and the expenses paid and/or incurred for notice and administration of the remediation program set forth in this Agreement and Order. Central shall provide, with these reports, the daily timesheets, with descriptions of all work performed, of each Central employee involved in administration of the remediation program, for the time period since the last report date. At any time, upon reasonable written notice, the Commission may require Central to submit to an independent or Commission review and/or audit of the remediation program set forth in this Consent Agreement and Order, and/or any Claims as defined in Paragraph 1.c of Appendix C. Central shall provide the staff with a copy of every audit report of its financial condition within 5 business days of the date the report is prepared.

26. If, after the effective date hereof, any provision of this Consent Agreement and Order is held to be illegal, invalid, or unenforceable under present or future laws effective during the terms of this Consent Agreement and Order, such provision shall be fully severable. The rest of the Agreement and Order shall remain in full effect, unless the

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

Commission determines that severing the provision materially impacts the remediation program set forth in this Agreement and Order.

27. Central acknowledges that this Consent Agreement and Order have been negotiated between unrelated, sophisticated and knowledgeable parties acting in their own self-interest and represented by counsel, and the provisions of this Consent Agreement and Order shall not be interpreted or construed against any person or entity because that person or entity or any of its attorneys or representatives drafted or participated in drafting this Consent Agreement.

28. The provisions of this Consent Agreement and Order shall be interpreted in a reasonable manner to effect its purpose to remedy the alleged hazard that Omegas pose. In the event of a dispute between the parties arising under this Consent Agreement and Order, the parties agree to submit the issue for determination by the Commission. Except as stated to the contrary in Paragraphs 7 through 10 of Appendix C of the Order, Central shall have the right to seek judicial review of the Commission decision, such review to be based upon the record of any such Commission proceeding and according to law.

29. The existence of a dispute shall not excuse, toll, or suspend any obligation or deadline imposed upon Central under this Consent Agreement and Order.

30. This Consent Agreement and Order shall not be waived, changed, amended, modified, or otherwise altered, except in writing executed by the party or parties against

Accepted and Approved:

CPSC Office of Compliance

Consumer Federation of America
Consumer Information Center
Consumer Union of United States
National Consumer League

- Written letter by first class mail to members of the American Waterworks Association in 68 targeted counties to provide notice of the corrective action either as part of water bills or consumer newsletters. CPSC to approve language for letter.

Computer Posting

- A **public service announcement** will be posted on appropriate legal, consumer, fire safety and related bulletin boards on Usenet News groups (Exhibit 5) and major online services (i.e., America Online, etc.) directed to professionals and consumers. In addition to any other contact information, the online PSA will include a link to the Central Omega program website.

- The notices of Recall and Settlement, Proof of Claim, Verification and Waiver and Release of Claims forms will be posted on the Omega website to provide access to the notice and other pertinent information. The website will be listed with major search engines.

- In addition, **hyperlinks** may be established with other websites, including CPSC's, related to fire safety, legal and construction-related issues to allow access to the class action and recall notice.

Telephone Support

1-800 REQUEST-LINE

All print advertising will direct the reader to call a 1-800 telephone number, to write to an address or to go to the website in order to receive the Notice of recall and settlement and related forms.

Accepted and Approved:

CPSC Office of Compliance

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

A 1-800 896-5685 interactive telephone number will be utilized. A pre-recorded message will welcome callers to the line. Callers will be directed through a series of steps that will allow the system to capture their names, mailing addresses and phone numbers.

Names and addresses will be downloaded and transcribed within 48 hours. Consumers will be mailed class action notice/recall package within 8 business days of consumer call until November 15, 1998 and thereafter within 5 business days.

1-800 OMEGA INFORMATION LINE

The Notice of recall and settlement will include Central Sprinkler's toll-free Omega information line. If potential Class Members have questions after reviewing the Notice of recall and settlement, they will be able to speak with a Central customer service representative. All customer service representatives will be trained by Central Sprinkler. A question and answer document incorporating a list of commonly asked questions is being drafted in advance so that customer service representatives will be prepared with scripted answers. The script will be updated periodically to include new information and answers to added questions. Central intends to dedicate 20 customer service representatives staggered throughout the operational period for the first 6 weeks from the date of the Notice of recall and settlement. The Omega information line will operate from 7:00 a.m. until 9:00 p.m. Monday through Friday for the first six weeks. Staffing for the Omega information line thereafter will be assessed after week 6.

Legal Notice Legal Notice

IMPORTANT SAFETY RECALL
AND CLASS ACTION SETTLEMENT
FOR HOME OWNERS/BUILDING OWNERS WITH OMEGA BRAND FIRE SPRINKLERS MANUFACTURED BY CENTRAL SPRINKLER CO.

Central Sprinkler Company ("Central") and the United States Consumer Product Safety Commission are announcing a settlement involving the recall and replacement of approximately 6.4 million Omega brand fire sprinklers manufactured since 1982 by Central. Plaintiffs in two suits representing a nationwide class have preliminarily settled their suits and are also announcing the availability of a remedy. Omega fire sprinklers are installed in homes, offices, hospitals, schools and other buildings around the country.

OMEGA FIRE SPRINKLERS COULD LIKELY FAIL IN A FIRE, WHICH COULD RESULT IN SEVERE INJURY OR DEATH.

IDENTIFYING SPRINKLERS

Numerous models of the Omega fire sprinklers are involved. On most models, consumers will be able to see one to three flat round metal disks stacked one above the other with a small space between each disk. However, because it may be difficult to determine whether Omegas are installed, consumers are encouraged to call the toll free number below for product identification or contact their architect, builder, sprinkler contractor, plumber, homeowners' association or property manager to determine if Omegas are installed in their residence or facility.

Building owners and consumers are urged to take immediate action and call the Omega information line to learn more about the recall, how to identify Omega sprinklers, obtain a Proof of Claim form, and obtain further information about the settlement, including how to participate in the settlement and how the settlement may affect their legal rights.

SPRINKLER REPLACEMENTS

For consumers to get replacement sprinklers and any reimbursement towards installation costs, they must submit the Proof of Claim and Release Forms to Central postmarked by August 1, 1999. Consumers submitting Proof of Claim and Release Forms postmarked after August 1, 1999 but before November 1, 2001 still qualify to receive replacement sprinklers (though not reimbursement).

Until free replacement sprinklers are provided, consumers need to protect themselves against fire, have working smoke detectors and have adequate escape plans.

CLASS ACTION

If you are an owner or operator of a building that is or was equipped with Omega fire sprinklers, your legal rights may be affected by the proposed class action settlement which, if approved by the court, will result in the release of certain claims.

Complete information about your rights as a class member, the settlement approval process, how to exclude yourself from the settlement class, how to object or comment on the settlement, and how to make a claim for replacement sprinklers and costs, including important dates and deadlines, is available in the Full Notice of Settlement.

FOR FURTHER INFORMATION AND A COPY OF THE RECALL AND FULL NOTICE OF CLASS ACTION SETTLEMENT,

CALL: **1-800-896-5685**

OR WRITE: **PO BOX 1555; FAIRMONT, MN 55021-1555**

OR VISIT: **http://www.xxxxxx.com/xxxx**

PLEASE DO NOT CONTACT THE COURT. DATED: March XX, 1999 COMMISSIONER BRUCE E. MITCHELL

The lawsuit and settlement are under consideration in Hart v. Central Sprinkler Corp. No. BCL 71727 (Cal. Super Ct.). It is pending before Commissioner Bruce E. Mitchell in the Los Angeles County Superior Court.

(Final Versions of Consumer Letter and AHJ Letter to be Provided by CPSC)

IMPORTANT SAFETY INFORMATION
RECALL OF CENTRAL SPRINKLER'S OMEGA BRAND FIRE SPRINKLERS

To Consumer/Homeowner:

The Consumer Product Safety Commission (CPSC) and Central Sprinkler recently announced the recall of **all** Omega fire sprinklers. According to the CPSC, these sprinklers are defective and could likely fail in a fire, which could result in bodily injury or death.

Please read the entire attached packet of information carefully. It is very important for you to determine if Omega sprinklers are installed in your home or building. The notice contains product information regarding the recall with the CPSC, as well as the preliminary settlement Central has reached with several private class action lawsuits. Please refer to the product information sheets which explain how to identify Omega sprinklers. Because sprinklers can be difficult to identify, we urge you to check with your architect, builder, sprinkler contractor, plumber, homeowners' association or property manager.

This recall is available to **all** owners of Omega fire sprinklers. To participate in the recall you **must** complete the enclosed Proof of Claim Form and Waiver and Release of Claims Form as soon as possible and return them to Central Sprinkler at the address indicated in the Proof of Claim Form. Central Sprinkler will mail you a free replacement sprinkler for every Omega sprinkler owned.

In order to receive replacement sprinklers and to qualify for reimbursement toward installation costs, you **must** complete the Proof of Claim Form and the accompanying Waiver and Release of Claim Form and return them to Central Sprinkler, **postmarked by August 1, 1999**. Although it is important to provide complete information, please submit your Proof of Claim Form **postmarked by August 1, 1999**, even if you can not provide complete responses to all the questions. In order to receive reimbursement toward installation costs, you **must** complete and return the Verification Form **within 365 days after you receive your replacement sprinklers**. Those owners filing a Proof of Claim and Waiver and of Release of Claims Forms postmarked after August 1, 1999 but before November 1, 2001, still qualify to receive replacement sprinklers (though not reimbursement). The recall terms may also provide benefits to those who have <u>already</u> replaced Omegas between May 1, 1996 and the effective date of the Commission's Order.

Please read all of this information carefully, as it explains your legal rights and obligations. If you have any questions about how to complete the forms or how to identify an Omega sprinkler, please call the Omega Hotline at 1-800-896-5685.

Do not delay! Take action today. Until you receive your free replacement sprinklers, you should have a well-defined and

rehearsed escape plan, an alternate plan and working smoke detectors on every floor of your home, especially near bedrooms.

IMPORTANT SAFETY INFORMATION
RECALL OF CENTRAL SPRINKLER'S OMEGA BRAND FIRE SPRINKLERS

October x, 1998

Dear Authority Having Jurisdiction:

I am writing to share with you urgent news regarding Omega fire sprinklers that may well be installed in your area. If you are not already, you must become aware of and familiarize yourself with this situation, the **new** steps being taken to correct it, and the vital role you play by your action in protecting consumer safety.

In cooperation with the United States Consumer Product Safety Commission (CPSC), Central Sprinkler is recalling approximately 8.4 million Omega series sprinklers now in service. According to the CPSC, these sprinklers are defective, and could likely fail in a fire.

The recall is comprehensive and fundamentally different from our prior remediation and notice efforts over the past three years. We are recalling all Omega sprinklers in service, including Omegas containing an EPDM o-ring made before June, 1996 and Omegas that contain a silicone o-ring made after June 1996. The recall encompasses Omegas from all dates of manufacture that are installed in all piping systems -- not simply steel, but polybutelene, CPVC, and copper, including those Omegas made after 1991. The recall involves no removal and testing of Omega field samples, upon which remediation was previously conditioned. The recall is not site-specific. It is total. As part of the recall, Central will provide to all Omega owners -- free of charge -- an approved Quick Response GB sprinkler as a replacement. The company has also established a special Trust to help building owners and homeowners defray the costs associated with replacing the sprinklers. The recall terms may also provide benefits to those who have already replaced Omegas between May 1, 1996 and the effective date of the Commission's Order.

The first order of business is to help identify locations containing Omega sprinklers and to help owners and residents of sprinklered properties determine whether they have Omegas. The attached Notice includes product identification to help you and property and homeowners in your area determine whether they have Omega sprinklers on their premises, and if they do, which model they have. As you may know, on all models of Omega sprinklers, you will see a heat collector assembly, comprised of one to three flat metal disks or fins and inside of which sit a plunger and fusible link. On some Omega models, the word "Central" or the letters "CSC" may be visible on the deflector shield.

ahj

Building and homeowners who have Omegas installed in their buildings should call 1-800-896-5685 as soon as possible to request a Proof of Claim Form and Waiver and Release of Claims Form, which must be completed in order to receive free replacement sprinklers. In order to receive any reimbursement for replacement costs, owners must submit a completed Proof of Claim Form and a Waiver and Release of Claims Form to Central Sprinkler by August 1, 1999. Details on completing the forms are included in the enclosed Notice packet. Please feel free to distribute copies of this letter to owners of Omegas in your jurisdiction. Those owners filing a Proof of Claim and Waiver and Release of Claims Form postmarked after August 1, 1999 but before November 1, 2001, still qualify to receive replacement sprinklers (though not reimbursement).

We are utilizing advertising, direct mail notices and news stories to inform consumers about the recall. However, in identifying buildings and residences that contain Omegas there is no substitute for personal intervention from fire protection leaders such as yourself. Along with the CPSC, we encourage you to help us spread the word about this recall to protect the public health and safety.

Please keep these two phone numbers handy when you and your constituents need further assistance:

- Call the Omega Information Line - 1-800-896-5685 to learn more about how to identify an Omega sprinkler and to obtain a Proof of Claim Form. This is the first number consumers should call to initiate the replacement effort.

- If you have any questions about the recall and replacement effort that are not answered by the Omega Information or the Notice packet, you may call Central Sprinkler's Omega Hotline at 1-800-xxx-xxxx.

On behalf of all of us who are committed to fire prevention and protection, we thank for your support in this effort.

ahj

ahj

Building and homeowners who have Omegas installed in their buildings should call 1-800-896-5685 as soon as possible to request a Proof of Claim Form and Waiver and Release of Claims Form, which must be completed in order to receive free replacement sprinklers. In order to receive any reimbursement for replacement costs, owners must submit a completed Proof of Claim Form and a Waiver and Release of Claims Form to Central Sprinkler by August 1, 1999. Please feel free to distribute copies of this letter to owners of Omegas in your jurisdiction. Those owners filing a Proof of Claim and Waiver and Release of Claims Form postmarked after August 1, 1999 but before November 1, 2001, still qualify to receive replacement sprinklers (though not reimbursement).

We are utilizing advertising, direct mail notices and news stories to inform consumers about the recall. However, in identifying buildings and residences that contain Omegas there is no substitute for personal intervention from fire protection leaders such as yourself. Along with the CPSC, we encourage you to help us spread the word about this recall to protect the public health and safety.

Please keep these two phone numbers handy when you and your constituents need further assistance:

- Call the Omega Information Line - 1-800-896-5685 to learn more about how to identify an Omega sprinkler and to obtain a Proof of Claim Form. This is the first number consumers should call to initiate the replacement effort.

- If you have any questions about the recall and replacement effort that are not answered by the Omega Information or the Notice packet, you may call Central Sprinkler's Omega Hotline at 1-800-xxx-xxxx.

On behalf of all of us who are committed to fire prevention and protection, we thank for your support in this effort.

ahj

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of CENTRAL SPRINKLER CORP., and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

ORDER

UPON CONSIDERATION of the Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. (collectively, "Central") issued on or about March 3, 1998, and the Consent Agreement between the parties;

UPON CONSIDERATION of Central's concession that "Omega" fire sprinklers are "consumer products" under the CPSA, 15 U.S.C. § 2052;

UPON CONSIDERATION of Central's decision not to contest the allegations in the Complaint that "Omega" fire sprinklers contain a defect which creates a "substantial product hazard;" and

Pursuant to Sections 15(c) and (d) of the CPSA, 15 U.S.C. § 2064(c) and (d), IT IS HEREBY ORDERED THAT:

1. The Consent Agreement between Central Sprinkler Corp. and Central Sprinkler Co. (collectively, "Central") and the Commission staff is accepted and incorporated by reference herein, and Central shall comply with all of its obligations thereunder.

2. All allegations of the Administrative Complaint are resolved by this Consent Agreement and Order. Based on the Consent Agreement, including Central's admissions and agreement not to contest certain allegations of the Administrative Complaint for settlement purposes, the Commission finds that the Consent Agreement and this Order are necessary to protect the public from the hazard the Commission believes is presented by Omega sprinklers.

3. To remedy the alleged substantial product hazard created by Omega sprinklers, Central shall remove from service and replace all Omega sprinklers with replacement glass bulb sprinklers containing a Belleville Washer-Type Seal ("Replacement Sprinklers"), pursuant to, and in accordance with, the terms of Paragraphs 4 through 21 below and all of its obligations under the Consent Agreement incorporated by reference herein.

4. Central shall immediately cease and desist manufacturing, selling, distributing, marketing, exporting, importing, and/or attempting to distribute or sell any Omega sprinkler, whether by itself or through its subsidiaries, affiliates, Central-owned distribution centers, or any other persons or entities over whom Central has control, whether in the United States or any other foreign state, country, or territory.

5. Central shall provide notice to the public, its customers, and Omega owners, of the alleged hazard posed by Omega sprinklers, and the remedy to which Omega owners are entitled, which notice shall include the elements set forth in Appendix A of this Order. All notices, including all script(s) for operators of the toll-free numbers set forth in Appendix A, must be approved by the Commission staff prior to dissemination.

6. Central shall provide Replacement Sprinklers to all owners of Omega sprinklers, at no cost to the Omega owners, according to the provisions set forth in Appendix C of this

Order. A listing of the Replacement Sprinkler(s) for each Omega is set forth in Appendix B of this Order.

7. Central shall provide replacement escutcheons, extensions, and any and all other fittings, fixtures and/or appurtenances necessary for proper replacement of Omegas with the Replacement Sprinklers ("Replacement Parts") at no cost to the Omega owners.

8. Beginning in November, 1998, and for 48 months thereafter, Central shall make best efforts to manufacture and distribute to Omega owners at least 100,000 Replacement Sprinklers, and the accompanying Replacement Parts, per month for as long as the demand for Replacement Sprinklers equals or exceeds 100,000 per month.

9. If Central receives requests for Replacement Sprinklers and Replacement Parts at a rate that exceeds its monthly capacity to manufacture and ship the Replacement Sprinklers and Replacement Parts, Central shall devise a plan for sprinkler and parts distribution to ensure priority replacement of sprinklers in buildings where members of the public are particularly vulnerable. Central's plan for sprinkler distribution shall be submitted to the Commission staff for approval prior to implementation. In the event the staff disagrees with Central's plan for sprinkler distribution, Central shall implement the plan as amended or devised by the staff.

10. In addition to providing Replacement Sprinklers and Replacement Parts as stated in Paragraphs 6 through 9 herein, Central shall pay, into a Trust for the benefit of Omega owners, a monetary contribution toward the labor costs of replacing their Omega sprinklers in accordance with the procedures set forth in Appendix C of this Order. The monetary contribution is for the purpose of assisting Omega owners in paying the costs associated with

removing and replacing their existing Omegas, and thus encouraging Omega owners to participate in the remediation program provided herein, in order to remedy the hazard the Commission believes is presented by the Omegas, and protect the public health and safety.

11. In order to obtain Replacement Sprinklers and Replacement Parts, and the monetary contribution provided for in Paragraph 10 herein, Omega owners must follow the procedures required by Appendix C of this Order.

12. Recognizing that suitable Replacement Sprinklers are not currently available for all Omega sprinkler models, Central shall pay $5.00 per Omega sprinkler to any owner of Omega sprinklers who does not want or cannot use Central's Replacement Sprinklers, provided such owner gives Central reasonable proof of removal and replacement of Omegas. Central shall also pay to all such Omega owners a monetary contribution toward the costs of removing and replacing their Omega sprinklers in accordance with the procedures set forth in Appendix C of this Order. This payment is for the purpose of assisting Omega owners in paying the costs associated with removing and replacing their existing Omegas, and thus encouraging Omega owners to remove and replace their existing Omega sprinklers, in order to remedy the hazard the Commission believes is presented by the Omegas, and protect the public health and safety.

13. For those Omega owners who, after May 1, 1996, but prior to the effective date of this Order, 1) already replaced or contracted to replace their Omegas with non-Omega sprinklers and 2) who received in value from Central less than what they would have received under Paragraph 12 of this Order, Central shall pay such owners the difference between what they have already paid and the amount they would have paid under Paragraph 12 of this

Order. This payment shall be made for the purpose of encouraging owners of products that present or may present a substantial product hazard to take immediate action to remove and, where appropriate, replace that product. This payment assists in the fulfillment of the Commission's mandate to protect the public health and safety from the risks associated with products that present a substantial product hazard.

14. If Central fails to make timely contributions to the Trust as required by Appendix C hereto, Central shall be liable for additional contributions to the Trust, separate from any penalty it may incur pursuant to Paragraph 17 of the Consent Agreement. Such additional contribution(s) shall include the following:

a. Interest at the percentage rate established by the Department of the Treasury pursuant to 31 U.S.C. § 3717, for any period after the due date;

b. A handling charge of $10,000 at the end of each 30 day late period; and

c. A 7% (seven percent) per annum penalty charge if the deposit is not made within 30 days of the due date.

These additional contributions are intended to encourage Respondents to fulfill their obligations to remedy the hazard the Commission believes is presented by Omega sprinklers, and protect the public health and safety.

15. Central shall devise procedures to ensure the destruction of the Omega sprinklers. Central shall destroy all finished goods inventory and returned Omegas, from whatever source, and will not use any component parts of any returned or finished goods Omega for the manufacture or sale of any other product. Central must provide to the staff a monthly accounting of all returned and destroyed sprinklers for the first three months after the

effective date of this Order, and a quarterly accounting of all returned and destroyed sprinklers thereafter, for four years. Such reports shall be provided in a format approved by the Commission staff.

16. Central shall not, without first both notifying and consulting with the staff, manufacture for sale, offer for sale, distribute in commerce, export, or import into the United States any automatic sprinkler containing all of the following elements: (a) a body or body portion housing a dynamic valve plug (whether or not utilizing an elastomeric seal) that controls the release of water or other extinguishing agent; (b) a retaining groove within the body of the sprinkler housing locking ball bearings; (c) a plunger; and (d) a cylindrical chimney (whether or not utilizing external heat collecting fins) housing a fusible element, bearing disk, and part or all of the plunger. Central shall notify the Commission staff at least 90 calendar days before it begins manufacturing, offering, distributing, exporting, or importing any such sprinkler(s). Central shall provide the staff prompt access to all design, testing, and listing documents pertaining to any and all such sprinklers.

17. Beginning December 1, 1998, and by 5:00 p.m. on the first business day of every month thereafter, Central must provide to the staff a monthly status report, in a form acceptable to the staff, of the progress of the remediation program for the Omegas.

18. Central must immediately notify the staff of the Consumer Product Safety Commission in writing if:

a. Factory Mutual Research Corporation (FMRC) or Underwriters Laboratories Inc. (UL) does not approve or list, withdraws or discontinues its approval or

listing, no longer approves or lists, or modifies its approval or listing of any of the Replacement Sprinklers at any time, for any reason whatsoever;

b. the Replacement Sprinklers fail any test conducted by FMRC or UL and indicated in Appendix E of this Order; or

c. Central obtains information with respect to Replacement Sprinklers that is reportable under Section 15(b) of the CPSA.

19. Central shall provide to the staff a copy of all filings it makes with the Securities and Exchange Commission (SEC) within five business days of making such filings. Central shall also notify the staff in writing of any changes in corporate officers and directors within five business days of such changes.

20. Central shall allow the Commission and/or staff to inspect any and all records that are not subject to the attorney-client privilege or attorney work-product doctrine, regarding the Replacement Sprinklers and Parts, remediation program, any class action lawsuits regarding Omega sprinklers, and any claims or lawsuits against its insurers or other third parties relating to Omega sprinklers, and to inspect all manufacturing, design and/or receiving facilities regarding Replacement Sprinklers at any time during normal business hours, upon reasonable notice.

21. This Order, and all of the obligations it imposes on Central, shall terminate in its entirety upon the final distribution of all funds required to be placed in the Trust pursuant to

Appendix C of this Order, unless Central has not completely fulfilled its obligations under the Consent Agreement and Order.

BY ORDER OF THE CONSUMER PRODUCT SAFETY COMMISSION

CPSC/OFFICE OF
THE SECRETARY

1998 OCT -2 P 5:10

In the Matter of	
CENTRAL SPRINKLER CORP.,	
and	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	
Respondents	

CONSENT AGREEMENT

This Consent Agreement is made by and between the staff of the Consumer Product Safety Commission and Respondents, Central Sprinkler Corp. and Central Sprinkler Co., to settle the above-captioned administrative action. The parties agree as follows:

Parties

1. The "staff" is the staff of the United States Consumer Product Safety Commission ("CPSC" or "the Commission"), an independent regulatory agency of the United States, established by Congress pursuant to Section 4 of the Consumer Product Safety Act ("CPSA"), 15 U.S.C. § 2053.

2. Respondents Central Sprinkler Corporation and Central Sprinkler Company (hereinafter collectively "Central") are corporations organized and existing under the laws of

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co.
and Central Sprinkler Corp.

the Commonwealth of Pennsylvania, with their principal place of business at 451 North Cannon Ave., Lansdale, PA 19446.

Subject Matter

3. From 1982 to July, 1998, Central manufactured and sold and/or distributed between 9 and 10 million "Omega" brand automatic fire sprinklers. On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint ("Complaint") against Central, seeking recall and replacement of Central's Omega fire sprinklers pursuant to 15 U.S.C. § 2064. The Complaint alleges that Central's Omega sprinklers are defective and will not function in certain fire situations, creating a substantial risk of bodily injury and/or death.

4. To date, the staff has received reports that from 1990 to the present, Omega sprinklers did not function in 20 fires.

5. Central has filed an answer to the Complaint in which it avers, *inter alia*, that its Omega sprinklers are not defective within the meaning of 15 U.S.C. § 2064.

6. The staff also contends that Central obtained information which reasonably supported the conclusion that Omega sprinklers contained a defect or defects that could create a substantial risk of injury to the public but failed to report such information in a timely manner pursuant to 15 U.S.C. § 2064(b). Central denies any wrongdoing under 15 U.S.C. § 2064(b).

Agreement of the Parties

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

7. It is the express purpose of the parties in entering into this Agreement to protect the public safety by carrying out the recall and replacement of Omega sprinklers.

8. The parties intend for this Consent Agreement and the attached Order (hereinafter "Order" or "the Order"), which is hereby incorporated by reference, to resolve all allegations and requests for relief set forth in the Administrative Complaint in this proceeding and to bar the initiation or referral by the CPSC of any administrative, civil, or criminal claims within the CPSC's jurisdiction arising from the conduct of Central, its officers, directors and/or employees regarding Omega sprinklers. This resolution shall not apply to any actions arising from non-compliance with or disputes pertaining to this Agreement or the Order.

9. For purposes of this settlement only, Central admits that "Omega" fire sprinklers are "consumer products" under Section 3 of the CPSA, 15 U.S.C. § 2052, subject to the jurisdiction of the Consumer Product Safety Commission.

10. For purposes of this settlement only, Central agrees not to contest the allegations in the Complaint that "Omega" fire sprinklers contain a "defect which creates a substantial product hazard," as those terms are defined in Section 15(a) of the CPSA, 15 U.S.C. § 2064(a). Central has agreed not to contest these allegations in order to avoid the expense, inconvenience and risks associated with further litigation, and the parties recognize that this resolution and this Consent Agreement may not be used or introduced as evidence of defect or hazard against Central in other litigation not involving the Commission or its staff. Entry of the Order will neither impair nor assist the bringing of any other action.

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

11. As part of the amounts referenced in 1.a and 1.b of Appendix C of the Order, Central shall deposit, without any adjudication or admission of fact or law, $1.3 million into the Trust established in Appendix C of the Order, in settlement of the staff's contention that Central failed to report to the Commission problems with the Omega pursuant to 15 U.S.C. § 2064(b). Central has agreed to do so solely to avoid the inconvenience and burden of litigation of this issue.

12. Upon acceptance by the Consumer Product Safety Commission of this Consent Agreement, and entry of the Order, Central knowingly, voluntarily and completely waives and relinquishes any past, present and/or future right or rights in this matter: (1) to an administrative or judicial hearing and to all further procedural steps, including findings of fact, conclusions of law and/or further determination of whether Omega sprinklers contain a defect which creates a substantial product hazard within the meaning of Section 15 of the CPSA; (2) to seek judicial review or otherwise contest the validity of this Consent Agreement and/or Order as issued and entered; and (3) to seek judicial review of this or any past orders, findings and/or determinations of the Commission or the Presiding Officer in this matter, except as set forth in the provisions regarding review in Paragraph 28 of this Agreement.

13. Central agrees to fulfill all requirements of the Order.

14. Central agrees to immediately cease and desist manufacturing, selling, distributing, marketing, exporting, importing, and/or attempting to distribute or sell any

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Respondents Central Sprinkler Co. and General Sprinkler Corp.

Omega sprinkler, whether by itself or through its subsidiaries, affiliates, Central-owned distribution centers, or any other persons or entities over whom Central has control, whether in the United States or any other foreign state, country, or territory.

15. Central shall request that Underwriters Laboratories, Inc. withdraw its listing of approval for all Omega sprinklers.

16. Central shall provide the staff with thirty days written notice of any transfer of property rights it holds in the following U.S. Patents: 4,465,141; 4,491,182; 4,508,175; 4,553,602; 5,094,298; 4,619,327; 3,734,191, 3,802,510; 3,877,527, 3,911,940; 3,991,829, and 4,359,098.

17. A violation of this Consent Agreement or the Order is a prohibited act within the meaning of Section 19 of the CPSA, 15 U.S.C. § 2068.

18. The Commission or Central may disclose terms of this Consent Agreement and Order to the public.

19. This Consent Agreement shall take effect upon its final acceptance by the Consumer Product Safety Commission.

20. This Consent Agreement and Order shall be binding upon the parties hereto and their successors, assigns, and receivers. If, prior to the termination of this Consent Agreement and Order, Central merges with any other corporation or sells, assigns, or otherwise transfers substantially all of its assets, Central shall provide reasonable prior notice to the surviving corporation or, in the case of an asset sale, assignment, or transfer, the

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

purchaser, transferee, or assignee of substantially all of Central's assets, of this Consent Agreement and Order, and of its binding effect upon said surviving corporation, purchaser, assignee, or transferee. The existence of this Consent Agreement and Order and their binding effect shall be noted in any agreement between Central and such surviving corporation, purchaser, transferee, or assignee. It shall be a condition of any such merger, sale, assignment, or transfer that the surviving corporation or, in the case of an asset sale, the purchaser, assignee, or transferee, execute a document agreeing to be bound by the provisions of this Consent Agreement and Order, and to submit to the jurisdiction of the Commission for purposes of enforcement of this Consent Agreement and Order. In the event of any merger or sale, transfer, or assignment of substantially all of Central's assets, notice shall be provided to the staff no later than 15 days prior to any such merger or asset sale, transfer, or assignment.

21. This Consent Agreement and Order have been negotiated by the parties. Central is not relying on the advice of the staff, nor anyone associated with the staff, as to legal, tax, or other consequences of any kind arising out of this Consent Agreement and Order, and Central specifically assumes the risk of all such legal, tax and other consequences.

22. For all purposes, this Consent Agreement and Order shall constitute an enforceable judgment obtained in an action or proceeding by a governmental unit to enforce its police or regulatory power. Central acknowledges and agrees that this Agreement and Order are pursuant to the Commission's police or regulatory power to remedy the risk

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

created by and protect the public from a substantial product hazard which the Commission believes is presented by Omega sprinklers, and that the Agreement and Order are not subject to an automatic stay if Central becomes the subject of a bankruptcy proceeding.

23. If all of the Replacement Sprinklers are not listed or approved by Underwriters' Laboratories Inc. ("UL") and all of the exclusively non-residential Replacement Sprinklers are not listed or approved by Factory Mutual Research Corporation ("FMRC") by November 1, 1998, or if the listing or approval of any of the Replacement Sprinklers by UL or FMRC is withdrawn, discontinued or modified at any time, for any reason whatsoever, the Commission, at its sole discretion and upon reasonable notice to Central, may void, suspend, or rescind all or any part of this Consent Agreement and Order.

24. The Commission, at its sole discretion and upon reasonable notice to Central, may void, suspend, or rescind all or any part of this Consent Agreement and Order if Central has made material misrepresentations regarding its current financial condition, manufacturing and shipping costs for Replacement Sprinklers and Replacement Parts, the number of Omega sprinklers remaining to be remediated (approximately 8.4 million), and/or the projected costs of administering the recall and replacement program in this Agreement and Order, and the staff has relied on those misrepresentations in entering into this Agreement. Appendix D of the Order lists those documents containing representations deemed material by the parties.

Accepted and Approved:

CPSC Office of Compliance

consent8.cle 10/01/98 5:00 p.m.

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

25. Beginning 3 months after the effective date of the Commission's Order, and for every 3 months thereafter until the expiration or final determination of the Claims as defined in Paragraph 1.c of Appendix C of the Order, Central shall provide to the staff a full report on the progress and status of the Claims as defined in Paragraph 1.c of Appendix C of the Order, and the progress and status of the remediation program set forth in this Agreement and Order, including but not limited to the payments made to the Trust as defined in Appendix C of the Order, and the expenses paid and/or incurred for notice and administration of the remediation program set forth in this Agreement and Order. Central shall provide, with these reports, the daily timesheets, with descriptions of all work performed, of each Central employee involved in administration of the remediation program, for the time period since the last report date. At any time, upon reasonable written notice, the Commission may require Central to submit to an independent or Commission review and/or audit of the remediation program set forth in this Consent Agreement and Order, and/or any Claims as defined in Paragraph 1.c of Appendix C. Central shall provide the staff with a copy of every audit report of its financial condition within 5 business days of the date the report is prepared.

26. If, after the effective date hereof, any provision of this Consent Agreement and Order is held to be illegal, invalid, or unenforceable under present or future laws effective during the terms of this Consent Agreement and Order, such provision shall be fully severable. The rest of the Agreement and Order shall remain in full effect, unless the

Commission determines that severing the provision materially impacts the remediation program set forth in this Agreement and Order.

27. Central acknowledges that this Consent Agreement and Order have been negotiated between unrelated, sophisticated and knowledgeable parties acting in their own self-interest and represented by counsel, and the provisions of this Consent Agreement and Order shall not be interpreted or construed against any person or entity because that person or entity or any of its attorneys or representatives drafted or participated in drafting this Consent Agreement.

28. The provisions of this Consent Agreement and Order shall be interpreted in a reasonable manner to effect its purpose to remedy the alleged hazard that Omegas pose. In the event of a dispute between the parties arising under this Consent Agreement and Order, the parties agree to submit the issue for determination by the Commission. Except as stated to the contrary in Paragraphs 7 through 10 of Appendix C of the Order, Central shall have the right to seek judicial review of the Commission decision, such review to be based upon the record of any such Commission proceeding and according to law.

29. The existence of a dispute shall not excuse, toll, or suspend any obligation or deadline imposed upon Central under this Consent Agreement and Order.

30. This Consent Agreement and Order shall not be waived, changed, amended, modified, or otherwise altered, except in writing executed by the party or parties against

Consumer Federation of America
Consumer Information Center
Consumer Union of United States
National Consumer League

- Written letter by first class mail to members of the American Waterworks Association in 68 targeted counties to provide notice of the corrective action either as part of water bills or consumer newsletters. CPSC to approve language for letter.

Computer Posting

- A **public service announcement** will be posted on appropriate legal, consumer, fire safety and related bulletin boards on Usenet News groups (Exhibit 5) and major online services (i.e., America Online, etc.) directed to professionals and consumers. In addition to any other contact information, the online PSA will include a link to the Central Omega program website.

- The notices of Recall and Settlement, Proof of Claim, Verification and Waiver and Release of Claims forms will be posted on the Omega website to provide access to the notice and other pertinent information. The website will be listed with major search engines.

- In addition, **hyperlinks** may be established with other websites, including CPSC's, related to fire safety, legal and construction-related issues to allow access to the class action and recall notice.

Telephone Support

1-800 REQUEST-LINE

All print advertising will direct the reader to call a 1-800 telephone number, to write to an address or to go to the website in order to receive the Notice of recall and settlement and related forms.

Accepted and Approved:

CPSC Office of Compliance

Accepted and Approved:

Respondents Central Sprinkler Co. and Central Sprinkler Corp.

A 1-800 896-5685 interactive telephone number will be utilized. A pre-recorded message will welcome callers to the line. Callers will be directed through a series of steps that will allow the system to capture their names, mailing addresses and phone numbers.

Names and addresses will be downloaded and transcribed within 48 hours. Consumers will be mailed class action notice/recall package within 8 business days of consumer call until November 15, 1998 and thereafter within 5 business days.

1-800 OMEGA INFORMATION LINE

The Notice of recall and settlement will include Central Sprinkler's toll-free Omega information line. If potential Class Members have questions after reviewing the Notice of recall and settlement, they will be able to speak with a Central customer service representative. All customer service representatives will be trained by Central Sprinkler. A question and answer document incorporating a list of commonly asked questions is being drafted in advance so that customer service representatives will be prepared with scripted answers. The script will be updated periodically to include new information and answers to added questions. Central intends to dedicate 20 customer service representatives staggered throughout the operational period for the first 6 weeks from the date of the Notice of recall and settlement. The Omega information line will operate from 7:00 a.m. until 9:00 p.m. Monday through Friday for the first six weeks. Staffing for the Omega information line thereafter will be assessed after week 6.

Legal Notice Legal Notice

IMPORTANT SAFETY RECALL
AND CLASS ACTION SETTLEMENT
FOR HOME OWNERS/BUILDING OWNERS WITH OMEGA BRAND FIRE SPRINKLERS MANUFACTURED BY CENTRAL SPRINKLER CO.

Central Sprinkler Company ("Central") and the United States Consumer Product Safety Commission are announcing a settlement involving the recall and replacement of approximately 6.4 million Omega brand fire sprinklers manufactured since 1982 by Central. Plaintiffs in two suits representing a nationwide class have preliminarily settled their suits and are also announcing the availability of a remedy. Omega fire sprinklers are installed in homes, offices, hospitals, schools and other buildings around the country.

OMEGA FIRE SPRINKLERS COULD LIKELY FAIL IN A FIRE, WHICH COULD RESULT IN SEVERE INJURY OR DEATH.

IDENTIFYING SPRINKLERS

Numerous models of the Omega fire sprinklers are involved. On most models, consumers will be able to see one to three flat round metal disks stacked one above the other with a small space between each disk. However, because it may be difficult to determine whether Omegas are installed, consumers are encouraged to call the toll free number below for product identification or contact their architect, builder, sprinkler contractor, plumber, homeowners' association or property manager to determine if Omegas are installed in their residence or facility.

Building owners and consumers are urged to take immediate action and call the Omega information line to learn more about the recall, how to identify Omega sprinklers, obtain a Proof of Claim form, and obtain further information about the settlement, including how to participate in the settlement and how the settlement may affect their legal rights.

SPRINKLER REPLACEMENTS

For consumers to get replacement sprinklers and any reimbursement towards installation costs, they must submit the Proof of Claim and Release Forms to Central postmarked by August 1, 1999. Consumers submitting Proof of Claim and Release Forms postmarked after August 1, 1999 but before November 1, 2001 still qualify to receive replacement sprinklers (though not reimbursement).

Until free replacement sprinklers are provided, consumers need to protect themselves against fire, have working smoke detectors and have adequate escape plans.

CLASS ACTION

If you are an owner or operator of a building that is or was equipped with Omega fire sprinklers, your legal rights may be affected by the proposed class action settlement which, if approved by the court, will result in the release of certain claims.

Complete information about your rights as a class member, the settlement approval process, how to exclude yourself from the settlement class, how to object or comment on the settlement, and how to make a claim for replacement sprinklers and costs, including important dates and deadlines, is available in the Full Notice of Settlement.

FOR FURTHER INFORMATION AND A COPY OF THE RECALL AND FULL NOTICE OF CLASS ACTION SETTLEMENT,

CALL: **1-800-896-5685**

OR WRITE: **PO BOX 1555; FAIRMONT, MN 55021-1555**

OR VISIT: **http://www.xxxxxx.com/xxxx**

PLEASE DO NOT CONTACT THE COURT. DATED: March XX, 1999 COMMISSIONER BRUCE E. MITCHELL

The lawsuit and settlement are under consideration in Hart v. Central Sprinkler Corp. No. BCL 71727 (Cal. Super Ct.). It is pending before Commissioner Bruce E. Mitchell in the Los Angeles County Superior Court.

(Final Versions of Consumer Letter and AHJ Letter to be Provided by CPSC)

IMPORTANT SAFETY INFORMATION
RECALL OF CENTRAL SPRINKLER'S OMEGA BRAND FIRE SPRINKLERS

To Consumer/Homeowner:

The Consumer Product Safety Commission (CPSC) and Central Sprinkler recently announced the recall of **all** Omega fire sprinklers. According to the CPSC, these sprinklers are defective and could likely fail in a fire, which could result in bodily injury or death.

Please read the entire attached packet of information carefully. It is very important for you to determine if Omega sprinklers are installed in your home or building. The notice contains product information regarding the recall with the CPSC, as well as the preliminary settlement Central has reached with several private class action lawsuits. Please refer to the product information sheets which explain how to identify Omega sprinklers. Because sprinklers can be difficult to identify, we urge you to check with your architect, builder, sprinkler contractor, plumber, homeowners' association or property manager.

This recall is available to **all** owners of Omega fire sprinklers. To participate in the recall you **must** complete the enclosed Proof of Claim Form and Waiver and Release of Claims Form as soon as possible and return them to Central Sprinkler at the address indicated in the Proof of Claim Form. Central Sprinkler will mail you a free replacement sprinkler for every Omega sprinkler owned.

In order to receive replacement sprinklers and to qualify for reimbursement toward installation costs, you **must** complete the Proof of Claim Form and the accompanying Waiver and Release of Claim Form and return them to Central Sprinkler, **postmarked by August 1, 1999**. Although it is important to provide complete information, please submit your Proof of Claim Form **postmarked by August 1, 1999**, even if you can not provide complete responses to all the questions. In order to receive reimbursement toward installation costs, you **must** complete and return the Verification Form **within 365 days after you receive your replacement sprinklers**. Those owners filing a Proof of Claim and Waiver and of Release of Claims Forms postmarked after August 1, 1999 but before November 1, 2001, still qualify to receive replacement sprinklers (though not reimbursement). The recall terms may also provide benefits to those who have <u>already</u> replaced Omegas between May 1, 1996 and the effective date of the Commission's Order.

Please read all of this information carefully, as it explains your legal rights and obligations. If you have any questions about how to complete the forms or how to identify an Omega sprinkler, please call the Omega Hotline at 1-800-896-5685.

Do not delay! Take action today. Until you receive your free replacement sprinklers, you should have a well-defined and

rehearsed escape plan, an alternate plan and working smoke detectors on every floor of your home, especially near bedrooms.

IMPORTANT SAFETY INFORMATION
RECALL OF CENTRAL SPRINKLER'S OMEGA BRAND FIRE SPRINKLERS

October x, 1998

Dear Authority Having Jurisdiction:

I am writing to share with you urgent news regarding Omega fire sprinklers that may well be installed in your area. If you are not already, you must become aware of and familiarize yourself with this situation, the **new** steps being taken to correct it, and the vital role you play by your action in protecting consumer safety.

In cooperation with the United States Consumer Product Safety Commission (CPSC), Central Sprinkler is recalling approximately 8.4 million Omega series sprinklers now in service. According to the CPSC, these sprinklers are defective, and could likely fail in a fire.

The recall is comprehensive and fundamentally different from our prior remediation and notice efforts over the past three years. We are recalling all Omega sprinklers in service, including Omegas containing an EPDM o-ring made before June, 1996 and Omegas that contain a silicone o-ring made after June 1996. The recall encompasses Omegas from all dates of manufacture that are installed in all piping systems -- not simply steel, but polybutelene, CPVC, and copper, including those Omegas made after 1991. The recall involves no removal and testing of Omega field samples, upon which remediation was previously conditioned. The recall is not site-specific. It is total. As part of the recall, Central will provide to all Omega owners -- free of charge -- an approved Quick Response GB sprinkler as a replacement. The company has also established a special Trust to help building owners and homeowners defray the costs associated with replacing the sprinklers. The recall terms may also provide benefits to those who have already replaced Omegas between May 1, 1996 and the effective date of the Commission's Order.

The first order of business is to help identify locations containing Omega sprinklers and to help owners and residents of sprinklered properties determine whether they have Omegas. The attached Notice includes product identification to help you and property and homeowners in your area determine whether they have Omega sprinklers on their premises, and if they do, which model they have. As you may know, on all models of Omega sprinklers, you will see a heat collector assembly, comprised of one to three flat metal disks or fins and inside of which sit a plunger and fusible link. On some Omega models, the word "Central" or the letters "CSC" may be visible on the deflector shield.

ahj

Building and homeowners who have Omegas installed in their buildings should call 1-800-896-5685 as soon as possible to request a Proof of Claim Form and Waiver and Release of Claims Form, which must be completed in order to receive free replacement sprinklers. In order to receive any reimbursement for replacement costs, owners must submit a completed Proof of Claim Form and a Waiver and Release of Claims Form to Central Sprinkler by August 1, 1999. Details on completing the forms are included in the enclosed Notice packet. Please feel free to distribute copies of this letter to owners of Omegas in your jurisdiction. Those owners filing a Proof of Claim and Waiver and Release of Claims Form postmarked after August 1, 1999 but before November 1, 2001, still qualify to receive replacement sprinklers (though not reimbursement).

We are utilizing advertising, direct mail notices and news stories to inform consumers about the recall. However, in identifying buildings and residences that contain Omegas there is no substitute for personal intervention from fire protection leaders such as yourself. Along with the CPSC, we encourage you to help us spread the word about this recall to protect the public health and safety.

Please keep these two phone numbers handy when you and your constituents need further assistance:

- Call the Omega Information Line - 1-800-896-5685 to learn more about how to identify an Omega sprinkler and to obtain a Proof of Claim Form. This is the first number consumers should call to initiate the replacement effort.

- If you have any questions about the recall and replacement effort that are not answered by the Omega Information or the Notice packet, you may call Central Sprinkler's Omega Hotline at 1-800-xxx-xxxx.

On behalf of all of us who are committed to fire prevention and protection, we thank for your support in this effort.

ahj

IMPORTANT SAFETY INFORMATION
RECALL OF CENTRAL SPRINKLER'S OMEGA BRAND FIRE SPRINKLERS

October x, 1998

Dear Authority Having Jurisdiction:

I am writing to share with you urgent news regarding Omega fire sprinklers that may well be installed in your area. If you are not already, you must become aware of and familiarize yourself with this situation, the **new** steps being taken to correct it, and the vital role you play by your action in protecting consumer safety.

In cooperation with the United States Consumer Product Safety Commission (CPSC), Central Sprinkler is recalling approximately 8.4 million Omega series sprinklers now in service. According to the CPSC, these sprinklers are defective, and could likely fail in a fire.

The recall is comprehensive and fundamentally different from our prior remediation and notice efforts over the past three years. We are recalling all Omega sprinklers in service, including Omegas containing an EPDM o-ring made before June, 1996 and Omegas that contain a silicone o-ring made after June 1996. The recall encompasses Omegas from all dates of manufacture that are installed in all piping systems -- not simply steel, but polybutelene, CPVC, and copper, including those Omegas made after 1991. The recall involves no removal and testing of Omega field samples, upon which remediation was previously conditioned. The recall is not site-specific. It is total. As part of the recall, Central will provide to all Omega owners -- free of charge -- an approved Quick Response GB sprinkler as a replacement. The company has also established a special Trust to help building owners and homeowners defray the costs associated with replacing the sprinklers. The recall terms may also provide benefits to those who have already replaced Omegas between May 1, 1996 and the effective date of the Commission's Order.

The first order of business is to help identify locations containing Omega sprinklers and to help owners and residents of sprinklered properties determine whether they have Omegas. The attached Notice includes product identification to help you and property and homeowners in your area determine whether they have Omega sprinklers on their premises, and if they do, which model they have. As you may know, on all models of Omega sprinklers, you will see a heat collector assembly, comprised of one to three flat metal disks or fins and inside of which sit a plunger and fusible link. On some Omega models, the word "Central" or the letters "CSC" may be visible on the deflector shield.

ahj

Building and homeowners who have Omegas installed in their buildings should call 1-800-896-5685 as soon as possible to request a Proof of Claim Form and Waiver and Release of Claims Form, which must be completed in order to receive free replacement sprinklers. In order to receive any reimbursement for replacement costs, owners must submit a completed Proof of Claim Form and a Waiver and Release of Claims Form to Central Sprinkler by August 1, 1999. Please feel free to distribute copies of this letter to owners of Omegas in your jurisdiction. Those owners filing a Proof of Claim and Waiver and Release of Claims Form postmarked after August 1, 1999 but before November 1, 2001, still qualify to receive replacement sprinklers (though not reimbursement).

We are utilizing advertising, direct mail notices and news stories to inform consumers about the recall. However, in identifying buildings and residences that contain Omegas there is no substitute for personal intervention from fire protection leaders such as yourself. Along with the CPSC, we encourage you to help us spread the word about this recall to protect the public health and safety.

Please keep these two phone numbers handy when you and your constituents need further assistance:

- Call the Omega Information Line - 1-800-896-5685 to learn more about how to identify an Omega sprinkler and to obtain a Proof of Claim Form. This is the first number consumers should call to initiate the replacement effort.

- If you have any questions about the recall and replacement effort that are not answered by the Omega Information or the Notice packet, you may call Central Sprinkler's Omega Hotline at 1-800-xxx-xxxx.

On behalf of all of us who are committed to fire prevention and protection, we thank for your support in this effort.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that you, as a former employee of Parco, Inc., possess information or have knowledge that may assist in the determination.

Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and appear for deposition.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Part 1025. Title 16 of the Code of Federal Regulations, section 1025.38, sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by you.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment with your responsive documents.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits,

statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

e. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 14th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 6, 1998, copies of all records in your possession, custody, or control relating to:

1) any and all tests, analyses, evaluations, or recommendations by Parco employees, former employees, agents, or contractors relating to elastomers,

lubricants, or elastomer design applications that were, or are, being carried out at the request of, in cooperation with, or for the benefit of Central; and

2) any and all records (including corrrespondence) relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that you, as a former employee of Parco, Inc., possess information or have knowledge that may assist in the determination.

Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and appear for deposition.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Part 1025. Title 16 of the Code of Federal Regulations, section 1025.38, sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by you.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment with your responsive documents.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits,

statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

e. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 14th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 6, 1998, copies of all records in your possession, custody, or control relating to:

1) any and all tests, analyses, evaluations, or recommendations by Parco employees, former employees, agents, or contractors relating to elastomers,

lubricants, or elastomer design applications that were, or are, being carried out at the request of, in cooperation with, or for the benefit of Central; and

2) any and all records (including corrrespondence) relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that Parco, Inc. and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product

Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you testify at a deposition and produce documents and tangible things.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she must respond to this Subpoena within 5 calendar days.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment in accordance with 16 C.F.R. §§ 1015.18 and 1118.3(e).

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; and Flow Control.

d. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio

recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

e. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 13th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 3, 1998, copies of all records relating to:

1) Parco's o-ring compound numbers 5601-70, 1235-60, 1235-70, and 1235-80, including the following:
   a. the precise ingredient polymers, reinforcing agents, curing or vulcanizing agents, plasticizers, accelerators, retarders, anti-oxidants, anti-ozonants, or anti-rads to build the sealing material for such o-rings;
   b. all fluid service guide information, indicating percentage volume change;
   c. all recommended and non-recommended media;
   d. any and all material test data sheets, including data on age resistance and storage conditions, physical and mechanical properties, thermal properties, and chemical properties;
   e. any and all recommended lubricants; and
   f. any and all assembly and design procedures or recommendations for dynamic applications.
2) any and all tests, analyses, evaluations, or recommendations by Parco employees, former employees, agents, or contractors relating to elastomers (including but limited to those compounds mentioned in 1), above), and lubricants that were, or are, being carried out at the request of, in cooperation with, or

for the benefit of Central.

3) any and all correspondence or written or electronically stored documents of any kind in your possession or control relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

You are further directed to produce, prior to testifying at the deposition above and by August 3, 1998, samples of each of the four o-rings referred to in 1), above.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that Parco, Inc. and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product

Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you testify at a deposition and produce documents and tangible things.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she must respond to this Subpoena within 5 calendar days.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment in accordance with 16 C.F.R. §§ 1015.18 and 1118.3(e).

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; and Flow Control.

d. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio

recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

e. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 13th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 3, 1998, copies of all records relating to:

1) Parco's o-ring compound numbers 5601-70, 1235-60, 1235-70, and 1235-80, including the following:
   a. the precise ingredient polymers, reinforcing agents, curing or vulcanizing agents, plasticizers, accelerators, retarders, anti-oxidants, anti-ozonants, or anti-rads to build the sealing material for such o-rings;
   b. all fluid service guide information, indicating percentage volume change;
   c. all recommended and non-recommended media;
   d. any and all material test data sheets, including data on age resistance and storage conditions, physical and mechanical properties, thermal properties, and chemical properties;
   e. any and all recommended lubricants; and
   f. any and all assembly and design procedures or recommendations for dynamic applications.
2) any and all tests, analyses, evaluations, or recommendations by Parco employees, former employees, agents, or contractors relating to elastomers (including but limited to those compounds mentioned in 1), above), and lubricants that were, or are, being carried out at the request of, in cooperation with, or

for the benefit of Central.

3) any and all correspondence or written or electronically stored documents of any kind in your possession or control relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

You are further directed to produce, prior to testifying at the deposition above and by August 3, 1998, samples of each of the four o-rings referred to in 1), above.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that you, as a former senior executive at Parco, Inc, and in your current position with Wynn's Precision, Inc., possess information or

have knowledge that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and tangible things and appear for deposition.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Part 1025. Title 16 of the Code of Federal Regulations, section 1025.38, sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment with your responsive documents.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Wynn's" refers to Wynn's - Precision, Inc. presently residing at 104 Hartmann Drive, Lebanon, TN 37087, and any agent, subsidiary, affiliate, facility, or division doing business under the "Wynn's" or "Precision" or "Wynn's Precision" name.

c. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

d. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes,

audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 13th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 5, 1998, copies of all records in Wynn's or your personal possession, custody, or control relating to:

1) Wynn's o-ring compound number 3407 (70 durometer), including the following:

   a. the precise ingredient polymers, reinforcing agents, curing or vulcanizing agents, plasticizers, accelerators, retarders, anti-oxidants, anti-ozonants, or anti-rads to build the sealing material for such o-rings;

   b. all fluid service guide information, indicating percentage volume change;

   c. all recommended and non-recommended media;

   d. any and all material test data sheets, including data on age resistance and storage conditions, physical and mechanical properties, thermal properties, and chemical properties;

   e. any and all recommended lubricants; and

   f. any and all assembly and design procedures or recommendations for dynamic applications.

2) any and all tests, analyses, evaluations, or recommendations by Wynn's or Parco employees, former employees, agents, or contractors relating to elastomers, lubricants, or elastomer design applications that were, or are, being carried out at the request of, in cooperation with, or for the benefit of Central; and

3) any and all records (including correspondence) relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

You are further directed to produce, prior to testifying at the deposition above and by August 5, 1998, samples of Wynn's o-ring compound 3407 (70 durometer, sizes -011 and -009).

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that you, as a former senior executive at Parco, Inc, and in your current position with Wynn's Precision, Inc., possess information or

have knowledge that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and tangible things and appear for deposition.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Part 1025. Title 16 of the Code of Federal Regulations, section 1025.38, sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment with your responsive documents.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Wynn's" refers to Wynn's - Precision, Inc. presently residing at 104 Hartmann Drive, Lebanon, TN 37087, and any agent, subsidiary, affiliate, facility, or division doing business under the "Wynn's" or "Precision" or "Wynn's Precision" name.

c. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

d. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes,

audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 13th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 5, 1998, copies of all records in Wynn's or your personal possession, custody, or control relating to:

1) Wynn's o-ring compound number 3407 (70 durometer), including the following:

   a. the precise ingredient polymers, reinforcing agents, curing or vulcanizing agents, plasticizers, accelerators, retarders, anti-oxidants, anti-ozonants, or anti-rads to build the sealing material for such o-rings;

   b. all fluid service guide information, indicating percentage volume change;

   c. all recommended and non-recommended media;

   d. any and all material test data sheets, including data on age resistance and storage conditions, physical and mechanical properties, thermal properties, and chemical properties;

   e. any and all recommended lubricants; and

   f. any and all assembly and design procedures or recommendations for dynamic applications.

2) any and all tests, analyses, evaluations, or recommendations by Wynn's or Parco employees, former employees, agents, or contractors relating to elastomers, lubricants, or elastomer design applications that were, or are, being carried out at the request of, in cooperation with, or for the benefit of Central; and

3) any and all records (including correspondence) relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

You are further directed to produce, prior to testifying at the deposition above and by August 5, 1998, samples of Wynn's o-ring compound 3407 (70 durometer, sizes -011 and -009).

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that you, as a former senior executive at Parco, Inc, and in your current position with Wynn's Precision, Inc., possess information or

have knowledge that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and tangible things and appear for deposition.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Part 1025. Title 16 of the Code of Federal Regulations, section 1025.38, sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment with your responsive documents.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Wynn's" refers to Wynn's - Precision, Inc. presently residing at 104 Hartmann Drive, Lebanon, TN 37087, and any agent, subsidiary, affiliate, facility, or division doing business under the "Wynn's" or "Precision" or "Wynn's Precision" name.

c. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

d. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes,

audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 13th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 5, 1998, copies of all records in Wynn's or your personal possession, custody, or control relating to:

1) Wynn's o-ring compound number 3407 (70 durometer), including the following:

   a. the precise ingredient polymers, reinforcing agents, curing or vulcanizing agents, plasticizers, accelerators, retarders, anti-oxidants, anti-ozonants, or anti-rads to build the sealing material for such o-rings;

   b. all fluid service guide information, indicating percentage volume change;

   c. all recommended and non-recommended media;

   d. any and all material test data sheets, including data on age resistance and storage conditions, physical and mechanical properties, thermal properties, and chemical properties;

   e. any and all recommended lubricants; and

   f. any and all assembly and design procedures or recommendations for dynamic applications.

2) any and all tests, analyses, evaluations, or recommendations by Wynn's or Parco employees, former employees, agents, or contractors relating to elastomers, lubricants, or elastomer design applications that were, or are, being carried out at the request of, in cooperation with, or for the benefit of Central; and

3) any and all records (including correspondence) relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

You are further directed to produce, prior to testifying at the deposition above and by August 5, 1998, samples of Wynn's o-ring compound 3407 (70 durometer, sizes -011 and -009).

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of CENTRAL SPRINKLER CORP. 451 North Cannon Avenue Lansdale, PA 19446 and CENTRAL SPRINKLER CO. 451 North Cannon Avenue Lansdale, PA 19446 Respondents.	CPSC Docket No. 98-2 Subpoena of a Non-Party: Dr. Ronald Campbell

TO: Dr. Ronald Campbell
Vice President, Research & Development
Wynn's Precision, Inc.
104 Hartmann Drive
Lebanon, TN 37087

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that you, as a former senior executive at Parco, Inc, and in your current position with Wynn's Precision, Inc., possess information or

have knowledge that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and tangible things and appear for deposition.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Part 1025. Title 16 of the Code of Federal Regulations, section 1025.38, sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment with your responsive documents.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Parco" refers to Parco, Incorporated, presently doing business at 2150 South Parco Avenue, Ontario, California 91761, and any agent, subsidiary, affiliate, or division doing business under the Parco name, or any Parco franchisee.

b. The term "Wynn's" refers to Wynn's - Precision, Inc. presently residing at 104 Hartmann Drive, Lebanon, TN 37087, and any agent, subsidiary, affiliate, facility, or division doing business under the "Wynn's" or "Precision" or "Wynn's Precision" name.

c. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

d. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes,

audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 13th day of August 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce, prior to testifying at the deposition above and by August 5, 1998, copies of all records in Wynn's or your personal possession, custody, or control relating to:

1) Wynn's o-ring compound number 3407 (70 durometer), including the following:

   a. the precise ingredient polymers, reinforcing agents, curing or vulcanizing agents, plasticizers, accelerators, retarders, anti-oxidants, anti-ozonants, or anti-rads to build the sealing material for such o-rings;

   b. all fluid service guide information, indicating percentage volume change;

   c. all recommended and non-recommended media;

   d. any and all material test data sheets, including data on age resistance and storage conditions, physical and mechanical properties, thermal properties, and chemical properties;

   e. any and all recommended lubricants; and

   f. any and all assembly and design procedures or recommendations for dynamic applications.

2) any and all tests, analyses, evaluations, or recommendations by Wynn's or Parco employees, former employees, agents, or contractors relating to elastomers, lubricants, or elastomer design applications that were, or are, being carried out at the request of, in cooperation with, or for the benefit of Central; and

3) any and all records (including correspondence) relating to Central, to Central products (including, but not limited to, the Omega), or to elastomers as used, evaluated, or considered for use in actual or proposed Central products.

You are further directed to produce, prior to testifying at the deposition above and by August 5, 1998, samples of Wynn's o-ring compound 3407 (70 durometer, sizes -011 and -009).

CENTRAL SPRINKLER CO.	)	
Respondents.	)	

COMPLAINT COUNSEL'S MOTION TO COMPEL ANSWERS TO INTERROGATORIES

Pursuant to 16 C.F.R. § 1025.36, Complaint Counsel respectfully requests that the Administrative Law Judge order Respondents to answer Complaint Counsel's First Set of Interrogatories and provide documents responsive to Complaint Counsel's First Request for Production of Documents.

I. FACTUAL BACKGROUND

On April 29, 1998, Complaint Counsel served Respondents with its First Set of Interrogatories ("First Set") and its First Requests for Production of Documents and Things ("First Requests") in the above-captioned matter. See Exhibits A and B, attached hereto. On

May 26, 1998, Respondents served, via regular mail, their Responses and Objections to Complaint Counsel's First Request for Production of Documents and Things, attached as Exhibit C, and their Responses and Objections to Complaint Counsel's First Set of Interrogatories, attached as Exhibit D hereto (collectively, "Responses"). Respondents also included an interim privilege log with their Responses consisting of some 709 entries, attached as Exhibit E hereto.

To all but eight of Complaint Counsel's 117 interrogatories, Respondents responded by promising to produce 400 boxes of business records subject to and without waiver of a litany of blanket objections, and Respondents insisted Complaint Counsel agree to a confidentiality agreement (since rejected by the Administrative Law Judge) before they would make these business records available at their lawyers' offices. See Exhibit D, Responses Nos. 1, 2, 4, 23, 32, 51, 116, and 117. In several of the same responses in which Respondents invoked (or did not invoke) the "business records option," Respondents provided partial, albeit either evasive or editorialized, narrative answers. Id., e.g., Response Nos. 5, 10, 23, 27-29, 32, 34, 47, and 52. In 88 "answers" in which Respondents directed the staff to business records, Respondents referred to broad categories of business records in which the answers could allegedly be found, such as customer service department files, return authorizations, project proposals, diagnostic reports, bills of materials, work instructions, engineering change notices, project proposals, correction action reports, quality control manuals, vendor certifications, testing documents, and material review board minutes. Id., Response Nos. 3, 5, 6, 8, 9, 13-19, 21, 22, 25, 26, 30, 31, 34-40, 46-50, 53, 54, 57-61, 63, 64, 66-108, and 111-115. However, the Responses provide absolutely no index to the business records whatsoever, nor

any suggestion as to where these particular broad categories could be concealed within those records.

The Responses state that Central's responsive business records are likely to exceed 400 boxes of documents. Central's counsel claims to have already reviewed 100 of these boxes available for Complaint Counsel's inspection at Central's counsel's Washington, D.C. offices. See Exhibit C at 2; see also May 27, 1998 Letter from Kathleen Sanzo, attached as Exhibit J. Further, "Central's counsel will continue to review the remaining responsive documents, estimated to encompass 300 boxes, as quickly as possible. Central also anticipates providing Complaint Counsel with a privilege log corresponding to the documents produced on a rolling basis." See Exhibit C at 2. (emphasis added). In addition, Central's counsel notes that they possess another 1,000 boxes of documents that they believe are not responsive or relevant to the matter, and "that the time and expense of reviewing and producing these documents would be prohibitive." Id. (emphasis added).

Upon Complaint Counsel's telephonic request and "as a courtesy," on May 29, 1998, Respondents provided a copy of an abridged "index" to some 57 boxes of business records. See May 29, 1998 Letter from Gordon Cooney, Jr., attached as Exhibit I. This index merely lists which of three departments at Central the box comes from: "Operations," "Accounting," or "Customer Service." Exhibit I at 3-4. Respondents also provided an index to 44 boxes of business records they previously reviewed and produced as part of discovery in a class-action lawsuit pertaining to Central's "Omega" series sprinkler, Hart v. Central Sprinkler Corp. (Los Angeles County Sup. Ct., Case No. BC176727). This index, too, merely indicates the department at Central from which boxes came, including "Customer Service," "Quality

Control," "Engineering," and "Operations." Id. at 5. Both indexes reveal that all documents contained in the boxes have been reviewed and Bates-stamped. Central's counsel also indicated that certain "remaining boxes will be made available in the near future once they had been gathered and reviewed." Exhibit I at 1.

On June 3, 1998, Complaint Counsel informed Respondents that the Responses were inadequate, and requested that Respondents provide proper responses to discovery. See June 3, 1998 Letter from Eric Stone, attached as Exhibit H hereto. Complaint Counsel has not since received appropriate responses to interrogatories, any documents in response to those interrogatories, or an index to such documents. See June 8, 1998 Letter from Thomas Hogan, attached as Exhibit G hereto at 2-3 (indicating Respondents have no intention of providing further answers, segregating documents, or providing more detailed indexes). At the First Pre-Hearing Conference in this matter on June 16, 1998, the Administrative Law Judge ordered Respondents to provide 100 boxes of business records responsive to Complaint Counsel's First Requests for Production of Documents by June 19, along with meaningful indexes to such records by June 26. The Judge held in abeyance any other ruling on discovery pending Complaint Counsel's and Respondents' forthcoming motions to compel.

II. LEGAL ARGUMENT

A. Respondents Breached Their Duty to "Answer" Complaint Counsel's Interrogatories

As under Fed. R. Civ. P. 33(a), 16 C.F.R. § 1025.32(b) requires that "each interrogatory shall be answered separately and fully in writing. . ." (emphasis added). "An evasive or incomplete response" is no response at all. 16 C.F.R. § 1025.36. Respondents

breached their duty to comply with these provisions because they chose not to answer, or answer fully, any of Complaint Counsel's Interrogatories where they plainly could have done so. Respondents have a primary obligation to provide answers with information that they know, whether or not it is memorialized or contained in business records. Cf. DiGregorio v. First Rediscount Corp., 506 F.2d 781 (3d Cir. 1974) (responding party must make bona fide attempt to provide adequate responses); Alliance to End Repression v. Rochford, 75 F.R.D. 438 (N.D.Ill. 1976) (party must provide information that is part of personal knowledge). Respondents clearly know the answers to numerous interrogatories; however, they simply choose not to respond, and instead send Complaint Counsel on a hunting expedition for information that may or may not exist within Respondents' "400 boxes" of documents. Several examples are illustrative.

Complaint Counsel's Interrogatory No. 3, for example, asked Central to identify all officers, directors, and/or shareholders of the company since its formation. Respondents pointed Complaint Counsel to annual reports and organizational charts, when they easily could have named officers, directors, and major shareholders. Exhibit D at 2.

Interrogatory No. 5 asked Central to identify all makes and/or models of "Omega" sprinklers and asked them to indicate the dates of design, manufacture, and distribution. Respondents partially answered with model numbers, but refused to provide the dates of design, manufacture, and distribution, ostensibly on the ground that to do so would be unduly burdensome. Respondents invoked the business records option, referring Complaint Counsel to product catalogues, engineering drawings, and cut sheets that presumably are to be found within the 400 boxes of documents. Exh. D at 3. Though providing an answer may be

"burdensome," it certainly is not unduly so. Complaint Counsel believes this information is readily available to Respondents' counsel, who have been negotiating sprinkler replacements with building owners and class action attorneys for some time.

In Complaint Counsel's Interrogatory No. 6, Complaint Counsel asked to know the total number of Omega sprinklers sold or distributed that contained an EPDM o-ring, and the number of Omegas containing a silicone o-ring. Central managed to provide the number of total Omegas sold, but would not break down the number between silicone and EPDM. Respondents pointed Complaint Counsel to sales reports to find the answers. See Exhibit D at 4. It is difficult to believe that Central does not already have such information at hand, and, if not, to understand why Central could not itself consult those sales reports to provide an answer. Instead, Respondents ask Complaint Counsel to sift through an unspecified number of boxes in search of "sales documents."

In Complaint Counsel's Interrogatory No. 16, Complaint Counsel asked Central, among other things, to identify all personnel who have been involved in the design and development of the Omega, its testing, marketing, or manufacturing. Since Central's top officers have been with the corporation since the Omegas were designed, it is hard to believe that they could not identify any of these people. Central referred Complaint Counsel to annual reports and employee status reports. Exh. D at 10.

Interrogatory No. 18 asked Central to identify the manufacturer of all component parts of the Omega, as well as the tools and substances used in the manufacturing process. Once again, rather than consult its engineers or answer from the records that Central apparently

knows to contain the information, Respondents evaded their responsibility and attempted to place the burden upon Complaint Counsel to search for an answer. See Exh. D at 11-12.

Interrogatory No. 23 asked Central whether it had ever utilized any chemical or substance in the manufacture of Omegas to prevent leaking when they are later installed. Central selectively responded: "[T]o the extent that this interrogatory is referring to products such as 'Stop-Leak,' Central has not utilized such substances." Central failed to address the substance of the question, which is not limited to "Stop-Leak." See Exh. D, at 14-15. Complaint Counsel has obtained information that shows Central used "loc-tite" for this purpose both in manufacturing and installed units.

In Complaint Counsel's Interrogatory No. 27, Complaint Counsel asked Central to explain how each different make and model of Omega sprinkler operates, once exposed to its activation temperature. Respondents provided a brief, generalized explanation for "most" Omegas, but then, rather than fully answering the question or resolving the ambiguity about the term "most," invoked the business records option. See Exh. D at 18.

In Complaint Counsel's Interrogatory No. 34, Complaint Counsel asked whether Respondents were aware or had ever been notified of an Omega that allegedly did not activate in a fire. Complaint Counsel asked Respondents to answer several follow up questions if the answer was in the affirmative. See Exhibit D at 25-26. Central's answer is printed below in full:

> Central objects to this interrogatory on the grounds and to the extent that is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that

constitute trade secrets or other confidential research, development, or commercial information, and it calls for a legal conclusion.

Subject to and without waiver of the foregoing objections, Central responds as follows: Following is a list of locations regarding which Central has "been notified of an Omega that did not or allegedly did not activate in a fire." By listing the locations below, Central does not concede that any Omega sprinkler involved did not activate properly or that any non-activation was caused by a defect in the sprinkler. To the contrary, for example, certain of the locations listed below involved fires that burned from outside the structure to the inside, systems that were contaminated with prohibited substances (e.g., Stop-Leak), or systems where the water supply may have been shut off or otherwise disabled. Central has not had an opportunity to investigate fully a number of locations listed below, and Central also is in the process of investigating other fires where Omegas were or allegedly were involved. To the extent that any responsive information is discovered during such ongoing investigations, Central will provide supplemental information in response to this interrogatory.

A. Jackson Memorial Hospital, Miami, Florida
B. Marriott Hotel, Romulus, Michigan
C. Veterans Affairs Building, Lake Canandaqua, New York
D. Crossroad, Ft. Wayne, Indiana
E. Mel's Marina, Gulf Breeze, Florida
F. Kent Manor Inn, Annapolis, Maryland
G. Casa Reale Apartments, Los Angeles, California
H. Escondido Gardens, Escondido, California
I. Joshua Tree Apartments, Scottsdale, Arizona
J. Lorene Lodge, Marietta, Georgia
K. Yorba Residence, Riverside, California
L. Days Inn, Horsham, Pennsylvania
M. Montserrat School of Art, Beverly, Massachusetts
N. Boarding House, Milford, Massachusetts
O. Private Residence, Dallas, Texas
P. The Fairway at Piper Glen, Charlotte, North Carolina
Q. Lockermill Plaza, Concord, North Carolina

For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. 1025.32(d) Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: . . . [sic] customer service department files, return authorizations, diagnostic reports.

The answer to this question -- fires in which Omegas failed to activate -- is undoubtedly available and undoubtedly already segregated, perhaps in Respondents' counsel's offices. See index of privileged documents citing numerous documents involving incidents to and from counsel for Central at Exhibit E.) As a letter from Central's counsel the day after they served their Responses indicates, Respondents are quite capable of providing more detailed narrative when, for whatever reason, the occasion suits. See Exhibit J at 1-2. Respondents should be directed to answer the interrogatories as fully as possible.

B. Respondents Have Wrongfully Asserted The Option To Produce Business Records under 16 C.F.R. § 1025.32(d)

1. The Applicable Standard under 16 C.F.R. § 1025.32

Title 16 C.F.R. § 1025.32(d) provides:

> (d) *Option to produce business records.*
>
> Where the answer to an interrogatory may be derived or ascertained from the business records of the party upon whom the interrogatory has been served, or from an examination, audit, or inspection of such business records, or from a compilation, abstract, or summary of those records, and the burden of deriving the answer is substantially the same for the party serving the interrogatory as for the party served, it is a sufficient answer to the interrogatory to specify the records from which the answer may be derived or ascertained and to afford to the party serving the interrogatory reasonable opportunity to examine, audit, or inspect such records and to make copies, compilations, abstracts, or summaries.

16 C.F.R. § 1025.32(d) (1997) (emphasis added).

This provision mirrors Fed. R. Civ. P. 33(d) (formerly Fed. R. Civ. P. 33(c)). The rule has at least three prerequisites. First, the rule presumes that the answering party faces a "burden" to begin with -- that of "compiling and extracting the requested information, above and beyond the simple task of referring to the records in order to answer interrogatories. . . .

Referring to a document in order to answer an interrogatory is not the kind of burden contemplated by the rule." Pascale v. G.D. Searle & Co., 90 F.R.D. 55, 60 (D. RI 1981) (emphasis added).

Second, "under [the rule] making pertinent business records available to an interrogating party is a sufficient response to interrogatories if, but only if, the burdens of deriving or ascertaining the answers [from the records] is substantially the same. . . " Id. at 59 (emphasis added) (quotations omitted). In other words, the rule does not apply if the burden of researching the answer is heavier for Complaint Counsel. Id.; see also Daiflon, Inc. v. Allied Chemical Corp., 534 F.2d 221, 226-27 (10th Cir.), cert. denied, 429 U.S. 886 (1976).

Third, under 16 C.F.R. § 1025.32(d), "the interrogated party must state specifically and precisely identify which documents will provide the information to be elicited." Budget Rent-a-Car of Missouri v. Hertz Corp., 55 F.R.D. 354, 357 (W.D. Mo. 1972) (emphasis added). The rule

> does not allow that party to impose on an interrogating party a mass of records as to which research is feasible only for one familiar with the records. . . . [The rule] cannot, therefore, be used as a procedural device for avoiding the duty to give information by shifting the obligation to find out whether information is ascertainable from the records which have been tendered.

Id. (citations and quotations omitted.)

Indeed, 16 C.F.R. § 1025.32(d)'s twin, the former Fed. R. Civ. P. 33(c), was amended in 1980 precisely "to make it clear that a responding party has the duty to specify . . . the records from which answers to interrogatories can be derived." Rainbow Pioneer No. 44-18-04A v. Hawaii-Nevada Investment Corp., 711 F.2d 902, 906 (9th Cir. 1983) (citing Notes of the Advisory Committee on Rules (1980 Amendment to Fed. R. Civ. P. 33(c))).

Respondents have utterly failed to meet any of the three prerequisites to 16 C.F.R. § 1025.32(d).[1]

2. Respondents Often Face No Burden Within the Meaning of 16 C.F.R. § 1025.32(d).

As the Court noted in Pascale, 90 F.R.D. at 60 (emphasis added):

> [a]nswering interrogatories often requires the interrogated party to refer to written documents, particularly where the party is a corporate entity. If a party could invoke [16 C.F.R. 1025.32(d)] in every such case, by claiming that the "burden" of "deriving" the information from the records is substantially the same for both parties, discovery would be thwarted at every turn. [Having to refer] to a document in order to answer an interrogatory is not the kind of burden contemplated by the rule (emphasis added).

In many cases, Respondents do not have a bona fide burden so as to trigger the rule, because they themselves could easily answer the questions either with or, as above, without referencing business records. As demonstrated above, they have simply chosen not to respond. Quite simply, Respondents should be ordered to provide complete answers to Complaint Counsel's interrogatories. See, e.g., Thomason v. Leiter, 52 F.R.D 290, 291 (M.D. Ala. 1971) (where answers to interrogatories require no burdensome research, business records option does not pertain).

---

[1] 16 C.F.R. § 1025.32(d) has at least one other implicit pre-requisite that Respondents may have failed to satisfy; namely, that the party invoking it must be able to state positively, not tentatively, that responsive information will be found within the business records. See Sabel v. Mead Johnson & Co., 110 F.R.D. 553, 555 (D. Mass. 1986). Complaint Counsel assumes, without waiving its right to further challenge, that Respondents repeated statements that information "may be derived by Complaint Counsel" from Respondents' business records is an assurance that they can be found. See, e.g., Exhibit D, Response No. 44. In the meantime, Complaint Counsel notes some uncertainty on the part of Central's counsel on this point. See Exhibit J at 1 (estimating that additional documents encompassing at least another 300 boxes "may be responsive"); Exhibit G at 2 (refusing to "speculate about what might be in" the business records).

3. If Respondents Do Bear a Burden, It is Far Lower Than That of Complaint Counsel, Because Respondents Have Already Screened and Reviewed Documents and Are Familiar With Them.

Even assuming, arguendo, that Respondents face a burden such as that contemplated by 16 C.F.R. § 1025.32(d), deriving Complaint Counsel's requested information from business records is not substantially equally burdensome for Complaint Counsel and Respondents, as 16 C.F.R. 1025.32(d) requires. Respondents are far less burdened, because they are overwhelmingly familiar with the documents. See T.N. Taube Corp. v. Marine Midland Mortg. Corp., 136 F.R.D. 449, 454 (W.D. NC 1991) (citing 4A Moore's Federal Practice par. 33.25) (2d ed. 1990) (often key factor in weighing relative burdens is the interrogated party's familiarity with its own documents; cost of research did not outweigh key criterion of interrogated party's familiarity). To the extent that business records are usually maintained in some indexed, retrievable form, searching for the appropriate documents without such access is extremely difficult and time consuming for Complaint Counsel. Respondents seem intent on imposing additional burdens on Complaint Counsel, rather than sharing the burden with them.

As correspondence from Respondents repeatedly illustrates, Central's counsel has already invested, and will continue to invest, considerable time and energy in reviewing the hundreds of boxes of documents they insist that Complaint Counsel sift through, whether to screen documents for privilege and confidentiality concerns or for other reasons. See Exhibit C at 2; Exhibit J at 1; Exhibit I at 1; Exhibit G at 1. Presumably, too, Central's counsel engaged in the same screening process in their discovery related to the class action suit against the Omega series sprinkler, in previous liability suits, and during the investigation

preceding this administrative proceeding. It has already reviewed the same documents it would seek to make available to Complaint Counsel. See Exhibit I at 1, 5.

Central's representatives, including Mr. Schiavone, are obviously familiar enough with the mass of business records not simply to point to them as a whole, but to indicate the broad categories within those records where answers to Complaint Counsel's interrogatories can be found. Furthermore, given the time at which alleged problems with the Omega first publicly surfaced -- January, 1996; given the date on which the CPSC staff first opened, and Central first began responding, to the staff's investigation -- Summer, 1996; and given the class action law-suit filed last year; and given that so many of Complaint Counsel's interrogatories go to Respondents' potential defenses, it seems more likely than not that Central's executives and engineers, in addition to Central's counsel, have over time reviewed those categories of documents for their substantive content and can do so more expertly and efficiently. For all these reasons, too, Central can make no bonafide claim to equal burdens. Cf. Petroleum Ins. Agcy. v. Hartford Acc. & Indem. Co., 111 F.R.D. 318, 321-22 (D. Mass. 1983) (where defendants had already analyzed other parties' answers and presumably did research into their own records to conduct analysis, they could not properly invoke business records option); Pascale, 90 F.R.D. at 61 (citing 4A Moore's Federal Practice, par. 33.20) (interrogated party has no reason not to furnish information if interrogated party has to go into the matter in any event, in order to prepare his own case); Puerto Rico Aqueduct and Sewer Authority v. Clow Corp., 108 F.R.D. 304, 309 (D. PR 1985) (citing Oppenheimer Fund, Inc. v. Sanders, 437 U.S. 340, 357 (1978)) (even assuming equal burdens, discovery rules require the responding party to derive answer itself where it could do so more efficiently).

4. Respondent's Have Abused The Business Records Option By Failing To Specify Documents Adequately

Respondents have failed to specify to Complaint Counsel which of its documents are relevant to Complaint Counsel's interrogatories, in plain contravention of 16 C.F.R. § 1025.32(d). In effect, Respondents are impermissibly directing Complaint Counsel to an "undifferentiated mass of records." T.N. Taube Corp. 136 F.R.D., at 455 (quotations and citations omitted). Central's documents are numbered in no apparent order, nor have any specific documents or boxes been identified as being responsive to any interrogatory by Complaint Counsel. Complaint Counsel also lacks the knowledge necessary to locate relevant documents within those boxes. This is all the more reason why Respondents familiarity with the records, already noted above, should count -- and should count against them -- in the balance of relative burdens. See Sabel v. Mead Johnson & Co., 110 F.R.D. 553, 556-57 (D. Mass 1986).

Complaint Counsel believes that the Administrative Law Judge's ruling at the June 16, 1998 Pre-Hearing Conference ordering Respondents to provide meaningful indexes already addresses 16 C.F.R. § 1025.32(d)'s third prong of "specificity"; namely, Complaint Counsel's right to be provided with specific indexes with respect to any "business record" answers to interrogatories, not simply requests for production of documents, inasmuch as production of business records is a legitimate option at all. The application of the Administrative Law Judge's ruling to interrogatories would be fully consistent with legal authority. See, e.g., T.N. Taube Corp. 136 F.R.D., at 455-56 (disallowing business records production where defendant failed to specify which of its documents were relevant and responsive to interrogatories); Sabel v. Mead Johnson & Co., 110 F.R.D. 553, 556 (defendant drug company's invocation of

business records option in response to plaintiff's interrogatories stricken where it was more familiar with the 154,000 documents to which it provided only an inadequate index.) Rainbow-Pioneer #44-18-04A, 711 F.2d at 906 (rejecting answering parties recitations, similar to Central's, that "answers could be found 'in partnership books of accounts, banking accounts, records, computer printouts, ledgers and other documents . . .'").

C. Respondents' Objections Are Impermissible Because They Are Overly General and Unsupported

Central has objected collectively to all of Complaint Counsel's document requests and interrogatories. See Exh. C at 3-5; Exh. D at 1. To every interrogatory, Central raises virtually the same litany of objections. It fails to treat each interrogatory as a separate entity upon its own merits. Central's objections to Complaint Counsel's interrogatory about Central's "helper spring" is representative:

> Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel, and/or equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Omegas fitted with "helper springs" will activate at the appropriate hydraulically calculated operating pressure specific to the particular installed system in each building.

Exh. D, at 33-34.

This objection is "cut and pasted," with some variation, throughout Central's Responses, and sometimes includes an additional objection of irrelevance, as well. See, e.g., Exh. D at 2, 5, 9, 10, 42, and 46. These objections simply cannot stand. Roesberg v. Johns-Mansville Corp., 85 F.R.D. 292 (E.D. Pa. 1980) (Respondent must show specifically how each interrogatory was overly burdensome or irrelevant by submitting affidavits or offering other detailed evidence); United States v. 58.16 Acres of Land, 66 F.R.D. 570 (E.D. Ill. 1975) (same). Respondents have explicated none of their objections; they have simply asserted them. Furthermore, many of the asserted bases for withholding information do not even appear to apply to the interrogatories in which they were raised.

III. CONCLUSION

Respondents' Responses to Complaint Counsel's First Set of Interrogatories are obstructive and unacceptable. Respondents have abused the business records option, and avoided any meaningful Responses. Complaint Counsel therefore respectfully requests that Respondents be compelled to provide proper responses to Complaint Counsel immediately.

Respectfully submitted,

Complaint Counsel

ORDER

AND NOW, this ____ day of _____, 1998, it hereby ORDERED that Complaint Counsel's Motion to Compel Answers to Interrogatories is GRANTED.

Pursuant to 16 C.F.R. § 1025.36, Respondents are hereby ordered to provide full and complete narrative responses to Interrogatories Nos. 1-117, inclusive, and provide specific indexes for any documents that may be permitted to be produced under 16 C.F.R. § 1025.32(d) in lieu of narrative responses by June 26, 1998

_____
William B. Moran
United States Administrative Law Judge

Dated: _____
Washington, D.C.

CERTIFICATE OF SERVICE

The undersigned hereby certifies that on this date, **COMPLAINT COUNSEL'S MOTION TO COMPEL ANSWERS TO INTERROGATORIES**, was filed with the Secretary of the Commission and sent to all parties of record in these proceedings by first-class U.S. mail, postage prepaid, on June 17, 1998.

CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

FIRST SET OF INTERROGATORIES TO RESPONDENTS
CENTRAL SPRINKLER CORP. AND CENTRAL SPRINKLER CO.

Complaint Counsel hereby propounds its First Set of Interrogatories upon Respondents Central Sprinkler Corp. and Central Sprinkler Co.

PLEASE TAKE NOTICE that pursuant to 16 C.F.R. § 1025.32, Respondents must respond to these Interrogatories within 30 days after service of same.

PLEASE TAKE FURTHER NOTICE that pursuant to 16 C.F.R. § 1025.31, Respondents are under a continuing duty to supplement their responses to the staff's discovery requests to include information later obtained, regardless of whether the response to the discovery request was complete when made.

DEFINITIONS

Throughout the following Interrogatories and Definitions, unless the context otherwise requires, the singular includes the plural, the masculine includes the feminine, and neuter, or vice versa.

As used herein, the terms below are defined as follows:

"Activate" in the context of Omega sprinklers means full opening (as opposed to partial opening) of the sprinkler -- i.e., full release of the plunger housing -- upon exposure to the Omega's triggering temperature.

"Adhesion" and "Adhered," in the context of a sprinkler "o" ring, refers to adhesion or adhered to the plunger housing and/or main housing of the sprinkler.

"Cause" means to bring about, effect, make happen, contribute to, induce, produce, and/or compel.

"Claim" refers to all lawsuits, governmental actions or orders, disputes, demands for payment, indemnification or reimbursement, complaints, and/or potential lawsuits that contain allegations against you and/or your agents and/or employees.

"Communication" means any transfer of information, ideas, opinions or thought by any means at any time or place under any circumstances, including any transfer of data from one location to another by electrical, electronic or similar means.

"Distribute" means to deliver, sell, give, allot, or otherwise provide, and includes the giving away of free samples and promotional items.

"Document" or "Record" shall have the broadest meanings permissible, and shall include the original and any non-identical copy of any written, graphic, photographic, audio,

electronic or visual material, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, facsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, memoranda, notes, transcripts, minutes, reports, recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendars, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated, no matter how produced or maintained, regardless of whether in your actual or constructive possession, custody or control, and regardless of whether or not communicated to any person other than the maker. A draft is a separate document or record within the meaning of this term.

If you claim that any document or record is privileged, specify the privilege claimed and the factual basis you contend supports the assertion of the privilege. If any document or record was, but is no longer, in your possession, custody, or control, provide the following information:

a) state the disposition of the document or record;

b) state the date such disposition was made;

c) identify the present custodian of the document or record and state his or her

address or, if the document or record no longer exists, so state;

d) identify the person who made the decision regarding the disposition of the document or record; and

e) state the reason for the disposition and describe the document or record and the contents of the document or record, including the title, the author, the position or title of the author, addressee, the position or title of the addressee, whether indicated or blind copies were made, date, subject matter, number of pages, attachments or appendices, and all persons to whom the document was distributed, shown or explained.

"Field test," for purposes of these Interrogatories, shall mean any test performed on a sprinkler while it is installed in a sprinkler system.

"Identify" or "identity" shall mean, when referring to an individual person, the person's full name, present or last known employer, present or last known address, occupation, business position, and telephone number, and the relationship or association, if any, to a Respondent in this action.

When referring to an entity, the terms "identify" or "identity" shall mean its present and any former name(s), the business address of its principal place of business, its state of incorporation, registration, or organization, the identity and address of its registered agent in each state where it is present and doing business or has a place of business, its present officers, directors, and shareholders, and its relationship, if any, to a Respondent in this action. Once a person or entity has been identified in accordance with this paragraph, only the name of that person or entity need be listed in response to subsequent discovery

requesting the identification of that person or entity.

When referring to a document or record, the terms "identify" or "identity" shall mean a description of the document or record including its date of preparation and transmission, the author, sender and recipient, the custodian of the record, and a summary of the subject matter.

When referring to an Omega or other brand sprinkler, "identify" or "identity means to provide the following information:

a) the sprinkler manufacturer

b) model name and number;

c) manufacture date;

d) activation temperature;

e) "o" ring type (if applicable)

f) all dates of UL listing;

g) the UL standards for safety under which the sprinkler is/was listed;

h) the type of piping in which the sprinkler is or was installed (if applicable);

i) the name, address and telephone number of the building in which the sprinkler was installed (if applicable); and the name, address and telephone number of the owner of that building;

"Manufacture" means to make, produce, assemble, fabricate, or work into usable form.

"Omega" means any and all models and makes (variations within a model) of Omega series or brand automatic fire sprinklers.

"Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing,

or bearing any logical or factual connection with the matter discussed.

"UL" or "Underwriters Laboratories, Inc." means Underwriters Laboratories, Inc., 333 Pfingsten Road, Northbrook, IL 60062 and any subsidiaries, divisions, or agents of Underwriters Laboratories, Inc.

"You," "your," "yourself" means the Respondent to whom this discovery is directed, including any officer, director, representative, insurer, agent or employee thereof, and also includes any agent, person or entity acting on your behalf.

INSTRUCTIONS

1. Each Interrogatory shall be answered completely, separately, and fully.

2. The following Interrogatories are to be regarded as continuing. You are required to supplement or modify any response as additional or different information becomes known to you.

3. Each person consulted in answering any Interrogatory shall be identified in the body of the response to the particular Interrogatory.

4. If you cannot answer any Interrogatory in full after exercising due diligence, so state and answer or produce to the extent possible, specifying your inability to answer or produce the remainder, stating whatever information or knowledge you have concerning the unanswered portion or unproduced documents, and describing your efforts to secure the unknown information or unproduced documents.

5. If you assert any privilege in responding to any Interrogatory, state the type of privilege asserted and the basis for its assertion. In addition, briefly identify the document or record with respect to which the privilege is asserted. For any document or record with

respect to which a privilege is asserted, state:

a) The type of document or record (e.g., letter, memorandum, contract, etc.), the date of the document, and the subject matter of the document or record;

b) The name, address and position of the author of the document or record and of any person who assisted in its preparation;

c) The name, address and position of each addressee or recipient of the document or record, or any copies of it; and

d) The present location of the document or record and the name, address and position of the person having custody of it.

For any communication with respect to which a privilege is asserted, identify the persons or entities among whom the communication took place, the date of the communication, and the subject.

INTERROGATORIES

INTERROGATORY NO. 1

Identify the person(s) answering these Interrogatories.

INTERROGATORY NO. 2

Identify yourself.

INTERROGATORY NO. 3

Identify all officers, directors and/or shareholders of your company since its formation. For each such person, specify all positions they have held, and the dates they held each position.

INTERROGATORY NO. 4

Provide the date on which the first "Omega" sprinkler was sold or given away as a free sample or promotional item. Identify the fist "Omega" sprinkler sold or given away as a free sample.

INTERROGATORY NO. 5

Identify all makes and/or models of "Omega" sprinklers you have ever designed, manufactured, and/or distributed. For each model, indicate the date(s) it was designed, manufactured and distributed.

INTERROGATORY NO. 6

Provide the total number of Omega sprinklers that:

a) have been sold;

b) have been given away as free samples or promotional items;

c) are installed

in the United States and its territories. Of these, how many contain:

i) EPDM "o" rings;

ii) silicone "o" rings;

iii) neither EPDM or silicone "o" rings (specify whether the model has an "o" ring, and if so, the composition of the "o" ring).

INTERROGATORY NO. 7

How many Omega sprinklers:

a) have been sold;

b) have been given away as free samples or promotional items;

c) are installed

in each state and territory of the United States.

INTERROGATORY NO. 8

Provide the sales price for each Omega sold by you (or anyone on your behalf) in the United States and/or its territories.

INTERROGATORY NO. 9

For each year in which you manufactured and/or distributed Omega sprinklers, provide:

a) your gross income;

b) your net income;

c) the amount in revenues generated from product sales;

d) the amount in revenues generated from sales of Omega sprinklers.

INTERROGATORY NO. 10

How many total Omega sprinklers are installed in the United States and/or its territories in:

a) steel piping systems;

b) copper piping systems;

c) plastic piping systems;

d) polybutylene piping systems;

e) other piping systems not listed above (specify the type of piping system)?

INTERROGATORY NO. 11

How many Omega sprinklers are installed in each state and territory of the United

States in:

a) steel piping systems;

b) copper piping systems;

c) plastic piping systems;

d) polybutylene piping systems;

e) other piping systems not listed above (specify the type of piping system)?

INTERROGATORY NO. 12

How many Omega sprinklers are installed in the United States and/or its territories in:

a) private homes

b) apartment buildings

c) schools (including universities and colleges, public or private)

d) nursing homes

e) hospitals

f) detention facilities (including jails, juvenile detention facilities, etc.)

g) homeless shelters

h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)

i) hotels

j) museums

k) offices (including office buildings)

l) warehouses with no public access areas

m) industrial facilities with no public access areas

INTERROGATORY NO. 13

Identify which Omega makes and/or models you are currently manufacturing and/or selling.

INTERROGATORY NO. 14

What is the current sales price for each Omega make and/or model listed in your response to Interrogatory No. 13?

INTERROGATORY NO. 15

Identify all of your employees, agents, representatives or consultants who have held a supervisory, managerial, or executive position or role in the following areas of your company at any time:

1) sales;

2) marketing;

3) product design and/or development;

4) engineering and/or technical services;

5) customer service/customer relations;

6) public and/or governmental relations;

7) product manufacturing and/or production;

8) product sales, marketing and/or distribution;

9) corporate mergers and/or acquisitions;

10) quality assurance/control;

11) any divisions, subdivisions or areas that deal or dealt with Omega automatic fire sprinklers and/or any component parts of Omega automatic fire

sprinklers.

For each employee, agent, representative or consultant, please state the position(s) and title(s) of those position(s), term(s) of employment, and salary. If the person is no longer in your employ, please indicate their reason for leaving and, if known, provide their current address and telephone number.

INTERROGATORY NO. 16

Identify all persons and/or entities who were in any way involved in:

a) design and/or development;

b) testing

c) the UL listing process and/or submission of Omega sprinkler samples and/or prototypes for same;

d) marketing;

e) sale; or

f) manufacturing of any makes and/or models

of each make and/or model Omega sprinkler.

For each such person and entity, indicate:

i) whether the person or entity is currently employed by your company;

ii) their position in your company (or, if not in your company, elsewhere) at the time of their involvement;

iii) which makes and/or models the involvement related to; and

iii) describe in detail the nature of their involvement.

INTERROGATORY NO. 17

For each make and/or model of Omega sprinkler, identify and describe (including specifications for) each component part and each chemical (including lubricants), tool and/or substance used in the Omega manufacturing process.

INTERROGATORY NO. 18

Identify the manufacturer of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

INTERROGATORY NO. 19

Identify the person and/or entity who supplied to you each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

INTERROGATORY NO. 20

Identify all persons and/or entities who were involved in any way in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

INTERROGATORY NO. 21

Describe in detail the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time. Specify and describe all tools, chemicals and substances used, including when, how and in what amount they are used.

INTERROGATORY NO. 22

For each change in procedure or specification identified in your response to

Interrogatory No. 21:

a) explain the differences between the procedure or specification and its predecessor(s);

b) explain the reasons for the change;

c) identify all persons and/or entities involved in bringing about the change, and explain their role in same;

d) identify all persons and/or entities who implemented the change;

e) indicate whether any tests were done on the models before or after the change occurred. If so:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

INTERROGATORY NO. 23

Have you (or anyone on your behalf) ever utilized any chemical or substance in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system? If so, identify, for each such chemical or substance:

a) its name (and brand name, if applicable);

b) its chemical composition;

c) its manufacturer; and

d) the person and/or entity from whom you purchased and/or received the chemical or substance;

e) identify and describe any tests performed by you or anyone else to assess whether and/or how the substance affects the operation of Omega sprinkler(s) or any Omega component part, providing the following information:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

f) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such chemical or substance. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 24

Were/are there any prototypes or precursors of any of the Omega sprinklers listed in your response to Interrogatory No. 6? If so:

a) identify and describe each prototypes or precursor, including any modifications

in composition or design;

b) indicate the date on which it was designed and/or developed;

c) identify all persons and entities who were in any way involved in designing, developing and/or reviewing the prototype or precursor;

d) identify the Omega model to which the prototype or precursor corresponds;

e) describe all tests and evaluations performed on the prototype or precursor, providing the following information:

i) the date on which the test or evaluation was conducted;

ii) the protocol for the test or evaluation;

iii) identify all persons and entities who conducted, attended, reviewed, and/or supervised the test or evaluation;

f) indicate whether the prototype or precursor was ever submitted to a testing laboratory for review, certification or listing. If so, fully describe the circumstances and outcome of the submission and testing, and identify the laboratory;

g) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such prototype or precursor. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 25

Identify and describe all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

INTERROGATORY NO. 26

Have you ever known or been advised of any problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas, including whether any component part has been or alleged to have been out of tolerance? If so, for each such problem, flaw, defect and deficiency:

a) describe in full detail the problem, imperfection, flaw, defect, deficiency or extent to which the part was out of tolerance;

b) indicate the date on which you were notified or learned of the problem, flaw, defect or deficiency;

c) indicate how you became aware or were notified of the problem, flaw, defect or deficiency;

d) describe all actions, if any, you took as a result, indicating when those actions were taken; and

e) state whether the affected component part was ever delisted, recalled, discontinued. taken off the market, or requested to be returned to the manufacturer, supplier, distributor, etc. and, if so, explain the circumstances of

same.

INTERROGATORY NO. 27

Explain in full detail the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

INTERROGATORY NO. 28

Once the activation (triggering) temperature has been reached, indicate whether water pressure or any other source of pressure (not internal to or part of the Omega itself) is a prerequisite to or requirement for activation of any make and/or model of Omega sprinkler(s). If so:

a) identify the Omega

b) indicate, for each make and/or model of Omega, what the necessary pressure is (in psig);

c) indicate the expected or required source of that pressure;

d) explain how the pressure activates or assists the Omega's activation;

e) explain why the sprinkler will not activate without that pressure.

INTERROGATORY NO. 29

Are you aware of any non-Omega sprinklers that contain an "o" ring? If so:

a) identify the sprinkler make and/or model;

b) identify the manufacturer of the sprinkler;

c) indicate where in the sprinkler the "o" ring is located;

d) explain the mechanism of proper operation/activation of the sprinkler, including how the "o" ring is used; and

e) identify all persons and entities involved in any way in the design of each such sprinkler make and/or model;

f) indicate whether you are aware or have been notified of any instances in which a non-Omega sprinkler containing an "o" ring did not or allegedly did not activate, either in testing or in a fire, when exposed to its activation (triggering) temperature. If so, indicate when, how, and from whom you received such notification;

g) identify all tests of which you are aware that were conducted on the sprinkler to determine whether or not it operates properly, providing the following information:

i) identify the sprinkler;

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results;

h) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding the operation of any non-Omega sprinklers containing an "o" ring. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication;

INTERROGATORY NO. 30

Indicate which Omega makes and/or models, and which, if any, adaptations or devices to be used with any Omega make and/or model (such as the "helper spring"), have been tested or submitted for approval, listing and/or certification by a certifying laboratory or institution such as UL or FM? For each such Omega, for each testing and/or submission, and for each certifying laboratory or institution:

a) describe all efforts involved and steps taken in an effort to obtain approval, listing and/or certification;

b) indicate the date on which each such effort or step took place;

c) indicate the project number, if any, that each such effort or step related to or was part of;

d) identify all persons and/or entities involved in each effort or step;

e) with respect to any testing and/or examinations:

i) describe the tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results;

f) describe all communications regarding or relating in any way to the listing and/or certification, including the following information:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

g) indicate whether and when listing and/or certification was granted, refused, or postponed by the certifying laboratory or institution.

INTERROGATORY NO. 31

Indicate whether approval, listing or certification was ever refused, withdrawn, discontinued or cancelled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler. If so:

a) identify the Omega and/or Omega component part or allegedly assistive operating device;

b) explain the circumstances and date;

c) identify all persons and/or entities involved;

d) identify and describe all communications regarding or relating in any way to the refusal, withdrawal, discontinuation, cancellation, or objected to sale and/or distribution, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 32

Have you ever advertised, represented, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM? If so:

a) identify the advertisement or marketing material;

b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:

i) how and from whom you received the notification;

ii) when you received the notification;

iii) describe the contents of the notification;

iv) describe your response to the notification.

INTERROGATORY NO. 33

Have you ever advertised, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by UL are listed or certified by UL? If so:

a) identify the advertisement or marketing material;

b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:

i) how and from whom you received the notification;

ii) when you received the notification;

iii) describe the contents of the notification;

iv) describe your response to the notification.

INTERROGATORY NO. 34

Indicate whether you are aware or have ever been notified of an Omega that did not or allegedly did not activate in a fire? If so:

a) identify the Omega;

b) indicate when, where and how the fire occurred;

c) what was the system pressure was (in psig) at the time of the fire and/or nonactivation;

d) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:

i) identify the injured person;

ii) indicate how the injury was or was alleged to have been sustained;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide details of same;

e) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:

i) identify the decedent;

ii) indicate how and where the death occurred;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;

f) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:

i) identify the owner of the property;

ii) indicate how the property was or allegedly was damaged;

iii) indicate the value or alleged value of the property;

iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;

g) indicate whether the Omega was fitted with a "helper spring;"

h) indicate when and how you became aware of the fire and/or the nonactivation, including from whom you received the notification;

i) identify and describe all communications regarding or relating in any way to the fire and/or nonactivation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

j) indicate whether you or anyone else tested and/or examined any Omega that failed to activate or allegedly failed to activate in a fire, the sprinkler system in which the Omega was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

k) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

l) indicate whether the Omega and/or the system from which it came was tested

and/or examined for "stop leak" or any other leakage prevention substance. If so:

i) indicate whether "stop leak" or any other such substance was present;

ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

m) indicate whether the Omega was examined for dezincification. If so:

i) indicate whether dezincification had occurred;

ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

n) explain why the Omega failed to activate in the fire.

INTERROGATORY NO. 35

Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested, did not activate or allegedly did not activate at 7 psig or below when exposed to its activation/triggering temperature? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received such notification;

c) describe and explain the circumstances of the nonactivation at 7 psig, including

i) when and where the testing and nonactivation at or below 7 psig took

place;

ii) describe the tests and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests;

iv) describe and explain the results of the tests, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results.

d) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the sprinkler was subjected);

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to

the notification, the sprinkler, the testing and/or examination, and/or the nonactivation at 7 psig or below, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:

i) indicate whether "stop leak" or any other such substance was present;

ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether

"stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:

i) indicate whether dezincification had occurred;

ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate at or below 7 psig.

INTERROGATORY NO. 36

Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received such notification;

c) describe and explain the circumstances of the nonactivation, including:

i) when and where the testing and nonactivation took place;

ii) describe the tests and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests;

iv) describe and explain the results of the tests, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results.

d) indicate what the pressure of the system (in which the Omega was installed) was at the time of the field test;

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing and/or examination, and/or the nonactivation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

  i) indicate whether swelling and/or adhesion was present;

  ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

  iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:

  i) indicate whether "stop leak" or any other such substance was present;

  ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

  iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:

  i) indicate whether dezincification had occurred;

  ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

  iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate when field tested.

INTERROGATORY NO. 37

Do you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation (triggering) temperature for long enough for its fusible like to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega)? If so:

a) explain the basis for your contention;

b) describe in detail the method of operation of the "helper spring;"

c) describe in detail the specifications for the "helper spring;"

d) identify the manufacturer of the "helper spring;"

e) identify all persons and/or entities involved in the design and/or development of the "helper spring."

f) describe and any tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part, providing the following information:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

g) indicate whether you have communicated with any persons and/or entities

(including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication;

h) if you allege that an Omega sprinkler fitted with a helper spring will activate at a lower system pressure than an Omega without a helper spring, please indicate:

i) how much lower the pressure required to activate the helper-spring fitted Omega is than the pressure required to activate an Omega not fitted with the helper spring; and

ii) explain the basis for your allegation;

iii) indicate what evidence supports your allegation.

INTERROGATORY NO. 38

Have you ever been aware or been notified of an Omega sprinkler or component that has cracked or broken? If so:

a) identify the Omega and, if applicable, its component part;

b) describe the circumstances of the cracking and/or breakage, including the date on which it occurred;

c) identify the person and/or entity (including your employees and/or consultants) who notified you of the cracking and/or breakage;

d) detail when and how you became aware or received notification of the cracking and/or breakage;

e) describe and explain your response to the notification;

f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:

i) describe all such tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iii) describe and explain the results of each test and/or examination, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the cracking and/or breakage, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

h) explain in full detail why the cracking and/or breakage occurred.

INTERROGATORY NO. 39

Have you ever been aware or been notified of an Omega sprinkler or any sprinkler component that has exhibited corrosion? If so:

a) identify the Omega and, if applicable, its component part;

b) describe the circumstances of the corrosion, including the date on which it occurred;

c) identify the person and/or entity (including your employees and/or consultants) who notified you of the corrosion;

d) detail when and how you became aware or received notification of the corrosion;

e) describe and explain your response to the notification;

f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:

i) describe all such tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iii) describe and explain the results of each test and/or examination, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test or

examination results;

g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the corrosion, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

h) explain in full detail how and why the corrosion occurred.

INTERROGATORY NO. 40

Indicate whether you are aware or have ever been notified of an Omega sprinkler that leaked and/or weeped when tested or in a fire? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received notification or became aware of the leakage and/or weeping;

c) describe and explain the circumstances of the leaking and/or weeping, including when and where the leakage and/or weeping took place. If the leakage and/or weeping took place in testing:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions (and including at what pressure the sprinkler leaked and/or wept);

iv) identify the persons and entities involved in evaluating the test and/or examination results.

d) indicate whether you or anyone else of whom you are aware tested and/or examined the Omega (after it leaked and/or wept), and/or any other sprinkler from the same site. If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the leakage and/or weeping, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

g) indicate whether the Omega that leaked or wept was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that leaked or wept was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

i) explain why the Omega leaked and/or wept.

INTERROGATORY NO. 41

Indicate whether you are aware or have ever been notified of an Omega sprinkler that activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received notification or became aware of the unnecessary or premature activation;

c) describe and explain the circumstances of the unnecessary and/or premature activation; including when and where the activation took place. If during

testing:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions (and including at what temperature and pressure the sprinkler activated);

iv) identify the persons and entities involved in evaluating the test results.

d) indicate whether you or anyone else of which you are aware tested and/or examined the Omega (after it activated prematurely and/or unnecessarily), and/or any other sprinkler from the same site. If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the premature and/or

unnecessary activation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

g) indicate whether the Omega that activated prematurely and/or unnecessarily was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that activated prematurely and/or unnecessarily was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was or was not present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

ii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

i) explain why the Omega activated prematurely and/or unnecessarily.

INTERROGATORY NO. 42

Do you contend that dezincification may cause an Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which dezincification causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which dezincification causes or may cause (a), (b), (c) and/or (d), above;

iv) describe the circumstances under which dezincification causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 43

Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of dezincification;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;

f) indicate how and when you were notified of the alleged dezincification;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega, the system in which it was installed and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

  iv) identify all persons and/or entities present during the communication.

j) With respect to each such Omega, indicate whether you contend that the dezincification caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

INTERROGATORY NO. 44

Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of dezincification;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;

f) indicate how and when you were notified of the alleged dezincification;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

j) With respect to each such Omega, indicate whether you or anyone else of

whom you are aware contend that the dezincification caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for their contention.

INTERROGATORY NO. 45

Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is neither copper or plastic exhibits dezincification? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of dezincification;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;

f) indicate how and when you were notified of the alleged dezincification;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 46

Are you aware or have you ever been notified of an Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether dezincification was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 47

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to dezincification? If so:

a) describe the alleged change, and indicate which Omega makes and models were changed;

b) indicate the date on which the change was effected;

c) identify all persons and/or entities involved in effecting the change, describing

each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits dezincification? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 48

Do you contend that the use of stop leak or other sealant, leakage prevention substance

or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the substances you contend are used;

v) describe the circumstances under which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 49

Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to stop leak or any other sealant, leakage prevention substance or pipe cement? If so:

a) identify the Omega;

b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;

c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;

e) describe the methods and criteria used to determine and confirm the existence of the stop leak or the other sealant, leak prevention substance or pipe cement;

f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;

g) indicate how and when you were notified of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;

h) detail your response to the notification or awareness;

i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

k) With respect to each such Omega, indicate whether you contend that the exposure to stop leak or any other sealant, leakage prevention substance or pipe cement caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature);

If so, explain fully the basis for your contention.

INTERROGATORY NO. 50

Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether stop leak or any other sealant, leakage prevention substance or pipe cement was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 51

Do you allege that any change in the manufacturing process and/or component parts,

including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so, for each such substance (stop leak or any other sealant, leakage prevention substance or pipe cement):

a) identify the substance;

b) describe the alleged change, and identify the Omega makes and models to which the change applies;

c) indicate the date on which the change was effected;
