UNITED STATES OF AMERICA

CONSUMER PRODUCT SAFETY COMMISSION

OFFICE OF THE SECRETARY
2001 DEC -6 P 12:04

In the matter of	)	
QUANTUM NORTH AMERICA, INC., and e4L, Inc.	)	CPSC Docket No.: 01-2

INITIAL DECISION

I. PROCEDURAL HISTORY

This is an administrative proceeding of the Consumer Product Safety Commission ("CPSC" or "the Agency"), initiated pursuant to Section 15 of the Consumer Product Safety Act, 15 U.S.C. § 2051 *et seq.*, ("CPSA"). The CPSC came into being October 27, 1972, with the passage of the Consumer Public Safety Act, Pub. L. No. 92-573, 86 Stat. 1207, amended by Consumer Product Safety Commission Improvements Act of 1976, Pub. L. No. 94-284, 90 Stat. 503. Among the congressional findings upon which the legislation rests are that "an unacceptable number of consumer products which present unreasonable risks of injury are distributed in commerce" and that "the public should be protected against unreasonable risks of injury associated with consumer products. . . ." *Id.*, 15 U.S.C. § 2051(a)(1), (3). The Commission's mandate includes the power, after conducting an adjudicatory hearing, to declare appropriate products to be "substantial product hazards" and to order notice and a repair, replacement or refund action plan. 15 U.S.C. § 2064.

This proceeding was instituted by complaint dated May 29, 2001, published in the Federal Register on June 6, 2001, for purposes of public notification and remedial action, whereby, in the public interest, the Legal Division of the Office of Compliance of the CPSC ("Complaint Counsel") seeks to protect the public from substantial risks of injury alleged to be presented by the Red Devil gas grill. The complaint seeks an order requiring Respondents Quantum North America, Inc. ("Quantum") and e4L, Inc. ("e4L") to give public notice of the defect and to elect to repair the defect, replace the grill with a product that does not contain the defect, or refund the purchase price.

The United States Office of Personnel Management, by Loan No. 2001-20-01, dated June 15, 2001, under the authority of 5 U.S.C. § 3344 and 5 C.F.R. § 930.213, at the request of the CPSC and with the consent of the Federal Trade Commission, has designated the undersigned Administrative Law Judge to be the Presiding Officer in this matter.

The Respondents in this proceeding, Quantum and e4L, are alleged to have manufactured the Red Devil gas grill. Respondents have failed to appear and answer the complaint in this matter, as required by 16 C.F.R. § 1025.12. Accordingly, on September 5, 2001, Complaint Counsel filed a Motion for Default Judgment. Respondents did not file an opposition to the motion for default judgment. By Order dated December 6, 2001 issued simultaneously herewith, Complaint Counsel's motion for default judgment was granted, pursuant to 16 C.F.R. § 1025.12(c).

II. STANDARDS WHERE DEFAULT JUDGMENT IS GRANTED

The Rules of Practice governing adjudicatory proceedings brought under the Consumer Product Safety Act require the Presiding Officer to file an Initial Decision with the Commission "based upon a consideration of the entire record" and "supported by reliable, probative, and substantial evidence." 16 C.F.R. § 1051(b). Where respondents are in default, as in this case, "the Presiding Officer may make such findings of fact and conclusions of law as are just and reasonable under the circumstances." 16 C.F.R. § 1025.12(c). Under the analogous Rule 55 of the Federal Rules of Civil Procedure, no hearing is required before an entry of default. If the court determines that a defendant is in default, the factual allegations of the complaint will be taken as true. *Thomson v. Wooster*, 114 U.S. 104 (1885); *Klapprott v. United States*, 335 U.S. 601, 603 (1949) (district court necessarily accepts the undenied allegations of the complaint as true). This rule applies to cases seeking equitable as well as legal relief. *Thomson*, 114 U.S. at 110; *Federal Trade Comm'n v. Kitco*, 612 F. Supp. 1282, 1297 (D. Minn. 1985).

III. FINDINGS OF FACT

The findings of fact, as alleged in the complaint and taken as true as they must be where default judgment has been granted, are as follows:

The Red Devil gas grill connects to a propane gas container. A plastic locking mechanism sits atop a collapsible three legged stand. A top threaded venturi tube, which contains four symmetrical air intake openings, is placed through the underside of a plastic locking mechanism, and is vertically locked into place by flipping a handle. The lower

end of the venturi tube is attached to a gas regulator. A burner pan is then placed on top of the venturi tube. (Complaint ¶ 9.)

The Red Devil gas grill design leads consumers to light the grill at the air intake openings on the venturi tube. If the grill is lit at this location, the consumer is igniting the combustible gas inside the tube. The grill will appear to function as intended, however, the venturi tube will reach temperatures up to 750°F. (Complaint ¶¶ 10 & 16.)

The plastic locking mechanism will melt and deform when subject to temperatures over 230°F. When the plastic deforms, it allows the grill to collapse and fall to the ground. If the Red Devil gas grill tips over, following the melting of the plastic locking mechanism, flames from the burner may ignite surrounding combustibles. It is also reasonably foreseeable that a consumer who is present would attempt to catch the falling grill, and receive severe burns to his or her hands or other body parts. (Complaint ¶¶ 11, 16 & 17.) Although the complaint does not allege that such injuries occurred, the List and Summary of Documentary Evidence filed with the Complaint, per 16 C.F.R. § 1025.11(b)(3), references complaints and claims of fires and personal injury related to melting of the plastic locking mechanism. Declaration of Jimmie L. Williams, Jr., Complaint Counsel for CPSC [hereinafter "Williams Declaration"].

Each Red Devil gas grill is packaged with an instruction booklet. The booklet calls for the grill to be lit at the burner, but does not contain an illustration that shows the consumer where to light the grill. The booklet also does not warn consumers of the danger of lighting the grill at the venturi opening. It is also foreseeable that this booklet will not remain with the grill. (Complaint ¶¶ 12 & 13; Williams Declaration).

IV. CONCLUSIONS OF LAW

A consumer product is defined as "any article, or component part thereof, produced or distributed (i) for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation, or otherwise, or (ii) for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise." 15 U.S.C. § 2064(a)(1).

A substantial product hazard is defined as "a product defect which (because of the pattern of defect, the number of defective products distributed in commerce, the severity of the risk, or otherwise) creates a substantial risk of injury to the public." 15 U.S.C. § 2064(a)(2).

Although the CPSA does not define the term defect, the Commission's interpretive rules governing Substantial Product Hazard Reports states that at a minimum, defect includes the dictionary or commonly accepted meaning of the word. 16 C.F.R. § 1115.4. "Thus, a defect is a fault, flaw, or irregularity that causes weakness, failure, or inadequacy in form or function. . . . [T]he design of and materials used in a consumer product may . . . result in a defect. Thus, a product may contain a defect even if the product is manufactured exactly in accordance with its design and specifications, if the design presents a risk of injury to the public. A design defect may also be present if the risk of injury occurs as a result of the operation or use of the product . . . ." *Id.* Additionally, inadequate product warnings or instructions can create a defect, even with reasonably foreseeable consumer use or misuse, if the lack of proper safety warnings and

instructions could result in injury. 16 C.F.R. § 1115.4(d).

The allegations of the complaint are sufficient to establish the presence of a defect in design, since it is likely that consumers will light the grill at the venturi tube, but the locking mechanism melts when that occurs. Further, the allegations support a finding of a defect for failure to properly warn or instruct on how to light the Red Devil gas grill, or to warn consumers about the danger in lighting the grill at the venturi opening, as set forth above, under 15 U.S.C. § 2064.

To determine the substantiality of a product hazard created by a defect, the Commission considers the factors listed in Section 15(a)(2) of the CPSA: the pattern of defect, the number of defective products, or the severity of the risk. 15 U.S.C. § 2064(a)(2). The existence of any one of these factors could create a substantial product hazard. 16 C.F.R. § 1115.12(g)(1).

All of the approximately 155,544 Red Devil gas grills have the same venturi tube and plastic locking mechanism design. It is foreseeable that consumers will light the grill at the venturi openings. Each grill has the potential to cause a severe burn injury. Details provided in the Williams Declaration show that more than one thousand incidents have occurred where the plastic locking mechanism melted. Forty-four consumers, including a four and five year old child, sustained burn injuries to their fingers, hands or legs. In four incidences, the grill fell over and ignited surrounding combustibles.

THEREFORE, it is just and reasonable under the circumstances to find based on the uncontested allegations of the complaint that Respondents' Red Devil gas grill presents a "substantial product hazard" within the meaning of Section 15(a)(2) of the

CPSA, 15 U.S.C. § 2064(a)(2).

Once it is determined "that a product . . . presents a substantial product hazard and that notification is required to adequately protect the public from such substantial product hazard, the Commission may order the manufacturer or any distributor or retailer of the product to . . . give public notice of the defect." 15 U.S.C. § 2064(c). Further, the Commission "may order the manufacturer or any distributor or retailer . . . (1) to repair the defect . . . (2) to replace such product with a . . . product . . . which does not contain the defect[,] . . . [or] (3) to refund the purchase price . . . ." 15 U.S.C. § 2064(d).

The foregoing constitutes my findings, conclusions and Initial Decision in this proceeding. This Initial Decision and Order shall be promptly served on all parties.

ORDER

Upon consideration of the Complaint, the Respondents' failure to answer, and the memorandum filed by Complaint Counsel in support of its Motion for Default Judgment, this Presiding Officer finds the following:

(1) Respondents Quantum North America, Inc. and e4L, Inc. are manufacturers of the Red Devil gas grill, as that term is defined in the CPSA, 15 U.S.C. § 2052(a)(4).

(2) The Red Devil gas grill is a consumer product, as that term is defined in the CPSA, 15 U.S.C. § 2052(a)(1).

(3) The Red Devil gas grill presents a substantial product hazard, as that term is defined in the CPSA, 15 U.S.C. § 2064(a)(2).

As set forth above, Section 15(c) of the CPSA, 15 U.S.C. § 2064(c) provides that the Commission may order respondents to give notice to purchasers and members of the public. Complaint Counsel's prayer for relief sets forth notice provisions entirely consistent with Section 15(c) of the CPSA, 15 U.S.C. § 2064(c), and ordering Respondents to give such notice is just and reasonable under the circumstances.

Accordingly, within ten days after service of the Final Decision and Order, Respondents shall submit their notification plan to the Commission. That plan shall include the following:

(1) Give public notice via in store posters, telephone, fax, certified mail, news release, web site, and other means acceptable to the Commission that the Red Devil gas grill presents an injury and fire hazard to consumers and of the remedies available to remove the risk of injury;

(2) Mail the notice, within twenty days after service of the Final Decision and Order, to each person who is or has been a distributor or retailer of the Red Devil gas grill;

(3) Mail the notice, within twenty days after service of the Final Decision and Order, to every person to whom Respondents know the Red Devil gas grill was delivered or sold; and

(4) Include in the notice required by (1), (2) and (3) above a complete description of the hazard presented, a warning to stop using the Red Devil gas grill immediately, and clear instructions to inform consumers how to avail themselves of the remedy ordered by the Commission.

IT IS FURTHER ORDERED, ADJUDGED AND DECREED that action under Section 15(d) of the CPSA, 15 U.S.C. § 2064(d), is in the public interest and ordering such action is just and reasonable under the circumstances of this case. Accordingly, it is ordered that Respondents shall:

(1) Elect to repair all the Red Devil gas grills so they will not create an injury and fire hazard; replace all the Red Devil gas grills with a like or equivalent product which will not create an injury or fire hazard; or refund to consumers the purchase price of the Red Devil gas grill;

(2) Make no charge to consumers and reimburse consumers for any foreseeable expenses incurred in availing themselves of the remedy provided under the order issued in this matter;

(3) Reimburse distributors and dealers for expenses in connection with carrying out the Commission's Order issued in this matter;

(4) Submit a plan satisfactory to the Commission, within ten days of service of the Final Order, directing that actions specified in paragraphs (1) through (3) above be taken in a timely manner;

(5) Submit monthly reports documenting progress of the corrective action program;

(6) For a period of five years after entry of a Final Order in this matter, to keep records of actions taken to comply with paragraphs (1) through (3) above, and to supply these records upon request to the Commission for the purpose of monitoring compliance with the Final Order;

(7) Notify the Commission at least 60 days prior to any change in Respondents' business (such as incorporation, dissolution, assignment, sale or petition for bankruptcy) that results in, or is intended to result in, the emergence of successor ownership, the creation or dissolution of subsidiaries, going out of business, or any other change that might affect compliance obligations under the Final Order issued by the Commission.

AND, IT IS FURTHER ORDERED that, pursuant to Rule 1025.52 of the Commission's Rules of Practice, this Initial Decision and Order shall become the Final Decision and Order of the Commission unless an appeal is noted and perfected or unless review is ordered by the Commission on or before forty days after issuance.

CONSUMER PRODUCT SAFETY COMMISSION

CPSC/OFC OF THE SECRETARY
2001 DEC -6 P 12:09

In the matter of	)	
QUANTUM NORTH AMERICA, INC., and e4L, Inc.	)	CPSC Docket No.: 01-2

ORDER GRANTING DEFAULT JUDGMENT

I.

On May 29, 2001, the United States Consumer Product Safety Commission ("CPSC") filed an administrative complaint against respondents, Quantum North America, Inc. ("Quantum") and e4L, Inc. ("e4L"), which seeks a determination that the Red Devil gas grill presents a substantial product hazard. The complaint seeks an order requiring Quantum and e4L to give public notice of the defect and to elect to repair the defect, replace the grill with a product that does not contain the defect, or refund the purchase price.

According to the declaration of Complaint Counsel, the respondents, Quantum and e4L, were regularly served with process, via certified mail, in accordance with 16 C.F.R. § 1025.17(b) on June 4, 2001, June 7, 2001, and June 9, 2001. (Declaration of Jimmie L. Williams, Jr.). Respondents failed to appear and answer the complaint in this matter, as required by 16 C.F.R. § 1025.12. On August 17, 2001, Complaint Counsel filed a Motion for a Default Judgment. Respondents have not filed an opposition to this motion.

For the reasons set forth below, Complaint Counsel's Motion for a Default Judgment is GRANTED.

II.

Under the Rules of Practice governing adjudicatory proceedings brought under the Consumer Product Safety Act, default judgment may be granted when a respondent fails to file an answer.

> Default. Failure of a respondent to file an answer within the time provided, unless extended, shall constitute a waiver of the right to appear and contest the allegations of the complaint, and the Presiding Officer may make such findings of fact and conclusions of law as are just and reasonable under the circumstances.

16 C.F.R. § 1025.12(c).

The Commission's Rule 1025.12(c) is closely modeled after Rule 55(b) of the Federal Rules of Civil Procedure. Under Rule 55(a), judgment by default may be entered "[w]hen a party against whom a judgment for affirmative relief is sought has failed to plead or otherwise defend [the lawsuit] . . . ." Fed. R. Civ. Pro. 55(a). Under Rule 55 of the Federal Rules of Civil Procedure, no hearing is required before an entry of default. If the court determines that a defendant is in default, the factual allegations of the complaint will be taken as true. *Thomson v. Wooster*, 114 U.S. 104 (1885); *Klapprott v. United States*, 335 U.S. 601, 603 (1949) (district court necessarily accepts the undenied allegations of the complaint as true). This rule applies to cases seeking equitable as well as legal relief. *Thomson*, 114 U.S. at 110; *Federal Trade Comm'n v. Kitco*, 612 F. Supp. 1282, 1297 (D. Minn. 1985).

The respondents have been regularly served with process and have failed to appear and answer the complaint filed in this matter. Accordingly, pursuant to 16 C.F.R. § 1025.12(c), it is

hereby ORDERED that default judgment be entered against Respondents. An Initial Decision containing findings of fact and conclusions of law as are just and reasonable under the circumstances will be issued separately herewith.

In the Matter of Daisy Manufacturing Company, Inc., CPSC Docket No. 02-2

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of	)	
ROYAL BEDDING COMPANY, a corporation and EDWARD KRUGMAN, and BARRY WOLF, individually and as officers of the corporation.	)	AGREEMENT CONTAINING CONSENT ORDER TO CEASE AND DESIST

The staff of the Consumer Product Safety Commission (Commission) has investigated certain practices of Royal Bedding Company and Edward Krugman and Barry Wolf, individually and as officers of the Corporation. The Corporation, Edward Krugman and Barry Wolf (Consenting Parties) are willing to enter into an agreement with the Commission containing an order to cease and desist.

Therefore, the Consenting Parties and counsel for the Commission agree:

1. THAT the Consumer Product Safety Commission has jurisdiction in this matter under the following Acts: the Flammable Fabrics Act (15 U.S.C. 1191 et seq.); the Federal Trade Commission Act (15 U.S.C. 41 et seq.); and the Consumer Product Safety Act (15 U.S.C. 2051 et seq.).

2. THAT Royal Bedding Company is a corporation organized and doing business under the laws of the State of Illinois.

Edward Krugman and Barry Wolf are officers of the Corporation. They formulate, direct and control the acts, practices and policies of the Corporation.

The Consenting Parties engage in the manufacture and sale of mattresses; their office and principal place of business is located at 3601 South Halsted, Chicago, Illinois 60609.

002380

3. THAT Consenting Parties state that they are now and have been engaged in one or more of the following: the manufacture for sale, sale or offering for sale, in commerce, and the introduction, delivery for introduction, transportation and causing to be transported in commerce, and the sale or delivery after sale or shipment in commerce, of products, as the terms "commerce" and "product" are defined in the Flammable Fabrics Act, which products are subject to the requirements of the Flammable Fabrics Act, the Standard for the Flammability of Mattresses (And Mattress Pads)(FF 4-72), (16 CFR Part 1632, Subparts A and B) and the regulations issued by the Commission to implement the Mattress Standard (16 CFR 1632.31).

4. THAT in accepting the terms of the Order, the Consenting Parties AGREE

(a) THAT the terms of the Order take effect upon their receipt of written notice that the Commission accepts the Consent Agreement, and that the Agreement and Order are available for public view at the Office of the Secretary, Consumer Product Safety Commission, 1750 K Street, N.W., Washington, D.C. 20207,

(b) TO forego any administrative and/or judicial review of the facts presented herein,

(c) THAT within 15 days of receipt of the Commission's written acceptance of this Agreement, a written, notarized compliance report shall be filed with the Commission, detailing their compliance with this Order, specifically, Paragraphs II and V,

(d) THAT they may be liable for a civil penalty of not more than $10,000 for each violation of the Order after the Order becomes effective,

(e) THAT the Commission retains the right to pursue criminal penalties under section 7 of the Flammable Fabrics Act if it believes the facts warrant such a course.

In issuing the Order and accepting the Consent Agreement, the Commission agrees:

5. THAT this Agreement is for settlement purposes only and does not constitute an admission by the Consenting Parties that the law has been violated. Therefore, if this Agreement is not accepted by the Commission it may not be used in adjudicative proceedings, either administrative or judicial.

6. THAT no agreement, understanding, representation or interpretation not contained in this Agreement or Order may be used to vary or contradict the terms of the Order.

ORDER

I

IT IS ORDERED that Royal Bedding Company (Corporation), its successors and its officers, and Edward Krugman, and Barry Wolf, individually and as officers of the corporation, and their agents, assigns, representatives and employees directly or through any corporation, subsidiary, division or other instrumentality, do forthwith cease and desist from manufacturing for sale, selling, or offering for sale, in commerce, or importing into the United States, or introducing, delivering for introduction, transporting or causing to be transported in commerce, or selling or delivering after sale or shipment in commerce, any product, fabric, or related material; or manufacturing for sale, selling, offering for sale, any product made of fabric or related material which has been shipped or received in commerce, as "commerce," "product," and "related material" are defined in the Flammable Fabrics Act, which product, fabric or related material fails to conform to the requirements of an applicable standard or regulation issued under the provisions of the Act.

Specifically the Corporation and Edward Krugman, and Barry Wolf are ordered to cease and desist from:

a. failing to conduct prototype flammability tests of each mattress prototype which they manufacture as required by the Standard for the Flammability of Mattresses (And Mattress Pads)(FF 4-72) at 16 CFR 1632.4(b)(2)(i)(A) and 1632.4(c).

b. failing to conduct production testing on their mattresses at specified production intervals in the manner required by the Standard for the Flammability of Mattresses (And Mattress Pads)(FF 4-72) at 16 CFR 1632.4(b)(2)(i)(B).

c. failing to establish production units and to randomly select a mattress or mattresses from each such unit for production testing as required by the Standard for the Flammability of Mattresses (And Mattress Pads)(FF 4-72) at 16 CFR 1632.4(b)(2).

d. failing to label each mattress manufactured with a permanent, accessible and legible label containing the appropriate production unit identification, as required by the Commission's Regulations implementing the Mattress Standard at 16 CFR 1632.31(b).

e. failing to fully and completely maintain records which establish a line of continuity through the manufacturing and distribution process showing sampling plans used, production units, test results, details of sampling and testing procedures, disposition of rejected mattresses, manufacturing specifications, date and quantity of each sale, and name and address of each purchaser as required by the Commission's Regulations implementing the Mattress Standard at 16 CFR 1632.31(c).

II

IT IS FURTHER ORDERED that Royal Bedding Company and Edward Krugman, and Barry Wolf, shall within fifteen (15) days after service upon them of this Order, file with the Commission a special written and notarized report which:

(A) Sets forth the manner in which they intend to comply with this Order and certifies that they will maintain the records listed in Paragraph VI of this Order.

(B) Advises the Commission fully and specifically concerning (1) identification and description of the products which gave rise to the Order, and (2) the steps taken to insure that all mattresses manufactured will conform to the requirements of the Mattress Standard including affirmative statements showing (a) identification of the particular sampling plan to be used, (b) establishment of mattress production or batch units, labeling of each mattress to identify it with a production or batch unit, (d) flammability testing of mattress surfaces from each production or batch unit; and (e) maintenance of records clearly relating sales to production or batch units and showing all unit sizes, test results, and the disposition of all rejected mattresses and units.

III

IT IS FURTHER ORDERED for a period of 10 years from the date this Order is issued that Royal Bedding Company and Edward Krugman, and Barry Wolf notify the Commission at least 30 days prior to any proposed change in the Corporation such as dissolution, assignment or sale resulting in the emergence of a successor corporation, the creation or dissolution of subsidiaries or any other change in the Corporation which may affect compliance obligations arising out of the Order.

IV

IT IS FURTHER ORDERED for a period of 10 years from the date this Order is issued that, Edward Krugman, and Barry Wolf promptly notify the Commission of the discontinuance of their present business or employment and of their affiliation with a new business or employment. Such notice shall include their current business address and a statement as to the nature of the business or employment in which they are engaged as well as a description of their duties and responsibilities.

V

IT IS FURTHER ORDERED that Royal Bedding Company shall distribute a copy of this Order to each of its operating divisions.

VI

The Commission may conduct inspections and/or require written reports to determine compliance with this Order and may direct Royal Bedding Company and Edward Krugman, and Barry Wolf to submit or permit the Commission to select mattresses sufficient to repeat the testing required by the Mattress Standard of any mattress prototype, production unit or batch unit which they are currently marketing. The Commission may examine and/or require the submission of copies of the records required to be maintained by 16 CFR 1632.31(c) and the Mattress Standard including prototype test reports and related records including photographs which are identified to show their relationship to each test and each production or batch unit, (2) test reports and related records where there has been substitution of one or more materials going into mattresses manufactured, (3) records showing the basis for reduced sampling, if used, (4) description and manufacturing specifications of mattress prototypes and types of mattresses including size of each production or batch unit and details as to fiber content of ticking, thread, tape edge, core and upholstery of any guarantees or certifications received from manufacturers of ticking, thread, tape edge, core and upholstery materials, and also (6) records of notification, recall, and reprocessing or destruction of violative products.

VII

The requirements of this Order are in addition to and not to the exclusion of other remedies such as criminal penalties which may be pursued under Section 7 of the Flammable Fabrics Act, the rules, regulations and standards promulgated thereunder or any other provision of federal law.

Signed this 26th day of October, 1976.

In the Matter of ROYAL BEDDING COMPANY, a corporation and EDWARD KRUGMAN, and BARRY WOLF, individually and as officers of the corporation	CPSC DOCKET NO. 76-3 DECISION AND ORDER

The Consumer Product Safety Commission having initiated an investigation of certain acts and practices of the respondents named in the caption hereof, and the respondents having been served with the Notice of Enforcement issued by the Commission staff on December 12, 1975, which charges respondents with violation of the Flammable Fabrics Act, as amended, and the Federal Trade Commission Act; and

The respondents and counsel for the Commission having executed an agreement containing a consent order, an admission by the respondents of all the jurisdictional facts set forth in the aforesaid Notice of Enforcement, a statement that the signing of said agreement is for settlement purposes only concerning respondents' civil liability under Section 3 of the Flammable Fabrics Act, and does not constitute an admission by respondents that the law has been violated; and

The Commission having considered the matter and having determined that it had reason to believe that the respondents have violated the said Acts and that the Notice of Enforcement should issue stating its charges in that respect, and having thereupon accepted the executed consent agreement, makes the following jurisdictional findings and enters the following order:

JURISDICTIONAL FINDINGS

1. Respondent Royal Bedding Company is a corporation organized, existing and doing business under and by virtue of the laws of the State of Illinois.

Respondents Edward Krugman and Barry Wolf are officers of said corporation. They participate in the formulation, direction and control of the acts, practices and policies of the corporation.

Respondents are engaged in the manufacture and sale of mattresses; their office and principal place of business is located at 3601 South Halsted, Chicago, Illinois 60609.

Respondents are now and have been engaged in one or more of the following: the manufacture for sale, or offering for sale, in commerce, and the introduction, delivery for introduction, delivery after sale or shipment in commerce, of products, as the terms "commerce" and "products" are defined in the Flammable Fabrics Act as amended (15 U.S.C. 1191 et seq.), which products are subject to the requirements of the Flammable Fabrics Act, (FF 4-72) (16 CFR Part 1632, Subparts A and B), and the regulations issued by the Commission to implement the Mattress Standard (16 CFR 1632.31).

2. The Consumer Product Safety Commission has jurisdiction of the subject matter of this proceeding and of the respondents, and the proceeding is in the public interest.

ORDER

I

IT IS ORDERED that Royal Bedding Company (Corporation), its successors and its officers, and Edward Krugman, and Barry Wolf, individually and as officers of the corporation, and their agents, assigns, representatives and employees directly or through any corporation, subsidiary, division or other instrumentality, do forthwith cease and desist from manufacturing for sale, selling, or offering for sale, in commerce, or importing into the United States, or introducing, delivering for introduction, transporting or causing to be transported in commerce, or selling or delivering after sale or shipment in commerce, any product, fabric, or related material; or manufacturing for sale, selling, offering for sale, any product made of fabric or related material which has been shipped or received in commerce, as "commerce," "product," and "related material" are defined in the Flammable Fabrics Act, which product, fabric, or related material fails to conform to the requirements of an applicable standard or regulation issued under the provisions of the Act.

Specifically the Corporation and Edward Krugman, and Barry Wolf are ordered to cease and desist from:

a. failing to conduct prototype flammability tests of each mattress prototype which they manufacture as required by the Standard for the Flammability of Mattresses (And Mattress Pads) (FF 4-72) at 16 CFR 1632.4(b)(2)(i)(A) and 1632.4(c).

b. failing to conduct production testing on their mattresses at specified production intervals in the manner required by the Standard for the Flammability of Mattresses (And Mattress Pads) (FF 4-72) at 16 CFR 1632.4(b)(2)(i)(B).

c. failing to establish production units and to randomly select a mattress or mattresses from each such unit for production testing as required by the Standard for the Flammability of Mattresses (And Mattress Pads) (FF 4-72) at 16 CFR 1632.4(b)(2).

d. failing to label each mattress manufactured with a permanent, accessible and legible label containing the appropriate production unit identification, as required by the Commission's Regulations implementing the Mattress Standard at 16 CFR 1632.31(b).

e. failing to fully and completely maintain records which establish a line of continuity through the manufacturing and distribution process showing sampling plans used, production units, test results, details of sampling and testing procedures, disposition of rejected mattresses, manufacturing specifications, date and quantity of each sale, and name and address of each purchaser as required by the Commission's Regulations implementing the Mattress Standard at 16 CFR 1632.31(c).

II

IT IS FURTHER ORDERED that Royal Bedding Company and Edward Krugman, and Barry Wolf, shall within fifteen (15) days after service upon them of this Order, file with the Commission a special written and notarized report which:

(A) Sets forth the manner in which they intend to comply with this Order and certifies that they will maintain the records listed in Paragraph VI of this Order.

(B) Advises the Commission fully and specifically concerning (1) identification and description of the products which gave rise to the Order, and (2) the steps taken to insure that all mattresses manufactured will conform to the requirements of the Mattress Standard including affirmative statements showing (a) identification of the particular sampling plan to be used, (b) establishment of mattress production or batch units, labeling of each mattress to identify it with a production or batch unit, (d) flammability testing of mattress surfaces from each production or batch unit; and (e) maintenance of records clearly relating sales to production or batch units and showing all unit sizes, test results, and the disposition of all rejected mattresses and units.

III

IT IS FURTHER ORDERED for a period of 10 years from the date this Order is issued that Royal Bedding Company and Edward Krugman, and Barry Wolf, notify the Commission at least 30 days prior to any proposed change in the Corporation such as dissolution, assignment or sale resulting in the emergence of a successor corporation, the creation or dissolution of subsidiaries or any other change in the Corporation which may affect compliance obligations arising out of the Order.

IV

IT IS FURTHER ORDERED for a period of 10 years from the date this Order is issued that Edward Krugman and Barry Wolf promptly notify the Commission of the discontinuance of their present business or employment and of their affiliation with a new business or employment. Such notice shall include their current business address and a statement as to the nature of the business or employment in which they are engaged as well as a description of their duties and responsibilities.

V

IT IS FURTHER ORDERED that Royal Bedding Company shall distribute a copy of this Order to each of its operating divisions.

VI

The Commission may conduct inspections and/or require written reports to determine compliance with this Order and may direct Royal Bedding Company and Edward Krugman and Barry Wolf to submit or permit the Commission to select mattresses sufficient to repeat the testing required by the Mattress Standard of any mattress prototype, production unit or batch unit which they are currently marketing. The Commission may examine and/or require the submission of copies of the records required to be maintained

by 16 CFR 1632.31(c) and the Mattress Standard including prototype test reports and related records including photographs which are identified to show their relationship to each test and each production or batch unit, (2) test reports and related records where there has been substitution of one or more materials going into mattresses manufactured, (3) records showing the basis for reduced sampling, if used, (4) description and manufacturing specifications of mattress prototypes and types of mattresses including size of each production or batch unit and details as to fiber content of ticking, thread, tape edge, core and upholstery of any guarantees or certifications received from manufacturers of ticking, thread, tape edge, core and upholstery materials, and also (6) records of notification recall, and reprocessing or destruction of violative products.

VII

The requirements of this Order are in addition to and not to the exclusion of other remedies such as criminal penalties which may be pursued under Section 7 of the Flammable Fabrics Act, the rules, regulations and standards promulgated thereunder or any other provision of federal law.

BY THE COMMISSION.

JAN 27 1977

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of F & D ASSOCIATES, INC., a corporation, and JOSEPH GOODMAN, individually and as an officer of said corporation	AGREEMENT CONTAINING CONSENT ORDER TO CEASE AND DESIST

The staff of the Consumer Product Safety Commission (Commission) has investigated certain practices of F & D Associates, Inc., a corporation and Joseph Goodman, individually and as an officer of the Corporation. The Corporation and Goodman (Consenting Parties) are willing to enter into an agreement with the Commission containing an order to cease and desist.

Therefore, the Consenting Parties and counsel for the Commission agree:

1. THAT the Consumer Product Safety Commission has jurisdiction in this matter under the following Acts: the Flammable Fabrics Act (15 U.S.C. 1191 et seq.); the Federal Trade Commission Act (15 U.S.C. 41 et seq.); and the Consumer Product Safety Act (15 U.S.C. 2051 et seq.).

2. THAT F & D Associates, Inc. is a corporation organized and doing business under the laws of the State of New York.

Joseph Goodman is an officer of the Corporation. He formulates, directs and controls the acts, practices and policies of the Corporation.

The Consenting Parties engage in the manufacture and sale of new and renovated mattresses; their office and principal place of business is located at 701-711 Avenue U, Brooklyn, New York 11223.

3. THAT the Consenting Parties state that they are now and have been engaged in one or more of the following: the manufacture for sale, sale or offering for sale, in commerce, and the introduction, delivery for introduction, transportation and causing to be transported in commerce, and the sale or delivery after sale or shipment in commerce, of products, as the terms "commerce" and "product" are defined in the Flammable Fabrics Act, which products are subject to the requirements of the Flammable Fabrics Act, the Standard for the Flammability of Mattresses (And Mattress Pads) (FF 4-72) (16 CFR Part 1632, Subparts A and B), and the regulations issued by the Commission to implement the Mattress Standard (16 CFR 1632.31).

4. THAT in accepting the terms of the Order, the Consenting Parties AGREE

(a) THAT, the terms of the Order take effect upon their receipt of written notice that the Commission accepts the Consent Agreement, and that the Agreement and Order are available for public view at the Office of the Secretary, Consumer Product Safety Commission, 1750 K Street, N.W., Washington, D.C. 20207,

(b) TO forego any administrative and/or judicial review of the facts presented herein,

(c) THAT within 15 days of receipt of the Commission's written acceptance of this Agreement, a written, notarized compliance report shall be filed with the Commission, detailing their compliance with this Order, specifically, Paragraphs V and IX,

(d) THAT they may be liable for a civil penalty of not more than $10,000 for each violation of the Order after the Order becomes effective,

(e) THAT the Commission retains the right to pursue criminal penalties under section 7 of the Flammable Fabrics Act if it believes the facts warrant such a course.

In issuing the Order and accepting the Consent Agreement, the Commission agrees:

5. THAT this Agreement is for settlement purposes only and does not constitute an admission by the Consenting Parties that the law has been violated. Therefore, if this Agreement is not accepted by the Commission it may not be used in adjudicative proceedings, either administrative or judicial.

6. THAT no agreement, understanding, representation or interpretation not contained in this Agreement or Order may be used to vary or contradict the terms of the Order.

ORDER

I

IT IS ORDERED that F & D Associates, Inc. (Corporation), its successors and its officers, and Joseph Goodman (Goodman), individually and as an officer of the corporation, and their agents, assigns, representatives and employees directly or through any corporation, subsidiary, division or other instrumentality, do forthwith cease and desist from manufacturing for sale, selling, offering for sale, in commerce, or importing into the United States, or introducing, delivering for introduction, transporting or causing to be transported in commerce, or selling or delivering after sale or shipment in commerce, any product, fabric, or related material; or manufacturing for sale, selling, or offering for sale, any product made of fabric or related material which has been shipped or received in commerce, as "commerce," "product," "fabric" and "related material" are defined in the Flammable Fabrics Act, which product, fabric or related material fails to conform to the requirements of an applicable standard or regulation issued under the provisions of the Act.

Specifically the Respondents are ordered to cease and desist from:

a. failing to conduct prototype flammability tests of each mattress prototype which they manufacture as required by the Standard for the Flammability of Mattresses (and Mattress Pads) (FF 4-72) at 16 CFR 1632.4(b)(2)(i)(a) and 1632.4(c).

b. failing to conduct production testing on their mattresses at specified production intervals in the manner required by the Standard for the Flammability of Mattresses (and Mattress Pads) (FF 4-72) at 16 CFR 1632.4(b)(2)(i)(B).

c. failing to establish production units and to randomly select a mattress or mattresses from each such unit for production testing as required by the Standard for the Flammability of Mattresses (and Mattress Pads) (FF 4-72) at 16 CFR 1632.4(b)(2).

d. failing to label each mattress manufactured with a permanent, accessible and legible label containing the appropriate production unit identification, as required by the Commission's regulations implementing the Mattress Standard at 16 CFR 1632.31(b).

e. failing to fully and competely maintain records which establish a line of continuity through the manufacturing and distribution process showing sampling plans used, production units, test results, details of sampling and testing procedures, disposition of rejected mattresses, manufacturing specifications, date and quantity of each sale, and name and address of each purchaser as required by the Commission's regulations implementing the Mattress Standard at 16 CFR 1632.31(c).

II

IT IS FURTHER ORDERED that the Respondents shall notify all of their customers who have purchased, or to whom have been delivered, mattresses manufactured by them between June 22, and December 22, 1973, that all such customers may return the mattresses to the Respondents for complete refund or replacement at the option of the Respondents, plus an allowance for reasonable transportation costs (the means of transportation to be determined by the Respondents) under the following conditions:

(1) That within 60 days from the effective date of this agreement, the Corporation and Goodman shall develop a method of collecting samples consistent with 16 CFR 1632 which will be approved by the Commission's Bureau of Compliance. In the presence of a CPSC representative, consenting parties shall collect samples for testing from the universe of mattresses manufactured and sold between June 22 and December 22, 1973.

(2) That the samples collected under these prescribed conditions shall be tested by the Respondents in accordance with the Mattress Standard and the test results shall be reported to the Commission within ten (10) days of receipt of the results. In addition, the Commission may collect samples at any time and conduct production testing in accordance with the Mattress Standard.

(3) That in the event the Commission or the Respondents discover that said mattresses fail to comply with the Mattress Standard, all such customers shall be notified of such flammability failures and that at the time of the sale the mattresses failed to comply with the labeling requirements of the Mattress Standard, to wit: (i) such mattresses were required to have firmly affixed thereto, a conspicuously displayed warning label at least five inches square with the word "WARNING" no less than 1/2 inch in height, reading as follows:

WARNING: This mattress does not meet the Consumer Product Safety Commission Flammability Standard for Mattresses (FF 4-72, as amended). It may be subject to ignition and hazardous smoldering from cigarettes.

and (ii) all invoices and sales papers relating to these mattresses were to have the same warning displayed thereon; and, furthermore, that respondents shall refund or replace in accordance with the terms and conditions of this section.

III

IT IS FURTHER ORDERED that the Respondents shall notify all of of their customers who have purchased, or to whom have been delivered mattresses manufactured by them between March 22, 1974 and October 31, 1974, that all such customers may return the mattresses to the Respondents for complete refund or replacement at the option of the Respondents, plus an allowance for reasonable transportation costs (the means of transportation to be determined by the Respondents) under the following conditions.

(1) That within 90 days from the effective date of this agreement, the Respondents shall develop a method of collecting samples consistent with 16 CFR 1632 which will be approved by the Commission's Bureau of Compliance. In the presence of a Commission representative, consenting parties shall collect samples for testing from the universe of mattresses manufactured and sold between March 22 and October 31, 1974.

(2) That the samples collected under these prescribed conditions shall be tested by the Respondents in accordance with the Mattress Standard and the test results shall be reported to the Commission within ten (10) days of receipt of the results. In addition, the Commission may collect samples at any time and conduct production testing in accordance with the Mattress Standard.

(3) In the event the Commission or the Respondents discover that said mattresses fail to comply with the Mattress Standard, all such customers shall be notified of such failures and to the effect that at the time of the sale (i) such mattresses were not subject to production unit testing, (ii) were not labeled with production unit identification number labeling and, (iii) furthermore, that respondents shall refund or replace in accordance with the terms and conditions of this section.

IV

IT IS FURTHER ORDERED that the Respondents either process the products recalled or in inventory so as to bring them into conformance with the Mattress Standard (FF 4-72), or destroy the products.

V

IT IS FURTHER ORDERED that the Respondents shall maintain records sufficient to establish the notification, recall, reprocessing and/or destruction of the products specified in Paragraphs II, III and IV of this Order.

VI

IT IS FURTHER ORDERED that the Respondents shall, within fifteen (15) days after service upon them of this Order, file with the Commission a special written and notarized report which:

(A) Sets forth the manner in which they intend to comply with this Order and certifies that they will maintain the records listed in Paragraphs V and IX of this Order.

(B) Advises the Commission fully and specifically concerning (1) identification and description of the products which gave rise to the Order, and (2) the steps taken to insure that all mattresses manufactured will conform to the requirements of the Mattress Standard including affirmative statements showing (a) identification of the particular sampling plan to be used, (b) establishment of mattress production or batch units, (c) labeling of each mattress to identify it with a production or batch unit, (d) flammability testing of mattress surfaces from each production or batch unit and (e) maintenance of records clearly relating sales to production or batch units and showing all unit sizes, test results, and the disposition of all rejected mattresses.

VII

IT IS FURTHER ORDERED for a period of 10 years from the date of the acceptance of this Order by the Commission that the Respondents notify the Commission at least 30 days prior to any proposed change in the status of any corporation named a Respondent in this Order, such as dissolution, assignment or sale resulting in the emergence of a successor corporation, the creation or dissolution of subsidiaries or any other change in the Corporation which may affect compliance obligations arising out of this Order.

VIII

IT IS FURTHER ORDERED that the Respondents shall distribute a copy of this Order to each of its operating divisions.

IX

The Commission may conduct inspections and/or require the Respondents to submit written reports to determine compliance with this Order and may direct the Respondents to submit or permit the Commission to select mattresses sufficient to repeat the testing required by the Mattress Standard of any mattress prototype, production unit or batch unit which they are currently marketing. The Commission may examine and/or require the submission of copies of the records required to be maintained by 16 CFR 1632.31(c) and the Mattress Standard including (1) prototype test reports and related records including photographs which are identified to show their relationship to each test and each production or batch unit; (2) test reports and related records where there has been substitution of one or more materials going into mattresses manufactured; (3) records showing the basis for reduced sampling, if used; (4) description and manufacturing specifications of mattress prototypes and types of mattresses including size of each production or batch unit and details as to fiber content of ticking, thread, tape edge, core and upholstery materials, and type of flame retardant treatment, if any; (5) copies of any guarantees or certifications received from manufacturers of ticking, thread, tape edge, core and upholstery materials, and also (6) record of notification, recall, and reprocessing or destruction of violative products.

X

The requirements of this Order are in addition to and not to the exclusion of other remedies such as criminal penalties which may be pursued under Section 7 of the Flammable Fabrics Act, the rules, regulations and standards promulgated thereunder or any other provision of federal law.

Signed this 16 day of June, 1976.

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of F & D ASSOCIATES, Inc., a corporation, and JOSEPH GOODMAN, individually and as an officer of said corporation	ON REQUESTED APPROVAL OF CONSENT DECREE CPSC 76-4

ORDER

On July 9, 1976 the Administrative Law Judge submitted to the Commission a proposed consent agreement in the above entitled matter which has been executed by staff counsel and respondents. Respondent corporation is a manufacturer and distributor of mattresses in interstate commerce. It is the Commission's understanding that certain violations of the Standard for the Flammability of Mattresses (and Mattress Pads) (FF4-72), 16 CFR 1632, have been alleged, including the failure to conduct proper sampling, prototype and production testing and to comply with the record keeping and labeling requirements. The alleged violations occurred during the periods June 22 -December 22, 1973 and March 22 - October 31, 1974. The mattresses in question are now in the hands of the ultimate consumer and apparently have been used. It is also the Commission's understanding that the mattresses in question were sold to institutional consumers and can be adequately traced.

Under the proposed consent agreement, respondents, inter alia, will develop a method for selection of the mattresses for testing which is "consistent" with the standard and which is subject to prior approval by the Commission's Bureau of Compliance. Thereafter the samples selected will be tested by respondents "in accordance with the Mattress Standard." Under the agreement the Commission staff will be permitted to "collect samples at any time and conduct production testing in accordance with the Mattress Standard". The agreement further provides "that in the event the Commission or respondent discovers that said mattresses fail to comply with the Mattress Standard, then all customers of the subject mattresses are to be notified of the flammability failures," and the failure to comply with the labeling requirements in the regulations. Also in the event of such failure to comply, the customers who purchased the subject mattresses will be able to return them to respondents for a complete refund or replacement (at the option of respondents) plus compensation for transportation and handling.

The proposed agreement raises important policy considerations concerning violations of the pre-market sampling and testing requirements of the mattress standard and the Commission's ability to deal with the problem through remedial administrative relief. The Commission is concerned that respondents may be unable, on a post-market basis, to obtain

an adequate sampling of the mattresses for testing and that flammability testing under the standard may not be appropriate for used mattresses. Moreover, the Commission is concerned about its ability to administer the mattress standard on an ad hoc, after the fact, basis.

The Standard for the Flammability of Mattresses is designed to screen out potentially flammable mattresses prior to the time they are placed on the market or in the possession of the consuming public. Without the information developed through compliance with the pre-market requirements of the standard, the Commission has no basis for determining the flammability of the product.

It is the Commission's view that the only meaningful manner in which it can administer the mattress standard, and thus protect the public, is to presume that mattresses produced and marketed in violation of the standard present an unreasonable risk of the occurrence of fire leading to death or personal injury or significant property damage in violation of the Flammable Fabrics Act. In a situation where this presumption of flammability has arisen, such as in the present case, the Commission will require a manufacturer or other person or entity subject to the Act to recall the mattresses (offering replacements or refunds) or to come forward with evidence demonstrating to the Commission's satisfaction that the product does not present an unreasonable

risk of the occurrence of fire. Any such evidence must closely approximate the sampling and testing provisions of the mattress standard. Because of the impossibility of complying with the strict requirements of the standard once untested and uncontrolled mattresses are produced and marketed, the Commission will only accept evidence where the Commission staff has supervised and approved the evidentiary accumulation. If the evidence presented is sufficient to satisfy the Commission that the mattresses do not present an unreasonable risk of the occurrence of fire, then the Commission will not require recall. It may, in such instances, order relief short of recall including cease and desist orders, requirements of notice to consumers and others, placement of labels on the non-complying products or other remedial requirements deemed necessary and proper. In the event that the evidence presented is deemed insufficient to allow the Commission to determine whether the product presents an unreasonable risk of the occurrence of fire or if the evidence demonstrates that the mattresses present such an unreasonable risk, then the Commission will require recall of the product.

The foregoing determination is not to be interpreted as an alternative to strict pre-market compliance with the mattress standard, nor will it relieve a non-complying party

from other remedies or sanctions under the Flammable Fabrics Act. In conjunction with the remedial action referred to above, the Commission will carefully investigate all cases of non-compliance for any willful failures to comply and will refer appropriate cases to the Department of Justice for criminal prosecution.

In the case of consent decrees, the Commission will, in the future, require the submission of a sampling plan, acceptance criteria and special testing procedures to be included in the agreement at the time it is submitted to the Commission for approval. Also the Commission will require along with such consent decrees*/ a detailed submission of data concerning the numbers of mattresses in question, their condition and availability for sampling and testing.

In accordance with the foregoing discussion, the Commission has decided that it will accept and approve the consent agreement presented herein under the following conditions:

(1) That the Commission's description of the agreement set forth above comports with the intent of the parties;

(2) That sufficient numbers of samples can be obtained which are adequate for testing;

---

*/ In the present case the Commission has experienced difficulty in assessing the practicality of post-market sampling and testing because of the lack of adequate information. To avoid delay in implementing the sampling and testing, the Commission has conditioned its acceptance on certain modifications which allow the Commission staff to approve the sampling and testing procedures.

(3) That the sampling methods established by respondents are approved by the Commission staff;

(4) That the sampling to be done by the Commission staff under the agreement is not on a statistically random basis but on the basis of reasonably representative sampling;

(5) That the precise number of samples to be tested and the acceptance and failure criteria be determined in advance of any testing and that both the number of samples and criteria used be acceptable to the Commission staff;

(6) That testing is to conform as closely as possible to the test methods prescribed in the standard and in a manner acceptable to the Commission staff;

(7) That all testing by respondents under the terms of the agreement be done in the presence of and to the satisfaction of a member of the Commission staff;

(8) That, in the event the sample mattresses do not meet the acceptance criteria established, respondents will (a) notify their customers of their right to return the subject mattresses for refund or replacement plus compensation for transportation and handling, (b) accept the mattresses returned, and (c) immediately give such customers a complete refund or replacement mattress plus compensation for transportation and handling.

(9) That, in the event the sample mattresses pass the testing, respondents notify customers who purchased the mattresses subject to the order that the products were not tested in accordance with the mattress standard and provide such customers with labels containing the warning specified in 16 CFR 1632.5(c)(3):

> WARNING: This mattress does not meet the Consumer Product Safety Commission Flammability Standard for Mattresses (FF 4-72, as amended). It may be subject to ignition and hazardous smoldering from cigarettes.

(10) That all other provisions of the consent agreement be carried out in strict conformance with their terms.

The parties will be given ten (10) days to file their consent or objections to the agreement as modified herein. Consents or objections must be filed in written form with the Secretary of the Commission. If consents are received, the Commission will deem the conditions to be consented to and incorporated into the agreement. Once consents are received, failure to comply with the conditions set out herein will be considered a breach of the consent agreement for which the Commission may, at its option, revoke its acceptance of the agreement or seek civil penalties. If consents are not filed or if objections are received, the Commission will further consider the matter and will

determine whether or not to remand the case for adjudicative hearings.

IN THE MATTER OF	
CENTRAL SPRINKLER CORP.	**CPSC DOCKET NO. 98-2**
and	
CENTRAL SPRINKLER CO.,	
Respondents	

RESPONDENTS' FIRST REQUEST
FOR PRODUCTION OF DOCUMENTS AND THINGS

Respondents Central Sprinkler Corp. ("CSC") and Central Sprinkler Co. ("Central") (collectively, "Respondents"), through their undersigned counsel, hereby propound to the Consumer Product Safety Commission (the "CPSC" or the "Complainant") the following request for documents pursuant to 16 C.F.R. § 1025.33. Complainant is requested to produce the documents and things described herein within thirty (30) days of the service of this request. Complainant's responses should be sent to the offices of Morgan, Lewis and Bockius LLP, 2000 One Logan Square, Philadelphia, PA 19103.

For the purposes of this Request, the following instructions and definitions apply:

INSTRUCTIONS

Respondents hereby fully incorporate by reference the Instructions set forth in Respondents' First Set of Interrogatories.

DEFINITIONS

Respondents hereby fully incorporate by reference the Definitions set forth in Respondents' First Set of Interrogatories.

DOCUMENTS AND THINGS TO BE PRODUCED

1. All documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint.

2. All documents identified in the CPSC's responses to Respondents' First Set of Interrogatories.

3. All documents that constitute the entirety of the CPSC administrative file regarding the Omegas.

4. All documents that constitute subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

5. All documents provided to the CPSC in response to subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

6. All documents provided to the CPSC by Respondents regarding the Omegas.

7. All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.

8. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.

9. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by on or behalf of any other person, organization, business, or other entity.

10. All documents that constitute, provide evidence of, refer, or relate to any testing of non-Omega sprinkler heads conducted by on or behalf of the CPSC.

11. All documents that constitute, provide evidence of, refer, or relate to testing of non-Omega sprinkler heads conducted by on or behalf of any other person, organization, business, or other entity.

12. All documents that constitute, provide evidence of, refer, or relate to the alleged jurisdiction of the CPSC over the Omegas.

13. All documents that constitute, provide evidence of, refer, or relate to the jurisdiction of the CPSC over any product, including without limitation any memoranda or other interanal correspondence that addresses the extent of or any limitations on the jurisdiction of the CPSC.

14. All documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas.

15. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly.

16. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly activated properly.

17. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly failed to activate properly.

18. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly activated properly.

19. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents, including but not

limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

20. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and current employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

21. All documents that constitute, provide evidence of, refer, or relate to "[the] multiple random inquiries of sprinkler contractors across the nation," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

22. All documents that constitute, provide evidence of, refer, or relate to "what has been, and remains, customarily required to remove and install sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

23. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view [that] dezincification alone is the cause of the above-required operating pressures in Omegas from plastic pipes," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

24. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

25. All documents that constitute, provide evidence of, refer, or relate to "the data [which] point to multiple failure modes rooted in the design and construction of these sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

26. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluation, consideration, or analyses done by or on behalf of the CPSC regarding the "testing based corrective action," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

27. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, or analyses done by or on behalf of the CPSC which reflects the "serious concerns" of the CPSC regarding whether "Omega sprinklers with silicone o-rings will function in the long term," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

28. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, consideration, or analyses done by or on behalf of the CPSC which addressed Omegas where "the internal shaft was cocked or tipped slightly and jammed in that position," as referenced in a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

29. All documents that constitute, provide evidence of, refer, or relate to "automatic fire sprinklers' historical rate of proving 99.5 percent effective," as referenced in a January 6, 1998 letter from Eric Singer of the CPSC to state attorneys general.

30. All documents that constitute, provide evidence of, refer, or relate to the CPSC Recall Handbook.

31. All documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents.

32. All Omegas in possession of the CPSC.

33. All non-Omega sprinkler heads in the possession of the CPSC.

34. All audio and/or video tapes regarding or relating to any testing of Omegas.

35. All audio and/or video tape regarding or relating to any testing of non-Omega sprinkler heads.

36. All documents that constitute, provide evidence of, refer, or relate to any personal journals, diaries, or correspondence maintained by the CPSC Staff regarding the Omegas and/or Respondents.

37. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any dealers, retailers, contractors, or any distributors regarding or related to the Omegas and/or Respondents.

38. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any Authorities Having Jurisdiction regarding or related to the Omegas and/or Respondents.

39. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any consumers regarding or related to the Omegas and/or Respondents.

40. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any state law enforcement authorities regarding or related to the Omegas and/or Respondents.

41. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any federal law enforcement authorities regarding or related to the Omegas and/or Respondents.

42. All documents that constitute, provide evidence of, refer, or relate to scripts, talking points, outlines, or any other material prepared by, for, or on behalf of the CPSC for any press conferences or news releases regarding the Omegas and/or Respondents.

43. All documents that constitute, provide evidence of, refer, or relate to any material regarding the Omegas and/or Respondents created by or on behalf of the CPSC public relations department, media department, or any other CPSC internal department charged with communicating with or providing information to the public media.

44. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products.

45. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products."

46. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13.

47. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures."

48. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function in a significant percentage of instances."

49. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the "Omegas are defective pursuant to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4."

50. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death."

51. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a

substantial risk of injury to the public within the meaning of § 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)."

52. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "Omegas present a substantial product hazard as described in Sections 15(a)(2), (c) and (d) of the CPSA, 15 U.S.C. §§ 2064(a) (2), (c) and (d)."

53. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest."

54. A current curriculum vitae or resume for each and every expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

55. All publications of any nature authored by any expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

56. Any and all written statements made by Respondents that the CPSC contends constitute an admission with reference to any of the issues raised in the Complaint.

57. All documents that constitute, provide evidence of, refer, or relate to the use of silicone o-rings in sprinkler heads.

58. All documents that constitute, provide evidence of, refer, or relate to the use of EPDM o-rings in sprinkler heads.

59. All documents that constitute, provide evidence of, refer, or relate to the use in sprinkler heads of o-rings comprised of any other material or compound.

60. All documents that constitute, provide evidence of, refer, or relate to the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas.

61. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage in connection with the Omegas.

62. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of personal injury in connection with the Omegas.

63. Any and all testing protocols used by the CPSC or by any expert or other person on behalf of the CPSC in testing the Omegas.

64. All documents that constitute, provide evidence of, refer, or relate to any alternative design features for the Omegas.

65. All documents that constitute, provide evidence of, refer, or relate to the feasibility and/or propriety of any alternative design features for the Omegas.

66. All documents that constitute, provide evidence of, refer, or relate to the CPSC's preliminary determination of the alleged risks associated with the Omegas.

67. All documents that constitute, provide evidence of, refer, or relate to any changes in the CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas.

68. All documents that constitute, provide evidence of, refer, or relate to any corrective action proposal for the Omegas.

69. All documents that constitute, provide evidence of, refer, or relate to the requested recall of the Omegas.

70. All documents that constitute, provide evidence of, refer, or relate to the corrective action proposal presented by Respondents regarding the Omegas.

71. All documents that constitute, provide evidence of, refer, or relate to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

CPSC/OFC OF THE SECRETARY
FREEDOM OF INFORMATION
1998 MAR 26 P 4:02

IN THE MATTER OF **CENTRAL SPRINKLER CORP.** **and** **CENTRAL SPRINKLER CO.,** **Respondents**	**CPSC DOCKET NO. 98-2**

RESPONDENTS' FIRST SET OF INTERROGATORIES

Respondents Central Sprinkler Corp. ("CSC") and Central Sprinkler Co. ("Central") (collectively, "Respondents"), through their undersigned counsel, hereby propound the following interrogatories to the Consumer Product Safety Commission (the "CPSC" or the "Complainant") pursuant to 16 C.F.R. § 1025.32. Complainant is requested to respond within thirty (30) days of the service of these interrogatories. Complainant's responses should be sent to the offices of Morgan, Lewis & Bockius LLP, 2000 One Logan Square, Philadelphia, PA 19103.

For the purposes of these Interrogatories, the following definitions and instructions apply:

INSTRUCTIONS

A. In answering these Interrogatories, Document Requests, and/or Requests for Admissions (collectively, the "Discovery Requests"), furnish all information available to you, including any such information in possession of your attorneys or anyone acting on your behalf, and not merely such information known of your own personal knowledge. If you cannot answer the Discovery Requests in full after exercising due diligence to secure the information to do so, so state and answer to the extent possible.

B. If the answer to any of the Discovery Requests is that you lack knowledge of some or all of the requested information, describe all efforts made by you to obtain the information necessary to answer that Discovery Request.

C. If any matter responsive to any of the Discovery Requests is withheld based on any claim of privilege, describe generally the matter withheld, state the privilege being relied upon, and identify all persons or entities who have or have had access to said matters. If you refuse to describe and/or produce any document on the basis of a claim of privilege or protection from discovery of any kind, with respect to each such document, set forth the following information:

(i) the date of the document;

(ii) its authors;

(iii) all recipients of the document;

(iv) the present location and custodian of the document; and

(v) the basis of the claim of privilege or protection from discovery.

D. Each lettered sub-part of a numbered Discovery Request is to be considered a separate Discovery Request for the purpose of Complainant's answers and objections. You must object separately to each sub-part and must answer any other sub-parts.

E. These Discovery Requests are to be deemed continuing in nature, and you shall promptly supply, by way of supplemental response, any additional responsive information that may become known to you or anyone acting on your behalf after your answers have been prepared or served.

F. For all documents produced by Complainant, identify by Bates number which document or documents are responsive to each separate Interrogatory and/or each separate Request for Documents.

DEFINITIONS

A. The "Complaint" means whichever version of the Complaint was last filed and in effect at the time of service of the relevant Discovery Request.

B. "Complainant" and/or the "CPSC" refers to the Consumer Product Safety Commission, the Legal Division of the Office of Compliance of the CPSC, and any employees or agents thereof.

C. "Respondents" refers to Central Sprinkler Corp. and Central Sprinkler Co., all corporate affiliates thereof, and all current or former employees of Central and corporate affiliates

thereof.

D. "CSC" refers to Central Sprinkler Corporation.

E. "Central" refers to Central Sprinkler Company.

F. "Omega" or "Omegas" refers to the line of sprinkler heads identified in the Complaint, including the following models: C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control.

G. "Person" or "persons" means all individuals and entities, including natural persons, representative persons, public or private corporations, companies, unincorporated associations, partnerships, organizations, government entities or groups, plus any divisions, departments, or units thereof.

H. "Document" or "documents" means any written, printed, typed, recorded, or graphic matter, whether produced or reproduced or stored on paper, cards, tapes, film, electronic facsimile, computer storage devices or any other devices or media, including, but not limited to papers; books; letter; photographs; objects; tangible things; correspondence; telegrams; cables; telex messages; memoranda; notes; notations; records; work papers; transcripts; minutes; reports and recordings of telephone or other conversations, or of interviews, or of conferences, or of other meetings; affidavits; statements; opinions; proposals; reports; studies; analyses; audits; evaluations; contracts; agreements; journals; statistical records; ledgers; books of account; bookkeeping entries; financial statements; tax returns; vouchers; checks; check stubs; invoices; receipts; desk calendars; appointment books; diaries; lists; tabulations; summaries; sound recordings; computer printouts; data processing input and output; microfilms; all records kept by electronic, photographic, or mechanical means; and things similar to any of the foregoing, however denominated. When one or more of the following documents is requested or referred to, the request or reference shall include, but is not limited to, the original and each and every copy and draft thereof having writings, notations, corrections, or markings unique to such copy or draft.

I. "Oral communication" means any and all non-written forms of expression or communication, whether face-to-face or by telephone, in a conference or otherwise.

J. "Identify" or "identification", when used in reference to a document, means to:

1. state the type of document (e.g., letter, log, report, etc.);

2. state its date;

3. state its title, heading or other designation and any other information (e.g., index or file number) which would facilitate the identification thereof;

4. identify the person(s) who prepared and/or signed the document;

5. identify the persons (or if widely distributed, the organization or classes of persons) to whom it was sent;

6. identify the last known location of the document and of each copy thereof having notations or markings unique to such copy;

7. if the document was, but no longer is, in your possession or subject to your control, identify its last know custodian, describe the circumstances under which it passed from your control to that person, and identify each person having knowledge of such circumstances;

8. describe its general subject matter and contents; and

9. if the document exceeds one page in length, or is contained in a series of documents or a larger portion, identify the specific document by appropriate identifying name or symbol, the number of the particular page or pages (or other descriptive aid) and of the line or lines thereof upon which the information referred to in the Discovery Request or your response appears.

K. "Identify" or "identification", when used in reference to a natural person, means to provide the following information:

1. his or her full name;

2. his or her business affiliation(s), position(s), title(s), and job description(s) during the period delineated in the Discovery Request (and the dates during which each affiliation, position, title, and job description applied to him or her);

3. his or her present or last known business address (and the date of that last knowledge); and

4. his or her present or last known residence address (and the date of that last knowledge).

L. "Identify" or "identification", when used in reference to an oral communication or statement, means to:

1. state the date of the oral communication or statement;

2. state the place where it occurred;

3. identify the persons(s) making and listening to the oral communication or statement;

4. identify all other persons present at the time it was made;

5. if by telephone, identify the persons participating in the conversation and where each was located at the time of the call; and

6. describe the substance of the oral communication or statement.

M. "Date" means the exact day, month, and year if ascertainable, or, if not, the best approximation thereof or best approximation in relation to other events.

N. "Describe" means to set forth fully and clearly every relevant fact and/or event, including particulars of time, place and manner.

O. Where the context so requires:

1. the terms "and" and "or" mean "and/or";

2. the plural of a word includes the singular, and the singular includes the plural;

3. the past tense of verb includes the present, and the present tense includes the past;

4. the masculine gender includes feminine and neuter genders, and the neuter gender include the masculine and feminine.

P. All other words are to be given their ordinary and usual meanings, according to a current edition of Webster's Dictionary.

INTERROGATORIES

A. Allegations of the Complaint

1. (a) State whether CSC manufactures Omegas.

If so:

(b) identify and describe any such manufacturing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such manufacturing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such manufacturing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

2. (a) State whether CSC sells Omegas.

If so:

(b) identify and describe any such sales;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such sales;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such sales; and

(e) describe in detail the substance of each such person's knowledge and/or information.

3. (a) State whether CSC markets Omegas.

If so:

(b) identify and describe any such marketing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such marketing;

(d) identify each and every person whom Complainant knows and/or believes to

have knowledge of such marketing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

4. With respect to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

5. (a) State whether the C-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

6. (a) State whether the C-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

7. (a) State whether the C-1A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

8. (a) State whether the C-1A PRO ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or

information.

9. (a) State whether the EC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

10. (a) State whether the EC-20A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

11. (a) State whether the EC-20 AID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

12. (a) State whether the HEC-12 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

13. (a) State whether the HEC-12 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

14. (a) State whether the HEC-12 PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

15. (a) State whether the HEC-12A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

16. (a) State whether the HEC-12 RES model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

17. (a) State whether the HEC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

18. (a) State whether the HEC-20 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

19. (a) State whether the R-1 model of the Omegas constitutes a "consumer product"

pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

20. (a) State whether the R-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

21. (a) State whether the R-1M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to

have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

22. (a) State whether the AC model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

23. (a) State whether the M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

24. (a) State whether the Flow Control model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

25. With respect to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

26. (a) Separately for each model of the Omegas listed in the Complaint, state whether such model is sold by Respondents directly to consumers.

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such sales;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such sales; and

(d) describe in detail the substance of each such person's knowledge and/or information.

27. (a) Separately for each model of the Omegas listed in the Complaint, state whether Respondents market such a model to consumers.

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such marketing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such marketing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

28. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is installed by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such installation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such installation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

29. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is serviced by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such servicing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such servicing; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

30. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is repaired by consumers themselves (as opposed to professional contractors). If so:

(b) identify all documents which describe, evidence, refer, or relate to any such repairs;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such repairs; and

(d) describe in detail the substance of each such person's knowledge and/or information.

31. State whether Omegas installed in buildings used only as storage facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).
If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

32. State whether Omegas installed in warehouses constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).
If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates

in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

33. State whether Omegas installed in factories constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

34. State whether Omegas installed in computer facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

35. State whether there are any factual circumstances under which any Omegas would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

36. (a) State whether there are any factual circumstances under which any non-Omega sprinkler heads would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

37. (a) Separately for each model of the Omegas listed in the Complaint, describe any and all ways in which consumers use, consume, and/or enjoy such a model.

(b) identify all documents which describe, evidence, refer, or relate to any such use, consumption, or enjoyment;

(c) identify each and every person whom Complainant knows and/or believes to

have knowledge of any such use, consumption, or enjoyment; and

(d) describe in detail the substance of each such person's knowledge and/or information.

38. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:

(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

39. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199:

(a) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of UL Standard 199, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of UL Standard 199, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi the testing standard that Complainant contends is created by UL Standard 199 that applies to the Omegas.

40. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

41. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures":

(a) describe in terms of both degrees Fahrenheit and Celsius what temperatures are meant by the phrase "certain temperatures";

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or

information.

42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

45. (a) State whether Complainant contends that there is a standard of "failure" that will accurately predict whether a particular Omega will fail to activate in a fire when used in a particular building without regard to the actual hydraulic pressure that exists in the building. If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

46. (a) State whether Complainant contends that if a particular Omega does not activate at a minimum of 7 psi when tested, such an Omega would not activate if a fire occurred in a building where such Omega was installed.

(b) set forth the factual basis for any such contention;

(c) identify all documents which describe, evidence, refer, support, or relate to

any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

47. Describe the average static water pressure (in psi) present in the sprinkler systems of most residential buildings.

48. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most residential buildings, after the system has been activated.

49. Describe the average static water pressure (in psi) present in the sprinkler systems of most commercial buildings.

50. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most commercial buildings, after the system has been activated.

51. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

52. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas do not and/or will not function in a "significant percentage" of instances:

(a) expressed in terms of a specific percentage, describe what constitutes "a significant percentage" regarding this allegation;

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

53. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

54. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

55. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

56. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

57. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

58. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

59. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 AID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

60. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

61. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

62. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

63. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

64. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 RES model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

65. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

66. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

67. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

68. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

69. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1M model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

70. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the AC model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

71. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the M model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

72. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the Flow Control model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

73. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to

have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

74. State whether the failure of any Omega to function has resulted in any bodily injury or injuries.

75. State whether the failure of any Omega to function has resulted in any death or deaths.

76. With respect to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

77. With respect to the allegation of Paragraph 15 of the Complaint that the defect or the defects in the Omegas create a "substantial risk of injury to the public":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

78. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

79. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

80. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

81. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate under any type of testing.
If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

82. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in a fire.
If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

83. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.

If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

84. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

85. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

86. (a) State whether Complainant contends that any Omegas manufactured using silicone o-rings constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

87. (a) State whether the Complainant contends that the performance of Omegas declines or deteriorates over time.

If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or

information.

88. With respect to the allegation of Paragraph 16 of the Complaint that the Omegas present a "substantial product hazard":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

89. With respect to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest":

(a) identify and describe all of the public interest factors which Complainant believes favor "action under these provisions";

(b) set forth the factual basis for such an allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

90. With respect to the allegation of Paragraph B(1) of the Complaint that Respondent give prompt "public notice of the defect in the Omegas," identify and describe the "public notice" that the Complainant seeks to impose.

91. With respect to the allegation of Paragraph C(3) of the Complaint regarding repair of all Omegas so they will "perform properly," identify and describe what would constitute "performs properly" for purposes of the Complainant.

92. With respect to the allegation of Paragraph C(3) of the Complaint regarding the replacement of all Omegas "with a like or equivalent product which performs properly":

(a) identify and describe any and all "like or equivalent product which performs properly";

(b) state whether Complainant believes that Omegas with a silicone o-ring qualify as a "like or equivalent product which performs properly"; and

(c) state whether Complainant believes that Omegas with a spring collar qualify as a "like or equivalent product which performs properly."

93. With respect to the allegation of Paragraph C(3) of the Complaint regarding a "refund to consumers [of] the purchase price of the Omegas," identify and describe how Complainant would calculate or determine a "refund to consumers [of] of the purchase price of the Omegas."

94. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(1), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

95. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(2), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

96. (a) If the Commission orders Respondents to refund some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(3), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

97. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to U.S.C. § 2064(d)(1), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to

any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

98. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to U.S.C. § 2064(d)(2), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

99. (a) If the Commission orders Respondents to refund the purchase price to some or all of the Omegas pursuant to U.S.C. § 2064(d)(3), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or

information about any such contention.

B. Potential Witnesses

100. Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the person's last known position with Respondents;

(e) the date of any such contacts;

(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);

(f) a detailed description of the subject matter of such communication; and

(g) the identity of any other persons who were present during such contacts.

101. For each and every contact describe an response to Interrogatory No. 100, identify each and every document that describes, evidences, refers, or relates to such contacts, including without limitation any notes of such contacts, documents shown during the course of such contacts, lists of questions or answers given, or any reports of such communications.

102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the corporate or government affiliation of the person;

(e) whether the Complainant has contacted such person; and

(e) the specific subject matter of the person's knowledge.

103. Identify each and every fact witness that Complainant expects to testify on its behalf at the hearing in this matter. For each such fact witness, identify and describe:

(a) the name, title, business address, and home address for each such witness; and

(b) the subject matter about which each witness is expected to testify.

104. Identify each and every expert witness whom the Complainant expects to testify on its behalf at the hearing in this matter. For each such expert, identify and describe:

(a) the expert's name, title, home address, business address, education, employment since graduation from high school, and all publications authored or edited by the expert;

(b) the subject matter on which each expert is expected to testify;

(c) the substance and facts upon which the expert relies in forming his or her opinion;

(d) the opinions to which the expert is expected to testify;

(e) a summary of the grounds for each such opinion; and

(f) a statement and description of all information and documents upon which the expert relies or expects to rely.

105. Identify and describe any and all oral or written statements made by Respondents that the Complainant contends constitute an admission with reference to any of the issues raised in the Complaint. For each such statement, identify and describe:

(a) the person making the alleged statement;

(b) that person's relationship to Respondents;

(c) the content of the statement;

(d) the date, time, and place of the statement;

(e) the nature of the alleged statement (e.g., written or oral); and

(f) the identity of each person who heard the statement or otherwise has personal knowledge of the statement.

C. Other Allegations Made By the CPSC

106. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "based on multiple random inquiries of sprinkler contractors across the nation in the recent past, we believe that Central's proposed labor payment falls considerably short of what has been, and remains, customarily required to remove and install sprinklers . . . ." With respect to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to the "multiple random inquiries of sprinkler contractors";

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such "multiple random inquires of sprinkler contractors";

(e) describe in detail the substance of each such person's knowledge and/or information of such "multiple random inquiries of sprinkler contractors";

(f) identify and describe in terms of a specific monetary amount "what has been, and remains, customarily required to remove and install sprinklers";

(g) identify each and every document that constitutes, evidences, refers, or relates in any way to "what has been, and remains, customarily required to remove and install sprinklers";

(h) identify each and every person whom Complainant knows and/or believes to have knowledge of "what has been, and remains, customarily required to remove and install sprinklers"; and

(i) describe in detail the substance of each such person's knowledge and/or

information of "what has been, and remains, customarily required to remove and install sprinklers."

107. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view that dezincification alone is the cause of above-required operating pressures in Omegas from plastic pipe . . . ." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

108. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to

have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

109. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "rather, primarily, the data points to multiple failure modes rooted in the design and construction of these sprinklers." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe the "multiple failure modes rooted in the design and construction of these sprinklers";

(d) identify and describe "the data" referenced in the statement;

(e) identify and describe each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(g) describe in detail the substance of each such person's knowledge and/or information.

110. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC refuses to accept a "testing based corrective action proposal" from Respondents. With regard to this rejection:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for rejecting a "testing based corrective action proposal";

(c) identify and describe any and all reasons that the CPSC believes are correct in

rejecting such a proposal;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the rejection of this proposal;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of the rejection of this proposal; and

(f) describe in detail the substance of each such person's knowledge and/or information.

111. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC states that "Central continues to insist on selling Omega sprinklers with silicone o-rings despite serious concerns about whether they will function in the long term." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all "serious concerns" that the CPSC has regarding the functioning of Omega sprinklers with silicone o-rings;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such "serious concerns"; and

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such "serious concerns."

112. In a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, Stone states, "x-ray examination of the unit showed that the internal shaft was cocked or tipped slightly and jammed in that position" and that the CPSC "plans to conduct non-destructive analysis of the unit . . . ." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe any evidence that Omegas may be "cocked or tipped slightly and jammed in that position";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the statement that Omegas are "cocked or tipped slightly and jammed in that position";

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of any such problems;

(f) describe in detail the substance of each such person's knowledge and/or information; and

(g) describe any "non-destructive analysis of the unit" performed by or on behalf of the CPSC.

113. In a January 6, 1998 letter from Eric Singer of the CPSC to the state attorneys general, Singer states, "this contrasts with automatic fire sprinklers' historical rate of proving 99.5 percent effective." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all evidence that automatic fire sprinklers have an "historical rate of proving 99.5 percent effective";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such historical rate of effectiveness;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such historical rate of effectiveness; and

(f) describe in detail the substance of each such person's knowledge and/or information.

114. (a) State whether Complainant deems any corrective action proposal to be acceptable that is based in part on testing of a sample of sprinkler heads from a building and comparing the results of the sample to the hydraulically calculated operating pressure of that building.

If so:

(b) identify and describe such an acceptable corrective action proposal;

If not:

(c) identify and describe all reasons for such unacceptability;

(e) identify each and every document that constitutes, evidences, refers, or relates in any way to such unacceptability;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of such unacceptability; and

(g) describe in detail the substance of each such person's knowledge and/or information.

D. <u>CPSC Investigation</u>

115. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's investigation of the Omegas. For each person identified, describe his or her role in the investigation.

116. Describe the circumstances surrounding, and the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date that the CPSC decided to investigate the Omegas;

(b) the identity of all persons at the CPSC involved in the decision to investigate the Omegas; and

(c) the identity of all information (including, but not limited to, any consumer complaints) available to or otherwise relied upon by the CPSC in deciding to initiate an

investigation of the Omegas.

117. Describe in detail any investigation by the CPSC relating to consumer complaints and/or consumer reports of personal injury, property damage, non-activation, or any other problems allegedly associated with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of all consumers with whom the CPSC communicated in connection with this aspect of the investigation;

(c) the identity of all consumers who complained of or reported an incident relating to the Omegas;

(d) the identification of any consumer questionnaires or other surveys used by the CPSC in conducting this aspect of the investigation; and

(e) the identification of any and all data, reports, survey results, or other information revealing the results of this aspect of the investigation.

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a result of or associated with the fire.

119. To the extent not already identified in response to Interrogatory Nos. 117-118,

identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage or personal injury in connection with the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the alleged property damage and/or personal injury;

(c) a description of the type of property damage allegedly sustained; and

(d) a description of any and all personal injury allegedly sustained.

120. Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

121. Describe in detail any and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

122. Describe in detail any and all communications between the CPSC and any state law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all state law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such state law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such state law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

123. Describe in detail any and all communications between the CPSC and any federal law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all federal law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such federal law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such federal law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

E. Design and Testing

124. Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the Omegas;

(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;

(c) a description of the methodology employed during each and every test of the Omegas;

(d) the date of each and every test of the Omegas;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

125. Identify any and all outside consultants, experts, or other persons who assisted, advised, or otherwise communicated with the CPSC with respect to any testing of the Omegas. For each such person, describe his or her role in the testing, and the communications between that

person and the CPSC.

126. For each test of the Omegas conducted by the CPSC, describe in detail the condition and age of the specific Omegas used in the test. Your response should include, without limitation, the following:

(a) an identification of each specific Omega by model number;

(b) a description of how and when the CPSC obtained each specific Omega used in the testing;

(c) a description of the condition of each specific Omega used in the testing (e.g., new, used, damaged, dented, etc. . .);

(d) a statement of the age of each specific Omega used in the testing;

(e) a statement of whether the CPSC has retained and the current location of each specific Omega used in the testing; and

(f) if the CPSC has since destroyed or discarded any Omegas used in its testing, a statement of the reasons for that action.

127. For each test of the Omegas conducted by the CPSC, describe in detail the piping used in the sprinkler system from which the Omegas were removed. Your response should include, without limitation, the following:

(a) the material constituting the piping;

(b) the presence of any treatments or substances applied to the piping;

(c) the contents of any and all materials or substances inside the piping; and

(d) a description of the overall condition of the piping.

128. For the time period 1990 through the present, identify and describe any and all testing of any non-Omega sprinkler heads conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the non-

Omega sprinkler heads;

(b) the identity of the person(s) who created or established any such testing protocols for the non-Omega sprinkler heads;

(c) a description of the methodology employed during each and every test of the non-Omega sprinkler heads;

(d) the dates of each and every test of the non-Omega sprinkler heads;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the non-Omega sprinkler heads;

(f) a description of the results of each and every test of the non-Omega sprinkler heads; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the non-Omega sprinkler heads.

129. To the extent that you contend, or otherwise intend to present at the hearing in this matter, the feasibility and/or propriety of any alternative design features for the Omegas, identify and describe any such proposed alternative design features. Your response should include, without limitation, a description of all data, testing, reports, or other information supporting this contention.

F. Risk Assessment

130. Set forth the factual basis of your contention in Paragraph 15 of the Complaint that the Omegas "create a substantial risk of injury to the public within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)." Your response should include, without limitation, the following:

(a) a description of the specific risks of injury that you contend are presented by the Omegas;

(b) a description of the criteria or factors used by the CPSC in determining that each risk allegedly associated with the Omegas constitutes a "substantial risk" within the meaning of 15 U.S.C. § 2064(a)(2); and

(c) an identification of any and all data, survey information, or testing relating to the alleged risks associated with the Omegas.

131. Describe in detail any and all measures taken by the CPSC to determine the severity of the risk allegedly associated with the Omegas, including, without limitation:

(a) a description of how the CPSC measures the severity of the risk allegedly associated with the Omegas;

(b) a statement of whether the measurement employed by the CPSC incorporates, considers, or is in any way adjusted to reflect the number of products in use and the frequency of use of the Omegas;

(c) a description of all efforts taken by the CPSC to measure the severity of the risk or probability of injury allegedly associated with the Omegas; and

(d) an identification of all data, studies, and reports that quantify or otherwise provide an assessment of the risk or probability of injury allegedly associated with the Omegas.

132. Describe the CPSC's preliminary determination of the alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date the CPSC Staff issued its preliminary determination of the alleged risks associated with the Omegas;

(b) the identity of all persons involved in the Staff's preliminary determination;

(c) the level of hazard assigned to the Omegas in accordance with the applicable provisions of the CPSC Recall Handbook; and

(d) an identification of all data, studies, reports, and/or testing upon which CPSC relied in making its preliminary determination.

133. Explain the factual basis underlying the level of hazard assigned to the Omegas in the CPSC Staff's preliminary determination of the alleged risks associated with the Omegas. Your response should include a statement of the specific factors considered, and the data or information

relied upon, by the CPSC Staff in determining the level of hazard assigned to the Omegas.

134. State whether CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas has changed over time. If so, describe any such change and the information or testing giving rise to the change.

135. For the period from 1990 through the present, identify all consumer products classified by the CPSC as presenting a hazard level equal to, or greater than, the hazard level assigned to the Omegas. For example, if the Omegas have been classified as a "Class B" hazard, identify all other consumer products that have been classified as "Class B" hazards and all consumer products identified as "Class A" hazards. For each consumer product identified in your response, you should provide the following:

(a) the identity of the consumer product by brand name or other description;

(b) the identification of the manufacturer of each such consumer product;

(c) the date of the CPSC's classification of the consumer product as presenting a hazard;

(d) the hazard level assigned each such consumer product;

(e) a description of the hazard presented by each such consumer product;

(f) for each such consumer product, the estimated total number of units manufactured as of the date the CPSC made its determination of the hazard level;

(g) for each such consumer product, the estimated total number of units in the hands of the consumers as of the date the CPSC made its determination of the hazard level;

(h) the number and severity of any and all personal injuries associated with each such consumer product;

(i) the number of deaths associated with each such consumer product; and

(j) the nature and number of property damage reports associated with each such consumer product.

G. Sufficiency of Corrective Action

136. For each consumer product identified in your response to Interrogatory No. 135, describe any and all corrective action taken with respect to that product. Your response should include, without limitation, the following:

(a) a statement of the CPSC's role in effecting the corrective action;

(b) a statement of whether the corrective action that was taken was completely voluntary on the part of the manufacturer, retailer, or distributor, was the result of a negotiated corrective action plan with the CPSC, or otherwise was compelled by the CPSC through the initiation of an adjudicative proceeding pursuant to 15 U.S.C. § 2064; and

(c) the identification of all documents evidencing the corrective action taken with respect to each such consumer product.

137. For each consumer product identified in your response to Interrogatory No. 135, describe the nature and extent of the public notice provided as part of the corrective action taken. Your response should include, without limitation, the following:

(a) the specific nature of the notice given (e.g., written notice to consumers and retailers, press releases, bill-boards, posters, etc. . .);

(b) a description of the media coverage associated with the corrective action (e.g., newspaper ads and reports, magazine ads and reports, wire services, other print media, television coverage, radio coverage, and/or internet exposure);

(c) a description of the extent of media coverage and exposure of the corrective action (e.g., a list of all newspapers, magazines, wire services, television stations, radio stations, and internet services that provided notice or otherwise covered the corrective action);

(d) a description of the frequency and amount of media coverage associated with the corrective action (e.g., the number of days newspapers carried a written notice, or the number of days the notice appeared on television); and

(e) a description of any and all point of purchase notification to consumers associated with the corrective action (e.g., posters and notices provided to retailers to display at

stores).

138. For each consumer product identified in your response to Interrogatory No. 135, describe the nature of the recall component, if any, of the corrective action taken. Your response should include, without limitation, the following:

(a) the number of individual units recalled;

(b) the remedy options offered to consumers (e.g., replacement, refund, substitute products);

(c) an assessment of consumer participation in the recall (e.g., percentage of units in the hands of consumers that were actually received by the recall);

(d) identification of any and all documents revealing the level of consumer participation in the recall; and

(e) a description of any studies conducted by the manufacturer, distributor, or retailer of the consumer product, or by the CPSC, or by both, or by any other person or entity, assessing the effectiveness of the recall program.

139. Explain the factual basis of your contention, if any, that the corrective action proposal of Respondents in connection with the Omegas is insufficient to protect the public or otherwise fails to provide adequate remedial measures under 15 U.S.C. § 2064.

140. Describe in detail the public notice, recall, and/or other remedial measures that you contend are necessary with respect to the Omegas to constitute a sufficient remedy and/or corrective action proposal under 15 U.S.C. § 2064.

141. Identify and describe all efforts taken by the CPSC (including, without limitation, consumer surveys, press surveys, and public opinion polls) to evaluate, test, or otherwise determine the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

142. Identify and describe all criteria and factors considered by the CPSC in measuring the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

143. Identify all public statements, press releases, or other information released to the public by the CPSC that in any way relates to or otherwise refers to the Omegas and/or Respondents.

H. Initiation of Adjudicative Proceedings

144. For the time period beginning January 1, 1982 to the present, identify all incidents in which the CPSC has filed an administrative complaint pursuant to Section 15 of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2064. Your response should include, without limitation, the following:

(a) the date the administrative action was filed;

(b) the identity of the manufacturers, distributors, or retailers of the consumer product named as respondents in the administrative action;

(c) the identity of the consumer product at issue;

(d) a description of the alleged "substantial product hazard" at issue in each case; and

(e) a description of the outcome of the administrative action and the nature of the remedy awarded.

145. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

146. State the date on which the CPSC authorized Complaint Counsel to initiate the instant adjudicative proceeding against the Respondents.

147. Identify all communications and documents (including internal memoranda and correspondence) relating to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

148. State the reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding against the Respondents.

CENTRAL SPRINKLER CO.,	
Respondents	

COMPLAINT COUNSEL'S OPPOSITION
TO RESPONDENTS' MOTION TO DISMISS

COMES NOW the staff of the Consumer Product Safety Commission and respectfully submits its opposition to Respondents Central Sprinkler Corporation and Central Sprinkler Company's Motion to Dismiss the staff's Complaint in the above-captioned matter.

I. INTRODUCTION

On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. of Lansdale, Pa., the manufacturers of "Omega" automatic fire sprinklers. The Complaint seeks a nationwide recall of the approximately 10 million Omega fire sprinklers manufactured by Respondents since 1982.

The staff filed its Complaint after extensive investigation revealed that Omega sprinklers have a high failure rate, and may not properly activate to release water in the event of a fire. The significant chance of failure of the Omega is a defect that creates a substantial risk of injury to the public pursuant to 15 U.S.C. § 2064. Complaint Counsel has

evidence, which it intends to produce at trial, of thousands of failures of Omega sprinklers. Complaint Counsel is aware of at least six fires in which Omega fire sprinklers have reportedly failed to operate; one of which caused over $3 million in property damage. In their brief, Respondents have indicated that there may be at least two additional fires in which Omega sprinklers reportedly failed to open (although claiming that in one of these, the sprinklers failed to open because of inadequate water supply). Respondents' Memorandum at 5, n. 2.

On March 26, 1998, Respondents filed a Motion to Dismiss and supporting Memorandum, claiming that CPSC lacks jurisdiction over Omega fire sprinklers, and that the staff's Complaint and List and Summary of Documentary Evidence are deficient. As explained more fully below, Respondents' arguments are without merit. CPSC clearly has jurisdiction over the Omega, and its Complaint and List and Summary of Documentary Evidence meet all applicable requirements.

II. SUMMARY OF THE ARGUMENT

Central's Omega sprinklers are consumer products within the jurisdiction of the Consumer Product Safety Commission. Therefore, there is no basis upon which to dismiss the Complaint for lack of jurisdiction.

The Consumer Product Safety Act, 15 U.S.C. § 2051 *et seq.,* imposes three basic requirements in order for an item to be a "consumer product" within the Commission's jurisdiction. *See* 15 U.S.C. § 2052 (1997). First, the item must be an "article" (or a component part of such "article") -- a final manufactured product, rather than anything at an intermediate stage of production. *See id.; Consumer Prod. Safety Comm'n v. The*

Anaconda Co., 593 F.2d 1314, 1319 (D.C. Cir. 1979). Second, the article must be customarily produced or distributed for sale to, or for the personal "use, consumption, or enjoyment of a consumer." *Id.* Lastly, the use, consumption or enjoyment of the article must be "in or around a permanent or temporary household or residence, a school, in recreation, or otherwise." *Id.*

As the following discussion demonstrates, Omega sprinklers are "articles" that are "used or enjoyed by consumers in or around a permanent or temporary household or residence, a school, in recreation, or otherwise." Omega sprinklers are a final manufactured product. They are installed in a "wide range of residential, commercial and industrial structures." Respondents' Memorandum at 3. Consumers use or enjoy Omegas in their homes, schools, hospitals, recreational facilities and many other places, and are exposed to the risk they create. Omega sprinklers are without question "consumer products" subject to the Commission's jurisdiction.

Furthermore, contrary to Respondents' claim, the staff's Complaint and List and Summary of Documentary Evidence fulfill all applicable pleading requirements.

As the moving party seeking an Order of Dismissal, Respondents bear the heavy burden of proving that the Agency lacks jurisdiction over Omega sprinklers, and that the staff's Complaint and List and Summary of Documentary Evidence are insufficient. *See Department of Labor v. Greenwich Collieries*, 114 S.Ct. 2251, 2259 (1994) (holding that under section 7(d) of the APA, 5 U.S.C. 556(d), the proponent of an order bears both the burden of production and the burden of persuasion). Respondents' unsupported and

untenable arguments fall far short of meeting this burden, and their Motion to Dismiss should therefore be denied.

III. FIRE SPRINKLERS ARE "CONSUMER PRODUCTS" WITHIN THE CPSC'S JURISDICTION

To fall within the Commission's jurisdiction, an article must be a "consumer product." *United States v. One Hazardous Product Consisting of a Refuse Bin*, 487 F. Supp. 581, 584 (D.N.J. 1980). Section 3 of the Consumer Product Safety Act, 15 U.S.C. §§ 2051 et seq. ("the Act"), clearly and unambiguously defines "consumer product" as:

> any article, or component part thereof, produced or distributed
>
> i) for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation or otherwise, **or**
>
> ii) **for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise; but such term does not include--**
>
> (A) any article which is not customarily produced or distributed for sale to, **or** use or consumption by, **or** enjoyment of, a consumer.

15 U.S.C. § 2052 (1997) (emphasis added).[1]

The Act's definition of "consumer product" is to be "liberally construed in accordance with the stated purposes of this legislation, i.e., the protection of consumers from injury due to unsafe products." *One Hazardous Product*, 487 F. Supp. at 584; *see also* Annotation, *What is "Consumer Product" for Purposes of Consumer Product Safety Act (15 USCS §§ 2051 et seq.),* 43 A.L.R. Fed. 827. As explained by one court,

---

[1] The statute further excepts tobacco products, motor vehicles, pesticides, aircraft, boats, food, drugs, devices and cosmetics, and articles which, if sold, would be subject to taxation under the Internal Revenue Code section 4181. *See* 15 U.S.C. § 2052(a)(1)(B) - (I) (1997).

> The most unequivocal expression of congressional intent to be gleaned from the legislative history of the Act is that the definition of "consumer product" be construed broadly to advance the Act's articulated purpose of protecting consumers from hazardous products . . . An additional factor in favor of an expansive interpretation of the Act generally is the Act's character as remedial legislation directed at a widespread, specifically identified threat to the public safety.

Consumer Prod. Safety Comm'n v. Chance Mfg. Co., 441 F. Supp. 228, 231 (D.D.C. 1977); *see also Butcher v. Robertshaw Controls Co.*, 550 F. Supp. 692 (1981) ("[t]he Act is intended for the protection of the public against unreasonable risks of injury associated with "consumer products," a term which is to be liberally construed in accordance with the statutes's patently remedial purpose").

Since the Commission was established, courts and the Agency have upheld an expansive definition of "consumer product," finding that, among many other things, the Act applies to architectural glazing materials *(ASG Indus. v. Consumer Product Safety Comm'n*, 593 F.2d 1323, 1328 (D.C. Cir.), *cert. denied*, 444 U.S. 864 (1979)); fire extinguishers (CPSC Advisory Op. No. 154 (1974)); aluminum wiring (*Kaiser Alum. & Chem. Corp. v. Consumer Prod. Safety Comm'n*, 574 F.2d 178 (3d Cir.), *cert. denied*, 439 U.S. 881 (1978)); elevators (CPSC Advisory Op. No. 182 (1973)); portable gas heaters (CPSC Advisory Op. No. 286 (1982)); and fire alarm equipment (CPSC Advisory Op. No. 181 (1975)).

A. Omega Sprinklers Are "Articles"

To qualify as a "consumer product" under the Act, a product must be produced or distributed as a distinct article of commerce, or as a component part of such distinct article, rather than any physical entity that might exist only at an intermediate stage of production.

Consumer Product Safety Comm'n v. The Anaconda Co., 593 F.2d 1314, 1319 (D.C. Cir. 1979) (emphasis added); *ASG Indus. v. Consumer Prod. Safety Comm'n*, 593 F.2d 1323, 1327 (D.C. Cir.), *cert. denied*, 444 U.S. 964 (1979). Respondents do not dispute that the Omega sprinklers in the instant case are distinct "articles" of commerce -- they are the final manufactured product, and not any intermediate stage of production.

However, Respondents do confuse which articles are the subject of this jurisdictional inquiry. Respondents attempt to back into a jurisdictional argument by claiming that sprinkler systems are not consumer products, and then urging the Commission to conclude that the sprinklers within those systems are not consumer products.[2,3] Sprinklers systems,

---

[2] *See, e.g.,* Respondents' Memorandum at 1 (sprinkler systems are an integral part of a building, and therefore disqualified as consumer products; sprinkler systems are not customarily marketed, sold or distributed to consumers); Respondents' Memorandum at 3 (discussing the makeup and construction of, and permit requirements associated with, sprinkler systems), Respondents' Memorandum at 4, 6, 15-16, 18 (discussing state and local regulation of sprinkler systems); Respondents' Memorandum at 11 (claiming that active consumer interaction with the product is required for the product to be a "consumer product," and arguing that the sprinkler system remains passive until automatically activated by fire); Respondents' Memorandum at 14-15 (arguing that a fire suppression system is a building component and, therefore, not a consumer product); Respondents' Memorandum at 21 (arguing that sprinklers in commercial and industrial settings are not consumer products because OSHA standards address automatic sprinkler systems).

[3] Respondents argue that the National Commission on Product Safety did not include "sprinkler systems" in its list of consumer products in 1973, nearly 10 years before Omega fire sprinklers were ever manufactured. Because the staff does not claim that sprinkler **systems** are defective, the absence of those systems from the National Commission's list is irrelevant. Moreover, the list contained in the National Commission's Final Report on Product Safety explicitly states, in bold and capital letters, that the home alarm, escape, and protection devices **INCLUDE BUT ARE NOT LIMITED TO** the few items listed therein. National Commission on Product Safety Final Report to the President and Congress, Table 11, p. 90 (June, 1970) (attached hereto as Exhibit B). What is included in the list is very instructive -- fire extinguishers, fire alarms, smoke alarms and burglar alarms, all of which, like fire sprinklers, are designed to operate in the event of an emergency. *See id.* Respondents ignore this inclusive language and the clear intent of the National Commission

however, are not at issue in this case. Complaint Counsel does not allege that sprinkler systems are consumer products, nor that they create a substantial product hazard. Instead, Complaint Counsel alleges that Omega sprinklers themselves are defective, and that the defect in those sprinklers creates a substantial product hazard.

As indicated by Respondents, sprinkler systems include piping, valves, hydraulic devices, and the sprinklers themselves, installed in a pressurized water delivery system. *See* Respondents' Memorandum at 3. Sprinklers are distinct from the sprinkler systems that contain them. This distinction is crucial to the jurisdictional inquiry.

In *Kaiser Alum. and Chem. Corp. v. Consumer Prod. Safety Comm'n*, 574 F.2d 178 (3d Cir.), *cert. denied*, 439 U.S. 881 (1978), the United States Court of Appeals for the Third Circuit held that aluminum branch wiring is a consumer product within CPSC jurisdiction. Less than a year later, in *Consumer Prod. Safety Comm'n v. The Anaconda Co.*, 593 F.2d at 1319, the United States Court of Appeals for the District of Columbia Circuit held that aluminum branch wiring systems will not fall under the Commission's jurisdiction unless the Commission can show that the systems are distinct articles in commerce. Stressing that it was only considering aluminum branch circuit wiring systems, and recognizing the difference, for purposes of CPSC jurisdiction, between a system and its components, the *Anaconda* Court refused to give collateral estoppel effect to *Kaiser*:

> A ruling for which collateral estoppel effect is sought must have been essential to the judgment in a prior proceeding . . . The jurisdictional question in this case is whether aluminum branch circuit wiring systems are "consumer products." This was not the issue before the Delaware district court. A fair reading of Judge Stapleton's decision makes clear that **the only issue actually**

---

to include more than the listed products.

> **litigated in Delaware related to aluminum wiring, a distinct product from the one involved in this case** . . . For the same reason, the Third Circuit's ruling on appeal, *Kaiser Aluminum & Chemical Corp. v. CPSC* , 574 F.2d 178 (3d Cir.), Cert. denied, 439 U.S. 881, 99 S. Ct. 218, 58 L. Ed. 2d 193 (1978), is not entitled to effect on the basis of collateral estoppel in this case.

Anaconda, 593 F.2d at 1322 (emphasis added).[4]

By its own reasoning, the holding of *Anaconda* is inapplicable to the instant case, and *Kaiser* is controlling. Like the aluminum wiring in *Kaiser*, sprinklers are articles customarily produced or distributed for the personal use, consumption or enjoyment of consumers, and are, therefore, consumer products. *See Kaiser*, 574 F.2d at 181.

B. Omega Sprinklers are Customarily Produced or Distributed for the Personal Use, Consumption or Enjoyment of Consumers

To qualify as a "consumer product" under the Act, an article must be produced or distributed "for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation or otherwise, **or** for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise." 15 U.S.C. § 2052 (1997) (emphasis added). Articles which are not customarily produced or distributed for sale to, **or** use or consumption by, **or** enjoyment of, a consumer, are explicitly excluded from coverage under the Act. *Id.* Because Omegas are customarily produced or distributed for use by, consumption by, or

---

[4] In *Anaconda*, the Court pointed out that the defect at issue was in the wiring systems, and not in the components of that system (the wires themselves). *Id.* In fact, the fire hazard was due to faulty connections in the system, and was a problem of "improper design or installation of the wiring system as a whole." *Id.* In the instant case, the defect in Central's Omega sprinklers is in the sprinklers themselves, not in the sprinkler system. It is not a question of faulty connections between components of a sprinkler system (between pipes, valves and pipes, sprinklers and pipes, etc.), or of improper design or installation of the sprinkler systems in which the defective sprinklers are installed.

enjoyment of consumers, and because consumers are exposed to the hazards associated therewith, Omegas are consumer products.

1. An Article Need Not be Sold or Marketed Directly to Consumers to be a "Consumer Product"

Respondents claim that the Act absolutely requires that to be a "consumer product," a product must be produced or distributed for sale to consumers. *See* Respondents' Memorandum at 7 (emphasis added). By its clear and unambiguous language, however, the Act requires that the article be produced or distributed either for sale to or for use, consumption, or enjoyment of a consumer. 15 U.S.C. § 2052(a)(1) (1997). In *Consumer Prod. Safety Comm'n v. Chance Mfg. Co.*, 441 F. Supp. 228, 232 (D.D.C. 1977) (emphasis added), the Court held that:

> [i]n light of the House Committee's additional statement that "[it] is not necessary that a product be actually sold to a consumer, but only that it be produced or distributed for his use," it seems beyond dispute that Congress intended the Act's application to a given product to depend, less on how the product changes hands than on the degree to which it affects or endangers the safety of individuals in their capacity as consumers. This guiding principle forms the first of the two prerequisites to CPSC jurisdiction: That the product in question be **either** directly sold to the consumer **or** "produced or distributed . . . for the personal use, consumption or enjoyment of a consumer . . .

Likewise, in *Anaconda*, 593 F.2d at 1320 (citing H.R. 92-1153, 92d Cong., 2d Sess. (1972) (emphasis added), the Court emphasized that "[i]t is **not necessary that a product be actually sold to a consumer**, but only that it be produced or distributed for his use." That Omega sprinklers are not available in retail stores, that the general public cannot directly purchase sprinklers, and that sprinklers are sold only to professional contractors through Central's distribution outlets, are all irrelevant for purposes of jurisdiction. *See*

Respondents' Memorandum at 8-9. Because Omegas are customarily produced or distributed for use, consumption or enjoyment of a consumer, they are consumer products.

Respondents ignore the plain language and judicial interpretation of clause (ii) of the definition of consumer product, which extends coverage to articles produced or distributed "for the personal use, consumption or enjoyment of a consumer." *See* 15 U.S.C. § 2052(a)(ii) (1997). Respondents claim that clause (ii) was merely intended to encompass free samples and promotional items. *See* Respondents' Memorandum at 7. In *Anaconda*, 593 F.2d at 1320 (emphasis added), however, the Court emphasized that clause (ii) is not a limitation on jurisdiction, but instead an effort to ensure its comprehensiveness:

> A consumer product must be produced or distributed either "(i) for sale to a consumer . . .," or "(ii) for the personal use, consumption or enjoyment of a consumer . . . **Together, clauses (i) and (ii) were designed to ensure that the definition of consumer product would encompass the various modes of distribution through which consumers acquire products and are exposed to the risks of injury associated with those products.**

Respondents also argue that because they do not market sprinklers directly to consumers, Omegas are not consumer products. *See* Respondents' Memorandum at 9 (citing *ASG Indus., Inc. v. Consumer Prod. Safety Comm'n*, 593 F.2d 1323, 1328 (D.C. Cir.), *cert. denied*, 444 U.S. 864 (1979)). Once again, Respondents attempt to insert a requirement into the CPSA that is simply not there -- neither the statute, nor the case Respondents cite, *ASG*, require marketing to consumers. In fact, the Court in *ASG* pointed out that:

> Jurisdiction does not require a showing that a majority of product-sales are to consumers, but there must be a significant marketing of the product as a distinct article of commerce for sale to consumers **or for the use of consumers** before the product may be considered as "customarily" produced or distributed in that manner.

ASG, 593 F.2d at 1328 (emphasis added) (citing *Anaconda*, 593 F.2d at 1314-1322, and holding that architectural glazing materials are consumer products,). Likewise, in *Anaconda*, 593 F.2d at 1320 (emphasis added), the Court noted that "products which are primarily or exclusively sold to industrial or institutional buyers would be included within the definition of consumer product so long as they were produced or distributed **for use of consumers**."

In *Kaiser*, 574 F.2d at 181, the Court held that aluminum branch circuit wiring is a consumer product regardless of the fact that it is sold primarily to electrical wholesalers who sell it directly to electrical contractors. The *Kaiser* Court rejected an argument identical to Respondents', explaining that:

> The method of distribution chosen by a manufacturer for its product cannot, however, determine whether the product falls within the definition . . . Since both (copper and aluminum branch wiring) are articles used or enjoyed by consumers in or around households, both are, according to the plain language of the Act, consumer products.

Id. at 181.

The true test of the jurisdictional inquiry is not to whom Omegas are marketed or sold, but whether consumers are exposed to the hazards associated with them. *United States v. One Hazardous Product Consisting of a Refuse Bin*, 487 F. Supp. 581, 584-85 (D.N.J. 1980) (citing *Kaiser* and *Anaconda*, and holding that refuse bins at a drive-in restaurant, supermarket, and apartment complex are consumer products because their distribution results in a significant number of consumers being exposed to the hazard associated with them); *Chance,* 441 F. Supp. at 231 (D.D.C. 1977) (holding that "[t]o insure that the Commission remained fully capable of acting against evolving and unforeseen risks associated with consumer products, Congress provided that the Commission's jurisdiction as to a particular

product would depend directly on the extent to which consumers were exposed to the risks associated with the product").

According to Respondents, Omega sprinklers are marketed and sold to professional contractors. Respondents' Memorandum at 9. Those contractors, in turn, sell and install Omegas into "a wide range of residential, commercial and industrial structures." *See* Respondents' Memorandum at 3 (citing 'affidavits' of Carmine Schiavone and Frank Hill).[5] These structures include homes, apartments, nursing homes, hospitals, schools and recreational facilities. Affidavit of Francis J. Teevan, attached hereto as Exhibit A. The ten million Omegas produced by Respondents expose the public to one of the most significant hazards imaginable -- uncontained fire. *Id.* Because Omegas are widely used or enjoyed by consumers, and because consumers are exposed to the hazards associated with them, Omegas are consumer products.

2. The Statute Does not Require that Consumers "Actively Interact" With or "Manipulate" a Product

Respondents argue that consumers do not "use" Omega sprinklers because they do not "actively interact" with or "manipulate" them. *See* Respondents' Memorandum at 10, 11. Respondents cite no authority to support this alleged "active interaction" or "manipulation" requirement. Once again, Respondents attempt to inject a requirement into the statute that is simply not there.

---

[5] Neither of Respondents' supporting affidavits are properly sworn. For this reason, and because they contain inaccurate information *(see Affidavit of Francis J. Teevan*, attached hereto as Exhibit A), they should be excluded.

As Respondents admit, smoke detectors, fire alarms and burglar alarms are consumer products. Respondents' Memorandum at 6. Yet, like Omega sprinklers, these consumer products are designed and intended only to activate in the event of an emergency; they are "passive systems" that consumers do not "actively interact" with or "manipulate." CPSC has jurisdiction over "consumer products," regardless of any "active interaction" or "manipulation" of the product by consumers. *See Kaiser*, 574 F.2d at 181 (aluminum wiring is a consumer product); *Chance,* 441 F. Supp. at 233 ("[t]he legislative history of the Act nowhere suggests that Congress intended to import a "control" requirement into the definition of the term "consumer product"). For Omegas to be consumer products, it is sufficient that consumers "use" or "enjoy" the Omega sprinklers by relying on them to function in a fire, and that consumers are exposed to the risk caused by their failure to function. The statute does not require consumers to actively manipulate them.

C. Omega Sprinklers are Used, Consumed or Enjoyed by Consumers "In or Around a Permanent or Temporary Household or Residence, a School, in Recreation, or Otherwise"

To qualify as a consumer product, an article must be produced or distributed for sale to or use, consumption or enjoyment of consumers "in or around a permanent or temporary household or residence, a school, in recreation, or otherwise . . ." 15 U.S.C. § 2052 (1997). Courts have interpreted the statutory enumeration of locations and activities in which a consumer product may be used as "an assurance of comprehensiveness rather than a limitation on jurisdiction." *ASG*, 593 F.2d at 1328; *One Hazardous Product*, 487 F. Supp. at 584. As noted above, Respondents admit that Omegas are installed in "a wide range of residential, commercial and industrial structures." *See* Respondents' Memorandum at 3. By

virtue of the fact that they are found in and around permanent and temporary households, residences, schools, recreational facilities and other locations, Omegas are clearly consumer products.

1. Omegas Do Not Lose their Status as "Consumer Products" Because They are "Installed" in a Building

Respondents argue that Omega sprinklers are not used in or around a household, residence or school, in recreation or otherwise, because they are "incorporat[ed] into the fundamental structure of a building as part of a complex system." Respondents' Memorandum at 12. Respondents claim that because "housing" is not within the Commission's jurisdiction, anything "incorporated" therein is also outside the Commission's reach. *See id.*

In *Kaiser*, 574 F.2d at 180, the United States Court of Appeals for the Third Circuit rejected the very argument Respondents make here, albeit in the context of an argument by the manufacturer that the products were not "articles." Like Respondents herein, the manufacturer in *Kaiser* maintained that to qualify as a "consumer product," a product cannot be permanently affixed to or in the home. The Court criticized Kaiser's attempt to artificially inject a new requirement into the statute:

> It does not follow . . . that the Act incorporates all the arcane knowledge about when personal property becomes a fixture and thus part of a building. If Kaiser's interpretation were correct, then many consumer products in common use -- such as furnaces, water heaters, dishwashers, and lighting fixtures -- would be excluded from coverage. We see nothing in the plain language of the Act suggesting that the word "article," a noun denoting any material thing, excludes components incorporated in a residence if they otherwise fit within the definition.

Id. The Kaiser Court ultimately concluded that because aluminum branch circuit wiring is an article used or enjoyed by consumers in or around households, it is, according to the plain language of the Act, a consumer product. *Id. at 181.*

Like aluminum wiring, furnaces and lighting fixtures, automatic fire sprinklers such as the Omega are consumer products, regardless of whether they are installed in a residence.

2. CPSC has Jurisdiction Over Omegas Even if Some of the Sprinklers Are Installed in Industrial and Commercial Buildings

Respondents claim that "even if certain Omegas are consumer products, they do not remain subject to the act when installed in commercial and industrial settings." Respondents' Memorandum at 19. Respondents claim that although "some" Omega models are designated for incorporation into residential structures, "most" are designed for commercial and industrial use. *Id.* Respondents' only support for this proposition is the unsworn statements of Carmine Schiavone and Frank Hill, which contain inaccurate information. Respondents point to the Flow Control and Model "M" Omegas as two models that are in distinctly "non-consumer locations." Respondents' Memorandum at 9, n. 3.

As indicated in the Affidavit of Francis J. Teevan, the Flow Control and Model "M" Omegas that Respondents claim are not in 'consumer locations' are actually installed in hospitals, schools, homeless shelters, nursing homes, and libraries. Affidavit of Francis J. Teevan, attached hereto as Exhibit A. While hospitals, schools, shelters and libraries may all be considered "commercial" facilities, they are 'permanent or temporary household(s) or residence(s), schools, recreational facilities and other' places where consumers may be exposed to the hazards of Omega sprinklers. *See One Hazardous Product*, 487 F. Supp. 581 (finding that refuse bins were located in facilities whose use by consumers was actively

facilitated and encouraged, that access to the bins was unrestricted, and that refuse bins were typically located in the parking areas of apartment complexes, retail businesses, restaurants, and supermarkets, and holding that the refuse bins are "consumer products" within the meaning of the statute); *Kaiser*, 574 F.2d at 181; *Chance*, 441 F. Supp. at 231-32. That certain Omega models "contemplate" certain construction or installations is irrelevant. Because consumers use or enjoy Omegas in or around households, residences, schools, recreational facilities and other locations, and because consumers are exposed to the risk of injury associated with Omegas, Omegas are consumer products.

IV. CPSC HAS JURISDICTION OVER OMEGAS REGARDLESS OF OSHA

Respondents argue that the Commission lacks jurisdiction over Omegas because the risk of injury associated with them falls under OSHA pursuant to Section 31(a) of the Act. *See* Respondents' Memorandum at 20. Section 31(a), codified at 15 U.S.C. § 2080, provides that:

> The Commission shall have no authority under this Act to regulate any risk of injury associated with a consumer product if such risk could be eliminated or reduced to a sufficient extent by actions taken under the Occupational Safety and Health Act of 1970.

15 U.S.C. § 2080(a) (1997).

The Commission has jurisdiction over Omegas despite the provision contained in Section 31(a). In *ASG,* 593 F.2d at 1328-1330, petitioners argued that the Commission is deprived of authority over architectural glazing materials used in most non-residential buildings pursuant to Section 31(a). After carefully considering the legislative history of the statute, the *ASG* Court rejected this argument, holding that the Section:

> [w]as not intended to preclude the exercise of jurisdiction by CPSC whenever a product-hazard either potentially could be or was in part being regulated under OSHA. Congress required CPSC to make a judgment . . . [E]ven if the product is being regulated under OSHA, the Commission has the authority if there has not been sufficient reduction or elimination of the risk of injury . . . We need not consider whether the Commission's authority may be negatived if there exists potential but unexercised authority under OSHA to sufficiently reduce a risk of injury within the Secretary's jurisdiction.

Id. at 1328-29 (holding that Section 31(a) does not preclude Commission's jurisdiction over architectural glazing materials).

The relevant test, as the statute and *ASG* suggest, is whether OSHA has sufficiently reduced or eliminated the risk of injury associated with a particular product. *Id.* at 1329. In the instant case, the risks associated with Omegas have not and cannot be sufficiently reduced or eliminated by OSHA. First and foremost, OSHA only extends to safety issues in the workplace. Omegas, as discussed above, are widely installed in residences and other facilities, not just workplaces. *See Chance*, 441 F. Supp. at 233 (emphasis added) (suggesting that the Court's holding that the Commission has jurisdiction over an amusement park ride would have been different if the risks associated with the ride threatened **only** employees).

Second, even though OSHA may have the power to regulate safety issues in the workplace, it does not remedy the risk that Omega sprinklers pose to employees and the American public. In a sweeping and unsubstantiated generalization that, once again, confuses sprinklers with sprinkler systems, Respondents maintain that since OSHA standards "thoroughly address . . . sprinkler systems . . ., sprinkler heads in the workplace are not within the Act's purview." Respondents' Memorandum at 21 (emphasis added). Although Respondents cite numerous OSHA fire protection and prevention requirements, these OSHA

regulations say little about sprinklers themselves -- the distinct article of commerce at issue in this adjudication -- and less about their integrity and safety, the central issues in this case. *See* 16 C.F.R. §§ 1910.155-1910.165 and Pt. 1910, Subpt. L., App. A. The only potentially relevant provision that Respondents cite is 16 C.F.R. § 1910.159(8), which provides that:

> (i) The employer shall assure that only approved sprinklers are used on systems.[6]
>
> (ii) The employer may not use older style sprinklers to replace standard sprinklers without a complete engineering review of the altered part of the of the system.
>
> (iii) The employer shall assure that sprinklers are protected from mechanical damage.

16 C.F.R. § 1910.159(8) (1997) (emphasis added).[7] Even if all employers protect their Omegas from mechanical damage, refrain from using older style replacement sprinklers without an engineering review, and use only listed Omegas,[8] the Omegas in United States workplaces will remain defective, and will continue to create a substantial risk of injury to the public. Because OSHA fails to sufficiently reduce or eliminate the risk of injury, Section 31(a) does not limit CPSC jurisdiction over Omegas.

---

[6] Even OSHA distinguishes between sprinklers and sprinkler systems by allowing only approved sprinklers to be used in sprinkler systems.

[7] The regulations define "approved" as "accepted, or certified, or listed, or labeled, or otherwise determined to be safe by a nationally recognized testing laboratory." 16 C.F.R. § 1910.155(c)(3)(i).

[8] Because Omegas remain listed by Underwriters Laboratories (UL), employers using the Omega in their facilities remain in technical compliance with OSHA regulations for fire sprinklers in the workplace.

V. CPSC HAS JURISDICTION OF OMEGAS REGARDLESS OF STATE AND LOCAL BUILDING AND FIRE CODES

Claiming that "fire sprinkler systems are already the subject of extensive state and local control," Respondents argue that CPSC lacks jurisdiction over Omegas because Congress did not intend for CPSC regulation to "supplant state and local regulations regarding building construction." *See* Respondents' Memorandum at 8. Respondents argue that if the Agency is given jurisdiction over defective automatic fire sprinklers, it will inexorably open the door to agency rule-making on the installation and design of fire sprinkler systems.[9] *See* Respondents' Memorandum at 17.

Respondents' argument is flawed. First, no matter how Respondents twist and contort, this case is about Omega sprinklers, not sprinkler systems. The question of whether and to what extent state and local governments regulate sprinkler systems is simply not relevant herein.

Like the OSHA standards discussed above, the building codes Respondents reference require only that sprinklers be "approved." *See* BOCA Code, Respondents' Memorandum, Exhibit C.[10] Respondents provide no evidence that the safety or efficacy of the sprinklers

---

[9] That Agencies do not regulate sprinkler systems is simply inaccurate. Concurrent with local Authorities Having Jurisdiction, the federal government exercises considerable authority over sprinkler system installation, design, and maintenance requirements. OSHA, the Joint Commission on Accreditation of Hospitals, and the Health Care Financing Administration, all prescribe standards regarding sprinkler systems. See, e.g., 16 C.F.R. § 1910.106(h)(6)(d) (OSHA requirement that processing plants have automatic sprinkler systems); 42 U.S.C. § 1395bb (JCAHO authority generally).

[10] Similar requirements apply to a wide range of consumer products, including furnaces, electrical products, and smoke and carbon monoxide detectors. *See id.*

themselves, which are the subject of this litigation, are regulated by state or local authorities, or that state and local authorities have the power to demand a recall or corrective action relating to defective fire sprinklers.

Second, even if state and local governments were to exercise authority over the safety and efficacy of Omegas, the Commission's authority would control. The House Budget Committee Report that Respondents cite for the proposition that CPSC is barred from "establishing standards that conflict[] with or displace[] state and local regulations," does not stand for this proposition. *See* H. R. 158, 97th Cong., 1st Sess., 390 (1981). In fact, contrary to Respondents' suggestion, the House Report actually states the opposite ("subsection (a) amends section 26 of the CPSA to provide that voluntary standards, which the agency has stated in the Federal Register that it will rely upon to address risks of injury, **preempt all inconsistent state and local laws**"), and reiterates one of Congress' primary goals in establishing the Agency -- "to develop uniform safety standards for consumer products and to minimize conflicting State and local regulations. *Id. at 423, 390*; *see also* 15 U.S.C. § 2051(b)(3) (1997). The Consumer Product Safety Act itself provides that;

> Whenever a consumer product safety standard under this Act is in effect and applies to a risk of injury associated with a consumer product, no State or political subdivision of a State shall have any authority either to establish or to continue in effect any provision of a safety standard or regulation which prescribes any requirements as to the performance, composition, contents design, finish, construction, packaging, or labeling of such product which are designed to deal with the same risk of injury associated with such consumer product, unless such requirements are identical to the requirements of the Federal standard.

15 U.S.C. § 2075(a) (1997).[11]

Respondents' claims are also contrary to established case law. In *Butcher v. Robertshaw Controls Co.*, 550 F. Supp. 692, 700 (D. Md. 1981) (citations omitted), the Court rejected similar "floodgates" and "federalism" arguments. The Court pointed out that:

> The Congress made express finding that "control by State and local governments of unreasonable risks of injury associated with consumer products is inadequate and may be burdensome to manufacturers . . ." and that "regulation of consumer products . . . is necessary to carry out [the protection of the public against said unreasonable risks of injury]." In view of these findings and the declarations of purpose that follow them, defendants' "floodgates" argument is entirely unconvincing.

Likewise, in *Kaiser*, 574 F.2d at 181, the Court rejected the manufacturer's argument that matters of specification, composition, and design of branch circuit wiring were intended by Congress to be left entirely to local building codes. The Court doubted that it "should even consider the argument in view of the explicit preemption in section 26(a) of the Act, 15 U.S.C. § 2075(a)," and ultimately held that "although local building codes continue to play a role in regulating the installation and use of consumer products, such as electric, gas, or plumbing appliances, design and performance standards for components are now a matter of national concern." *Id.* (citing Bureau of Nat'l Affairs, The Consumer Product Safety Act: Text, Analysis, Legislative History 81 (1973)). Thus, even if local and state governments were to regulate the safety and efficacy of sprinklers, and even if such authority were to somehow conflict with Commission action, the Commission's authority would control.

---

[11] Although the CPSC has issued no safety standard for sprinklers, it clearly has the jurisdiction to do so.

Based on the foregoing, it is clear that the Commission has jurisdiction under the Act over Omega sprinklers. Omegas are articles customarily produced or distributed for use or consumption by, or enjoyment of, consumers in or around households, residences, schools, recreational facilities or otherwise. Neither OSHA standards, nor any state or local regulations, negate the Commission's jurisdiction over Omega sprinklers.

VI. THE COMPLAINT AND LIST AND SUMMARY OF DOCUMENTARY EVIDENCE COMPLY WITH ALL APPLICABLE REQUIREMENTS

Respondents further request dismissal of the staff's Complaint by claiming that it fails to inform them with reasonable definiteness of the factual basis of the defect and hazard posed by their sprinklers. Respondents also allege that the List and Summary of Documentary Evidence that supports the staff's allegations is insufficient. As explained below, both the Complaint and the List and Summary of Documentary Evidence meet all applicable requirements.

A. The Complaint Contains a Clear and Concise Statement of the Charges, Sufficient to Inform Respondents with Reasonable Definiteness of the Factual Bases of the Allegations of Hazard

Under the Commission's Rules of Practice for Adjudicative Proceedings, an administrative complaint issued under Section 15 of the CPSA must contain "a clear and concise statement of the charges, sufficient to inform each respondent with reasonable definiteness of the factual basis or bases of the allegations of violation or hazard." 16 C.F.R. § 1025.11(b)(3) (1997). Respondents claim that the Administrative Complaint in this matter does not comply with this rule because it fails to contain "factual specificity." Respondents' Memorandum at 22. Based on this allegation, Respondents seek dismissal of the Complaint or, in the alternative, amendment of the Complaint to somehow inform

Central with more 'reasonable definiteness" of the factual basis for the staff's Complaint. *See id.*

An administrative complaint must provide the adverse party with sufficient notice of the charges. Koch, *Administrative Law and Practice*, § 5.33 (2d ed. 1997). The complaint is not required to set forth evidentiary facts, but must simply advise parties of the legal and factual issues involved. *Id.* (*citing* Att'y Gen. Manual on Admin. Proc. Act, U.S. Dep't of Justice, 47 (1947)).

Because the Commission's Rules of Practice are patterned on the Federal Rules of Civil Procedure, a review of Federal Rule of Civil Procedure 8 on the requirements of pleading is instructive. *See* Supplementary Info., Consumer Prod. Safety Comm'n Rules of Practice for Adjudicative Proceedings, 45 Fed. Reg. 29,206, 29,207 (May 1, 1980); *Consolidated Gas Supply Corp. v. Fed. Energy Reg. Comm'n*, 611 F.2d 951, 959, n.7 (4th Cir. 1979) (administrative pleadings are no stricter than the requirements for court pleadings). Federal Rule of Civil Procedure 8 requires only that a complaint provide "a short and plain statement of the claim" sufficient to give the defendant fair notice of what the plaintiff's claim is, and the grounds upon which it rests. Fed. R. Civ. P. 8. As the United States Supreme Court explained in *Conley v. Gibson*, 355 U.S. 41, 47-48 (1951):

> The Federal Rules of Civil Procedure do not require a claimant to set out in detail the facts upon which he bases his claim. To the contrary, all the Rules requires is a "short and plain statement of the claim" that will give the defendant fair notice of what the plaintiff's claim is and the grounds upon which it rests. . . . Such simplified "notice pleading" is made possible by the liberal opportunity for discovery and other pretrial procedures established by the Rules to disclose more precisely the basis of both claim and defense and to define more narrowly the disputed facts and issues.

See also Mitchell v. E-Z Way Towers, Inc. 269 F.2d 126,129-130 (5th Cir. 1959) (possible vagueness of complaint no grounds for granting dismissal).

In the instant case, Complaint Counsel has more than met its pleading burden under 16 C.F.R. § 1025.11(b)(3). The Complaint provides Respondents with "a clear and concise statement of the charges" by stating that "Omegas are defective pursuant to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4", Compl. ¶ 10, that "Omegas do not and will not function in a significant percentage of instances," *id.*, by referencing data compilations depicting 40% failure rates in testing of Respondents' Omega brand fire sprinklers (List and Sum. of Doc. Ev. ¶ 1), and by referencing documents evidencing failure of Respondents' Omega fire sprinklers in actual fire situations (List and Sum. of Doc. Ev. ¶ 2). These enumerated allegations of malfunction are more than a sufficient factual predicate for the charges of defect and substantial product hazard stated in the Complaint. To the extent Respondents seek to argue that the Complaint is deficient because a specific failure mechansim is not enumerated, such pleading is not required either by the Act or under analogous tort principles. *See* 16 C.F.R. § 1115.4(e) (exhaust fan, which is intended to activate to remove carbon monoxide fans but consistently does not, is defective although cause of malfunction not positively identified); *see also* Restatement (Third) of Torts: Products Liability § 3 (1998) (discussing well-settled "malfunction" theory of defect). The Complaint need not be rewritten, and should not be dismissed, for an alleged lack of definiteness.

B. The List and Summary of Documentary Evidence Complies with the Commission's Rules of Practice for Adjudicatory Proceedings

Respondents also ask the Court to dismiss the Complaint because it "identifies" none of the documents that support the Complaint. Respondents' Memorandum, at 22.

The Commission's Rules of Practice for Adjudicative Proceedings at 16 C.F.R. § 1025.11(b)(3) requires that a "list and summary of documentary evidence supporting the charges" be attached to the Complaint. The rule does not call for the "comprehensive" summary Respondents desire, nor does it require Complaint Counsel to specifically "identify" documents, as Respondents demand. *See* Respondents' Memorandum at 25. It simply requires "a list and summary of documentary evidence." This is precisely what Complaint Counsel has provided. *See* List and Summary of Documentary Evidence.

Respondents' attempt to add to the regulations is unfounded, and their tactics can only be seen as an effort to delay this case. Respondents admit that they are aware of fires in which Omegas have reportedly failed to activate. Respondents have also tested thousands of Omega sprinklers, and found a significant number of failures. Respondents can, and already have, requested in discovery all of the documentary evidence supporting the staff's claims. Respondents' claims are unpersuasive, and do not remotely support a dismissal.

VII. CONCLUSION

Based on the foregoing, the Commission has jurisdiction under the Act over Omega fire sprinklers, and the Complaint and List and Summary of Documentary Evidence meet all applicable requirements. Complaint Counsel respectfully requests that Respondents' Motion to Dimiss be denied.

Dated: April 6, 1998

AFFIDAVIT OF FRANCIS J. TEEVAN

I, FRANCIS J. TEEVAN, hereby declare, under penalty of perjury, that the following is true and correct:

1. I am employed by the County of Fairfax, Virginia. My title is Captain II (Assistant Fire Marshal), Fire Prevention Division, Fire and Rescue Department. I have held this position for six and one-half years. My business address is: 4100 Chain Bridge Road, Fairfax, Virginia 22030.

2. In my capacity as Captain II (Assistant Fire Marshal), Fire Prevention Division, Fire and Rescue Department, Fairfax County, Virginia, I have personally seen installed Central Omega Flow Control sprinklers in several Fairfax County Public Schools and a Fairfax County Public Library. Based on inspection reports produced by Fire Inspectors under my command, I am also aware of Central Omega Flow Control sprinklers installed in homeless shelters in Fairfax County.

3. In my capacity as Captain II (Assistant Fire Marshal), Fire Prevention Division, Fire and Rescue Department, Fairfax County, Virginia, I have also personally seen installed Central Omega Model "M" sprinklers in a nursing home and in the INOVA/Fairfax Hospital. The Model "M" sprinklers were not used with exposed piping in either of these locations.

4. In my capacity as Captain II (Assistant Fire Marshal), Fire Prevention Division, Fire and Rescue Department, Fairfax County, Virginia, I have also personally seen installed Central Omega sprinklers in numerous residential occupancies and in facilities open to and used by the public.

5. Properly operating fire sprinklers are an integral part of a building's fire protection package. In a fire situation, the failure of a sprinkler to operate properly will allow the spread of fire. The occurrence of a fire is one of the most devastating phenomena known to mankind. Each year lives and property are lost due to fire. In Fairfax County, Virginia in 1997 there were 7 lives lost, 32 burn cases and $14,042,972 worth of property damage due to fire.

Date: April 3, 1998

Signed: _____
Captain II Francis J. Teevan

NATIONAL COMMISSION ON PRODUCT SAFETY REVISED PRODUCT LIST[1]

I. GENERAL HOUSEHOLD APPLIANCES INCLUDING BUT NOT LIMITED TO

Clothes washers without wringers or other dryers
Washing machines with wringers
Washing machines with spin dryers without thermal dryers
Washing machines with electric dryers
Washing machines with gas dryers
Electric dryers without washing machines attached
Ironers
Electric blankets and electric sheets
Electric heating pads
Electric fans
Sewing machines
Floor buffers and waxers
Electric rug cleaners
Vacuum cleaners
Electric sweepers
Automatic door openers and closers
Gas water heaters
Electric water heaters
Oil water heaters
Incinerators without gas or electric heat supply
Electric incinerators
Gas incinerators
Water fountains, with or without cooling or heating units
Water softeners and conditioners
Washing machines not otherwise specified
Clothes dryers, not otherwise specified
Water heaters, not otherwise specified
Incinerators, not otherwise specified

II. KITCHEN APPLIANCES INCLUDING BUT NOT LIMITED TO

Electric ranges with ovens, except self-cleaning ovens
Electric ranges without ovens
Gas ranges with ovens, except self-cleaning ovens
Gas ranges without ovens
Electric ovens separate from ranges
Gas ovens separate from ranges
Electric refrigerators
Gas refrigerators
Electric freezers
Gas freezers
Automatic corn poppers
Can openers, powered
Dishwashers
Electric blenders
Electric broilers
Electric coffeemakers and teapots
Cutlery, powered
Electric deep fryers
Electric defroster devices
Electric food warmers and hot trays
Electric fry pans and skillets
Electric griddles
Electric hot plates and grills
Electric ice-cream makers
Electric ice crushers
Electric ice makers, separate from refrigerators
Electric juicers
Electric kettles
Electric meat grinders
Electric mixers
Electric scissors
Electric slicers
Toasters
Electric waffle irons
Faucet water heaters
Garbage disposers
Irons with dry heat
Steam irons
Knife sharpeners
Rotisseries
Electric immersion heaters
Ranges, not otherwise specified
Ovens, not otherwise specified
Refrigerators, not otherwise specified
Freezers, not otherwise specified
Irons, not otherwise specified
Electric ovens, self-cleaning
Gas ovens, self-cleaning
Range and oven accessories (including racks, broiler pans, etc.)

III. SPACE HEATING, COOLING, AND VENTILATING APPLIANCES INCLUDING BUT NOT LIMITED TO

Electric air conditioners
Gas air conditioners
Fans, water cooled
Humidifiers
Vaporizers
Dehumidifiers
Ionizers
Broilers
Coal furnaces, including floor furnaces
Gas furnaces, including floor furnaces
Oil furnaces, including floor furnaces
Panel and cable electric radiant heat units
Electric space heaters
Gas space heaters and gas heating stoves, attached.
Note: For portable heaters see category XII, sports and recreation equipment
Kerosene space heaters and kerosene heating stoves, attached.
Fireplaces and wood or coal stoves, factory built
Chimneys, factory built
Electric furnaces, including floor furnaces
Other heating systems, including heat pumps
Radiators and hot water or steam pipes
Air conditioners, not otherwise specified
Furnaces, not otherwise specified
Space heaters, not otherwise specified
Heating stoves, not otherwise specified
Water heaters, not otherwise specified
Floor furnaces, not otherwise specified

IV. HOUSEWARES INCLUDING BUT NOT LIMITED TO

Can openers, unpowered
Chafing dish with open flame heaters
Table stoves - open flame
Non-electric coffee grinders
Coffee makers and teapots, unpowered
Cooking utensils and ovenware including glass
Cutlery, unpowered
Ironing boards and covers
Manual ice crusher
Manual juicers
Manual heat grinders
Pressure cookers and canners
Waste containers
Cutting and chopping devices including scissors
Candles and candleholders, including butane candles
Corkscrews and other opening devices
Flatware, except cutlery
Tableware, including insulated design

V. HOME COMMUNICATIONS AND ENTERTAINMENT APPLIANCES AND EQUIPMENT INCLUDING BUT NOT LIMITED TO

Television sets
Radios, and record players, including Hi-Fi and Stereo equipment
Sound and video recording and reproducing equipment (tape recorders and players)
Musical instruments including electric musical instruments
Motion picture and still cameras
Other photographic equipment and accessories
Movie projectors
Slide projectors
Intercommunication devices
Telephone and telephone accessories
Typewriters, electric and manual
TV and radio antennas
Art supplies and equipment
Clay, pottery and ceramic supplies and equipment
Printing presses

VI. HOME FURNISHING AND FIXTURES INCLUDING BUT NOT LIMITED TO

Beds, springs, mattresses, covers and pads
Chairs
Tables
Other furniture including multiple use and lawn furniture
Electrical outlets, built-in wiring devices, and distribution systems for use in or around the household
Electric power plants
Gas pipes, fittings and distribution systems
Plumbing fixtures and pipes, including sinks and toilets
Structural glass and glass doors, including bathtub and shower enclosures
Bathtub and shower enclosures of materials other than glass
Bathtub and shower structures other than doors and panels, including the tub, walls, handgrips, etc.
Runners and throw rugs
Carpeting including outdoor carpeting but excluding runners
Sheets and pillow cases
Pillows
Blankets, except electric and baby blankets
Drapes, curtains including plastic curtains and shower curtains
Step ladders
Straight ladders
Stepstools
Appliance cords, extension cords and replacement wire
Gas meters

1/In the case of certain product categories (primarily IX and XVI), some products may be subject to limited Federal regulations under existing laws. In each case, such products are listed here because all potential hazards are not subject to regulation or because some remedial means (such as labeling) are covered, while others (such as performance standards) are not.

Table 11 (continued)

Meters for LP gas
Electric meters
Gas lamps
Electric table lamps and floor lamps
Light bulbs
Electric light fixtures, attached
Electric clocks
Medicine cabinets
Gun cabinets, ammunition cabinets and racks
Other cabinets, shelves and storage areas
Sump pumps
Furniture, not otherwise specified
Fabrics not otherwise specified
Ladders or stepstools, not otherwise specified
Meters, not otherwise specified
Window shades and venetian blinds
Flashlights and electric lanterns
Mirrors and mirror glass
Glass - unknown origin

VII. HOME ALARM, ESCAPE, AND PROTECTION DEVICES INCLUDING BUT NOT LIMITED TO

Fire extinguishers
Fire and smoke alarms
Fire excape devices, including chain ladders
Burglar alarms
Ground fault circuit interrupters
Lighting arrestors, rods and grounding devices
Locks and padlocks

VIII. HOME WORKSHOR APPARATUS, TOOLS, AND ATTACHMENTS INCLUDING BUT NOT LIMITED TO

Power saws
Power drills
Power sanders
Power routers
Power lathes
Power grinders
Power jointers
Power shapers
Other portable and stationary power tools
Workshop manual tools and accessories
Torches
Welding equipment
Soldering guns and irons
Hoists, lifts, jacks and chains
Test equipment
Battery chargers
Batteries
Extension work lights and continuous use flood lights
Separate electric motors
Internal combustion engines, for use in or around the household
Automotive tools and accessories
Paint sprayers
Air compressors, separate

IX. HOME AND FAMILY MAINTENANCE PRODUCTS, INCLUDING BUT NOT LIMITED TO

Cleaning agents and compounds
Bleaches and dyes
Solvent based cleaning and sanitizing compounds
Waxes
Polishes
Fumigants
Paints, paint removers, brushes and rollers
Thinners
Adhesives and adhesive products including glues and tapes
Gasoline
Kerosene
Anti freeze
Lubricants
Alcohol
Caustics
Charcoal
Caulking compounds
Other chemicals, including photographic chemicals
Wallpaper cleaners and removers, including steamers
Other cleaning equipment

X. FARM EQUIPMENT INCLUDING BUT NOT LIMITED TO

Electric fences
Home pasteurizers
Cream Separaters

XI. PACKAGING AND CONTAINERS FOR HOUSEHOLD PRODUCTS INCLUDING BUT NOT LIMITED TO

Pressurized containers
Vacuum containers
Self-contained openers
Resealable closures
Child resistant closures
Glass bottles and containers
Containers made of materials other than glass, except vacuum or pressure containers
Plastic wrapping products, including plastic trash and garden bags
Paper and cardboard products, and other paper objects, including magazines, newspapers, books, etc.

XII. SPORTS AND RECREATIONAL EQUIPMENT INCLUDING BUT NOT LIMITED TO

Playground equipment, swings, slides and associated hardware.
Bicycles and bicycle equipment
Boats, motors and accessories for recreational use
Baseball equipment
Basketball and volleyball equipment.
Bowling equipment
Boxing and wrestling equipment
Croquet equipment
Exercise equipment
Fishing equipment
Football equipment
Golf equipment except golf carts
Golf carts
Hockey equipment, including ice skates
Lacrosse equipment
Skiing equipment, including skiis, poles, boots and bindings
Sleds and toboggans
Snowmobiles
Tennis equipment, including badminton and table tennis
Swimming and underwater sports equipment, including scuba accessories and spear guns
Headgear for cycling
Beach equipment
Stationary and portable grills, kerosene, charcoal and gas
Portable gasoline and kerosene stoves
Portable gasoline, alcohol, and gas heating equipment
Note: For attached heating devices see category III.
Gasoline, kerosene and propane lanterns and lamps
Battery powered cooking devices
Picnic equipment including coolers
Camping equipment including tents, cots, and sleeping bags
Camping trailers, other than mobile homes
Swimming and wading pools and associated equipment
Charcoal igniters, electrical or chemical
Rebound tumbling devices
Play houses and tree houses
Archery equipment and darts
Unlicensed motor scooters and go-karts
Gas, air and spring operated guns
Other special sports and camping clothing
Horseback riding equipment
Aquariums, including pumps, heaters and accessories

XIII. TOYS INCLUDING BUT NOT LIMITED TO

Wheeled toys - carrying the child, powered and unpowered including wagons, tricycles, stand-up scooters, pedal cars, sit-in airplanes, sit-in trucks
Non-mechanical dolls and toy animals
Mechanical dolls and toy animals including keywind and battery operated
Other windup and battery operated toys
Wheeled toys not carrying the child, powered and unpowered including toy cars, electric trains, and non-flying airplanes
Gasoline powered toys, including model airplanes
Electric games
Skates and skateboards
Kites and kite string
Pogo sticks and stilts
Toy guns and other toy weapons without projectiles
Toy guns and other toy weapons with projectiles
Fireworks, explosives and caps
Rocketry sets
Chemistry sets
Other science kits and toys
Flying devices, not gasoline or rocket powered
Other models and their construction materials. For glues see category IX.
Metal and plastic molding sets
Games, other than electric
Toy home equipment, including ovens, stoves, sinks, irons, sewing machines, washing machines, etc.
Children play tents, play tunnels and other enclosures
Toy balls and balloons
Inflated toys other than balloons
Blocks, pull toys, and similar items

XIV. YARD AND GARDEN EQUIPMENT INCLUDING BUT NOT LIMITED TO

Power mowers of all types
Hand mowers
Hand garden tools
Power trimmers and edgers
Garden tractors
Snow throwers and snow plows
Garden sprayers
Power tillers and cultivators
Other power garden tools
Outdoor lighting equipment
Chain saws

388-101 O - 70 - 8

Table 11 (continued)

Pumps including electric submersible fountain pumps
Greenhouse equipment
Garden hose, nozzles, and sprinklers
Winter manual yardtools
Insect traps and insecticide vaporizers, electrically operated
Yard decorative equipment including fish ponds, bird baths, planters, bird houses, etc.

XV. CHILD NURSERY EQUIPMENT AND SUPPLIES INCLUDING BUT NOT LIMITED TO

Highchairs
Changing tables
Infant seats
Cribs, including springs and mattresses
Carriages
Gates
Baby blankets, sheets, pads, pillows, etc. and other baby bedding equipment
Walkers
Bottles, nipples and related items
Bottle warmers
Sterilizers
Diapers and diaper pins, including disposable diapers
Playpens
Baby baths
Baby scales
Other nursery furniture and equipment, including baby rattles

XVI. PERSONAL USE ITEMS INCLUDING BUT NOT LIMITED TO

Razors and shavers
Hair dryers
Hair curlers
Cigarette, cigar and pipe lighters, and lighter fluid
Wigs
Eyeglasses, not including contact lenses
Eye protection devices, including light shields, sunglasses
Powered tooth brushes and picks
Sun lamps
Massage devices
Manicure devices
Saunas including facial saunas
Electric shoe polishers
Clothing
Footwear except for sports footwear
Other beauty aids, and jewelry
Ear protection devices, including noise plugs
Respiratory protection devices
Personal protection devices, including tear gas pens and tear gas guns
Hearing aids
Umbrellas
Wrist watches, wrist compasses, pendant watches, pocket watches, etc.
Luggage
Contact lenses

XVII. HOME STRUCTURES, CONSTRUCTION MATERIALS, INCLUDING BUT NOT LIMITED TO

Stairs, ramps and handrails, indoors and outdoord
Fireplaces, individually built
Insulation materials
Siding materials, including aluminum siding
Doors, trap doors, hatches and other ingress-egress devices

In the Matter of CENTRAL SPRINKLER CORP. 451 North Cannon Avenue Lansdale, PA 19446 and CENTRAL SPRINKLER CO. 451 North Cannon Avenue Lansdale, PA 19446 Respondents.	CPSC Docket No. 98-2 Subpoena of a Non-Party: ERE Yarmouth

TO: James Quille, President
ERE Yarmouth
3424 Peachtree Street
Suite 800
Atlanta, GA 30326

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that ERE Yarmouth and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16

C.F.R. Part 1025. The Subpoena requires that you testify at a deposition and produce documents.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she must respond to this Subpoena within 5 calendar days after receipt.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, Office of Compliance, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "ERE" refers to ERE Yarmouth, presently residing at 3424 Peachtree St., Suite 800, Atlanta, GA 30326, and Equitable Real Estate, previously residing at the same address, and any agent, subsidiary, affiliate, or division of either, doing business, or previously doing business, under the ERE name or any other name, or any entity in which ERE holds or shares an equity interest.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. "Corrective action" means any action taken with respect to remedying Omega sprinklers, including, but not limited to, replacement, repair, modification, retrofit, agreements to

conduct further testing on Omegas, refunds, discounted purchases of equipment, goods, or services, and settlement of legal claims.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing,

analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to matters referred to above on the 23rd day of April, 1998 at 9:00 a.m. and continuing thereafter until your testimony is concluded. You are also directed to produce copies of all records relating to servicing, testing, evaluating or analyzing Omegas and copies of all records relating to corrective action on Omegas.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that the Department of Fire Services and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and

2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you produce documents and tangible things.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she must respond to this Subpoena within 5 calendar days after receipt.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Department of Fire Services" refers to the Department of Fire Services within, or that is the very same entity as, the Office of the Massachusetts State Fire Marshal, and to any agent, affiliate, bureau, or division operating under the name or authority of the Department of Fire Services or Office of the Massachusetts State Fire Marshal.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. The term "affected Omega" refers to the Omega sprinkler or sprinklers that allegedly failed to activate properly in the fires and over which the Department of Fire Services has retained custody.

e. The term "the fire" or "the fires" refers to the fire that occurred on or about February 7, 1998 at a rooming house in Milford, Massachusetts and to the fire that occurred on or about March 1, 1998 in a dormitory at Montserrat College of Art in Beverly, Massachusetts.

f. The term "Vikings" refers to the Viking brand fire sprinklers located inside the dormitory at Montserrat College of Art that did activate in the fire.

g. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

h. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA DUCES TECUM

You are directed to produce the affected Omegas and Vikings and provide copies of all records (including any photographs, videotape, audiotape, and drawings) relating to the following:

(a) the investigation of the fires;

(b) the removal of affected Omegas and the Vikings;

(c) the installation, maintenance, or servicing of any fire sprinklers in the buildings in which the fires occurred;

(d) the sprinkler system design and calculations at the buildings in which the fires occurred; and

(e) any evaluations, tests, or reports on fire sprinklers or sprinkler water at the buildings in which the fires occurred.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. The term "affected Omega" refers to the Omega sprinkler or sprinklers that allegedly failed to activate properly in the fires and over which the Department of Fire Services has retained custody.

e. The term "the fire" or "the fires" refers to the fire that occurred on or about February 7, 1998 at a rooming house in Milford, Massachusetts and to the fire that occurred on or about March 1, 1998 in a dormitory at Montserrat College of Art in Beverly, Massachusetts.

f. The term "Vikings" refers to the Viking brand fire sprinklers located inside the dormitory at Montserrat College of Art that did activate in the fire.

g. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

h. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA DUCES TECUM

You are directed to produce the affected Omegas and Vikings and provide copies of all records (including any photographs, videotape, audiotape, and drawings) relating to the following:

(a) the investigation of the fires;

(b) the removal of affected Omegas and the Vikings;

(c) the installation, maintenance, or servicing of any fire sprinklers in the buildings in which the fires occurred;

(d) the sprinkler system design and calculations at the buildings in which the fires occurred; and

(e) any evaluations, tests, or reports on fire sprinklers or sprinkler water at the buildings in which the fires occurred.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that Hilton Hotels Corp. and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of

the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you testify at a deposition and produce documents and tangible things.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she must respond to this Subpoena within 5 calendar days.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment in accordance with 16 C.F.R. §§ 1015.18 and 1118.3(e).

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Hilton" refers to Hilton Hotels Corporation, whose headquarters presently are located at 9336 Civic Center Drive, Beverly Hills, California 90210, and any agent, subsidiary, affiliate, or division doing business under the Hilton name or any other name, or any entity in which Hilton has either an ownership interest or property management interest.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. "Corrective action" means any action taken with respect to remedying Omega sprinklers, including, but not limited to, replacement, repair, modification, retrofit, agreements to conduct further testing on Omegas, refunds, and discounted purchases of equipment, goods, or services, and settlement of

legal claims.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 20th day of April 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce with you the Omegas identified on Attachment A and to provide copies of all records relating to servicing, testing, evaluating or analyzing Omegas and copies of all records relating to corrective action on Omegas.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that Hilton Hotels Corp. and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of

the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you testify at a deposition and produce documents and tangible things.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individual named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she must respond to this Subpoena within 5 calendar days.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment in accordance with 16 C.F.R. §§ 1015.18 and 1118.3(e).

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission, Legal Division, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Hilton" refers to Hilton Hotels Corporation, whose headquarters presently are located at 9336 Civic Center Drive, Beverly Hills, California 90210, and any agent, subsidiary, affiliate, or division doing business under the Hilton name or any other name, or any entity in which Hilton has either an ownership interest or property management interest.

b. The term "Central" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446, and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of automatic fire sprinkler, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, and Flow Control Pendent.

d. "Corrective action" means any action taken with respect to remedying Omega sprinklers, including, but not limited to, replacement, repair, modification, retrofit, agreements to conduct further testing on Omegas, refunds, and discounted purchases of equipment, goods, or services, and settlement of

legal claims.

e. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

f. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 20th day of April 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce with you the Omegas identified on Attachment A and to provide copies of all records relating to servicing, testing, evaluating or analyzing Omegas and copies of all records relating to corrective action on Omegas.

SUBPOENA

The staff of the Consumer Product Safety Commission ("staff") is conducting administrative litigation seeking an order determining that "Omega" series fire sprinklers manufactured by Central Sprinkler Corporation contain a defect which creates a substantial product hazard. 15 U.S.C. § 2064. The staff believes that Factory Mutual Research Corporation and its officers, employees, and agents possess or control information that may assist in the determination. Therefore, the

Commission authorizes issuance of this Subpoena to carry out its specific regulatory functions under Sections 5 and 27(b)(1), (3) & (4) of the Consumer Product Safety Act, 15 U.S.C. §§ 2054 and 2076(b)(1), (3) & (4), and 16 C.F.R. Part 1025. The Subpoena requires that you testify at a deposition and produce documents and tangible things.

I. GENERAL INSTRUCTIONS

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individuals named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she or they must respond to this Subpoena within 5 calendar days after receipt.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission,

Division of Administrative Litigation, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Factory Mutual" or "FM" refers to Factory Mutual Research Corporation, presently residing at 1157 Boston-Providence Turnpike, Norwood, MA 02062, and any agent, subsidiary, affiliate, or division doing business under the Factory Mutual name or any other name.

b. The term "Central Sprinkler" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446 and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of sprinklers, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, Flow Control Pendent.

d. The term "Straight-on Sprinkler" refers to an automatic fire sprinkler and sprinkler design, predecessor to the Omega, invented by Mr. Wilfred V. Johnson (deceased), with U.S. Patent

No. 4,465,141 issued to U.S. Fire Control on Aug. 14, 1984. (Patent is attached.)

e. The term "On-Off Fire Sprinkler" refers to any one or more automatic sprinklers and sprinkler designs, predecessor to the Flow Control, invented by Mr. Wilfred V. Johnson (deceased), with U.S. Patent Nos. Des. 231,529, issued April 30, 1974; 3,734,191, issued May 22, 1973; 3,802,510, issued April 9, 1974; 3,877,527, issued April 15, 1975; 3,911,940, issued Oct. 14, 1975; 3,991,829, issued Nov. 16, 1976; and 4,359,098, issued Nov. 16, 1982. (Patents are attached.)

f. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or

programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

g. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

h. "June 17 answer and response" refers to FM's answer and response, dated June 17, 1997, to a special order and subpoena issued to it by the CPSC, dated May 13, 1997.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 27th day of April 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce any On-Off or Straight-On Sprinkler and any Omega prototype in FM's possession or control. You are further directed to produce copies of records relating to the sampling and testing of Omegas since the June 17 answer and

response, and copies of all records relating to the testing, analysis, or demonstration of the Straight-On or On-Off Sprinkler.

The Commission's rules for adjudications govern this Subpoena. 16 C.F.R. Parts 1025. Section 1025.38 sets forth procedures for motions to quash or modify the terms of this Subpoena.

This Subpoena shall be answered by the organization and individuals named above, or such other responsible individual who has the same or greater knowledge of and control over the information being sought. He or she or they must respond to this Subpoena within 5 calendar days after receipt.

The public disclosure of any information provided to the Commission under Subpoena shall be governed by the Freedom of Information Act, 5 U.S.C. § 552 and the Commission's regulations under that Act, 16 C.F.R. Part 1015. If you wish to request confidential treatment for any information provided, you should submit a request for such treatment.

Questions about this Subpoena should be directed to Eric H. Singer, Trial Attorney, Consumer Product Safety Commission,

Division of Administrative Litigation, 4330 East-West Highway, Bethesda 20814, (301) 504-0626, Ext. 1376.

II. DEFINITIONS

For purposes of this Subpoena, the following definitions apply:

a. The term "Factory Mutual" or "FM" refers to Factory Mutual Research Corporation, presently residing at 1157 Boston-Providence Turnpike, Norwood, MA 02062, and any agent, subsidiary, affiliate, or division doing business under the Factory Mutual name or any other name.

b. The term "Central Sprinkler" refers to Central Sprinkler Corporation, presently residing at 451 N. Cannon Avenue, Lansdale, Pennsylvania 19446 and any agent, subsidiary, affiliate, or division doing business under the Central name or any other name.

c. The term "Omega" or "Omega sprinkler" includes, but is not limited to, the following sub-types or models of sprinklers, all manufactured by Central: AC; C-1, C-1A, C-1A Pro, C-1A PRO ID; R-1, R-1A, R-1M, EC-20, EC-20A; EC-20 AID; Model M Upright, Model M Pendent, Model M Sidewall, HEC-12, HEC-12 ID; HEC-12 PRO; HEC-12A, HEC-12 RES; HEC-20; HEC-20 ID; Flow Control Pendent Flush, Flow Control Pendent.

d. The term "Straight-on Sprinkler" refers to an automatic fire sprinkler and sprinkler design, predecessor to the Omega, invented by Mr. Wilfred V. Johnson (deceased), with U.S. Patent

No. 4,465,141 issued to U.S. Fire Control on Aug. 14, 1984. (Patent is attached.)

e. The term "On-Off Fire Sprinkler" refers to any one or more automatic sprinklers and sprinkler designs, predecessor to the Flow Control, invented by Mr. Wilfred V. Johnson (deceased), with U.S. Patent Nos. Des. 231,529, issued April 30, 1974; 3,734,191, issued May 22, 1973; 3,802,510, issued April 9, 1974; 3,877,527, issued April 15, 1975; 3,911,940, issued Oct. 14, 1975; 3,991,829, issued Nov. 16, 1976; and 4,359,098, issued Nov. 16, 1982. (Patents are attached.)

f. The term "record" or "records" means the original and any non-identical copy of any written, graphic, photographic, audio, or visual materials, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, telefacsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, transcripts, minutes, reports, and recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendar, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, cards, printouts or

programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated.

g. "Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing, or bearing any logical or factual connection with the matter discussed.

h. "June 17 answer and response" refers to FM's answer and response, dated June 17, 1997, to a special order and subpoena issued to it by the CPSC, dated May 13, 1997.

III. SUBPOENA AD TESTIFICANDUM AND DUCES TECUM

You are ordered to appear at the Commission's headquarters at 4330 East West Highway, Bethesda, MD 20814 to testify with respect to the matters referred to above on the 27th day of April 1998 at 9:30 a.m. and continuing thereafter until your testimony is concluded.

You are also directed to produce any On-Off or Straight-On Sprinkler and any Omega prototype in FM's possession or control. You are further directed to produce copies of records relating to the sampling and testing of Omegas since the June 17 answer and

response, and copies of all records relating to the testing, analysis, or demonstration of the Straight-On or On-Off Sprinkler.

MOTION FOR LEAVE TO SUBMIT REPLY BRIEF
IN SUPPORT OF THE MOTION TO DISMISS
OF RESPONDENTS CENTRAL SPRINKLER CORPORATION
AND CENTRAL SPRINKLER COMPANY

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") filed a Motion To Dismiss the administrative Complaint on March 26, 1998. Complaint Counsel filed its Response on April 6, 1998. Because Complaint Counsel's Response misstates or misapprehends respondents' arguments and the applicable caselaw, respondents hereby seek leave to file a Reply Brief. The Reply Brief is attached hereto as Exhibit "A."

WHEREFORE, Central respectfully requests that the Administrative Law Judge grant

this Motion for leave to submit reply brief.

REPLY BRIEF IN SUPPORT OF THE MOTION TO DISMISS OF RESPONDENTS CENTRAL SPRINKLER CORPORATION AND CENTRAL SPRINKLER COMPANY

I. INTRODUCTION

Because the administrative Complaint in the above-referenced matter would expand jurisdiction far beyond the boundaries set by the Consumer Product Safety Act, respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") filed a Motion To Dismiss the administrative Complaint on March 26, 1998 (hereinafter "Mot. to Dismiss"). Complaint Counsel filed their Response on April 6, 1998. Complaint Counsel's Response embraces a distorted view of the Consumer Product Safety Commission's ("CPSC") jurisdiction -- essentially advocating a position that would set no limits to CPSC jurisdiction. Moreover, the Response does not properly construe or address the key case applicable to deciding this issue. Accordingly, Central hereby files its Reply to Complaint Counsel's Response.

II. LEGAL ARGUMENT

A. The CPSC Complaint Counsel's View Of CPSC Jurisdiction Is Overbroad, Incorrect And Not Supported By Law.

According to Complaint Counsel's view of jurisdiction under the Consumer Product Safety Act, 15 U.S.C. § 2051 et seq. ("the Act"), there are essentially no limits to CPSC jurisdiction. To Complaint Counsel, as long as an item is a "distinct article" -- even if fully integrated into, and an inherent part of, building construction -- it is subject to jurisdiction under the Act. Moreover, despite the express language of the Act and caselaw regarding industrial users, Complaint Counsel recognizes no limits to the types of buildings and usages covered by the Act. Because Complaint Counsel's view of CPSC jurisdiction is both incorrect and would dramatically expand jurisdiction under the Act, the Administrative Law Judge should reject Complaint Counsel's arguments and grant the respondents' Motion To Dismiss.

1. Complaint Counsel Does Not Properly Address Anaconda And Its Discussion Of Building Components.

Complaint Counsel's response focuses first on the fact that Omega sprinkler heads are distinct articles of commerce, as opposed to being items in an intermediate stage of production. (Compl. Counsel Response in Opposition to Mot. to Dism., pp. 5-6.) (hereinafter "Response"). Central does not dispute that point. That fact, however, is not dispositive in this matter. The issue here is whether a fundamental, integral component of a building's structure is a consumer product.

Similarly, Complaint Counsel's attempt to distinguish Consumer Product Safety Commission v. Anaconda Company, 593 F.2d 1314 (D.C. Cir. 1979), from Kaiser Aluminum and Chemical Corporation v. Consumer Product Safety Commission, 574 F.2d 178 (3d Cir.),

cert. denied, 439 U.S. 881 (1978), and to ignore the former while adopting the latter, is unavailing. Complaint Counsel asserts that because Kaiser involved wiring and Anaconda involved wiring systems, and because Complaint Counsel is attempting to recall only Omega sprinkler heads rather than the entire sprinkler system of which the sprinkler heads are an integral, fundamental part, then Kaiser is controlling. This argument fails on several counts.

First, the District of Columbia Circuit did not base its decision in Anaconda on the "system versus article" distinction that Complaint Counsel attempts to draw. To the contrary, the crux of the Court's decision focused on the fact that housing is not a consumer product, as housing itself is not be used "in or around" a household or residence, as required by the Act. Anaconda, 593 F.2d at 1320, 1321. The court noted that the CPSC

> has taken the position that its jurisdiction extends to every component part of a dwelling including the central wiring and plumbing systems as well as the wall and flooring systems and their various building components. Such an extension of the statutory language would seem to ignore a contrary congressional intention and potentially raises significant problems of federalism in areas of building construction currently regulated extensively by local jurisdictions.

Id. at 1320 (emphasis added).

Contrary to Complaint Counsel's argument in the instant matter, the Anaconda court did not base its opinion on the distinction between systems and distinct components of systems. Rather, as noted above, the Court recognized that Complaint Counsel was arguing that the CPSC had jurisdiction over both systems and system components in building construction. The Anaconda court rejected that argument in toto, observing that even the CPSC's counsel "had obvious difficulty" defending the position at oral argument. Id. In a telling colloquy cited by

the Anaconda court, the CPSC's counsel was unable to identify a single component of a house that would not be subject to CPSC regulation under the CPSC's view of its jurisdiction.

> COUNSEL FOR THE COMMISSION: No, Your Honor, what I am trying to say is that there may be many products within the household environment that are not consumer products within the definition.
>
> THE COURT: Such as what?
>
> COUNSEL FOR THE COMMISSION: Well.
>
> THE COURT: Under your theory.
>
> COUNSEL FOR THE COMMISSION: Your Honor, there may be a brick.
>
> THE COURT: Pardon?
>
> COUNSEL FOR THE COMMISSION: A brick, which is not transported in interstate commerce made in a local jurisdiction. Now, that brick may not present any case for federal jurisdiction.
>
> THE COURT: Suppose you conclude it does?
>
> COUNSEL FOR THE COMMISSION: Well, if we conclude that it does, it possibly would be a consumer product.

Id. at 1321 n.20. Complaint Counsel here takes the same position, that if it concludes an item is a consumer product, then it is.

Second, although the Anaconda court observed that Kaiser had involved aluminum wiring, while Anaconda concerned aluminum wiring systems, that difference did not drive the Anaconda decision, as discussed above. To the contrary, the Anaconda court merely observed that the two products were different from a collateral estoppel perspective, and hence the issues before the two courts was not the same. Anaconda, 593 F.2d at 1322.

Complaint Counsel's Response ignores the basic meaning of Anaconda -- fundamental, key products and integral product components used in building construction are not consumer products because the building itself is not a consumer product under the Act's "in or around" language. Thus, even if Omega sprinkler heads are distinct articles, they are available to building owners only as an integral component part of a sprinkler system, which system is an integral component part of the building structure. (Aff. of Carmine Schiavone, attached to Mot. to Dismiss as Exhibit "A," ¶¶ 6, 8).[1/]

As Central established, sprinkler systems and the attendant sprinkler heads are a fixed and integral part of a building's basic structure and are incorporated into the building's fundamental structure as constructed. (Mot. to Dismiss, pp. 14-15; Aff. of Frank Hill, attached to Mot. to Dismiss as Exhibit "B," ¶¶ 3, 10, 11.) As discussed in the affidavits, sprinkler heads have no use as a free standing item, but are designed to be integrated into a building's overall sprinkler system. (Schiavone Aff. ¶ 6.) Hence, they are not marketed or sold to building owners. (Schiavone Aff. ¶¶ 8-10.) Indeed, sprinkler systems as a whole also are not marketed or sold to building owners, who acquire sprinkler systems and sprinkler heads only as part of the overall building after an installation contractor has designed, selected and installed the sprinkler system

---

1/ Complaint Counsel attempts to avoid the affidavits attached to respondents' Motion To Dismiss on the ground that they were not sworn before a notary. (Response, p. 12, n.5). As provided in 28 U.S.C. § 1746, any matter permitted to be supported by an affidavit in writing of a person may, "with like force and effect, be supported, evidenced, established or proved by the unsworn declaration . . ., in writing of such person which is subscribed by him as true under penalty of perjury, and dated, in substantially the following form . . . ." 28 U.S.C. § 1746. The affidavits of Carmine Schiavone and Frank Hill, signed under penalty of perjury and dated, comport with the statutory form. Complaint Counsel's attempt to exclude the affidavits must be rejected.

and sprinkler heads. (Hill Aff. ¶¶ 3, 6, 7.) Sprinkler systems and sprinkler heads are installed in buildings even before the ceilings and walls are built. (Hill Aff. ¶¶ 10, 11.)

Nowhere in its Response does Complaint Counsel refute Central's evidence regarding sprinkler system design, sprinkler system and sprinkler head installation, or their incorporation into the fundamental structure of a building. Because Central's unrefuted affidavits establish that a sprinkler system, including the sprinkler heads, is designed and constructed as part of a building's fundamental construction, it is clear that, despite Complaint Counsel's attempt artificially to separate the two, the sprinkler system and sprinkler heads cannot be divorced from one another.[2/]

Complaint Counsel attempts to denigrate Central's argument by asserting that "[r]espondents claim that because 'housing' is not within the Commission's jurisdiction, anything 'incorporated' therein is also outside the Commission's reach." (Response, p. 14.) Complaint Counsel implies that Central's position, therefore, is that any item installed in a residence is not a consumer product. Central's argument, to the contrary, goes far beyond "installation" or the law regarding fixtures. As Central's Motion and supporting affidavits make clear, a sprinkler system and sprinkler heads are more than mere fixtures. They are not simply attached to a building. Rather, they become part of the basic building structure itself, built into the internal structure with drywall, ceiling materials, flooring and walls built around them at a later stage of construction. (Hill Aff. ¶¶ 10, 11.) Thus, Central's argument did not rely on the

---

2/ Although Complaint Counsel appears to concede that sprinkler systems are not within the CPSC's jurisdiction, (Response, p. 7), it is unclear how Complaint Counsel can then distinguish sprinkler heads from sprinkler piping, sprinkler valves or any other "distinct" items that are incorporated into a sprinkler system as system components.

law of fixtures to support its position that sprinkler systems and sprinkler heads, like bricks, roof trusses, and the wiring system in Anaconda, are a fundamental part of a building's structure and therefore, like a building itself, are not consumer products.

2. Complaint Counsel's Interpretation Of The Act Eliminates The "Use" Requirement.

In its discussion of "use" of consumer products, Complaint Counsel argues that Central is creating a new statutory requirement. (Response, pp. 12-13.) To the contrary, it is Complaint Counsel's interpretation of "use" that would read the requirement out of the Act. As Central argued on pages 10-11 of its Motion To Dismiss, although the Act requires that a consumer product be one produced or distributed for consumers' "use in or around a permanent or temporary household or residence . . . .," the Act does not define "use." The requirement, however, can only be understood as requiring some sort of consumer interaction with the product -- even if, as in Kaiser, the interaction is one step removed from direct use, i.e., plugging an electric razor into branch circuit wiring. Kaiser, 574 F.2d at 180. Contrary to Complaint Counsel's insinuation, Central does not suggest that a consumer must have control over a product in order for it to be used. There must, however, be some sort of enjoyment, holding, occupation, or availment of the product. See Consumer Product Safety Comm'n v. Chance Mnfg. Co., 441 F. Supp. 228, 233 (D.D.C. 1977) (although riders of amusement park "Zipper" do not control, own or possess ride, their occupancy of its cars satisfies the "personal use, consumption or enjoyment" clause).

Consumers in no way interact with sprinkler systems or sprinkler heads. Unlike a fire extinguisher, they do not pick up a sprinkler head and spray it onto a localized fire. Unlike a

smoke detector, consumers do not purchase sprinkler heads off the shelf for self-installation. Under Complaint Counsel's interpretation, mere exposure to a product would be "use" -- a definition that Congress eschewed when it rejected the Senate's definition of "use" as including "exposure to" a product. (See Mot. to Dism., pp. 10-11.) Indeed, under Complaint Counsel's definition of "use," a building's roof trusses or foundation would be consumer products because consumers are "exposed to the risk caused by their failure to function," (Response, p. 13); to wit, exposed to harm if the roof collapses or the foundation fails to support the building. Such a definition of "use" would eliminate a key requirement of the Act and is therefore incorrect.

3. Complaint Counsel's Reliance on Kaiser Is Misplaced.

Not only does Complaint Counsel fail to address the rationale of Anaconda or the "use" discussion in Kaiser, but Complaint Counsel's heavy reliance on other aspects of Kaiser is misplaced. First, the Kaiser decision is, simply, poorly-reasoned. It fails to address the important issues raised and properly considered in Anaconda, the better-reasoned decision. The Kaiser court focused on whether branch circuit wiring is an "article." Kaiser, 574 F.2d at 180. In so doing, the Court did not discuss the textual requirement in the Act that a consumer product be an article used "in or around" a household, residence or school. 15 U.S.C. § 2052(a)(1).[3/]

Moreover, the Kaiser court also considered that branch circuit wiring is used and enjoyed by consumers "whenever they turn on an electric switch." Kaiser, 574 F.2d at 180. The Court

---

3/ Indeed, although Complaint Counsel argues that Kaiser rejected the "in or around" discussion and the argument that fundamental components of housing, like housing itself, are not consumer products, Complaint Counsel admits that Kaiser referred to such arguments only within the context of the manufacturer's argument that branch circuit wiring was not an "article." (Response, p. 14.) Central does not assert that sprinkler heads are not "articles."

noted that the wiring made it possible for consumers to use other consumer products, stating, "it would be impossible for a consumer to enjoy the use of an electric razor without also enjoying the use of the branch circuit wiring to which it connected." Id. In contrast, consumers use neither sprinkler systems nor sprinkler heads to enjoy other consumer products, and they do not use or control the sprinkler heads themselves. (Hill Aff., Ex. B, ¶ 24.) In ignoring that the Kaiser court relied, in part, on consumers' use of branch wiring in order to use and enjoy other consumer products in determining that branch wiring is a consumer product, Complaint Counsel thus ignores a key distinction between sprinkler heads and consumer products.

Further, to the extent that Kaiser holds that fundamental components of building structures -- as opposed to mere fixtures -- are consumer products, it is incorrect. In reaching its conclusion, the Kaiser court stated that if the CPSC lacked jurisdiction over wiring, "then many consumer products in common use such as furnaces, water heaters, dishwashers, and lighting fixtures would be excluded from coverage." Kaiser, 574 F.2d at 180. One does not necessarily follow the other, particularly where the fixtures are marketed to, purchased by or distributed to, and actively used by, consumers. Thus, while the listed items may be fixtures, and also consumer products, sprinkler heads, in contrast, are not consumer products because they are not merely fixtures. Rather, they are fundamental components of the building itself, incorporated into the inherent structure during construction, and, further, are neither marketed nor sold to consumers. In contrast, furnaces, water heaters, dishwashers and lighting fixtures are marketed and sold to consumers, are not part of the internal building structure itself, and are readily used directly by consumers. Thus, whereas Kaiser is correct in providing that the examples it lists are consumer products, it is incorrect to extend that rationale from mere fixtures to inherent

components of the building structure itself. The Anaconda court recognized the distinction, and its holding thus has the stronger basis.

4. Without A Clear Statement Of Congressional Intent, The Act Cannot Be Construed To Displace An Area Closely Regulated By State And Local Authorities.

Complaint Counsel misapprehends Central's discussion of the extensive state and local codes that already exist to regulate building construction. Central does not suggest that if the CPSC had the authority to regulate sprinkler systems and sprinkler heads, then such regulations could not displace state and local regulations. Rather, Central's argument is that in construing the Act, the Administrative Law Judge must look to Congress' intent to ascertain what types of products the Act was meant to address and what perceived regulatory gaps the Act was intended to fill. As Anaconda recognized, building construction is already extensively regulated by local jurisdictions. Anaconda, 593 F.2d at 1320. Thus, without a clear statement that Congress intended the Act to displace that entire body of regulatory codes, the Act cannot, and should not, be so broadly construed.

Further, Complaint Counsel seriously misstates the extent to which sprinkler systems and sprinkler heads are regulated by local building codes. Complaint Counsel states that local codes require only that sprinklers be approved, and that Central "provides no evidence that the safety or efficacy of the sprinklers themselves . . . are regulated by state or local authorities." (Response, pp. 19-20.) That statement illustrates precisely why the CPSC, in contrast to the experienced fire safety professionals who write and enforce building and fire codes, regulations and standards, is ill-equipped to regulate the fire sprinkler industry. Were Complaint Counsel more experienced in building codes and sprinkler regulations, it would recognize that all three building codes cited

by Central incorporate by reference the standards of the National Fire Protection Association ("NFPA"), and that NFPA standards detail virtually every aspect of implementing the codes' fire safety provisions. For example, although the BOCA Code attached to Central's Motion To Dismiss as Exhibit "C," says only that a sprinkler system "shall be designed and installed in accordance with NfiPA [NFPA] 13," that simple reference to NFPA 13 incorporates an entire volume over 130 pages long of specific instructions, technical requirements and specifications governing all aspects of sprinkler system installation, including the sprinkler heads themselves. (See NFPA 13, attached hereto as Exhibit "B.") Thus, Complaint Counsel's assertion that sprinklers are not sufficiently regulated by local codes, which incorporate NFPA 13, evidences how dangerously ignorant Complaint Counsel is about the very products it demands to regulate. Moreover, even a brief examination of NFPA 13 indicates the extensive, detailed, technical standards that would be displaced by an exercise of CPSC's rulemaking authority. As Anaconda wisely recognized, Congress, in passing the Act, did not intend to impose federal regulation on an area closely and effectively regulated by knowledgeable and experienced local jurisdictions. Anaconda, 593 F.2d at 1320.

5. In Ignoring The Statutory Exclusion For Industrial Products, Complaint Counsel Recognizes No Limit On CPSC's Regulatory Authority.

Accepting Complaint Counsel's interpretation of the Act and pertinent caselaw means accepting the proposition that there are no jurisdictional limits to the CPSC's authority, and that the CPSC can recall items from any location and from any kind of use, as long as the item is used somewhere by consumers in a consumer setting. Given that the Act expressly excludes, inter

alia, industrial products and products associated with risks that can be addressed by OSHA, Complaint Counsel's view of jurisdiction as limitless and unbounded is incorrect.

As argued in Central's Motion To Dismiss, the Act expressly excludes from CPSC authority articles "not customarily produced or distributed for sale to, or use or consumption by, or enjoyment of, a consumer." 15 U.S.C. § 2052(a)(1)(A). (Mot. To Dismiss, pp. 9, n.3; 19-21.) Complaint Counsel, despite its reliance on Kaiser, ignores both the text of the Act and the Kaiser court's recognition that the Act "undoubtedly intended to exclude industrial products, on the theory that industrial purchasers are better able to protect themselves . . . ." Kaiser, 574 F.2d at 180-81. Further, as the Court stated, citing the legislative history of the Act, the "occasional use of industrial products by consumers would not be sufficient to bring the product under the Commission's jurisdiction."[4/] Id. at 181. By Complaint Counsel's logic, once an item is identified as a consumer product in one setting, it can be recalled by the CPSC no matter where it is located and regardless of the commercial or industrial nature of the product. Such "logic" disregards the statutory exception, ignores courts' recognition that industrial users are well-poised to protect themselves, and means the CPSC's jurisdiction would be virtually limitless.

In the same vein, while conceding that the CPSC lacks authority to regulate where potential risks in the workplace can be addressed under OSHA, Complaint Counsel asserts nonetheless that it can recall sprinkler heads from workplaces as long as OSHA has not sufficiently regulated risks associated with a particular product. (Response, p. 17.) Sprinkler

---

4/ Thus, despite Complaint Counsel's affidavit from Francis Teevan alleging that he has seen certain industrial/commercial Omega models in a nursing home and hospital, even under Kaiser, such occasional "crossover" use would not bring the commercial/industrial models within the CPSC's jurisdiction. Kaiser, 574 F.2d at 181.

systems and sprinkler heads are specifically addressed in OSHA standards, which regulate the overall fire safety of workplaces. Again, by Complaint Counsel's logic, as long as OSHA has not taken the precise action that Complaint Counsel wants the CPSC to take, then the CPSC can step into the breach. As above, this "logic" overstates and oversteps the authority granted to the CPSC by the Act, and it must be rejected.

B. The Complaint And List Of Documents Do Not Comply With CPSC Regulations.

Although purporting to rely on the pleading rules of the Federal Rules of Civil Procedure, Complaint Counsel does not address the numerous cases cited by Central in which parties were ordered under the Federal Rules to plead more specifically their allegations of, e.g., product defects, misappropriation, conspiracy and negligence. (Mot. To Dismiss, pp. 23-24.) The Complaint alleges only that Omega sprinklers could fail to function as a result of a failure to operate. Such circular reasoning does not comply with 16 C.F.R. § 1025.11(b)(3) because it does not inform Central with "reasonable definiteness of the factual basis or bases" of Complaint Counsel's charges of violation or hazard. Further, Complaint Counsel's Response purports to have evidence of "thousands of failures of Omega sprinklers," (Response, p. 2), yet admits that it is aware of only eight alleged failures during fires out of approximately 10 million Omega sprinklers manufactured since 1982. (Id., pp. 1, 2.) Complaint Counsel's statistics alone -- eight fires out of 10 million sprinklers sold over a 15-year period-- make clear that this is not an instance where a substantial number of products do not work.[5/]

5/ In its original brief in support of the Motion to Dismiss, Central addressed the number of reported fires allegedly concerning Omegas. (See Mot. to Dismiss, pp. 5-6 and n.2.)

Moreover, Complaint Counsel's view of what constitutes a sufficient list of documents makes a mockery of the regulations' requirement that a complaint attach a list and summary of documentary evidence. Given the serious allegations of the Complaint and the complex technical issue underlying those allegations, a mere recitation of : "Data compilations depicting over 40% failure rates in testing of Central's Omega brand fire sprinklers" and "Documents evidencing failure of Omega fire sprinklers in actual fire situations" hardly satisfies the requirement that a "list and summary of documentary evidence supporting the charges shall be attached" to the Complaint. 16 C.F.R. § 1025.11(b)(3). Moreover, it is difficult to believe that Complaint Counsel purports to base this action solely on documents relating to a small number of fires and laboratory test results. The regulations were promulgated, inter alia, to permit respondents to understand the allegations and documentary bases supporting them. Complaint Counsel has not complied with these requirements and their hide-the-ball tactics should not be condoned.

Because the administrative Complaint does not comply with the pleading requirements of the CPSC's own regulations, it must be dismissed or, at a minimum, repleaded with greater specificity.

III. CONCLUSION

For all of the foregoing reasons, in addition to those argued in Central's Motion To Dismiss, Central respectfully requests that the Administrative Law Judge grant Central's Motion To Dismiss.

Respectfully submitted,

J. Gordon Cooney, Jr.

NOTICE

All questions or other communications relating to this document should be sent only to NFPA headquarters, addressed to the attention of the Committee responsible for the document.

For information on the procedures for requesting Technical Committees to issue Formal Interpretations, proposing Tentative Interim Amendments, proposing amendments for Committee consideration, and appeals on matters relating to the content of the document, write to the Secretary, Standards Council, National Fire Protection Association, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101.

A statement, written or oral, that is not processed in accordance with Section 5 of the Regulations Governing Committee Projects shall not be considered the official position of NFPA or any of its Committees and shall not be considered to be, nor be relied upon as, a Formal Interpretation.

Users of this document should consult applicable federal, state and local laws and regulations. NFPA does not, by the publication of this document, intend to urge action that is not in compliance with applicable laws, and this document may not be construed as doing so.

Policy Adopted by NFPA Board of Directors on December 3, 1982

The Board of Directors reaffirms that the National Fire Protection Association recognizes that the toxicity of the products of combustion is an important factor in the loss of life from fire. NFPA has dealt with that subject in its technical committee documents for many years.

There is a concern that the growing use of synthetic materials may produce more or additional toxic products of combustion in a fire environment. The Board has, therefore, asked all NFPA technical committees to review the documents for which they are responsible to be sure that the documents respond to this current concern. To assist the committees in meeting this request, the Board has appointed an advisory committee to provide specific guidance to the technical committees on questions relating to assessing the hazards of the products of combustion.

Licensing Provision—This document is copyrighted by the National Fire Protection Association (NFPA).

---

1. Adoption by Reference—Public authorities and others are urged to reference this document in laws, ordinances, regulations, administrative orders, or similar instruments. Any deletions, additions, and changes desired by the adopting authority must be noted separately. Those using this method are requested to notify the NFPA (Attention: Secretary, Standards Council) in writing of such use. The term "adoption by reference" means the citing of title and publishing information only.

2. Adoption by Transcription—A. Public authorities with lawmaking or rule-making powers only, upon written notice to the NFPA (Attention: Secretary, Standards Council), will be granted a royalty-free license to print and republish this document in whole or in part, with changes and additions, if any, noted separately, in laws, ordinances, regulations, administrative orders, or similar instruments having the force of law, provided that: (1) due notice of NFPA's copyright is contained in each law and in each copy thereof; and (2) that such printing and republication is limited to numbers sufficient to satisfy the jurisdiction's lawmaking or rule-making process. **B.** Once this NFPA Code or Standard has been adopted into law, all printings of this document by public authorities with lawmaking or rule-making powers or any other persons desiring to reproduce this document or its contents as adopted by the jurisdiction in whole or in part, in any form, upon written request to NFPA (Attention: Secretary, Standards Council), will be granted a nonexclusive license to print, republish, and vend this document in whole or in part, with changes and additions, if any, noted separately, provided that due notice of NFPA's copyright is contained in each copy. Such license shall be granted only upon agreement to pay NFPA a royalty. This royalty is required to provide funds for the research and development necessary to continue the work of NFPA and its volunteers in continually updating and revising NFPA standards. Under certain circumstances, public authorities with lawmaking or rule-making powers may apply for and may receive a special royalty where the public interest will be served thereby.

3. Scope of License Grant—The terms and conditions set forth above do not extend to the index to this document.

(For further explanation, see the Policy Concerning the Adoption, Printing, and Publication of NFPA Documents, which is available upon request from the NFPA.)

Statement on NFPA Procedures

This material has been developed under the published procedures of the National Fire Protection Association, which are designed to assure the appointment of technically competent Committees having balanced representation. While these procedures assure the highest degree of care, neither the National Fire Protection Association, its members, nor those participating in its activities accept any liability resulting from compliance or noncompliance with the provisions given herein, for any restrictions imposed on materials or processes, or for the completeness of the text.

NFPA has no power or authority to police or enforce compliance with the contents of this document, and any certification of products stating compliance with requirements of this document is made at the peril of the certifier.

NFPA 13

Standard for the

Installation of Sprinkler Systems

1996 Edition

This edition of NFPA 13, *Standard for the Installation of Sprinkler Systems*, was prepared by the Technical Committee on Automatic Sprinklers and acted on by the National Fire Protection Association, Inc., at its Annual Meeting held May 20-23, 1996, in Boston, MA. It was issued by the Standards Council on July 18, 1996, with an effective date of August 9, 1996, and supersedes all previous editions.

Changes other than editorial are indicated by a vertical rule in the margin of the pages on which they appear. These lines are included as an aid to the user in identifying changes from the previous edition.

This document has been submitted to ANSI for approval.

Origin and Development of NFPA 13

NFPA 13 represents the first standard published under the auspices of the NFPA Committee on Automatic Sprinklers. Originally titled *Rules and Regulations of the National Board of Fire Underwriters for Sprinkler Equipments, Automatic and Open Systems*, the standard has been continuously updated to keep in step with change.

Full information about the NFPA actions on various changes will be found in the NFPA Proceedings. The dates of successive editions are as follows: 1896, 1899, 1902, 1905, 1907, 1908, 1912, 1913, 1915, 1916, 1917, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929. In 1930 a separate standard was published on "Class B" systems. This was integrated into the 1931 edition. Further revisions were adopted in 1934, 1935, and 1936. A two-step revision was presented in the form of a progress report in 1939 and finally adopted in 1940. Further amendments were made in 1947, 1950, 1953, 1956, 1958, 1960, 1961, 1963, 1964, 1965, 1966, 1968, 1969, 1971, 1972, 1973, 1974, 1975, 1976, 1978, 1980, 1982, 1984, 1986, and 1989.

The 1991 edition incorporated an entire rewrite of the standard to make the overall format user friendly. Substantive changes were made to numerous terms, definitions, and descriptions, with additional refinements made in 1994.

This centennial edition contains a major reformatting of those portions of the chapter on installation of sprinklers. A number of subsections have been added to allow the installation requirements for each type of style of sprinkler to be readily located. These include positioning rules, spacing rules, and area of coverage rules to be found in one location for each type of sprinkler. Other changes have been made to mainstream the extended coverage sprinkler and to recognize the benefits of fast-response sprinkler technology.

This list represents the membership at the time the Committee was balloted on the text of this edition. Since that time, changes in the membership may have occurred.

NOTE Membership on a Committee shall not in and of itself constitute an endorsement of the Association or any document developed by the Committee on which the member serves.

Committee Scope: This Committee shall have primary responsibility for documents on the design and installation of automatic and of open sprinkler systems, including the character and adequacy of water supplies, and the selection of sprinklers, piping, valves, and all materials and accessories; this committee does not cover the installation of fire pumps, nor the construction and installation of gravity and pressure tanks and towers, nor the installation, maintenance, and use of central station, proprietary, auxiliary, and local signaling systems for watchmen, fire alarm, and supervisory service, nor the care of valves controlling water supplies, nor the design of fire department hose connections, nor the installation of private fire service mains and their appurtenances.

NFPA 13

Standard for the

Installation of Sprinkler Systems

1996 Edition

NOTICE: An asterisk (*) following the number or letter designating a paragraph indicates explanatory material on that paragraph in Appendix A.

Information on referenced publications can be found in Chapter 11 and Appendix C.

Chapter 1 General Information

1-1 Scope. This standard provides the minimum requirements for the design and installation of automatic fire sprinkler systems and exposure protection sprinkler systems, including the character and adequacy of water supplies and the selection of sprinklers, piping, valves, and all materials and accessories, but not including the installation of private fire service mains and water supplies.

NOTE: Consult other NFPA standards for additional requirements relating to water supplies.

Storage in excess of 12 ft (3.7 m) in height or storage in excess of 5 ft (1.5 m) in height of high hazard materials such as Level II and III aerosols, idle pallets, rubber tires, rolled paper stored on end, plastics, and flammable liquids are outside the scope of this standard. (For guidance and limitations regarding areas, quantities, or methods of storage for high hazard materials, see NFPA 30, 30B, 40, 58, 231, 231C, 231D, 231F, and 409.)

Exception No. 1: Wooden pallets stored up to 6 ft (1.8 m) in height or plastic pallets up to 4 ft (1.2 m) in height with not over four stacks of wooden pallets or two stacks of plastic pallets separated from other stacks by at least an 8-ft (2.4-m) aisle. (For heights or quantities exceeding these limits, see NFPA 231, Standard for General Storage.)

Exception No. 2: Storage of rubber tires that is incidental to the main use of the building and not more than 2,000 ft^2 (185.8 m^2). On-tread storage, regardless of piling method, shall not exceed 25 ft (7.62 m) in the direction of the wheel hole. Laced tires in racks shall not exceed 5 ft (1.52 m) in height. Storage arrangements that are acceptable as miscellaneous storage are:*

(a) On floor, on side storage less than 12 ft (3.66 m) in height, or

(b) On floor, on tread storage less than 5 ft (1.52 m) in height, or

(c) Double row or multi-row portable or fixed rack storage less than 5 ft (1.52 m) in height, or

(d) Single row portable or fixed rack storage less than 12 ft (3.66 m) in height.

Exception No. 3: Miscellaneous storage is within the scope of this standard.

1-2 Purpose. The purpose of this standard is to provide a reasonable degree of protection for life and property from fire through standardization of design, installation, and testing requirements for sprinkler systems based upon sound engineering principles, test data, and field experience. This standard endeavors to continue the excellent record that has been established by sprinkler systems while meeting the needs of changing technology. Nothing in this standard is intended to restrict new technologies or alternate arrangements, provided the level of safety prescribed by this standard is not lowered. Materials or devices not specifically designated by this standard shall be utilized in complete accord with all conditions, requirements, and limitations of their listings.

NOTE 1: A sprinkler system is a specialized fire protection system and requires knowledgeable and experienced design and installation.

NOTE 2: Since its inception, this document has been developed on the basis of standardized materials, devices, and design practices. However, certain paragraphs, such as 2-3.5, 4-4.9, and this one, allow the use of materials and devices not specifically designated by this standard, provided such use is within parameters established by a listing organization. In using such materials or devices, it is important that all conditions, requirements, and limitations of the listing be fully understood and accepted and that the installation be in complete accord with such listing requirements.

1-3 Retroactivity Clause. The provisions of this document are considered necessary to provide a reasonable level of protection from loss of life and property from fire. They reflect situations and the state of the art at the time the standard was issued.

Unless otherwise noted, it is not intended that the provisions of this document be applied to facilities, equipment, structures, or installations that were existing or approved for construction or installation prior to the effective date of this document.

Exception: In those cases where it is determined by the authority having jurisdiction that the existing situation involves a distinct hazard to life or property, this standard shall apply.

1-4 Definitions.

1-4.1 NFPA Definitions.

Approved.* Acceptable to the authority having jurisdiction.

Authority Having Jurisdiction.* The organization, office, or individual responsible for approving equipment, an installation, or a procedure.

Listed.* Equipment, materials, or services included in a list published by an organization acceptable to the authority having jurisdiction and concerned with evaluation of products or services that maintains periodic inspection of production of listed equipment or materials or periodic evaluation of services and whose listing states either that the equipment, material, or service meets identified standards or has been tested and found suitable for a specified purpose.

Shall. Indicates a mandatory requirement.

Should. Indicates a recommendation or that which is advised but not required.

Standard. A document, the main text of which contains only mandatory provisions using the word "shall" to indicate requirements, which is in a form generally suitable for mandatory reference by another standard or code or for adoption into law. Nonmandatory provisions shall be located in an Appendix, footnote, or fine-print note and are not to be considered a part of the requirements of a standard.

1-4.2 General Definitions.

Compartment. As used in 4-4.5.3 and 6-4.4.4, a space completely enclosed by walls and a ceiling. The compartment enclosure is permitted to have openings to an adjoining space if the openings have a minimum lintel depth of 8 in. (203 mm) from the ceiling.

Drop-Out Ceiling. A suspended ceiling system with listed translucent or opaque panels that are heat sensitive and fall from their setting when exposed to heat. This ceiling system is installed below the sprinklers.

Dwelling Unit. One or more rooms arranged for the use of one or more individuals living together, as in a single housekeeping unit normally having cooking, living, sanitary, and sleeping facilities.

For purposes of this standard, dwelling unit includes hotel rooms, dormitory rooms, apartments, condominiums, sleeping rooms in nursing homes, and similar living units.

Fire Control. Limiting the size of a fire by distribution of water so as to decrease the heat release rate and pre-wet adjacent combustibles, while controlling ceiling gas temperatures to avoid structural damage.

Fire Suppression. Sharply reducing the heat release rate of a fire and preventing its regrowth by means of direct and sufficient application of water through the fire plume to the burning fuel surface.

High Challenge Fire Hazard. A fire hazard typical of that produced by fires in combustible high-piled storage.

High-Piled Storage. Solid-piled, palletized, rack storage, bin box, and shelf storage in excess of 12 ft (3.7 m) in height. (*See 5-2.3.1.1.*)

Hydraulically Designed System. A calculated sprinkler system in which pipe sizes are selected on a pressure loss basis to provide a prescribed water density, in gallons per minute per square foot [(L/min)/m^2], or a prescribed minimum discharge pressure or flow per sprinkler, distributed with a reasonable degree of uniformity over a specified area.

Limited-Combustible Material. As applied to a building construction material, a material not complying with the definition of noncombustible material that, in the form in which it is used, has a potential heat value not exceeding 3500 Btu per lb (8141 kJ/kg) and complies with one of the following paragraphs, (a) or (b). Materials subject to increase in combustibility or flame spread rating beyond the limits herein established through the effects of age, moisture, or other atmospheric condition shall be considered combustible.

(a) Materials having a structural base of noncombustible material, with a surfacing not exceeding a thickness of $^1/_8$ in. (3.2 mm) that has a flame spread rating not greater than 50.

(b) Materials, in the form and thickness used, other than as described in (a), having neither a flame spread rating greater than 25 nor evidence of continued progressive combustion and of such composition that surfaces that would be exposed by cutting through the material on any plane would have neither a flame spread rating greater than 25 nor evidence of continued progressive combustion.

Miscellaneous Storage.* Storage that does not exceed 12 ft (3.66 m) in height and is incidental to another occupancy use group as defined in 1-4.7 (*see 5-2.3.1.1*). Such storage shall not constitute more than 10 percent of the building area or 4,000 sq ft (372 m^2) of the sprinklered area, whichever is greater. Such storage shall not exceed 1,000 sq ft (93 m^2) in one pile or area, and each such pile or area shall be separated from other storage areas by at least 25 ft (7.62 m). Protection criteria for miscellaneous storage are within the scope of this standard.

Noncombustible Material. A material that, in the form in which it is used and under the conditions anticipated, will not ignite, burn, support combustion, or release flammable vapors when subjected to fire or heat. Materials that are reported as passing ASTM E136, *Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C*, shall be considered noncombustible materials.

Pipe Schedule System. A sprinkler system in which the pipe sizing is selected from a schedule that is determined by the occupancy classification. A given number of sprinklers are allowed to be supplied from specific sizes of pipe.

Shop Welded. As used in this standard, shop in the term shop welded means either:

(a) At a sprinkler contractor's or fabricator's premise.

(b) In an area specifically designed or authorized for such work such as a detached outside location, maintenance shop, or other area (either temporary or permanent) of noncombustible or fire-resistive construction free of combustible and flammable contents and suitably segregated from adjacent areas.

Small Rooms. Rooms of Light Hazard Occupancy classification having unobstructed construction and floor areas not exceeding 800 sq ft (74.3 m^2). (*See 1-4.7.1.*) Rooms shall be enclosed by walls and a ceiling. Openings to the adjoining space are permitted if the minimum lintel depth is 8 in. (203 mm) from the ceiling.

Sprinkler System.* For fire protection purposes, an integrated system of underground and overhead piping designed in accordance with fire protection engineering standards. The installation includes one or more automatic water supplies. The portion of the sprinkler system aboveground is a network of specially sized or hydraulically designed piping installed in a building, structure, or area, generally overhead, and to which sprinklers are attached in a systematic pattern. The valve controlling each system riser is located in the system riser or its supply piping. Each sprinkler system riser includes a device for actuating an alarm when the system is in operation. The system is usually activated by heat from a fire and discharges water over the fire area.

NOTE: The design and installation of water supply facilities such as gravity tanks, fire pumps, reservoirs or pressure tanks, and underground piping are covered by the following NFPA standards: NFPA 20, *Standard for the Installation of Centrifugal Fire Pumps*; NFPA 22, *Standard for Water Tanks for Private Fire Protection*; and NFPA 24, *Standard for the Installation of Private Fire Service Mains and Their Appurtenances.*

Thermal Barrier. A material that will limit the average temperature rise of the unexposed surface to not more than 250°F (121°C) after 15 minutes of fire exposure complying with the standard time-temperature curve of NFPA 251, *Standard Methods of Fire Tests of Building Construction and Materials.*

1-4.3 Sprinkler System Type Definitions.

Antifreeze System. A wet pipe sprinkler system employing automatic sprinklers attached to a piping system containing an antifreeze solution and connected to a water sup-

ply. The antifreeze solution is discharged, followed by water, immediately upon operation of sprinklers opened by heat from a fire.

Circulating Closed-Loop System. A wet pipe sprinkler system having non-fire-protection connections to automatic sprinkler systems in a closed-loop piping arrangement for the purpose of utilizing sprinkler piping to conduct water for heating or cooling. Water is not removed or used from the system, but only circulated through the piping system.

Combined Dry Pipe-Preaction System. A sprinkler system employing automatic sprinklers attached to a piping system containing air under pressure with a supplemental detection system installed in the same areas as the sprinklers. Operation of the detection system actuates tripping devices that open dry pipe valves simultaneously and without loss of air pressure in the system. Operation of the detection system also opens listed air exhaust valves at the end of the feed main, which usually precedes the opening of sprinklers. The detection system also serves as an automatic fire alarm system.

Deluge System. A sprinkler system employing open sprinklers attached to a piping system connected to a water supply through a valve that is opened by the operation of a detection system installed in the same areas as the sprinklers. When this valve opens, water flows into the piping system and discharges from all sprinklers attached thereto.

Dry Pipe System. A sprinkler system employing automatic sprinklers attached to a piping system containing air or nitrogen under pressure, the release of which (as from the opening of a sprinkler) permits the water pressure to open a valve known as a dry pipe valve. The water then flows into the piping system and out the opened sprinklers.

Gridded System.* A sprinkler system in which parallel cross mains are connected by multiple branch lines. An operating sprinkler will receive water from both ends of its branch line while other branch lines help transfer water between cross mains.

Looped System.* A sprinkler system in which multiple cross mains are tied together so as to provide more than one path for water to flow to an operating sprinkler and branch lines are not tied together.

Preaction System. A sprinkler system employing automatic sprinklers attached to a piping system containing air that may or may not be under pressure, with a supplemental detection system installed in the same areas as the sprinklers. Actuating means of the valve are described in 3-3.2.1. Actuation of the detection system opens a valve that permits water to flow into the sprinkler piping system and to be discharged from any sprinklers that are open.

Wet Pipe System. A sprinkler system employing automatic sprinklers attached to a piping system containing water and connected to a water supply so that water discharges immediately from sprinklers opened by heat from a fire.

1-4.4* System Component Definitions.

Branch Lines. The pipes in which the sprinklers are placed, either directly or through risers.

Cross Mains. The pipes supplying the branch lines, either directly or through risers.

Feed Mains. The pipes supplying cross mains either directly or through risers.

Flexible Listed Pipe Coupling. A listed coupling or fitting that allows axial displacement, rotation, and at least 1 degree of angular movement of the pipe without inducing harm on the pipe.

Exception: For pipe diameters of 8 in. (203.2 mm) and larger, the angular movement shall be permitted to be less than 1 degree but not less than 0.5 degrees.

Risers. The vertical supply pipes in a sprinkler system.

Sprig-up. A line that rises vertically and supplies a single sprinkler.

Supervisory Devices. Devices arranged to supervise the operative condition of automatic sprinkler systems.

System Riser. The aboveground horizontal or vertical pipe between the water supply and the mains (cross or feed), which contains a control valve (either directly or within its supply pipe) and a waterflow alarm device.

1-4.5 Sprinkler Definitions.

1-4.5.1* The characteristics of a sprinkler that define its ability to control or extinguish a fire are:

(a) *Thermal Sensitivity.* A measure of the rapidity with which the thermal element operates as installed in a specific sprinkler or sprinkler assembly. One measure of thermal sensitivity is the Response Time Index (RTI) as measured under standardized test conditions.

1. Sprinklers defined as fast response have a thermal element with an RTI of 50 (meters–seconds) $^1/_2$ or less, or

2. Sprinklers defined as standard response have a thermal element with an RTI of 80 (meters–seconds) $^1/_2$ or more.

(b) *Temperature Rating.*

(c) *Orifice Size.* See Chapter 2.

(d) *Installation Orientation (see 1-4.5.3).*

(e) *Water Distribution Characteristics* (i.e., application rate, wall wetting).

(f) *Special Service Conditions (see 1-4.5.4).*

1-4.5.2 Sprinklers defined according to design and performance characteristics:

Early Suppression Fast-Response (ESFR) Sprinkler.* A type of fast-response sprinkler that meets the criteria of 1-4.5.1(a)1 and is listed for its capability to provide fire suppression of specific high challenge fire hazards.

Extended Coverage Sprinkler. A type of spray sprinkler that complies with the extended protection areas defined in Chapter 4.

Large-Drop Sprinkler. A type of sprinkler that is capable of producing characteristic large water droplets and that is listed for its capability to provide fire control of specific high challenge fire hazards.

Nozzles. Devices for use in applications requiring special water discharge patterns, directional spray, or other unusual discharge characteristics.

Old-Style/Conventional Sprinkler. Sprinklers that direct from 40 to 60 percent of the total water initially in a downward direction and that are designed to be installed with the deflector either upright or pendent.

Open Sprinklers. Sprinkler that do not have actuators or heat-responsive elements.

Quick-Response (QR) Sprinkler. A type of spray sprinkler that meets the criteria of 1-4.5.1(a)1 and is listed as a quick-response sprinkler for its intended use.

Quick-Response Early Suppression (QRES) Sprinkler.* A type of quick-response sprinkler that meets the criteria of 1-4.5.1(a)1 and is listed for its capability to provide fire suppression of specific fire hazards.

Quick-Response Extended Coverage Sprinkler. A type of quick-response sprinkler that meets the criteria of 1-4.5.1(a)1 and complies with the extended protection areas defined in Chapter 4.

Residential Sprinkler. A type of fast-response sprinkler that meets the criteria of 1-4.5.1(a)1 that has been specifically investigated for its ability to enhance survivability in the room of fire origin and is listed for use in the protection of dwelling units.

Special Sprinkler. Sprinklers that have been tested and listed as prescribed in 4-4.9.

Spray Sprinkler. A type of sprinkler listed for its capability to provide fire control for a wide range of fire hazards.

1-4.5.3 Sprinklers defined according to orientation:

Concealed Sprinkler. Recessed sprinklers with cover plates.

Flush Sprinkler. Sprinklers in which all or part of the body, including the shank thread, is mounted above the lower plane of the ceiling.

Pendent Sprinkler. Sprinklers designed to be installed in such a way that the water stream is directed downward against the deflector.

Recessed Sprinkler. Sprinklers in which all or part of the body, other than the shank thread, is mounted within a recessed housing.

Sidewall Sprinkler. Sprinklers having special deflectors that are designed to discharge most of the water away from the nearby wall in a pattern resembling one quarter of a sphere, with a small portion of the discharge directed at the wall behind the sprinkler.

Upright Sprinkler. Sprinklers designed to be installed in such a way that the water spray is directed upwards against the deflector.

1-4.5.4 Sprinklers defined according to special application or environment:

Corrosion-Resistant Sprinkler. Sprinklers fabricated with corrosion-resistant material or with special coatings or platings to be used in an atmosphere that would normally corrode sprinklers.

Dry Sprinkler.* Sprinklers secured in an extension nipple that has a seal at the inlet end to prevent water from entering the nipple until the sprinkler operates. Dry sprinklers are intended to extend into an unheated area from a wet pipe system or (for dry-pendent sprinklers) to be used on a dry pipe system in the pendent position.

Intermediate Level Sprinkler/Rack Storage Sprinkler. Sprinklers equipped with integral shields to protect their operating elements from the discharge of sprinklers installed at higher elevations.

Ornamental/Decorative Sprinkler. Sprinklers that have been painted or plated by the manufacturer.

1-4.6 Construction Definitions.

Obstructed Construction.* Construction where beams, trusses, or other members impede heat flow or water distribution in a manner that materially affects the ability of sprinklers to control or suppress a fire.

Unobstructed Construction.* Construction where beams, trusses, or other members do not impede heat flow or water distribution in a manner that materially affects the ability of sprinklers to control or suppress a fire. Unobstructed construction has horizontal structural members that are not solid, where the openings are at least 70 percent of the cross section area, and the depth of the member does not exceed the least dimension of the openings, or all construction types where the spacing of structural members exceeds 7½ ft (2.3 m) on center.

For descriptions of construction types, see A-1-4.6(a) and (b).

1-4.7* Classification of Occupancies. Occupancy classifications for this standard relate to sprinkler installations and their water supplies only. They are not intended to be a general classification of occupancy hazards.

1-4.7.1* Light Hazard Occupancies. Occupancies or portions of other occupancies where the quantity and/or combustibility of contents is low, and fires with relatively low rates of heat release are expected.

1-4.7.2 Ordinary Hazard Occupancies.

1-4.7.2.1* Ordinary Hazard (Group 1). Occupancies or portions of other occupancies where combustibility is low, quantity of combustibles is moderate, stockpiles of combustibles do not exceed 8 ft (2.4 m), and fires with moderate rates of heat release are expected.

1-4.7.2.2* Ordinary Hazard (Group 2). Occupancies or portions of other occupancies where quantity and combustibility of contents is moderate to high, stockpiles do not exceed 12 ft (3.7 m), and fires with moderate to high rates of heat release are expected.

1-4.7.3 Extra Hazard Occupancies.

1-4.7.3.1* Occupancies or portions of other occupancies where quantity and combustibility of contents is very high and flammable and combustible liquids, dust, lint, or other materials are present, introducing the probability of rapidly developing fires with high rates of heat release.

1-4.7.3.2 Extra hazard occupancies involve a wide range of variables that may produce severe fires. The following shall be used to evaluate the severity of Extra Hazard Occupancies:

Extra Hazard (Group 1) includes occupancies described in 1-4.7.3.1 with little or no flammable or combustible liquids.

Extra Hazard (Group 2) includes occupancies described in 1-4.7.3.1 with moderate to substantial amounts of flammable or combustible liquids or where shielding of combustibles is extensive.

1-4.7.4 Special Occupancy Hazards.

1-4.7.4.1* Other NFPA standards contain sprinkler system design criteria for fire control or suppression of specific hazards. These are listed in Chapter 11 and include but are not limited to NFPA 30, *Flammable and Combustible Liquids Code*; NFPA 30B, *Code for the Manufacture and Storage of Aerosol Products*; NFPA 40, *Standard for the Storage and Handling of*

Cellulose Nitrate Motion Picture Film; NFPA 58, *Standard for the Storage and Handling of Liquefied Petroleum Gases*; NFPA 231, *Standard for General Storage*; NFPA 231C, *Standard for Rack Storage of Materials*; NFPA 231D, *Standard for Storage of Rubber Tires*; NFPA 231E, *Recommended Practice for the Storage of Baled Cotton*; NFPA 231F, *Standard for the Storage of Roll Paper*; NFPA 232, *Standard for the Protection of Records*; and NFPA 409, *Standard on Aircraft Hangars*.

1-4.7.4.2 Miscellaneous storage as defined herein shall be classified as to occupancy group in accordance with Table 1-4.7.4.2.

1-4.7.4.2.1 The commodity classifications and storage characteristics in Table 1-4.7.4.2 shall be as defined in NFPA 231, *Standard for General Storage*, and NFPA 231C, *Standard for Rack Storage of Materials*.

1-5 Abbreviations. The standard abbreviations in Table 1-5 shall be used on the hydraulic calculation form.

1-6 Level of Protection.

1-6.1 A building, where protected by an automatic sprinkler system installation, shall be provided with sprinklers in all areas.

Exception: Where specific sections of this standard permit the omission of sprinklers.

1-6.2 Limited Area Systems. When partial sprinkler systems are installed, the requirements of this standard shall be used insofar as they are applicable. The authority having jurisdiction shall be consulted in each case.

Table 1-4.7.4.2 Occupancy Group Classification for Miscellaneous Storage 12 ft (3.7 m) or Less in Height*†

Group A Plastics

Height of Storage	Ceiling Clearance to Top of Storage	Rack-R or Palletized-P	Cartoned		Exposed	
			Solid	Expanded	Solid	Expanded
To 5 ft	No limit	R-P	OH-2	OH-2	OH-2	OH-2
Over 5 ft to 10 ft	To 5 ft	R-P	EH-1	EH-1	EH-2	EH-2
Over 5 ft to 10 ft	Over 5 ft to 10 ft	R-P	EH-2	EH-2	EH-2	
Over 5 ft to 8 ft	Over 5 ft	P				EH-2
Over 10 ft to 12 ft	To 15 ft	P	EH-2	EH-2		
Over 10 ft to 12 ft	Over 5 ft	R	OH-2 +1 level in rack	OH-2 +1 level in rack	OH-2 +1 level in rack	OH-2 +1 level in rack
Over 10 ft to 12 ft	To 5 ft	R-P	EH-2**	EH-2**	EH-2**	EH-2

Miscellaneous Tire Storage

Piling Methods	Height of Storage	Occupancy Group
On floor, on side	5 ft to 12 ft	EH-1
On floor, on tread or side	To 5 ft	OH-2
Single, double, or multi-row racks	To 5 ft	OH-2
Single row rack, portable	5 ft to 12 ft	EH-1
Single row rack, fixed	5 ft to 12 ft	EH-1 or OH-2 plus 1 level of in-rack sprinklers

Rolled Paper Stored on End	Height of Storage	Occupancy Group
Heavy and medium weight	To 8 ft	OH-2
	Over 8 ft to 12 ft	EH-1
Tissue	To 10 ft	EH-1

Idle Pallet Storage	Height of Storage	Occupancy Group
	To 6 ft wooden	OH-2
	To 4 ft plastic	OH-2

For SI Units: 1 ft = 0.3048 m.
*For storage heights or clearance to ceiling in excess of the above configurations, see NFPA 231, 231C, 231D, or 231F as appropriate.
**For rack storage, OH-2 +1 Level in rack shall also be permitted.
†The design of the sprinkler system shall be based on the conditions that will routinely or periodically exist in the building creating the greatest water demand, including pile height and clearance.

Table 1-5 Hydraulic Symbols

Symbol or Abbreviation	Item
p	Pressure in psi
gpm	U.S. gallons per minute
q	Flow increment in gpm to be added at a specific location
Q	Summation of flow in gpm at a specific location
P_t	Total pressure in psi at a point in a pipe
P_f	Pressure loss due to friction between points indicated in location column
P_e	Pressure due to elevation difference between indicated points. This can be a plus value or a minus value. Where minus, the (−) shall be used; where plus, no sign need be indicated.
P_v	Velocity pressure in psi at a point in a pipe
P_n	Normal pressure in psi at a point in a pipe
E	90° Ell
EE	45° Ell
Lt.E	Long-turn elbow
Cr	Cross
T	Tee—flow turned 90°
GV	Gate valve
BV	Butterfly (wafer) check valve
Del V	Deluge valve
ALV	Alarm valve
DPV	Dry pipe valve
CV	Swing check valve
WCV	Butterfly (wafer) check valve
St	Strainer
psi	Pounds per square inch
v	Velocity of water in pipe in feet per second

Chapter 2 System Components and Hardware

2-1 General. This chapter provides requirements for correct use of sprinkler system components.

2-1.1* All materials and devices essential to successful system operation shall be listed.

Exception No. 1: Equipment as permitted in Table 2-3.1, Table 2-4.1, and the Exceptions to 2-6.1 and 2-6.1.1 shall not be required to be listed.

Exception No. 2: Components that do not affect system performance such as drain piping, drain valves, and signs need not be listed. The use of reconditioned valves and devices other than sprinklers as replacement equipment in existing systems shall be permitted.

2-1.2 System components shall be rated for the maximum working pressure to which they are exposed but not less than 175 psi (12.1 bars).

2-2 Sprinklers.

2-2.1 Only new sprinklers shall be installed.

2-2.2 Sprinkler Discharge Characteristics.

2-2.2.1 The K factor, relative discharge, and identification for sprinklers having different orifice sizes shall be in accordance with Table 2-2.2.

Exception No. 1: Listed sprinklers having pipe threads different from those shown in Table 2-2.2 shall be permitted.

Exception No. 2 Sprinklers with a larger orifice diameter and which increase the flow by a 50-percent increment when compared with a 1/2-in. (12.7-mm) orifice sprinkler shall be permitted where listed in accordance with 4-4.9.

2-2.2.2 Large drop and ESFR sprinklers shall be minimum 5/8 in. nominal orifice size. The ESFR sprinkler orifice shall be selected as appropriate for the hazard. (*See Chapter 5.*)

2-2.3 Limitations.

2-2.3.1 Sprinklers shall not be listed for protection of a portion of an occupancy classification.

Exception No. 1: Residential sprinklers.

Exception No. 2: Special sprinklers shall be permitted to be listed for protection of a specific construction feature in a portion of an occupancy classification. (See 4-4.9.)

2-2.3.2 For Light Hazard Occupancies not requiring as much water as is discharged by a nominal 1/2-in. (12.7-mm) orifice sprinkler operating at 7 psi (0.5 bar), sprinklers having a smaller orifice shall be permitted subject to the following restrictions:

(a) The system shall be hydraulically calculated. (*See Chapter 6.*)

(b) Small-orifice sprinklers shall be installed in wet systems only.

Exception: Small-orifice outside sprinklers for protection from exposure fires installed in conformance with Section 3-7 shall be permitted.

(c) A listed strainer shall be provided on the supply side of sprinklers having nominal orifice sizes smaller than 3/8 in. (9.5 mm).

2-2.3.3 Sprinklers having orifice sizes exceeding 1/2 in. (12.7 mm) and having 1/2 in. (12.7 mm) NPT shall not be installed in new sprinkler systems.

2-2.4* Temperature Characteristics.

2-2.4.1 The standard temperature ratings of automatic sprinklers are shown in Table 2-2.4.1. Automatic sprinklers shall have their frame arms colored in accordance with the color code designated in Table 2-2.4.1.

Exception No. 1: A dot on the top of the deflector, or the color of the coating material, or colored frame arms shall be permitted for color identification of corrosion-resistant sprinklers.

Exception No. 2: Color identification shall not be required for ornamental sprinklers such as factory-plated or factory-painted sprinklers or for recessed, flush, or concealed sprinklers.

Exception No. 3: The frame arms of bulb-type sprinklers shall not be required to be color coded.

2-2.4.2 The liquid in bulb-type sprinklers shall be color coded in accordance with Table 2-2.4.1.

2-2.5 Special Coatings.

2-2.5.1* Listed corrosion-resistant sprinklers shall be installed in locations where chemicals, moisture, or other corrosive vapors sufficient to cause corrosion of such devices exist.

Table 2-2.2 Sprinkler Discharge Characteristics Identification

Nominal Orifice Size (in.)	(mm)	K Factor[1]	Percent of Nominal ½ in. Discharge	Thread Type	Pintle	Nominal Orifice Size Marked On Frame
¼	6.4	1.3–1.5	25	½ in. NPT	Yes	Yes
5/16	8.0	1.8–2.0	33.3	½ in. NPT	Yes	Yes
⅜	9.5	2.6–2.9	50	½ in. NPT	Yes	Yes
7/16	11.0	4.0–4.4	75	½ in. NPT	Yes	Yes
½	12.7	5.3–5.8	100	½ in. NPT	No	No
17/32	13.5	7.4–8.2	140	¾ in. NPT or	No	No
				½ in. NPT	Yes	Yes
⅝	15.9	11.0–11.5	200	½ in. NPT or	Yes	Yes
				¾ in. NPT	Yes	Yes
¾	19.0	13.5–14.5	250	¾ in. NPT	Yes	Yes

[1]K factor is the constant in the formula $Q = K\sqrt{p}$
where Q = Flow in gpm
p = Pressure in psi

For SI Units: $Q_m = K_m\sqrt{P_m}$
where Q_m = Flow in L/min
P_m = Pressure in bars
K_m = 14 K

Table 2-2.4.1 Temperature Ratings, Classifications, and Color Codings

Max. Ceiling Temp. °F	°C	Temperature Rating °F	°C	Temperature Classification	Color Code	Glass Bulb Colors
100	38	135 to 170	57 to 77	Ordinary	Uncolored or black	Orange or red
150	66	175 to 225	79 to 107	Intermediate	White	Yellow or green
225	107	250 to 300	121 to 149	High	Blue	Blue
300	149	325 to 375	163 to 191	Extra high	Red	Purple
375	191	400 to 475	204 to 246	Very extra high	Green	Black
475	246	500 to 575	260 to 302	Ultra high	Orange	Black
625	329	650	343	Ultra high	Orange	Black

2-2.5.2* Corrosion-resistant coatings shall be applied only by the manufacturer of the sprinkler.

Exception: Any damage to the protective coating occurring at the time of installation shall be repaired at once using only the coating of the manufacturer of the sprinkler in the approved manner so that no part of the sprinkler will be exposed after installation has been completed.

2-2.5.3* Unless applied by the manufacturer, sprinklers shall not be painted, and any sprinklers that have been painted shall be replaced with new listed sprinklers of the same characteristics, including orifice size, thermal response, and water distribution.

Exception: Factory-applied paint or coating to sprinkler frames in accordance with 2-2.4.1 shall be permitted.

2-2.5.4 Ornamental finishes shall not be applied to sprinklers by anyone other than the sprinkler manufacturer, and only sprinklers listed with such finishes shall be used.

2-2.6 Escutcheon Plates.

2-2.6.1 Nonmetallic escutcheon plates shall be listed.

2-2.6.2* Escutcheon plates used with a recessed or flush-type sprinkler shall be part of a listed sprinkler assembly.

2-2.7* Guards and Shields. Sprinklers subject to mechanical injury shall be protected with listed guards.

2-2.8 Stock of Spare Sprinklers.

2-2.8.1 A supply of spare sprinklers (never fewer than 6) shall be maintained on the premises so that any sprinklers that have operated or been damaged in any way can be promptly replaced. These sprinklers shall correspond to the types and temperature ratings of the sprinklers in the property. The sprinklers shall be kept in a cabinet located where the temperature to which they are subjected will at no time exceed 100°F (38°C).

2-2.8.2 A special sprinkler wrench shall also be provided and kept in the cabinet to be used in the removal and installation of sprinklers.

2-2.8.3 The stock of spare sprinklers shall include all types and ratings installed and shall be as follows:

(a) For systems having less than 300 sprinklers, not fewer than 6 sprinklers.

(b) For systems with 300 to 1000 sprinklers, not fewer than 12 sprinklers.

(c) For systems with over 1000 sprinklers, not fewer than 24 sprinklers.

2-3 Pipe and Tube.

2-3.1 Pipe or tube used in sprinker systems shall meet or exceed one of the standards in Table 2-3.1 or be in accordance with 2-3.5. In addition, steel pipe must be in accordance with 2-3.2 and 2-3.3, copper tube must be in accordance with 2-3.4, and nonmetallic pipe must be in accordance with 2-3.5 and with the portions of the ASTM standards specified in Table 2-3.5 that apply to fire protection service.

Table 2-3.1 Pipe or Tube Materials and Dimensions

Materials and Dimensions	Standard
Ferrous Piping (Welded and Seamless)	
Spec. for Black and Hot-Dipped Zinc Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use	ASTM A 795
Spec. for Welded and Seamless Steel Pipe	ANSI/ ASTM A 53
Wrought Steel Pipe	ANSI B36.10M
Spec. for Elec.-Resistance Welded Steel Pipe	ASTM A 135
Copper Tube (Drawn, Seamless)	
Spec. for Seamless Copper Tube	ASTM B 75
Spec. for Seamless Copper Water Tube	ASTM B 88
Spec. for General Requirements for Wrought Seamless Copper and Copper-Alloy Tube	ASTM B 251
Fluxes for Soldering Applications of Copper and Copper Alloy Tube	ASTM B 813
Brazing Filler Metal (Classification BCuP-3 or BCuP-4)	AWS A5.8
Solder Metal, 95-5 (Tin-Antimony-Grade 95TA)	ASTM B 32
Alloy Materials	ASTM B 446 ASTM B 467

2-3.2* When steel pipe listed in Table 2-3.1 is used and joined by welding as referenced in 2-5.2 or by roll-grooved pipe and fittings as referenced in 2-5.3, the minimum nominal wall thickness for pressures up to 300 psi (20.7 bars) shall be in accordance with Schedule 10 for sizes up to 5 in. (127 mm); 0.134 in. (3.40 mm) for 6 in. (152 mm); and 0.188 in. (4.78 mm) for 8- and 10-in. (203- and 254-mm) pipe.

Exception: Pressure limitations and wall thickness for steel pipe listed in accordance with 2-3.5 shall be in accordance with the listing requirements.

2-3.3 When steel pipe listed in Table 2-3.1 is joined by threaded fittings referenced in 2-5.1 or by fittings used with pipe having cut grooves, the minimum wall thickness shall be in accordance with Schedule 30 [in sizes 8 in. (203 mm) and larger] or Schedule 40 [in sizes less than 8 in. (203 mm)] pipe for pressures up to 300 psi (20.7 bars).

Exception: Pressure limitations and wall thickness for steel pipe specially listed in accordance with 2-3.5 shall be in accordance with the listing requirements.

2-3.4* Copper tube as specified in the standards listed in Table 2-3.1 shall have a wall thickness of Type K, L, or M where used in sprinkler systems.

2-3.5* Other types of pipe or tube investigated for suitability in automatic sprinkler installations and listed for this service, including but not limited to polybutylene, chlorinated polyvinyl chloride (CPVC), and steel, differing from that provided in Table 2-3.1 shall be permitted where installed in accordance with their listing limitations, including installation instructions. Pipe or tube shall not be listed for portions of an occupancy classification. Bending of pipe conforming to 2-3.5 shall be permitted as allowed by the listing.

2-3.6 Pipe Bending. Bending of Sch-10 steel pipe, or any steel pipe of wall thickness equal to or greater than Sch-10 and Types K and L copper tube shall be permitted when bends are made with no kinks, ripples, distortions, reductions in diameter, or any noticeable deviations from round. For Sch-40 and copper tubing, the minimum radius of a bend shall be 6 pipe diameters for pipe sizes 2 in. (51 mm) and smaller, and 5 pipe diameters for pipe sizes 2½ in. (64 mm) and larger. For all other steel pipe, the minimum radius of a bend shall be 12 pipe diameters for all sizes.

Table 2-3.5 Specially Listed Pipe or Tube Materials and Dimensions

Materials and Dimensions	Standard
Nonmetallic Piping	
Specification for Special Listed Chlorinated Polyvinyl Chloride (CPVC) Pipe	ASTM F 442
Specification for Special Listed Polybutylene (PB) Pipe	ASTM D 3309

2-3.7 Pipe Identification. All pipe, including specially listed pipe allowed by 2-3.5, shall be marked continuously along its length by the manufacturer in such a way as to properly identify the type of pipe. This identification shall include the manufacturer's name, model designation, or schedule.

2-4 Fittings.

2-4.1 Fittings used in sprinkler systems shall meet or exceed the standards in Table 2-4.1 or be in accordance with 2-4.2. In addition to the standards in Table 2-4.1, CPVC fittings shall also be in accordance with 2-4.2 and with the portions of the ASTM standards specified in Table 2-4.2 that apply to fire protection service.

2-4.2* Other types of fittings investigated for suitability in automatic sprinkler installations and listed for this service, including but not limited to polybutylene, chlorinated polyvinyl chloride (CPVC), and steel differing from that provided in Table 2-4.1, shall be permitted when installed in accordance with their listing limitations, including installation instructions.

2-4.3 Fittings shall be extra-heavy pattern where pressures exceed 175 psi (12.1 bars).

Exception No. 1: Standard weight pattern cast-iron fittings 2 in. (51 mm) in size and smaller shall be permitted where pressures do not exceed 300 psi (20.7 bars).

Exception No. 2: Standard weight pattern malleable iron fittings 6 in. (152 mm) in size and smaller shall be permitted where pressures do not exceed 300 psi (20.7 bars).

Exception No. 3: Fittings shall be permitted for system pressures up to the limits specified in their listings.

2-4.4* Couplings and Unions. Screwed unions shall not be used on pipe larger than 2 in. (51 mm). Couplings and unions of other than screwed-type shall be of types listed specifically for use in sprinkler systems.

2-4.5 Reducers and Bushings. A one-piece reducing fitting shall be used wherever a change is made in the size of the pipe.

Exception No. 1: Hexagonal or face bushings shall be permitted in reducing the size of openings of fittings when standard fittings of the required size are not available.

Exception No. 2: Hexagonal bushings as permitted in 4-13.18.1 are acceptable.

Specification for Schedule 80 CPVC Socket-type Fittings	ASTM F 439

2-5 Joining of Pipe and Fittings.

2-5.1 Threaded Pipe and Fittings.

2-5.1.1 All threaded pipe and fittings shall have threads cut to ANSI/ASME B1.20.1, *Pipe Threads, General Purpose.*

2-5.1.2* Steel pipe with wall thicknesses less than Schedule 30 [in sizes 8 in. (203 mm) and larger] or Schedule 40 [in sizes less than 8 in. (203 mm)] shall not be joined by threaded fittings.

Exception: A threaded assembly investigated for suitability in automatic sprinkler installations and listed for this service shall be permitted.

2-5.1.3 Joint compound or tape shall be applied only to male threads.

2-5.2* Welded Pipe and Fittings.

2-5.2.1 Welding methods that comply with all of the requirements of AWS D10.9, *Specification for Qualification of Welding Procedures and Welders for Piping and Tubing*, Level AR-3, are acceptable means of joining fire protection piping.

2-5.2.2* Sprinkler piping shall be shop welded.

Exception No 1: Welding of tabs for longitudinal earthquake bracing to in-place piping shall be permitted where the welding process is performed in accordance with NFPA 51B, Standard for Fire Prevention in Use of Cutting and Welding Processes.

Exception No. 2: Where the design specifications call for all or part of the piping to be welded in place, welding of sprinkler piping in place shall be permitted where the welding process is performed in accordance with NFPA 51B, and the mechanical fittings required by 4-13.15 and 4-13.22 are provided.

2-5.2.3 Fittings used to join pipe shall be listed fabricated fittings or manufactured in accordance with Table 2-4.1. Such fittings joined in conformance with a qualified welding procedure as set forth in this section are an acceptable product under this standard, provided that materials and wall thickness are compatible with other sections of this standard.

Exception: Fittings are not required where pipe ends are buttwelded.

2-5.2.4 No welding shall be performed if there is impingement of rain, snow, sleet, or high wind on the weld area of the pipe product.

2-5.2.5 When welding is performed:

(a)* Holes in piping for outlets shall be cut to the full inside diameter of fittings prior to welding in place of the fittings.

(b) Discs shall be retrieved.

(c) Openings cut into piping shall be smooth bore, and all internal slag and welding residue shall be removed.

(d) Fittings shall not penetrate the internal diameter of the piping.

(e) Steel plates shall not be welded to the ends of piping or fittings.

(f) Fittings shall not be modified.

(g) Nuts, clips, eye rods, angle brackets, or other fasteners shall not be welded to pipe or fittings.

Exception: Only tabs welded to pipe for longitudinal earthquake braces shall be permitted. (See 4-14.4.3.5.5.)

2-5.2.6 When the pipe size in a run of piping is reduced, a reducing fitting designed for that purpose shall be used.

2-5.2.7 Torch cutting and welding shall not be permitted as a means of modifying or repairing sprinkler systems.

2-5.2.8 Qualifications.

2-5.2.8.1 A welding procedure shall be prepared and qualified by the contractor or fabricator before any welding is done. Qualification of the welding procedure to be used and the performance of all welders and welding operators is required and shall meet or exceed the requirements of American Welding Society Standard AWS D10.9, Level AR-3.

2-5.2.8.2 Contractors or fabricators shall be responsible for all welding they produce. Each contractor or fabricator shall have available to the authority having jurisdiction an established written quality assurance procedure ensuring compliance with the requirements of 2-5.2.5.

2-5.2.9 Records.

2-5.2.9.1 Welders or welding machine operators shall, upon completion of each weld, stamp an imprint of their identification into the side of the pipe adjacent to the weld.

2-5.2.9.2 Contractors or fabricators shall maintain certified records, which shall be available to the authority having jurisdiction, of the procedures used and the welders or welding machine operators employed by them along with their welding identification imprints. Records shall show the date and the results of procedure and performance qualifications.

2-5.3 Groove Joining Methods.

2-5.3.1 Pipe joined with grooved fittings shall be joined by a listed combination of fittings, gaskets, and grooves. Grooves cut or rolled on pipe shall be dimensionally compatible with the fittings.

2-5.3.2 Grooved fittings including gaskets used on dry pipe systems shall be listed for dry pipe service.

2-5.4* Brazed and Soldered Joints. Joints for the connection of copper tube shall be brazed.

Exception No. 1: Solder joints shall be permitted for exposed wet pipe systems in Light Hazard Occupancies where the temperature classification of the installed sprinklers is ordinary or intermediate.

Exception No. 2: Solder joints shall be permitted for wet pipe systems in Light Hazard and Ordinary Hazard (Group 1) Occupancies where the piping is concealed, irrespective of sprinkler temperature ratings.

2-5.4.1* Soldering fluxes shall be in accordance with Table 2-3.1. Brazing fluxes, if used, shall not be of a highly corrosive type.

2-5.5 Other Types. Other joining methods investigated for suitability in automatic sprinkler installations and listed for this service shall be permitted where installed in accordance with their listing limitations, including installation instructions.

2-5.6 End Treatment. After cutting, pipe ends shall have burrs and fins removed.

2-5.6.1 Pipe used with listed fittings and its end treatment shall be in accordance with the fitting manufacturer's installation instructions and the fitting's listing.

2-6 Hangers.

2-6.1* General. Types of hangers shall be in accordance with the requirements of Section 2-6.

Exception: Hangers certified by a registered professional engineer to include all of the following shall be acceptable:

(a) Hangers are designed to support five times the weight of the water-filled pipe plus 250 lb (114 kg) at each point of piping support.

(b) These points of support are adequate to support the sprinkler system.

(c) The spacing between hangers shall not exceed the value given for the type of pipe as indicated in Table 4-14.2.2.1.

(d) Hanger components shall be ferrous.

Detailed calculations shall be submitted, when required by the reviewing authority, showing stresses developed in hangers, piping, and fittings, and safety factors allowed.

2-6.1.1 The components of hanger assemblies that directly attach to the pipe or to the building structure shall be listed.

Exception: Mild steel hangers formed from rods need not be listed.

2-6.1.2 Hangers and their components shall be ferrous.

Exception: Nonferrous components that have been proven by fire tests to be adequate for the hazard application, that are listed for this purpose, and that are in compliance with the other requirements of this section shall be acceptable.

2-6.1.3 Sprinkler piping shall be substantially supported from the building structure, which must support the added load of the water-filled pipe plus a minimum of 250 lb (114 kg) applied at the point of hanging.

Exception: Branch line hangers under metal deck shall be permitted only for the support of pipe 1 in. (25.4 mm) or smaller in size, by drilling or punching vertical members and using through bolts. The distance from the bottom of the bolt hole to the bottom of the vertical member shall be not less than $^3/_8$ in. (9.5 mm).

2-6.1.4 Where sprinkler piping is installed below ductwork, piping shall be supported from the building structure or from the ductwork supports, provided such supports are capable of handling both the load of the ductwork and the load specified in 2-6.1.3.

2-6.1.5* For trapeze hangers, the minimum size of steel angle or pipe span between purlins or joists shall be such that the available section modulus of the trapeze member from Table 2-6.1.5(b) equals or exceeds the section modulus required in Table 2-6.1.5(a).

Any other sizes or shapes giving equal or greater section modulus shall be acceptable. All angles shall be used with the longer leg vertical. The trapeze member shall be secured to prevent slippage. Where a pipe is suspended from a pipe trapeze of a diameter less than the diameter of the pipe being supported, ring, strap, or clevis hangers of the size corresponding to the suspended pipe shall be used on both ends.

2-6.1.6 The size of hanger rods and fasteners required to support the steel angle iron or pipe indicated in Table 2-6.1.5(a) shall comply with 2-6.4.

2-6.1.7* Sprinkler piping or hangers shall not be used to support nonsystem components.

2-6.2 Hangers in Concrete.

2-6.2.1 The use of listed inserts set in concrete to support hangers shall be permitted.

2-6.2.2 Listed expansion shields for supporting pipes under concrete construction shall be permitted to be used in a horizontal position in the sides of beams. In concrete having gravel or crushed stone aggregate, expansion shields shall be permitted to be used in the vertical position to support pipes 4 in. (102 mm) or less in diameter.

2-6.2.3 For the support of pipes 5 in. (127 mm) and larger, expansion shields, if used in the vertical position, shall alternate with hangers connected directly to the structural members, such as trusses and girders, or to the sides of concrete beams. In the absence of convenient structural members, pipes 5 in. (127 mm) and larger shall be permitted to be supported entirely by expansion shields in the vertical position, but spaced not over 10 ft (3 m) apart.

2-6.2.4 Expansion shields shall not be used in ceilings of gypsum or similar soft material. In cinder concrete, expansion shields shall not be used except on branch lines where they shall alternate with through-bolts or hangers attached to beams.

Table 2-6.1.5(a) Section Modulus Required for Trapeze Members (in.^{3})

Span of Trapeze	1 in.	1¼ in.	1½ in.	2 in.	2½ in.	3 in.	3½ in.	4 in.	5 in.	6 in.	8 in.	10 in.

	.56	.59	.61	.65	.74	.82	.90	.99	1.20	1.44	2.01	2.74

For SI Units: 1 in = 25.4 mm; 1 ft = 0.3048 m.
Top values are for Schedule 10 pipe; bottom values are for Schedule 40 pipe.
NOTE: The table is based on a maximum allowable bending stress of 15 KSI and a midspan concentrated load from 15 ft (4.6 m) of water-filled pipe, plus 250 lb (114 kg)

2-6.2.5 Where expansion shields are used in the vertical position, the holes shall be drilled to provide uniform contact with the shield over its entire circumference. Depth of the hole shall not be less than specified for the type of shield used.

2-6.2.6 Holes for expansion shields in the side of concrete beams shall be above the center line of the beam or above the bottom reinforcement steel rods.

2-6.3 Powder-Driven Studs and Welding Studs.

2-6.3.1* Powder-driven studs, welding studs, and the tools used for installing these devices shall be listed. Pipe size, installation position, and construction material into which they are installed shall be in accordance with individual listings.

2-6.3.2 Powder-driven fasteners shall not be used to attach hangers to the building structure where the systems are required to be protected against earthquakes using a horizontal force factor exceeding 0.50 Wp.

Exception: Powder-driven fasteners shall be permitted where they are specifically listed for horizontal force factors in excess of 0.50 Wp.

2-6.3.3* Representative samples of concrete into which studs are to be driven shall be tested to determine that the studs will hold a minimum load of 750 lb (341 kg) for 2-in. (51-mm) or smaller pipe, 1000 lb (454 kg) for 2½-, 3-, or 3½-in. (64-, 76-, or 89-mm) pipe, and 1200 lb (545 kg) for 4- or 5-in. (102- or 127-mm) pipe.

2-6.3.4 Increaser couplings shall be attached directly to the powder-driven studs or welding studs.

2-6.3.5 Welding studs or other hanger parts shall not be attached by welding to steel less than U.S. Standard, 12 gauge.

2-6.4 Rods and "U" Hooks.

2-6.4.1 Hanger rod size shall be the same as that approved for use with the hanger assembly, and the size of rods shall not be less than that given in Table 2-6.4.1.

Exception: Rods of smaller diameter shall be permitted where the hanger assembly has been tested and listed by a testing laboratory and installed within the limits of pipe sizes expressed in individual listings. For rolled threads, the rod size shall not be less than the root diameter of the thread.

2-6.4.2 U-Hooks. The size of the rod material of U-hooks shall not be less than that given in Table 2-6.4.2. Drive screws shall be used only in a horizontal position as in the side of a beam in conjunction with U-hangers only.

2-6.4.3 The size of the rod material for eye rods shall not be less than specified in Table 2-6.4.3. Where eye rods are fastened to wood structural members, the eye rod shall be backed with a large flat washer bearing directly against the structural member, in addition to the lock washer.

2-6.4.3.1 Eye rods shall be secured with lock washers to prevent lateral motion.

Table 2-6.1.5(b) Available Section Moduli of Common Trapeze Hangers

Pipe Size	Hook Material Diameter in.	mm
Up to 2 in.	5/16	7.9
2½ to 6 in.	⅜	9.5
8 in.	½	12.7

For SI Units: 1 in. = 25.4 mm.

Table 2-6.4.3 Eye Rod Sizes

Pipe Size	Diameter of Rod With Bent Eye in.	mm	With Welded Eye in.	mm
Up to 4 in.	⅜	9.5	⅜	9.5
5 to 6 in.	½	12.7	½	12.7
8 in.	¾	19.1	½	12.7

For SI Units: 1 in. = 25.4 mm.

2-6.4.4 Threaded sections of rods shall not be formed or bent.

2-6.4.5 Screws. For ceiling flanges and U-hooks, screw dimensions shall not be less than those given in Table 2-6.4.5.

Exception: When the thickness of planking and thickness of flange do not permit the use of screws 2 in. (51 mm) long, screws 1¾ in. (44 mm) long shall be permitted with hangers spaced not over 10 ft (3 m) apart. When the thickness of beams or joists does not permit the use of screws 2 ½ in. (64 mm) long, screws 2 in. (51 mm) long shall be permitted with hangers spaced not over 10 ft (3 m) apart.

Table 2-6.4.5 Screw Dimensions for Ceiling Flanges and U-Hooks

Pipe Size	2 Screw Flanges
Up to 2 in.	Wood screw No. 18 × 1½ in. or Lag screw 5/16 in. × 1½ in.
Pipe Size	**3 Screw Flanges**
Up to 2 in.	Wood screw No. 18 × 1½ in.
2½ in., 3 in., 3½ in.	Lag screw ⅜ in. × 2 in.
4 in., 5 in., 6 in.	Lag screw ½ in. × 2 in.
8 in.	Lag screw ⅝ in. × 2 in.
Pipe Size	**4 Screw Flanges**
Up to 2 in.	Wood screw No. 18 × 1½ in.
2½ in., 3 in., 3½ in.	Lag screw ⅜ in. × 1½ in.
4 in., 5 in., 6 in.	Lag screw ½ in. × 2 in.
8 in.	Lag screw ⅝ in. × 2 in.
Pipe Size	**U-Hooks Flanges**
Up to 2 in.	Drive screw No. 16 × 2 in.
2½ in., 3 in., 3½ in.	Lag screw ⅜ in. × 2½ in.
4 in., 5 in., 6 in.	Lag screw ½ in. × 3 in.
8 in.	Lag screw ⅝ in. × 3 in.

For SI Units: 1 in. = 25.4 mm

2-6.4.6 The size bolt or lag (coach) screw used with an eye rod or flange on the side of the beam shall not be less than specified in Table 2-6.4.6.

Exception: Where the thickness of beams or joists does not permit the use of screws 2 ½ in. (64 mm) long, screws 2 in. (51 mm) long shall be permitted with hangers spaced not over 10 ft (3 m) apart.

2-6.4.7 Wood screws shall be installed with a screwdriver. Nails are not acceptable for fastening hangers.

2-6.4.8 Screws in the side of a timber or joist shall be not less than 2 ½ in. (64 mm) from the lower edge where supporting branch lines and not less than 3 in. (76 mm) where supporting main lines.

Exception: This requirement shall not apply to 2-in. (51-mm) or thicker nailing strips resting on top of steel beams.

Table 2-6.4.6 Minimum Bolt or Lag Screw Sizes

Size of Pipe	Size of Bolt or Lag Screw		Length of Lag Screw Used with Wood Beams	
	in.	mm	in.	mm
Up to and including 2 in.	3/8	9.5	2 1/2	64
2 1/2 to 6 in. (inclusive)	1/2	12.7	3	76
8 in.	5/8	15.9	3	76

For SI Units: 1 in. = 25.4 mm.

2-6.4.9 The minimum plank thickness and the minimum width of the lower face of beams or joists in which lag screw rods are used shall be as given in Table 2-6.4.9.

Table 2-6.4.9 Minimum Plank Thicknesses and Beam or Joist Widths

Pipe Size	Nominal Plank Thickness		Nominal Width of Beam or Joist Face	
	in.	mm	in.	mm
Up to 2 in.	3	76	2	51
2 1/2 to 3 1/2 in.	4	102	2	51
4 in. and 5 in.	4	102	3	76
6 in.	4	102	4	102

For SI Units: 1 in. = 25.4 mm.

2-6.4.10 Lag screw rods shall not be used for support of pipes larger than 6 in. (152 mm). All holes for lag screw rods shall be predrilled 1/8 in. (3.2 mm) less in diameter than the maximum root diameter of the lag screw thread.

2-7 Valves.

2-7.1 Types of Valves to Be Used.

2-7.1.1 All valves controlling connections to water supplies and to supply pipes to sprinklers shall be listed indicating valves. Such valves shall not close in less than 5 sec when operated at maximum possible speed from the fully open position.

Exception No. 1: A listed underground gate valve equipped with a listed indicator post shall be permitted.

Exception No. 2: A listed water control valve assembly with a reliable position indication connected to a remote supervisory station shall be permitted.

Exception No. 3: A nonindicating valve, such as an underground gate valve with approved roadway box complete with T-wrench, accepted by the authority having jurisdiction, shall be permitted.

2-7.1.2 When water pressures exceed 175 psi (12.1 bars), valves shall be used in accordance with their pressure ratings.

2-7.1.3 Wafer-type valves with components that extend beyond the valve body shall be installed in a manner that does not interfere with the operation of any system components.

2-7.2 Drain Valves and Test Valves. Drain valves and test valves shall be approved.

2-7.3* Identification of Valves. All control, drain, and test connection valves shall be provided with permanently marked weather-proof metal or rigid plastic identification signs. The sign shall be secured with corrosion-resistant wire, chain, or other approved means.

2-8 Fire Department Connections.

2-8.1 The fire department connection(s) shall be internal threaded swivel fitting(s) having threads compatible with those of the local fire department.

Exception: The use of threadless couplings shall be permitted where required by the authority having jurisdiction and where listed for such use.

2-8.2 Connections shall be equipped with listed plugs or caps.

2-9 Waterflow Alarms.

2-9.1 Waterflow alarm apparatus shall be listed for the service and so constructed and installed that any flow of water from a sprinkler system equal to or greater than that from a single automatic sprinkler of the smallest orifice size installed on the system will result in an audible alarm on the premises within 5 min after such flow begins and until such flow stops.

2-9.2 Waterflow Detecting Devices.

2-9.2.1 Wet Pipe Systems. The alarm apparatus for a wet pipe system shall consist of a listed alarm check valve or other listed waterflow detecting alarm device with the necessary attachments required to give an alarm.

2-9.2.2 Dry Pipe Systems. The alarm apparatus for a dry pipe system shall consist of listed alarm attachments to the dry pipe valve. When a dry pipe valve is located on the system side of an alarm valve, connection of the actuating device of the alarms for the dry pipe valve to the alarms on the wet pipe system is permitted.

2-9.2.3 Preaction and Deluge Systems. The alarm apparatus for deluge and preaction systems shall consist of alarms actuated independently by the detection system and the flow of water.

2-9.2.4* Paddle-type waterflow alarm indicators shall be installed in wet systems only.

2-9.3 Attachments — General.

2-9.3.1* An alarm unit shall include a listed mechanical alarm, horn, or siren or a listed electric gong, bell, speaker, horn, or siren.

2-9.3.2* Outdoor water motor operated or electrically operated bells shall be weatherroofed and guarded.

2-9.4 All piping to water motor operated devices shall be galvanized or brass or other corrosion-resistant material acceptable under this standard and of a size not less than 3/4 in. (19 mm).

2-9.5* Attachments — Electrically Operated.

2-9.5.1 Electrically operated alarm attachments forming part of an auxiliary, central station, local protective, proprietary, or remote station signaling system shall be installed in accordance with NFPA 72, *National Fire Alarm Code*.

Exception: Sprinkler waterflow alarm systems that are not part of a required protective signaling system need not be supervised and shall be installed in accordance with NFPA 70, National Electrical Code®, Article 760.

2-9.5.2 Outdoor electric alarm devices shall be listed for outdoor use.

2-9.6 Drains from alarm devices shall be so arranged that there will be no overflowing at the alarm apparatus, at domestic connections, or elsewhere with the sprinkler drains wide open and under system pressure. *(See 4-14.3.6.1.)*

Chapter 3 System Requirements

3-1 Wet Pipe Systems.

3-1.1 Pressure Gauges. A listed pressure gauge conforming to 4-15.3.2 shall be installed in each system riser. Pressure gauges shall be installed above and below each alarm check valve where such devices are present.

3-1.2 Relief Valves. A gridded wet pipe system shall be provided with a relief valve not less than ¼ in. (6.4 mm) in size set to operate at pressures not greater than 175 psi (12.1 bars).

Exception No. 1: When the maximum system pressure exceeds 165 psi (11.4 bars), the relief valve shall operate at 10 psi (0.7 bars) in excess of the maximum system pressure.

Exception No. 2: Where auxiliary air reservoirs are installed to absorb pressure increases, a relief valve shall not be required.

3-1.3 Auxiliary Systems. A wet pipe system shall be permitted to supply an auxiliary dry pipe, preaction, or deluge system, provided the water supply is adequate.

3-2* Dry Pipe Systems.

3-2.1 Pressure Gauges. Listed pressure gauges conforming with 4-15.3.2 shall be connected:

(a) On the water side and air side of the dry pipe valve,

(b) At the air pump supplying the air receiver where one is provided,

(c) At the air receiver where one is provided,

(d) In each independent pipe from air supply to dry pipe system, and

(e) At exhausters and accelerators.

3-2.2 Upright Sprinklers. Only upright sprinklers shall be installed on dry pipe systems.

Exception No. 1: Listed dry sprinklers shall be permitted.*

Exception No. 2: Pendent sprinkles installed on return bends shall be permitted where both the sprinklers and the return bends are located in a heated area.

Exception No. 3: Horizontal sidewall sprinklers, installed so that water is not trapped, shall be permitted.

3-2.3* Size of Systems.

3-2.3.1* Volume Limitations. Not more than 750 gal (2839 L) system capacity shall be controlled by one dry pipe valve.

Exception: Piping volume shall be permitted to exceed 750 gal (2839 L) for nongridded systems if the system design is such that water is delivered to the system test connection in not more than 60 sec, starting at the normal air pressure on the system and at the time of fully opened inspection test connection.

3-2.3.2 Gridded dry pipe systems shall not be installed. *(See 4-14.3.5.3.3.)*

3-2.4 Quick-Opening Devices.

3-2.4.1 Dry pipe valves shall be provided with a listed quick-opening device where system capacity exceeds 500 gal (1893 L).

Exception: A quick-opening device shall not be required if the requirements of 3-2.3.1 Exception can be met without such a device.

3-2.4.2 The quick-opening device shall be located as close as practical to the dry pipe valve. To protect the restriction orifice and other operating parts of the quick-opening device against submergence, the connection to the riser shall be above the point at which water (priming water and back drainage) is expected when the dry pipe valve and quick-opening device are set, except where design features of the particular quick-opening device make these requirements unnecessary.

3-2.4.3 A soft disc globe or angle valve shall be installed in the connection between the dry pipe sprinkler riser and the quick-opening device.

3-2.4.4 A check valve shall be installed between the quick-opening device and the intermediate chamber of the dry pipe valve. If the quick-opening device requires pressure feedback from the intermediate chamber, a valve type that will clearly indicate whether it is opened or closed shall be permitted in place of that check valve. This valve shall be constructed so that it may be locked or sealed in the open position.

3-2.4.5 A listed antiflooding device shall be installed in the connection between the dry pipe sprinkler riser and the quick-opening device.

Exception: Where the quick-opening device has built-in antiflooding design features.

3-2.5* Location and Protection of Dry Pipe Valve.

3-2.5.1 The dry pipe valve and supply pipe shall be protected against freezing and mechanical injury.

3-2.5.2 Valve rooms shall be lighted and heated. The source of heat shall be of a permanently installed type. Heat tape shall not be used in lieu of heated valve enclosures to protect the dry pipe valve and supply pipe against freezing.

3-2.5.3 The supply for the sprinkler in the dry pipe valve enclosure shall be from the dry side of the system.

3-2.5.4 Protection against accumulation of water above the clapper shall be provided for a low differential dry pipe valve. An automatic high water level signaling device or an automatic drain device is acceptable.

3-2.6 Air Pressure and Supply.

3-2.6.1 Maintenance of Air Pressure. Air or nitrogen pressure shall be maintained on dry pipe systems throughout the year.

3-2.6.2* Air Supply. The compressed air supply shall be from a source available at all times and having a capacity capable of restoring normal air pressure in the system within 30 min.

Exception: In refrigerated spaces maintained below 5°F (−15°C), normal system air pressure shall be restored within 60 min.

3-2.6.3 Air Filling Connection. The connection pipe from the air compressor shall not be less than 1/2 in. (13 mm) in diameter and shall enter the system above the priming water level of the dry pipe valve. A check valve shall be installed in this air line, and a shutoff valve of the renewable disc type shall be installed on the supply side of this check valve and shall remain closed unless filling the system.

3-2.6.4 Relief Valve. A listed relief valve shall be provided between the compressor and controlling valve, set to relieve at a pressure 5 psi (0.3 bars) in excess of maximum air pressure carried in the system.

3-2.6.5 Shop Air Supply. Where the air supply is taken from a shop system having a normal pressure greater than that required for dry pipe systems and an automatic air maintenance device is not used, the relief valve shall be installed between two control valves in the air line, and a small air cock, which is normally left open, shall be installed in the fitting below the relief valve. (*See Figure 3-2.6.5.*)

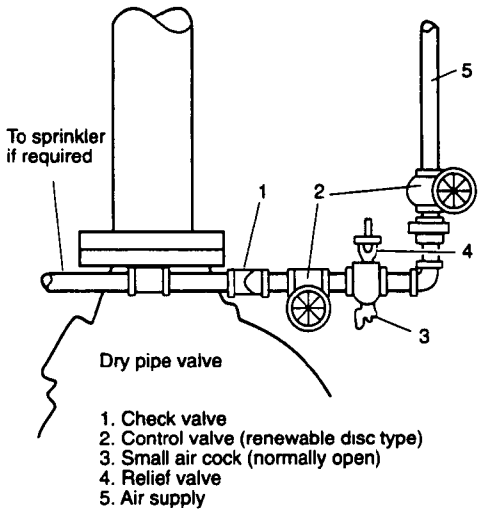

Figure 3-2.6.5 Air supply from shop system.

3-2.6.6 Automatic Air Compressor. Where a dry pipe system is supplied by an automatic air compressor or plant air system, any device or apparatus used for automatic maintenance of air pressure shall be of a type specifically listed for such service and capable of maintaining the required air pressure on the dry pipe system. Automatic air supply to more than one dry pipe system shall be connected to enable individual maintenance of air pressure in each system. A check valve or other positive backflow prevention device shall be installed in the air supply to each system to prevent air- or waterflow from one system to another.

3-2.6.7 System Air Pressure. The system air pressure shall be maintained in accordance with the instruction sheet furnished with the dry pipe valve, or 20 psi (1.4 bars) in excess of the calculated trip pressure of the dry pipe valve, based on the highest normal water pressure of the system supply. The permitted rate of air leakage shall be as specified in 8-2.3.

3-2.6.8 Nitrogen. Where used, nitrogen shall be introduced through a pressure regulator set to maintain system pressure in accordance with 3-2.6.7.

3-3 Preaction Systems and Deluge Systems.

3-3.1* General.

3-3.1.1 All components of pneumatic, hydraulic, or electrical systems shall be compatible.

3-3.1.2 The automatic water control valve shall be provided with hydraulic, pneumatic, or mechanical manual means for operation that is independent of detection devices and of the sprinklers.

3-3.1.3 Pressure Gauges. Listed pressure gauges conforming with 4-15.3.2 shall be installed as follows:

(a) Above and below preaction valve and below deluge valve.

(b) On air supply to preaction and deluge valves.

3-3.1.4 A supply of spare fusible elements for heat-responsive devices, not less than two of each temperature rating, shall be maintained on the premises for replacement purposes.

3-3.1.5 Hydraulic release systems shall be designed and installed in accordance with manufacturer's requirements and listing for height limitations above deluge valves or deluge valve actuators to prevent water column.

3-3.1.6 Location and Spacing of Detection Devices. Spacing of detection devices, including automatic sprinklers used as detectors, shall be in accordance with their listing and manufacturer's specifications.

3-3.1.7 Devices for Test Purposes and Testing Apparatus.

3-3.1.7.1 Where detection devices installed in circuits are located where not readily-accessible, an additional detection device shall be provided on each circuit for test purposes at an accessible location and shall be connected to the circuit at a point that will assure a proper test of the circuit.

3-3.1.7.2 Testing apparatus capable of producing the heat or impulse necessary to operate any normal detection device shall be furnished to the owner of the property with each installation. Where explosive vapors or materials are present, hot water, steam, or other methods of testing not involving an ignition source shall be used.

3-3.1.8 Location and Protection of System Water Control Valves.

3-3.1.8.1 System water control valves and supply pipes shall be protected against freezing and mechanical injury.

3-3.1.8.2 Valve rooms shall be lighted and heated. The source of heat shall be of a permanently installed type. Heat tape shall not be used in lieu of heated valve enclosure rooms to protect preaction and deluge valves and supply pipe against freezing.

3-3.2 Preaction Systems.

3-3.2.1 Preaction systems shall be one of the types described in (a) through (c) below.

(a) *Single Interlock System.* Systems that admit water to sprinkler piping upon operation of detection devices.

(b) *Non-Interlock System.* Systems that admit water to sprinkler piping upon operation of detection devices or automatic sprinklers.

(c) *Double Interlock System.* Systems that admit water to sprinkler piping upon operation of both detection devices and automatic sprinklers.

3-3.2.2 Size of Systems. Not more than 1000 automatic sprinklers shall be controlled by any one preaction valve.

Exception: For preaction system types described in 3-3.2.1(c), system volume shall not exceed 750 gal (2839 L) controlled by one preaction valve unless the system is designed to deliver water to the system test connection in not more than 60 sec, starting at the normal air pressure on the system with the detection system operated and at the time of fully opened inspection test connection. Air pressure and supply shall comply with 3-2.6.

3-3.2.3 Supervision. Sprinkler piping and fire detection devices shall be automatically supervised where there are more than 20 sprinklers on the system. All preaction system types described in 3-3.2.1(b) and (c) shall maintain a minimum supervising air pressure of 7 psi (0.5 bars.)

3-3.2.4 Upright Sprinklers. Only upright sprinklers shall be installed on preaction systems.

Exception No. 1: Listed dry sprinklers shall be permitted.*

Exception No. 2: Pendent sprinklers installed on return bends shall be permitted where both the sprinklers and the return bends are located in a heated area.

Exception No. 3: Horizontal sidewall sprinklers, installed so that water is not trapped, shall be permitted.

3-3.2.5 System Configuration. Preaction systems of the type described in 3-3.2.1(c) shall not be gridded.

3-3.3* Deluge Systems.

3-3.3.1 The detection devices or systems shall be automatically supervised.

3-3.3.2 Deluge systems shall be hydraulically calculated.

3-4 Combined Dry Pipe and Preaction Systems.

3-4.1* General.

3-4.1.1* Combined automatic dry pipe and preaction systems shall be so constructed that failure of the detection system shall not prevent the system from functioning as a conventional automatic dry pipe system.

3-4.1.2 Combined automatic dry pipe and preaction systems shall be so constructed that failure of the dry pipe system of automatic sprinklers shall not prevent the detection system from properly functioning as an automatic fire alarm system.

3-4.1.3 Provisions shall be made for the manual operation of the detection system at locations requiring not more than 200 ft (61 m) of travel.

3-4.1.4 Upright Sprinklers. Only upright sprinklers shall be installed on combined dry pipe and preaction systems.

Exception No. 1: Listed dry sprinklers shall be permitted.*

Exception No. 2: Pendent sprinklers installed on return bends shall be permitted where both sprinklers and return bends are located in a heated area.

Exception No. 3: Horizontal sidewall sprinklers, installed so that water is not trapped, shall be permitted.

3-4.2 Dry Pipe Valves in Combined Systems.

3-4.2.1 Where the system consists of more than 600 sprinklers or has more than 275 sprinklers in any fire area, the entire system shall be controlled through two 6-in. (152-mm) dry pipe valves connected in parallel and shall feed into a common feed main. These valves shall be checked against each other. (*See Figure 3-4.2.*)

3-4.2.2 Each dry pipe valve shall be provided with a listed tripping device actuated by the detection system. Dry pipe valves shall be cross-connected through a 1-in. (25.4-mm) pipe connection to permit simultaneous tripping of both dry pipe valves. This 1-in. (25.4-mm) pipe connection shall be equipped with an indicating valve so that either dry pipe valve can be shut off and worked on while the other remains in service.

3-4.2.3 The check valves between the dry pipe valves and the common feed main shall be equipped with $^1/_2$-in. (13-mm) bypasses so that a loss of air from leakage in the trimmings of a dry pipe valve will not cause the valve to trip until the pressure in the feed main is reduced to the tripping point. An indicating valve shall be installed in each of these bypasses so that either dry pipe valve can be completely isolated from the main riser or feed main and from the other dry pipe valve.

3-4.2.4 Each combined dry pipe and preaction system shall be provided with listed quick-opening devices at the dry pipe valves.

3-4.3* Air Exhaust Valves. One or more listed air exhaust valves of 2-in. (51-mm) or larger size controlled by operation of a fire detection system shall be installed at the end of the common feed main. These air exhaust valves shall have soft-seated globe or angle valves in their intakes; also, approved strainers shall be installed between these globe valves and the air exhaust valves.

3-4.4 Subdivision of System Using Check Valves.

3-4.4.1 Where more than 275 sprinklers are required in a single fire area, the system shall be divided into sections of 275 sprinklers or less by means of check valves. If the system is installed in more than one fire area or story, not more than 600 sprinklers shall be supplied through any one check valve. Each section shall have a $1^1/_4$-in. (33-mm) drain on the system side of each check valve supplemented by a dry pipe system auxiliary drain.

3-4.4.2 Section drain lines and dry pipe system auxiliary drains shall be located in heated areas or inside of heated cabinets to enclose drain valves and auxiliary drains for each section.

3-4.4.3 Air exhaust valves at the end of a feed main and associated check valves shall be protected against freezing.

3-4.5 Time Limitation. The sprinkler system shall be so constructed and the number of sprinklers controlled shall be so limited that water shall reach the farthest sprinkler within a period of time not exceeding 1 min for each 400 ft (122 m) of common feed main from the time the heat-responsive system operates. Maximum time permitted shall not exceed 3 min.

3-4.6 System Test Connection. The end section shall have a system test connection as required for dry pipe systems.

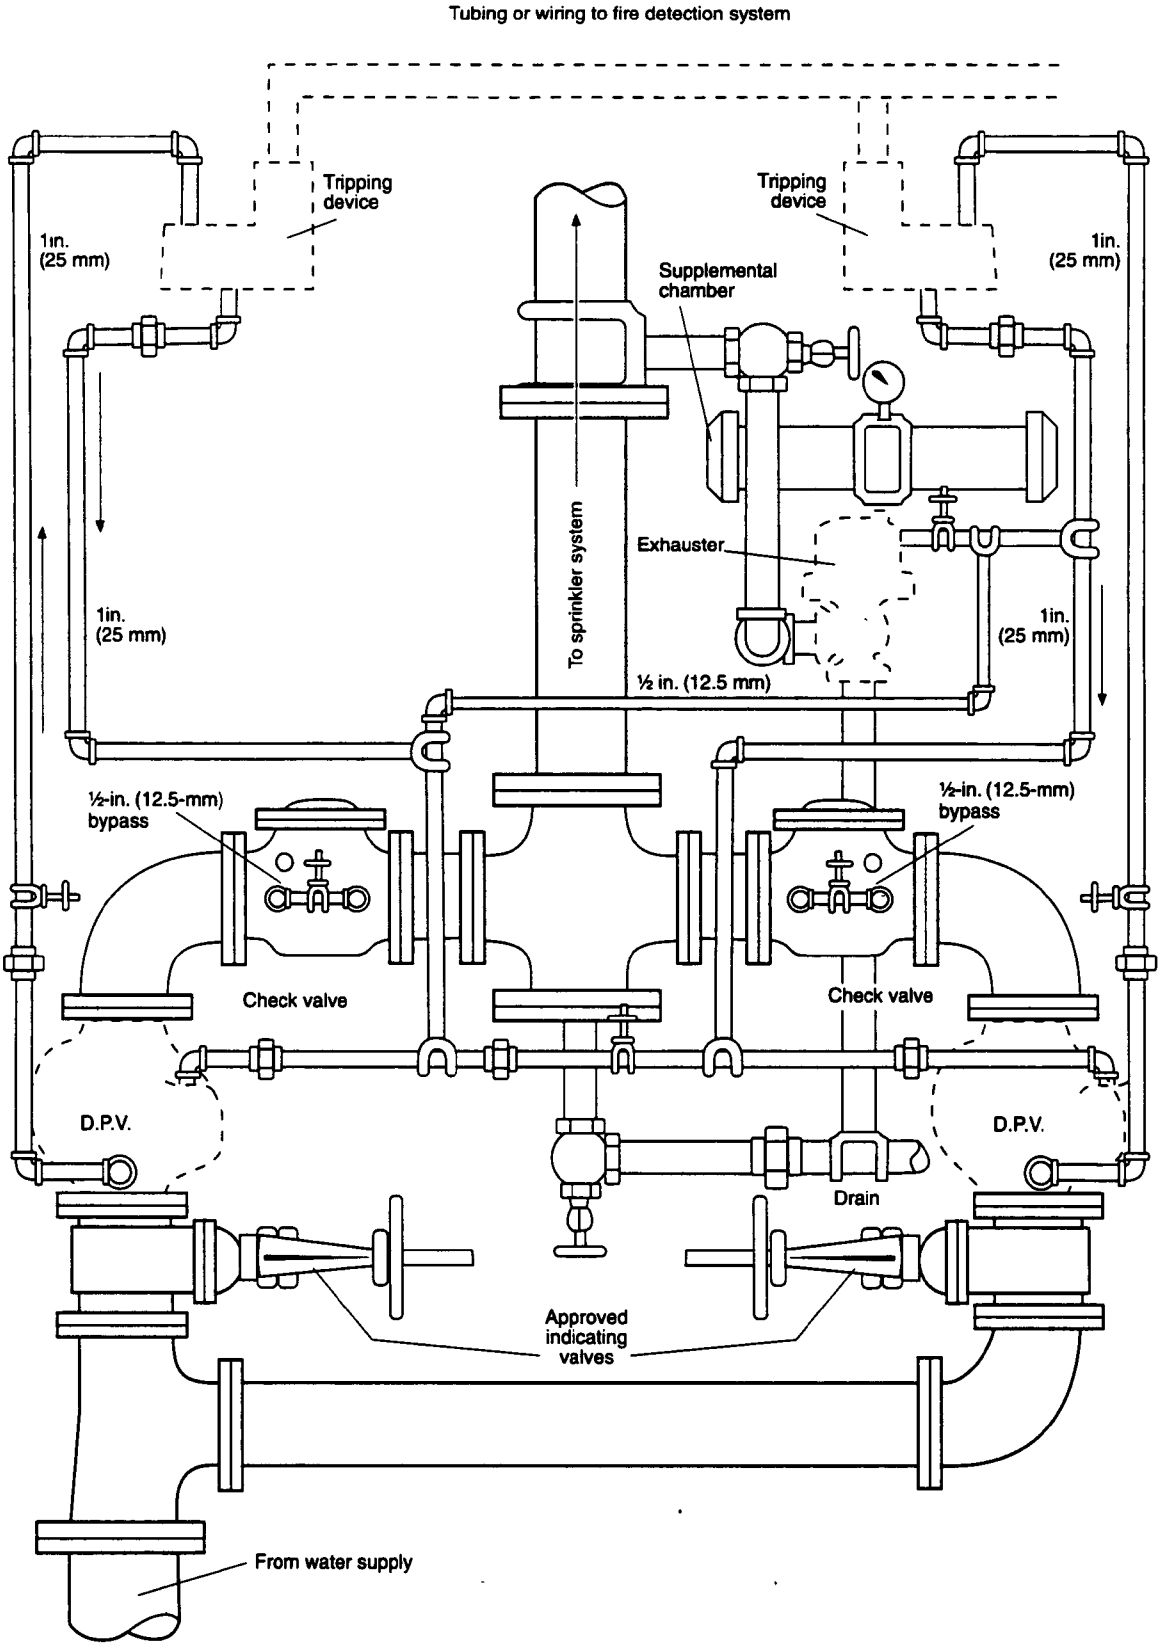

Figure 3-4.2 Header for dry pipe valves installed in parallel for combined systems; standard trimmings not shown. Arrows indicate direction of fluid flow.

3-5 Antifreeze Systems.

3-5.1* Where Used. The use of antifreeze solutions shall be in conformity with state and local health regulations.

3-5.2* Antifreeze Solutions.

3-5.2.1 Where sprinkler systems are supplied by potable water connections, the use of antifreeze solutions other than water solutions of pure glycerine (C.P. or U.S.P. 96.5 percent grade) or propylene glycol shall not be permitted. Suitable glycerine-water and propylene glycol-water mixtures are shown in Table 3-5.2.1.

Table 3-5.2.1 Antifreeze Solutions to Be Used if Potable Water Is Connected to Sprinklers

Material	Solution (by Volume)	Specific Gravity at 60°F (15.6°C)	Freezing Point °F	Freezing Point °C
Glycerine	50% Water	1.133	−15	−26.1
C.P. or U.S.P. Grade*	40% Water	1.151	−22	−30.0
	30% Water	1.165	−40	−40.0
Hydrometer Scale 1.000 to 1.200				
Propylene Glycol	70% Water	1.027	+9	−12.8
	60% Water	1.034	−6	−21.1
	50% Water	1.041	−26	−32.2
	40% Water	1.045	−60	−51.1
Hydrometer Scale 1.000 to 1.200 (Subdivisions 0.002)				

*C.P.—Chemically Pure. U.S.P.—United States Pharmacopoeia 96.5%.

3-5.2.2 If potable water is not connected to sprinklers, the commercially available materials indicated in Table 3-5.2.2 shall be permitted for use in antifreeze solutions.

3-5.2.3* An antifreeze solution shall be prepared with a freezing point below the expected minimum temperature for the locality. The specific gravity of the prepared solution shall be checked by a hydrometer with suitable scale or refractometer having a scale calibrated for the antifreeze solution involved. [*See Figures 3-5.2.3(a) and (b).*]

3-5.3 Arrangement of Supply Piping and Valves. A control valve and two small solution test valves shall be provided as illustrated in Figures 3-5.3(a) and 3-5.3(b).

3-5.3.1* Where sprinklers are above the water/antifreeze interface, a check valve with a 1/32-in. (0.8-mm) hole in the clapper shall be provided. In most cases, this necessitates the use of a 5-ft (1.5-m) drop pipe or U-loop as illustrated in Figure 3-5.3(a).

Exception: Where the connection between the antifreeze system and the wet pipe system incorporates a backflow prevention device, piping and valves shall be arranged as illustrated in Figure 3-5.3(b). An expansion chamber of appropriate size and pre-charged air pressure shall be provided to compensate for thermal expansion of the antifreeze solution as illustrated in Figure 3-5.3(b).

3-5.3.2 Where a backflow prevention device is provided between the antifreeze system and the wet pipe system, piping and valves shall be arranged as illustrated in Figure 3-5.3(b). An expansion chamber of appropriate size shall be provided to compensate for thermal expansion of the antifreeze solution as illustrated in Figure 3-5.3(b).

Table 3-5.2.2 Antifreeze Solution to Be Used if Nonpotable Water Is Connected to Sprinklers

Material	Solution (by Volume)	Specific Gravity at 60°F (15.6°C)	Freezing Point °F	Freezing Point °C
Glycerine	If glycerine is used, see Table 3-5.2.1.			
Diethylene Glycol	50% Water	1.078	−13	−25.0
	45% Water	1.081	−27	−32.8
	40% Water	1.086	−42	−41.1
Hydrometer Scale 1.000 to 1.120 (Subdivisions 0.002)				
Ethylene Glycol	61% Water	1.056	−10	−23.3
	56% Water	1.063	−20	−28.9
	51% Water	1.069	−30	−34.4
	47% Water	1.073	−40	−40.0
Hydrometer Scale 1.000 to 1.120 (Subdivisions 0.002)				
Propylene Glycol	If propylene glycol is used, see Table 3-5.2.1.			
Calcium Chloride 80% "Flake"	lb $CaCl_2$ per gal of Water			
Fire Protection Grade†	2.83	1.183	0	−17.8
Add corrosion inhibitor	3.38	1.212	−10	−23.3
of sodium bichromate	3.89	1.237	−20	−28.9
1/4 oz per gal water	4.37	1.258	−30	−34.4
	4.73	1.274	−40	−40.0
	4.93	1.283	−50	−45.6

† Free from magnesium chloride and other impurities.

3-6 Automatic Sprinkler Systems with Nonfire Protection Connections.

3-6.1 Circulating Closed-Loop Systems.

3-6.1.1 System Components.

3-6.1.1.1 A circulating closed-loop system is primarily a sprinkler system and shall comply with all provisions of this standard such as those for control valves, area limitations of a system, alarms, fire department connections, sprinkler spacing, etc.

Exception: Items as specifically detailed within 3-6.1.

3-6.1.1.2 Piping, fittings, valves, and pipe hangers shall meet the requirements specified in Chapter 2.

3-6.1.1.3 A dielectric fitting shall be installed in the junction where dissimilar piping materials are joined, e.g., copper to steel.

Exception: Dielectric fittings are not required in the junction where sprinklers are connected to piping.

3-6.1.1.4 It is not required that other auxiliary devices be listed for sprinkler service; however, these devices, such as pumps, circulating pumps, heat exchangers, radiators, and luminaries, shall be pressure rated at 175 or 300 psi (12.1 or 20.7 bars) (rupture pressure of 5 times rated water working pressure) to match the required rating of sprinkler system components.

3-6.1.1.5 Auxiliary devices shall incorporate materials of construction and be so constructed that they will maintain their physical integrity under fire conditions to avoid impairment to the fire protection system.

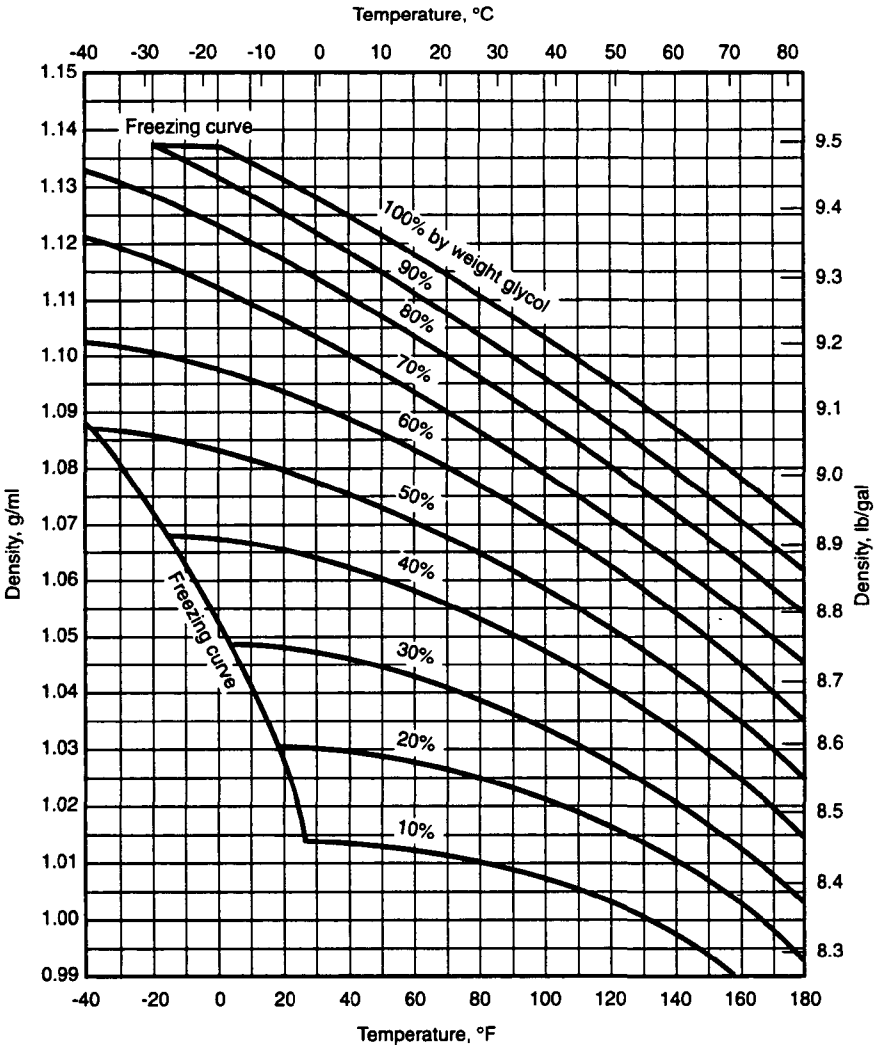

Figure 3-5.2.3(a) Densities of aqueous ethylene glycol solutions (percent by weight).

3-6.1.1.6 Auxiliary devices, where hung from the building structure, shall be supported independently from the sprinkler portion of the system, following recognized engineering practices.

3-6.1.2* Hydraulic Characteristics. Piping systems for attached heating and cooling equipment shall have auxiliary pumps or an arrangement made to return water to the piping system in order to assure the following:

(a) Water for sprinklers shall not be required to pass through heating or cooling equipment. At least one direct path shall exist for waterflow from the sprinkler water supply to every sprinkler. Pipe sizing in the direct path shall be in accordance with design requirements of this standard.

(b) No portions of the sprinkler piping shall have less than the sprinkler system design pressure regardless of the mode of operation of the attached heating or cooling equipment.

(c) There shall be no loss or outflow of water from the system due to or resulting from the operation of heating or cooling equipment.

(d) Shutoff valves and a means of drainage shall be provided on piping to heating or cooling equipment at all points of connection to sprinkler piping and shall be installed in such a manner as to make possible repair or removal of any auxiliary component without impairing the serviceability and response to the sprinkler system. All auxiliary components, including the strainer, shall be installed on the auxiliary equipment side of the shutoff valves.

3-6.1.3 Water Temperature.

3-6.1.3.1 Maximum. In no case shall maximum water temperature flowing through the sprinkler portion of the system exceed 120°F (49°C). Protective control devices listed for this purpose shall be installed to shut down heating or cooling systems when temperature of water flowing through the sprinkler portion of the system exceeds 120°F (49°C). When water temperature exceeds 100°F (37.8°C), intermediate or higher temperature rated sprinklers shall be used.

3-6.1.3.2 Minimum. Precautions shall be taken to ensure that temperatures below 40°F (4°C) are not permitted.

3-6.1.4 Obstruction to Discharge. Automatic sprinklers shall not be obstructed by auxiliary devices, piping, insulation, etc., from detecting fire or from proper distribution of water.

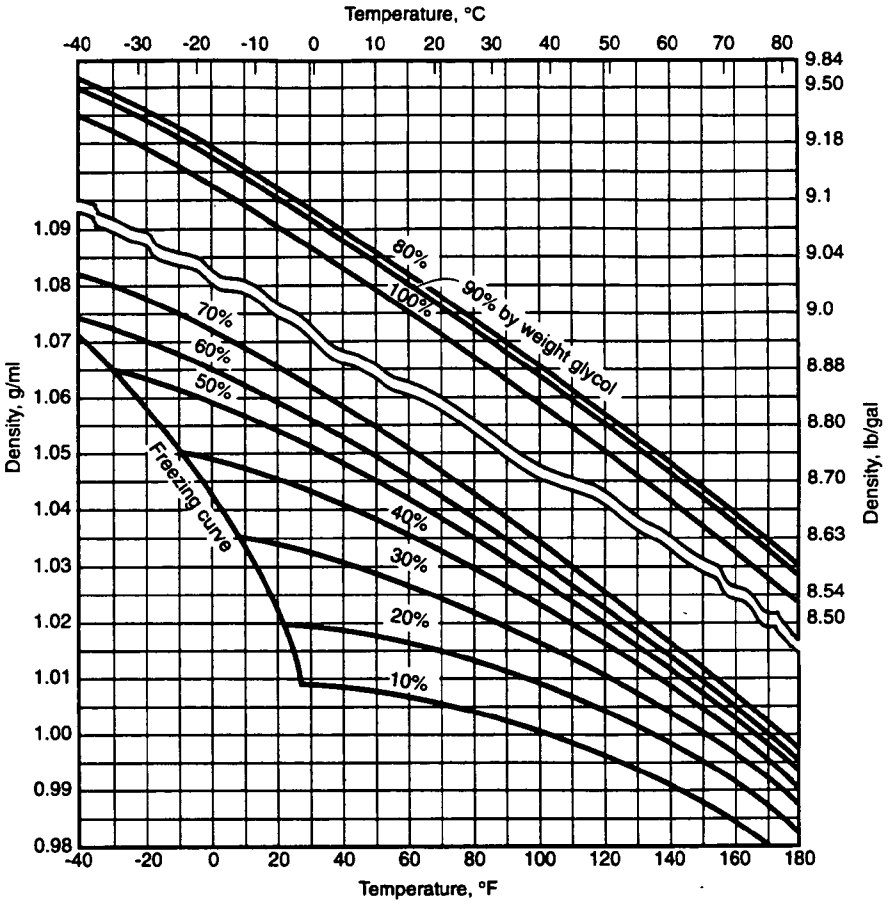

Figure 3-5.2.3(b) Densities of aqueous propylene glycol solutions (percent by weight).

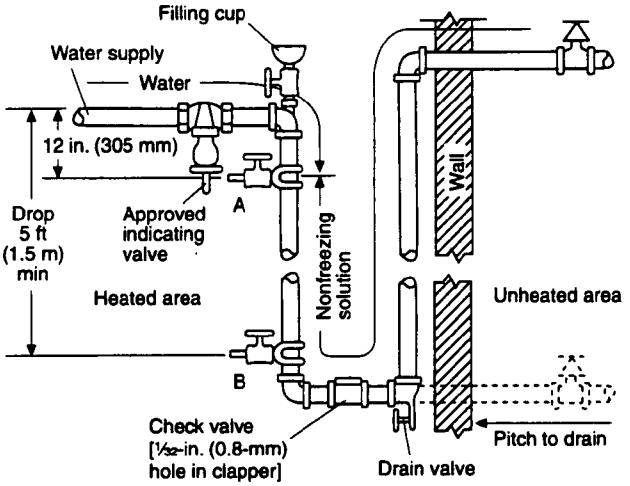

Note 1: Check valve shall be permitted to be omitted where sprinklers are below the level of valve A.
Note 2: The 1/32-in. (0.8-mm) hole in the check valve clapper is needed to allow for expansion of the solution during a temperature rise, thus preventing damage to sprinklers.

Figure 3-5.3(a) Arrangement of supply piping and valves.

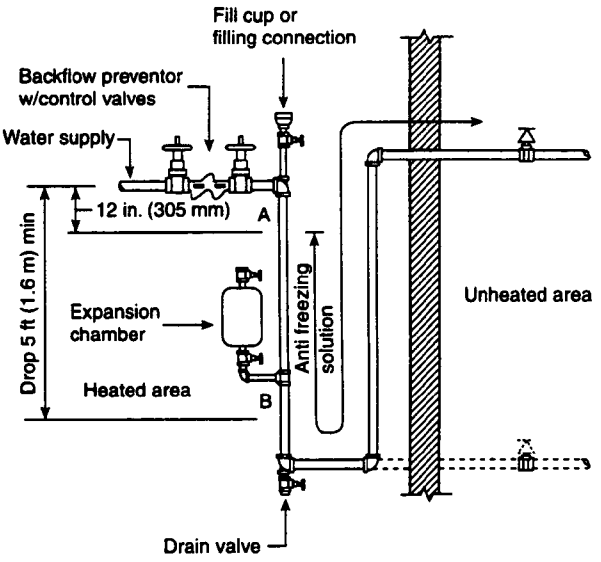

Figure 3-5.3(b) Arrangement of supply piping with backflow device.

3-6.1.5 Signs. Caution signs shall be attached to all valves controlling sprinklers. The caution sign shall be worded as follows:

"This valve controls fire protection equipment. Do not close until after fire has been extinguished. Use auxiliary valves when necessary to shut off supply to auxiliary equipment.

CAUTION: Automatic alarm will be sounded if this valve is closed."

3-6.1.6 Water Additives. Materials added to water shall not adversely affect the fire fighting properties of the water and shall be in conformity with any state or local health regulations. Due care and caution shall be given to the use of additives that may remove or suspend scale from older piping systems. Where additives are necessary for proper system operation, due care shall be taken to ensure that additives are replenished after alarm testing or whenever water is removed from the system.

3-6.1.7 Waterflow Detection. The supply of water from sprinkler piping through auxiliary devices, circulatory piping, and pumps shall not under any condition or operation, transient or static, cause false sprinkler waterflow signals.

3-6.1.7.1 A sprinkler waterflow signal shall not be impaired when water is discharged through an opened sprinkler or through the system test connection while auxiliary equipment is in any mode of operation (on, off, transient, stable).

3-7 Outside Sprinklers for Protection against Exposure Fires.

3-7.1 Applications. Exposure protection systems shall be permitted on buildings regardless of whether the building's interior is protected by a sprinkler system.

3-7.2 Water Supply and Control.

3-7.2.1* Sprinklers installed for protection against exposure fires shall be supplied from a standard water supply as outlined in Chapter 7.

Exception: Where approved, other supplies, such as manual valves or pumps or fire department connections, shall be acceptable.

3-7.2.2 Where fire department connections are used for water supply, they shall be so located that they will not be affected by the exposing fire.

3-7.3 Control.

3-7.3.1 Each system of outside sprinklers shall have an independent control valve.

3-7.3.2 Manually controlled open sprinklers shall be used only where constant supervision is present.

3-7.3.3 Sprinklers shall be of the open or automatic type. Automatic sprinklers in areas subject to freezing shall be on dry pipe systems conforming to Section 3-2 or antifreeze systems conforming to Section 3-5.

3-7.3.4 Automatic systems of open sprinklers shall be controlled by the operation of fire detection devices designed for the specific application.

3-7.4 System Components.

3-7.4.1 Drain Valves. Each system of outside sprinklers shall have a separate drain valve installed on the system side of each control valve.

Exception: Open sprinkler-top fed systems arranged to facilitate drainage.

3-7.4.2 Check Valves. Where sprinklers are installed on two adjacent sides of a building, protecting against two separate and distinct exposures, with separate control valves for each side, the end lines shall be connected with check valves located so that one sprinkler around the corner will operate. (*See Figure 3-7.4.2.*) The intermediate pipe between the two check valves shall be arranged to drain. As an alternate solution, an additional sprinkler shall be installed on each system located around the corner from the system involved.

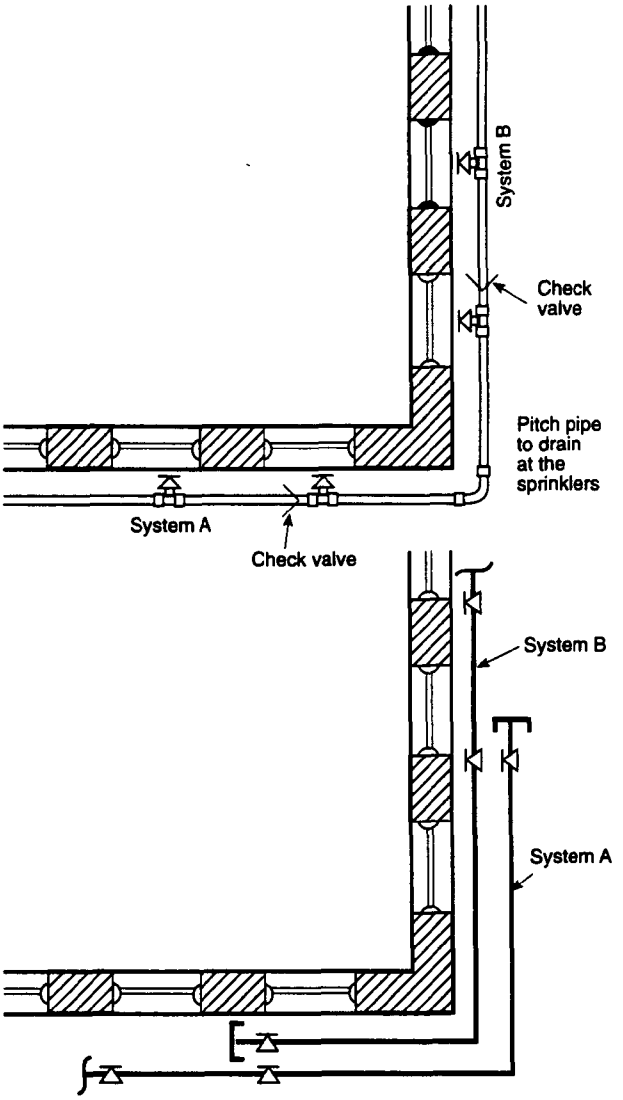

Figure 3-7.4.2 Arrangement of check valves. Top: typical. Bottom: alternate.

3-7.4.3 System Arrangement. Where one exposure affects two sides of the protected structure, the system shall not be subdivided between the two sides, but rather shall be arranged to operate as a single system.

3-7.5 Pipe and Fittings. Pipe and fittings installed on the exterior of the building shall be corrosion resistant.

3-7.6 Strainers. A listed strainer shall be provided in the riser or feed main that supplies sprinklers having nominal orifice sizes smaller than 3/8 in. (9.5 mm).

3-7.7 Gauge Connections. A listed pressure gauge conforming with 4-15.3.2 shall be installed immediately below the control valve of each system.

3-7.8 Sprinklers. Only sprinklers of such type as are listed for window, cornice, sidewall, or ridge pole service shall be installed for such use except where adequate coverage by use of other types of listed sprinklers and/or nozzles has been demonstrated. Small-orifice or large-orifice sprinklers shall be permitted.

3-8* Refrigerated Spaces.

3-8.1 Spaces Maintained at Temperatures Above 32°F (0°C). Where temperatures are maintained above 32°F (0°C) in refrigerated spaces, the requirements in this section shall not apply.

3-8.2* Spaces Maintained at Temperatures Below 32°F (0° C).

3-8.2.1 Where sprinkler pipe passes through a wall or floor into the refrigerated space, a section of pipe arranged for removal shall be provided immediately inside the space. The removable length of pipe shall be a minimum of 30 in. (762 mm).

3-8.2.2 A low air pressure alarm to a constantly attended location shall be installed.

Exception: Systems equipped with local low pressure alarms and an automatic air maintenance device.

3-8.2.3 Piping in refrigerated spaces shall be installed with pitch as outlined in 4-14.3.3

3-8.2.4* Air supply for systems shall be taken from the room of lowest temperature to reduce moisture content of the air.

Exception: Where compressed nitrogen gas from cylinders is used in lieu of compressed air.

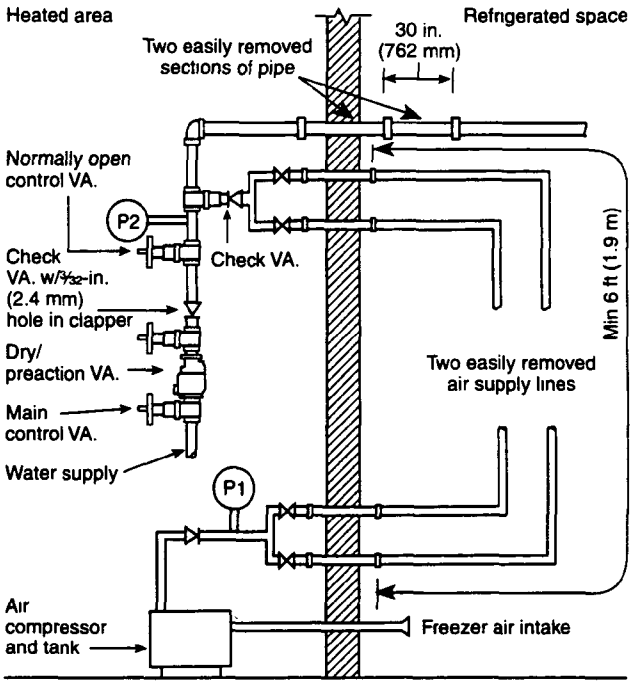
3-8.2.5* An indicating-type control valve for operational testing of the system shall be provided on each sprinkler riser outside of the refrigerated space.

3-8.2.6 A check valve with a 3/32-in. (24-mm) diameter hole in the clapper shall be installed in the system riser below the test valve required in 3-8.2.5. The check valve is to prevent evaporation of prime water into the system piping.

Exception: When system dry pipe or preaction valves, if designed to completely drain all water above the seat, and which are listed for installation without priming water remaining and where priming water is not used in the system riser.

3-8.2.7* The air supply piping entering the freezer area shall be equipped with two easily removable supply lines at least 6 ft (1.9 m) long and at least 1 in. (25.4 mm) in diameter as shown in Figure 3-8.2.7. Each supply line shall be equipped with control valves located in the warm area. Only one air supply line shall be open to supply the system air at any one time.

Exception: Where compressed nitrogen gas from cylinders is used in lieu of compressed air.



1. Check valve with 3/32-in. (2.4-mm) hole in clapper not required if prime water not used.
2. Supply air to be connection to top or side of system pipe.
3. Each removable air line shall be a minimum of 1 in. (25 mm) diameter and minimum of 6 ft (1.9 m) long.

Figure 3-8.2.7 Refrigerator area sprinkler systems to minimize the chances of developing ice-plugs.

3-9 Commercial-Type Cooking Equipment and Ventilation.

3-9.1 In cooking areas protected by automatic sprinklers, additional sprinklers or automatic spray nozzles shall be provided to protect commercial-type cooking equipment and ventilation systems that are designed to carry away grease-laden vapors unless otherwise protected. (*See NFPA 96, Standard on Ventilation Control and Fire Protection of Commercial Cooking Operations.*)

3-9.2* Standard sprinklers or automatic spray nozzles shall be so located as to provide for the protection of exhaust ducts, hood exhaust duct collars, and hood exhaust plenum chambers.

Exception: Sprinklers or automatic spray nozzles in ducts, duct collars, and plenum chambers shall not be required where all cooking equipment is served by listed grease extractors.

3-9.3 Exhaust ducts shall have one sprinkler or automatic spray nozzle located at the top of each vertical riser and at the midpoint of each offset. The first sprinkler or automatic spray nozzle in a horizontal duct shall be installed at the duct entrance. Horizontal exhaust ducts shall have such devices located on 10-ft (3-m) centers beginning no more than 5 ft (1.5 m) from the duct entrance. Sprinkler(s) or automatic spray nozzle(s) in exhaust ducts subject to freezing shall be properly protected against freezing by approved means. (*See 4-14.4.1.*)

Exception No. 1: Sprinklers or automatic spray nozzles shall not be required in a vertical riser located outside of a building provided the riser does not expose combustible material or provided the interior of a building and the horizontal distance between the hood outlet and the vertical riser is at least 25 ft (7.6 m).

Exception No. 2: Sprinklers or automatic spray nozzles shall not be required where the entire exhaust duct is connected to a listed exhaust hood incorporating a specific duct collar and sprinkler (or automatic spray nozzle) assembly investigated for protection of unlimited length of duct in accordance with the Standard for Fire Testing of Fire Extinguishing Systems for Protection of Restaurant Cooking Areas, UL 300.

3-9.4 Each hood exhaust duct collar shall have one sprinkler or automatic spray nozzle located 1 in. minimum to 12 in. maximum (25.4 mm min. to 305 mm max.) above the point of duct collar connection in the hood plenum. Hoods that have listed fire dampers located in the duct collar shall be protected with a sprinkler or automatic spray nozzle located on the discharge side of the damper and be so positioned as not to interfere with damper operation.

3-9.5 Hood exhaust plenum chambers shall have one sprinkler or automatic spray nozzle centered in each chamber not exceeding 10 ft (3 m) in length. Plenum chambers greater than 10 ft (3 m) in length shall have two sprinklers or automatic spray nozzles evenly spaced with the maximum distance between the two sprinklers not to exceed 10 ft (3 m).

3-9.6 Sprinklers or automatic spray nozzles being used in duct, duct collar, and plenum areas shall be of the extra high temperature classification [325 to 375°F (163 to 191°C)] and shall have orifice sizes not less than 1/4 in. (6.4 mm) and not more than 1/2 in. (13 mm).

Exception: When use of a temperature measuring device indicates temperatures above 300°F (149°C), a sprinkler or automatic spray nozzle of higher classification shall be used.

3-9.7 Access must be provided to all sprinklers or automatic spray nozzles for examination and replacement.

3-9.8 Cooking Equipment.

3-9.8.1 Cooking equipment (such as deep fat fryers, ranges, griddles, and broilers) that is considered to be a source of ignition shall be protected in accordance with the provisions of 3-9.1.

3-9.8.2 A sprinkler or automatic spray nozzle used for protection of deep fat fryers shall be listed for that application. The position, arrangement, location, and water supply for each sprinkler or automatic spray nozzle shall be in accordance with its listing.

3-9.8.3 The operation of any cooking equipment sprinkler or automatic spray nozzle shall automatically shut off all sources of fuel and heat to all equipment requiring protection. Any gas appliance not requiring protection but located under ventilating equipment shall also be shut off. All shutdown devices shall be of the type that requires manual resetting prior to fuel or power being restored.

3-9.9 A listed indicating valve shall be installed in the water supply line to the sprinklers and spray nozzles protecting the cooking and ventilating system.

3-9.10 A listed line strainer shall be installed in the main water supply preceding sprinklers or automatic spray nozzles having nominal orifice sizes smaller than 3/8 in. (9.5 mm).

3-9.11 A system test connection shall be provided to verify proper operation of equipment specified in 3-9.8.3.

3-9.12 Sprinklers and automatic spray nozzles used for protecting commercial-type cooking equipment and ventilating systems shall be replaced annually.

Exception: Where automatic bulb-type sprinklers or spray nozzles are used and annual examination shows no build-up of grease or other material on the sprinklers or spray nozzles.

Chapter 4 Installation Requirements

4-1* Basic Requirements.

4-1.1* The requirements for spacing, location, and position of sprinklers are based on the following principles:

(a) Sprinklers installed throughout the premises,

(b) Sprinklers located so as not to exceed maximum protection area per sprinkler,

(c) Sprinklers positioned and located so as to provide satisfactory performance with respect to activation time and distribution.

Exception No. 1: For locations permitting omission of sprinklers, see 4-13.1, 4-13.2, and 4-13.8.

Exception No. 2: When sprinklers are specifically tested and test results demonstrate that deviations from clearance requirements to structural members do not impair the ability of the sprinkler to control or suppress a fire, their positioning and locating in accordance with the test results shall be permitted.

Exception No. 3: Clearance between sprinklers and ceilings exceeding the maximum specified in 4-6.4.1, 4-7.4.1, 4-8.4.1, 4-9.4.1, 4-10.4.1, and 4-11.4.1 shall be permitted provided that tests or calculations demonstrate comparable sensitivity and performance of the sprinklers to those installed in conformance with these sections.

4-1.2* System valves and gauges shall be accessible for operation, inspection, tests, and maintenance.

4-2 System Protection Area Limitations. The maximum floor area on any one floor to be protected by sprinklers supplied by any one sprinkler system riser or combined system riser shall be as follows:

Light Hazard	52,000 sq ft (4831 m^2)
Ordinary Hazard	52,000 sq ft (4831 m^2)
Extra Hazard	
Pipe Schedule	25,000 sq ft (2323 m^2)
Hydraulically Calculated	40,000 sq ft (3716 m^2)
Storage — High-piled storage (as defined in 1-4.2) and storage covered by other NFPA standards	40,000 sq ft (3716 m^2)

Exception No. 1: The floor area occupied by mezzanines shall not be included in the above area.

Exception No. 2: Where single systems protect extra hazard, high-piled storage, or storage covered by other NFPA standards, and ordinary or light hazard areas, the extra hazard or storage area coverage shall not exceed the floor area specified for that hazard and the total area coverage shall not exceed 52,000 sq ft (4831 m^2).

4-3 Use of Sprinklers.

4-3.1 General.

4-3.1.1* Sprinklers shall be installed in accordance with their listing.

Exception: Where construction features or other special situations require unusual water distribution, listed sprinklers shall be permitted to be installed in positions other than anticipated by their listing to achieve specific results.

4-3.1.2* Upright sprinklers shall be installed with the frame arms parallel to the branch line.

4-3.1.3 Temperature Ratings.

4-3.1.3.1 Ordinary-temperature-rated sprinklers shall be used throughout buildings.

Exception No. 1: Where maximum ceiling temperatures exceed 100°F (38°C), sprinklers with temperature ratings in accordance with the maximum ceiling temperatures of Table 2-2.4.1 shall be used.

Exception No. 2: Intermediate- and high-temperature sprinklers shall be permitted to be used throughout Ordinary and Extra Hazard Occupancies.

Exception No. 3: Sprinklers of intermediate and high temperature classifications shall be installed in specific locations as required by 4-3.1.3.2.

4-3.1.3.2 The following practices shall be observed to provide sprinklers of other than ordinary temperature classification unless other temperatures are determined or unless high-temperature sprinklers are used throughout [*see Tables 4-3.1.3.2(a) and (b) and Figure 4-3.1.3.2*].

(a) Sprinklers in the high temperature zone shall be of the high temperature classification, and sprinklers in the intermediate temperature zone of the intermediate temperature classification.

(b) Sprinklers located within 12 in. (305 mm) to one side or 30 in. (762 mm) above an uncovered steam main, heating coil, or radiator shall be of the intermediate temperature classification.

(c) Sprinklers within 7 ft (2.1 m) of a low-pressure blowoff valve that discharges free in a large room shall be of the high temperature classification.

(d) Sprinklers under glass or plastic skylights exposed to the direct rays of the sun shall be of the intermediate temperature classification.

(e) Sprinklers in an unventilated, concealed space, under an uninsulated roof, or in an unventilated attic shall be of the intermediate temperature classification.

(f) Sprinklers in unventilated show windows having high-powered electric lights near the ceiling shall be of the intermediate temperature classification.

(g) Sprinklers protecting commercial-type cooking equipment and ventilation systems shall be of the high or extra high temperature classification as determined by use of a temperature measuring device. (*See 3-9.6.*)

4-3.1.3.3 In case of occupancy change involving temperature change, the sprinklers shall be changed accordingly.

Table 4-3.1.3.2(a) Temperature Ratings of Sprinklers Based on Distance from Heat Sources

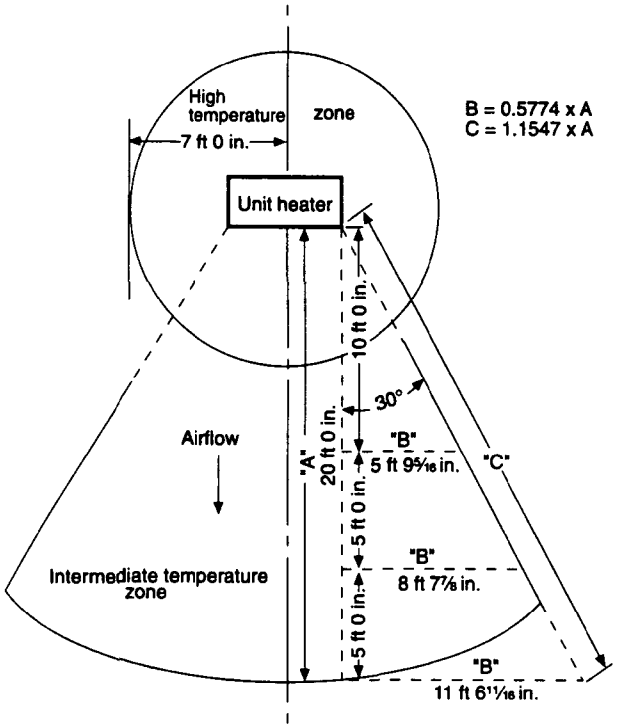
Type of Heat Condition	Ordinary Degree Rating	Intermediate Degree Rating	High Degree Rating
1. Heating ducts (a) Above	More than 2 ft 6 in.	2 ft 6 in. or less	—
(b) Side and below	More than 1 ft 0 in.	1 ft 0 in. or less	—
(c) Diffuser	Any distance except as shown under Intermediate Degree Rating column	*Downward Discharge:* Cylinder with 1 ft 0 in. radius from edge, extending 1 ft 0 in. below and 2 ft 6 in. above *Horizontal Discharge:* Semi-cylinder with 2 ft 6 in. radius in direction of flow, extending 1 ft 0 in. below and 2 ft 6 in. above	—
2. Unit heater (a) Horizontal discharge	—	*Discharge Side:* 7 ft 0 in. to 20 ft 0 in. radius pie-shaped cylinder [see Figure 4-3.1.3.2] extending 7 ft 0 in. above and 2 ft 0 in. below heater; also 7 ft 0 in. radius cylinder more than 7 ft 0 in. above unit heater	7 ft 0 in. radius cylinder extending 7 ft 0 in. above and 2 ft 0 in. below unit heater
(b) Vertical downward discharge [Note: For sprinklers below unit heater, see Figure 4-3.1.3.2.]	—	7 ft 0 in. radius cylinder extending upward from an elevation 7 ft 0 in. above unit heater	7 ft 0 in. radius cylinder extending from the top of the unit heater to an elevation 7 ft 0 in. above unit heater
3. Steam mains (uncovered) (a) Above	More than 2 ft 6 in.	2 ft 6 in. or less	—
(b) Side and below	More than 1 ft 0 in.	1 ft 0 in. or less	—
(c) Blowoff valve	More than 7 ft 0 in.	—	7 ft 0 in. or less

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

Table 4-3.1.3.2(b) Ratings of Sprinklers in Specified Locations

Location	Ordinary Degree Rating	Intermediate Degree Rating	High Degree Rating
Skylights	—	Glass or plastic	—
Attics	Ventilated	Unventilated	—
Peaked roof: Metal or thin boards, concealed or not concealed, insulated or uninsulated	Ventilated	Unventilated	—
Flat roof: Metal, not concealed; insulated or uninsulated	Ventilated or unventilated	Note: For uninsulated roof, climate and occupancy may necessitate intermediate sprinklers. Check on job.	—
Flat roof: Metal, concealed, insulated or uninsulated	Ventilated	Unventilated	—
Show windows	Ventilated	Unventilated	—

Note: A check of job condition by means of thermometers may be necessary.



SI units: 1 in. = 25.4 mm; 1 ft = 0.31 m.

Figure 4-3.1.3.2 High temperature and intermediate temperature zones at unit heaters.

4-4* Application of Sprinkler Types. Sprinklers shall be selected for use as indicated in this section. Sprinklers shall be positioned and spaced as described in Section 4-5.

4-4.1 Upright and Pendent Spray Sprinklers. Upright and pendent spray sprinklers shall be permitted in all occupancy hazard classifications and building construction types.

Exception: Quick-response sprinklers are not permitted for use in extra hazard occupancies under the area-density design method. (See 5-2.3.2.3, Exception No. 1.)

4-4.2 Sidewall Spray Sprinklers. Sidewall sprinklers shall be installed only in light hazard occupancies with smooth, flat ceilings.

Exception: Sidewall sprinklers shall be permitted to be used in Ordinary Hazard Occupancies with smooth, flat ceilings where specifically listed for such use.

4-4.3 Extended Coverage Sprinklers. Extended coverage sprinklers shall be limited to a type of unobstructed construction consisting of flat, smooth ceilings with a slope not exceeding 2 in. per ft. (158 mm/m)

Exception No. 1: Where sprinklers are specifically listed for unobstructed or noncombustible obstructed construction, they shall be permitted for such use.

Exception No. 2: Extended coverage upright and pendent spray sprinklers shall be permitted within trusses or bar joists having web members not greater than 1-in. (25.4-mm) maximum dimension.

Exception No. 3: Where specifically listed for use under smooth, flat ceilings that have slopes not exceeding 4 in. per ft (316 mm/m).

4-4.4 Open Sprinklers. Open sprinklers shall be permitted to be used in deluge systems to protect special hazards or exposures, or in other special locations. Open sprinklers shall be installed in accordance with all applicable requirements of this standard for their automatic counterpart.

4-4.5 Residential Sprinklers.

4-4.5.1* Residential sprinklers shall be permitted in dwelling units and their adjoining corridors provided they are installed in conformance with their listing and the positioning requirements of NFPA 13D, *Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes*, or NFPA 13R, *Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height.*

4-4.5.2 Residential sprinklers shall be used only in wet systems.

Exception: Residential sprinklers shall be permitted for use in dry systems if specifically listed for such service.

4-4.5.3 Where residential sprinklers are installed in a compartment as defined in 1-4.2, all sprinklers within the compartment shall be of the fast-response type that meets the criteria of 1-4.5.1(a)1.

4-4.6 Early Suppression Fast-Response (ESFR) Sprinklers.

4-4.6.1 ESFR sprinklers shall be used only in wet pipe systems.

Exception: ESFR sprinklers shall be permitted for use in dry systems if specifically listed for such service.

4-4.6.2 ESFR sprinklers shall be installed only in buildings where roof or ceiling slope above the sprinklers does not exceed 2 in. per ft (158 mm/m).

4-4.6.3 ESFR sprinklers shall be permitted for use only in buildings with the following types of construction:

(a) Smooth ceiling, joists consisting of steel truss-shaped members, or wood truss-shaped members that consist of wood top or bottom chord members not exceeding 4 in. (102 mm) in depth with steel tube or bar web.

(b) Wood beams of 4 in. by 4 in. (102 mm by 102 mm) or greater nominal dimension, concrete or steel beams spaced 3 1/2 to 7 1/2 ft (0.9 to 2.3 m) on centers and either supported on or framed into girders.

(c) Paragraphs (a) and (b) apply to construction with noncombustible or combustible roof or decks.

(d) Construction with ceiling panels formed by members capable of trapping heat to aid the operation of sprinklers with members spaced greater than 7 1/2 ft (2.3 m) and limited to a maximum of 300 sq ft (27.9 m^2) in area.

4-4.6.4 Temperature Rating. Sprinkler temperature ratings shall be ordinary.

Exception: Sprinklers of intermediate and high temperature ratings shall be installed in locations as required by Section 4-3.

4-4.7 Large-Drop Sprinklers.

4-4.7.1 Large-drop sprinklers shall be permitted to be used in wet, dry, or preaction systems.

4-4.7.2* Where steel pipe is used in preaction and dry pipe systems, piping materials shall be limited to internally galvanized steel.

Exception: Nongalvanized fittings shall be permitted.

4-4.7.3 Sprinkler temperature ratings shall be the same as those indicated in Tables 4-3.1.3.2(a) and (b) or those used in large-scale fire testing to determine the protection requirements for the hazard involved.

Exception: Sprinklers of intermediate and high temperature ratings shall be installed in specific locations as required by 4-3.1.3.

4-4.8 QRES. (Reserved)

4-4.9 Special Sprinklers.

4-4.9.1* Special sprinklers that are intended for the protection of specific hazards or construction features shall be permitted where such devices have been evaluated and listed for performance under the following conditions:

(a) Fire tests related to the intended hazard.

(b) Distribution of the spray pattern with respect to wetting of floors and walls.

(c) Distribution of the spray pattern with respect to obstructions.

(d) Evaluation of the thermal sensitivity of the sprinkler.

(e) Performance under horizontal or sloped ceilings.

(f) Area of design.

4-4.9.2 Special sprinklers shall maintain the following characteristics:

(a) Orifice size shall be in accordance with Section 2-2.3.

(b) Temperature ratings shall be in accordance with Table 2-2.4.1.

(c) The protection area of coverage shall not exceed 400 ft^2 (36 m^2) for light hazard and ordinary hazard occupancies.

(d) The protection area of coverage shall not exceed 196 ft^2 (17 m^2) for extra hazard and high pile storage occupancies.

4-5 Position, Location, Spacing, and Use of Sprinklers.

4-5.1 General. Sprinklers shall be located, spaced, and positioned in accordance with the requirements of this section. Sprinklers shall be positioned to provide protection of the area consistent with the overall objectives of this standard by controlling the positioning and allowable area of coverage for each sprinkler. The requirements of 4-5.2 through 4-5.6 shall apply to all sprinkler types unless modified by more restrictive rules in Sections 4-6 through 4-11.

4-5.2 Protection Areas per Sprinkler.

4-5.2.1 Determination of the Protection Area of Coverage. The protection area of coverage per sprinkler (A_s) shall be determined as follows:

(a) *Along Branch Lines.* Determine distance between sprinklers (or to wall or obstruction in the case of the end sprinkler on the branch line) upstream and downstream. Choose the larger of either twice the distance to the wall or the distance to the next sprinkler. This dimension will be defined as S.

(b) *Between Branch Lines.* Determine perpendicular distance to the sprinkler on the adjacent branch line (or to a wall or obstruction in the case of the last branch line) on each side of the branch line on which the subject sprinkler is positioned. Choose the larger of either twice the distance to the wall or obstruction or the distance to the next sprinkler. This dimension will be defined as L.

4-5.2.1.1 The protection area of coverage of the sprinkler shall be established by multiplying the S dimension by the L dimension. ($A_s = S \times L$)

4-5.2.2 Maximum Protection Area of Coverage. The maximum allowable protection area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in the section for each type or style of sprinkler. The maximum area of coverage of any sprinkler shall not exceed 400 ft^2 (36 m^2).

4-5.3 Sprinkler Spacing.

4-5.3.1 Maximum Distance Between Sprinklers. The maximum distance permitted between sprinklers shall be based on the centerline distance between sprinklers on the branch line or on adjacent branch lines. The maximum distance shall be measured along the slope of the ceiling. The maximum distance permitted between sprinklers shall comply with the value indicated in the section for each type or style of sprinkler.

4-5.3.2 Maximum Distance From Walls. The distance from sprinklers to walls shall not exceed one-half of the allowable maximum distance between sprinklers. The distance from the wall to the sprinkler shall be measured perpendicular to the wall.

4-5.3.3 Minimum Distance from Walls. The minimum distance permitted between a sprinkler and the wall shall comply with the value indicated in the section for each type or style of sprinkler. The distance from the wall to the sprinkler shall be measured perpendicular to the wall.

4-5.3.4 Minimum Distance Between Sprinklers. A minimum distance shall be maintained between sprinklers to prevent operating sprinklers from wetting adjacent sprinklers and to prevent skipping of sprinklers. The minimum distance permitted between sprinklers shall comply with the value indicated in the section for each type or style of sprinkler.

4-5.4 Deflector Position.

4-5.4.1 Distance Below Ceilings. The distances between the sprinkler deflector and the ceiling above shall be selected based on the type of sprinkler and the type of construction.

4-5.4.2 Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings, roofs, or the incline of stairs.

4-5.5 Obstructions to Sprinkler Discharge.

4-5.5.1 Performance Objective.

4-5.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-5.5.2 and 4-5.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard. (*See Figure 4-5.5.1.1.*)

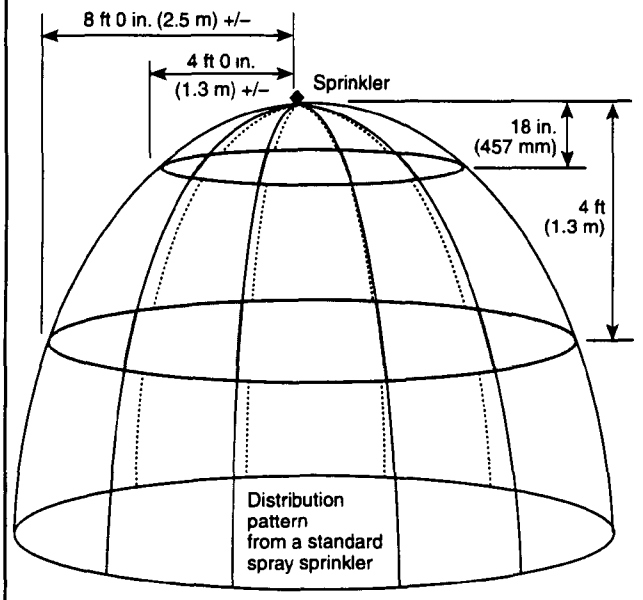


Figure 4-5.5.1.1 Typical distribution pattern from a standard spray sprinkler.

4-5.5.2* Obstructions to Sprinkler Discharge Pattern Development.

4-5.5.2.1 Continuous or noncontinuous obstructions less than 18 in. (457 mm) below the sprinkler deflector that prevent the pattern from fully developing shall comply with this section.

4-5.5.2.2 Sprinklers shall be positioned such that they are located at a distance three times greater than the maximum dimension of an obstruction up to a maximum of 24 in. (609 mm) (e.g., truss webs and chords, pipe, columns, and fixtures).

Exception No. 1: Continuous solid obstructions, such as beams, top chord members, and ducts, that are tight to the ceiling shall comply with 4-6.5.1, 4-7.5.1, 4-8.5.1, 4-9.5.1, 4-10.5.1 and 4-11.5.1.

Exception No. 2: Piping to which an upright sprinkler is directly attached less than 3 in. (75 mm) in diameter.

Exception No. 3: Piping to which pendent and sidewall sprinklers are directly attached.

4-5.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard. Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 18 in. (457 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

4-5.5.3.1 Sprinklers shall be installed under fixed obstructions over 4 ft (1.2 m) wide such as ducts, decks, cutting tables, and overhead doors.

Exception: Obstructions that are not fixed in place such as conference tables.

4-5.5.3.2 Sprinklers installed under open gratings shall be of the intermediate level/rack storage type or otherwise shielded from the discharge of overhead sprinklers.

4-5.6 Clearance to Storage. The clearance between the deflector and the top of storage shall be 18 in. (457 mm) or greater.

Exception No. 1: Where other standards specify greater minimums, they shall be followed.

Exception No. 2: A minimum clearance of 36 in. (.91 m) shall be permitted for special sprinklers.

Exception No. 3: A minimum clearance of less than 18 in. (457 mm) between the top of storage and ceiling sprinkler deflectors shall be permitted where proven by successful large-scale fire tests for the particular hazard.

4-6 Standard Pendent and Upright Spray Sprinklers.

4-6.1 General. All requirements of Section 4-5 shall apply to standard pendent and upright spray sprinklers except as modified below.

4-6.2 Protection Areas per Sprinkler (Standard Pendent and Upright Spray Sprinklers).

4-6.2.1 Determination of the Protection Area of Coverage. The protection area of coverage per sprinkler (A_s) shall be determined in accordance with 4-5.2.1.

Exception: In a small room as defined in 1-4.2, the protection area of coverage for each sprinkler in the small room shall be the area of the room divided by the number of sprinklers in the room.

4-6.2.2 Maximum Protection Area of Coverage. The maximum allowable protection area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in Table 4-6.2. In any case, the maximum area of coverage of a sprinkler shall not exceed 225 ft^2 (21 m^2).

Exception No. 1: The following maximum protection areas of coverage shall apply for pipe schedule systems:

Light Hazard— 200 ft^2 (18.6 m^2)

Extra Hazard— 90 ft^2 (8.4 m^2)

Exception No. 2: The maximum protection area of coverage for light hazard systems installed in configurations utilizing combustible construction members spaced less than 3 ft (.91 m) on center shall not exceed 130 ft^2 (12 m^2).

Table 4-6.2 Protection Areas and Maximum Spacing (SSU/SSP)

	Light Hazard		Ordinary Hazard		Extra Hazard		High-Piled Storage	
Construction Type	Protection Area ft^2	Spacing (max.) ft	Protection Area ft^2	Spacing (max.) ft	Protection Area ft^2	Spacing (max.) ft	Protection Area ft^2	Spacing (max.) ft
Noncombustible obstructed and unobstructed and combustible unobstructed	225	15	130	15	100	12	100	12
Combustible obstructed	168	15	130	15	100	12	100	12

For SI units: 1 ft^2 = 0.0929 m^2; 1 ft = 0.3048 m.

Exception No. 3: Where densities for extra hazard and high piled storage occupancies are less than 0.25 gpm/ft^2 (10.2 Lpm/m^2), the maximum protection area of coverage shall be permitted to be increased to 130 ft^2 (.91 m^2).

4-6.3 Sprinkler Spacing (Standard Pendent and Upright Spray Sprinklers).

4-6.3.1 Maximum Distance Between Sprinklers. The maximum distance permitted between sprinklers shall comply with Table 4-6.2.

Exception No. 1: For extra hazard occupancies and high piled storage in bays 25 ft (7.6m) wide, a spacing of 12 ft 6 in (3.8 m) shall be permitted.

Exception No. 2: For densities less than 0.25 gpm/ft^2 (10.2 Lpm/m^2), a spacing of 15 ft (4.6 m) shall be permitted.

4-6.3.2* Maximum Distance from Walls. The distance from sprinklers to walls shall not exceed one-half of the allowable distance between sprinklers as indicated in Table 4-6.2. The distance from the wall to the sprinkler shall be measured perpendicular to the wall. Where walls are angled or irregular, the maximum horizontal distance between a sprinkler and any point of floor area protected by that sprinkler shall not exceed 0.75 times the allowable distance permitted between sprinklers, provided the maximum perpendicular distance is not exceeded.

4-6.3.2.1 Under curved surfaces, the horizontal distance shall be measured at the floor level from the wall, or the intersection of the curved surface and the floor to the nearest sprinkler shall not be greater than one-half the allowable distance between sprinklers.

Exception: Within small rooms as defined in 1-4.2, sprinklers shall be permitted to be located not more than 9 ft (2.7 m) from any single wall. Sprinkler spacing limitations of 4-6.3 and area limitations of Table 4-6.2 shall not be exceeded.*

4-6.3.3 Minimum Distance from Walls. Sprinklers shall be located a minimum of 4 in. (102 mm) from a wall.

4-6.3.4 Minimum Distance Between Sprinklers. Sprinklers shall be spaced not less than 6 ft (1.8 m) on center.

Exception No. 1: Sprinklers shall be permitted to be placed less than 6 ft (1.8 m) on center where the following conditions are satisfied:

(a) Baffles shall be installed and located midway between sprinklers and arranged to protect the actuating elements.

(b) Baffles shall be of noncombustible or limited-combustible material that will stay in place before and during sprinkler operation.

(c) Baffles shall be not less than 8 in. (203 mm) wide and 6 in. (152 mm) high. The tops of baffles shall extend between 2 in. to 3 in. (51 to 76 mm) above the deflectors of upright sprinklers. The bottoms of baffles shall extend downward to a level at least even with the deflectors of pendent sprinklers.

Exception No. 2: In-rack sprinklers.

Exception No. 3: Old-style sprinklers protecting fur storage vaults.

4-6.4 Deflector Position (Standard Pendent and Upright Spray Sprinklers).

4-6.4.1 Distance Below Ceilings.

4-6.4.1.1 Under unobstructed construction, the distance between the sprinkler deflector and the ceiling shall be a minimum of 1 in. (25.4 mm) and a maximum of 12 in. (305 mm).

Exception: Ceiling-type sprinklers (concealed, recessed, and flush types) shall be permitted to have the operating element above the ceiling and the deflector located nearer to the ceiling where installed in accordance with their listing.

4-6.4.1.2 Under obstructed construction, the sprinkler deflector shall be located 1 to 6 in. (25.4 to 152 mm) below the structural members and a maximum distance of 22 in. (559 mm) below the ceiling/roof deck.

Exception No. 1: Sprinklers shall be permitted to be installed with the deflector at or above the bottom of the structural member to a maximum of 22 in. (559 mm) below the ceiling/roof deck where the sprinkler is installed in conformance with 4-6.5.1.2.

Exception No. 2: Where sprinklers are installed in each bay of obstructed construction, deflectors shall be a minimum of 1 in. (25.4 mm) and a maximum of 12 in. (305 mm) below the ceiling.

Exception No. 3: Sprinklers shall only be permitted below composite wood joists where joist channels are fire-stopped to the full depth of the joists with material equivalent to the web construction so that individual channel areas do not exceed 300 ft^2 (27.9 m^2).

Exception No. 4: Deflectors of sprinklers under concrete tee construction with stems spaced less than 7 1/2 ft (2.3 m) but more than 3 ft (0.9 m) on centers shall, regardless of the depth of the tee, be permitted to be located at or above a horizontal plane 1 in. (25.4 mm) below the bottom of the stems of the tees and shall comply with Table 4-6.5.1.2.*

4-6.4.1.3* Sprinklers under or near the peak of a roof or ceiling shall have deflectors located not more than 3 ft (0.9 m) vertically down from the peak. [*See Figures 4-6.4.1.3(a) and 4-6.4.1.3(b).*]

Exception No. 1: Under saw-toothed roofs, sprinklers at the highest elevation shall not exceed a distance of 3 ft (0.9 m) measured down the slope from the peak.

Exception No. 2: Under a steeply pitched surface, the distance from the peak to the deflectors shall be permitted to be increased to maintain a horizontal clearance of not less than 2 ft (0.6 m) from other structural members. [See Figure 4-6.4.1.3(c).]

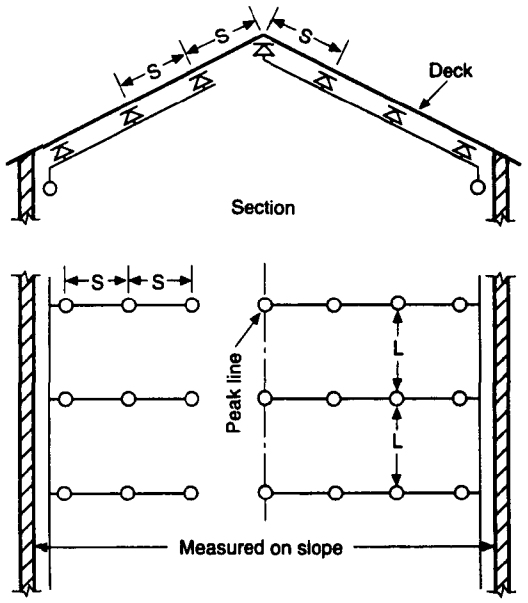

Figure 4-6.4.1.3(a) Sprinklers at pitched roofs; branch lines run up the slope.

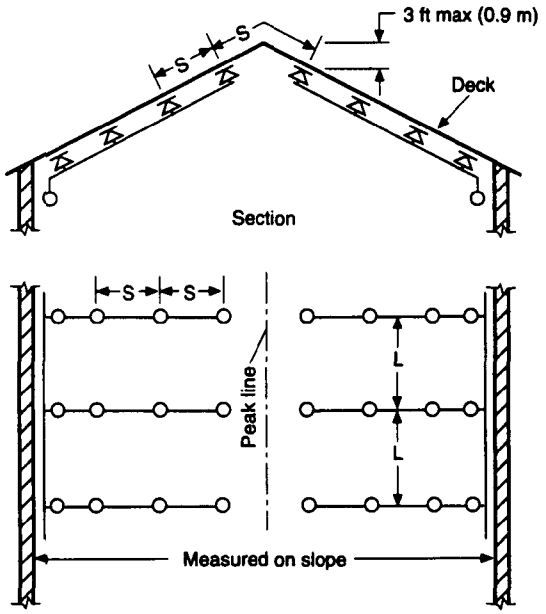

Figure 4-6.4.1.3(b) Sprinklers at pitched roofs; branch lines run up the slope.

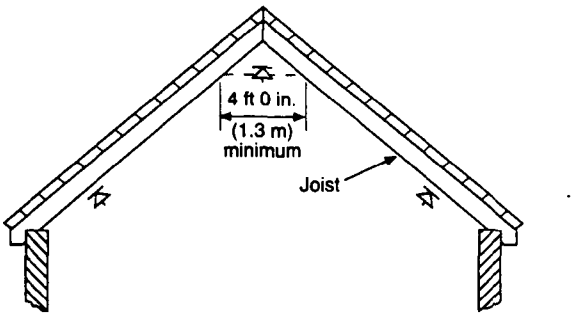

Figure 4-6.4.1.3(c) Horizontal clearance for sprinklers at peak of pitched roof.

4-6.4.1.4 Double Joist Obstructions. Where there are two sets of joists under a roof or ceiling, and there is no flooring over the lower set, sprinklers shall be installed above and below the lower set of joists where there is a clearance of 6 in. (152 mm) or more between the top of the lower joist and the bottom of the upper joist. (*See Figure 4-6.4.1.4.*)

Exception: Sprinklers are permitted to be omitted from below the lower set of joists where at least 18 in. (457 mm) is maintained between the sprinkler deflector and the top of the lower joist.

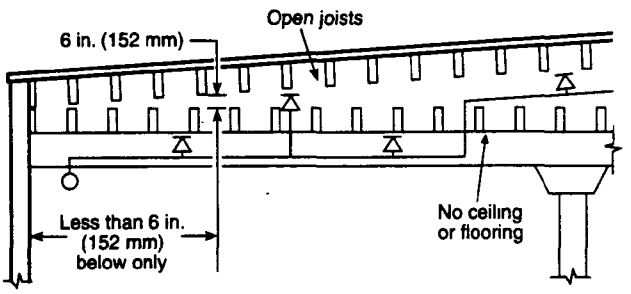

Figure 4-6.4.1.4 Arrangement of sprinklers under two sets of open joists — no sheathing on lower joists.

4-6.4.2* Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings, roofs, or the incline of stairs.

Exception: Where sprinklers are installed in the peak below a sloped ceiling or roof surface, the sprinkler shall be installed with the deflector horizontal.

4-6.5 Obstructions to Sprinkler Discharge (Standard Pendent and Upright Spray Sprinklers).

4-6.5.1 Performance Objective.

4-6.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-6.5.2 and 4-6.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard.

4-6.5.1.2 Sprinklers shall be arranged to comply with 4-5.5.2, Table 4-6.5.1.2, and Figure 4-6.5.1.2(a).

Exception No. 1: Sprinklers shall be permitted to be spaced on opposite sides of obstructions not exceeding 4 ft (1.3 m) in width provided the distance from the centerline of the obstruction to the sprinklers does not exceed one-half the allowable distance permitted between sprinklers.

Exception No. 2 Obstructions located against the wall and that are not over 30 in.(762 mm) in width shall be permitted to be protected in accordance with Figure 4-6.5.1.2(b).

Table 4-6.5.1.2 Positioning of Sprinklers to Avoid Obstructions to Discharge (SSU/SSP)

Distance from Sprinklers to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
Less than 1 ft	0
One ft to less than 1 ft 6 in.	2½
1 ft 6 in. to less than 2 ft	3½
2 ft to less than 2 ft 6 in.	5½
2 ft 6 in. to less than 3 ft	7½
3 ft to less than 3 ft 6 in.	9½
3 ft 6 in. to less than 4 ft	12
4 ft to less than 4 ft 6 in.	14
4 ft 6 in. to less than 5 ft	16½
5 ft and greater	18

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

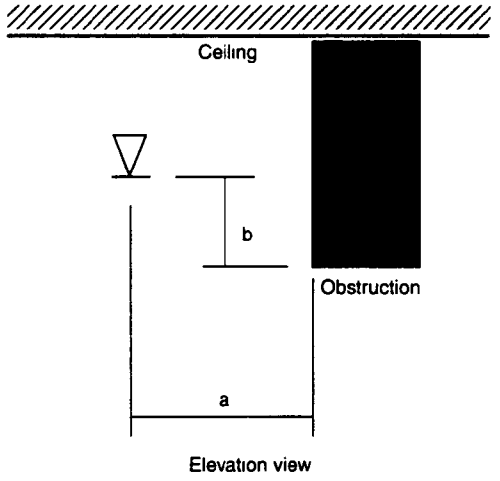

Figure 4-6.5.1.2(a) Positioning of sprinklers to avoid obstructions to discharge (SSU/SSP).

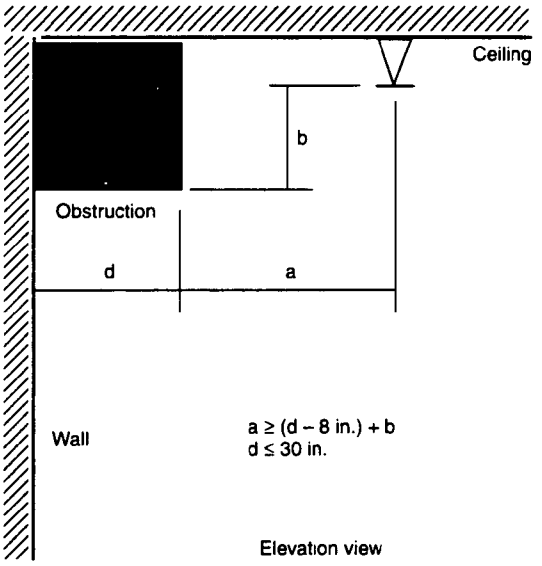

Figure 4-6.5.1.2(b) Obstructions against walls (SSU/SSP).

4-6.5.2 Obstructions to Sprinkler Discharge Pattern Development.

4-6.5.2.1 Continuous or noncontinuous obstructions less than 18 in. (457 mm) below the sprinkler deflector that prevent the pattern from fully developing shall comply with this section.

4-6.5.2.2 Sprinklers shall be positioned such that they are located at a distance three times greater than the maximum dimension of an obstruction up to a maximum of 24 in. (609 mm) (e.g., structural members, pipe, columns, and fixtures). *(See Figure 4-6.5.2.2.)*

Exception No. 1: Sprinklers shall be permitted to be spaced on opposite sides of the obstruction provided the distance from the centerline of the obstruction to the sprinklers does not exceed one-half the allowable distance between sprinklers.

Exception No. 2: Where the obstruction consists of open trusses 20 in. (.51 m) or greater apart [24 in. (.61 m) on center], sprinklers shall be permitted to be located one-half the distance between the obstruction created by the truss provided that all truss members are not greater than 4 in. (102 mm) (nominal) in width.

Exception No. 3: Where the sprinklers are installed in the centerline of bar joists or a truss.

Exception No. 4: Piping to which an upright sprinkler is directly attached less than 3 in. (75 mm) in diameter.

Exception No. 5: Piping to which pendent sprinklers are directly attached.

4-6.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard. Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 18 in. (457 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

4-6.5.3.1 Sprinklers shall be installed under fixed obstructions over 4 ft (1.2 m) wide such as ducts, decks, cutting tables, and overhead doors.

Exception: Obstructions that are not fixed in place, such as conference tables.

4-6.5.3.2 Sprinklers installed under open gratings shall be of the intermediate level/rack storage type or otherwise shielded from the discharge of overhead sprinklers.

4-6.5.4* Suspended or Floor-Mounted Vertical Obstructions. The distance from sprinklers to privacy curtains, free standing partitions, room dividers, and similar obstructions in light hazard occupancies shall be in accordance with Table 4-6.5.4 and Figure 4-6.5.4.

4-6.6* Clearance to Storage (Standard Pendent and Upright Spray Sprinklers). The clearance between the deflector and the top of storage shall be 18 in. (457 mm) or greater.

Exception: Where other standards specify greater minimums, they shall be followed.

4-7 Sidewall Standard Spray Sprinklers.

4-7.1 General. All requirements of Section 4-5 shall apply to sidewall standard spray sprinklers except as modified below.

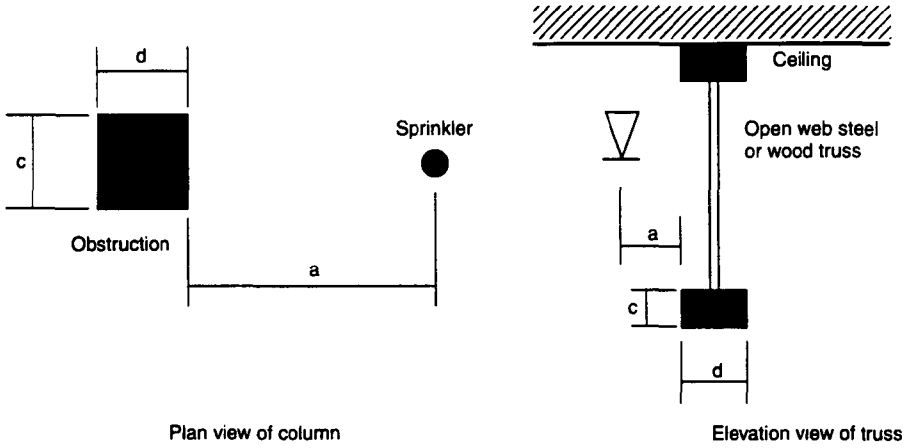

Figure 4-6.5.2.2 Minimum distance from obstruction (SSU/SSP).

Table 4-6.5.4 Suspended or Floor Mounted Obstructions (SSU/SSP)

Horizontal Distance (a)	Minimum Vertical Distance below Deflector (b)
6 in. or less	3 in.
More than 6 in. to 9 in.	4 in.
More than 9 in. to 12 in.	6 in.
More than 12 in. to 15 in.	8 in.
More than 15 in. to 18 in.	9½ in.
More than 18 in to 24 in.	12 ½ in.
More than 24 in. to 30 in.	15 ½ in.
More than 30 in.	18 in.

For SI Units. 1 in. = 25.4 mm.

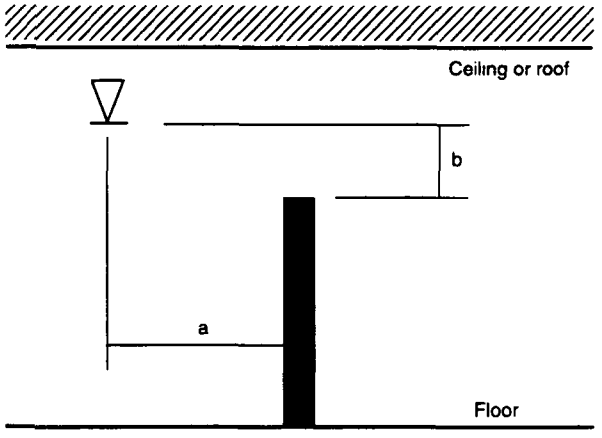

Figure 4-6.5.4 Suspended or floor-mounted obstructions (SSU/SSP).

4-7.2 Protection Areas per Sprinkler (Standard Sidewall Spray Sprinklers).

4-7.2.1 Determination of the Protection Area of Coverage. The protection area of coverage per sprinkler (A_s) shall be determined as follows:

(a) *Along the Wall.* Determine the distance between sprinklers along the wall (or to the end wall or obstruction in the case of the end sprinkler on the branch line) upstream and downstream. Choose the larger of either twice the distance to the end wall or the distance to the next sprinkler. This dimension will be defined as S.

(b) *Across the Room.* Determine the distance from the sprinkler to the wall opposite the sprinklers or to the midpoint of the room where sprinklers are installed on two opposite walls (*see 4-7.3.1*). This dimension will be defined as L.

4-7.2.1.1 The protection area of the sprinkler shall be established by multiplying the S dimension by the L dimension. (A_s = S × L)

4-7.2.2 Maximum Protection Area of Coverage. The maximum allowable protection area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in Table 4-7.2. In any case, the maximum area of coverage of a sprinkler shall not exceed 196 ft² (59.7 m²).

4-7.3 Sprinkler Spacing (Standard Sidewall Spray Sprinklers).

4-7.3.1 Maximum Distance Between Sprinklers. The maximum distance permitted between sprinklers shall be based on the centerline distance between sprinklers on the branch line. The maximum distance shall be measured along the slope of the ceiling.

4-7.3.1.1 Sidewall spray sprinklers shall be installed along the length of a single wall of rooms or bays in accordance with the maximum spacing provisions of Table 4-7.2.

Exception No 1: Sidewall sprinklers shall not be installed back-to-back without being separated by a continuous lintel or soffit.

Exception No 2: Where the width of the room or bay exceeds the maximum allowed, up to 24 ft (9.1 m) for Light Hazard Occupancy, or 20 ft (6.1 m) for Ordinary Hazard Occupancy, sidewall sprinklers shall be provided on two opposite walls or sides of bays with spacing as required by Table 4-7.2.

Exception No 3: Sidewall sprinklers shall be permitted to be installed on opposing or adjacent walls provided no sprinkler is located within the maximum protection area of another sprinkler.

Table 4-7.2 Protection Areas and Maximum Spacing (Standard Sidewall Spray Sprinkler)

	Light Hazard		Ordinary Hazard	
	Combustible Finish	Noncombustible or Limited-Combustible Finish	Combustible Finish	Noncombustible or Limited-Combustible Finish
Maximum distance along the wall (S)	14 ft	14 ft	10 ft	10 ft
Maximum room width (L)	12 ft	14 ft	10 ft	10 ft
Maximum protection area	120 ft^2	196 ft^2	80 ft^2	100 ft^2

For SI units: 1 ft = 0.3048 m; 1 sq ft = 0.0929 m^2.

4-7.3.2 Maximum Distance from Walls. The distance from sprinklers to the end walls shall not exceed one-half of the allowable distance permitted between sprinklers as indicated in Table 4-7.2.

4-7.3.3 Minimum Distance from Walls. Sprinklers shall be located a minimum of 4 in. (102 mm) from a wall. The distance from the wall to the sprinkler shall be measured perpendicular to the wall.

Exception: Horizontal and vertical sidewall sprinklers are permitted to be located with their deflectors less than 4 in. (102 mm) from the wall on which they are mounted.

4-7.3.4 Minimum Distance Between Sprinklers. Sprinklers shall be spaced not less than 6 ft (1.8 m) on center.

4-7.4 Deflector Position from Ceilings and Walls (Standard Sidewall Spray Sprinklers).

4-7.4.1 Distance Below Ceilings and from Walls.

4-7.4.1.1 Sidewall sprinkler deflectors (vertical type) shall be located not more than 6 in. (152 mm) nor less than 4 in. (102 mm) from ceilings.

Exception: Horizontal sidewall sprinklers are permitted to be located in a zone 6 to 12 in. (152 to 305 mm) or 12 to 18 in. (305 mm to 457 mm) below noncombustible ceilings where listed for such use.

4-7.4.1.2 Sidewall sprinkler deflectors shall be located not more than 6 in. (152 mm) nor less than 4 in. (102 mm) from walls.

4-7.4.1.3 Sidewall sprinklers shall only be installed along walls, lintels, or soffits where the distance from the ceiling to the bottom of the lintel or soffit is at least 2 in. (51 mm) greater than the distances from the ceiling to sidewall sprinkler deflectors.

4-7.4.1.3.1 Where soffits are used for the installation of sidewall sprinklers, they shall not exceed 8 in. (203 mm) in width or projection from the wall.

Exception: Soffits shall be permitted to exceed 8 in. (203 mm) where additional sprinklers are installed below the soffit.

4-7.4.2 Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings or roofs.

4-7.4.2.1 Sidewall sprinklers, where installed under a sloped ceiling, shall be located at the high point of the slope and positioned to discharge downward along the slope.

4-7.5 Obstructions to Sprinkler Discharge (Standard Sidewall Spray Sprinklers).

4-7.5.1 Performance Objective.

4-7.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-5.5.2 and 4-5.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard.

4-7.5.1.2 Sidewall sprinklers shall be installed no closer than 4 ft (2.3 m) from light fixtures or similar obstructions. The distance between light fixtures or similar obstructions located more than 4 ft (2.3 m) from the sprinkler shall be in conformity with Table 4-7.5.1.2 and Figure 4-7.5.1.2.

Table 4-7.5.1.2 Positioning of Sprinklers to Avoid Obstructions (Standard Sidewall Spray Sprinklers)

Distance from Sidewall Sprinkler to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
Less than 4 ft	0
4 ft to less than 5 ft	1
5 ft to less than 5 ft 6 in.	2
5 ft 6 in. to less than 6 ft 6 in.	3
6 ft to less than 6 ft 6 in.	4
6 ft to less than 7 ft	6
7 ft to less than 7 ft 6 in.	7
7 ft 6 in. to less than 8 ft	9
8 ft to less than 8 ft 6 in.	11
8 ft 6 in. or greater	14

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

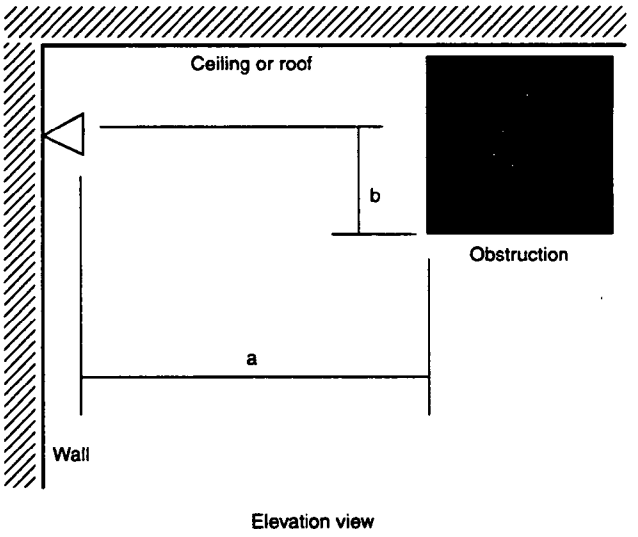

Figure 4-7.5.1.2 Positioning of sprinklers to avoid obstructions (standard sidewall spray sprinklers).

4-7.5.1.3 Obstructions projecting from the same wall as the sidewall sprinkler is mounted shall be in accordance with Table 4-7.5.1.3 and Figure 4-7.5.1.3.

4-7.5.2 Obstructions to Sprinkler Discharge Pattern Development.

4-7.5.2.1 Continuous or noncontinuous obstructions less than 18 in. (457 mm) below the sprinkler deflector that prevent the pattern from fully developing shall comply with this section.

4-7.5.2.2 Sprinklers shall be positioned such that they are located at a distance three times greater than the maximum dimension of an obstruction up to a maximum of 24 in. (609 mm) (e.g., truss webs and chords, pipe, columns, and fixtures). Sidewall sprinklers shall be positioned in accordance with Figure 4-7.5.2.2 where obstructions are present.

Exception: Piping to which sidewall sprinklers are directly attached.

4-7.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard. Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 18 in. (457 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

4-7.5.3.1 Sprinklers shall be installed under fixed obstructions over 4 ft (1.2 m) wide such as ducts, decks, cutting tables, and overhead doors.

Exception: Obstructions that are not fixed in place such as conference tables.

Table 4-7.5.1.3 Positioning of Sprinklers to Avoid Obstructions Along the Wall (Standard Sidewall Spray Sprinklers)

Distance from Sidewall Sprinkler to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
Less than 6 in.	1
6 in. to less than 1 ft	2
1 ft to less than 1 ft 6 in.	3
1 ft 6 in. to less than 2 ft	4 1/2
2 ft to less than 2 ft 6 in.	5 3/5
2 ft 6 in. to less than 3 ft	7
3 ft to less than 3 ft 6 in.	8
3 ft 6 in. to less than 4 ft	9 1/4
4 ft to less than 4 ft 6 in.	10
4 ft 6 in. to less than 5 ft	11 1/2
5 ft to less than 5 ft 6 in.	12 3/4
5 ft 6 in. to less than 6 ft	14
6 ft to less than 6 ft 6 in.	15
6 ft 6 in. to less than 7 ft.	16 1/4
7 ft to less than 7 ft 6 in.	17 1/2

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

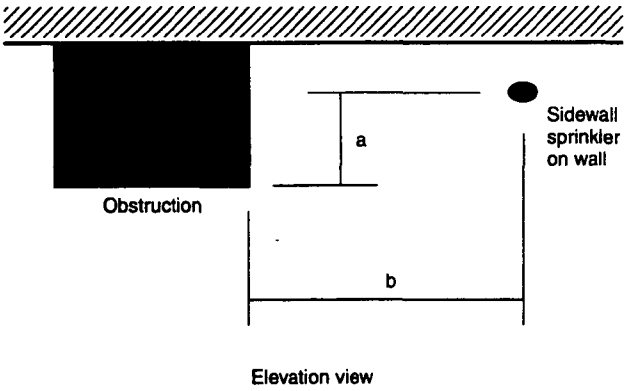

Figure 4-7.5.1.3 Positioning of sprinklers to avoid obstructions along the wall (standard sidewall spray sprinklers).

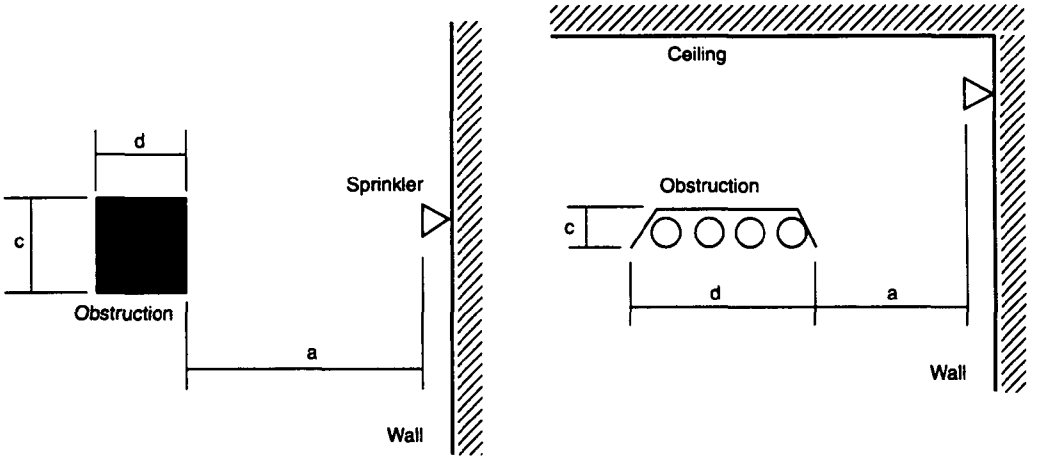

Figure 4-7.5.2.2 Minimum distance from obstruction (standard sidewall spray sprinkler).

4-7.5.4 Suspended or Floor-Mounted Vertical Obstructions. The distance from sprinklers to privacy curtains, free-standing partitions, room dividers, and similar obstructions in light hazard occupancies shall be in accordance with Table 4-7.5.4 and Figure 4-7.5.4.

Table 4-7.5.4 Suspended or Floor Mounted Obstructions (Standard Sidewall Spray Sprinklers)

Horizontal Distance (a)	Maximum Vertical Distance below Deflector (b)
6 in. or less	3 in.
More than 6 in. to 9 in.	4 in.
More than 9 in. to 12 in.	6 in.
More than 12 in. to 15 in.	8 in.
More than 15 in. to 18 in.	9½ in.
More than 18 in. to 24 in.	12½ in.
More than 24 in. to 30 in.	15½ in.
More than 30 in.	18 in.

For SI Units: 1 in. = 25.4 mm.

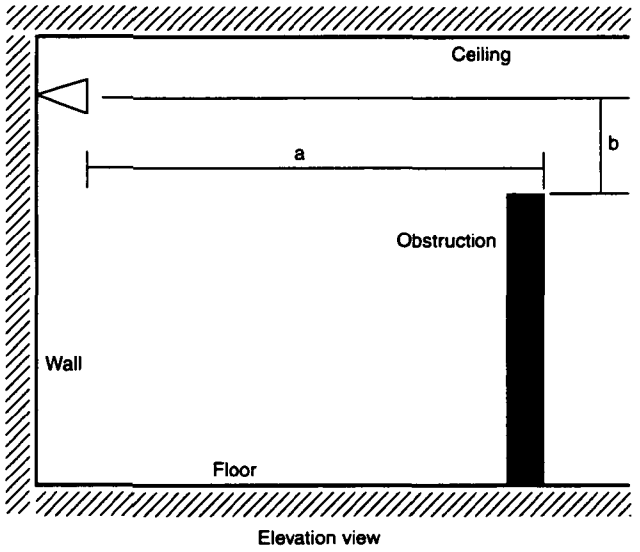

Figure 4-7.5.4 Suspended or floor-mounted obstructions (standard sidewall spray sprinklers).

4-7.6 Clearance to Storage (Standard Sidewall Spray Sprinklers). The clearance between the deflector and the top of storage shall be 18 in. (457 mm) or greater.

4-8 Extended Coverage Upright and Pendent Spray Sprinklers.

4-8.1 General. All requirements of Section 4-5 shall apply to extended coverage upright and pendent sprinklers except as modified below.

4-8.2 Protection Areas per Sprinkler (Extended Coverage Upright and Pendent Spray Sprinklers).

4-8.2.1* Determination of the Protection Area of Coverage. The protection area of coverage (A_s) for extended coverage sprinklers shall be not less than that prescribed by the listing. Listing dimensions shall be even-numbered square protection areas as shown in Table 4-8.2.

4-8.2.2 Maximum Protection Area of Coverage. The maximum allowable area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in Table 4-8.2. In any case, the maximum area of coverage of a sprinkler shall not exceed 400 sq ft.

4-8.3 Sprinkler Spacing (Extended Coverage Upright and Pendent Spray Sprinklers).

4-8.3.1 Maximum Distance Between Sprinklers. The maximum distance permitted between sprinklers shall be based on the centerline distance between sprinklers on the branch line or on adjacent branch lines. The maximum distance shall be measured along the slope of the ceiling. The maximum distance permitted between sprinklers shall comply with Table 4-8.2.

4-8.3.2 Maximum Distance From Walls. The distance from sprinklers to walls shall not exceed one-half of the allowable distance permitted between sprinklers as indicated in Table 4-8.2. The distance from the wall to the sprinkler shall be measured perpendicular to the wall. Where walls are angled or irregular, the maximum horizontal distance between a sprinkler and any point of floor area protected by that sprinkler shall not exceed 0.75 times the allowable distance permitted between sprinklers.

4-8.3.3 Minimum Distance from Walls. Sprinklers shall be located a minimum of 4 in. (102 mm) from a wall.

Exception: Where sprinklers have been listed for distances less than this, they shall be permitted.

4-8.3.4 Minimum Distance Between Sprinklers. Sprinklers shall be spaced not less than 8 ft (2.4 m) on center.

Exception: Sprinklers shall be permitted to be placed less than 8 ft (2.4 m) on center where the following conditions are satisfied:

(a) Baffles shall be installed and located midway between sprinklers and arranged to protect the actuating elements.

(b) Baffles shall be of noncombustible or limited-combustible material that will stay in place before and during sprinkler operation.

(c) Baffles shall be not less than 8 in. (203 mm) wide and 6 in. (152 mm) high. The tops of baffles shall extend between 2 to 3 in. (51 to 76 mm) above the deflectors of upright sprinklers. The bottoms of baffles shall extend downward to a level at least even with the deflectors of pendent sprinklers. (See A-4-13.3.4.)

4-8.4 Deflector Position (Extended Coverage Upright and Pendent Spray Sprinklers).

4-8.4.1 Distance Below Ceilings.

4-8.4.1.1 Under unobstructed construction, the distance between the sprinkler deflector and the ceiling shall be a minimum of 1 in. (25.4 mm) and a maximum of 12 in. (305 mm).

Exception No. 1. Ceiling-type sprinklers (concealed, recessed, and flush types) shall be permitted to have the operating element above the ceiling and the deflector located nearer to the ceiling where installed in accordance with their listing.

Exception No. 2: Where sprinklers are listed for use under other ceiling construction features or for different distances, they shall be permitted to be installed in accordance with their listing.

4-8.4.1.2 Under obstructed construction, the sprinkler deflector shall be located 1 to 6 in. (25.4 to 152 mm) below the structural members and a maximum distance of 22 in. (559 mm) below the ceiling/roof deck.

Table 4-8.2 Protection Areas and Maximum Spacing (Extended Coverage Upright and Pendent Spray Sprinklers)

	Light Hazard		Ordinary Hazard		Extra Hazard		High Pile Storage	
Construction Type	Protection Area (ft^2)	Spacing (ft)	Protection Area (ft^2)	Spacing (ft)	Protection Area (ft^2)	Spacing (ft)	Protection Area (ft^2)	Spacing (ft)

(when specifically	324	18	196	14	196	14	196	14
listed for such use)	256	16	144	12	144	12	144	12
Obstructed combustible	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

For SI Units: 1 ft = 0.3048 m; 1 ft^2 = 0.0929 m^2.

Exception No. 1: Sprinklers shall be permitted to be installed with the deflector at or above the bottom of the structural member to a maximum of 22 in. (559 mm) below the ceiling/roof deck where the sprinkler is installed in conformance with 4-6.5.1.2.

Exception No. 2: Where sprinklers are installed in each bay of obstructed construction, deflectors shall be a minimum of 1 in. (25.4 mm) and a maximum of 12 in. (305 mm) below the ceiling.

Exception No. 3: Where sprinklers are listed for use under other ceiling construction features or for different distances, they shall be permitted to be installed in accordance with their listing.

4-8.4.1.3* Sprinklers under or near the peak of a roof or ceiling shall have deflectors located not more than 3 ft (0.9 m) vertically down from the peak. [*See Figures 4-6.4.1.3(a) and 4-6.4.1.3(b).*]

4-8.4.2 Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings or roofs.

4-8.5 Obstructions to Sprinkler Discharge (Extended Coverage Upright and Pendent Spray Sprinklers).

4-8.5.1 Performance Objective.

4-8.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-8.5.2 and 4-8.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard.

4-8.5.1.2 Sprinklers shall be arranged to comply with Paragraph 4-5.5.2, Table 4-8.5.1.2, and Figure 4-8.5.1.2(a).

Exception No. 1: Sprinklers shall be permitted to be spaced on opposite sides of obstructions not exceeding 4 ft (1.3 m) in width provided the distance from the centerline of the obstruction to the sprinklers does not exceed one-half the allowable distance permitted between sprinklers.

Exception No. 2: Obstructions located against the wall and that are not over 30 in. (762 mm) in width shall be permitted to be protected in accordance with Figure 4-8.5.1.2(b).

Table 4-8.5.1.2(a) Position of Sprinklers to Avoid Obstructions to Discharge (Extended Coverage Upright and Pendent Spray Sprinklers)

Distance from Sprinklers to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
Less than 1 ft	0
1 ft to less than 1 ft 6 in.	0
1 ft 6 in. to less than 2 ft	1
2 ft to less than 2 ft 6 in.	1
2 ft 6 in. to less than 3 ft	1
3 ft to less than 3 ft 6 in.	3
3 ft 6 in. to less than 4 ft	3
4 ft to less than 4 ft 6 in.	5
4 ft 6 in. to less than 5 ft	7
5 ft to less than 5 ft 6 in.	7
5 ft 6 in. to less than 6 ft	7
6 ft to less than 6 ft 6 in.	9
6 ft 6 in. to less than 7 ft	11
7 ft and greater	14

For SI Units: 1 in. = 25.4 mm, 1 ft = 0.3048 m.

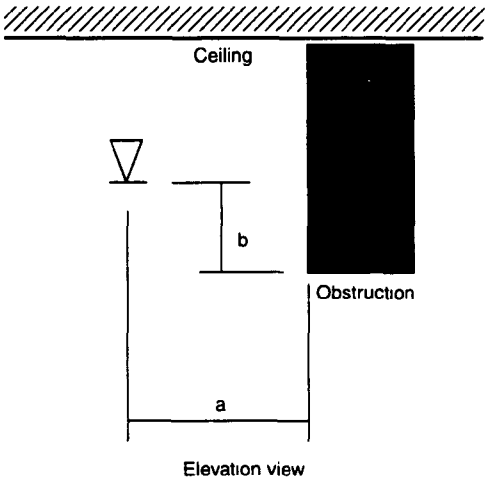

Figure 4-8.5.1.2(a) Position of sprinklers to avoid obstructions to discharge (extended coverage upright and pendent spray sprinklers).

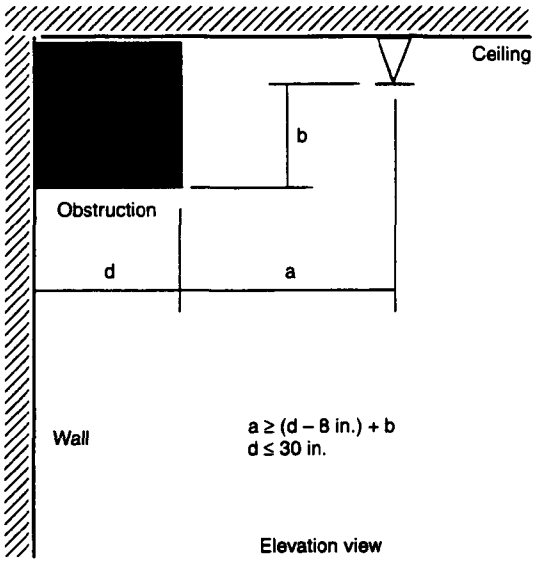

Figure 4-8.5.1.2(b) Obstructions against walls (SSU/SSP).

4-8.5.2 Obstructions to Sprinkler Discharge Pattern Development.

4-8.5.2.1 Continuous or noncontinuous obstructions less than 18 in. (457 mm) below the sprinkler deflector that prevent the pattern from fully developing shall comply with this section.

4-8.5.2.2 Sprinklers shall be positioned such that they are located at a distance four times greater than the maximum dimension of an obstruction up to a maximum of 36 in. (.91 m) (e.g., truss webs and chords, pipe, columns, and fixtures). (*See Figure 4-8.5.2.2.*)

Exception No. 1: Sprinklers shall be permitted to be spaced on opposite sides of the obstruction provided the distance from the centerline of the obstruction to the sprinklers does not exceed one-half the allowable distance between sprinklers.

Exception No. 2: Where the obstruction consists of open trusses 20 in. (.51 m) or greater apart [24 in. (.61 m) on center], sprinklers shall be permitted to be located one-half the distance between the obstruction created by the truss provided that truss chords do not exceed 4 in. (101 mm) in width and web members do not exceed 1 in. (25.4 mm) in width.

Exception No .3: Where the sprinklers are installed in the centerline of bar joists or a truss.

Exception No. 4: Piping to which an upright sprinkler is directly attached less than 3 in. (75 mm) in diameter.

Exception No. 5: Piping to which pendent and sidewall sprinklers are directly attached.

4-8.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard. Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 18 in. (457 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

4-8.5.3.1 Sprinklers shall be installed under fixed obstructions over 4 ft (1.2 m) wide such as ducts, decks, cutting tables, and overhead doors.

Exception: Obstructions that are not fixed in place such as conference tables.

4-8.5.3.2 Sprinklers installed under open gratings shall be of the intermediate level/rack storage type or otherwise shielded from the discharge of overhead sprinklers.

4-8.5.4 Suspended or Floor-Mounted Vertical Obstructions. The distance from sprinklers to privacy curtains, free standing partitions, room dividers, and similar obstructions in light hazard occupancies shall be in accordance with Table 4-8.5.4 and Figure 4-8.5.4.

4-8.6 Clearance to Storage (Extended Coverage Upright and Pendent Spray Sprinklers). The clearance between the deflector and the top of storage shall be 18 in. (457 mm) or greater.

Exception: Where other standards specify greater minimums, they shall be followed.

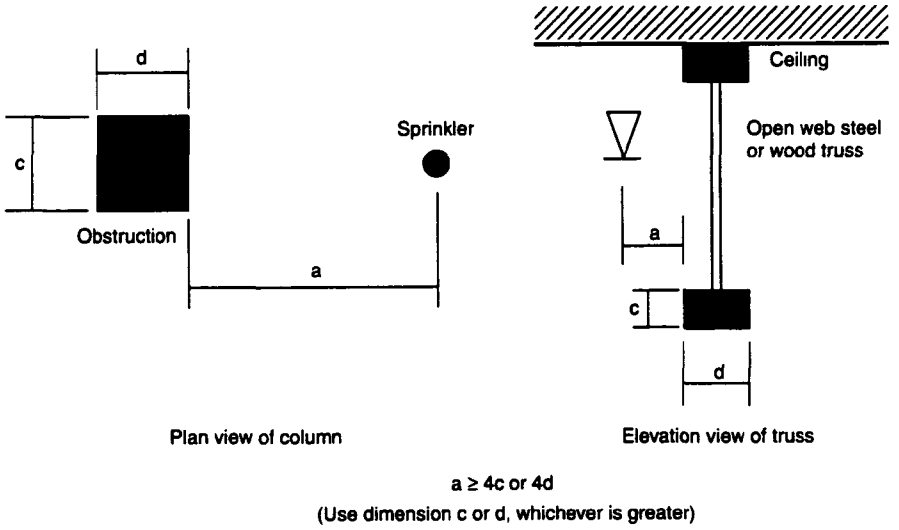

Figure 4-8.5.2.2 Minimum distance from obstruction (extended coverage upright and pendent spray sprinklers).

Table 4-8.5.4 Suspended or Floor Mounted Obstructions (Extended Coverage Upright and Pendent Spray Sprinklers)

Horizontal Distance (a)	Maximum Vertical Distance below Deflector (b)
6 in. or less	3 in.
More than 6 in. to 9 in.	4 in.
More than 9 in. to 12 in.	6 in.
More than 12 in. to 15 in.	8 in.
More than 15 in. to 18 in.	9½ in.
More than 18 in. to 24 in.	12½ in.
More than 24 in. to 30 in.	15½ in.
More than 30 in.	18 in.

For SI Units. 1 in. = 25 4 mm

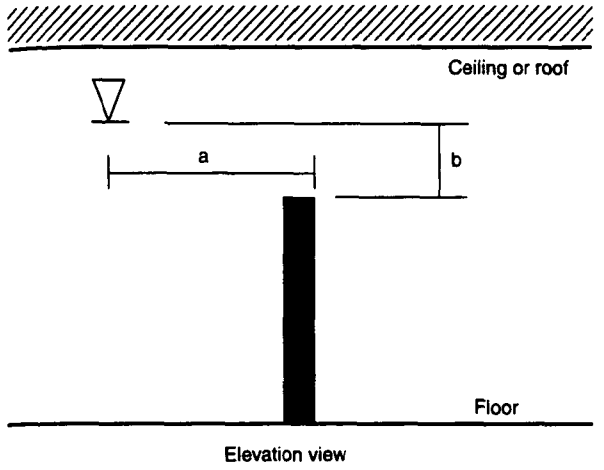

Figure 4-8.5.4 Suspended or floor-mounted obstructions (extended coverage upright and pendent spray sprinklers).

4-9 Extended Coverage Sidewall Spray Sprinklers.

4-9.1 General. All requirements of Section 4-5 shall apply to extended coverage sidewall spray sprinklers except as modified below.

4-9.2 Protection Areas per Sprinkler (Extended Coverage Sidewall Spray Sprinklers).

4-9.2.1* Determination of the Protection Area of Coverage. The protection area of coverage per sprinkler (A_s) for extended coverage sidewall sprinklers shall be not less than that prescribed by the listing. Listing dimensions shall be in 2-ft (.61-m) increments up to 28 ft (8.5 m).

4-9.2.2 Maximum Protection Area of Coverage. The maximum allowable protection area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in Table 4-9.2. In any case, the maximum area of coverage of a sprinkler shall not exceed 400 sq ft (37.1 m^2).

4-9.3 Sprinkler Spacing (Extended Coverage Sidewall Spray Sprinklers).

4-9.3.1 Maximum Distance Between Sprinklers. The maximum distance permitted between sprinklers shall be based on the centerline distance between sprinklers on the branch line along the wall.

Table 4-9.2 Protection Area and Maximum Spacing for Extended Coverage Sidewall Sprinklers

	Light Hazard		Ordinary Hazard	
Construction Type	Protection Area (ft^2)	Spacing (ft)	Protection Area (ft^2)	Spacing (ft)
Unobstructed, smooth, flat	400	28	400	24

4-9.3.1.1 Sidewall spray sprinklers shall be installed along the length of a single wall of a room.

Exception No 1: Sidewall sprinklers shall not be installed back-to-back without being separated by a continuous lintel soffit or baffle.

Exception No 2: Sidewall sprinklers shall be permitted to be installed on opposing or adjacent walls provided no sprinkler is located within the maximum protection area of another sprinkler.

4-9.3.2 Maximum Distance from Walls. The distance from sprinklers to the end walls shall not exceed one-half of the allowable distance permitted between sprinklers as indicated in Table 4-9.2.

4-9.3.3 Minimum Distance from Walls. Sprinklers shall be located a minimum of 4 in. (102 mm) from a wall. The distance from the wall to the sprinkler shall be measured perpendicular to the wall.

Exception: Horizontal sidewall sprinklers are permitted to be located with their deflectors less than 4 in. (102 mm) from the wall on which they are mounted.

4-9.3.4 Minimum Distance Between Sprinklers. No sprinklers shall be located within the maximum protection area of any other sprinkler.

4-9.4 Deflector Position from Ceilings and Walls (Extended Coverage Sidewall Spray Sprinklers).

4-9.4.1 Distance Below Ceilings and from Walls.

4-9.4.1.1 Sidewall sprinkler deflectors shall be located not more than 6 in. (152 mm) nor less than 4 in. (102 mm) from ceilings.

Exception: Horizontal sidewall sprinklers are permitted to be located in a zone 6 to 12 in. (152 to 305 mm) or 12 to 18 in. (305 to 457 mm) below noncombustible ceilings where listed for such use.

4-9.4.1.2 Sidewall sprinkler deflectors shall be located not more than 6 in. (229 mm) nor less than 4 in. (102 mm) from walls.

4-9.4.1.3 Sidewall sprinklers shall only be installed along walls, lintels, or soffits where the distance from the ceiling to the bottom of the lintel or soffit is at least 2 in. (51 mm) greater than the distances from the ceiling to sidewall sprinkler deflectors.

4-9.4.1.3.1 Where soffits are used for the installation of sidewall sprinklers, they shall not exceed 8 in. (203 mm) in width or projection from the wall.

Exception: Soffits shall be permitted to exceed 8 in. (203 mm) where additional sprinklers are installed below the soffit.

4-9.4.2 Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings or roofs.

4-9.4.2.1 Sidewall sprinklers, where installed under a sloped ceiling, shall be located at the high point of the slope and positioned to discharge downward along the slope.

4-9.5 Obstructions to Sprinkler Discharge (Extended Coverage Sidewall Spray Sprinklers).

4-9.5.1 Performance Objective.

4-9.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-5.5.2 and 4-5.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard.

4-9.5.1.2 Sidewall sprinklers shall be installed no closer than 8 ft (2.3 m) from light fixtures or similar obstructions. The distance between light fixtures or similar obstructions located more than 8 ft (4.6 m) from the sprinkler shall be in conformity with Figure 4-9.5.1.2 and Table 4-9.5.1.2.

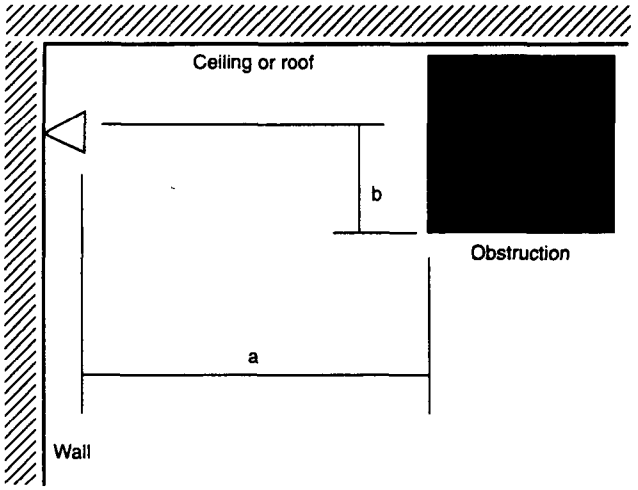

Figure 4-9.5.1.2 Positioning of sprinklers to avoid obstructions (extended coverage sidewall sprinklers).

Table 4-9.5.1.2 Positioning of Sprinklers to Avoid Obstructions (Extended Coverage Sidewall Sprinklers)

Distance from Sidewall Sprinkler to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
8 ft to less than 10 ft	1
10 ft to less than 11 ft	2
11 ft to less than 12 ft	3
12 ft to less than 13 ft	4
13 ft to less than 14 ft	6
14 ft to less than 15 ft	7
15 ft to less than 16 ft	9
16 ft to less than 17 ft	11
17 ft or greater	14

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

4-9.5.2 Obstructions to Sprinkler Discharge Pattern Development.

4-9.5.2.1 Continuous or noncontinuous obstructions less than 18 in. (457 mm) below the sprinkler deflector that prevent the pattern from fully developing shall comply with this section.

4-9.5.2.2 Sprinklers shall be positioned such that they are located at a distance four times greater than the maximum dimension of the obstruction to a maximum of 36 in. (.91 m) from the sprinkler (e.g., truss webs and chords, pipe, columns, and fixtures). Sidewall sprinklers shall be positioned in accordance with Figure 4-9.5.2.2 when obstructions are present.

4-9.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard. Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 18 in. (457 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

4-9.5.3.1 Sprinklers shall be installed under fixed obstructions over 4 ft (1.2 m) wide such as ducts, decks, cutting tables, and overhead doors.

Exception: Obstructions that are not fixed in place such as conference tables.

4-9.5.4 Suspended or Floor-Mounted Vertical Obstructions. The distance from sprinklers to privacy curtains, free-standing partitions, room dividers, and similar obstructions in light hazard occupancies shall be in accordance with Table 4-9.5.4 and Figure 4-9.5.4.

4-10 Large-Drop Sprinklers.

4-10.1 General. All requirements of Section 4-5 shall apply to large-drop sprinklers except as modified below.

4-10.2* Protection Areas per Sprinkler (Large-Drop Sprinklers).

4-10.2.1 Determination of the Protection Area of Coverage. The protection area of coverage per sprinkler (A_s) shall be determined in accordance with 4-5.2.1.

4-10.2.2 Maximum Protection Area of Coverage. The maximum allowable protection area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in Table 4-10.2. In any case, the maximum area of coverage of any sprinkler shall not exceed 130 ft^2 (12.9 m^2).

4-10.2.3 Minimum Protection Area of Coverage. The minimum allowable protection area of coverage for a sprinkler (A_s) shall be not less than 80 ft^2 (7.4 m^2).

4-10.3 Sprinkler Spacing (Large-Drop Sprinklers).

4-10.3.1* Maximum Distance Between Sprinklers. The distance between sprinklers shall be limited to not more than 12 ft (3.7 m) between sprinklers as shown in Table 4-10.2.

Exception: Under obstructed combustible construction, the maximum distance shall be limited to 10 ft (3.0 m).

4-10.3.2 Maximum Distance from Walls. The distance from sprinklers to walls shall not exceed one-half of the allowable distance permitted between sprinklers as indicated in Table 4-10.2.

Figure 4-9.5.4 Suspended or floor-mounted obstructions (extended coverage sidewall sprinklers).

Table 4-9.5.4 Suspended or Floor Mounted Obstructions (Extended Coverage Sidewall Sprinklers)

Horizonal Distance (a)	Minimum Allowable Distance below Deflector (b)
6 in. or less	3 in.
More than 6 in. to 9 in.	4 in.
More than 9 in. to 12 in.	6 in.
More than 12 in. to 15 in.	8 in.
More than 15 in. to 18 in.	9½ in.
More than 18 in. to 24 in.	12½ in.
More than 24 in. to 30 in.	15½ in.
More than 30 in.	18 in.

For SI Units: 1 in. = 25.4 mm.

Table 4-10.2 Protection Areas and Maximum Spacing for Large-Drop Sprinklers

Construction Type	Protection Area (ft^2)	Maximum Spacing (ft)
Noncombustible unobstructed	130	12
Noncombustible obstructed	130	12
Combustible unobstructed	130	12
Combustible obstructed	100	10

For SI Units: 1 ft = 0.3048 m; 1 ft^2 = 0.0929 m^2.

4-10.3.3 Minimum Distance from Walls. Sprinklers shall be located a minimum of 4 in. (102 mm) from a wall.

4-10.3.4 Minimum Distance Between Sprinklers. Sprinklers shall be spaced not less than 8 ft (2.4 m) on center.

4-10.4 Deflector Position (Large-Drop Sprinklers).

4-10.4.1* Distance Below Ceilings.

4-10.4.1.1 Under unobstructed construction, the distance between the sprinkler deflector and the ceiling shall be a minimum of 6 in. (152 mm) and a maximum of 8 in. (203 mm).

4-10.4.1.2 Under obstructed construction, the distance between the sprinkler deflector and the ceiling shall be a minimum of 6 in. (152 mm) and a maximum of 12 in. (305 mm).

Exception: Under wood joist or composite wood joist construction, the sprinklers shall be located 1 to 6 in. (25.4 to 152 mm) below the structural members to a maximum distance of 22 in. (559 mm) below the ceiling/roof or deck.

4-10.4.2 Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings or roofs.

4-10.5* Obstructions to Sprinkler Discharge (Large-Drop Sprinklers).

4-10.5.1 Performance Objective.

4-10.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-5.5.2 and 4-5.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard.

4-10.5.1.2 Sprinklers shall be arranged to comply with Paragraph 4-5.5.2, Table 4-10.5.1.2, and Figure 4-10.5.1.2.

4-10.5.2 Obstructions to Sprinkler Discharge Pattern Development.

4-10.5.2.1 Continuous or noncontinuous obstructions less than 36 in. (914 mm) below the sprinkler deflector that prevent the pattern from fully developing shall comply with this section.

4-10.5.2.2 Sprinklers shall be positioned such that they are located at a distance three times greater than the maximum dimension of the obstruction to a maximum of 24 in. (610 mm) from the sprinkler (e.g., webs and chord members, pipe, columns, and fixtures). Sprinklers shall be positioned in accordance with Figure 4-10.5.2.2 when obstructions are present.

4-10.5.2.3 Where branch lines are larger than 2 in. (51 mm), the sprinkler shall be supplied by a riser nipple to elevate the sprinkler 13 in. (330 mm) for 2½-in. (64-mm) pipe and 15 in. (380 mm) for 3-in. (76-mm) pipe. These dimensions shall be measured from the centerline of the pipe to the deflector.

Exception No. 1: This provision shall not apply where the sprinklers are offset horizontally a minimum of 12 in. (305 mm) from the pipe.

Exception No. 2: Piping to which the sprinkler is directly attached less than 2 in. (51 mm) in diameter.

4-10.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard. Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 36 in. (914 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

Table 4-10.5.1.2 Positioning of Sprinklers to Avoid Obstructions to Discharge (Large Drop Sprinkler)

Distance from Sprinkler to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
Less than 1 ft	0
1 ft to less than 1 ft 6 in.	1½
1 ft 6 in. to less than 2 ft	3
2 ft to less than 2 ft 6 in.	5½
2 ft 6 in. to less than 3 ft	8
3 ft to less than 3 ft 6 in.	10
3 ft 6 in. to less than 4 ft	12
4 ft to less than 4 ft 6 in.	15
4 ft 6 in. to less than 5 ft	18
5 ft to less than 5 ft 6 in.	22
5 ft 6 in. to less than 6 ft	26
6 ft	31

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

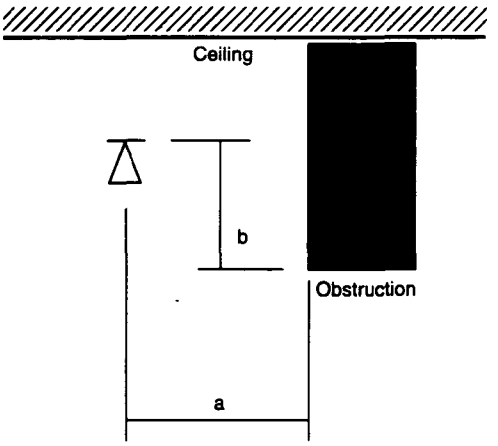

Figure 4-10.5.1.2 Positioning of sprinklers to avoid obstructions to discharge (large-drop sprinkler).

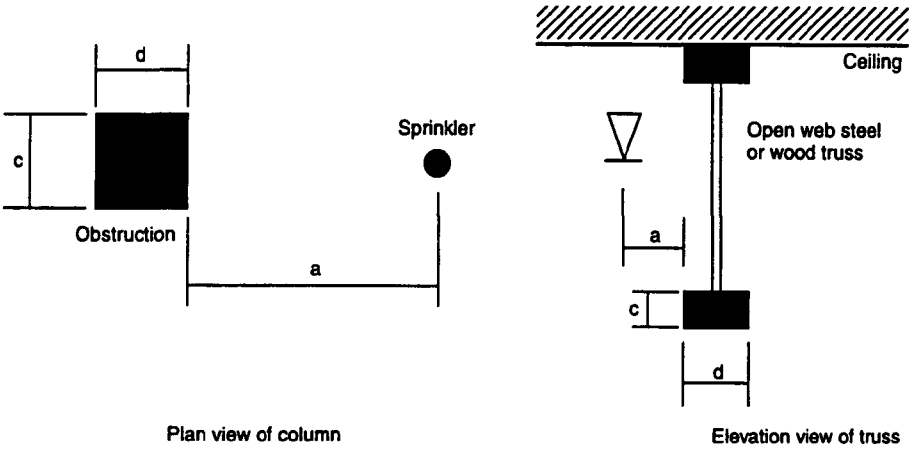

a ≥ 3c or 3d
(Use dimension c or d, whichever is greater)

Figure 4-10.5.2.2 Minimum distance from obstruction (large-drop sprinkler).

4-10.5.3.1 Sprinklers shall be positioned with respect to fluorescent lighting fixtures, ducts, and obstructions more than 24 in. (610 mm) wide and located entirely below the sprinklers so that the minimum horizontal distance from the near side of the obstruction to the center of the sprinkler is not less than the value specified in Table 4-10.5.3.1. (*See Figure 4-10.5.3.1.*)

Table 4-10.5.3.1 Obstruction Entirely Below the Sprinkler (Large Drop Sprinkler)

Distance of Deflector above Bottom of Obstruction (b)	Minimum Distance to Side of Obstruction (ft) (a)
Less than 6 in.	1½
6 in. to less than 12 in.	3
12 in. to less than 18 in.	4
18 in. to less than 24 in.	5
24 in. to less than 30 in.	5½
30 in. less than 36 in.	6

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.

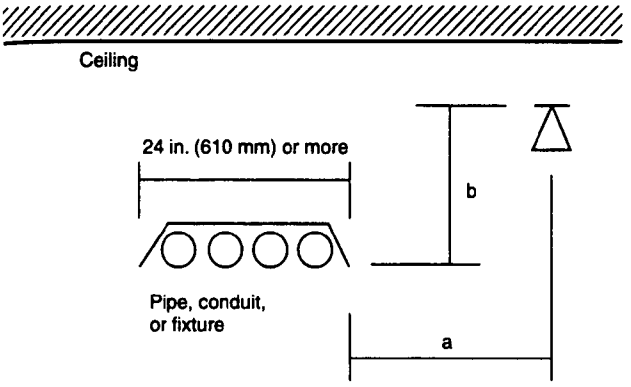

Figure 4-10.5.3.1 Obstruction entirely below the sprinkler (large-drop sprinkler).

4-10.5.3.2 Sprinklers installed under open gratings shall be of the intermediate level/rack storage type or otherwise shielded from the discharge of overhead sprinklers.

4-10.5.3.3 Where the bottom of the obstruction is located 24 in. (610 mm) or more below the sprinkler deflectors:

(a) Sprinklers shall be positioned so that the obstruction is centered between adjacent sprinklers. (*See Figure 4-10.5.3.3.*)

(b) The obstruction shall be limited to a maximum width of 24 in. (610 mm). (*See Figure 4-10.5.3.3.*)

Exception: Where the obstruction is greater than 24 in. (610 mm) wide, one or more lines of sprinklers shall be installed below the obstruction.

(c) The obstruction shall not extend more than 12 in. (305 mm) to either side of the midpoint between sprinklers. (*See Figure 4-10.5.3.3.*)

Exception: Where the extensions of the obstruction exceed 12 in. (305 mm), one or more lines of sprinklers shall be installed below the obstruction.

(d) At least 18 in. (457 mm) clearance shall be maintained between the top of storage and the bottom of the obstruction. (*See Figure 4-10.5.3.3.*)

4-10.5.3.4 In the special case of an obstruction running parallel to and directly below a branch line:

(a) The sprinkler shall be located at least 36 in. (914 mm) above the top of the obstruction. (*See Figure 4-10.5.3.4.*)

(b) The obstruction shall be limited to a maximum width of 12 in. (305 mm). (*See Figure 4-10.5.3.4.*)

(c) The obstruction shall be limited to a maximum extension of 6 in. (152 mm) to either side of the centerline of the branch line. (*See Figure 4-10.5.3.4.*)

4-10.6 Clearance to Storage (Large-Drop Sprinklers). The clearance between the deflector and the top of storage shall be 36 in. (914 mm) or greater.

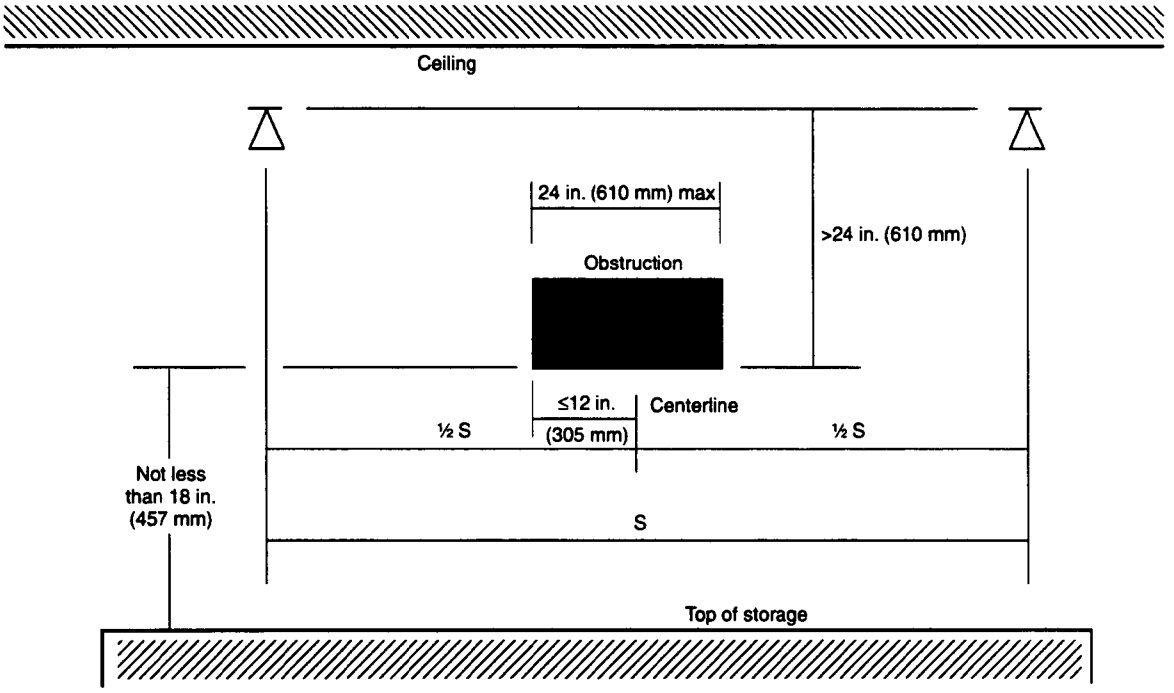

Figure 4-10.5.3.3 Obstruction more than 24 in. (610 mm) below the sprinkler (large-drop sprinkler).

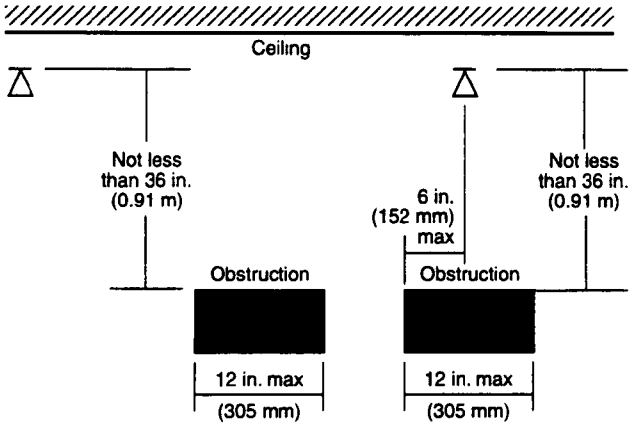

Figure 4-10.5.3.4 Obstruction more than 36 in. (914 mm) below the sprinkler (large-drop sprinkler).

4-11 Early Suppression Fast-Response Sprinklers.

4-11.1 General. All requirements of Section 4-5 shall apply except as modified below.

4-11.2 Protection Areas per Sprinkler (Early Suppression Fast-Response Sprinklers).

4-11.2.1 Determination of the Protection Area of Coverage. The protection area of coverage per sprinkler (A_s) shall be determined in accordance with 4-5.2.1.

4-11.2.2 Maximum Protection Area of Coverage. The maximum allowable protection area of coverage for a sprinkler (A_s) shall be in accordance with the value indicated in Table 4-11.2. In any case, the maximum area of coverage of any sprinkler shall not exceed 100 ft^2 (9.3 m^2).

4-11.2.3 Minimum Protection Area of Coverage. The minimum allowable protection area of coverage for a sprinkler (A_s) shall be not less than 80 ft^2 (7.4 m^2).

4-11.3 Sprinkler Spacing (Early Suppression Fast-Response Sprinklers).

4-11.3.1 Maximum Distance Between Sprinklers. The distance between sprinklers shall be limited to not more than 12 ft (3.7 m) between sprinklers as shown in Table 4-11.2.

Exception: ESFR sprinklers used in buildings with storage heights greater than 25 ft (7.6 m) and ceiling heights greater than 30 ft (9.1 m) shall not be spaced more than 10 ft (3.0 m) between sprinklers.

4-11.3.2 Maximum Distance from Walls. The distance from sprinklers to walls shall not exceed one-half of the allowable distance permitted between sprinklers as indicated in Table 4-11.2.

4-11.3.3 Minimum Distance from Walls. Sprinklers shall be located a minimum of 4 in. (102 mm) from a wall.

4-11.3.4 Minimum Distance Between Sprinklers. Sprinklers shall be spaced not less than 8 ft (2.4 m) on center.

4-11.4 Deflector Position (Early Suppression Fast-Response Sprinklers).

4-11.4.1 Distance Below Ceilings.

4-11.4.1.1 Pendent sprinklers shall be positioned so that deflectors are a maximum 14 in. (356 mm) and a minimum 6 in. (152 mm) below the ceiling. Upright sprinklers shall be positioned so that the deflector is 3 to 5 in. (76.2 to 127 mm) below the ceiling. With obstructed construction, the branch lines shall be permitted to be installed across the beams, but sprinklers shall be located in the bays and not under the beams.

4-11.4.2 Deflector Orientation. Deflectors of sprinklers shall be aligned parallel to ceilings or roofs. Pendent sprinklers shall be positioned so that deflectors are a maximum 14 in. (356 mm) and a minimum 6 in. (152 mm) below the ceiling.

4-11.5 Obstructions to Sprinkler Discharge (Early Suppression Fast-Response Sprinklers).

4-11.5.1 Performance Objective.

4-11.5.1.1 Sprinklers shall be located so as to minimize obstructions to discharge as defined in 4-5.5.2 and 4-5.5.3 or additional sprinklers shall be provided to ensure adequate coverage of the hazard.

4-11.5.1.2 Sprinklers shall be arranged to comply with Paragraph 4-5.5.2, Table 4-11.5.1.2, and Figure 4-11.5.1.2.

4-11.5.2 Obstructions to Sprinkler Discharge Pattern Development. Sprinklers shall be positioned such that they are located at a distance three times greater than the maximum dimension of an obstruction up to a maximum of 24 in. (609 mm) (e.g., structural members, pipe, columns, and fixtures). Sprinklers shall be positioned in accordance with Figure 4-11.5.2 where obstructions are present.

Table 4-11.2 Protection Areas and Maximum Spacing of ESFR Sprinklers

	ESFR Sprinkler up to 30 ft in Height		ESFR Sprinkler up to 40 ft in Height	
Construction Type	Protection Area (ft^2)	Spacing (ft)	Protection Area (ft^2)	Spacing (ft)
Noncombustible unobstructed	100	12	100	10
Noncombustible obstructed	100	12	100	10
Combustible unobstructed	100	12	100	10
Combustible obstructed	N/A	N/A	N/A	N/A

For SI units: 1 ft = 0.3048 m, 1 ft^2 = 0.0929 m^2

Table 4-11.5.1.2 Positioning of Sprinklers to Avoid Obstructions to Discharge (ESFR Sprinkler)

Distance from Sprinkler to Side of Obstruction (a)	Maximum Allowable Distance of Deflector above Bottom of Obstruction (in.) (b)
Less than 1 ft	0
1 ft to less than 1 ft 6 in.	1½
1 ft 6 in. to less than 2 ft	3
2 ft to less than 2 ft 6 in.	5½
2 ft 6 in. to less than 3 ft	8
3 ft to less than 3 ft 6 in.	10
3 ft 6 in. to less than 4 ft	12
4 ft to less than 4 ft 6 in.	15
4 ft 6 in. to less than 5 ft	18
5 ft to less than 5 ft 6 in.	22
5 ft 6 in. to less than 6 ft	26
6 ft	31

For SI Units: 1 in. = 25.4 mm, 1 ft = 0.3048 m.

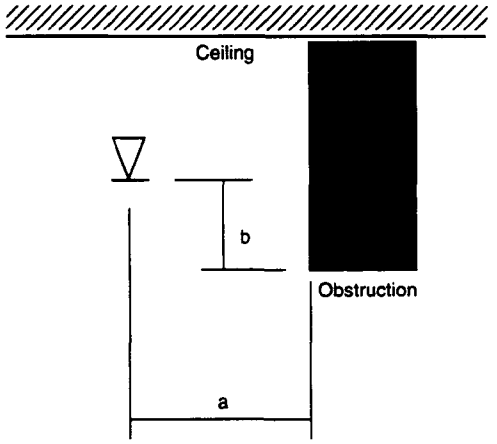

Figure 4-11.5.1.2 Positioning of sprinklers to avoid obstructions to discharge (ESFR sprinkler).

4-11.5.3* Obstructions that Prevent Sprinkler Discharge from Reaching the Hazard.

4-11.5.3.1 Continuous or noncontinuous obstructions that interrupt the water discharge in a horizontal plane more than 36 in. (914 mm) below the sprinkler deflector in a manner to limit the distribution from reaching the protected hazard shall comply with this section.

4-11.5.3.2 Where sprinklers are located entirely above obstructions such as the bottom chords of trusses or joists, ducts, piping, fluorescent lighting fixtures, conveyors, or similar obstructions, the sprinklers shall be positioned so that the maximum distance from the bottom of the obstruction to the deflector does not exceed the values specified in Table 4-11.5.1.2. Upright sprinklers shall also be positioned so that the deflector is a minimum of 7 in. (178 mm) above the top of the sprinkler pipe.

Exception No. 1: ESFR sprinklers shall be positioned so that the deflectors are at least 1 ft (305 mm) horizontally from the nearest edge of any bottom chords at open trusses or open bar joists.

Exception No. 2: Sprinklers shall not be required to meet Table 4-11.5.1.2 where additional sprinklers are located beneath the obstruction and are added to the water demand. If the obstruction is not solid (such as a group of closely spaced pipes or conduit) a barrier shall be placed under the obstruction and above the sprinklers. Sprinklers installed under the barrier or obstruction shall be positioned in accordance with 4-11.4 as if the obstruction or barrier were a ceiling. Paragraph 4-11.6 shall apply to sprinklers located below obstructions.

Exception No. 3: Sprinklers shall not be required to meet Table 4-11.5.1.2 where the sprinkler deflector is at least 1 ft (305 mm) horizontally from the nearest edge of any obstructions up to 2 ft (610 mm) wide and located below a single sprinkler, but not below two or more adjacent sprinklers, including diagonally.

Exception No. 4: Sprinklers shall not be required to meet Table 4-11.5.1.2 where the sprinkler deflectors are at least 1 ft (305 mm) horizontally from the nearest edge of any obstructions up to 1 ft (305 mm) wide that are located below two or more adjacent sprinklers, including diagonally.

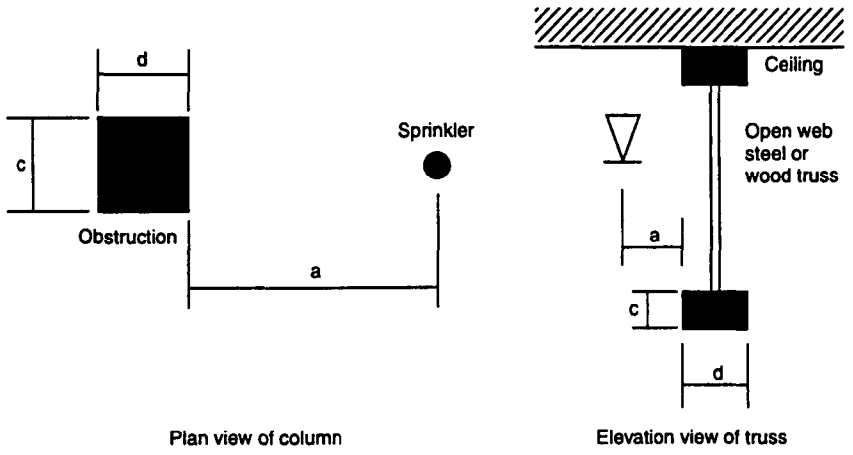

Figure 4-11.5.2 Minimum distance from obstruction (ESFR sprinkler).

Exception No. 5: Sprinklers shall not be required to meet Table 4-11.5.1.2 where the sprinkler deflectors are least 2 ft (610 mm) horizontally from the nearest edge of any obstructions up to 2 ft (610 mm) wide that are located below two or more adjacent sprinklers, including diagonally.

4-11.5.3.3 Sprinklers installed under open gratings shall be of the intermediate level/rack storage type or otherwise shielded from the discharge of overhead sprinklers.

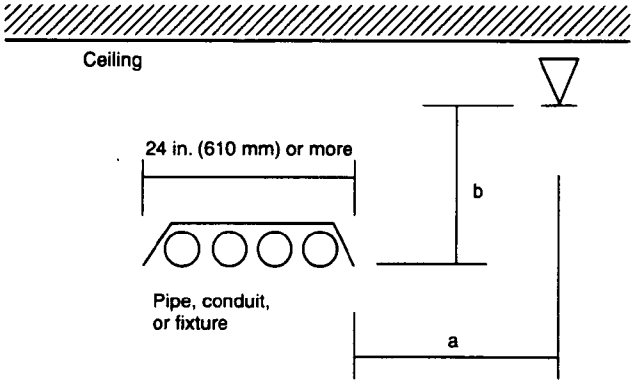

Figure 4-11.5.3.3 Obstruction entirely below the sprinkler (ESFR sprinkler).

4-11.6 Clearance to Storage (Early Suppression Fast-Response Sprinklers). The clearance between the deflector and the top of storage shall be 36 in. (914 mm) or greater.

4-12 In-Rack Sprinklers.

4-12.1 System Size. The area protected by a single system of sprinklers in racks shall not exceed 40,000 ft^2 (3716 m^2) of floor area occupied by the racks, including aisles, regardless of the number of levels of in-rack sprinklers.

4-12.2 Control Valves. Where sprinklers are installed in racks, separate indicating control valves and drains shall be provided for ceiling sprinklers and sprinklers in racks.

Exception No. 1: In-rack installations of 20 or fewer sprinklers.

Exception No. 2: The separate indicating valve shall be permitted to be arranged as sectional control valves where the racks occupy only a portion of the area protected by ceiling sprinklers.

4-12.3 Type of Sprinklers. In-rack sprinklers shall be ordinary temperature $^1/_2$- or $^{17}/_{32}$-in. (12.7- or 13.5-mm) sprinklers.

4-12.4 Location of In-Rack Sprinklers.

4-12.4.1 A minimum 6-in. (152-mm) vertical clear space shall be maintained between the sprinkler deflector and the top tier of storage.

4-12.4.2 The maximum spacing between sprinklers shall be 10 ft (3.05 m).

4-12.4.3 Sprinklers shall be located in transverse flue spaces.

4-12.4.4 In-rack sprinklers shall be located at the first tier level at or above one-half of the storage height.

4-12.4.5 Where sprinklers are installed in racks, different distances of deflectors above the bottom of horizontal rack supports shall be permitted when water distribution tests complete with storage commodity above the sprinklers demonstrate essentially equivalent distribution to that obtained with distances as specified in Table 4-6.5.1.2.

4-13 Special Situations.

4-13.1 Concealed Spaces.

4-13.1.1* All concealed spaces enclosed wholly or partly by exposed combustible construction shall be protected by sprinklers.

Exception No. 1: Concealed spaces formed by studs or joists with less than 6 in. (152 mm) between the inside or near edges of the studs or joists. (See Figure 4-6.4.1.4.)

Exception No. 2: Concealed spaces formed by bar joists with less than 6 in. (152 mm) between the roof or floor deck and ceiling.

Exception No. 3: Concealed spaces formed by ceilings attached directly to or within 6 in. (152 mm) of wood joist construction.

Exception No. 4: Concealed spaces formed by ceilings attached directly to the underside of composite wood joist construction, provided the joist channels are firestopped into volumes each not exceeding 160 ft^3 (4.53 m^3) using materials equivalent to the web construction.

Exception No. 5: Concealed spaces entirely filled with noncombustible insulation.

Exception No. 6: Concealed spaces within wood joist construction and composite wood joist construction having noncombustible insulation filling the space from the ceiling up to the bottom edge of the joist of the roof or floor deck, provided that in composite wood joist construction the joist channels are firestopped into volumes each not exceeding 160 ft^3 (4.53 m^3). The joists shall be firestopped to the full depth of the joist with material equivalent to the web construction.

Exception No. 7: Concealed spaces over isolated small rooms not exceeding 55 ft^2 (4.6 m^2) in area.

Exception No. 8: Where rigid materials are used and the exposed surfaces have a flame spread rating of 25 or less and the materials have been demonstrated not to propagate fire in the form in which they are installed in the space.

Exception No. 9: Concealed spaces in which the exposed materials are constructed entirely of fire-retardant treated wood as defined by NFPA 703, Standard for Fire Retardant Impregnated Wood and Fire Retardant Coatings for Building Materials.

Exception No. 10: Noncombustible concealed spaces having exposed combustible insulation where the heat content of the facing and substrate of the insulation material does not exceed 1000 Btu per ft^2 (11 356 kJ/m^2).

4-13.1.2 Sprinklers in concealed spaces having no access for storage or other use shall be installed in accordance with the requirements for Light Hazard Occupancy.

4-13.1.3 Where heat-producing devices such as furnaces or process equipment are located in the joist channels above a ceiling attached directly to the underside of composite wood joist construction that would not otherwise require sprinkler protection of the spaces, the joist channel containing the heat-producing devices shall be sprinklered by installing sprinklers in each joist channel, on each side, adjacent to the heat-producing device.

4-13.2 Vertical Shafts.

4-13.2.1 One sprinkler shall be installed at the top of shafts.

Exception No. 1: Noncombustible or limited-combustible, nonaccessible vertical duct shafts.

Exception No. 2: Noncombustible or limited-combustible, nonaccessible vertical electrical or mechanical shafts.

4-13.2.2* Where vertical shafts have combustible surfaces, one sprinkler shall be installed at each alternate floor level. Where a shaft having combustible surfaces is trapped, an additional sprinkler shall be installed at the top of each trapped section.

4-13.2.3 Where accessible vertical shafts have noncombustible surfaces, one sprinkler shall be installed near the bottom.

4-13.2.4 Where vertical openings are not protected by fire-rated enclosures, sprinklers shall be placed so as to fully protect the openings.

4-13.3 Stairways.

4-13.3.1 Sprinklers shall be installed beneath all stairways of combustible construction.

4-13.3.2 In noncombustible stair shafts with noncombustible stairs, sprinklers shall be installed at the top of the shaft and under the first landing above the bottom of the shaft.

Exception: Sprinklers shall be installed beneath landings or stairways where the area beneath is used for storage.

4-13.3.3* Sprinklers shall be installed in the stair shaft at each floor landing where two or more doors open from that landing into separate fire divisions.

4-13.3.4* Where moving stairways, staircases, or similar floor openings are unenclosed, the floor openings involved shall be protected by closely spaced sprinklers in combination with draft stops.

The draft stops shall be located immediately adjacent to the opening, shall be at least 18 in. (457 mm) deep, and shall be of noncombustible or limited-combustible material that will stay in place before and during sprinkler operation. Sprinklers shall be spaced not more than 6 ft (1.8 m) apart and placed 6 to 12 in. (152 to 305 mm) from the draft stop on the side away from the opening. Where sprinklers are closer than 6 ft (1.8 m), cross baffles shall be provided in accordance with 4-6.3.4.

Exception: Closely spaced sprinklers and draft stops are not required around large openings such as those found in shopping malls, atrium buildings, and similar structures where all adjoining levels and spaces are protected by automatic sprinklers in accordance with this standard and where the openings have all horizontal dimensions between opposite edges of 20 ft (6 m) or greater and an area of 1000 ft^2 (93 m^2) or greater.

4-13.4* Building Service Chutes. Building service chutes (linen, rubbish, etc.) shall be protected internally by automatic sprinklers. A sprinkler shall be provided above the top service opening of the chute, above the lowest service opening, and above service openings at alternate levels in buildings over two stories in height. The room or area into which the chute discharges shall also be protected by automatic sprinklers.

4-13.5 Elevator Hoistways and Machine Rooms.

4-13.5.1* Sidewall spray sprinklers shall be installed at the bottom of each elevator hoistway, not more than 2 ft (0.61 m) above the floor of the pit.

Exception: For enclosed, noncombustible elevator shafts that do not contain combustible hydraulic fluids, the sprinklers at the bottom of the shaft are not required.

4-13.5.2* Automatic sprinklers in elevator machine rooms or at the tops of hoistways shall be of ordinary or intermediate temperature rating.

4-13.5.3* Upright or pendent spray sprinklers shall be installed at the top of elevator hoistways.

Exception: Sprinklers are not required at the tops of noncombustible hoistways of passenger elevators whose car enclosure materials meet the requirements of ASME A17.1, Safety Code for Elevators and Escalators.

4-13.6 Spaces under Ground Floors, Exterior Docks, and Platforms. Sprinklers shall be installed in spaces under all combustible ground floors, exterior docks, and platforms.

Exception: Sprinklers shall be permitted to be omitted where all of the following conditions prevail:

(a) The space is not accessible for storage purposes and is protected against accumulation of wind-borne debris;

(b) The space contains no equipment such as conveyors or fuel-fired heating units;

(c) The floor over the space is of tight construction;

(d) No combustible or flammable liquids or materials that under fire conditions would convert into combustible or flammable liquids are processed, handled, or stored on the floor above the space.

4-13.7* Exterior Roofs or Canopies.

4-13.7.1 Sprinklers shall be installed under roofs or canopies over areas where combustibles are stored or handled.

Exception: Sprinklers are permitted to be omitted where construction is noncombustible or limited combustible and areas under the roofs or canopies are not used for storage or handling of combustibles.

4-13.7.2 Sprinklers shall be installed under exterior combustible roofs or canopies exceeding 4 ft (1.2 m) in width.

4-13.8 Dwelling Units.

4-13.8.1 Sprinklers are not required in bathrooms that are located within dwelling units, that do not exceed 55 ft^2 (5.1 m^2) in area, and that have walls and ceilings of noncombustible or limited-combustible materials with a 15-min thermal barrier rating including the walls and ceilings behind fixtures.

Exception: Sprinklers are required in bathrooms of nursing homes and in bathrooms opening directly onto public corridors or exitways.

4-13.8.2* Sprinklers are not required in clothes closets, linen closets, and pantries within dwelling units in hotels and motels where the area of the space does not exceed 24 ft^2 (2.2 m^2), the least dimension does not exceed 3 ft (0.9 m), and the walls and ceilings are surfaced with noncombustible or limited-combustible materials.

4-13.9 Library Stack Rooms. Sprinklers shall be installed in every aisle and at every tier of stacks with distance between sprinklers along aisles not to exceed 12 ft (3.6 m). [*See Figure 4-13.9(a).*]

Exception No. 1: Where vertical shelf dividers are incomplete and allow water distribution to adjacent aisles, sprinklers are permitted to be omitted in alternate aisles on each tier. Where ventilation openings are also provided in tier floors, sprinklers shall be staggered vertically. [See Figure 4-13.9(b).]

Exception No. 2: Sprinklers are permitted to be installed without regard to aisles where there is 18 in. (457 mm) or more clearance between sprinkler deflectors and tops of racks.

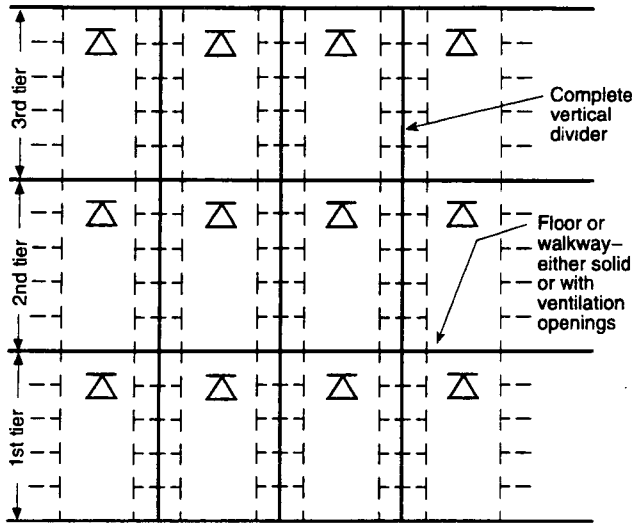

Figure 4-13.9(a) Sprinklers in multitier library bookstacks with complete vertical dividers.

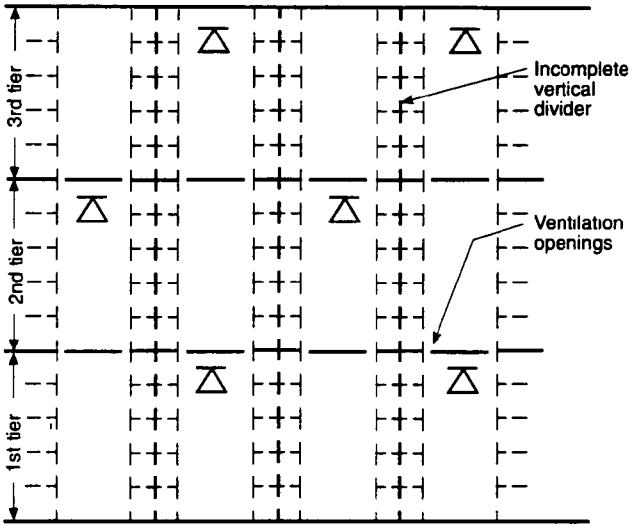

Figure 4-13.9(b) Sprinklers in multitier library bookstacks with incomplete vertical dividers.

4-13.10 Electrical Equipment. Sprinkler protection shall be required in electrical equipment rooms. Hoods or shields installed to protect important electrical equipment from sprinkler discharge shall be noncombustible.

Exception: Sprinklers shall not be required where all of the following conditions are met:

(a) The room is dedicated to electrical equipment only.

(b) Only dry-type electrical equipment is used.

(c) Equipment is installed in a 2-hr fire-rated enclosure including protection for penetrations.

(d) No combustible storage is permitted to be stored in the room.

4-13.11* Open-Grid Ceilings. Open-grid ceilings shall not be installed beneath sprinklers.

Exception No. 1: Open-grid ceilings in which the openings are 1/4 in. (6.4 mm) or larger in the least dimension, where the thickness or depth of the material does not exceed the least dimension of the opening, and where such openings constitute 70 percent of the area of the ceiling material. The spacing of the sprinklers over the open-grid ceiling shall then comply with the following:

(a) In Light Hazard Occupancies where sprinkler spacing (either spray or old-style sprinklers) is less than 10 ft by 10 ft (3 m by 3 m), a minimum clearance of at least 18 in. (457 mm) shall be provided between the sprinkler deflectors and the upper surface of the open-grid ceiling. Where spacing is greater than 10 ft by 10 ft (3 m by 3 m) but less than 10 ft by 12 ft (3 m by 3.7 m), a clearance of at least 24 in. (610 mm) shall be provided from spray sprinklers and at least 36 in. (914 mm) from old-style sprinklers. Where spacing is greater than 10 ft by 12 ft (3 m by 3.7 m), a clearance of at least 48 in. (1219 mm) shall be provided.

(b) In Ordinary Hazard Occupancies, open-grid ceilings shall be permitted to be installed beneath spray sprinklers only. Where sprinkler spacing is less than 10 ft by 10 ft (3 m by 3 m), a minimum clearance of at least 24 in. (610 mm) shall be provided between the sprinkler deflectors and the upper surface of the open-grid ceiling. Where spacing is greater than 10 ft by 10 ft (3 m by 3 m), a clearance of at least 36 in. (914 mm) shall be provided.

Exception No. 2: Other types of open-grid ceilings shall not be installed beneath sprinklers unless they are listed for such service and are installed in accordance with instructions contained in each package of ceiling material.

4-13.12 Drop-Out Ceilings.

4-13.12.1 Drop-out ceilings shall be permitted to be installed beneath sprinklers where ceilings are listed for that service and are installed in accordance with their listings.

Exception: Special sprinklers shall not be installed above drop-out ceilings unless specifically listed for this purpose.

4-13.12.2 Drop-out ceilings shall not be considered ceilings within the context of this standard.

4-13.12.3* Piping installed above drop-out ceilings shall not be considered concealed piping (*see 2-5.4, Exception No. 2*).

4-13.12.4* Sprinklers shall not be installed beneath drop-out ceilings.

4-13.13 Old-Style Sprinklers. Old-style sprinklers shall not be used in a new installation.

Exception No. 1: Old-style sprinklers shall be installed in fur storage vaults. See A-4-13.13 Exception No. 1.*

Exception No. 2: Use of old-style sprinklers shall be permitted where construction features or other special situations require unique water distribution.

4-13.14 Stages.

4-13.14.1 Sprinklers shall be installed under the roof at the ceiling, in spaces under the stage either containing combustible materials or constructed of combustible materials, and in all adjacent spaces and dressing rooms, storerooms, and workshops.

4-13.14.2 Where proscenium opening protection is required, a deluge system shall be provided with open sprinklers located not more than 3 ft (0.9 m) away from the stage side of the proscenium arch and spaced up to a maximum of 6 ft (1.8 m) on center. (*See Chapter 5 for design criteria.*)

4-13.15 Provision for Flushing Systems. All sprinkler systems shall be arranged for flushing. Readily removable fittings shall be provided at the end of all cross mains. All cross

mains shall terminate in 1 ¼-in. (33-mm) or larger pipe. All branch lines on gridded systems shall be arranged to facilitate flushing.

4-13.16 Stair Towers. Stairs, towers, or other construction with incomplete floors, if piped on independent risers, shall be treated as one area with reference to pipe sizes.

4-13.17 Return Bends. Return bends shall be used where pendent sprinklers are supplied from a raw water source, mill pond, or from open-top reservoirs. Return bends shall be connected to the top of branch lines in order to avoid accumulation of sediment in the drop nipples. (*See Figure 4-13.17.*)

Exception No. 1: Return bends are not required for deluge systems.

Exception No. 2: Return bends are not required where drypendent sprinklers are used.

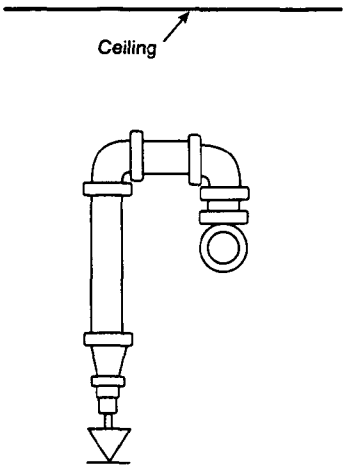

Figure 4-13.17 Return bend arrangement.

4-13.18 Piping to Sprinklers below Ceilings.

4-13.18.1 In new installations expected to supply sprinklers below a ceiling, minimum 1-in. (25-mm) outlets shall be provided.

Exception: Hexagonal bushings shall be permitted to accommodate temporary sprinklers and shall be removed with the temporary sprinklers when the permanent ceiling sprinklers are installed.

4-13.18.2 When pipe schedule systems are revamped, a nipple not exceeding 4 in. (102 mm) in length shall be permitted to be installed in the branch line fitting. All other piping shall be 1 in. (25.4 mm) where it supplies a single sprinkler in an area. [*See Figure 4-13.18.2(a).*]

Exception No. 1: When it is necessary to pipe 2 new ceiling sprinklers from an existing outlet in an overhead system, the use of a nipple not exceeding 4 in. (102 mm) in length and of the same pipe thread size as the existing outlet shall be permitted, provided that a hydraulic calculation verifies that the design flow rate will be achieved. [See Figure 4-13.18.2(b).]

Exception No. 2: The use of pipe nipples less than 1 in. (25.4 mm) in diameter is not permitted in areas subject to earthquakes.

4-13.18.3 When hydraulically designed systems are revamped, any existing bushing shall be removed and a nipple not exceeding 4 in. (102 mm) in length shall be permitted to be installed in the branch line fitting. Calculations shall be provided to verify that the system design flow rate will be achieved.

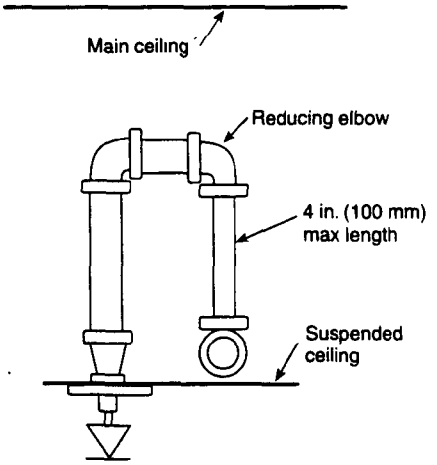

Figure 4-13.18.2(a) Nipple and reducing elbow supplying sprinkler below ceiling.

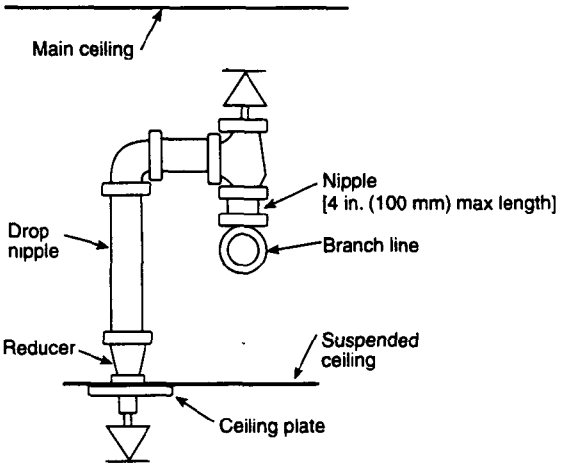

Figure 4-13.18.2(b) Sprinklers in concealed space and below ceiling.

Exception No. 1: When it is necessary to pipe 2 new ceiling sprinklers from an existing outlet in an overhead system, any bushings shall be removed and the use of a nipple not exceeding 4 in. (102 mm) in length and of the same pipe thread size as the existing outlet shall be permitted, provided that a hydraulic calculation verifies that the design flow rate will be achieved.

Exception No. 2: The use of pipe nipples less than 1 in. (25.4 mm) in diameter is not permitted in areas subject to earthquakes.

4-13.19 Dry Pipe Underground. Where necessary to place pipe that will be under air pressure underground, the pipe shall be protected against corrosion (*see 4-14.4.2*).

Exception: Unprotected cast or ductile iron pipe shall be permitted where joined with a gasketed joint listed for air service underground.

4-13.20* One-and-One-Half-Inch Hose Connections. One- and-one-half-inch [1½-in. (38-mm)] hose used for fire purposes only shall be permitted to be connected to wet sprinkler systems only, subject to the following restrictions:

(a) Hose station's supply pipes shall not be connected to any pipe smaller than 2½ in. (64 mm).

Exception: For hydraulically designed loops and grids, the minimum size pipe between the hose station's supply pipe and the source shall be permitted to be 2 in. (51 mm).

(b) For piping serving a single hose station, pipe shall be minimum 1 in. (25.4 mm) for horizontal runs up to 20 ft (6.1 m), minimum 1¼ in. (33 mm) for the entire run for runs between 20 and 80 ft (6.1 and 24.4 m), and minimum 1½ in. (38 mm) for the entire run for runs greater than 80 ft (24.4 m). For piping serving multiple hose stations, runs shall be a minimum of 1½ in. (38 mm) throughout.

(c) Piping shall be at least 1 in. (25 mm) for vertical runs.

(d) When the pressure at any hose station outlet exceeds 100 psi (6.9 bars), an approved device shall be installed at the outlet to reduce the pressure at the outlet to 100 psi (6.9 bars).

4-13.21* Hose Connections for Fire Department Use. In buildings of Light or Ordinary Hazard Occupancy, 2½-in. (64-mm) hose valves for fire department use are permitted to be attached to wet pipe sprinkler system risers. [*See 5-2.3.1.3(d).*] The following restrictions shall apply:

(a) Sprinklers shall be under separate floor control valves.

(b) The minimum size of the riser shall be 4 in. (102 mm) unless hydraulic calculations indicate that a smaller size riser will satisfy sprinkler and hose stream demands.

(c) Each combined sprinkler and standpipe riser shall be equipped with a riser control valve to permit isolating a riser without interrupting the supply to other risers from the same source of supply.

(d) For fire department connections serving standpipe and sprinkler systems, refer to Section 2-8.

4-13.22* System Subdivision. Where individual floor/zone control valves are not provided, a flanged joint or mechanical coupling shall be used at the riser at each floor for connections to piping serving floor areas in excess of 5,000 ft² (465 m²).

4-14 Piping Installation.

4-14.1 Valves.

4-14.1.1* Valves Controlling Sprinkler Systems. (*See 2-7.1.*)

4-14.1.1.1* Each system shall be provided with a listed indicating valve in an accessible location, so located as to control all automatic sources of water supply.

4-14.1.1.2 At least one listed indicating valve shall be installed in each source of water supply.

Exception: There shall be no shutoff valve in the fire department connection.

4-14.1.1.3 Valves on connections to water supplies, sectional control valves, and other valves in supply pipes to sprinklers shall be supervised open by one of the following methods:

(a) Central station, proprietary, or remote station signaling service.

(b) Local signaling service that will cause the sounding of an audible signal at a constantly attended point.

(c) Valves locked in the open position.

(d) Valves located within fenced enclosures under the control of the owner, sealed in the open position, and inspected weekly as part of an approved procedure.

Floor control valves in high-rise buildings and valves controlling flow to sprinklers in circulating closed loop systems shall comply with (a) or (b) above.

Exception: Supervision of underground gate valves with roadway boxes shall not be required.

4-14.1.1.4 Where control valves are installed overhead, they shall be positioned so that the indicating feature is visible from the floor below.

4-14.1.1.5 Where there is more than one source of water supply, a check valve shall be installed in each connection.

4-14.1.1.6 Check valves shall be installed in a vertical or horizontal position in accordance with their listing.

4-14.1.1.7* Where a single wet pipe sprinkler system is equipped with a fire department connection, the alarm valve is considered a check valve and an additional check valve shall not be required.

4-14.1.1.8* In a city connection serving as one source of supply, listed indicating valves or indicator post valves shall be installed on both sides of the check valve required in 4-14.1.1.5.

Exception No. 1: There shall be no control valves in the fire department connection piping. (See 4-14.1.1.2).

Exception No. 2: Where the city connection serves as the only automatic source of supply to a wet pipe sprinkler system, a control valve is not required on the system side of the check valve or the alarm check valve.

4-14.1.2 Pressure-Reducing Valves.

4-14.1.2.1 In portions of systems where all components are not listed for pressure greater than 175 psi (12.1 bars) and the potential exists for normal (nonfire condition) water pressure in excess of 175 psi (12.1 bars), a listed pressure-reducing valve shall be installed and set for an outlet pressure not exceeding 165 psi (2.4 bars) at the maximum inlet pressure.

4-14.1.2.2 Pressure gauges shall be installed on the inlet and outlet sides of each pressure-reducing valve.

4-14.1.2.3* A relief valve of not less than ½ in. (13 mm) in size shall be provided on the discharge side of the pressure-reducing valve set to operate at a pressure not exceeding 175 psi (12.1 bars).

4-14.1.2.4 A listed indicating valve shall be provided on the inlet side of each pressure-reducing valve.

Exception: A listed indicating valve is not required where the pressure-reducing valve meets the listing requirements for use as an indicating valve.

4-14.2 Pipe Support.

4-14.2.1 General.

4-14.2.1.1 Sprinkler piping shall be supported independently of the ceiling sheathing.

Exception: Toggle hangers shall be permitted only for the support of pipe 1½ in. (38 mm) or smaller in size under ceilings of hollow tile or metal lath and plaster.

4-14.2.1.2 Where sprinkler piping is installed in storage racks as defined in NFPA 231C, *Standard for Rack Storage of Materials*, piping shall be supported from the storage rack structure or building in accordance with all applicable provisions of 4-14.2 and 4-14.4.3.

4-14.2.2 Maximum Distance between Hangers.

4-14.2.2.1* The maximum distance between hangers shall not exceed that in Table 4-14.2.2.1.

Exception No. 1: The maximum distance between hangers for steel pipe and copper tube shall be modified as specified in 4-14.2.1 and 4-14.2.2.

Exception No. 2: The maximum distance between hangers for CPVC pipe and polybutylene pipe shall be modified as specified in the individual product listings.

Exception No. 3: Holes through concrete beams shall be acceptable for the support of steel pipe as a substitute for hangers.

4-14.2.3 Location of Hangers on Branch Lines. This subsection applies to the support of steel pipe or copper tube as specified in 2-3.1 and subject to the provisions of 4-14.2.2.

4-14.2.3.1 There shall be not less than one hanger for each section of pipe.

Exception No. 1: Where sprinklers are spaced less than 6 ft (1.8 m) apart, hangers spaced up to a maximum of 12 ft (3.7 m) shall be permitted.*

Exception No. 2: Starter lengths less than 6 ft (1.8 m) shall not require a hanger, unless on the end line of a sidefeed system or where an intermediate cross main hanger has been omitted.

4-14.2.3.2 The distance between a hanger and the centerline of an upright sprinkler shall not be less than 3 in. (76 mm).

4-14.2.3.3* The unsupported length between the end sprinkler and the last hanger on the line shall not be greater than 36 in. (914 mm) for 1-in. (2.5-cm) pipe or 48 in. (1219 mm) for 1¼-in. (3.2-cm) pipe, and 60 in. (15.2 cm) for 1½-in. (3.8-cm) or larger pipe. Where any of these limits is exceeded, the pipe shall be extended beyond the end sprinkler and shall be supported by an additional hanger.

Exception No. 1: When the maximum pressure at the sprinkler exceeds 100 psi (6.9 bars), and a branch line above a ceiling supplies sprinklers in a pendent position below the ceiling, the hanger assembly supporting the pipe supplying an end sprinkler in a pendent position shall be of a type that prevents upward movement of the pipe.*

Exception No. 2: When the maximum pressure at the sprinkler exceeds 100 psi (6.9 bars), the unsupported length between the end sprinkler in a pendent position or drop nipple and the last hanger on the branch line shall not be greater than 12 in. (305 mm) for steel pipe or 6 in. (152 mm) for copper pipe. When this limit is exceeded, the pipe shall be extended beyond the end sprinkler and supported by an additional hanger. The hanger closest to the sprinkler shall be of a type that prevents upward movement of the piping.*

4-14.2.3.4* The length of an unsupported armover to a sprinkler shall not exceed 24 in. (610 mm) for steel pipe or 12 in. (305 mm) for copper tube.

Exception: Where the maximum pressure at the sprinkler exceeds 100 psi (6.9 bars) and a branch line above a ceiling supplies sprinklers in a pendent position below the ceiling, the length of an unsupported armover to a sprinkler and drop nipple shall not exceed 12 in. (305 mm) for steel pipe and 6 in. (152 mm) for copper tube.*

Where the limits of the unsupported armover lengths of 4-14.2.3.4 or this Exception are exceeded, the hanger closest to the sprinkler shall be of a type that prevents upward movement of the piping.

4-14.2.3.5 Wall-mounted sidewall sprinklers shall be restrained to prevent movement.

4-14.2.4 Location of Hangers on Cross Mains. This subsection applies to the support of steel pipe only as specified in 4-14.2.3, subject to the provisions of 4-14.2.2.

4-14.2.4.1 On cross mains there shall be at least one hanger between each two branch lines.

Exception No. 1: In bays having two branch lines, the intermediate hanger shall be permitted to be omitted provided that a hanger attached to a purlin is installed on each branch line located as near to the cross main as the location of the purlin permits. Remaining branch line hangers shall be installed in accordance with 4-14.2.3.

Exception No. 2: In bays having three branch lines, either side or center feed, one (only) intermediate hanger shall be permitted to be omitted provided that a hanger attached to a purlin is installed on each branch line located as near to the cross main as the location of the purlin permits. Remaining branch line hangers shall be installed in accordance with 4-14.2.3.

Exception No. 3: In bays having four or more branch lines, either side or center feed, two intermediate hangers shall be permitted to be omitted provided the maximum distance between hangers does not exceed the distances specified in 4-14.2.2.1 and a hanger attached to a purlin on each branch line is located as near to the cross main as the purlin permits.

4-14.2.4.2 Intermediate hangers shall not be omitted for copper tube.

4-14.2.4.3 At the end of the cross main, intermediate trapeze hangers shall be installed unless the cross main is extended to the next framing member with a hanger installed at this point, in which event an intermediate hanger shall be permitted to be omitted in accordance with 4-14.2.4.1, Exceptions No. 1, No. 2, and No. 3.

Table 4-14.2.2.1 Maximum Distance between Hangers (ft - in.)

Nominal Pipe Size (in.)	¾	1	1¼	1½	2	2½	3	3½	4	5	6	8
Steel pipe except threaded light-wall	N/A	12-0	12-0	15-0	15-0	15-0	15-0	15-0	15-0	15-0	15-0	15-0
Threaded lightwall steel pipe	N/A	12-0	12-0	12-0	12-0	12-0	12-0	N/A	N/A	N/A	N/A	N/A
Copper tube	8-0	8-0	10-0	10-0	12-0	12-0	12-0	15-0	15-0	15-0	15-0	15-0
CPVC	5-6	6-0	6-6	7-0	8-0	9-0	10-0	N/A	N/A	N/A	N/A	N/A
Polybutylene (IPS)	N/A	3-9	4-7	5-0	5-11	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Polybutylene (CTS)	2-11	3-4	3-11	4-5	5-5	N/A	N/A	N/A	N/A	N/A	N/A	N/A

For SI Units: 1 in. = 25.4 mm; 1 ft = 0.3048 m.
NOTE: (IPS) Iron Pipe Size
(CTS) Copper Tube Size

4-14.2.5 Support of Risers.

4-14.2.5.1 Risers shall be supported by pipe clamps or by hangers located on the horizontal connections close to the riser.

4-14.2.5.2 Clamps supporting pipe by means of setscrews shall not be used.

4-14.2.5.3 In multistory buildings, riser supports shall be provided at the lowest level, at each alternate level above, above and below offsets, and at the top of the riser. Supports above the lowest level shall also restrain the pipe to prevent movement by an upward thrust where flexible fittings are used. Where risers are supported from the ground, the ground support constitutes the first level of riser support. Where risers are offset or do not rise from the ground, the first ceiling level above the offset constitutes the first level of riser support.

4-14.2.5.4 Risers in vertical shafts, or in buildings with ceilings over 25 ft (7.6 m) high, shall have at least one support for each riser pipe section.

4-14.3 Drainage.

4-14.3.1* All sprinkler pipe and fittings shall be so installed that the system can be drained.

4-14.3.2 On wet pipe systems, sprinkler pipes shall be permitted to be installed level. Trapped piping shall be drained in accordance with 4-14.3.5.

4-14.3.3 In dry pipe systems and portions of preaction systems subject to freezing, branch lines shall be pitched at least $\frac{1}{2}$ in. per 10 ft (4 mm/m) and mains shall be pitched at least $\frac{1}{4}$ in. per 10 ft (2 mm/m).

Exception: Mains shall be pitched at least $\frac{1}{2}$ in. per 10 ft (4 mm/m) in refrigerated areas.

4-14.3.4 System, Main Drain, or Sectional Drain Connections. [*See Figures 4-14.3.4 and A-4-15.4.2(b).*]

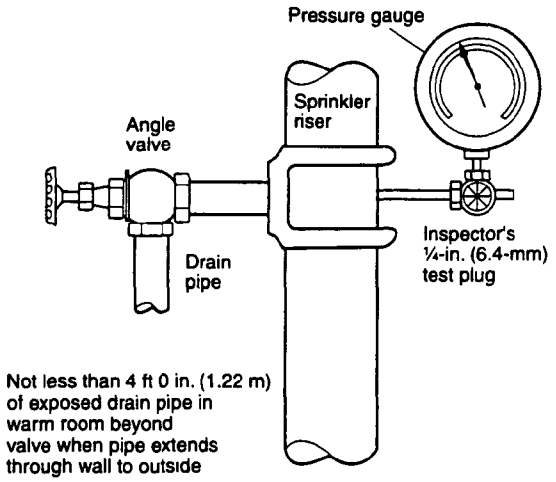

Figure 4-14.3.4 Drain connection for system riser.

4-14.3.4.1 Provisions shall be made to properly drain all parts of the system.

4-14.3.4.2 Drain connections for systems' supply risers and mains shall be sized as shown in Table 4-14.3.4.2.

Table 4-14.3.4.2 Drain Size

Riser or Main Size	Size of Drain Connection
Up to 2 in.	$\frac{3}{4}$ in. or larger
$2\frac{1}{2}$ in., 3 in., $3\frac{1}{2}$ in.	$1\frac{1}{4}$ in. or larger
4 in. and larger	2 in. only

For SI Units: 1 in. = 25.4 mm

4-14.3.4.3 Where interior sectional or floor control valve(s) are provided, they shall be provided with a drain connection sized as shown in Table 4-14.3.4.2 to drain that portion of the system controlled by the sectional valve. Drains shall discharge outside or to a drain connection. [*See Figure A-4-15.4.2(b).*]

Exception: For those drains serving pressure reducing valves, the drain, drain connection, and all other downstream drain piping shall be sized to permit a flow of at least the greatest system demand supplied by the pressure-reducing valve.

4-14.3.4.4 The test connections required by 4-15.4.1 shall be permitted to be used as main drain connections.

Exception: Where drain connections for floor control valves are tied into a common drain riser, the drain riser shall be one pipe size larger than the largest size drain connection tying into it.

4-14.3.5 Auxiliary Drains.

4-14.3.5.1 Auxiliary drains shall be provided where a change in piping direction prevents drainage of system piping through the main drain valve.

4-14.3.5.2 Auxiliary Drains for Wet Pipe Systems and Preaction Systems in Areas Not Subject to Freezing.

4-14.3.5.2.1 Where the capacity of trapped sections of pipes in wet systems is less than 5 gal (18.9 L), the auxiliary drain shall consist of a nipple and cap or plug not less than $\frac{1}{2}$ in. (12 mm) in size.

Exception No. 1: Auxiliary drains are not required for system piping that can be drained by removing a single pendent sprinkler.

Exception No. 2: Where flexible couplings or other easily separated connections are used, the nipple and cap or plug shall be permitted to be omitted.

4-14.3.5.2.2 Where the capacity of isolated trapped sections of pipe is more than 5 gal (18.9 L) and less than 50 gal (189 L), the auxiliary drain shall consist of a valve $\frac{3}{4}$ in. (19 mm) or larger and a plug or a nipple and cap.

4-14.3.5.2.3* Where the capacity of isolated trapped sections of pipe is 50 gal (18.9 L) or more, the auxiliary drain shall consist of a valve not smaller than 1 in. (25.4 mm), piped to an accessible location.

4-14.3.5.2.4 Tie-in drains are not required on wet pipe and preaction systems.

4-14.3.5.3 Auxiliary Drains for Dry Pipe Systems and Preaction Systems in Areas Subject to Freezing.

4-14.3.5.3.1 Where the capacity of trapped sections of pipe is less than 5 gal (18.9 L), the auxiliary drain shall consist of a valve not smaller than $\frac{1}{2}$ in. (12 mm) and a plug or a nipple and cap.

Exception: Auxiliary drains are not required for pipe drops supplying dry-pendent sprinklers installed in accordance with 3-2.2.

4-14.3.5.3.2 Where the capacity of isolated trapped sections of system piping is more than 5 gal (18.9 L), the auxiliary drain shall consist of two 1-in. (25.4-mm) valves and one 2-in. by 12-in. (50-mm by 300-mm) condensate nipple or equivalent, accessibly located. (*See Figure 4-14.3.5.3.2.*)

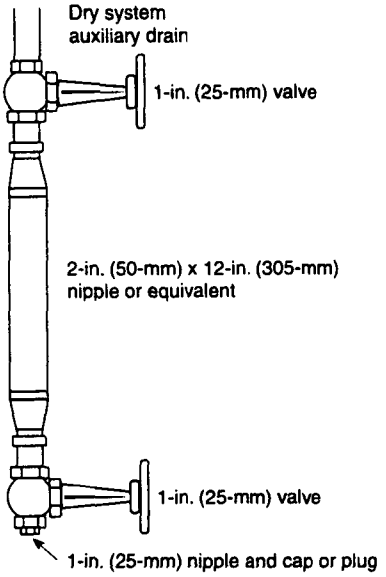

Figure 4-14.3.5.3.2 Dry system auxiliary drain.

4-14.3.5.3.3 Tie-in drains shall be provided for multiple adjacent trapped branch pipes and shall be only 1 in. (25.4 mm). Tie-in drain lines shall be pitched a minimum of ½ in. per 10 ft (4 mm/m).

4-14.3.6 Discharge of Drain Valves.

4-14.3.6.1* Direct interconnections shall not be made between sprinkler drains and sewers. The drain discharge shall conform to any health or water department regulations.

4-14.3.6.2 Where drain pipes are buried underground, approved corrosion-resistant pipe shall be used.

4-14.3.6.3 Drain pipes shall not terminate in blind spaces under the building.

4-14.3.6.4 Where exposed to the atmosphere, drain pipes shall be fitted with a turned down elbow.

4-14.3.6.5 Drain pipes shall be arranged to avoid exposing any part of the sprinkler system to freezing conditions.

4-14.4 Protection of Piping.

4-14.4.1 Protection of Piping against Freezing.

4-14.4.1.1 Where portions of systems are subject to freezing and temperatures cannot reliably be maintained at or above 40°F (4°C), sprinklers shall be installed as a dry pipe or preaction system.

Exception: Small unheated areas are permitted to be protected by antifreeze systems or by other systems specifically listed for this purpose. (See 3-5.2.)

4-14.4.1.2 Where water-filled supply pipes, risers, system risers, or feed mains pass through open areas, cold rooms, passageways, or other areas exposed to freezing, the pipe shall be protected against freezing by insulating coverings, frostproof casings, or other reliable means capable of maintaining a minimum temperature of 40°F (4°C).

4-14.4.2 Protection of Piping against Corrosion.

4-14.4.2.1* Where corrosive conditions are known to exist due to moisture or fumes from corrosive chemicals or both, special types of fittings, pipes, and hangers that resist corrosion shall be used or a protective coating shall be applied to all unprotected exposed surfaces of the sprinkler system. (*See 2-2.5.*)

4-14.4.2.2 Where water supplies are known to have unusual corrosive properties and threaded or cut-groove steel pipe is to be used, wall thickness shall be in accordance with Schedule 30 [in sizes 8 in. (200 mm) or larger] or Schedule 40 [in sizes less than 8 in. (200 mm)].

4-14.4.2.3 Steel pipe, where exposed to weather, shall be externally galvanized or otherwise protected against corrosion.

4-14.4.2.4 Where steel pipe is used underground, the pipe shall be protected against corrosion.

4-14.4.3 Protection of Piping against Damage Where Subject to Earthquakes.

4-14.4.3.1* General. Sprinkler systems shall be protected to prevent pipe breakage where subject to earthquakes in accordance with the requirements of 4-14.4.3.

Exception: Alternative methods of providing earthquake protection of sprinkler systems based on a dynamic seismic analysis certified by a registered professional engineer such that system performance will be at least equal to that of the building structure under expected seismic forces.

4-14.4.3.2* Couplings. Listed flexible pipe couplings joining grooved end pipe shall be provided as flexure joints to allow individual sections of piping 2½ in. (64 mm) or larger to move differentially with the individual sections of the building to which it is attached. Couplings shall be arranged to coincide with structural separations within a building. Systems having more flexible couplings than required here shall be provided with additional sway bracing as required in 4-14.4.3.5.10, Exception No. 4. The sway bracing shall be installed:

(a) Within 24 in. (610 mm) of the top and bottom of all risers.

Exception No. 1: In risers less than 3 ft (0.9 m) in length, flexible couplings are permitted to be omitted.

Exception No. 2: In risers 3 to 7 ft (0.9 to 2.1 m) in length, one flexible coupling is adequate.

(b) Within 12 in. (305 mm) above and below the floor in multistory buildings such that the flexible coupling below the floor is below the main supplying that floor.

(c) On one side of concrete or masonry walls within 3 ft (0.9 m) of the wall surface.

Exception: Flexible pipe couplings are not required where clearance around the pipe is provided in accordance with 4-14.4.3.4.

(d)* At or near building expansion joints.

(e) Within 24 in. (610 mm) of the top and bottom of drops to hose lines, rack sprinklers, and mezzanines, regardless of pipe size.

(f) Within 24 in. (610 mm) of the top of drops exceeding 15 ft (4.6 m) in length to portions of systems supplying more than one sprinkler, regardless of pipe size.

(g) Above and below any intermediate points of support for a riser or other vertical pipe.

4-14.4.3.3* Seismic Separation Assembly. Seismic separation assemblies with flexible fittings shall be installed where sprinkler piping, regardless of size, crosses building seismic separation joints above ground level.

4-14.4.3.4* Clearance. Clearance shall be provided around all piping extending through walls, floors, platforms, and foundations, including drains, fire department connections, and other auxiliary piping.

4-14.4.3.4.1 When sprinkler systems are to be protected against damage from earthquakes, the requirements of 4-14.3.4 shall apply. Where pipe passes through holes in platforms, foundations, walls or floors, the holes shall be sized such that the diameter of the holes is 2 in. (50 mm) larger than the pipe for 1 in. (25 mm) nominal to 3½ in. (89 mm) nominal and 4 in. (100 mm) larger than the pipe for pipe 4 in. (100 mm) nominal and larger. Clearance from structural members not penetrated or used, collectively or independently, to support the piping shall be at least 2 in. (51 mm).

Exception No. 1: Where clearance is provided by a pipe sleeve, a nominal diameter 2 in. (51 mm) larger than the nominal diameter of the pipe is acceptable for pipe sizes 1 in. (25.4 mm) through 3½ in. (89 mm), and the clearance provided by a pipe sleeve of nominal diameter 4 in. (102 mm) larger than the nominal diameter of the pipe is acceptable for pipe sizes 4 in. (102 mm) and larger.

Exception No. 2: No clearance is necessary for piping passing through gypsum board or equally frangible construction that is not required to have a fire resistance rating.

Exception No. 3: No clearance is necessary if flexible couplings are located within 1 ft (0.31 m) of each side of a wall, floor, platform, or foundation.

4-14.4.3.4.2 Where required, the clearance shall be filled with a flexible material such as mastic.

4-14.4.3.5 Sway Bracing.

4-14.4.3.5.1 The system piping shall be braced to resist both lateral and longitudinal horizontal seismic loads and to prevent vertical motion resulting from seismic loads. The structural components to which bracing is attached shall be determined to be capable of carrying the added applied seismic loads.

4-14.4.3.5.2 Sway braces shall be designed to withstand forces in tension and compression.

Exception: Tension only bracing systems shall be permitted for use where listed for this service and where installed in accordance with their listing limitations, including installation instructions.*

4-14.4.3.5.3* The assigned loads for both lateral and longitudinal sway bracing shall be determined using Table 4-14.4.3.5.3, based on a horizontal force of $F_p = 0.5\ W_p$, where F_p is the horizontal force factor and W_p is the weight of the water-filled piping.

Exception No. 1: In lieu of using Table 4-14.4.3.5.3, horizontal loads for braces shall be permitted to be determined by analysis. For lateral braces, the load shall include all branch lines and mains (unless the branch lines are provided with longitudinal bracing) within the zone of influence of the brace. For longitudinal braces, the load shall include all mains within the zone of influence of the brace.

Exception No. 2: Where the use of other horizontal force factors is required or permitted by the authority having jurisdiction, the loads of Table 4-14.4.3.5.3. or those determined in accordance with Exception No. 1 shall be adjusted by the following multipliers:

Horizontal Force Factor F_p	Multiplying Factor
$0.2\ W_p$	0.4
$0.4\ W_p$	0.8
$0.6\ W_p$	1.2
$0.8\ W_p$	1.6
$1.0\ W_p$	2.0
$1.2\ W_p$	2.4

Exception No. 3: Lateral braces shall only be permitted to be spaced up to 50 ft (16 m) as permitted only under Exception No. 4 to 4-14-4.3.5.10.

Exception No. 4: If branch lines are provided with lateral bracing or hung with U-hooks bent out at least 30 degrees from vertical, half the assigned load is permitted to be used for longitudinal braces.

4-14.4.3.5.4 Where the horizontal force factors used exceed $0.5\ W_p$ and the brace angle is less than 45° from vertical or where the horizontal force factor exceeds $1.0\ W_p$ and the brace angle is less than 60° from vertical, the braces shall be arranged to resist the net vertical reaction produced by the horizontal load.

Table 4-14.4.3.5.3 Assigned Load Table (Based on Half the Weight of the Water-Filled Pipe)

Spacing of Lateral Braces (ft)	Spacing of Longitudinal Braces (ft)	Assigned Load for Pipe Size to Be Braced (lb)						
		2	2½	3	4	5	6	8
10	20	380	395	410	435	470	655	915
20	40	760	785	815	870	940	1305	1830
25	50	950	980	1020	1090	1175	1630	2290
30	60	1140	1180	1225	1305	1410	1960	2745
40	80	1515	1570	1630	1740	1880	2610	3660
50		1895	1965	2035	2175	2350	3260	4575

For SI Units: 1 ft = 0.3048 m; 1 lb = 0.45 Kg

4-14.4.3.5.5* Sway bracing shall be tight and concentric. For individual braces, the slenderness ratio (l/r) shall not exceed 300 where l is the length of the brace and r is the least radius of gyration. Where threaded pipe is used as part of a sway brace assembly, it shall not be less than Schedule 30. All parts and fittings of a brace shall lie in a straight line to avoid eccentric loadings on fittings and fasteners. For longitudinal braces only, the brace shall be permitted to be connected to a tab welded to the pipe in conformance with 2-5.2. For individual braces, the slenderness ratio, l/r, shall not exceed 300 where l is the length of the brace and r is the least radius of gyration. For tension only braces, such as prestretched color-coded aircraft cable, two tension only brace components opposing each other must be installed at each lateral or longitudinal brace location. For all braces, whether or not listed, the maximum allowable horizontal load shall be based on the weakest component of the brace with safety factors. The loads determined in 4-14.4.3.5.3 shall not exceed the lesser of the maximum allowable loads provided in Table 4-14.4.3.5.5 or the manufacturer's certified maximum allowable horizontal loads for 30-44, 45-59, and 60-90 degree brace angles. These certified allowable horizontal loads must include a minimum safety factor of 1.5 against the ultimate break strength of the brace components and then be further reduced according to the brace angles.

Exception: Other pipe schedules and materials not specifically included in Table 4-14.4.3.5.5 are acceptable for use if certified by a registered professional engineer to support the loads determined in accordance with the above criteria. Calculations shall be submitted where required by the authority having jurisdiction.

4-14.4.3.5.6* For individual fasteners, the loads determined in 4-14.4.3.5.3 shall not exceed the allowable loads provided in Table 4-14.4.3.5.6.

The type of fasteners used to secure the bracing assembly to the structure shall be limited to those shown in Table 4-14.4.3.5.6. For connections to wood, through bolts with washers on each end shall be used. Holes for through bolts shall be 1/16 in. (1.6 mm) greater than the diameter of the bolt.

Exception: Where it is not practical to install through bolts due to the thickness of the member or inaccessibility, lag screws shall be permitted. Holes shall be pre-drilled 1/8 in. (3.2 mm) smaller than the maximum root diameter of the lag screw.

4-14.4.3.5.7 Sway brace assemblies shall be listed for a maximum allowable load. The loads shall be reduced as shown in Table 4-14.4.3.5.7 for loads that are less than 90° from vertical.

Exception: Where sway bracing utilizing pipe, angles, flats or rods as shown in Table 4-14.4.3.5.5 is used, the components do not require listing. Bracing fittings and connections used with those specific materials shall be listed.

4-14.4.3.5.8 Longitudinal sway bracing spaced at a maximum of 80 ft (24 m) on center shall be provided for feed and cross mains. Longitudinal braces shall be permitted to serve as lateral braces where they are installed within 24 in. (609 mm) of the piping which is braced laterally.

4-14.4.3.5.9* Tops of risers shall be secured against drifting in any direction, utilizing a four-way sway brace.

4-14.4.3.5.10 Lateral sway bracing spaced at a maximum interval of 40 ft (12.2 m) on center shall be provided for all feed mains, all cross mains, and branchlines with a diameter of 2 1/2 in. (76 mm) and larger. The last length of pipe at the end of a feed or cross main shall be provided with a lateral brace. Lateral braces shall be allowed to act as longitudinal braces if they are within 24 in. (610 mm) of the centerline of the piping braced longitudinally for lines that are 2 1/2 in. (76 mm) and greater in diameter. The distance between the last brace and the end of the pipe shall not exceed 20 ft (6.1 m). This shall not preclude the use of a lateral brace serving as a longitudinal brace as described in this paragraph.

Exception No. 1: Where the spacing of lateral braces is permitted to be up to 50 ft (7.6 m), the distance between the last brace and the end of the pipe is permitted to be extended to 25 ft (15.2 m).

Exception No. 2: Lateral sway bracing shall not be required on pipes individually supported by rods less than 6 in. (152 mm) long.

Exception No. 3: 'U'- type hooks of the wraparound type or those 'U'-type hooks arranged to keep the pipe tight to the underside of the structural element shall be permitted to be used to satisfy the requirements for lateral sway bracing provided the legs are bent out at least 30 degrees from the vertical and the maximum length of each leg and the rod size satisfies the conditions of Table 4-14.4.3.5.5.

Exception No. 4: Where flexible couplings are installed on mains other than as required in 4-14.4.3.2, a lateral brace shall be provided within 24 in. (610 mm) of every other coupling, but not more than 40 ft (12 m) on center.

Exception No. 5: Where building primary structural members exceed 40 ft (12 m) on center, lateral braces shall be permitted to be spaced up to 50 ft (15.2 m) on center.

4-14.4.3.5.11 Bracing shall be attached directly to feed and cross mains. Each run of pipe between a change in direction shall be provided with both lateral and longitudinal bracing.

Exception: Pipe runs less than 12 ft (3.6 m) in length shall be permitted to be supported by the braces on adjacent runs of pipe.

4-14.4.3.5.12 A length of pipe shall not be braced to sections of the building that will move differentially.

4-14.4.3.5.13* Sway bracing is not required for branch lines.

Exception No. 1: The end sprinkler on a line shall be restrained against excessive vertical and lateral movement by use of a wrap' around U-hook (see Figure A-2-6.1) or by other approved means.

Exception No. 2: Where upward or lateral movement of sprinklers would result in an impact against the building structure, equipment, or finish materials, branch lines shall be provided at intervals not exceeding 30 ft (9 m) with a wraparound U-hook, lateral sway brace, or #12, 440-lb (200-kg) splayed seismic brace wire installed at least 45 degrees from the vertical plane and anchored on both sides of the pipe. This bracing shall be located within 2 ft (610 mm) of a hanger. The hanger closest to a splayed wire restraint shall be of a type that resists upward movement of a branch line.*

4-14.4.3.5.14 Where ceilings are seismically braced to prevent horizontal and vertical movement, branch lines and armovers in excess of 2 ft (610 mm) horizontally, if provided, shall be restrained against upward movement and sprinklers shall be provided with a one-piece escutcheon.

Exception: Recessed, flush, and concealed sprinklers shall not be required to be provided with the escutcheon.

4-14.4.3.5.15* Sprig-ups 4 ft (1.2 m) or longer shall be restrained against lateral movement.

Table 4-14.4.3.5.5

Shape and Size	Least Radius of Gyration	Maximum Length for l/r = 200	Maximum Horizontal Load (lb) 30°–44° Angle from Vertical	45°–59° Angle from Vertical	60°–90° Angle from Vertical
Pipe (Schedule 40)	$= \frac{\sqrt{r_0^2 + r_i^2}}{2}$

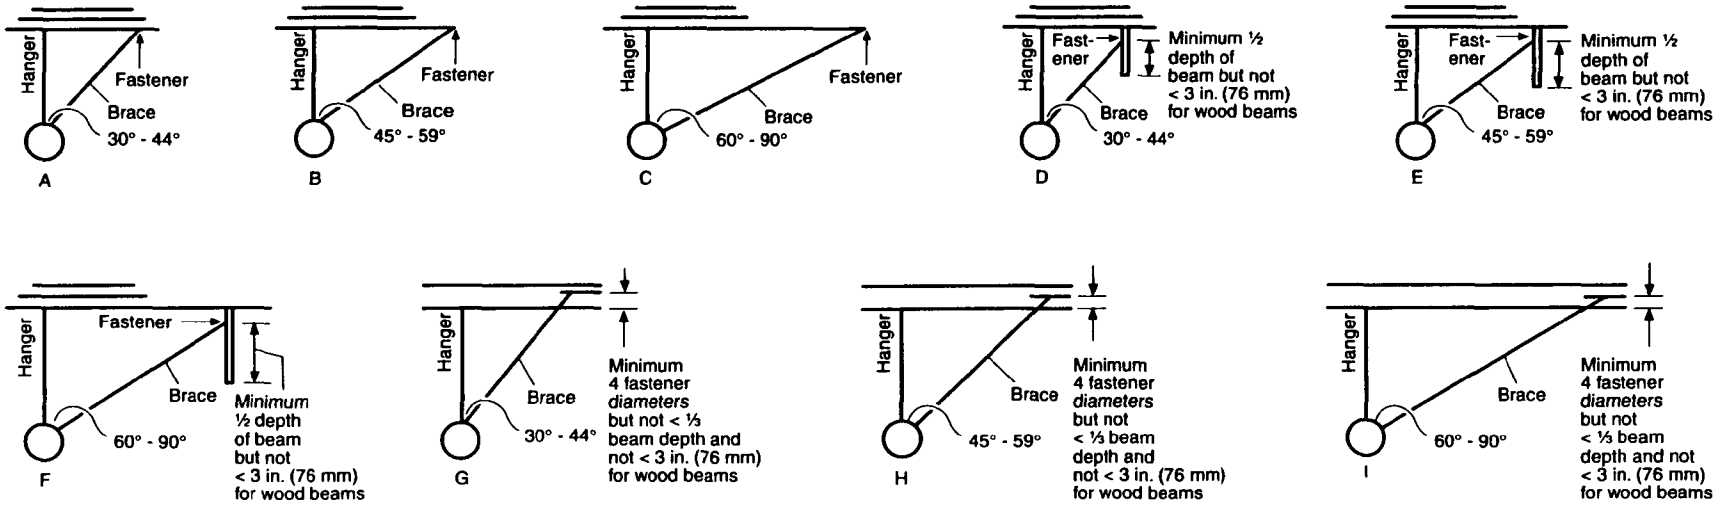
Table 4-14.4.3.5.6 Maximum Loads for Various Types of Structure
Maximum Loads for Various Types of Fasteners to Structure

NOTE: Loads (given in pounds) are keyed to vertical angles of braces and orientation of connecting surface. These values are based on concentric loadings of the fastener. Use figures to determine proper reference within table. For angles between those shown, use most restrictive case. Braces should not be attached to light structure members.



Note: For wooden beams not less than 3 in. (76 mm).

Brace Angle	Allowable Horizontal Load
30 degrees from vertical	Ultimate strength divided by safety factor divided by 2.000
45 degrees from vertical	Ultimate strength divided by safety factor divided by 1.414
60 degrees from vertical	Ultimate strength divided by safety factor divided by 1.155

4-14.4.3.5.16 The retaining strap shall be listed for use with a C-type clamp, or shall be a steel strap of not less than 16 gauge thickness and not less than 1 in. (25.4 mm) wide for pipe diameters 8 in. (203 mm) or less and 14 gauge thickness and not less than 1¼ in. (31.7 mm) wide for pipe diameters greater than 8 in. (203 mm). The retaining strap shall wrap around the beam flange not less than 1 in. (25.4 mm). A lock nut on a C-type clamp shall not be used as a method of restraint. A lip on a "C" or "Z" purlin shall not be used as a method of restraint.

Where purlins or beams do not provide an adequate lip to be secured by a retaining strap, the strap shall be through-bolted or secured by a self-tapping screw.

4-14.4.3.5.17 C-type clamps (including beam and large flange clamps), with or without retaining straps, shall not be used to attach braces to the building structure.

4-14.4.3.5.18 Powder-driven fasteners shall not be used to attach braces to the building structure.

Exception: Powder-driven fasteners shall be permitted where they are specifically listed for service in resisting lateral loads in areas subject to earthquakes.

4-15 System Attachments.

4-15.1 Sprinkler Alarms.

4-15.1.1* Waterflow Alarms.

4-15.1.1.1 Local waterflow alarms shall be provided on all sprinkler systems having more than 20 sprinklers.

4-15.1.1.2 On each alarm check valve used under conditions of variable water pressure, a retarding device shall be installed. Valves shall be provided in the connections to retarding devices to permit repair or removal without shutting off sprinklers; these valves shall be so arranged that they may be locked or sealed in the open position.

4-15.1.1.3 Alarm, dry pipe, preaction, and deluge valves shall be fitted with an alarm bypass test connection for an electric alarm switch, water motor gong, or both. This pipe connection shall be made on the water supply side of the system and provided with a control valve and drain for the alarm piping. A check valve shall be installed in the pipe connection from the intermediate chamber of a dry pipe valve.

Exception: The alarm test connection at the riser shall be permitted to be made on the system side of an alarm valve.

4-15.1.1.4 An indicating control valve shall be installed in the connection to pressure-type contactors or water-motor-operated alarm devices. Such valves shall be locked or sealed in the open position. The control valve for the retarding chamber on alarm check valves shall be accepted as complying with this paragraph.

4-15.1.1.5* Attachments — Mechanically Operated. For all types of sprinkler systems employing water-motor-operated alarms, a listed ¾-in. (19-mm) strainer shall be installed at the alarm outlet of the waterflow detecting device.

Exception: Where a retarding chamber is used in connection with an alarm valve, the strainer shall be located at the outlet of the retarding chamber unless the retarding chamber is provided with an approved integral strainer in its outlet.

4-15.1.1.6* Alarm Attachments — High-Rise Buildings. When a fire must be fought internally due to the height of a building, the following additional alarm apparatus shall be provided:

(a) Where each sprinkler system on each floor is equipped with a separate waterflow device, it shall be connected to an alarm system in such a manner that operation of one sprinkler will actuate the alarm system and the location of the operated flow device shall be indicated on an annunciator and/or register. The annunciator or register shall be located at grade level at the normal point of fire department access, at a constantly attended building security control center, or at both locations.

Exception: Where the location within the protected buildings where supervisory or alarm signals are received is not under constant supervision by qualified personnel in the employ of the owner, a connection shall be provided to transmit a signal to a remote central station.

(b) A distinct trouble signal shall be provided to indicate a condition that will impair the satisfactory operation of the sprinkler system.

4-15.2* Fire Department Connections.

4-15.2.1* A fire department connection shall be provided as described in this section. (*See Figure 4-15.2.1.*)

Exception No. 1: Buildings located in remote areas that are inaccessible for fire department support.

Exception No. 2: Large-capacity deluge systems exceeding the pumping capacity of the fire department.

Exception No. 3: Single-story buildings not exceeding 2000 ft² (186 m²) in area.

4-15.2.2 Size. Pipe size shall be 4 in. (102 mm) for fire engine connections and 6 in. (152 mm) for fire boat connections.

Exception No. 1: For hydraulically calculated systems, fire department connection pipe as small as the system riser shall be permitted where serving one system riser.

Exception No. 2: A single-outlet fire department connection shall be acceptable where piped to a 3-in. (76-mm) or smaller riser.

4-15.2.3* Arrangement. (*See Figure 4-15.2.1.*)

4-15.2.3.1 The fire department connection shall be on the system side of the water supply check valve.

4-15.2.3.2 For single systems, the fire department connection shall be installed as follows:

(a) *Wet System.* On the system side of system control, check, and alarm valves. (*See Figure A-4-14.1.1.*)

(b) *Dry System.* Between the system control valve and the dry pipe valve.

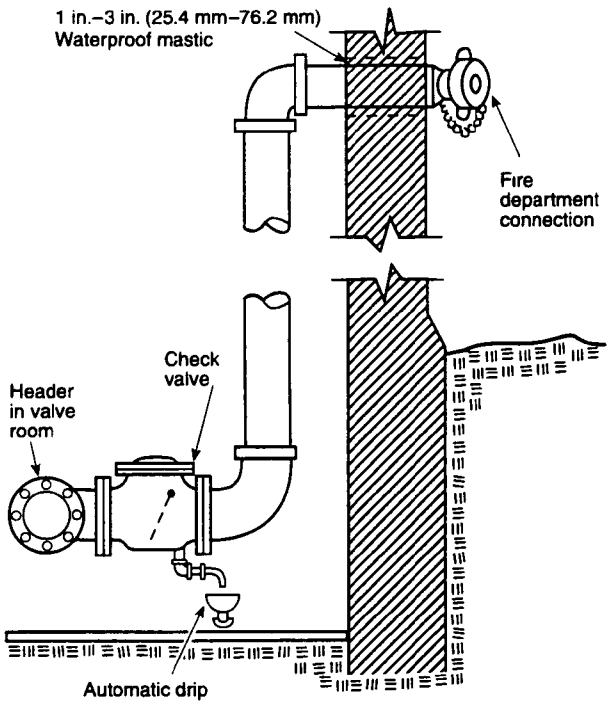

Figure 4-15.2.1 Fire department connection.

(c) *Preaction System.* Between the preaction valve and the check valve on the system side of the preaction valve.

(d) *Deluge System. On the system side of the deluge valve.*

Exception: Connection of the fire department connection to underground piping is acceptable.

4-15.2.3.3 For multiple systems, the fire department connection shall be connected between the supply control valves and the system control valves.

Exception: Connection of the fire department connection to underground piping is acceptable.

4-15.2.3.4 Where a fire department connection services only a portion of a building, a sign shall be attached indicating the portions of the building served.

4-15.2.3.5 Fire department connections shall be located and arranged so that hose can be readily and conveniently attached.

Each fire department connection to sprinkler systems shall be designated by a sign having raised or engraved letters at least 1 in. (25.4 mm) in height on plate or fitting reading service design, e.g., "AUTOSPKR.," "OPEN SPKR. AND STANDPIPE." A sign shall also indicate the pressure required at the inlets to deliver the greatest system demand.

Exception: The sign is not required where the system demand pressure is less than 150 psi (10.3 bars).

4-15.2.3.6 Fire department connections shall not be connected on the suction side of fire pumps.

4-15.2.4 Valves.

4-15.2.4.1 A listed check valve shall be installed in each fire department connection.

4-15.2.4.2 There shall be no shutoff valve in the fire department connection piping.

4-15.2.5 Drainage. The piping between the check valve and the outside hose coupling shall be equipped with an approved automatic drip.

Exception: An automatic drip is not required in areas not subject to freezing.

4-15.3 Gauges.

4-15.3.1 A pressure gauge with a connection not smaller than ¼ in. (6.4 mm) shall be installed at the system main drain, at each main drain associated with a floor control valve, and on the inlet and outlet side of each pressure reducing valve. Each gauge connection shall be equipped with a shutoff valve and provisions for draining.

4-15.3.2 The required pressure gauges shall be listed and shall have a maximum limit not less than twice the normal working pressure at the point where installed. They shall be installed to permit removal and shall be located where they will not be subject to freezing.

4-15.4 System Connections.

4-15.4.1 Main Drain Test Connections. Main drain test connections shall be provided at locations that will permit flow tests of water supplies and connections. They shall be so installed that the valve can be opened wide for a sufficient time to assure a proper test without causing water damage. Main drain connections shall be sized in accordance with 4-14.3.4 and 4-14.3.6.

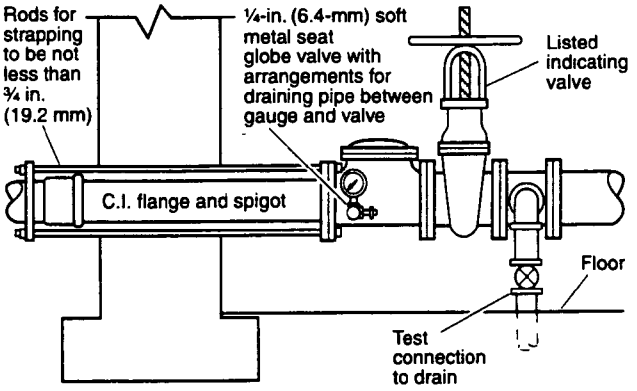

Figure 4-15.4.1 Water supply connection with test connection.

4-15.4.2* Wet Pipe Systems. An alarm test connection not less than 1 in. (25.4 mm) in diameter, terminating in a smooth bore corrosion-resistant orifice, giving a flow equivalent to one sprinkler of a type having the smallest orifice installed on the particular system, shall be provided to test each waterflow alarm device for each system. The test connection valve shall be readily accessible. The discharge shall be to the outside, to a drain connection capable of accepting full flow under system pressure, or to another location where water damage will not result.

4-15.4.3* Dry Pipe Systems. A trip test connection not less than 1 in. (25.4 mm) in diameter, terminating in a smooth bore corrosion-resistant orifice, to provide a flow equivalent to one sprinkler of a type installed on the particular system, shall be installed on the end of the most distant sprinkler pipe in the upper story and shall be equipped with a readily accessible 1-in. (25.4-mm) shutoff valve and plug, at least one of which shall be brass. In lieu of a plug, a nipple and cap shall be acceptable.

4-15.4.4 Preaction Systems. A test connection shall be provided on a preaction system using supervisory air. The connection used to control the level of priming water shall be considered adequate to test the operation of the alarms monitoring the supervisory air pressure.

4-15.4.5 Deluge Systems. A test connection is not required on a deluge system.

4-15.4.6 Backflow Devices.

4-15.4.6.1 Backflow Prevention Valves. Means shall be provided downstream of all backflow prevention valves for floor tests at system demand.

4-15.4.6.2* When backflow prevention devices are to be retroactively installed on existing systems, a thorough hydraulic analysis, including revised hydraulic calculations, new fire flow data, and all necessary system modifications to accommodate the additional friction loss, shall be completed as a part of the installation.

Chapter 5 Design Approaches

5-1 General. Water demand requirements shall be determined from the occupancy hazard fire control approach of Section 5-2.

Exception: Special design approaches shall be permitted for specific hazards in Section 5-3.

5-2 Occupancy Hazard Fire Control Approach.

5-2.1 Occupancy Classifications.

5-2.1.1 Occupancy classifications for this standard relate to sprinkler installations and their water supplies only. They shall not be used as a general classification of occupancy hazards.

5-2.1.2 Occupancies or portions of occupancies shall be classified according to the quantity and combustibility of contents, the expected rates of heat release, the total potential for energy release, the heights of stockpiles, and the presence of flammable and combustible liquids, using the definitions contained in 1-4.7. Classifications are as follows:

Light Hazard

Ordinary Hazard (Groups 1 and 2)

Extra Hazard (Groups 1 and 2)

Special Occupancy Hazard.

5-2.1.3* Sprinklers in light hazard occupancies shall be of the quick-response type as defined in 1-4.5.2.

Exception No. 1: Residential sprinklers are permitted in accordance with 4-4.5.

Exception No. 2: For modifications or additions to existing systems equipped with standard response sprinklers, standard response sprinklers shall be permitted to be used.

Exception No. 3: When individual standard response sprinklers are replaced in existing systems, standard response sprinklers shall be permitted to be used.

5-2.1.3.1 When existing light hazard systems are converted to use quick-response or residential sprinklers, all sprinklers in a compartmented space shall be changed.

5-2.2 Water Demand Requirements—Pipe Schedule Method.

5-2.2.1 Table 5-2.2 shall be used in determining the minimum water supply requirements for Light and Ordinary Hazard Occupancies protected by systems with pipe sized according to the pipe schedules of 6-5. Pressure and flow requirements for Extra Hazard Occupancies shall be based on the hydraulic calculation methods of 5-2.3. The pipe schedule method shall be permitted only for new installations of 5000 ft² (465 m) or less or for additions or modifications to existing pipe schedule systems sized according to the pipe schedules of Section 6-5. Table 5-2.2 shall be used in determining the minimum water supply requirements.

Exception No 1: The pipe schedule method shall be permitted for use in systems exceeding 5000 ft² (465m²) where the flows required in Table 5-2.2 are available at a minimum residual pressure of 50 psi (3.4 bar) at the highest elevation of sprinkler.

Exception No. 2: The pipe schedule method shall be permitted for additions or modifications to existing extra hazard pipe schedule systems if the pressures and flows are determined to be acceptable to the authority having jurisdiction.

Table 5-2.2 Water Supply Requirements for Pipe Schedule Sprinkler Systems

Occupancy Classification	Minimum Residual Pressure Required	Acceptable Flow at Base of Riser	Duration in Minutes
Light Hazard	15 psi	500–750 gpm	30–60
Ordinary Hazard	20 psi	850–1500 gpm	60–90

For SI Units: 1 gpm = 3.785L/min; 1 psi = 0.0689 bar.

5-2.2.2 The lower duration value of Table 5-2.2 shall be acceptable only where remote station or central station waterflow alarm service is provided.

5-2.2.3* The residual pressure requirement of Table 5-2.2 shall be met at the elevation of the highest sprinkler. (*See the Exceptions to 5-2.2.1.*)

5-2.2.4 The lower flow figure of Table 5-2.2 shall be permitted only where the building is of noncombustible construction or the potential areas of fire are limited by building size or compartmentation such that no open areas exceed 3000 sq ft (279 m²) for Light Hazard or 4000 sq ft (372 m²) for Ordinary Hazard.

5-2.3 Water Demand Requirements—Hydraulic Calculation Methods.

5-2.3.1 General.

5-2.3.1.1* The minimum water supply requirements for a hydraulically designed occupancy hazard fire control sprinkler system shall be determined by adding the hose stream demand from Table 5-2.3 to the water supply for sprinklers determined in 5-2.3.1.2. This supply shall be available for the minimum duration specified in Table 5-2.3.

Exception No. 1: Where other NFPA standards have developed sprinkler system area/density or other design criteria and water supply requirements appropriate for fire control or suppression of Special Occupancy Hazards, they shall take precedence.

Exception No. 2: An allowance for inside and outside hose shall not be required where tanks supply sprinklers only.

Exception No. 3: Where pumps taking suction from a private fire service main supply sprinklers only, the pump need not be sized to accommodate inside and outside hose. Such hose allowance shall be considered in evaluating the available water supplies.

Table 5-2.3 Hose Stream Demand and Water Supply Duration Requirements

Hazard Classification	Inside Hose (gpm)	Total Combined Inside and Outside Hose (gpm)	Duration in Minutes
Light	0, 50, or 100	100	30
Ordinary	0, 50, or 100	250	60–90
Extra Hazard	0, 50, or 100	500	90–120

For SI Units: 1 gpm = 3.785L/min.

5-2.3.1.2 The water supply for sprinklers only shall be determined either from the area/density curves of Figure 5-2.3 in accordance with the method of 5-2.3.2 or be based upon the room design method in accordance with 5-2.3.3, at the discretion of the designer. For special areas under consideration, as described in 5-2.3.4, separate hydraulic calculations shall be required in addition to those required by 5-2.3.2 or 5-2.3.3.

5-2.3.1.3 Regardless of which of the two methods is used, the following restrictions apply:

(a) For areas of sprinkler operation less than 1500 sq ft (139 m^2) used for Light and Ordinary Hazard Occupancies, the density for 1500 sq ft (139 m^2) shall be used. For areas of sprinkler operation less than 2500 sq ft (232 m^2) for Extra Hazard Occupancies, the density for 2500 sq ft (232 m^2) shall be used.

(b)* For buildings having unsprinklered combustible concealed spaces (as described in 4-13.1.1), the minimum area of sprinkler operation shall be 3000 sq ft (279 m^2).

Exception No. 1: Combustible concealed spaces filled entirely with noncombustible insulation.

Exception No. 2: Light or Ordinary Hazard Occupancies where noncombustible or limited combustible ceilings are directly attached to the bottom of solid wood joists so as to create enclosed joist spaces 160 cu ft (4.8 m^3) or less in volume.*

Exception No. 3: Concealed spaces where the exposed surfaces have a flame spread rating of 25 or less and the materials have been demonstrated to not propagate fire in the form in which they are installed in the space.*

(c) Water demand of sprinklers installed in racks or water curtains shall be added to the ceiling sprinkler water demand at the point of connection. Demands shall be balanced to the higher pressure. (*See Chapter 6.*)

Water demand of sprinklers installed in concealed spaces or under obstructions such as ducts and cutting tables need not be added to ceiling demand.

(d) Where inside hose stations are planned or are required by other standards, a total water allowance of 50 gpm (189 L/min) for a single hose station installation or 100 gpm (378 L/min) for a multiple hose station installation shall be added to the sprinkler requirements. The water allowance shall be added in 50-gpm (189-L/min) increments beginning at the most remote hose station, with each increment added at the pressure required by the sprinkler system design at that point.

(e) When hose valves for fire department use are attached to wet pipe sprinkler system risers in accordance with 4-13.21, the water supply shall not be required to be

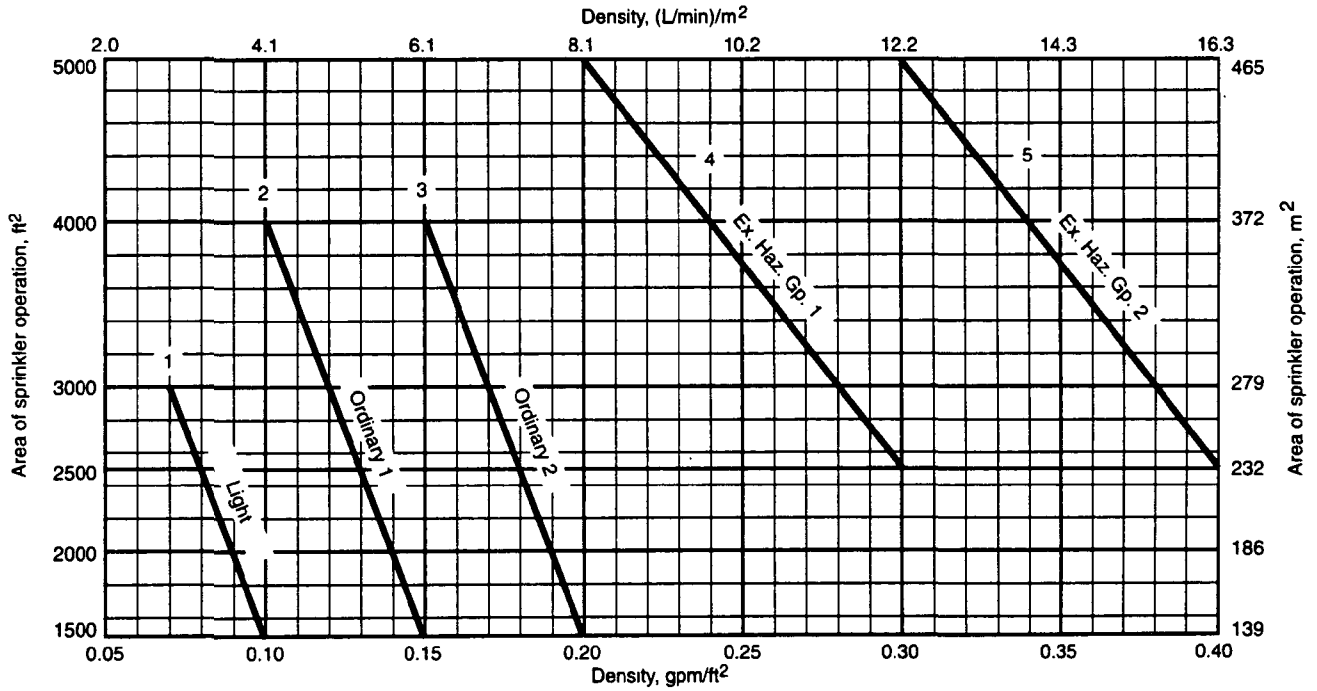

Figure 5-2.3 Area/density curves.

added to standpipe demand as determined from NFPA 14, *Standard for the Installation of Standpipe and Hose Systems.*

Exception No. 1: Where the combined sprinkler system demand and hose stream allowance of Table 5-2.3 exceeds the requirements of NFPA 14, Standard for the Installation of Standpipe and Hose Systems, this higher demand shall be used.

Exception No. 2: For partially sprinklered buildings, the sprinkler demand, not including hose stream allowance, as indicated in Table 5-2.3 shall be added to the requirements given in NFPA 14, Standard for the Installation of Standpipe and Hose Systems.

(f) Water allowance for outside hose shall be added to the sprinkler and inside hose requirement at the connection to the city water main, or a yard hydrant, whichever is closer to the system riser.

(g) The lower duration values in Table 5-2.3 shall be permitted where remote station or central station waterflow alarm service is provided.

(h) Where pumps, gravity tanks, or pressure tanks supply sprinklers only, requirements for inside and outside hose need not be considered in determining the size of such pumps or tanks.

5-2.3.1.4 Total system water supply requirements shall be determined in accordance with the hydraulic calculation procedures of Section 6-4.

5-2.3.2 Area/Density Method.

5-2.3.2.1 The water supply requirement for sprinklers only shall be calculated from the area/density curves in Figure 5-2.3. The calculations shall satisfy any single point on the appropriate area/density curve as follows:

(a) Light Hazard Area/Density Curve 1
(b) Ordinary Hazard (Group 1) Area/Density Curve 2
(c) Ordinary Hazard (Group 2) Area/Density Curve 3
(d) Extra Hazard (Group 1) Area/Density Curve 4
(e) Extra Hazard (Group 2) Area/Density Curve 5.

It is not necessary to meet all points on the selected curve.

5-2.3.2.2 For protection of storage up to 12 ft (3.6 m) in height, the following shall be applicable:

Commodity Classes I through IV

Commodity Classification	Palletized and Bin Box	Rack
I	OH-1	OH-1
II up to 8 ft (2.4 m)	OH-1	OH-1
II over 8 ft (2.4 m) up to 12 ft (3.6 m)	OH-2	OH-2
III	OH-2	OH-2
IV up to 10 ft (3 m)	OH-2	OH-2
IV over 10 ft (3 m) to 12 ft (3.6 m)	OH-2	EH-1

5-2.3.2.3 The densities and areas provided in Figure 5-2.3 are for use only with spray sprinklers. For use with other types of sprinklers, see Section 5-3.

Exception No. 1: Quick-response sprinklers shall not be permitted for use with Curves 4 and 5 (Extra Hazard).*

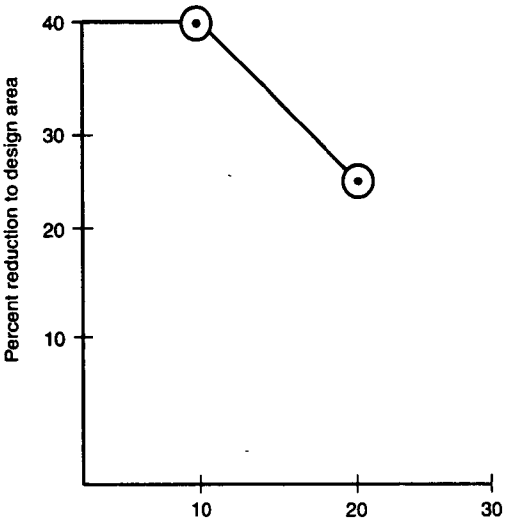
Exception No. 2: Sidewall spray sprinklers shall be permitted for use with Area/Density Curve 1 (Light Hazard) and, if specifically listed, with Area/Density Curves 2 or 3 (Ordinary Hazard).

Exception No. 3: For extended coverage sprinklers, the minimum design area shall be that corresponding to the maximum density for the hazard in Figure 5-2.3 or the area protected by 5 sprinklers, whichever is greater. Extended coverage sprinklers shall be listed with and designed for the minimum flow corresponding to the density for the smallest area of operation for the hazard as specified in Figure 5-2.3.

5-2.3.2.4 Where listed quick-response sprinklers are used throughout, the system area of operation is permitted to be reduced without revising the density as indicated in Figure 5-2.3.2.4 when all of the following conditions are satisfied:

Wet pipe system
Light hazard or ordinary hazard occupancy
20-foot (9.0-m) maximum ceiling height.

The number of sprinklers in the design area shall never be less than five.



Note: $y = \frac{-3x}{2} + 55$

For ceiling height ≥ 10 ft and ≤ 20 ft, $y = \frac{-3x}{2} + 55$;
For ceiling height < 10 ft, y = 40;
For ceiling height > 20, y = 0.
For SI units: 1 ft = 0.31 m.

Figure 5-2.3.2.4

5-2.3.2.5 The system area of operation shall be increased by 30 percent without revising the density when the following types of sprinklers are used on sloped ceilings with a pitch exceeding 2 in. in 12 in. (50 mm in .3 m):

Standard Spray Upright
Standard Spray Pendent
Sidewall Spray
Large Drop.

5-2.3.2.6 For dry pipe systems and double interlock preaction systems, the area of sprinkler operation shall be increased by 30 percent without revising the density.

5-2.3.2.7 Where high temperature sprinklers are used for Extra Hazard Occupancies, the area of sprinkler operation shall be permitted to be reduced by 25 percent without revising the density, but not to less than 2000 sq ft (186 m^2).

5-2.3.3 Room Design Method.

5-2.3.3.1* The water supply requirements for sprinklers only shall be based upon the room that creates the greatest demand. The density selected shall be that from Figure 5-2.3 corresponding to the room size. To utilize this method, all rooms shall be enclosed with walls having a fire-resistance rating equal to the water supply duration indicated in Table 5-2.3.

5-2.3.3.2 If the room is smaller than the smallest area shown in the applicable curve in Figure 5-2.3, the provisions of 5-2.3.1.3(a) shall apply.

5-2.3.3.3 Minimum protection of openings shall be as follows:

(a) Light Hazard — automatic or self-closing doors.

Exception: Where openings are not protected, calculations shall include the sprinklers in the room plus two sprinklers in the communicating space nearest each such unprotected opening unless the communicating space has only one sprinkler, in which case calculations shall be extended to the operation of that sprinkler. The selection of the room and communicating space sprinklers to be calculated shall be that which produces the greatest hydraulic demand.

(b) Ordinary and Extra Hazard — automatic or self-closing doors with appropriate fire-resistance ratings for the enclosure.

5-2.3.4 Special Design Methods.

5-2.3.4.1 Where the design area consists of a building service chute supplied by a separate riser, the maximum number of sprinklers that needs to be calculated is 3.

5-2.3.4.2 Where the room design method is used, and the area under consideration is a corridor protected by one row of sprinklers, the maximum number of sprinklers that needs to be calculated is 5. (*See 5-2.3.1.*)

Exception: Where the area under consideration is a corridor protected by a single row of sprinklers and the openings are not protected, the design area shall include all sprinklers in the corridor to a maximum of 7.

5-3 Special Design Approaches.

5-3.1 General. All special design approaches utilize the hydraulic calculation procedures of Section 6-4, except as specified.

5-3.2 Residential Sprinklers.

5-3.2.1* Sprinkler discharge rates shall be provided in accordance with minimum flow rates indicated in individual residential sprinkler listings, both for the single sprinkler discharge and the multiple sprinkler discharge of the design sprinklers.

5-3.2.2* The design area shall be that area that includes the 4 hydraulically most demanding sprinklers. Calculations shall be provided to verify the single (1) operating sprinkler criteria and the multiple (4) operating sprinkler criteria.

5-3.2.3 Where areas such as attics, basements, or other types of occupancies are outside of dwelling units but within the same structure, these areas shall be protected in accordance with the provisions of this standard, including appropriate design criteria of 5-2.3.

5-3.2.4 Hose stream demand and water supply duration requirements shall be in accordance with those for Light Hazard Occupancies in Table 5-2.3.

5-3.3 Quick-Response Early Suppression (QRES) Sprinklers. (Reserved) (*See 1-4.5.2 and A-1-4.5.2.*)

5-3.4* Large-Drop Sprinklers.

5-3.4.1 Large-drop sprinklers shall be permitted to protect ordinary hazard, miscellaneous storage, and other storage as specified by other NFPA standards.

5-3.4.2 Number of Design Sprinklers.

5-3.4.2.1 Protection shall be provided as specified in Table A-5-3.4 or appropriate NFPA standards in terms of minimum operating pressure and the number of sprinklers to be included in the design area.

5-3.4.2.2 The minimum number of design sprinklers for ordinary hazard and miscellaneous storage in accordance with this standard shall be 15 for wet pipe and preaction systems and 25 for double interlock preaction systems and dry pipe systems. For other storage configurations, the number of design sprinklers shall be in accordance with the appropriate NFPA storage standard.

5-3.4.3 Large-drop sprinkler systems shall be designed such that the minimum operating pressure is not less than 25 psi (170 kPa).

5-3.4.4 For design purposes, 95 psi (650 kPa) shall be the maximum discharge pressure at the hydraulically most remote sprinkler.

5-3.4.5 The design area shall be a rectangular area having a dimension parallel to the branch lines at least 1.2 times the square root of the area protected by the number of sprinklers to be included in the design area. Any fractional sprinkler shall be included in the design area.

5-3.4.6 The nominal diameter of branch line pipes (including riser nipples) shall be not less than 1 ¼ in. (33 mm) nor greater than 2 in. (51 mm).

Exception No. 1: Starter pieces shall be permitted to be 2½ in. (64 mm).

Exception No. 2: Where branch lines are larger than 2 in. (51 mm), the sprinkler shall be supplied by a riser nipple to elevate the sprinkler 13 in. (330 mm) for 2½-in. (64-mm) pipe and 15 in. (380 mm) for 3-in. (76-mm) pipe. These dimensions are measured from the centerline of the pipe to the deflector. In lieu of this, sprinklers may be offset horizontally a minimum of 12 in. (305 mm).

5-3.4.7 Hose stream demand and water supply duration requirements shall be in accordance with those for extra hazard occupancies in Table 5-2.3.

5-3.5* Early Suppression Fast-Response (ESFR) Sprinklers.

5-3.5.1 ESFR sprinklers shall be permitted to protect ordinary hazard, miscellaneous storage, and other storage as specified by other NFPA standards.

5-3.5.1.1* ESFR sprinklers shall be designed such that the minimum operating pressure is not less than 50 psi (3.445 bars).

5-3.5.2 ESFR sprinklers are suitable for use with the hazards listed in Table A-5-3.5 and shall be permitted to be used

in other specific hazard classifications and configurations only when proven by large-scale or other suitable fire testing. ESFR sprinklers listed for use in buildings up to 30 ft (9.1 m) high shall be used only in buildings up to 30 ft (9.1 m) high. ESFR sprinklers listed for use in buildings up to 40 ft (12.2 m) high shall used where building height exceeds 30 ft (9.1 m) to a maximum of 40 ft (12.2 m).

5-3.5.3 ESFR sprinkler systems shall be designed such that the minimum operating pressure is not less than that indicated in Table A-5-3.5 for type of storage, commodity, storage height, and building height involved.

5-3.5.4 The design area shall consist of the most hydraulically demanding area of 12 sprinklers, consisting of 4 sprinklers on each of 3 branch lines. Design shall include a minimum of 960 sq ft (89 m^2).

5-3.5.5 Water supply duration shall be at least 60 min.

5-3.6 Exposure Protection.

5-3.6.1* Piping shall be hydraulically calculated in accordance with Section 6-4 to furnish a minimum of 7 psi (48 kPa) at any sprinkler with all sprinklers facing the exposure operating.

5-3.6.2 Where the water supply feeds other fire protection systems, it shall be capable of furnishing total demand for such systems as well as the exposure system demand.

5-3.7 Water Curtains. Sprinklers in a water curtain as described in 4-13.3.4 shall be hydraulically designed to provide a discharge of 3 gpm per lineal foot [37 (L/min)/m] of water curtain, with no sprinklers discharging less than 15 gpm (56.8 L/min). The number of sprinklers calculated in this water curtain shall be the number in the length corresponding to the length parallel to the branch lines in the area determined by 6-4.4.1(a). If a single fire can be expected to operate sprinklers within the water curtain and within the design area of a hydraulically calculated system, the water supply to the water curtain shall be added to the water demand of the hydraulic calculations and shall be balanced to the calculated area demand. Hydraulic design calculations shall include a design area selected to include ceiling sprinklers adjacent to the water curtain. (*See 4-13.14.1*).

5-4 In-Rack Sprinklers. In-rack sprinklers mandated by this standard shall meet the requirements of this section.

5-4.1 In-rack sprinklers shall operate at a minimum of 15 psi (1 bar).

5-4.2 Water Demand.

5-4.2.1 Where one level of in-rack sprinklers is installed, water demand shall be based on simultaneous operation of the hydraulically most demanding 4 adjacent sprinklers.

Chapter 6 Plans and Calculations

6-1* Working Plans.

6-1.1* Working plans shall be submitted for approval to the authority having jurisdiction before any equipment is installed or remodeled. Deviation from approved plans will require permission of the authority having jurisdiction.

6-1.1.1 Working plans shall be drawn to an indicated scale, on sheets of uniform size, with a plan of each floor, and shall show those items from the following list that pertain to the design of the system.

(a) Name of owner and occupant.

(b) Location, including street address.

(c) Point of compass.

(d) Full height cross section, or schematic diagram, if required for clarity; including ceiling construction and method of protection for nonmetallic piping.

(e) Location of partitions.

(f) Location of fire walls.

(g) Occupancy class of each area or room.

(h) Location and size of concealed spaces, closets, attics, and bathrooms.

(i) Any small enclosures in which no sprinklers are to be installed.

(j) Size of city main in street and whether dead-end or circulating; and, if dead-end, direction and distance to nearest circulating main. City main test results and system elevation relative to test hydrant (*see A-7-2.1.*)

(k) Other sources of water supply, with pressure or elevation.

(l) Make, type, and nominal orifice size of sprinklers.

(m) Temperature rating and location of high-temperature sprinklers.

(n) Total area protected by each system on each floor.

(o) Number of sprinklers on each riser per floor.

(p) Total number of sprinklers on each dry pipe system, preaction system, combined dry pipe-preaction system, or deluge system.

(q) Approximate capacity in gal of each dry pipe system.

(r) Pipe type and schedule of wall thickness.

(s) Nominal pipe size and cutting lengths of pipe (or center-to-center dimensions).

NOTE: Where typical branch lines prevail, it will be necessary to size only one typical line.

(t) Location and size of riser nipples.

(u) Type of fittings and joints and location of all welds and bends. The contractor shall specify on drawing any sections to be shop welded and the type of fittings or formations to be used.

(v) Type and locations of hangers, sleeves, braces, and methods of securing sprinklers when applicable.

(w) All control valves, check valves, drain pipes, and test connections.

(x) Make, type, model, and size of alarm or dry pipe valve.

(y) Make, type, model, and size of preaction or deluge valve.

(z) Kind and location of alarm bells.

(aa) Size and location of hose outlets, hand hose, and related equipment.

(bb) Underground pipe size, length, location, weight, material, point of connection to city main; the type of valves, meters, and valve pits; and the depth that the top of the pipe is laid below grade.

(cc) Piping provisions for flushing.

(dd) Where the equipment is to be installed as an addition to an existing system, enough of the existing system indicated on the plans to make all conditions clear.

(ee) For hydraulically designed systems, the information on the hydraulic data nameplate.

(ff) A graphic representation of the scale used on all plans.

(gg) Name and address of contractor.

(hh) Hydraulic reference points shown on the plan shall correspond with comparable reference points on the hydraulic calculation sheets.

(ii) The minimum rate of water application (density), the design area of water application, in-rack sprinkler demand, and the water required for hose streams both inside and outside.

(jj) The total quantity of water and the pressure required noted at a common reference point for each system.

(kk) Relative elevations of sprinklers, junction points, and supply or reference points.

(ll) If room design method is used, all unprotected wall openings throughout the floor protected.

(mm) Calculation of loads for sizing, and details of, sway bracing.

(nn) The setting for pressure-reducing valves.

(oo) Information about backflow preventers (manufacturer, size, type).

(pp) Information about antifreeze solution used (type and amount).

6-1.1.2 The working plan submittal shall include manufacturer's installation instructions for any specially listed equipment, including descriptions, applications, and limitations for any sprinklers, devices, piping, or fittings.

6-1.1.3* Working plans for automatic sprinkler systems with nonfire protection connections. Special symbols shall be used and explained for auxiliary piping, pumps, heat exchangers, valves, strainers, and the like, clearly distinguishing these devices and piping runs from those of the sprinkler system. Model number, type, and manufacturer's name shall be identified for each piece of auxiliary equipment.

6-2 Hydraulic Calculation Forms.

6-2.1 General. Hydraulic calculations shall be prepared on form sheets that include a summary sheet, detailed work sheets, and a graph sheet. [*See copies of typical forms, Figures A-6-2.2(a), A-6-2.3, and A-6-2.4.*]

6-2.2* Summary Sheet. The summary sheet shall contain the following information, where applicable:

(a) Date.

(b) Location.

(c) Name of owner and occupant.

(d) Building number or other identification.

(e) Description of hazard.

(f) Name and address of contractor or designer.

(g) Name of approving agency.

(h) System design requirements.

1. Design area of water application, sq ft (m^2).

2. Minimum rate of water application (density), gpm per sq ft (L/min/m^2).

3. Area per sprinkler, sq ft (m^2).

(i) Total water requirements as calculated including allowance for inside hose, outside hydrants, and water curtain and exposure sprinklers.

(j) Allowance for in-rack sprinklers, gpm (L/min).

(k) Limitations (dimension, flow, and pressure) on extended coverage or other listed special sprinklers.

6-2.3* Detailed Work Sheets. Detailed work sheets or computer printout sheets shall contain the following information:

(a) Sheet number.

(b) Sprinkler description and discharge constant (K).

(c) Hydraulic reference points.

(d) Flow in gpm (L/min).

(e) Pipe size.

(f) Pipe lengths, center-to-center of fittings.

(g) Equivalent pipe lengths for fittings and devices.

(h) Friction loss in psi per ft (bars/m) of pipe.

(i) Total friction loss between reference points.

(j) In-rack sprinkler demand balanced to ceiling demand.

(k) Elevation head in psi (bars) between reference points.

(l) Required pressure in psi (bars) at each reference point.

(m) Velocity pressure and normal pressure if included in calculations.

(n) Notes to indicate starting points, reference to other sheets, or to clarify data shown.

(o)* Diagram to accompany gridded system calculations to indicate flow quantities and directions for lines with sprinklers operating in the remote area.

(p) Combined K-factor calculations for sprinklers on drops, armovers, or sprigs where calculations do not begin at sprinkler.

6-2.4* Graph Sheet. A graphic representation of the complete hydraulic calculation shall be plotted on semi-exponential graph paper ($Q^{1.85}$) and shall include the following:

(a) Water supply curve.

(b) Sprinkler system demand.

(c) Hose demand (where applicable).

(d) In-rack sprinkler demand (where applicable).

6-3 Water Supply Information. The following information shall be included:

(a) Location and elevation of static and residual test gauge with relation to the riser reference point.

(b) Flow location.

(c) Static pressure, psi (bars).

(d) Residual pressure, psi (bars).

(e) Flow, gpm (L/min).

(f) Date.

(g) Time.

(h) Test conducted by or information supplied by.

(i) Other sources of water supply, with pressure or elevation.

6-4 Hydraulic Calculation Procedures.

6-4.1* General. A calculated system for a building, or a calculated addition to a system in an existing sprinklered

Table 6-4.3.1 Equivalent Schedule 40 Steel Pipe Length Chart

Fittings and Valves	Fittings and Valves Expressed in Equivalent Feet of Pipe														
	½ in.	¾ in.	1 in.	1¼ in.	1½ in.	2 in.	2½ in.	3 in.	3½ in.	4 in.	5 in.	6 in.	8 in.	10 in.	12 in.
45° Elbow		1	1	1	2	2	3	3	3	4	5	7	9	11	13
90° Standard elbow	1	2	2	3	4	5	6	7	8	10	12	14	18	22	27
90° Long turn elbow	0.5	1	2	2	2	3	4	5	5	6	8	9	13	16	18
Tee or cross (flow turned 90°)	3	4	5	6	8	10	12	15	17	20	25	30	35	50	60
Butterfly valve		-	-	-	-	6	7	10	-	12	9	10	12	19	21
Gate valve		-	-	-	-	1	1	1	1	2	2	3	4	5	6
Swing check*		-	5	7	9	11	14	16	19	22	27	32	45	55	65

For SI Units: 1 in. = 25.4 mm, 1 ft = 0.3048 m.

*Due to the variations in design of swing check valves, the pipe equivalents indicated in the above chart are considered average

NOTE 1: This table applies to all types of pipe listed in Table 6-4.4.5.

NOTE 2: Information on ½-in. pipe is included in this table only because it is allowed under 4-13.18.2 and 4-13.18.3

building, supersedes the rules in this standard governing pipe schedules, except that all systems continue to be limited by area, and pipe sizes shall be no less than 1 in. (25.4 mm) nominal for ferrous piping and ¾ in. (19 mm) nominal for copper tubing or nonmetallic piping listed for fire sprinkler service. The size of pipe, number of sprinklers per branch line, and number of branch lines per cross main are otherwise limited only by the available water supply. However, sprinkler spacing and all other rules covered in this and other applicable standards shall be observed.

6-4.2 Formulas.

6-4.2.1 Friction Loss Formula. Pipe friction losses shall be determined on the basis of the Hazen-Williams formula.

$$p = \frac{4.52\,Q^{1.85}}{C^{1.85}\,d^{4.87}}$$

where:

p = frictional resistance in pounds pressure per square inch per foot of pipe
Q = flow in gpm
d = actual internal diameter of pipe in inches
C = friction loss coefficient.

$$\text{For SI Units: } p_m = 6.05 \times \frac{Q_m^{1.85}}{C^{1.85}\,d_m^{4.87}} \times 10^5$$

where:

p_m = frictional resistance in bars per meter of pipe
Q_m = flow in L/min
d_m = actual internal diameter in mm
C = friction loss coefficient.

6-4.2.2 Velocity Pressure Formula. Velocity pressure shall be determined on the basis of the formula

$$P_v = \frac{0.001123Q^2}{D^4}$$

where:

P_v = velocity pressure in psi
Q = flow in gpm
D = inside diameter in inches

For SI Units: 1 in. = 25.4 mm; 1 gal = 3.785 L; 1 psi = 0.0689 bar.

6-4.2.3 Normal Pressure Formula. Normal pressure (P_n) shall be determined on the basis of the formula

$$P_n = P_t - P_v$$

where:

P_n = normal pressure
P_t = total pressure in psi (bars)
P_v = velocity pressure in psi (bars).

6-4.2.4 Hydraulic Junction Points. Pressures at hydraulic junction points shall balance within 0.5 psi (0.03 bar). The highest pressure at the junction point, and the total flows as adjusted, shall be carried into the calculations.

6-4.3 Equivalent Pipe Lengths of Valves and Fittings.

6-4.3.1 Table 6-4.3.1 shall be used to determine the equivalent length of pipe for fittings and devices unless manufacturer's test data indicate that other factors are appropriate. For saddle-type fittings having friction loss greater than that shown in Table 6-4.3.1, the increased friction loss shall be included in hydraulic calculations. For internal pipe diameters different from Schedule 40 steel pipe, the equivalent feet shown in Table 6-4.3.1 shall be multiplied by a factor derived from the following formula:

$$\left[\frac{\text{Actual inside diameter}}{\text{Schedule 40 steel pipe inside diameter}}\right]^{4.87} = \text{Factor}$$

The factor thus obtained shall be further modified as required by Table 6-4.3.2.

This table shall apply to other types of pipe listed in Table 6-4.4.5 only where modified by factors from 6-4.3.1 and 6-4.3.2.

6-4.3.2 Table 6-4.3.1 shall be used with Hazen-Williams C = 120 only. For other values of C, the values in Table 6-4.3.1 shall be multiplied by the factors indicated in Table 6-4.3.2.

Table 6-4.3.2 C Value Multiplier

Value of C	100	130	140	150
Multiplying Factor	0.713	1.16	1.33	1.51

NOTE: This is based upon the friction loss through the fitting being independent of the C factor available to the piping.

6-4.3.3 Specific friction loss values or equivalent pipe lengths for alarm valves, dry pipe valves, deluge valves,

strainers, and other devices shall be made available to the authority having jurisdiction.

6-4.3.4 Specific friction loss values or equivalent pipe lengths for listed fittings not in Table 2-4.1 (*see 2-4.2*) shall be used in hydraulic calculations where these losses or equivalent pipe lengths are different from those shown in Table 6-4.3.1.

6-4.4* Calculation Procedure.

6-4.4.1* For all systems the design area shall be the hydraulically most demanding based on the criteria of 5-2.3.

Exception: Special design approaches in accordance with 5-3.3.

(a) Where the design is based on area/density method, the design area shall be a rectangular area having a dimension parallel to the branch lines at least 1.2 times the square root of the area of sprinkler operation (A) used. This shall permit the inclusion of sprinklers on both sides of the cross main. Any fractional sprinkler shall be carried to the next higher whole sprinkler.

Exception: In systems having branch lines with an insufficient number of sprinklers to fulfill the 1.2 $\sqrt{A}$ requirement, the design area shall be extended to include sprinklers on adjacent branch lines supplied by the same cross main.

(b) Where the design is based on the room design method, see 5-2.3.3. The calculation shall be based on the room and communicating space, if any, that is the hydraulically most demanding.

6-4.4.2* For gridded systems, the designer shall verify that the hydraulically most demanding area is being used. A minimum of two additional sets of calculations shall be submitted to demonstrate peaking of demand area friction loss when compared to areas immediately adjacent on either side along the same branch lines.

Exception: Computer programs that show the peaking of the demand area friction loss shall be acceptable based on a single set of calculations.

6-4.4.3 System piping shall be hydraulically designed using design densities and areas of operation in accordance with Figure 5-2.3 as required for the occupancies involved.

(a)* The density shall be calculated on the basis of floor area of sprinkler operation. The area covered by any sprinkler used in hydraulic design and calculations shall be the horizontal distances measured between the sprinklers on the branch line and between the branch lines in accordance with 4-2.2.1.

(b)* Where sprinklers are installed above and below a ceiling or in a case where more than two areas are supplied from a common set of branch lines, the branch lines and supplies shall be calculated to supply the largest water demand.

6-4.4.4* Each sprinkler in the design area and the remainder of the hydraulically designed system shall discharge at a flow rate at least equal to the stipulated minimum water application rate (density) multiplied by the area of sprinkler operation. Calculations shall begin at the hydraulically most remote sprinkler. Discharge at each sprinkler shall be based on the calculated pressure at that sprinkler.

Exception No. 1: Where the area of application is equal to or greater than the minimum allowable area of Figure 5-2.3 for the appropriate hazard classification (including a 30 percent increase for dry pipe systems), sprinkler discharge in closets, washrooms, and similar small compartments requiring only one sprinkler shall be permitted to be omitted from hydraulic calculations within the area of application. Sprinklers in these small compartments shall, however, be capable of discharging minimum densities in accordance with Figure 5-2.3.

Exception No. 2: Where sprinklers are provided above and below obstructions such as wide ducts or tables, the water supply for one of the levels of sprinklers shall be permitted to be omitted from the hydraulic ceiling design calculations within the area of application. In any case, the most hydraulically demanding arrangement shall be calculated.

6-4.4.5 Pipe friction loss shall be calculated in accordance with the Hazen-Williams formula with C values from Table 6-4.4.5.

(a) Include pipe, fittings, and devices such as valves, meters, and strainers, and calculate elevation changes that affect the sprinkler discharge.

Exception: Tie-in drain piping shall not be included in the hydraulic calculations.

(b) Calculate the loss for a tee or a cross where flow direction change occurs based on the equivalent pipe length of the piping segment in which the fitting is included. The tee at the top of a riser nipple shall be included in the branch line; the tee at the base of a riser nipple shall be included in the riser nipple; and the tee or cross at a cross main-feed main junction shall be included in the cross main. Do not include fitting loss for straight-through flow in a tee or cross.

(c) Calculate the loss of reducing elbows based on the equivalent feet value of the smallest outlet. Use the equivalent feet value for the standard elbow on any abrupt 90-degree turn, such as the screw-type pattern. Use the equivalent feet value for the long-turn elbow on any sweeping 90-degree turn, such as a flanged, welded, or mechanical joint-elbow type. (*See Table 6-4.3.1.*)

(d) Friction loss shall be excluded for the fitting directly connected to a sprinkler.

(e) Losses through a pressure-reducing valve shall be included based on the normal inlet pressure condition. Pressure loss data from the manufacturer's literature shall be used.

Table 6-4.4.5 Hazen-Williams C Values

Pipe or Tube	C Value*
Unlined cast or ductile iron	100
Black steel (dry systems including preaction)	100
Black steel (wet systems including deluge)	120
Galvanized (all)	120
Plastic (listed)—all	150
Cement lined cast or ductile iron	140
Copper tube or stainless steel	150

*The authority having jurisdiction is permitted to consider other C values.

6-4.4.6* Orifice plates or sprinklers of different orifice sizes shall not be used for balancing the system.

Exception No. 1: Sprinklers with different orifice sizes shall be acceptable for special use such as exposure protection, small rooms or enclosures, or directional discharge. (See 1-4.2 for definition of small rooms.)

Exception No. 2: Extended-coverage sprinklers with a different orifice size shall be acceptable for part of the protection area where installed in accordance with their listing.

6-4.4.7* When calculating flow from an orifice, the total pressure (P_t) shall be used.

Exception: Use of the normal pressure (P_n) calculated by subtracting the velocity pressure from the total pressure shall be permitted. Where the normal pressure is used, it shall be used on all branch lines and cross mains where applicable.

6-4.4.8 Minimum operating pressure of any sprinkler shall be 7 psi (0.5 bar).

Exception: Where higher minimum operating pressure for the desired application is specified in the listing of the sprinkler.

6-5 Pipe Schedules. Pipe schedules shall not be used, except in existing systems and in new systems or extensions to existing systems described in Chapter 5. Water supplies shall conform to 5-2.2.

6-5.1* General. The pipe schedule sizing provisions shall not apply to hydraulically calculated systems. Sprinkler systems having sprinklers with orifices other than ½ in. (13 mm) nominal, listed piping material other than that covered in Table 2-3.1, Extra Hazard Groups 1 and 2 systems, and exposure protection systems shall be hydraulically calculated.

6-5.1.1 The number of automatic sprinklers on a given pipe size on one floor shall not exceed the number given in 6-5.2, 6-5.3, or 6-5.4 for a given occupancy.

6-5.1.2* Size of Risers. Each system riser shall be sized to supply all sprinklers on the riser on any one floor as determined by the standard schedules of pipe sizes in 6-5.2, 6-5.3, or 6-5.4.

6-5.1.3 Slatted Floors, Large Floor Openings, Mezzanines, and Large Platforms. Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one area with reference to pipe sizes, and the feed mains or risers shall be of the size required for the total number of sprinklers.

6-5.1.4 Stair Towers. Stairs, towers, or other construction with incomplete floors, if piped on independent risers, shall be treated as one area with reference to pipe sizes.

6-5.2 Schedule for Light Hazard Occupancies.

6-5.2.1 Branch lines shall not exceed 8 sprinklers on either side of a cross main.

Exception: Where more than 8 sprinklers on a branch line are necessary, lines may be increased to 9 sprinklers by making the 2 end lengths 1 in. (25.4 mm) and 1¼ in. (33 mm), respectively, and the sizes thereafter standard. Ten sprinklers may be placed on a branch line making the 2 end lengths 1 in. (25.4 mm) and 1¼ in. (33 mm), respectively, and feeding the tenth sprinkler by a 2½-in. (64-mm) pipe.

6-5.2.2 Pipe sizes shall be in accordance with Table 6-5.2.2.

Exception: Each area requiring more sprinklers than the number specified for 3 ½-in. (89-mm) pipe in Table 6-5.2.2 and without subdividing partitions (not necessarily fire walls) shall be supplied by mains or risers sized for Ordinary Hazard Occupancies.

6-5.2.3 Where sprinklers are installed above and below ceilings [*see Figures 6-5.2.3(a), (b), and (c)*] and such sprinklers are supplied from a common set of branch lines or separate branch lines from a common cross main, such branch lines shall not exceed 8 sprinklers above and 8 sprinklers below any ceiling on either side of the cross main. Pipe sizing up to and including 2 ½ in. (64 mm) shall be as shown in Table 6-5.2.3 utilizing the greatest number of sprinklers to be found on any two adjacent levels.

Exception: Branch lines and cross mains supplying sprinklers installed entirely above, or entirely below, ceilings shall be sized in accordance with Table 6-5.2.2.

Table 6-5.2.2 Light Hazard Pipe Schedules

Steel		Copper	
1 in.	2 sprinklers	1 in.	2 sprinklers
1¼ in.	3 sprinklers	1¼ in.	3 sprinklers
1½ in.	5 sprinklers	1½ in.	5 sprinklers
2 in.	10 sprinklers	2 in.	12 sprinklers
2½ in.	30 sprinklers	2½ in.	40 sprinklers
3 in.	60 sprinklers	3 in.	65 sprinklers
3½ in.	100 sprinklers	3½ in.	115 sprinklers
4 in.	See 4-2.1	4 in.	See 4-2.1

For SI Units: 1 in. = 25.4 mm.

Table 6-5.2.3 Number of Sprinklers above and below a Ceiling

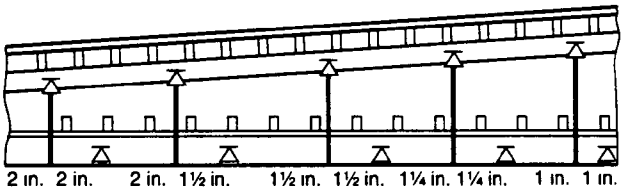
1¼ in.	4 sprinklers	1¼ in.	4 sprinklers
1½ in.	7 sprinklers	1½ in.	7 sprinklers
2 in.	15 sprinklers	2 in.	18 sprinklers
2½ in.	50 sprinklers	2½ in.	65 sprinklers

For SI Units: 1 in. = 25.4 mm.



For SI units: 1 in. = 25.4 mm.

Figure 6-5.2.3(a) Arrangement of branch lines supplying sprinklers above and below a ceiling.

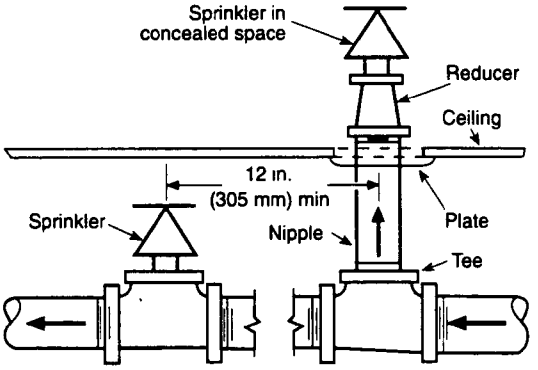


Figure 6-5.2.3(b) Sprinkler on riser nipple from branch line in lower fire area.

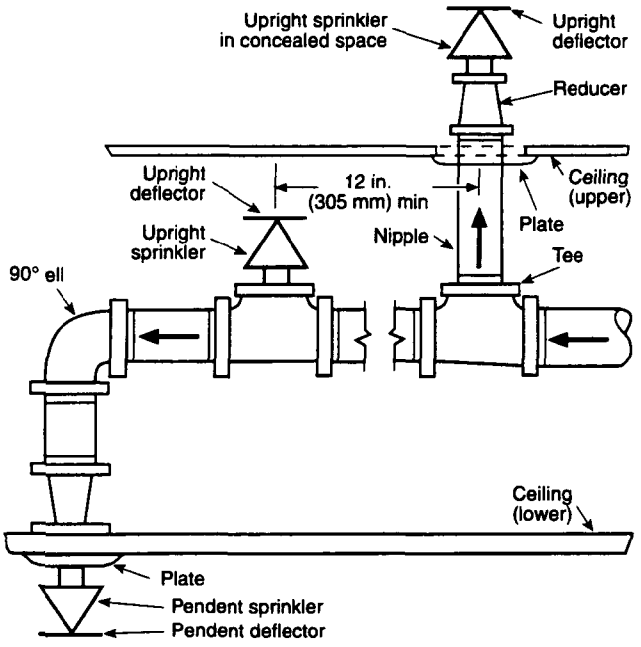

Figure 6-5.2.3(c) Arrangement of branch lines supplying sprinklers above and below ceilings.

6-5.2.3.1* Where the total number of sprinklers above and below a ceiling exceeds the number specified in Table 6-5.2.3 for 2½-in. (64-mm) pipe, the pipe supplying such sprinklers shall be increased to 3 in. (76 mm) and sized thereafter according to the schedule shown in Table 6-5.2.2 for the number of sprinklers above or below a ceiling, whichever is larger.

6-5.3 Schedule for Ordinary Hazard Occupancies.

6-5.3.1 Branch lines shall not exceed 8 sprinklers on either side of a cross main.

Exception: Where more than 8 sprinklers on a branch line are necessary, lines may be increased to 9 sprinklers by making the 2 end lengths 1 in. (25.4 mm) and 1¼ in. (33 mm), respectively, and the sizes thereafter standard. Ten sprinklers are permitted to be placed on a branch line making the 2 end lengths 1 in. (25.4 mm) and 1¼ in. (33 mm), respectively, and feeding the tenth sprinkler by a 2½-in. (64-mm) pipe.

6-5.3.2 Pipe sizes shall be in accordance with Table 6-5.3.2(a).

Table 6-5.3.2(a) Ordinary Hazard Pipe Schedule

Steel		Copper	
1 in.	2 sprinklers	1 in.	2 sprinklers
1¼ in.	3 sprinklers	1¼ in.	3 sprinklers
1½ in.	5 sprinklers	1½ in.	5 sprinklers
2 in.	10 sprinklers	2 in.	12 sprinklers
2½ in.	20 sprinklers	2½ in.	25 sprinklers
3 in.	40 sprinklers	3 in.	45 sprinklers
3½ in.	65 sprinklers	3½ in.	75 sprinklers
4 in.	100 sprinklers	4 in.	115 sprinklers
5 in.	160 sprinklers	5 in.	180 sprinklers
6 in.	275 sprinklers	6 in.	300 sprinklers
8 in.	See 4-2.1	8 in.	See 4-2.1

For SI Units: 1 in. = 25.4 mm.

Exception: Where the distance between sprinklers on the branch line exceeds 12 ft (3.7 m), or the distance between the branch lines exceeds 12 ft (3.7 m), the number of sprinklers for a given pipe size shall be in accordance with Table 6-5.3.2(b).

Table 6-5.3.2(b) Number of Sprinklers—Greater than 12 ft Separations

Steel		Copper	
2½ in.	15 sprinklers	2½ in.	20 sprinklers
3 in.	30 sprinklers	3 in.	35 sprinklers
3½ in.	60 sprinklers	3½ in.	65 sprinklers

For other pipe and tube sizes, see Table 6-5.3.2(a).

For SI Units: 1 in. = 25.4 mm.

6-5.3.3 Where sprinklers are installed above and below ceilings and such sprinklers are supplied from a common set of branch lines or separate branch lines supplied by a common cross main, such branch lines shall not exceed 8 sprinklers above and 8 sprinklers below any ceiling on either side of the cross main. Pipe sizing up to and including 3 in. (76 mm) shall be as shown in Table 6-5.3.3 [*see Figures 6-5.2.3(a), (b), and (c)*] utilizing the greatest number of sprinklers to be found on any two adjacent levels.

Exception: Branch lines and cross mains supplying sprinklers installed entirely above, or entirely below, ceilings shall be sized in accordance with Tables 6-5.3.2(a) or (b).

Table 6-5.3.3 Number of Sprinklers above and below a Ceiling

Steel		Copper	
1 in.	2 sprinklers	1 in.	2 sprinklers
1¼ in.	4 sprinklers	1¼ in.	4 sprinklers
1½ in.	7 sprinklers	1½ in.	7 sprinklers
2 in.	15 sprinklers	2 in.	18 sprinklers
2½ in.	30 sprinklers	2½ in.	40 sprinklers
3 in.	60 sprinklers	3 in.	65 sprinklers

For SI Units: 1 in. = 25.4 mm

6-5.3.3.1* Where the total number of sprinklers above and below a ceiling exceeds the number specified in Table 6-5.3.3 for 3-in. (76-mm) pipe, the pipe supplying such sprinklers shall be increased to 3 ½ in. (89 mm) and sized thereafter according to the schedule shown in Table 6-5.2.2 or Table 6-5.3.2(a) for the number of sprinklers above or below a ceiling, whichever is larger.

Exception: Where the distance between the sprinklers protecting the occupied area exceeds 12 ft (3.7 m) or the distance between the branch lines exceeds 12 ft (3.7 m), the branch lines shall be sized in accordance with either Table 6-5.3.2(b), taking into consideration the sprinklers protecting the occupied area only, or paragraph 6-5.3.3, whichever requires the greater size of pipe.

6-5.4* Extra Hazard Occupancies shall be hydraulically calculated.

Exception: For existing systems, see A-6-5.4.

6-5.5 Deluge Systems. Open sprinkler and deluge systems shall be hydraulically calculated according to applicable standards.

6-5.6* Exposure Systems. Exposure sprinklers shall be hydraulically calculated using Table 6-5.6 and a relative classification of exposures guide number.

Table 6-5.6 Exposure Protection

Section A—Window Sprinklers

Guide Number	Level of Window Sprinkler	Window Sprinkler Orifice Size	Discharge Coefficient (K Factor)	Flow Rate (Q)	Application Rate over 25 ft² of Window Area
1.50 or less	Top 2 levels	3/8 in. (9.5 mm)	2.8	7.4 gpm	0.30 gpm/ft²
	Next lower 2 levels	5/16 in. (7.9 mm)	1.9	5.0 gpm	0.20 gpm/ft²
	Next lower 2 levels	1/4 in. (6.4 mm)	1.4	3.7 gpm	0.15 gpm/ft²
1.51 to 2.20	Top 2 levels	1/2 in. (12.7 mm)	5.6	14.8 gpm	0.59 gpm/ft²
	Next lower 2 levels	7/16 in. (11.1 mm)	4.2	11.1 gpm	0.44 gpm/ft²
	Next lower 2 levels	3/8 in. (9.5 mm)	2.8	7.4 gpm	0.30 gpm/ft²
2.21 to 13.15	Top 2 levels	5/8 in. (15.9 mm)	11.2	29.6 gpm	1.18 gpm/ft²
	Next lower 2 levels	17/32 in. (13.5 mm)	8.0	21.2 gpm	0.85 gpm/ft²
	Next lower 2 levels	1/2 in. (12.7 mm)	5.6	14.8 gpm	0.59 gpm/ft²

Section B—Cornice Sprinklers

Guide Number	Cornice Sprinkler Orifice Size	Application Rate per Lineal Foot
1.50 or less	3/8 in. (9.5 mm)	0.75 gpm
1.51 to 2.20	1/2 in. (12.7 mm)	1.50 gpm
2.21 to 13.15	5/8 in. (15.9 mm)	3.00 gpm

For SI Units: 1 gpm = 3.785 L/min; 1 gpm/ft² = 40.76 (L/min)/m².

6-6 In-Rack Sprinklers.

6-6.1 Pipes to in-rack sprinklers shall be sized by hydraulic calculations.

6-6.2 Water demand of sprinklers installed in racks shall be added to ceiling sprinkler water demand over the same protected area at the point of connection. The demand shall be balanced to the higher pressure.

Chapter 7 Water Supplies

7-1 General. Every automatic sprinkler system shall have at least one automatic water supply.

7-1.1 Capacity. Water supplies shall be reliable and be capable of providing the required flow and pressure for the required duration as specified in Chapter 5 ("Design Approaches").

7-1.2 Arrangement.

7-1.2.1 Underground Supply Pipe. For pipe schedule systems, the underground supply pipe shall be at least as large as the system riser.

7-1.2.2 Connection between Underground and Aboveground Piping. The connection between the system piping and underground piping shall be made with a suitable transition piece and shall be properly strapped or fastened by approved devices. The transition piece shall be protected against possible damage from corrosive agents, solvent attack, or mechanical damage.

7-1.2.3* Connection Passing through or under Foundation Walls. When system piping pierces a foundation wall below grade or is located under the foundation wall, clearance shall be provided to prevent breakage of the piping due to building settlement.

7-1.3 Meters. Where meters are required by other authorities, they shall be listed.

7-2 Types.

7-2.1* Connections to Water Works Systems. A connection to a reliable water works system shall be an acceptable water supply source. The volume and pressure of a public water supply shall be determined from waterflow test data. (*See NFPA 24, Standard for the Installation of Private Fire Service Mains and Their Appurtenances.*) The authority having jurisdiction shall be permitted to require an adjustment to the waterflow test data to account for daily and seasonal fluctuations, possible interruption by flood or ice conditions, large simultaneous industrial use, future demand on the water supply system, or any other condition that could affect the water supply.

7-2.2 Pumps.

7-2.2.1* Acceptability. A single automatically controlled fire pump installed in accordance with NFPA 20, *Standard for the Installation of Centrifugal Fire Pumps*, shall be an acceptable water supply source.

7-2.3 Pressure Tanks.

7-2.3.1 Acceptability.

7-2.3.1.1 A pressure tank installed in accordance with NFPA 22, *Standard for Water Tanks for Private Fire Protection*, shall be an acceptable water supply source.

7-2.3.1.2 Pressure tanks shall be provided with an approved means for automatically maintaining the required air pressure. Where a pressure tank is the sole water supply, there shall also be provided an approved trouble alarm to indicate low air pressure and low water level with the alarm supplied from an electrical branch circuit independent of the air compressor.

7-2.3.1.3 Pressure tanks shall not be used to supply other than sprinklers and hand hose attached to sprinkler piping.

7-2.3.2 Capacity. In addition to the requirements of 7-1.1, the water capacity of a pressure tank shall include the extra capacity needed to fill dry pipe or preaction systems where installed. The total volume shall be based on the water capacity, plus the air capacity required by 7-2.3.3.

7-2.3.3* Water Level and Air Pressure. Pressure tanks shall be kept two-thirds full of water, and an air pressure of at least 75 psi (5.2 bars) by the gauge shall be maintained. Where the bottom of the tank is located below the highest sprinklers served, the air pressure by the gauge shall be at least 75 psi (5.2 bars) plus three times the pressure caused by the column of water in the sprinkler system above the tank bottom.

7-2.4 Gravity Tanks. An elevated tank installed in accordance with NFPA 22, *Standard for Water Tanks for Private Fire Protection*, shall be an acceptable water supply source.

Chapter 8 System Acceptance

8-1 Approval of Sprinkler Systems. The installing contractor shall:

(a) Notify the authority having jurisdiction and owner's representative of the time and date testing will be performed.

(b) Perform all required acceptance tests. (*See Section 8-2.*)

(c) Complete and sign the appropriate Contractor's Material and Test Certificate(s) [*see Figures 8-1(a) and 8-1(b)*].

8-2 Acceptance Requirements.

8-2.1* Flushing of Piping. Underground mains and lead-in connections to system risers shall be completely flushed before connection is made to sprinkler piping. The flushing operation shall be continued for a sufficient time to ensure thorough cleaning. The minimum rate of flow shall be not less than:

(a) The hydraulically calculated water demand rate of the system including any hose requirements, or

(b) That flow necessary to provide a velocity of 10 ft per sec (3 m/s), [*see Table 8-2.1(b)*] or

(c) The maximum flow rate available to the system under fire conditions.

Table 8-2.1(b) Flow Required to Produce a Velocity of 10 ft per sec (3 m/s) in Pipes

Pipe Size (in.)	Pipe Size (mm)	Flow Rate (gpm)	Flow Rate (L/min)
4	102	390	1476
6	152	880	3331
8	203	1560	5905
10	254	2440	9235
12	305	3520	13323

8-2.2 Hydrostatic Tests.

8-2.2.1* All interior piping and attached appurtenances subjected to system working pressure shall be hydrostatically tested at 200 psi (13.8 bars) and shall maintain that pressure without loss for 2 hours. Loss shall be determined by a drop in gauge pressure or visual leakage.

Exception No. 1: Portions of systems normally subjected to working pressures in excess of 150 psi (10.4 bars) shall be tested as described above at a pressure of 50 psi (3.5 bars) in excess of normal working pressure.

Exception No. 2: Where cold weather will not permit testing with water, an interim air test may be conducted as described in 8-2.3.

Exception No. 3: When an addition or modification is made to an existing system, the new installation shall be isolated and tested at not less than 50 psi (3.4 bars) in excess of normal static pressure for 2 hr.

Exception No. 4: Modifications that cannot be isolated, such as relocated drops, shall not require testing in excess of normal static pressure.

The test pressure shall be read from a gauge located at the low elevation point of the system or portion being tested.

8-2.2.2 Additives. Additives, corrosive chemicals such as sodium silicate or derivatives of sodium silicate, brine, or other chemicals shall not be used while hydrostatically testing systems or for stopping leaks.

8-2.2.3 Piping between the exterior fire department connection and the check valve in the fire department inlet pipe shall be hydrostatically tested in the same manner as the balance of the system.

8-2.2.4 When deluge systems are being hydrostatically tested, plugs shall be installed in fittings and replaced with open sprinklers after the test is completed, or the operating elements of automatic sprinklers shall be removed after the test is completed.

8-2.2.5 All underground piping shall be hydrostatically tested in accordance with NFPA 24, *Standard for the Installation of Private Fire Service Mains and Their Appurtenances*. The allowable leakage shall be within the limits prescribed by NFPA 24 and shall be recorded on the test certificate.

8-2.2.6 Provision shall be made for the proper disposal of water used for flushing or testing.

8-2.2.7* Test blanks shall have painted lugs protruding in such a way as to clearly indicate their presence. The test blanks shall be numbered, and the installing contractor shall have a record-keeping method ensuring their removal after work is completed.

8-2.2.8 Differential-Type Valves. When subject to hydrostatic test pressures, the clapper of a differential-type valve shall be held off its seat to prevent damaging the valve.

8-2.3 Dry and Double Interlocked System(s) Air Test. In addition to the standard hydrostatic test, an air pressure leakage test at 40 psi (2.8 bars) shall be conducted for 24 hr. Any leakage that results in a loss of pressure in excess of 1 ½ psi (0.1 bar) for the 24 hr shall be corrected.

8-2.3.1 Where systems are installed in spaces that are capable of being operated at temperatures below 32°F (0°C), air pressure leakage tests required in 8-2.3 shall be conducted at the lowest nominal temperature of the space.

8-2.4 System Operational Tests.

8-2.4.1 Waterflow detecting devices including the associated alarm circuits shall be flow tested through the inspec-

Contractor's Material and Test Certificate for Aboveground Piping

PROCEDURE

Upon completion of work, inspection and tests shall be made by the contractor's representative and witnessed by an owner's representative. All defects shall be corrected and system left in service before contractor's personnel finally leave the job.

A certificate shall be filled out and signed by both representatives. Copies shall be prepared for approving authorities, owners, and contractor. It is understood the owner's representative's signature in no way prejudices any claim against contractor for faulty material, poor workmanship, or failure to comply with approving authority's requirements or local ordinances.

TEST DESCRIPTION

HYDROSTATIC: Hydrostatic tests shall be made at not less than 200 psi (13.6 bars) for 2 hours or 50 psi (3.4 bars) above static pressure in excess of 150 psi (10.2 bars) for 2 hours. Differential dry-pipe valve clappers shall be left open during the test to prevent damage. All aboveground piping leakage shall be stopped.

PNEUMATIC: Establish 40 psi (2.7 bars) air pressure and measure drop, which shall not exceed 1½ psi (0.1 bars) in 24 hours. Test pressure tanks at normal water level and air pressure and measure air pressure drop, which shall not exceed 1½ psi (0.1 bars) in 24 hours.

Figure 8-1(a) Part 3.

tor's test connection and shall result in an audible alarm on the premises within 5 min after such flow begins and until such flow stops.

8-2.4.2 A working test of the dry pipe valve alone, and with a quick-opening device, if installed, shall be made by opening the inspector's test connection. The test shall measure the time to trip the valve and the time for water to be discharged from the inspector's test connection. All times shall be measured from the time the inspector's test connection is completely opened. The results shall be recorded using the Contractor's Material and Test Certificate for Aboveground Piping.

8-2.4.3 The automatic operation of a deluge or preaction valve shall be tested in accordance with the manufacturer's instructions. The manual and remote control operation, where present, shall also be tested.

8-2.4.4 The main drain valve shall be opened and remain open until the system pressure stabilizes. The static and residual pressures shall be recorded on the contractor's test certificate.

8-2.5 Each pressure-reducing valve shall be tested upon completion of installation to ensure proper operation under flow and no-flow conditions. Testing shall verify that the device properly regulates outlet pressure at both maximum and normal inlet pressure conditions. The results of the flow test of each pressure-reducing valve shall be recorded on the contractor's test certificate. The results shall include the static and residual inlet pressures, static and residual outlet pressures, and the flow rate.

8-2.6 The backflow prevention assembly shall be forward flow tested to ensure proper operation. The minimum flow rate shall be the system demand, including hose stream demand where applicable.

8-2.7 Operating tests shall be made of exposure protection systems upon completion of the installation, where such tests do not risk water damage to the building on which they are installed or to adjacent buildings.

8-3 Circulating Closed Loop Systems. For sprinkler systems with nonfire protection connections, additional information shall be appended to the Contractor's Material and Test Certificate shown in Figure 8-1(a) as follows:

(a) Certification that all auxiliary devices, such as heat pumps, circulating pumps, heat exchangers, radiators, and luminaries, if a part of the system, have a pressure rating of at least 175 psi or 300 psi (12.1 or 20.7 bars) if exposed to pressures greater than 175 psi (12.1 bars).

(b) All components of sprinkler system and auxiliary system have been pressure tested as a composite system in accordance with 8-2.2.

(c) Waterflow tests have been conducted and waterflow alarms have operated while auxiliary equipment is in each of the possible modes of operation.

(d) With auxiliary equipment tested in each possible mode of operation and with no flow from sprinklers or test connection, waterflow alarm signals did not operate.

(e) Excess temperature controls for shutting down the auxiliary system have been properly field tested.

8-4 Instructions.

8-4.1 The installing contractor shall provide the owner with:

(a) All literature and instructions provided by the manufacturer describing proper operation and maintenance of any equipment and devices installed.

(b) Publication titled NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.*

Contractor's Material and Test Certificate for Underground Piping

PROCEDURE

Upon completion of work, inspection and tests shall be made by the contractor's representative and witnessed by an owner's representative. All defects shall be corrected and system left in service before contractor's personnel finally leave the job.

A certificate shall be filled out and signed by both representatives Copies shall be prepared for approving authorities, owners, and contractor. It is understood the owner's representative's signature in no way prejudices any claim against contractor for faulty material, poor workmanship, or failure to comply with approving authority's requirements or local ordinances.

	JOINTS NEEDING ANCHORAGE CLAMPED, STRAPPED, OR BLOCKED IN ACCORDANCE WITH _____ STANDARD IF NO, EXPLAIN	☐ YES ☐ NO
TEST DESCRIPTION	FLUSHING: Flow the required rate until water is clear as indicated by no collection of foreign material in burlap bags at outlets such as hydrants and blow-offs. Flush at flows not less than 390 GPM (1476 L/min) for 4-inch pipe, 880 GPM (3331 L/min) for 6-inch pipe, 1560 GPM (5905 L/min) for 8-inch pipe, 2440 GPM (9235 L/min) for 10-inch pipe, and 3520 GPM (13323 L/min) for 12-inch pipe When supply cannot produce stipulated flow rates, obtain maximum available. HYDROSTATIC Hydrostatic tests shall be made at not less than 200 psi (13.8 bars) for two hours or 50 psi (3.4 bars) above static pressure in excess of 150 psi (10.3 bars) for two hours. LEAKAGE: New pipe laid with rubber gasketed joints shall, if the workmanship is satisfactory, have little or no leakage at the joints The amount of leakage at the joints shall not exceed 2 qts. per hr. (1.89 L/h) per 100 joints irrespective of pipe diameter. The leakage shall be distributed over all joints. If such leakage occurs at a few joints the installation shall be considered unsatisfactory and necessary repairs made The amount of allowable leakage specified above may be increased by 1 fl oz per in. valve diameter per hr. (30 mL/25 mm/h) for each metal seated valve isolating the test section. If dry barrel hydrants are tested with the main valve open, so the hydrants are under pressure, an additional 5 oz per minute (150 mL/min) leakage is permitted for each hydrant.

ADDITIONAL EXPLANATION AND NOTES		

Figure 8-1(b) Part 2.

8-5* Hydraulic Design Information Sign. The installing contractor shall identify a hydraulically designed sprinkler system with a permanently marked weatherproof metal or rigid plastic sign secured with corrosion-resistant wire, chain, or other approved means. Such signs shall be placed at the alarm valve, dry pipe valve, preaction valve, or deluge valve supplying the corresponding hydraulically designed area. The sign shall include the following information:

(a) Location of the design area or areas.

(b) Discharge densities over the design area or areas.

(c) Required flow and residual pressure demand at the base of riser.

(d) Occupancy classification or commodity classification and maximum permitted storage height and configuration.

(e) Hose stream demand included in addition to the sprinkler demand.

8-6 Circulating Closed Loop Systems. Discharge tests of sprinkler systems with nonfire protection connections shall be conducted using system test connections described in 2-7.2. Pressure gauges shall be installed at critical points and readings taken under various modes of auxiliary equipment operation. Waterflow alarm signals shall be responsive to discharge of water through system test pipes while auxiliary equipment is in each of the possible modes of operation.

Chapter 9 Marine Systems

9-1 General. This chapter outlines the deletions, modifications, and additions that are necessary for marine application. All other requirements of this standard shall apply to merchant vessel systems except as modified by this chapter.

9-1.1 The following definitions shall be applicable to this chapter.

A-Class Boundary. A boundary designed to resist the passage of smoke and flame for 1 hr when tested in accordance with ASTM E 119, *Standard Test Methods for Fire Tests of Building Construction and Materials*.

B-Class Boundary. A boundary designed to resist the passage of flame for ½ hr when tested in accordance with ASTM E 119, *Standard Test Methods for Fire Tests of Building Construction and Materials*.

Central Safety Station. A continuously manned control station from which all of the fire control equipment is monitored. If this station is not the bridge, direct communication with the bridge shall be provided by means other than the ship's service telephone.

Heat-Sensitive Material.* A material whose melting point is below 1700°F (926.7°C).

Heel. The inclination of a ship to one side.

Heel Angle. The angle defined by the intersection of a vertical line through the center of a vessel and a line perpendicular to the surface of the water.

International Shore Connection.* A universal connection complying with ASTM F1121, to which shoreside firefighting hoses are to be connected.

Marine Thermal Barrier.* An assembly that is constructed of noncombustible materials and made intact with the main structure of the vessel, such as shell, structural bulkheads, and decks. A marine thermal barrier shall meet the requirements of a B-Class boundary. In addition, a marine thermal barrier shall be insulated such that, if tested in accordance with ASTM E 119, *Standard Test Methods for Fire Tests of Building Construction and Materials*, for 15 min, the average temperature of the unexposed side does not rise more than 250°F (193°C) above the original temperature, nor does the temperature at any one point, including any joint, rise more than 405°F (225°C) above the original temperature.

Supervision. A visual and audible alarm signal given at the central safety station to indicate when the system is in operation or when a condition that would impair the satisfactory operation of the system exists. Supervisory alarms shall give a distinct indication for each individual system component that is monitored.

Survival Angle. The maximum angle to which a vessel is permitted to heel after the assumed damage required by stability regulations is imposed.

Type 1 Stair. A fully enclosed stair that serves all levels of a vessel in which persons may be employed.

Water Supply. The supply portion of the sprinkler system from the water pressure tank or the sea suction of the designated sprinkler system pump up to and including the valve that isolates the sprinkler system from these two water sources.

9-1.2* Occupancy Classifications. Marine environment classifications shall be in accordance with 1-4.7.

9-1.3* Partial installation of automatic sprinklers shall not be permitted.

Exception No. 1: Spaces shall be permitted to be protected with an alternative, approved fire suppression system where such areas are separated from the sprinklered areas with a 1-hr-rated assembly.

Exception No. 2: Where specific sections of this standard permit the omission of sprinklers.

9-2 System Components, Hardware, and Use.

9-2.1* A sprinkler orifice shall not be less than a nominal $^3/_8$ in. (9.5 mm) in size. Sprinklers shall have a discharge coefficient greater than 2.9. The minimum operating pressure of any sprinkler shall be 10 psi (68.9 kPa).

9-2.2* Sprinkler piping penetrations shall be designed to preserve the fire integrity of the ceiling or bulkhead penetrated.

9-2.3 Spare Sprinklers.

9-2.3.1 The required stock of spare sprinklers shall be carried for each type of sprinkler installed onboard the vessel. Where fewer than six sprinklers of a particular type are installed, 100 percent spares shall be kept in stock. Where applicable, at least one elastometric gasket shall be kept in the cabinet for each fire department connection that is installed onboard the vessel.

9-2.3.2 The cabinet containing spare sprinklers, special wrenches, and elastometric gaskets shall be located in the same central safety station that contains the alarm annunciator panel(s) and supervisory indicators.

9-2.4 System Pipe and Fittings.

9-2.4.1 All the materials listed in Tables 2-3.1 and 2-4.1 shall be acceptable for use except Brazing Filler Metal (AWS A5.8). Where ferrous materials are subjected to salt water, the materials shall be protected against corrosion by hotdip galvanizing or by the use of extra heavy schedule material.

9-2.4.2 Maximum design pressure for copper and brass pipe shall not exceed 250 psi (1722 kPa).

9-2.4.3 Materials other than those meeting the requirements of Table 2-3.1 or Table 2-4.1 shall be permitted to be installed in wet automatic sprinkler systems in accordance with their listing, subject to the following restrictions:

(a) Portions of a system that are constructed from heat-sensitive materials shall be installed behind a marine thermal barrier.

(b)* Piping materials shall be listed for the intended service and installed according to the listing requirements.

9-2.5 Pipe Support.

9-2.5.1* Pipe supports shall comply with the following:

(a) Pipe supports shall be designed to provide adequate lateral, longitudinal, and vertical sway bracing. The design shall account for the degree of bracing, which varies with the route and operation of the vessel. Bracing shall be designed to ensure that:

1. Slamming, heaving, and rolling will not shift sprinkler piping, potentially moving sprinklers above ceilings, bulkheads, or other obstructions.

2. Piping and sprinklers will remain in place at a steady heel angle at least equal to the maximum required damaged survival angle.

(b) Pipe supports shall be welded to the structure. Hangers that can loosen during ship motion or vibration, such as screw-down-type hangers, shall not be permitted.

Exception to (b): Hangers that are listed for seismic use shall be permitted to be used in accordance with their listing.

9-2.5.2 Sprinkler piping shall be supported by the primary structural members of the vessel such as beams, girders, and stiffeners.

9-2.5.3* The components of hanger assemblies that are welded directly to the ship structure are not required to be listed.

9-2.5.4* U-hook sizes shall be no less than that specified in Table 2-6.4.1.

9-2.6 Valves.

9-2.6.1* All indicating, supply, and zone control valves shall be supervised open from a central safety station.

9-2.6.2 Drain and test valves shall meet the applicable requirements of 46 CFR 56.20 and 56.60.

9-2.6.3 Valve markings shall include the information required by 46 CFR 56.20-5(a).

9-2.7 Fire Department Connections and International Shore Connections.

9-2.7.1* A fire department connection and an International Shore Connection shall be installed.

Exception: Fire department connections shall not be required on vessels that operate primarily on international voyages.

9-2.7.2 Connections shall be located near the gangway or other shore access point so that they are readily accessible to the landbased fire department. Fire department and international shore connections shall be colored and marked so that the connections are easily located from the shore access point (i.e., gangway location) and will not be confused with a firemain connection. An 18 × 18 in. (0.46 × 0.46 m) sign displaying standard symbol 4-2.1 of NFPA 170, *Standard for Fire Safety Symbols*, shall be placed at the connection so that it is in plain sight from the shore access point. Connections on both sides of the vessel shall be provided where shore access arrangements make it necessary.

9-2.7.3* Fire department connection thread type shall be compatible with fire department equipment.

9-3 System Requirements.

9-3.1* Relief Valves. Relief valves shall be provided on all wet pipe systems.

9-3.2 Spare Detection Devices. The number of spare detection devices or fusible elements used for protection systems that shall be carried per temperature rating is as follows:

(a) Vessels shall have 2 spare detection devices or fusible elements when operating voyages are normally less than 24 hr.

(b) Vessels shall have 4 spare detection devices or fusible elements when operating voyages are normally more than 24 hr.

9-3.3 System Piping Supervision. All preaction sprinkler systems shall be supervised regardless of the number of sprinklers supplied.

9-3.4 Circulating Closed Loop Systems. Circulating closed loop systems shall not be permitted.

9-4 Installation Requirements.

9-4.1 Temperature Zones. Intermediate-temperature-rated sprinklers shall be installed under a noninsulated steel deck that is exposed to sunlight.

9-4.2* Residential Sprinklers. Residential sprinklers shall be permitted for use only in sleeping accommodation areas.

9-4.3 Window Protection. Where required, windows shall be protected as outlined below:

(a) Sprinklers shall be installed at a distance not exceeding 1 ft (0.3 m) from the glazing at a spacing not exceeding 6 ft (1.8 m) such that the entire glazing surface is wetted at a linear density not less than 6 gpm/ft (75 Lpm/m).

Exception: Window sprinkler protection systems installed in accordance with their installation and testing criteria.

9-4.4* Concealed Spaces. Concealed spaces that are constructed of combustible materials, or materials with combustible finishes or that contain combustible materials, shall be sprinklered.

Exception: Spaces that contain only nonmetallic piping that is continuously filled with water are not required to be sprinklered.

9-4.5 Vertical Shafts.

9-4.5.1 Sprinklers are not required in vertical shafts used as duct, electrical, or pipe shafts that are nonaccessible, noncombustible, and enclosed in an A-Class-rated assembly.

9-4.5.2 Stairway enclosures shall be fully sprinklered.

9-4.6 Bath Modules. Sprinklers shall be installed in bath modules (full room modules) constructed with combustible materials, regardless of room fire load.

9-4.7 Ceiling Types. Drop-out ceilings shall not be used in conjunction with sprinklers.

9-4.8 Return Bends. To prevent sediment buildup, return bends shall be installed in all shipboard sprinkler systems where pendent-type or dry pendent-type sprinklers are used in wet systems. (*See Figure 4-13.17.*) Consideration shall be given concerning the intrusion of saltwater into the system. Specifically, sprinklers shall not be rendered ineffective by corrosion related to saltwater entrapment within the return bend.

9-4.9 Hose Connections. Sprinkler system piping shall not be used to supply hose connections or hose connections for fire department use.

9-4.10* Heat-Sensitive Piping Materials.

9-4.10.1 Portions of the piping system constructed with a heat-sensitive material permitted by 9-2.4.3 shall be subject to the following restrictions:

(a) Piping shall be of non-heat-sensitive type from the sea suction up through the penetration of the last A-Class barrier enclosing the space(s) in which the heat-sensitive piping is installed.

(b) B-Class draft stops shall be fitted not more than 45 ft (13.7 m) apart between the marine thermal barrier (*see definitions*) and the deck or shell.

9-4.10.2 Each zone in which heat-sensitive piping is used (under the provisions of 9-2.4.3) shall be fitted with a valve capable of segregating that zone from the remainder of the system. The valve shall be supervised and shall be located within a constantly attended control station or Type 1 stair.

9-4.11 Discharge of Drain Lines.

9-4.11.1 Drain lines shall not be connected to housekeeping, sewage, or deck drains. Drains shall be permitted to be discharged to bilges. Overboard discharges shall meet the requirements of 46 CFR 56.50-95 and shall be corrosion resistant in accordance with 46 CFR 56.60. Systems that contain water additives that are not permitted to be discharged into the environment shall be specially designed to prevent such discharge.

9-4.11.2 Discharges shall be provided with a down-turned elbow.

9-4.12 Alarm Signals and Devices.

9-4.12.1* A visual and audible alarm signal shall be given at the central safety station to indicate when the system is in operation or when a condition that would impair the satisfactory operation of the system exists. Alarm signals shall be provided for, but not limited to, each of the following: monitoring position of control valves, fire pump power supplies and operating condition, water tank levels and temperatures, zone water flow alarms, pressure of tanks, and air pressure on dry-pipe valves. Alarms shall give a distinct indication for each individual system component that is monitored. An audible alarm shall be given at the central safety station within 30 sec of water flow.

9-4.12.2 Waterflow alarms shall be installed for every zone of the sprinkler system. Sprinkler zones shall not encompass more than two adjacent decks or encompass more than one main vertical zone.

9-4.12.3 Electrically operated alarm attachments shall comply with, meet, and be installed in accordance with the requirements of 46 CFR, Subchapter J (Electrical Engineering). All wiring shall be chosen and installed in accordance with IEEE 45, *Marine Supplement.*

9-4.13 Test Connections. Where test connections are below the bulkhead deck, they shall comply with the overboard discharge arrangements of 46 CFR 56.50-95.

9-5 Design Approaches.

9-5.1 Design Options. Marine sprinkler systems shall be designed using the hydraulic calculation procedure of Chapter 5. The pipe schedule method shall not be used to determine the water demand requirements.

9-5.2* Window Protection. Minimum water demand requirements shall include sprinklers that are installed for the protection of windows as described in 9-4.3.

9-5.3* Hose Stream Allowance. No allowance for hose stream use is required.

9-6 Water Supplies.

9-6.1 General. The water supply requirements for marine applications shall be in accordance with Section 9-6.

9-6.2 Pressure Tank.

9-6.2.1 A pressure tank shall be provided. The pressure tank shall be sized and constructed so that:

(a) The tank shall contain a standing charge of fresh water equal to that specified by Table 9-6.2.1.

(b) The pressure tank shall be sized in accordance with 7-2.3.2.

(c) A glass gauge shall be provided to indicate the correct level of water within the pressure tank.

(d) Arrangements shall be provided for maintaining an air pressure in the tank such that, while the standing charge of water is being expended, the pressure will not be less than that necessary to provide the design pressure and flow of the hydraulically most remote design area.

(e) Suitable means of replenishing the air under pressure and the fresh water standing charge in the tank shall be provided.

(f) Tank construction shall be in accordance with the applicable requirements of 46 CFR, Subchapter F (Marine Engineering).

Exception: In lieu of a pressure tank, a dedicated pump connected to a fresh water tank shall be permitted to be used provided:

(a) The pump is listed for marine use and is sized to meet the required system demand;

(b) The suction for the fire pump is located below the suction for the fresh water system so that there shall be a minimum water supply of at least 1 min for the required system demand;

(c) Pressure switches are provided in the system and the controller for the pump that automatically start the pump within 10 sec after detection of a pressure drop of more than 5 percent;

(d) There shall be a reduced pressure zone backflow preventer to prevent contamination of the potable water system by salt water; and

(e) There are at least two sources of power for this pump. Where the sources of power are electrical, these shall be a main generator and an emergency source of power. One supply shall be taken from the main switchboard, by separate feeder reserved solely for that purpose. This feeder shall be run to an automatic change-over switch situated near the sprinkler unit and the switch shall normally be kept closed to the feeder from the emergency switchboard. The changeover switch shall be clearly labeled and no other switch shall be permitted in these feeders.

Table 9-6.2.1 Required Water Supply

System type	Additional Water Volume
Wet pipe system	Flow requirement of the hydraulically most remote system demand for one minute.
Dry pipe system	Flow requirement of the hydraulically most remote system demand for one minute of system demand plus the volume needed to fill all dry piping.
Preaction system Deluge system	

9-6.2.2 Relief valves shall be installed on the tank to avoid overpressurization and false actuation of any dry pipe valve. Relief valves shall comply with 46 CFR 54.15-10.

9-6.2.3 There shall be not less than two sources of power for the compressors that supply air to the pressure tank. Where the sources of power are electrical, these shall be a main generator and an emergency source of power. One supply shall be taken from the main switchboard, by separate feeders reserved solely for that purpose. Such feeders shall be run to a changeover switch situated near the air compressor, and the switch normally shall be kept closed to the feeder from the emergency switchboard. The changeover switch shall be clearly labeled, and no other switch shall be permitted in these feeders.

9-6.2.4 More than one pressure tank can be installed provided that each is treated as a single water source when determining valve arrangements. Check valves shall be installed to prohibit flow from tank to tank or from pump to tank.

Exception: Arrangements where a tank is designed to hold only pressurized air.

9-6.2.5 In systems subject to use with saltwater, valves shall be so arranged as to prohibit contamination of the pressure tank with saltwater.

9-6.2.6* Where applicable, a means shall be provided to restrict the amount of air that can enter the pressure tank from the air supply system. A means shall also be provided to prevent water from backflowing into the air supply system.

9-6.3 Fire Pump.

9-6.3.1 A dedicated, automatically controlled pump that is listed for marine service, which takes suction from the sea, shall be provided to supply the sprinkler system. Where two pumps are required to ensure the reliability of the water supply, the pump that supplies the fire main shall be allowed to serve as the second fire pump.

9-6.3.2 The pump shall be sized to meet the water demand of the hydraulically most demanding area. Pumps shall be designed to not exceed 120 percent of the rated capacity of the pump.

9-6.3.3 The system shall be designed so that, before the supply falls below the design criteria, the fire pump shall be automatically started and shall supply water to the system until manually shut off.

Exception: Where pump and fresh water tank arrangement is used in lieu of the pressure tank, there must be a pressure switch that senses a system pressure drop of 25 percent, and the controller must automatically start the fire pump(s) if pressure is not restored within 20 sec.

9-6.3.4 There shall be not less than two sources of power supply for the fire pumps. Where the sources of power are electrical, these shall be a main generator and an emergency source of power. One supply shall be taken from the main switchboard, by separate feeders reserved solely for that purpose. Such feeders shall be run to a changeover switch situated near to the sprinkler unit and the switch normally shall be kept closed to the feeder from the emergency switchboard. The changeover switch shall be clearly labeled and no other switch shall be permitted in these feeders.

9-6.3.5 A test valve(s) shall be installed on the discharge side of the pump with a short open-ended discharge pipe. The area of the pipe shall be adequate to permit the release of the required water output to supply the demand of the hydraulically most remote area.

9-6.3.6 Where two fire pumps are required to ensure the reliability of the water supply, each fire pump shall meet the requirements of 9-7.1.1.7, exception items (a) through (d), above. In addition, a system that is required to have more than one pump shall be designed to accommodate the following features:

(a)* Pump controls and system sensors shall be arranged such that the secondary pump will automatically operate if the primary pump fails to operate or deliver the required water pressure and flow. (*Figure A-9-7.1.2.6(a) is an example of an acceptable dual pump arrangement.*)

(b) Both pumps shall be served from normal and emergency power sources. However, where approved by the authority having jurisdiction, the secondary pump shall be permitted to be non-electrically driven.

(c) Pump failure or operation shall be indicated at the central safety station.

9-6.3.7 If not specifically prohibited, the fire pump that supplies the fire main is permitted to be used as the second pump provided that: (*See Figure A-9-6.3.7*).

(a) The pump is adequately sized to meet the required fire hose and sprinkler system pressure and flow demands simultaneously;

(b) The fire main system is segregated from the sprinkler system by a normally closed valve that is designed to automatically open upon failure of the designated fire pump; and

(c) The fire pump that supplies the fire main is automatically started in the event of dedicated fire pump failure or loss of pressure in the sprinkler main.

9-6.4 Water Supply Configurations.

9-6.4.1 The pressure tank and fire pump shall be located in a position reasonably remote from any machinery space of Category A.

9-6.4.2 All valves within the water supply piping system shall be supervised.

9-6.4.3 The sprinkler system shall be cross-connected with the ship's fire main system and fitted with a lockable screw-down nonreturn valve such that backflow from the sprinkler system to the fire main is prevented.

9-6.4.4 The piping, tanks, and pumps that make up the water supply shall be installed in accordance with the applicable requirements of 46 CFR, Subchapter F (Marine Engineering).

9-6.4.5* When a shore water supply is to be used during extended dockside periods, the water supply shall be qualified in the manner described in 7-2.1. Tests shall be conducted in accordance with the requirements of the local shore-based authority having jurisdiction. The water supply information listed in Section 6-3 shall then be provided to the authority having jurisdiction.

9-7 Plans and Calculations.

9-7.1 Additional Information. The pressure tank size, high pressure relief setting, high and low water alarm settings, low pressure alarm setting, and pump start pressure shall be provided.

9-7.2 Sprinklers specifically installed for the protection of windows under 9-4.3 are permitted to be of a different size from those protecting the remainder of the occupancy classification. All of the window sprinklers, however, shall be of the same size.

9-8 System Acceptance.

9-8.1 Hydrostatic Tests. In addition to the interior piping, the test required by 8-2.2.3 shall also be conducted on all external water supply connections including international shore and fireboat connections.

9-8.2 Alarm Test. A waterflow test shall result in an alarm at the central safety station within 30 sec after flow through the test connection begins.

9-8.3 Operational Tests. Pressure tank and pump operation, valve actuation, and water flow shall also be tested. Pump operation and performance shall be tested in accordance with Chapter 11 of NFPA 20, *Standard for the Installation of Centrifugal Fire Pumps.*

9-9 System Maintenance.

9-9.1 Periodic Inspection, Test, and Maintenance.

9-9.1.1 Sprinkler systems shall be inspected, tested, and maintained in accordance with Chapter 2 of NFPA 25, *Stan-*

dard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.

9-9.1.2 Sprinkler pumps and any fire pumps that are cross-connected to the sprinkler system shall be inspected, tested, and maintained in accordance with Chapter 5 of NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.*

9-9.1.3 The pressure tank shall be inspected, tested, and maintained in accordance with 46 CFR, Subchapter F, Marine Engineering and Chapter 6 of NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.*

9-9.1.4 System valves, international shore connections, and fire department connections shall be inspected, tested, and maintained in accordance with Chapter 9 of NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.*

9-9.1.5 Instructions for operation, inspection, maintenance, and testing shall be kept in the cabinet containing the spare sprinklers.

9-9.1.6 Impairments to the system shall be handled in accordance with Chapter 11 of NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems*, except that inspections, maintenance, and testing shall not be conducted when the vessel is at sea. Extended periods of impairment shall not be scheduled for periods when passengers or cargo are onboard the vessel. Log entries shall be made whenever a system impairment occurs or is removed. In addition, shipboard fire-fighting personnel shall be onboard the vessel and notified whenever portions of the system are impaired.

9-9.1.7 A separate card or booklet with tabulated spaces for the date and signature of the licensed officer of the vessel who shall witness or conduct inspections, maintenance, and tests shall also be kept in the cabinet containing the spare sprinklers.

9-9.1.8 Fresh water wet pipe systems that have had sea water introduced into the pipe network shall be flushed with fresh water within 45 days.

Exception: Flushing the pipe network at the vessel's next port of call shall be permitted when the vessel's voyage is longer than 45 days.

Chapter 10 System Maintenance

10-1 General.

10-1.1* A sprinkler system installed in accordance with this standard shall be properly inspected, tested, and maintained in accordance with NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems*, to provide at least the same level of performance and protection as designed. The owner shall be responsible for maintaining the system and keeping the system in good operating condition.

Chapter 11 Referenced Publications

11-1 The following documents or portions thereof are referenced within this standard and shall be considered part of the requirements of this document. The edition indicated for each reference is the current edition as of the date of the NFPA issuance of this document.

11-1.1 NFPA Publications. National Fire Protection Association, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101.

NFPA 13D, *Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes*, 1996 edition.

NFPA13R, *Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height*, 1996 edition.

NFPA 14, *Standard for the Installation of Standpipe and Hose Systems*, 1996 edition.

NFPA 20, *Standard for the Installation of Centrifugal Fire Pumps*, 1996 edition.

NFPA 22, *Standard for Water Tanks for Private Fire Protection*, 1996 edition.

NFPA 24, *Standard for the Installation of Private Fire Service Mains and Their Appurtenances*, 1995 edition.

NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems*, 1995 edition.

NFPA 51B, *Standard for Fire Prevention in Use of Cutting and Welding Processes*, 1994 edition.

NFPA 70, *National Electrical Code*, 1996 edition.

NFPA 72, *National Fire Alarm Code*, 1996 edition.

NFPA 170, *Standard for Fire Safety Symbols*, 1996 edition.

NFPA 231, *Standard for General Storage*, 1995 edition.

NFPA 231C, *Standard for Rack Storage of Materials*, 1995 edition.

NFPA 251, *Standard Methods of Tests of Fire Endurance of Building Construction and Materials*, 1995 edition.

11-1.2 The following NFPA codes, standards, and recommended practices contain specific sprinkler design criteria.

NFPA 13D, *Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes*, 1996 edition.

NFPA 13R, *Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height*, 1996 edition.

NFPA 15, *Standard for Water Spray Fixed Systems for Fire Protection*, 1996 edition.

NFPA 16, *Standard on Deluge Foam-Water Sprinkler and Foam-Water Spray Systems*, 1995 edition.

NFPA 30, *Flammable and Combustible Liquids Code*, 1996 edition.

NFPA 30B, *Code for the Manufacture and Storage of Aerosol Products*, 1994 edition.

NFPA 33, *Standard for Spray Application Using Flammable and Combustible Materials*, 1995 edition.

NFPA 34, *Standard for Dipping and Coating Processes Using Flammable or Combustible Liquids*, 1995 edition.

NFPA 35, *Standard for the Manufacture of Organic Coatings*, 1995 edition.

NFPA 40, *Standard for the Storage and Handling of Cellulose Nitrate Motion Picture Film*, 1994 edition.

NFPA 40E, *Code for the Storage of Pyroxylin Plastic*, 1993 edition.

NFPA 43B, *Code for the Storage of Organic Peroxide Formulations*, 1993 edition.

NFPA 45, *Standard on Fire Protection for Laboratories Using Chemicals*, 1996 edition.

NFPA 51, *Standard for the Design and Installation of Oxygen-Fuel Gas Systems for Welding, Cutting, and Allied Processes*, 1992 edition.

NFPA 51A, *Standard for Acetylene Cylinder Charging Plants*, 1996 edition.

NFPA 58, *Standard for the Storage and Handling of Liquefied Petroleum Gases*, 1995 edition.

NFPA 61, *Standard for the Prevention of Fires and Dust Explosions in Agricultural and Food Products Facilities*, 1995 edition.

NFPA 75, *Standard for the Protection of Electronic Computer/Data Processing Equipment*, 1995 edition.

NFPA 82, *Standard on Incinerators and Waste and Linen Handling Systems and Equipment*, 1994 edition.

NFPA 86, *Standard for Ovens and Furnaces*, 1995 edition.

NFPA 86C, *Standard for Industrial Furnaces Using a Special Processing Atmosphere*, 1995 edition.

NFPA 88B, *Standard for Repair Garages*, 1991 edition.

NFPA 99, *Standard for Health Care Facilities*, 1996 edition.

NFPA 99B, *Standard for Hypobaric Facilities*, 1996 edition.

NFPA *101®*, *Life Safety Code®*, 1994 edition.

NFPA 120, *Standard for Coal Preparation Plants*, 1994 edition.

NFPA 122, *Standard for Fire Prevention and Control in Underground Metal and Nonmetal Mine*, 1995 edition.

NFPA 123, *Standard for Fire Prevention and Control in Underground Bituminous Coal Mines*, 1995 edition.

NFPA 130, *Standard for Fixed Guideway Transit Systems*, 1995 edition.

NFPA 150, *Standard on Fire Safety in Racetrack Stables*, 1995 edition.

NFPA 214, *Standard on Water-Cooling Towers*, 1996 edition.

NFPA 231, *Standard for General Storage*, 1995 edition.

NFPA 231C, *Standard for Rack Storage of Materials*, 1995 edition.

NFPA 231D, *Standard for Storage of Rubber Tires*, 1994 edition.

NFPA 231E, *Recommended Practice for the Storage of Baled Cotton*, 1996 edition.

NFPA 231F, *Standard for Storage of Roll Paper*, 1996 edition.

NFPA 232, *Standard for the Protection of Records*, 1995 edition.

NFPA 307, *Standard for the Construction and Fire Protection of Marine Terminals, Piers, and Wharves*, 1995 edition.

NFPA 318, *Standard for the Protection of Cleanrooms*, 1995 edition.

NFPA 409, *Standard on Aircraft Hangars*, 1995 edition.

NFPA 423, *Standard for Construction and Protection of Aircraft Engine Test Facilities*, 1994 edition.

NFPA 430, *Code for the Storage of Liquid and Solid Oxidizers*, 1995 edition.

NFPA 850, *Recommended Practice for Fire Protection for Electric Generating Plants and High Voltage Direct Current Converter Stations*, 1996 edition.

NFPA 851, *Recommended Practice for Fire Protection for Hydroelectric Generating Plants*, 1996 edition.

NFPA 1231, *Standard on Water Supplies for Suburban and Rural Fire Fighting*, 1993 edition.

11-1.3 Other Publications.

11-1.3.1 ANSI Publications. American National Standards Institute, Inc., 1450 Broadway, New York, NY 10018.

Appendix A Explanatory Material

This Appendix is not a part of the requirements of this NFPA document, but is included for informational purposes only.

A-1-1 Exception No. 2. The limitations on the type and size of storage are intended to identify the situations where tire storage is present in limited quantities and incidental to the main use of the building. Occupancies such as aircraft hangars, automobile dealers, repair garages, retail stores, automotive and truck assembly plants, mobile home assembly plants, etc., are types of facilities where miscellaneous storage could be present. The fire protection sprinkler design densities specified by NFPA 13 are adequate to provide protection to the storage heights and areas indicated. Storage beyond these heights and areas present hazards that are properly addressed by NFPA 231D and are outside the scope of NFPA 13.

A-1-4.1 Approved. The National Fire Protection Association does not approve, inspect, or certify any installations, procedures, equipment, or materials; nor does it approve or evaluate testing laboratories. In determining the acceptability of installations, procedures, equipment, or materials, the authority having jurisdiction may base acceptance on compliance with NFPA or other appropriate standards. In the absence of such standards, said authority may require evidence of proper installation, procedure, or use. The authority having jurisdiction may also refer to the listings or labeling practices of an organization concerned with product evaluations that is in a position to determine compliance with appropriate standards for the current production of listed items.

A-1-4.1 Authority Having Jurisdiction. The National Fire Protection Association does not approve, inspect, or certify any installations, procedures, equipment, or materials; nor does it approve or evaluate testing laboratories. In determining the acceptability of installations, procedures, equipment, or materials, the authority having jurisdiction may base acceptance on compliance with NFPA or other appropriate standards. In the absence of such standards, said authority may require evidence of proper installation, procedure, or use. The authority having jurisdiction may also refer to the listings or labeling practices of an organization concerned with product evaluations that is in a position to determine compliance with appropriate standards for the current production of listed items.

A-1-4.1 Listed. The means for identifying listed equipment may vary for each organization concerned with product evaluation, some of which do not recognize equipment as listed unless it is also labeled. The authority having jurisdiction should utilize the system employed by the listing organization to identify a listed.

A-1-4.2 Miscellaneous Storage. The sprinkler system design criteria for miscellaneous storage at heights below 12 ft (3.7 m) is covered by this standard in Chapters 4 and 5. Paragraph 5-2.3.1.1 describes design criteria and 4-2.2 (Table 4-2.2) describes installation requirements (area limits). These apply to all storage of 12 ft (3.7 m) or less in height.

A-1-4.2 Sprinkler System. A sprinkler system is considered to have a single system riser control valve.

A-1-4.3 Gridded System. See Figure A-1-4.3(a).

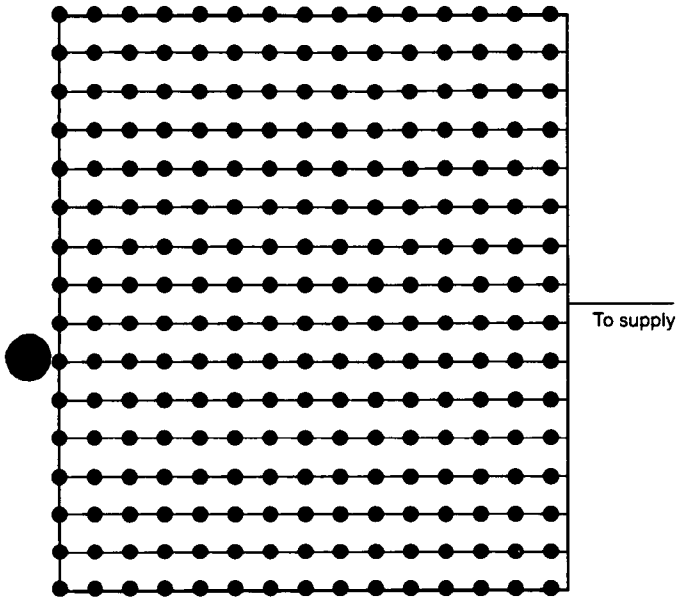

Figure A-1-4.3(a) Gridded system.

A-1-4.3 Looped System. See Figure A-1-4.3(b).

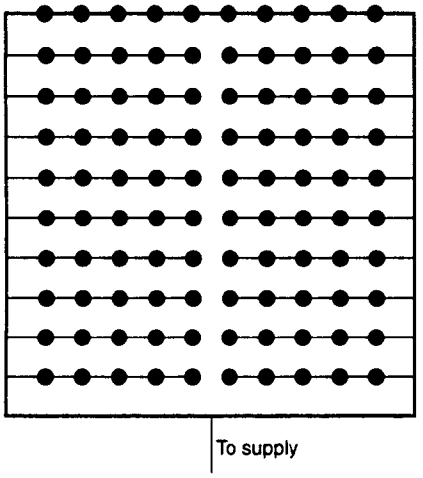

Figure A-1-4.3(b) Looped system.

A-1-4.4 See Figure A-1-4.4.

A-1-4.5.1 The Response Time Index is a measure of the sensitivity of the sprinkler's thermal element as installed in a specific sprinkler. It is usually determined by plunging a sprinkler into a heated laminar airflow within a test oven. The plunge test is not currently applicable to certain sprinklers. These sprinklers must have their thermal sensitivity determined by other standardized test methods.

The RTI is calculated using:

1. The operating time of the sprinkler,
2. The operating temperature of the sprinkler's heat-responsive element (as determined in a bath test),
3. The air temperature of the test oven,
4. The air velocity of the test oven, and
5. The sprinkler's conductivity (c) factor, which is the measure of conductance between the sprinkler's heat-responsive element and the sprinkler oven mount.

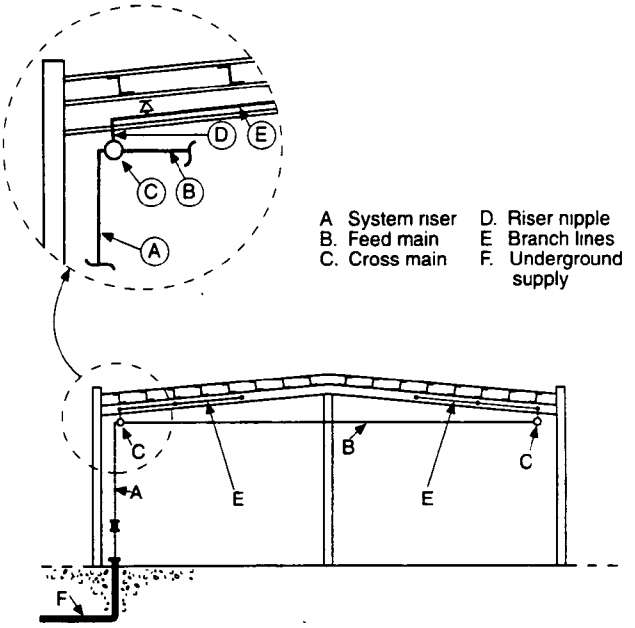

Figure A-1-4.4 Building elevation showing parts of sprinkler piping system.

Other factors affecting response include temperature rating, sprinkler position, fire exposure, and radiation.

ISO standard 6182-1 currently recognizes the RTI range of greater than 50 meter-seconds$^{1/2}$ and less than 80 meter-seconds$^{1/2}$ as special response. Such sprinklers can be recognized as special sprinklers under 4-4.9.1.

A-1-4.5.2 ESFR Sprinkler. It is important to realize that the effectiveness of these highly tested and engineered sprinklers depends on the combination of fast response and the quality and uniformity of the sprinkler discharge. It should also be realized that ESFR sprinklers cannot be relied upon to provide fire control, let alone suppression, if they are used outside the guidelines specified in 5-3.5.

A-1-4.5.2 QRES Sprinkler. Research into the development of QRES sprinklers is continuing under the auspices of the National Fire Protection Research Foundation. It is expected that the proposed design criteria will be added to the standard when a thorough analysis of the test data is completed.

A-1-4.5.4 Dry Sprinkler. Under certain ambient conditions, wet pipe systems having dry-pendent (or upright) sprinklers may freeze due to heat loss by conduction. Therefore, due consideration should be given to the amount of heat maintained in the heated space, the length of the nipple in the heated space, and other relevant factors.

A-1-4.6 Obstructed Construction. The following are examples of obstructed construction. The definitions are provided as guidance to assist the user in determining the type of construction feature:

(i) *Beam and Girder Construction.* The term "beam and girder construction" as used in this standard includes noncombustible and combustible roof or floor decks supported by wood beams of 4 in. (102 mm) or greater nominal thickness or concrete or steel beams spaced 3 to 7½ ft (0.9 to 2.3 m) on center and either supported on or framed into girders. [Where supporting a wood plank deck, this includes

semi-mill and panel construction, and where supporting (with steel framing) gypsum plank, steel deck, concrete, tile, or similar material, this includes much of the so-called noncombustible construction.]

(ii) *Composite Wood Joist Construction.* The term "composite wood joist construction" refers to wood beams of I cross section constructed of wood flanges and solid wood web, supporting a floor or roof deck. Composite wood joists may vary in depth up to 48 in. (1.2 m), may be spaced up to 48 in. (1.2 m) on centers, and may span up to 60 ft (18 m) between supports. Joist channels should be firestopped to the full depth of the joists with material equivalent to the web construction so that individual channel areas do not exceed 300 sq ft (27.9 m^2). See Figure A-1-4.6(a)(ii) for examples of composite wood joist construction.

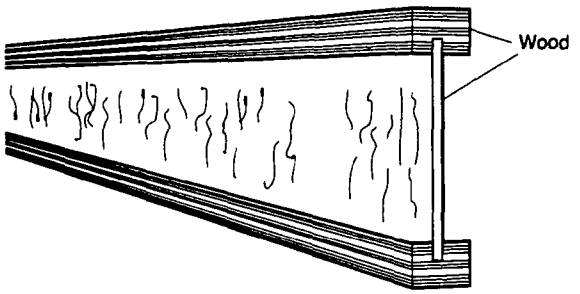

Figure A-1-4.6(a)(ii) Typical composite wood joist construction.

(iii) *Panel Construction.* The term "panel construction" as used in this standard includes ceiling panels formed by members capable of trapping heat to aid the operation of sprinklers and limited to a maximum of 300 sq ft (27.9 m^2) in area. Beams spaced more than 7½ ft (2.3 m) apart and framed into girders qualify for panel construction provided the 300-sq ft (27.9-m^2) area limitation is met.

(iv) *Semi-Mill Construction.* The term "semi-mill construction" as used in this standard refers to a modified standard mill construction, where greater column spacing is used and beams rest on girders.

(v) *Wood Joist Construction.* The term "wood joist construction" refers to solid wood members of rectangular cross section, which may vary from 2 to 4 in. (51 to 102 mm) nominal width and up to 14 in. (356 mm) nominal depth spaced up to 3 ft (0.9 m) on centers, and spanning up to 40 ft (12 m) between supports, supporting a floor or roof deck. Solid wood members less than 4 in. (102 mm) nominal width and up to 14 in. (356 mm) nominal depth, spaced more than 3 ft (0.9 m) on centers, are also considered as wood joist construction.

A-1-4.6 Unobstructed Construction. The following are examples of unobstructed construction. The definitions are provided as guidance to assist the user in determining the type of construction feature:

(i) *Bar Joist Construction.* The term "bar joist construction" refers to construction employing joists consisting of steel truss-shaped members. Wood truss-shaped members, which consist of wood top and bottom chord members not exceeding 4 in. (102 mm) in depth with steel tube or bar webs, are also defined as bar joists. Bar joist includes noncombustible or combustible roof or floor decks on bar joist construction. See Figures A-1-4.6(b)(i)1 and A-1-4.6(b)(i)2 for examples of bar joist construction.

(ii) *Open-Grid Ceilings.* Open-grid ceilings are ceilings in which the openings are ¼ in. (6.4 mm) or larger in the least

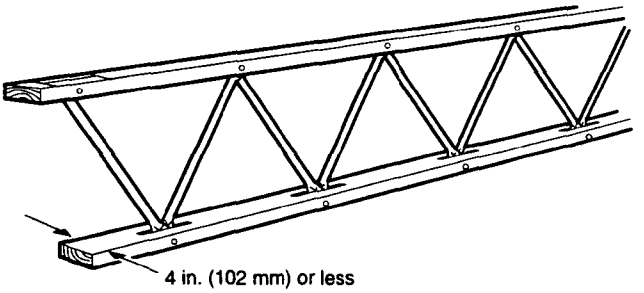

Figure A-1-4.6(b)(i)1 Wood bar joist construction.

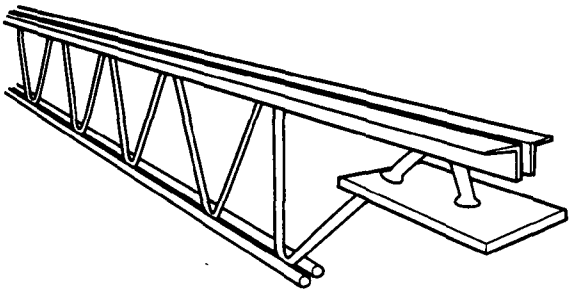

Figure A-1-4.6(b)(i)2 Open-web bar joist construction.

dimension, the thickness of the ceiling material does not exceed the least dimension of the openings, and such openings constitute at least 70 percent of the ceiling area.

(iii) *Smooth Ceiling Construction.* The term "smooth ceiling construction" as used in this standard includes:

a. Flat slab, pan-type reinforced concrete.

b. Continuous smooth bays formed by wood, concrete, or steel beams spaced more than 7½ ft (2.3 m) on centers — beams supported by columns, girders, or trusses.

c. Smooth roof or floor decks supported directly on girders or trusses spaced more than 7½ ft (2.3 m) on center.

d. Smooth monolithic ceilings of at least ¾ in. (19 mm) of plaster on metal lath or a combination of materials of equivalent fire-resistive rating attached to the underside of wood joists, wood trusses, and bar joists.

e. Open web-type steel beams, regardless of spacing.

f. Smooth shell-type roofs, such as folded plates, hyperbolic paraboloids, saddles, domes, and long barrel shells.

NOTE: In b. through f. above, combustible or noncombustible floor decks are permitted. Item b. would include standard mill construction.

g. Suspended ceilings of combustible or noncombustible construction.

h. Smooth monolithic ceilings with fire resistance less than that specified under item d. attached to the underside of wood joists, wood trusses, and bar joists.

(iv) *Standard Mill Construction.* The term "standard mill construction" as used in this standard refers to heavy timber construction as defined in NFPA 220, *Standard on Types of Building Construction.*

(v) *Wood Truss Construction.* The term "wood truss construction" refers to parallel or pitched wood chord members connected by open wood members (webbing) supporting a roof or floor deck. Trusses with steel webbing, similar to bar

joist construction, having top and bottom wood chords exceeding 4 in. (102 mm) in depth, should also be considered wood truss construction. [*See Figure A-1-4.6(b)(v).*]

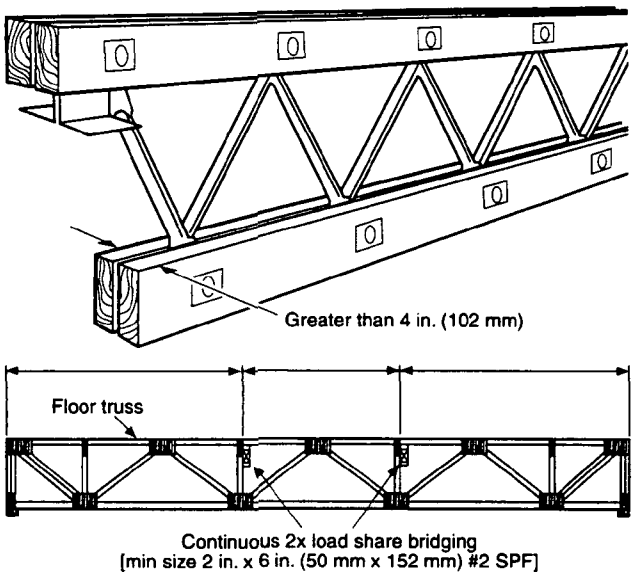

Figure A-1-4.6(b)(v) Examples of wood truss construction.

A-1-4.7 Occupancy examples in the listings as shown in the various hazard classifications are intended to represent the norm for those occupancy types. Unusual or abnormal fuel loadings or combustible characteristics and susceptibility for changes in these characteristics, for a particular occupancy, are considerations that should be weighed in the selection and classification.

The Light Hazard classification is intended to encompass residential occupancies; however, this is not intended to preclude the use of listed residential sprinklers in residential occupancies or residential portions of other occupancies.

A-1-4.7.1 Light Hazard Occupancies include occupancies having conditions similar to:

Churches
Clubs
Eaves and overhangs, if combustible construction with no combustibles beneath
Educational
Hospitals
Institutional
Libraries, except large stack rooms
Museums
Nursing or convalescent homes
Office, including data processing
Residential
Restaurant seating areas
Theaters and Auditoriums excluding stages and prosceniums
Unused attics.

A-1-4.7.2.1 Ordinary Hazard Occupancies (Group 1) include occupancies having conditions similar to:

Automobile parking and showrooms
Bakeries
Beverage manufacturing
Canneries
Dairy products manufacturing and processing
Electronic plants
Glass and glass products manufacturing
Laundries
Restaurant service areas.

A-1-4.7.2.2 Ordinary Hazard Occupancies (Group 2) include occupancies having conditions similar to:

Cereal mills
Chemical plants — ordinary
Confectionery products
Distilleries
Dry cleaners
Feed mills
Horse stables
Leather goods manufacturing
Libraries — large stack room areas
Machine shops
Metal working
Mercantile
Paper and pulp mills
Paper process plants
Piers and wharves
Post offices
Printing and publishing
Repair garages
Stages
Textile manufacturing
Tire manufacturing
Tobacco products manufacturing
Wood machining
Wood product assembly.

A-1-4.7.3.1 Extra Hazard Occupancies (Group 1) include occupancies having conditions similar to:

Aircraft hangars (except as governed by NFPA 409)
Combustible hydraulic fluid use areas
Die casting
Metal extruding
Plywood and particle board manufacturing
Printing [using inks having flash points below 100°F (37.9°C)]
Rubber reclaiming, compounding, drying, milling, vulcanizing
Saw mills
Textile picking, opening, blending, garnetting, carding, combining of cotton, synthetics, wool shoddy, or burlap
Upholstering with plastic foams.

Extra Hazard Occupancies (Group 2) include occupancies having conditions similar to:

Asphalt saturating
Flammable liquids spraying
Flow coating
Manufactured home or modular building assemblies (where finished enclosure is present and has combustible interiors)
Open oil quenching
Plastics processing
Solvent cleaning
Varnish and paint dipping.

A-1-4.7.4.1 Other NFPA standards contain design criteria for fire control or fire suppression (*see 1-4.7.4 and Chapter 11*). While these may form the basis of design criteria, this standard describes the methods of design, installation, fabrication, calculation, and evaluation of water supplies that should be used for the specific design of the system.

A-2-1.1 Included among items requiring listing are sprinklers, some pipe and some fittings, hangers, alarm devices, valves controlling flow of water to sprinklers, valve tamper switches, and gauges.

A-2-2.4 Information regarding the highest temperature that may be encountered in any location in a particular installation may be obtained by use of a thermometer that will register the highest temperature encountered; it should be hung for several days in the location in question, with the plant in operation.

A-2-2.5.1 Examples of such locations are paper mills, packing houses, tanneries, alkali plants, organic fertilizer plants, foundries, forge shops, fumigation, pickle and vinegar works, stables, storage battery rooms, electroplating rooms, galvanizing rooms, steam rooms of all descriptions including moist vapor dry kilns, salt storage rooms, locomotive sheds or houses, driveways, areas exposed to outside weather such as piers and wharves exposed to salt air, areas under sidewalks, around bleaching equipment in flour mills, all portions of cold storage buildings where a direct ammonia expansion system is used, and portions of any plant where corrosive vapors prevail.

A-2-2.5.2 Care should be taken in the handling and installation of wax-coated or similar sprinklers to avoid damaging the coating.

A-2-2.5.3 Painting of sprinklers may retard the thermal response of the heat-responsive element, may interfere with the free movement of parts, and may render the sprinkler inoperative. Moreover, painting may invite the application of subsequent coatings, thus increasing the possibility of a malfunction of the sprinkler.

A-2-2.6.2 The use of the wrong type of escutcheon with recessed or flush type sprinklers can result in severe disruption of the spray pattern, which can destroy the effectiveness of the sprinkler.

A-2-2.7 Sprinklers under open gratings should be provided with shields. Shields over automatic sprinklers should not be less, in least dimension, than four times the distance between the shield and fusible element, except special sprinklers incorporating a built-in shield need not comply with this recommendation if listed for the particular application.

A-2-3.2 See Table A-2-3.2.

A-2-3.4 See Table A-2-3.4.

A-2-3.5 Other types of pipe and tube that have been investigated and listed for sprinkler applications include lightweight steel pipe and thermoplastic pipe and fittings. While these products may offer advantages, such as ease of handling and installation, cost effectiveness, reduction of friction losses, and improved corrosion resistance, it is important to recognize that they also have limitations that are to be considered by those contemplating their use or acceptance.

With respect to lightweight steel pipe, corrosion studies have shown that, in comparison to Schedule 40 pipe, its effective life may be reduced, the level of reduction being related to its wall thickness. Further information with respect to corrosion resistance is contained in the individual listings of such products.

With respect to thermoplastic pipe and fittings, exposure of such piping to elevated temperatures in excess of that for which it has been listed may result in distortion or failure. Accordingly, care must be exercised when locating such systems to ensure that the ambient temperature, including seasonal variations, does not exceed the rated value.

The upper service temperature limit of currently listed CPVC sprinkler pipe is 150°F (65.5°C) at 175 psi (1206 kPa). The upper service temperature limit of currently listed polybutylene sprinkler pipe is 120°F (49°C) at 175 psi (1206 kPa).

Not all pipe or tube made to ASTM F 442 and D 3309 as described in 2-3.5 is listed for fire sprinkler service. Listed pipe is identified by the logo of the listing agency.

Not all fittings made to ASTM F 437, F 438, and F 439 as described in 2-4.2 are listed for fire sprinkler service. Listed fittings are identified by the logo of the listing agency.

Consideration must also be given to the possibility of exposure of the piping to elevated temperatures during a fire. The survival of thermoplastic piping under fire conditions derives primarily from the cooling effect of the discharge from the sprinklers it serves. As this discharge may not occur simultaneously with the rise in ambient temperature and, under some circumstances, may be delayed for periods beyond the tolerance of the piping, protection in the form of a fire-resistant membrane is generally required. (Some listings do provide for the use of exposed piping in conjunction with residential or quick-response sprinklers, but only under specific, limited installation criteria.) Where protection is required, it is described in the listing information for each individual product, and the requirements given must be followed. Equally important, such protection must be maintained. Removal of, for example, one or more panels in a lay-in ceiling can expose piping in the concealed space to the possibility of failure in the event of a fire. Similarly, the relocation of openings through protective ceilings that expose the pipe to heat, inconsistent with the listing, would place the system in jeopardy. The potential for loss of the protective membrane under earthquake conditions should also be considered.

While the listings of thermoplastic piping do not prohibit its installation in combustible concealed spaces where the provision of sprinkler protection is not required, and while the statistical record of fire originating in such spaces is low, it should be recognized that the occurrence of a fire in such a space could result in failure of the piping system.

The investigation of pipe and tube other than described in Table 2-3.1 should involve consideration of many factors, including:

(a) Pressure rating.

(b) Beam strength (hangers).

(c) Unsupported vertical stability.

(d) Movement during sprinkler operation (affecting water distribution).

(e) Corrosion (internal and external), chemical and electrolytic.

(f) Resistance to failure when exposed to elevated temperatures.

(g) Methods of joining (strength, permanence, fire hazard).

(h) Physical characteristics related to integrity during earthquakes.

Table A-2-3.2 Steel Pipe Dimensions

Nominal Pipe Size	Outside Diameter		Schedule 10[1] Inside Diameter		Schedule 10[1] Wall Thickness		Schedule 30 Inside Diameter		Schedule 30 Wall Thickness		Schedule 40 Inside Diameter		Schedule 40 Wall Thickness	
in.	in.	(mm)	in.	(mm)	in.	(mm)	in.	(mm)	in.	(mm)	in.	(mm)	in.	(mm)

For SI Units: 1 in. = 25.4 mm.

A-2-4.2 Rubber-gasketed pipe fittings and couplings should not be installed where ambient temperatures can be expected to exceed 150°F (66°C) unless listed for this service. If the manufacturer further limits a given gasket compound, those recommendations should be followed.

A-2-4.4 Listed flexible connections are permissible and encouraged for sprinkler installations in racks to reduce the possibility of physical damage. Where flexible tubing is used, it should be located so that it will be protected against mechanical injury.

A-2-5.1.2 Some steel piping material having lesser wall thickness than specified in 2-5.1.2 has been listed for use in sprinkler systems where joined with threaded connections. The service life of such products may be significantly less than that of Schedule 40 steel pipe, and it should be determined if this service life will be sufficient for the application intended.

All such threads should be checked by the installer using working ring gauges conforming to the Basic Dimensions of Ring Gauges for USA (American) Standard Taper Pipe Threads, NPT, as per ANSI/ASME B1.20.1, Table 8.

A-2-5.2 See Figure A-2-5.2(a) and Figure A-2-5.2(b).

A-2-5.2.2 Cutting and welding operations account for 4 percent of fires each year in nonresidential properties and 8 percent in industrial and manufacturing properties. In-place welding of sprinkler piping introduces a significant hazard that can normally be avoided by shop-welding the piping and installing the welded sections with mechanical fittings. As a result, the standard requires that all piping be shop-welded. When such situations cannot be avoided, the exceptions outline procedures and practices that minimize the increase in hazard.

A-2-5.2.5(a) Listed, shaped, contoured nipples meet the definition of fabricated fittings.

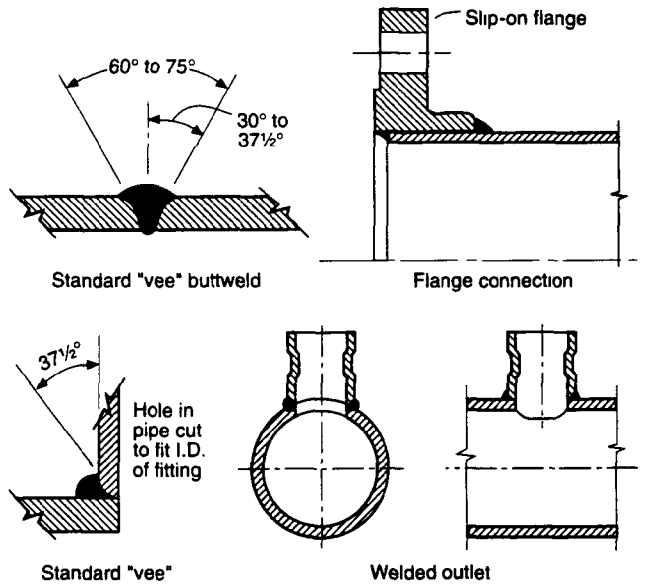

Figure A-2-5.2(a) Acceptable weld joints.

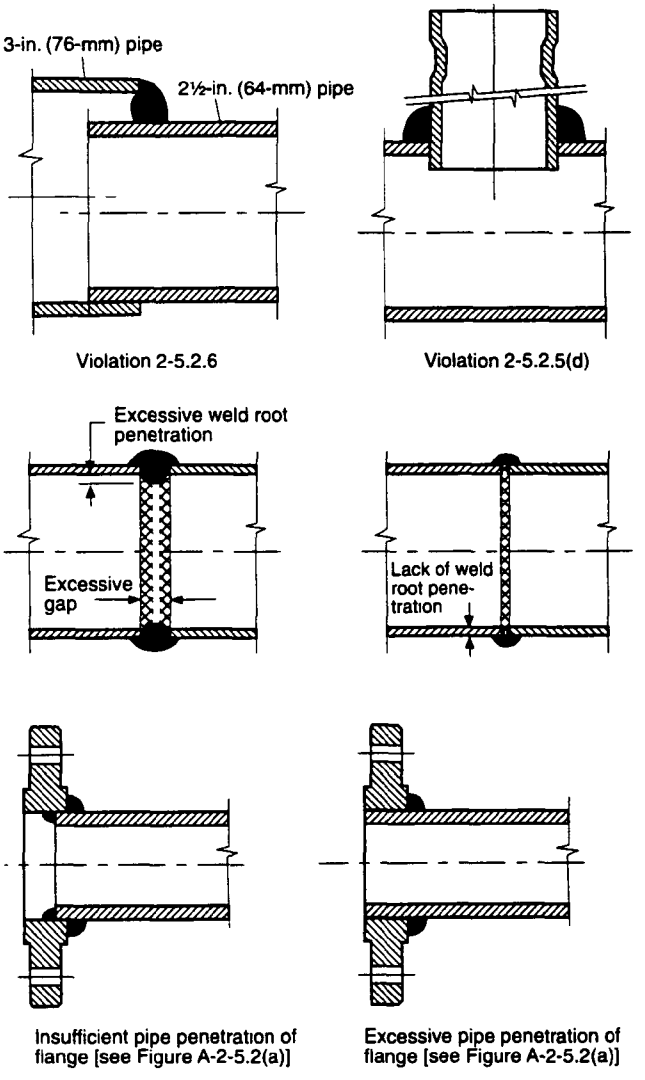

Figure A-2-5.2(b) Unacceptable weld joints.

A-2-5.4 The fire hazard of the brazing and soldering processes should be suitably safeguarded.

A-2-5.4.1 Soldering fluxes manufactured to the specifications required by Table 2-3.1 are unlikely to cause damage to the seats of sprinklers. When brazing flux is used, it must be of a type not likely to damage the seats of sprinklers.

A-2-6.1 See Figure A-2-6.1.

A-2-6.1.5 Table 2-6.1.5(a) assumes that the load from 15 ft (5 m) of water-filled pipe, plus 250 lb (114 kg), is located at the midpoint of the span of the trapeze member, with a maximum allowable bending stress of 15 KSI (111 kg). If the load is applied at other than the midpoint, for the purpose of sizing the trapeze member, an equivalent length of trapeze may be used, derived from the formula

$$L = \frac{4ab}{a + b}$$

where:

L = equivalent length
a = distance from one support to the load
b = distance from the other support to the load.

Where multiple mains are to be supported or multiple trapeze hangers are provided in parallel, the required or available section modulus may be added.

A-2-6.1.7 The rules covering the hanging of sprinkler piping take into consideration the weight of water-filled pipe plus a safety factor. No allowance has been made for the hanging of nonsystem components from sprinkler piping.

A-2-6.3.1 Powder-driven studs should not be used in steel of less than $^3/_{16}$ in. (4.8 mm) total thickness.

A-2-6.3.3 The ability of concrete to hold the studs varies widely according to type of aggregate, quality of concrete, and proper installation.

A-2-7.3 The intent of this section is to provide assistance in determining the area of a building served by a particular control valve.

A-2-9.2.4 The surge of water when the valve trips may seriously damage the device.

A-2-9.3.1 Audible alarms are normally located on the outside of the building. Listed electric gongs, bells, horns, or sirens inside the building or a combination inside and outside are sometimes advisable.

A-2-9.3.2 All alarm apparatus should be so located and installed that all parts are accessible for inspection, removal, and repair and should be substantially supported.

The water motor gong bell mechanism should be protected from weather-related elements such as rain, snow, or ice. To the extent practicable, they should also be protected from other influencing factors such as birds or other small animals that might attempt to nest in such devices.

A-2-9.5 Switches that will silence electric alarm-sounding devices by interruption of electrical current are not desirable; however, if such means are provided, then the electrical alarm-sounding device circuit should be arranged so that, when the sounding device is electrically silenced, that fact should be indicated by means of a conspicuous light located in the vicinity of the riser or alarm control panel. This light should remain in operation during the entire period of the electrical circuit interruption.

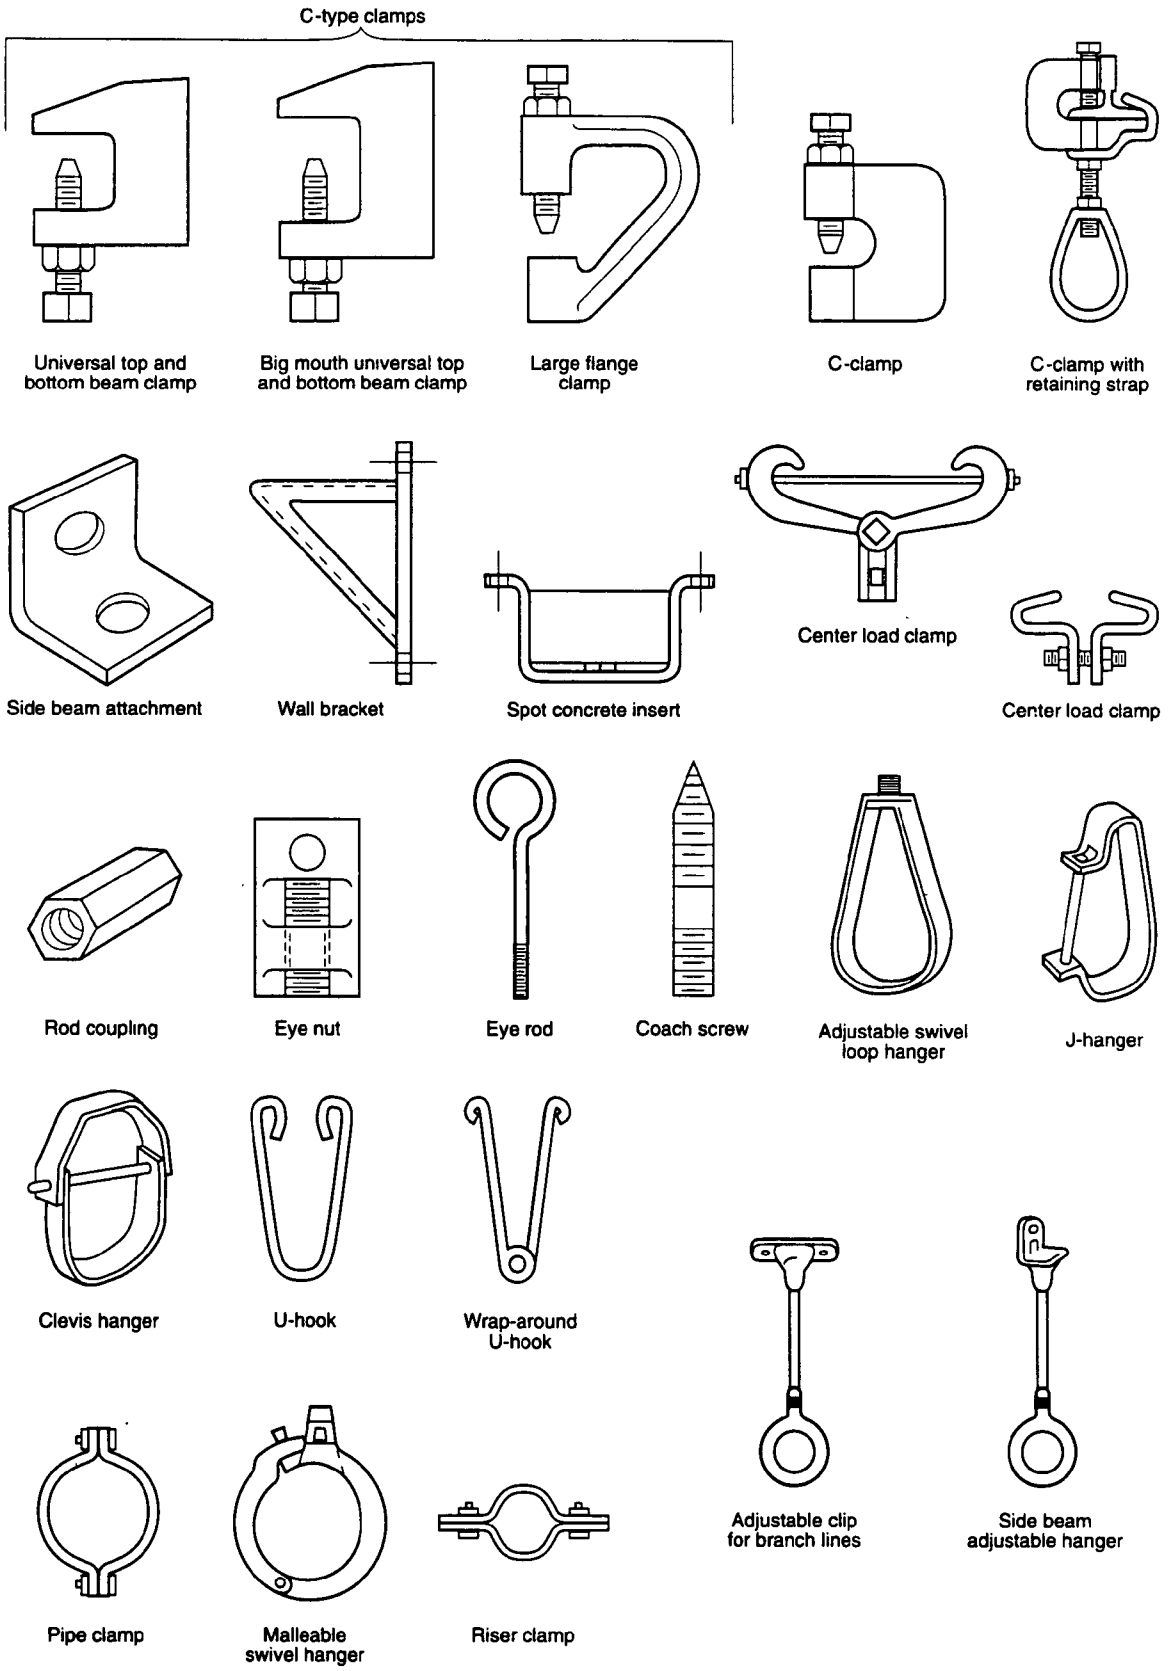

Figure A-2-6.1 Common types of acceptable hangers.

A-3-2 A dry pipe system should be installed only where heat is not adequate to prevent freezing of water in all or sections of the system. Dry pipe systems should be converted to wet pipe systems when they become unnecessary because adequate heat is provided. Sprinklers should not be shut off in cold weather.

Where two or more dry pipe valves are used, systems preferably should be divided horizontally to prevent simultaneous operation of more than one system and the resultant increased time delay in filling systems and discharging water, plus receipt of more than one waterflow alarm signal.

Where adequate heat is present in sections of the dry pipe system, consideration should be given to dividing the system into a separate wet pipe system and dry pipe system. Minimized use of dry pipe systems is desirable where speed of operation is of particular concern.

A-3-2.2 Exception No. 1. Installation limitations of listed dry pendent sprinklers can vary with different products. Limitations should be included in product installation instructions to warn against the potential accumulation of water, scale, and sediment from collecting at the sprinkler.

A-3-2.3 The capacities of the various sizes of pipe given in Table A-3-2.3 are for convenience in calculating the capacity of a system.

Table A-3-2.3 Capacity of One Foot of Pipe (Based on Actual Internal Pipe Diameter)

Nominal Diameter	Gal Sch 40	Gal Sch 10	Nominal Diameter	Gal Sch 40	Gal Sch 10
¾ in.	0.028	—	3 in.	0.383	0.433
1 in.	0.045	0.049	3½ in.	0.513	0.576
1¼ in.	0.078	0.085	4 in.	0.660	0.740
1½ in.	0.106	0.115	5 in.	1.040	1.144
2 in.	0.174	0.190	6 in.	1.501	1.649[1]
2½ in.	0.248	0.283	8 in.	2.66[3]	2.776[2]

For SI Units 1 in = 25.4 mm; 1 ft = 0.3048 m; 1 gal = 3.785 L

[1] 0.134 Wall Pipe.
[2] 0.188 Wall Pipe.
[3] Schedule 30.

A-3-2.3.1 The 60-sec limit does not apply to dry systems with capacities of 500 gal (1893 L) or less, nor to dry systems with capacities of 750 gal (2839 L) or less if equipped with a quick-opening device.

A-3-2.5 The dry pipe valve should be located in an accessible place near the sprinkler system it controls. Where exposed to cold, the dry pipe valve should be located in a valve room or enclosure of adequate size to properly service equipment.

A-3-2.6.2 The compressor should draw its air supply from a place where the air is dry and not too warm. Moisture from condensation can cause trouble in the system.

A-3-3.1 Conditions of occupancy or special hazards might require quick application of large quantities of water, and in such cases deluge systems might be needed.

Fire detection devices should be selected to assure operation, yet guard against premature operation of sprinklers, based on normal room temperatures and draft conditions.

In locations where ambient temperature at the ceiling is high from heat sources other than fire conditions, heat-responsive devices that operate at higher than ordinary temperature and are capable of withstanding the normal high temperature for long periods of time should be selected.

Where corrosive conditions exist, materials or protective coatings that resist corrosion should be used.

To help avoid ice formation in piping due to accidental tripping of dry pipe valves in cold storage rooms, a deluge automatic water control valve can be used on the supply side of the dry pipe valve. Where this combination is employed:

(a) Dry systems can be manifolded to a deluge valve, the protected area not exceeding 40,000 sq ft (3716 m^2). The distance between valves should be as short as possible to minimize water hammer.

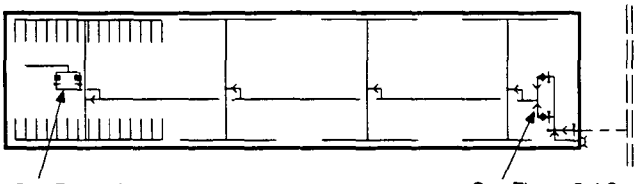
(b) The dry pipe valves should be pressurized to 50 psi (3.4 bars) to reduce the possibility of dry pipe valve operation from water hammer.

A-3-3.2.4 Exception No. 1. See A-3-2.2 Exception No. 1.

A-3-3.3 Where 8-in. (203-mm) piping is employed to reduce friction losses in a system operated by fire detection devices, a 6-in. (152-mm) preaction or deluge valve and 6-in. (152-mm) gate valve between tapered reducers should be permitted.

A-3-4.1 Systems described by Section 3-4 are special types of non-interlocking preaction systems intended for use in, but not limited to, structures where a number of dry pipe valves would be required if a dry pipe system were installed. These systems are primarily used in piers and wharves.

A-3-4.1.1 See Figure A-3-4.1.1.



Typical piping layout
(in one-story shed–4 section system)

Figure A-3-4.1.1 Typical piping layout for combined dry pipe and preaction sprinkler system.

A-3-4.1.4 Exception No. 1. See A-3-2.2 Exception No. 1.

A-3-4.3 See Figure A-3-4.3.

A-3-5.1 Antifreeze solutions may be used for maintaining automatic sprinkler protection in small unheated areas. Antifreeze solutions are recommended only for systems not exceeding 40 gal (151 L).

Because of the cost of refilling the system or replenishing small leaks, it is advisable to use small dry valves where more than 40 gal (151 L) are to be supplied.

A-3-5.2 Listed CPVC sprinkler pipe and fittings should be protected from freezing with glycerine only. The use of diethylene, ethylene, or propylene glycols are specifically prohibited. Laboratory testing shows that glycol-based antifreeze solutions present a chemical environment detrimental to CPVC.

A-3-5.2.3 Beyond certain limits, increased proportion of antifreeze does not lower the freezing point of solution. (*See Figure A-3-5.2.3.*)

Glycerine, diethylene glycol, ethylene glycol, and propylene glycol should never be used without mixing with water

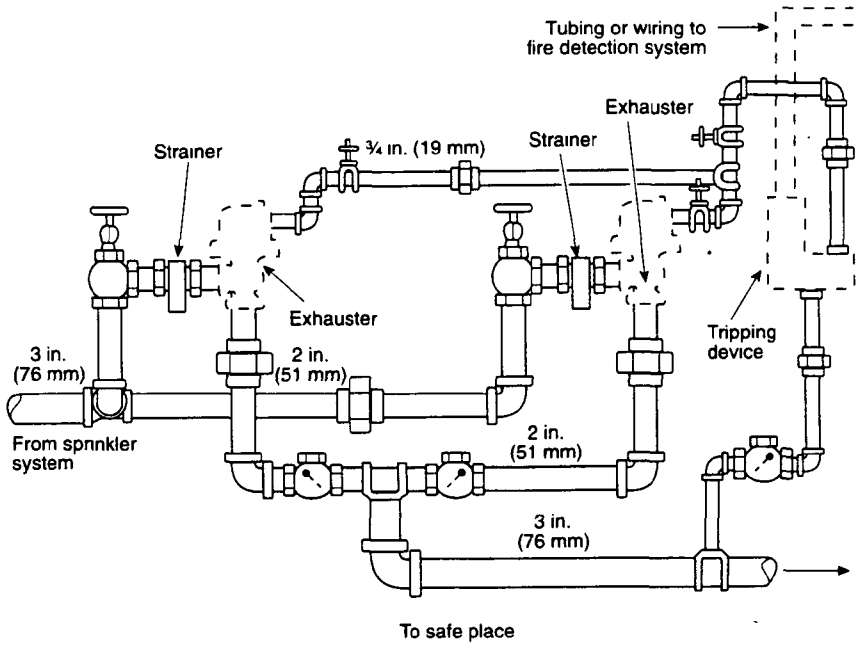


Figure A-3-4.3 Arrangement of air exhaust valves for combined dry pipe and preaction sprinkler system.

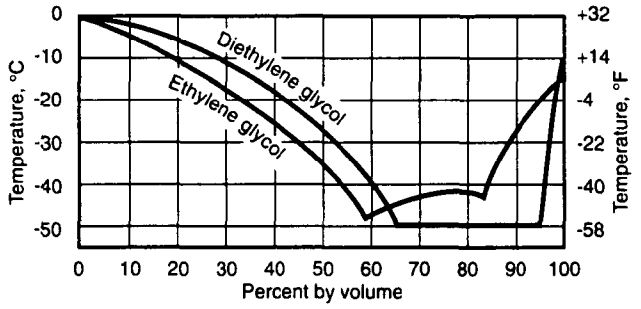

Figure A-3-5.2.3 Freezing points of water solutions of ethylene glycol and diethylene glycol.

in proper proportions, because these materials tend to thicken near 32°F (0°C).

A-3-5.3.1 All permitted antifreeze solutions are heavier than water. At the point of contact (interface), the heavier liquid will be below the lighter liquid, preventing diffusion of water into the unheated areas.

A-3-6.1.2 Outlets should be provided at critical points on sprinkler system piping to accommodate attachment of pressure gauges for test purposes.

A-3-7.2.1 The water supply should be capable of furnishing the total demand for all exposure sprinklers operating simultaneously for protection against the exposure fire under consideration for a duration of not less than 60 min.

A-3-8 Careful installation and maintenance, and some special arrangements of piping and devices as outlined in this section, are needed to avoid the formation of ice and frost inside piping in cold storage rooms that will be maintained at or below 32°F (0°C). Conditions are particularly favorable to condensation where pipes enter cold rooms from rooms having temperatures above freezing.

Whenever the opportunity offers, fittings such as those specified in 3-8.1 and illustrated in Figures A-3-8(a) and (b), as well as flushing connections, should be provided in existing systems.

Where possible, risers should be located in stair towers or other locations outside of refrigerated areas. This would reduce the probabilities of ice or frost formation within the riser (supply) pipe.

Cross mains should be connected to risers or feed mains with flanges. In general, flanged fittings should be installed at points that would allow easy dismantling of the system. Split ring or other easily removable types of hangers will facilitate the dismantling.

Because it is not practical to allow water to flow into sprinkler piping in spaces that might be constantly subject to freezing, or where temperatures must be maintained at or below 40°F (4.4°C), it is important that means be provided at the time of system installation to conduct trip tests on dry pipe valves that service such systems. NFPA 25, *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems*, contains requirements in this matter.[101]

A-3-8.2 The requirements in this section are intended to minimize the chances of ice plug formation inside sprinkler system piping protecting freezers.

A-3-8.2.4 A higher degree of preventing ice blocks can be achieved by lowering moisture of the air supply entering the refrigerated space to a pressure dew point no greater than 20°F (−6.6°C) below the lowest nominal temperature of the refrigerated space. The pressure dew point of the air supply can cause moisture to condense and freeze in sprinkler pipe even when the air supply is from the freezer. One method of reducing moisture content of the air by use of air drying systems is illustrated in Figure A-3-8.2.4.

When compressors and dryers are used for an air supply, consideration should be given to pressure requirements of

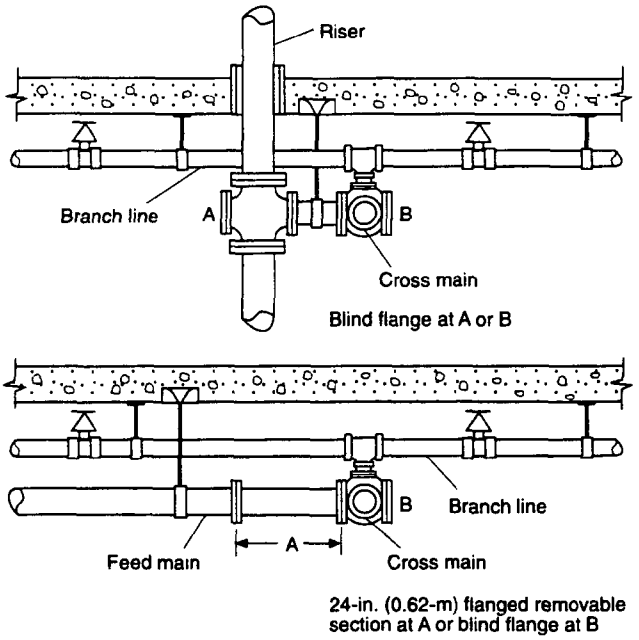

Figure A-3-8(a) Fittings to facilitate examination of feed mains, risers, and cross mains in freezing areas. Top: elevation at riser and cross main. Bottom: elevation at feed main and cross main.

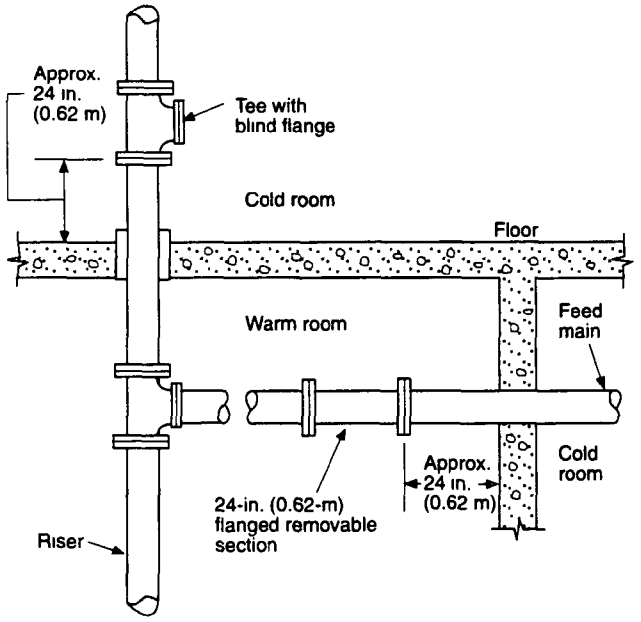

Figure A-3-8(b) Fittings in feed main or riser passing through wall or floor from warm room to cold room.

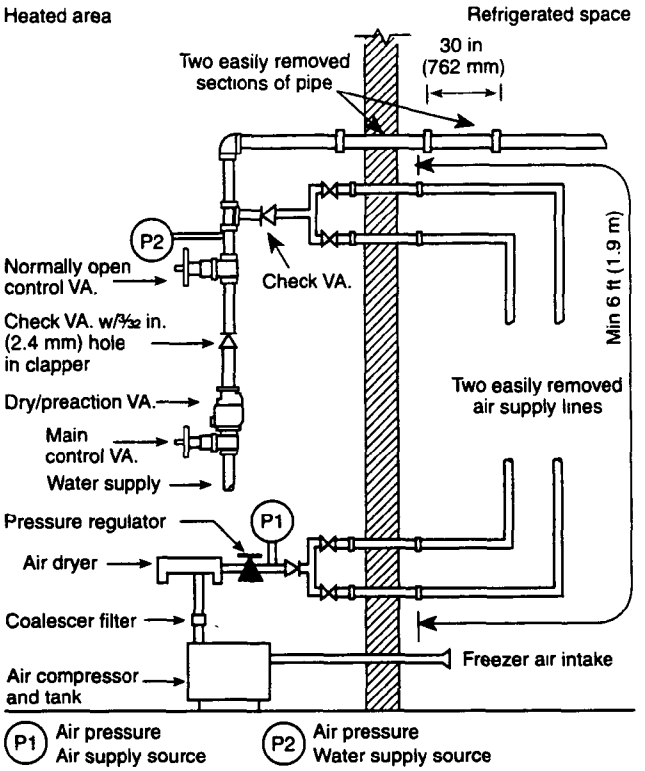
the regenerative dryers, compressor size, air pressure regulator capacity, and air fill rate. Application of these factors could necessitate use of increased air pressures and larger air compressor.

The compressed air supply should be properly prepared prior to entering a regenerative-type air dryer, such as minimum air pressure, maximum inlet air temperature, and proper filtration of compressed air.

A-3-8.2.5 A major contributing factor of introducing moisture in the system piping comes from excessive air compressor operation caused by system leakage. Where excessive compressor operation is noted or ice is accumulated in the air supply piping, the system should be checked for leakage and appropriate corrective action should be taken.



1. If pressure gauge P1 and P2 do not indicate equal pressures, it could mean the air line is blocked or the air supply is malfunctioning.
2. Air dryer and coalescer filter not required when system piping capacity is less than 250 gal.

Figure A-3-8.2.4 Refrigerator area sprinkler systems to minimize the chances of developing ice plugs.

A-3-8.2.7 The dual lines feeding the system air entering the cold area is intended to facilitate continued service of the system when one line is removed for inspection. It should be noted that, when using a system as described in Figure A-3-8.2.4, differences in the pressures at gauge P1 and gauge P2 indicate blockage in the air supply line or other malfunctions.

A-3-9.2 See Figure A-3-9.2.

A-4-1 The installation requirements are specific for the normal arrangement of structural members. There will be arrangements of structural members not specifically detailed by the requirements. By applying the basic principles, layouts for such construction can vary from specific illustrations, provided the maximum specified for the spacing and location of sprinklers (Section 4-4) are not exceeded.

Where buildings or portions of buildings are of combustible construction or contain combustible material, standard fire barriers should be provided to separate the areas that are sprinkler protected from adjoining unsprinklered areas. All openings should be protected in accordance with applicable standards, and no sprinkler piping should be placed in an unsprinklered area unless the area is permitted to be unsprinklered by this standard.

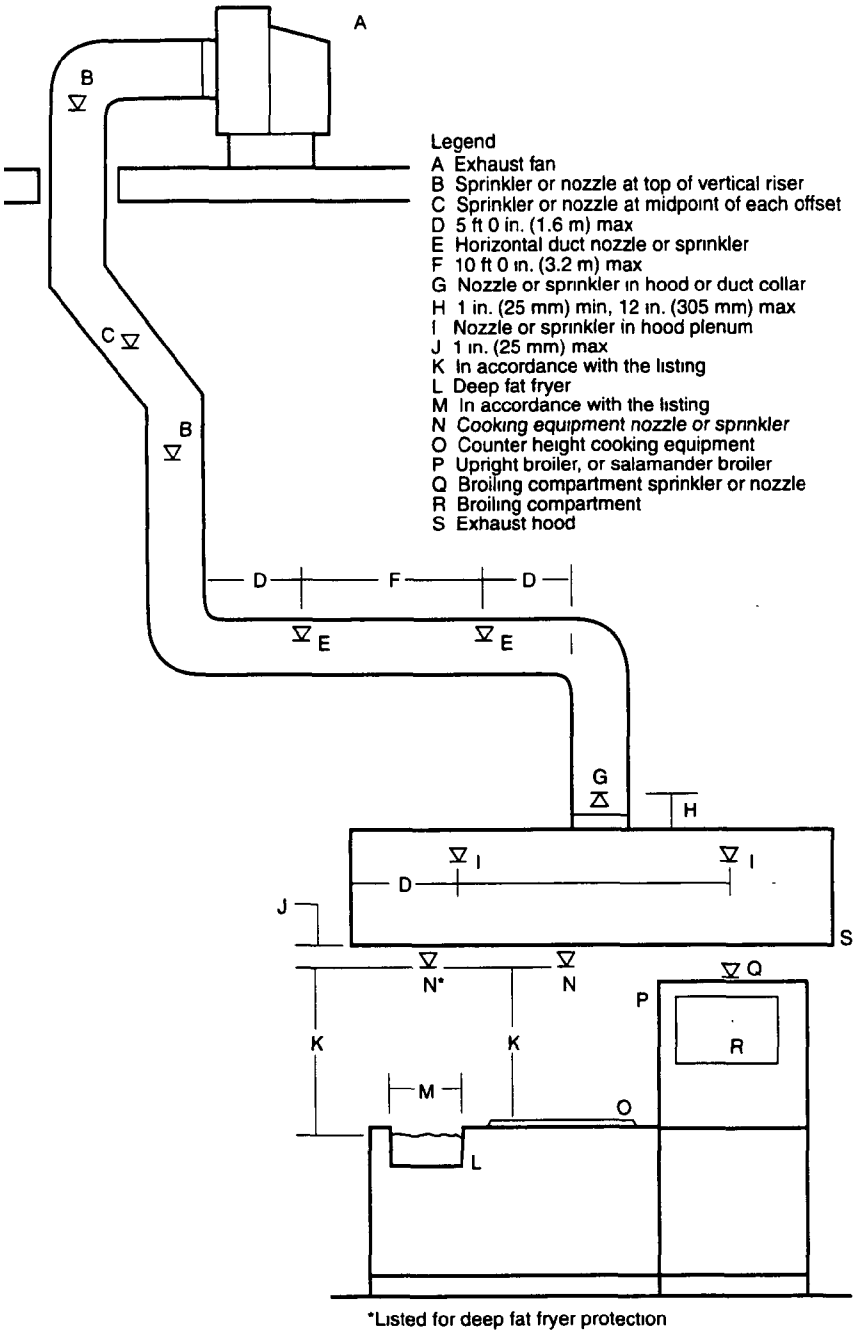


Figure A-3-9.2 Typical installation showing automatic sprinklers or automatic nozzles being used for the protection of commercial cooking equipment and ventilation systems.

Water supplies for partial systems should be designed with consideration to the fact that in a partial system more sprinklers might be opened in a fire that originates in an unprotected area and spreads to the sprinklered area than would be the case in a completely protected building. Fire originating in a nonsprinklered area might overpower the partial sprinkler system.

Where sprinklers are installed in corridors only, sprinklers should be spaced up to the maximum of 15 ft (4.5 m) along the corridor, with one sprinkler opposite the center of any door or pair of adjacent doors opening onto the corridor, and with an additional sprinkler installed inside each adjacent room above the door opening. Where the sprinkler in the adjacent room provides full protection for that space, an additional sprinkler is not required in the corridor adjacent to the door.

A-4-1.1 This standard contemplates full sprinkler protection for all areas. Other NFPA standards that mandate sprinkler installation might not require sprinklers in certain areas. The requirements of this standard should be used

insofar as they are applicable. The authority having jurisdiction should be consulted in each case.

A-4-1.2 The components need not be open or exposed. Doors, removable panels, or valve pits can satisfy this need. Such equipment should not be obstructed by such permanent features as walls, ducts, columns, or direct burial.

A-4-3.1.1 The evaluation for usage should be based upon a review of available technical data.

A-4-3.1.2 This requirement is to minimize the obstruction of the discharge pattern.

A-4-4 The selection of a sprinkler type will vary by occupancy. Where more than one type of sprinkler is used within a compartment, sprinklers with similar response characteristics should be used (i.e., standard or quick response). However, some hazards might benefit from designs that include the use of both standard and quick-response sprinklers. Examples include rack storage protected by standard-response ceiling sprinklers and quick-response in-rack sprinklers. Another case might include opening protection using closely spaced quick-response sprinklers with standard-response sprinklers in the adjoining areas. Other designs can be compromised when sprinklers of differing sensitivity are mixed. An example is a system utilizing ESFR sprinklers adjacent to a system using high temperature standard-response sprinklers as might be found in a warehouse. In this case a fire occurring near the boundary might open ESFR sprinklers, which would not be contemplated in the standard-response system design.

A-4-4.5.1 The response and water distribution pattern of listed residential sprinklers have been shown by extensive fire testing to provide better control than spray sprinklers in residential occupancies. These sprinklers are intended to prevent flashover in the room of fire origin, thus improving the chance for occupants to escape or be evacuated.

The protection area for residential sprinklers is defined in the listing of the sprinkler as a maximum square or rectangular area. Listing information is presented in even 2-ft (.65-m) increments from 12 ft to 20 ft (3.9 m to 6.5 m). When a sprinkler is selected for an application, its area of coverage must be equal to or greater than both the length and width of the hazard area. For example, if the hazard to be protected is a room 13 ft 6 in. (4.4 m) wide and 17 ft 6 in. (5.6 m) long, a sprinkler that is listed to protect a rectangular area of 14 ft × 18 ft (4.5 m × 5.8 m) or a square area of 18 ft × 18 ft (5.8 m × 5.8 m) must be selected. The flow used in the calculations is then selected as the flow required by the listing for the selected coverage.

A-4-4.7.2 This requirement is to avoid scale accumulation.

A-4-4.9.1 Tests of standard sprinklers by approved laboratories have traditionally encompassed a fire test using a 350-lb (160-kg) wood crib and water distribution tests in which water is collected in pans from several arrangements of sprinklers to evaluate distribution under nonfire conditions.

Tests of special sprinklers are customized to evaluate responsiveness, distribution, and other unique characteristics of the sprinkler to control or extinguish. These include variables such as:

(a) The location of the fire relative to the sprinklers, i.e., below 1 sprinkler or between 2, 4, or 6 sprinklers,

(b) Fire conditions that encompass a variety of fire growth rates representative of anticipated conditions of use,

(c) Tests of room areas where sprinklers are expected to function in multiple arrays,

(d) Adverse conditions of use, i.e., pipe shadows or other obstructions to discharge,

(e) Effect of a fire plume on water distribution and discharge under a variety of heat release rates.

A-4-5.5.2 Where of a depth that will obstruct the spray discharge pattern, girders, beams, or trusses forming narrow pockets of combustible construction along walls may require additional sprinklers.

A-4-5.5.3 Frequently, additional sprinkler equipment can be avoided by reducing the width of decks or galleries and providing proper clearances. Slatting of decks or walkways or the use of open grating as a substitute for automatic sprinklers thereunder is not acceptable. The use of cloth or paper dust tops for rooms forms obstruction to water distribution. If dust tops are used, the area below should be sprinklered.

A-4-6.3.2 See Figure A-4-6.3.2.

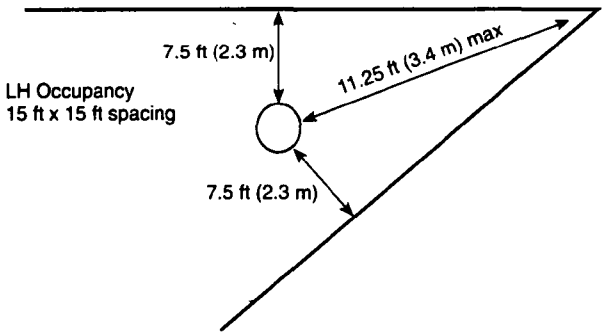

Figure A-4-6.3.2 Maximum distance from walls.

A-4-6.3.2.1 Exception. An example of sprinklers in small rooms for hydraulically designed and pipe schedule systems is shown in Figure A-4-6.3.2 Exception (a), and examples for hydraulically designed systems only are shown in Figures A-4-6.3.2 Exception (b), (c), and (d).

A-4-6.4.1.2 Exception No. 4. For concrete joists spaced less than 3 ft (.91 m) on center, the rules for obstructed construction shown in 4-6.4.1.2 apply. (*See Figure A-4-6.4.1.2 Exception No. 4.*)

A-4-6.4.1.3 Saw-toothed roofs have regularly spaced monitors of saw tooth shape, with the nearly vertical side glazed and usually arranged for venting. Sprinkler placement is limited to a maximum of 3 ft (0.91 m) down the slope from the peak because of the effect of venting on sprinkler sensitivity.

A-4-6.4.2 On sprinkler lines larger than 2 in. (51 mm), consideration should be given to the distribution interference caused by the pipe, which can be minimized by installing sprinklers on riser nipples or installing sprinklers in the pendent position.

A-4-6.5.3 See A-4-5.5.3.

A-4-6.5.4 The distances given in Table 4-6.5.4 were determined through tests in which privacy curtains with either a solid fabric or close mesh [¼ in. (6.4 mm)] top panel were

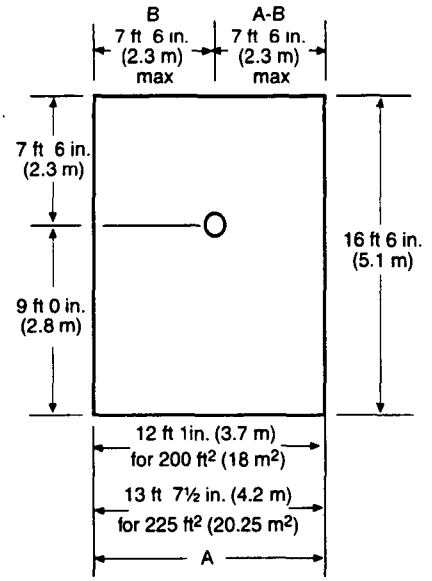

Figure A-4-6.3.2 Exception (a) Small room provision.

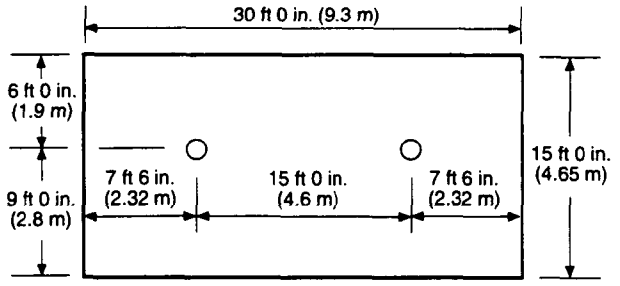

Figure A-4-6.3.2 Exception (b) Small room provision.

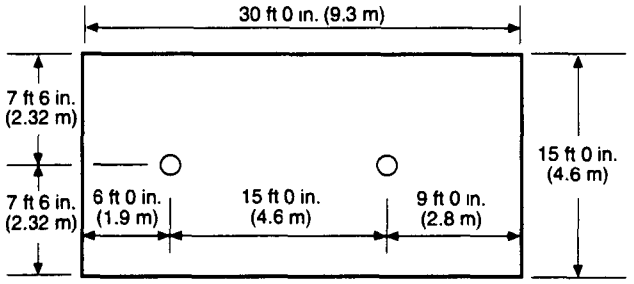

Figure A-4-6.3.2 Exception (c) Small room provision.

installed. For broader-mesh top panels, e.g., ½ in. (13 mm), the obstruction of the sprinkler spray is not likely to be severe and the authority having jurisdiction may not need to apply the requirements in 4-6.5.4.

A-4-6.6 The 18-in. (457-mm) dimension is not intended to limit the height of shelving on a wall or shelving against a wall in accordance with 4-4.1.6. Where shelving is installed on a wall and is not directly below sprinklers, the shelves, including storage thereon, may extend above the level of a plane located 18 in. (457 mm) below ceiling sprinkler deflectors. Shelving, and any storage thereon, directly below the sprinklers may not extend above a plane located 18 in. (457 mm) below the ceiling sprinkler deflectors.

A-4-7.5.3 See A-4-5.5.3.

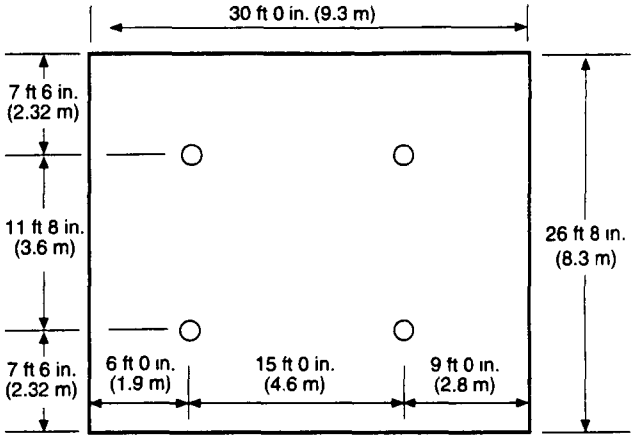

Figure A-4-6.3.2 Exception (d) Small room provision.

Figure A-4-6.4.1.2 Exception No. 4 Typical concrete joist construction.

A-4-8.2.1 The protection area for extended coverage upright and pendent sprinklers is defined in the listing of the sprinkler as a maximum square area. Listing information is presented in even 2-ft (0.65-m) increments up to 20 ft (6.5 m). When a sprinkler is selected for an application, its area of coverage must be equal to or greater than both the length and width of the hazard area. For example, if the hazard to be protected is a room 13 ft 6 in. (4.4 m) wide and 17 ft 6 in. (5.6 m) long, a sprinkler that is listed to protect an area of 18 ft × 18 ft (5.8 m × 5.8 m) must be selected. The flow used in the calculations is then selected as the flow required by the listing for the selected coverage.

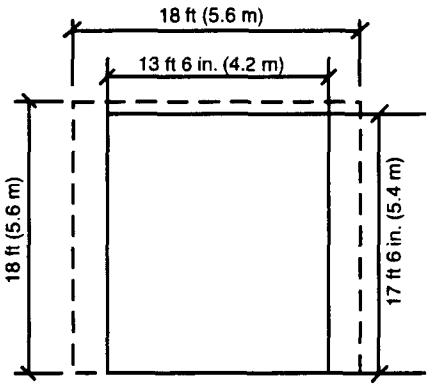

Figure A-4-8.2.1 Determination of protection area of coverage for EC upright and pendent sprinklers.

A-4-8.4.1.3 Saw-toothed roofs have regularly spaced monitors of saw tooth shape, with the nearly vertical side glazed and usually arranged for venting. Sprinkler placement is limited to a maximum of 3 ft (0.91 m) down the slope from the peak because of the effect of venting on sprinkler sensitivity.

A-4-8.5.3 See A-4-5.5.3.

A-4-9.2.1 The protection area for extended coverage sidewall spray sprinklers is defined in the listing of the sprinkler

as a maximum square or rectangular area. Listing information is presented in even 2-ft (0.65-m) increments up to 28 ft (9 m) for extended coverage sidewall spray sprinklers. When a sprinkler is selected for an application, its area of coverage must be equal to or greater than both the length and width of the hazard area. For example, if the hazard to be protected is a room 14 ft 6 in. (4.7 m) wide and 20 ft 8 in. (6.7 m) long, a sprinkler that is listed to protect an area of 16 ft × 22 ft (5.2 m × 7.1 m) must be selected. The flow used in the calculations is then selected as the flow required by the listing for the selected coverage.

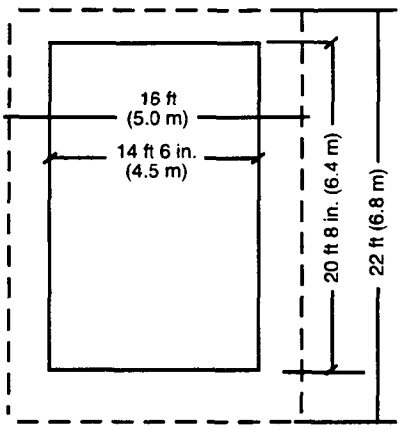

Figure A-4-9.2.1 Determination of protection area of coverage for EC sidewall sprinklers.

A-4-9.5.3 See A-4-5.5.3.

A-4-10.2 Tests involving areas of coverage over 100 ft^2 (9.3 m^2) for large-drop sprinklers are limited in number, and use of areas of coverage over 100 ft^2 (9.3 m^2) should be carefully considered.

A-4-10.3.1 It is important that sprinklers in the immediate vicinity of the fire center not skip, and this requirement imposes certain restrictions on the spacing.

A-4-10.4.1 If all other factors are held constant, the operating time of the first sprinkler will vary exponentially with the distance between the ceiling and deflector. At distances greater than 7 in. (178 mm), for other than open wood joist construction, the delayed operating time will permit the fire to gain headway, with the result that substantially more sprinklers operate. At distances less than 7 in. (178 mm), other effects occur. Changes in distribution, penetration, and cooling nullify the advantage gained by faster operation. The net result again is increased fire damage accompanied by an increase in the number of sprinklers operated. The optimum clearance between deflectors and ceiling is, therefore, 7 in. (178 mm). For open wood joist construction, the optimum clearance between deflectors and the bottom of joists is 3½ in. (89 mm).

A-4-10.5 To a great extent, large-drop sprinklers rely on direct attack to gain rapid control of both the burning fuel and ceiling temperatures. Therefore, interference with the discharge pattern and obstructions to the distribution should be avoided.

A-4-10.5.3 See A-4-5.5.3.

A-4-11.5.3 See A-4-5.5.3.

A-4-13.1.1 Exceptions Nos. 1, 2, and 3 do not require sprinkler protection because it is not physically practical to install sprinklers in these spaces. To reduce the possibility of uncontrolled fire spread, consideration should be given in these unsprinklered concealed space situations to using Exceptions Nos. 5, 8, and 10.

A-4-13.2.2 Where practicable, sprinklers should be staggered at the alternate floor levels, particularly where only one sprinkler is installed at each floor level.

A-4-13.3.3 See Figures A-4-13.3.3(a) and (b). Sprinklers would be required in the case shown in Figure (a) but not in the case shown in Figure (b).

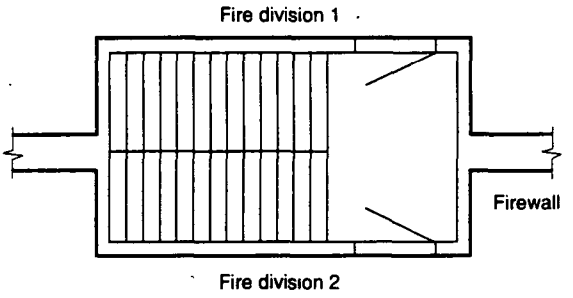

Figure A-4-13.3.3(a) Noncombustible stair shaft serving two fire sections.

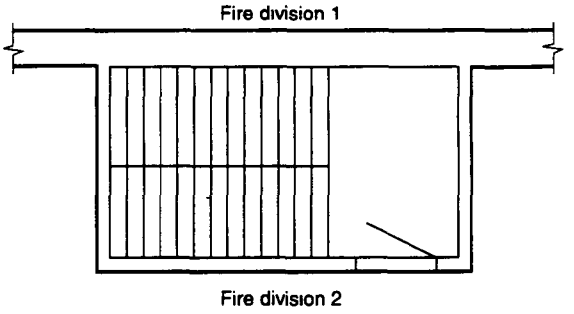

Figure A-4-13.3.3(b) Noncombustible stair shaft serving one fire section.

A-4-13.3.4 Where sprinklers in the normal ceiling pattern are closer than 6 ft (1.8 m) from the water curtain, it might be preferable to locate the water curtain sprinklers in recessed baffle pockets. (*See Figure A-4-13.3.4.*)

A-4-13.4 The installation of sprinklers at floor levels should be arranged so as to protect the sprinklers from mechanical injury and from falling materials and not cause obstruction within the chute. This usually can be accomplished by recessing the sprinkler in the wall of the chute or by providing a protective deflector canopy over the sprinkler. Sprinklers should be placed so that there will be minimum interference of the discharge therefrom. Sprinklers with special directional discharge characteristics might be advantageous. (*See Figure A-4-13.4.*)

A-4-13.5.1 The sprinklers in the pit are intended to protect against fires cause by debris, which can accumulate over time. Ideally, the sprinklers should be located near the side of the pit below the elevator doors, where most debris accumulates. However, care should be taken that the sprinkler location does not interfere with the elevator toe guard, which extends below the face of the door opening.

A-4-13.5.2 The ASME A17.1 code requires the shutdown of power to the elevator upon or prior to the application of

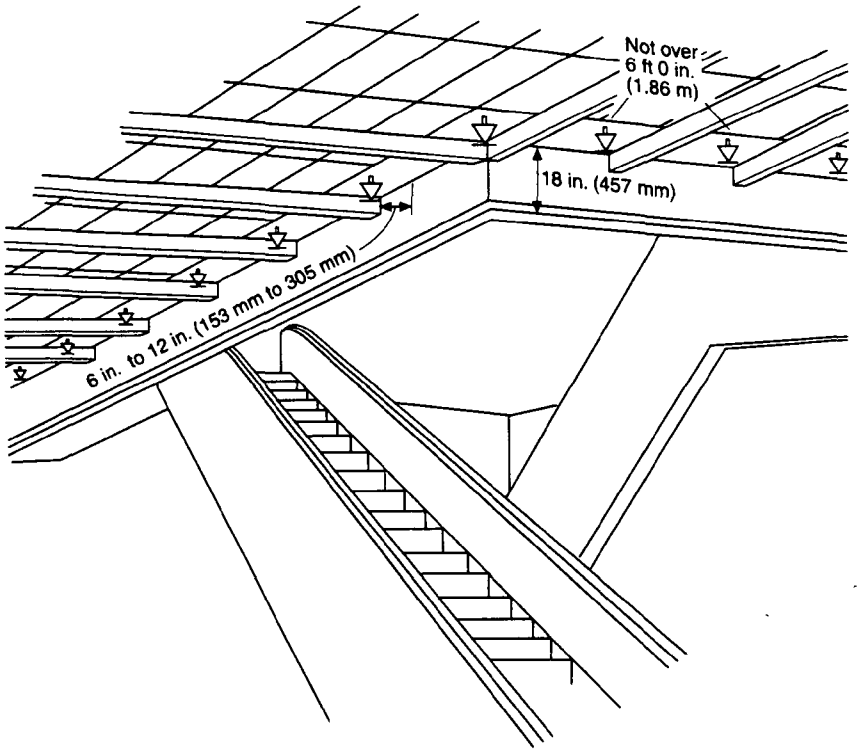

Figure A-4-13.3.4 Sprinklers around escalators.

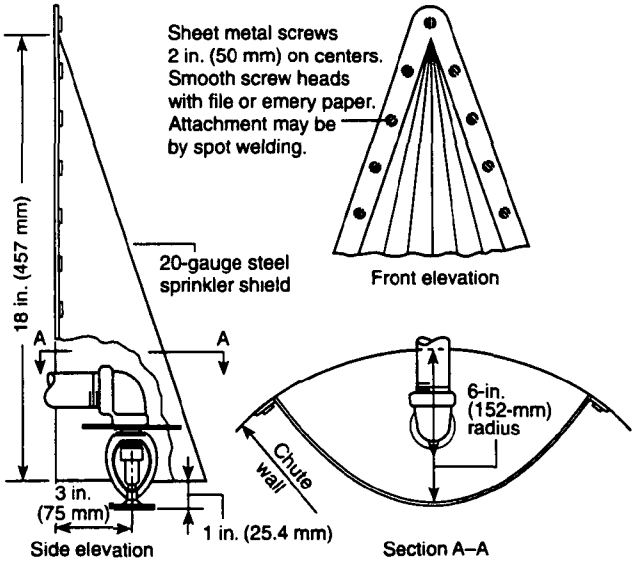

Figure A-4-13.4 Canopy for protecting sprinklers in building service chutes.

water in elevator machine rooms or hoistways. This can be accomplished by a detection system with sufficient sensitivity to operate prior to the activation of the sprinklers (*see also NFPA 72*). As an alternative, the system can be arranged using devices or sprinklers capable of effecting power shutdown immediately upon sprinkler activation, such as a waterflow switch without a time delay. This is intended to interrupt power before significant sprinkler discharge.

A-4-13.5.3 Passenger elevator cars that have been constructed in accordance with A17.1 Rule 204.2a (under A17.1a-1985 and later editions of the code) have limited combustibility. Materials exposed to the interior of the car and the hoistway, in their end-use composition, are limited to a flame spread rating of 0 to 75, and a smoke development rating of 0 to 450.

A-4-13.7 Small loading docks, covered platforms, ducts, or similar small unheated areas can be protected by dry-pendent sprinklers extending through the wall from wet sprinkler piping in an adjacent heated area. Where protecting covered platforms, loading docks, and similar areas, a dry-pendent sprinkler should extend down at a 45-degree angle. The width of the area to be protected should not exceed 7½ ft (2.3 m). Sprinklers should be spaced not over 12 ft (3.7 m) apart. (*See Figure A-4-13.7.*)

A-4-13.8.2 Portable wardrobe units, such as those typically used in nursing homes and mounted to the wall, do not require sprinklers to be installed in them. Although the units are attached to the finished structure, the standard views those units as pieces of furniture rather than a part of the structure; thus, sprinklers are not required.

A-4-13.11 The installation of open-grid egg crate, louver, or honeycomb ceilings beneath sprinklers restricts the sideways travel of the sprinkler discharge and can change the character of discharge.

A-4-13.12.3 Drop-out ceilings do not provide the required protection for soft-soldered copper joints or other piping that requires protection.

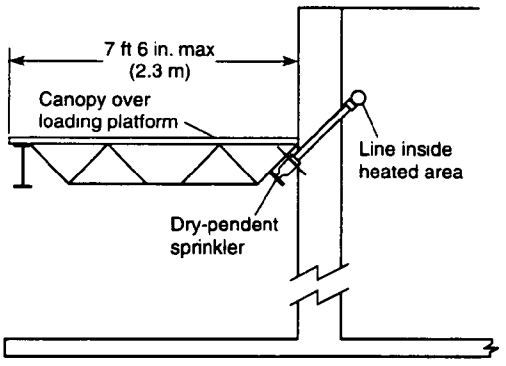

Figure A-4-13.7 Dry-pendent sprinklers for protection of covered platforms, loading docks, and similar areas.

A-4-13.12.4 The ceiling tiles might drop before sprinkler operation. Delayed operation might occur because heat must then bank down from the deck above before sprinklers will operate.

A-4-13.13 Exception No. 1. For tests of sprinkler performance in fur vaults see "Fact Finding Report on Automatic Sprinkler Protection for Fur Storage Vaults" of Underwriters Laboratories Inc., dated November 25, 1947.

Sprinklers should be listed old-style having orifice sizes selected to provide as closely as possible but not less than 20 gal per min (76 L/min) per sprinkler, for four sprinklers, based on the water pressure available.

Sprinklers in fur storage vaults should be located centrally over the aisles between racks and shall be spaced not over 5 ft (1.5 m) apart along the aisles.

Where sprinklers are spaced 5 ft (1.5 m) apart along the sprinkler branch lines, pipe sizes should be in accordance with the following schedule:

1 in. (25.4 mm)	4 sprinklers	2 in. (50.8 mm)	20 sprinklers
1 1/4 in. (31.7 mm)	6 sprinklers	2 1/2 in. (63.5 mm)	40 sprinklers
1 1/2 in. (38.1 mm)	10 sprinklers	3 in. (76.2 mm)	80 sprinklers

A-4-13.20 One-and-one-half (1 1/2) in. hose connections for use in storage occupancies and other locations where standpipe systems are not required are covered by this standard. Where Class II standpipe systems are required, see the appropriate provisions of NFPA 14, *Standard for the Installation of Standpipe and Hose Systems*, with respect to hose stations and water supply for hose connections from sprinkler systems.

A-4-13.21 Combined automatic sprinkler and standpipe risers should not be interconnected by sprinkler system piping.

A-4-13.22 See Figure A-4-13.22.

A-4-14.1.1 See Figure A-4-14.1.1.

A-4-14.1.1.1 A water supply connection should not extend into a building or through a building wall unless such connection is under the control of an outside listed indicating valve or an inside listed indicating valve located near the outside wall of the building.

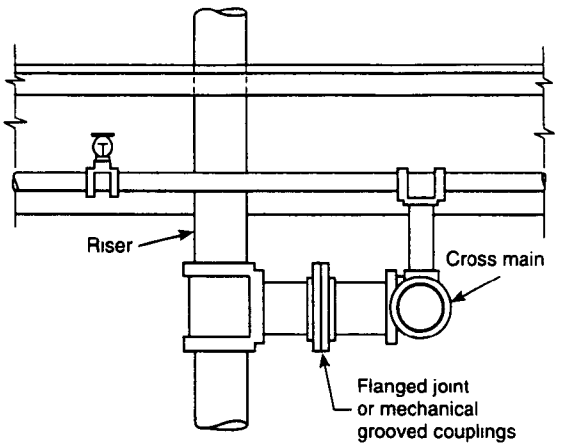

Figure A-4-13.22 One arrangement of flanged joint at sprinkler riser.

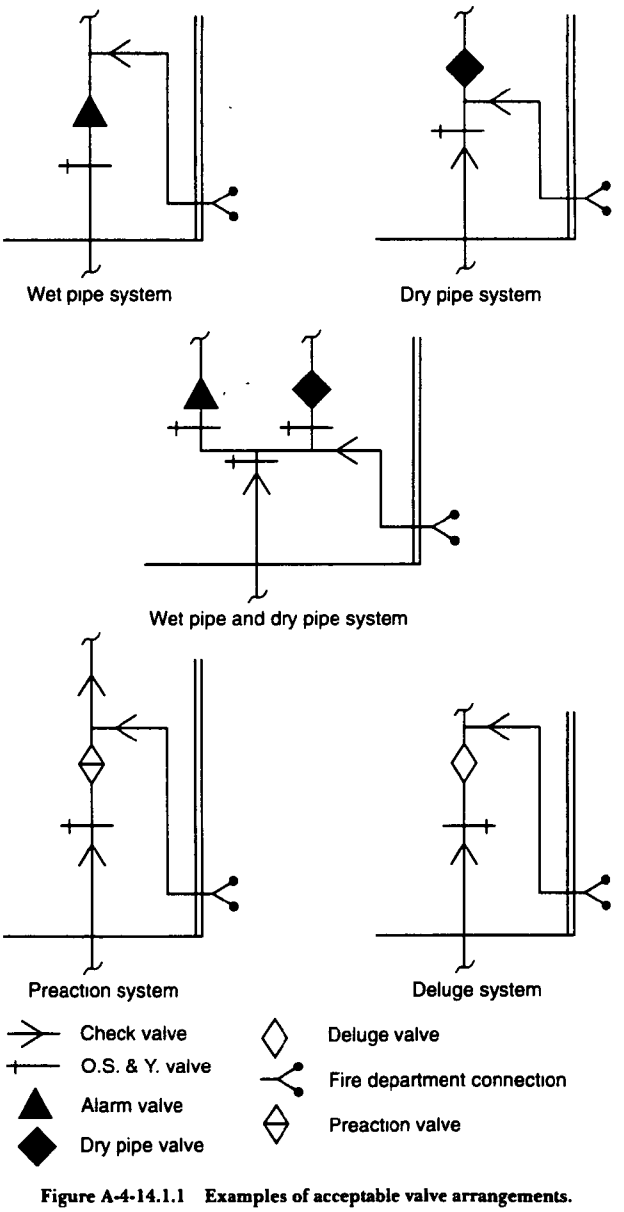

Figure A-4-14.1.1 Examples of acceptable valve arrangements.

All valves controlling water supplies for sprinkler systems or portions thereof, including floor control valves, should be accessible to authorized persons during emergencies. Permanent ladders, clamped treads on risers, chain-operated hand wheels, or other accepted means should be provided where necessary.

Outside control valves are suggested in the following order of preference:

(a) Listed indicating valves at each connection into the building at least 40 ft (12.2 m) from buildings if space permits.

(b) Control valves installed in a cutoff stair tower or valve room accessible from outside.

(c) Valves located in risers with indicating posts arranged for outside operation.

(d) Key-operated valves in each connection into the building.

A-4-14.1.1.7 Where a system having only one dry pipe valve is supplied with city water and fire department connection, it will be satisfactory to install the main check valve in the water supply connection immediately inside of the building. In instances where there is no outside control valve, the system indicating valve should be placed at the service flange, on the supply side of all fittings.

A-4-14.1.1.8 See Figure A-4-14.1.1.8.

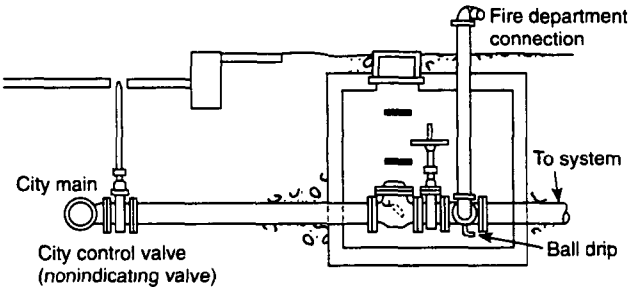

Figure A-4-14.1.1.8 Pit for gate valve, check valve, and fire department connection.

A-4-14.1.2.3 Where the relief valve operation would result in water being discharged onto interior walking or working surfaces, consideration should be given to piping the discharge from the valve to a drain connection or other safe location.

A-4-14.2.2.1 Where copper tube is to be installed in moist areas or other environments conducive to galvanic corrosion, copper hangers or ferrous hangers with an insulating material should be used.

A-4-14.2.3.1 Exception No. 1. See Figure A-4-14.2.3.1 Exception No. 1.

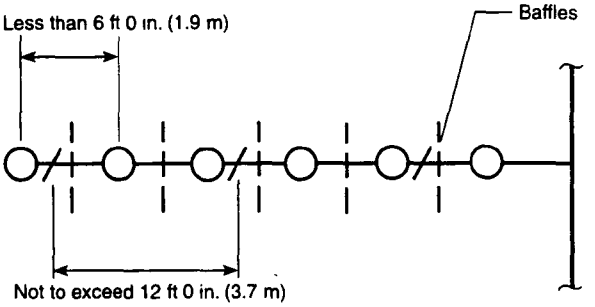

Figure A-4-14.2.3.1 Exception No. 1 Distance between hangers.

A-4-14.2.3.3 Sprinkler piping should be adequately secured to restrict the movement of piping upon sprinkler operation. The reaction forces caused by the flow of water through the sprinkler could result in displacement of the sprinkler, thereby adversely affecting sprinkler discharge. Listed CPVC pipe and listed polybutylene pipe have specific requirements for piping support to include additional pipe bracing of sprinklers. (*See Figure A-4-14.2.3.3.*)

A-4-14.2.3.3 Exception No. 1. See Figure A-4-14.2.3.3 Exception No. 1.

A-4-14.2.3.3 Exception No. 2. See Figure A-4-14.2.3.3 Exception No. 2.

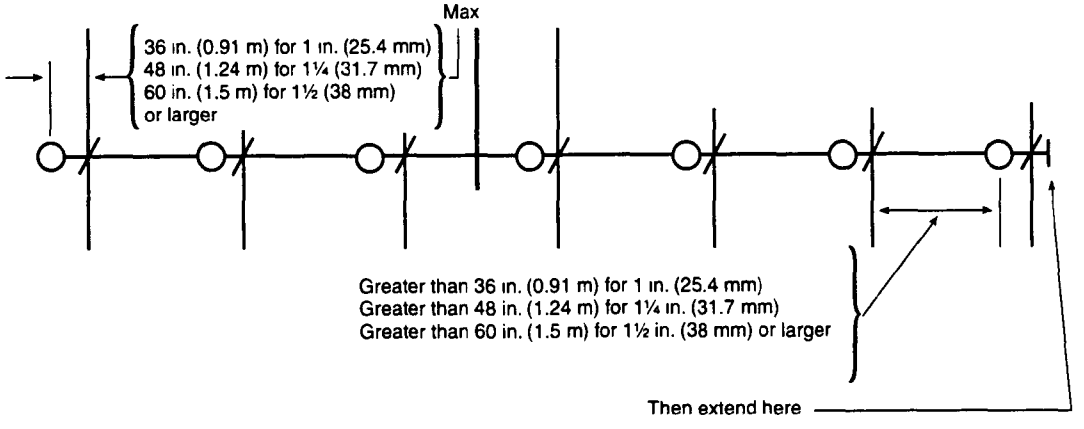

Figure A-4-14.2.3.3 Distance from sprinkler to hanger.

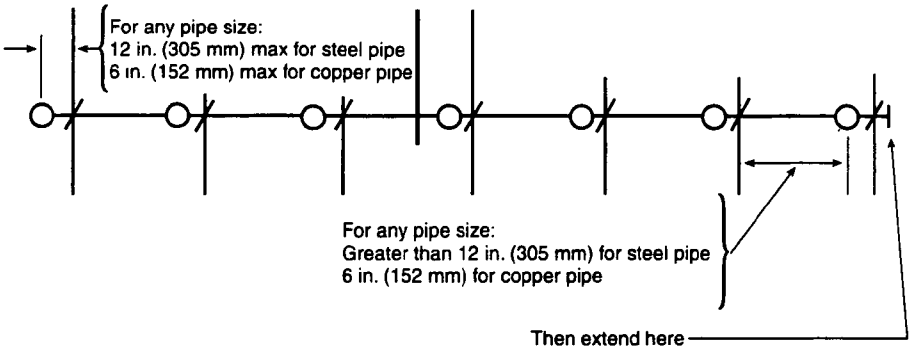

Figure A-4-14.2.3.3 Exception No. 1 Distance from sprinkler to hanger where maximum pressure exceeds 100 psi (6.9 bars) and a branch line above a ceiling supplies pendent sprinklers below the ceiling.

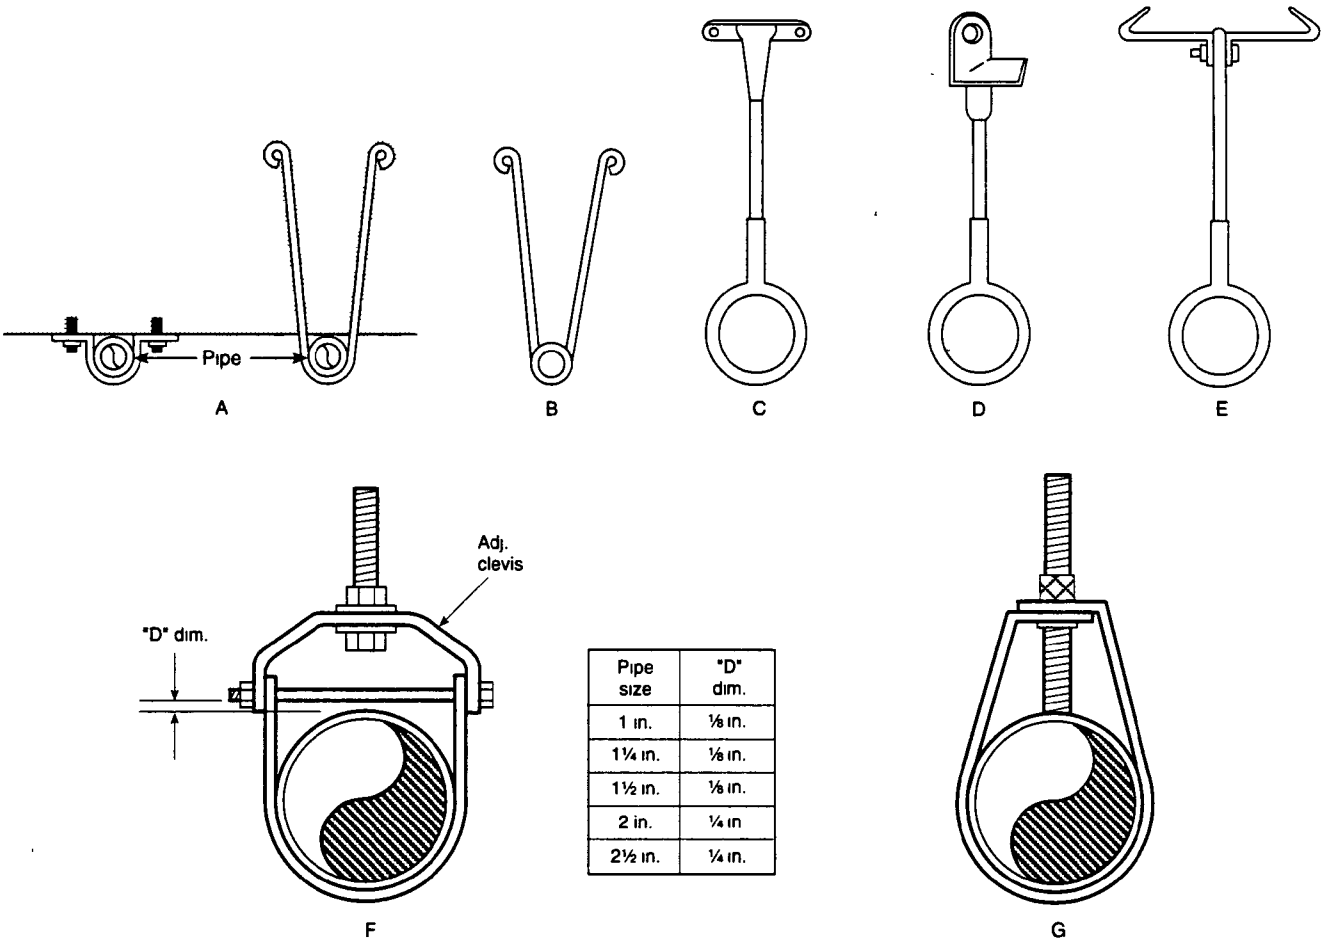

Pipe size	"D" dim.
1 in.	⅛ in.
1¼ in.	⅛ in.
1½ in.	⅛ in.

G. Adjustable swivel loop hanger

Figure A-4-14.2.3.3 Exception No. 2 Examples of acceptable hangers for end of line (or armover) pendent sprinklers.

A-4-14.2.3.4 See Figure A-4-14.2.3.4.

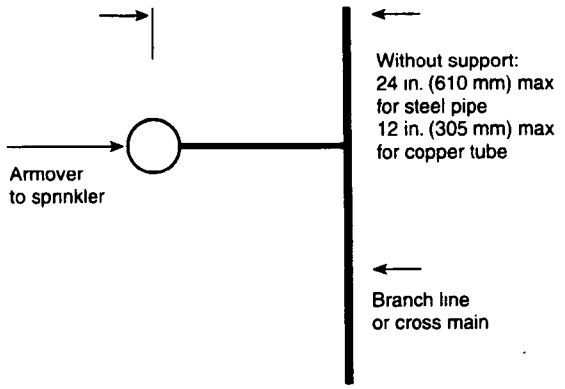

Figure A-4-14.2.3.4 Maximum length for unsupported armover.

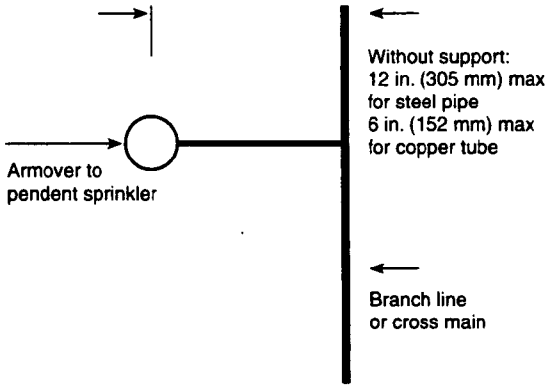
A-4-14.2.3.4 Exception See Figure A-4-6.2.3.4 Exception.



Note: The pendent sprinkler may be installed either directly in the fitting at the end of the armover or in a fitting at the bottom of a drop nipple.

Figure A-4-14.2.3.4 Exception Maximum length of unsupported armover where the maximum pressure exceeds 100 psi (6.9 bars) and a branch line above a ceiling supplies pendent sprinklers below the ceiling.

A-4-14.3.1 All piping should be arranged where practicable to drain to the main drain valve.

A-4-14.3.5.2.3 An example of an accessible location would be a valve located approximately 7 ft (2 m) above the floor level to which a hose could be connected to discharge the water in an acceptable manner.

A-4-14.3.6.1 Where possible, the main sprinkler riser drain should discharge outside the building at a point free from the possibility of causing water damage. Where it is not possible to discharge outside the building wall, the drain should be piped to a sump, which in turn should discharge by gravity or be pumped to a waste water drain or sewer. The main sprinkler riser drain connection should be of a size sufficient to carry off water from the fully open drain valve while it is discharging under normal water system pressures. Where this is not possible, a supplementary drain of equal size should be provided for test purposes with free discharge, located at or above grade.

A-4-14.4.2.1 Types of locations where corrosive conditions can exist include bleacheries, dye houses, metal plating processes, animal pens, and certain chemical plants.

If corrosive conditions are not of great intensity and humidity is not abnormally high, good results can be obtained by a protective coating of red lead and varnish or by a good grade of commercial acid-resisting paint. The paint manufacturer's instructions should be followed in the preparation of the surface and in the method of application.

Where moisture conditions are severe but corrosive conditions are not of great intensity, copper tube or galvanized steel pipe, fittings, and hangers might be suitable. The exposed threads of steel pipe should be painted.

In instances where the piping is not readily accessible and where the exposure to corrosive fumes is severe, either a protective coating of high quality can be employed or some form of corrosion-resistant material used.

A-4-14.4.3.1 Sprinkler systems are protected against earthquake damage by means of the following:

(a) Stresses that would develop in the piping due to differential building movement are minimized through the use of flexible joints or clearances.

(b) Bracing is used to keep the piping fairly rigid when supported from a building component expected to move as a unit, such as a ceiling.

Areas known to have a potential for earthquakes have been identified in building code and insurance maps. Examples of two such maps are shown in Figures A-4-14.4.3.1(a) and A-4-14.4.3.1(b).

A-4-14.4.3.2 Strains on sprinkler piping can be greatly lessened and, in many cases, damage prevented by increasing the flexibility between major parts of the sprinkler system. One part of the piping should never be held rigidly and another part allowed to move freely without provision for relieving the strain. Flexibility can be provided by using listed flexible couplings, by joining grooved end pipe at critical points, and by allowing clearances at walls and floors.

Tank or pump risers should be treated the same as sprinkler risers for their portion within a building. The discharge pipe of tanks on buildings should have a control valve above the roof line so any pipe break within the building can be controlled.

Piping 2 in. (50 mm) or smaller in size is pliable enough so that flexible couplings are not usually necessary. "Rigid-type" couplings that permit less than 1 degree of angular movement at the grooved connections are not considered to be flexible couplings. [*See Figures A-4-14.4.3.2(a) and (b).*]

A-4-14.4.3.2(d) A building expansion joint is usually a bituminous fiber strip used to separate blocks or units of concrete to prevent cracking due to expansion as a result of temperature changes. In this case, the flexible coupling required on one side by 4-14.4.3.2(d) will suffice.

For seismic separation joints, considerably more flexibility is needed, particularly for piping above the first floor. Figure A-4-14.4.3.3 shows a method of providing additional flexibility through the use of swing joints.

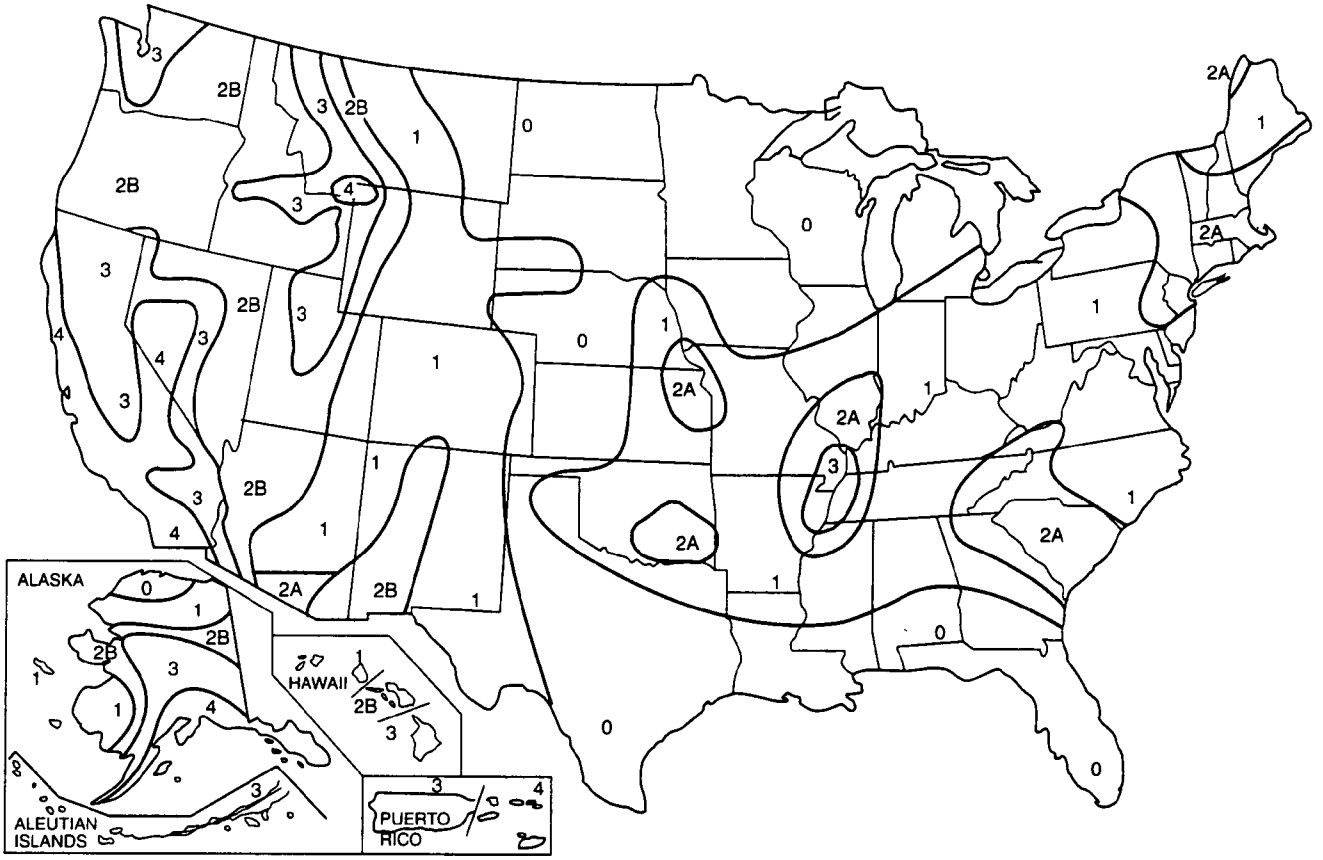


Figure A-4-14.4.3.1(a) Seismic zone map of the United States.

A-4-14.4.3.3 Plan and elevation views of a seismic separation assembly assembled with flexible elbows are shown in Figure A-4-14.4.3.3.

A seismic separation assembly is considered to be an assembly of fittings, pipe, and couplings or an assembly of pipe and couplings that permits movement in all directions. The extent of permitted movement should be sufficient to accommodate calculated differential motions during earthquakes. In lieu of calculations, permitted movement can be made at least twice the actual separations, at right angles to the separation as well as parallel to it.

A-4-14.4.3.4 While clearances are necessary around the sprinkler piping to prevent breakage due to building movement, suitable provision should also be made to prevent passage of water, smoke, or fire.

Drains, fire department connections, and other auxiliary piping connected to risers should not be cemented into walls or floors; similarly, pipes that pass horizontally through walls or foundations should not be cemented solidly or strains will accumulate at such points.

Where risers or lengths of pipe extend through suspended ceilings, they should not be fastened to the ceiling framing members.

A-4-14.4.3.5.2 Exception. The investigation of tension only bracing using materials, connection methods, or both, other than those described in Table 4-14.4.3.5.5 should involve consideration of:

(a) Corrosion resistance.

(b) Prestretching to eliminate permanent construction stretch and to obtain a verifiable modulus of elasticity.

(c) Color coding of each different size cable for field verification.

(d) The capacity of all components of the brace assemblies, including the field connections, to maintain the manufacturer's minimum certified break strength.

(e) Manufacturer's published design data sheets/manual showing product design guidelines, including connection details, load calculation procedures for sizing of braces, and the maximum recommended horizontal load-carrying capacity of the brace assemblies including the associated fasteners as described in Table 4-14.4.3.5.6. The maximum allowable horizontal loads shall not exceed the manufacturer's minimum certified break strength of the brace assemblies, excluding fasteners, after taking a safety factor of 1.5 and then adjusting for the brace angle.

(f) Brace product shipments accompanied by the manufacturer's certification of the minimum break strength, and prestretching and installation instructions.

(g) The manufacturer's literature, including any special tools or precautions required to ensure proper installation.

(h) The installation should include a means to prevent vertical motion due to seismic forces.

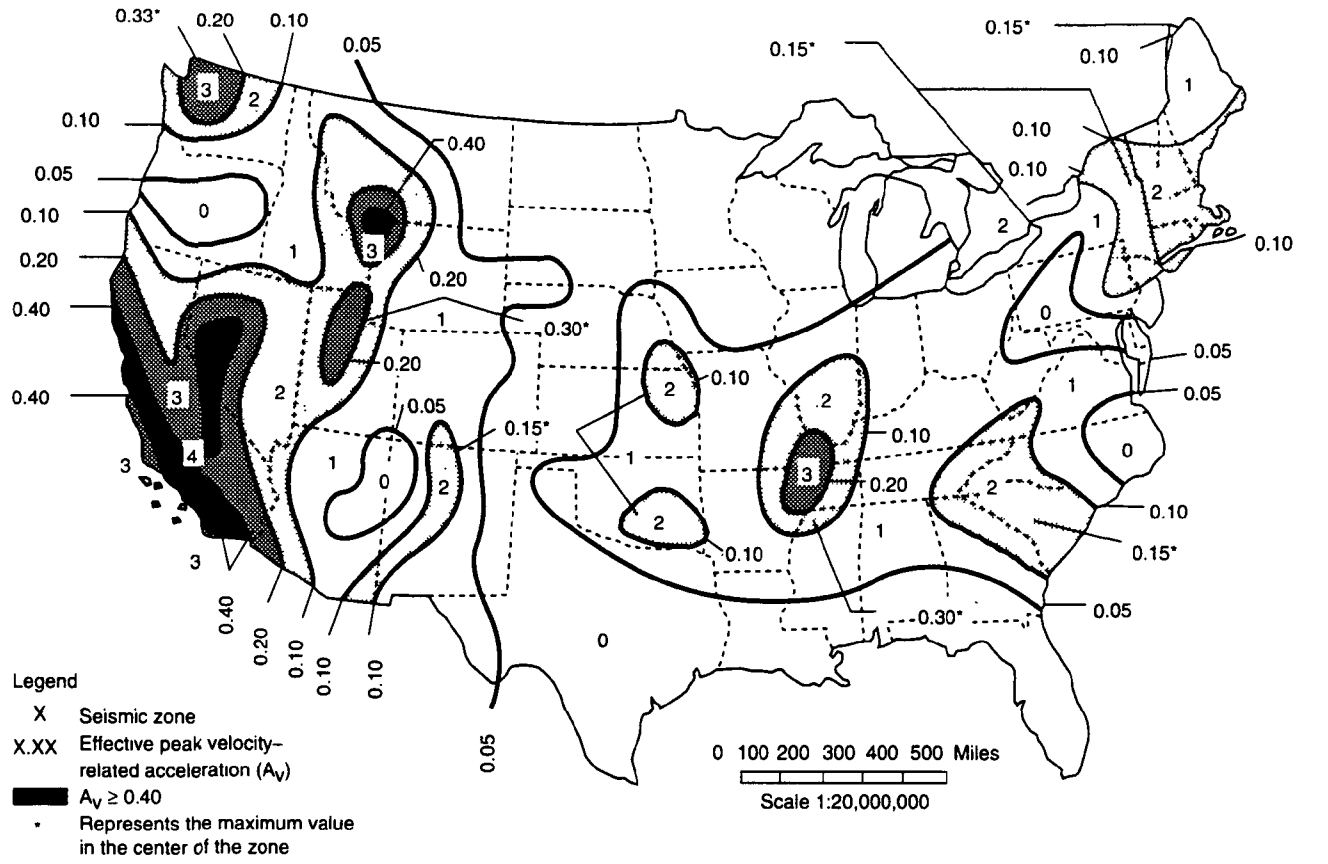

Figure A-4-14.4.3.1(b) Map of seismic zones and effective peak velocity-related acceleration (A_V) for contiguous 48 states. Linear interpolation between contours is acceptable.

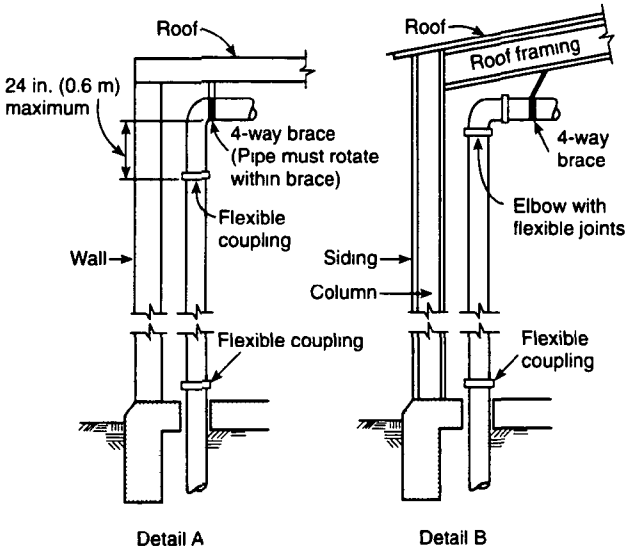

Note to Detail A: The four-way brace should be attached above the upper flexible coupling required for the riser and preferably to the roof structure if suitable. The brace should not be attached directly to a plywood or metal deck.

Figure A-4-14.4.3.2(a) Riser details.

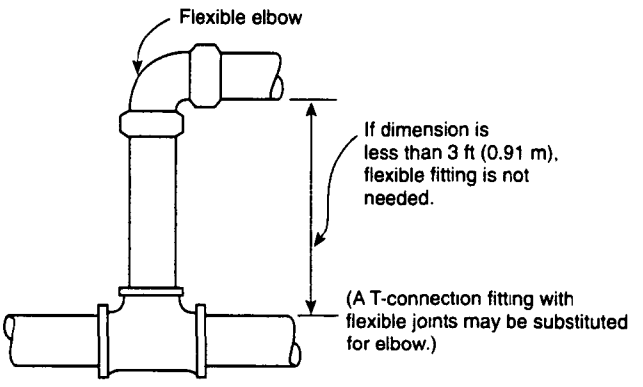

Figure A-4-14.4.3.2(b) Detail at short riser.

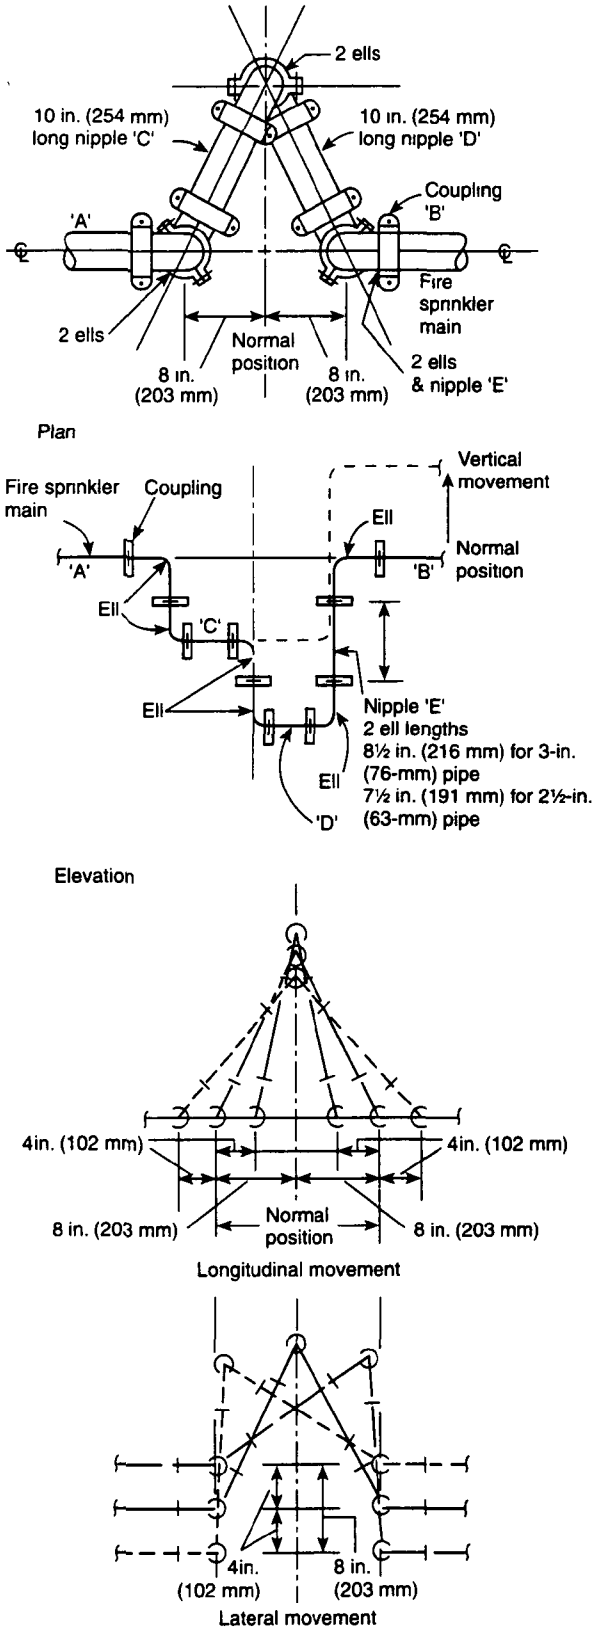

Figure A-4-14.4.3.3 Seismic separation assembly. Illustrates an 8-in. (203-mm) separation crossed by pipes up to 4 in. (102 mm) in nominal diameter. For other separation distances and pipe sizes, lengths and distances should be modified proportionally.

Breaking Strength Failure Testing	ASTM E 8

A-4-14.4.3.5.3 Location of Sway Bracing. Two-way braces are either longitudinal or lateral depending on their orientation with the axis of the piping. [*See Figures A-4-14.4.3.5.3(a), (b), (c), and (d).*] The simplest form of two-way brace is a piece of steel pipe or angle. Because the brace must act in both compression and tension, it is necessary to size the brace to prevent buckling.

An important aspect of sway bracing is its location. In Building 1 of Figure A-4-14.4.3.5.3(a), the relatively heavy main will pull on the branch lines when shaking occurs. If the branch lines are held rigidly to the roof or floor above, the fittings can fracture due to the induced stresses.

Bracing should be on the main as indicated at Location B. With shaking in the direction of the arrows, the light branch lines will be held at the fittings. Where necessary, a lateral brace or other restraint should be installed to prevent a branch line from striking against building components or equipment.

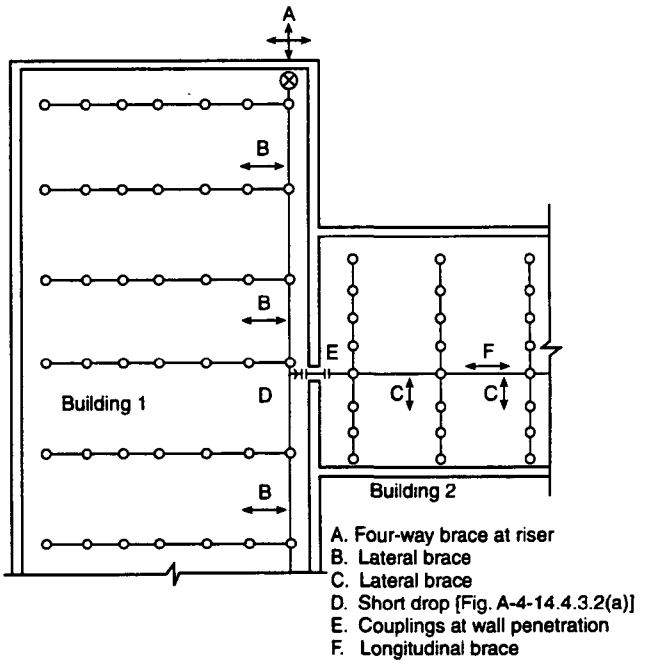

Figure A-4-14.4.3.5.3(a) Earthquake protection for sprinkler piping.

A four-way brace is indicated at Location A. This keeps the riser and main lined up and also prevents the main from shifting.

In Building 1, the branch lines are flexible in a direction parallel to the main, regardless of building movement. The heavy main cannot shift under the roof or floor, and it also steadies the branch lines. While the main is braced, the flexible couplings on the riser allow the sprinkler system to move with the floor or roof above, relative to the floor below.

Figures A-4-14.4.3.5.3(b), (c), and (d) show typical locations of sway bracing.

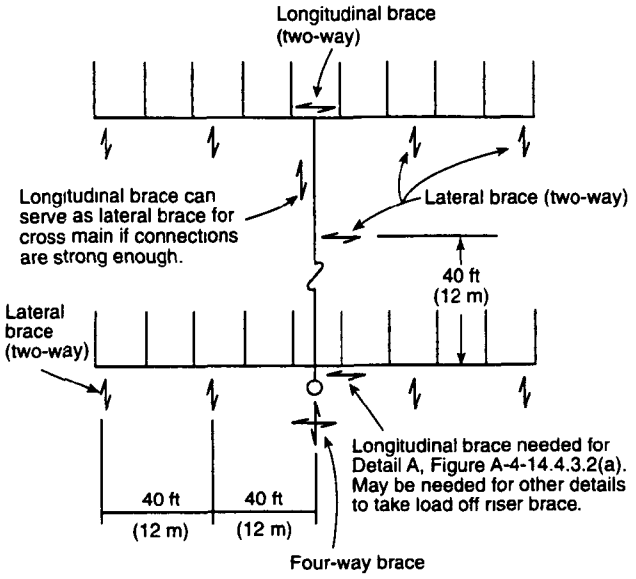

Figure A-4-14.4.3.5.3(b) Typical location of bracing on a tree system.

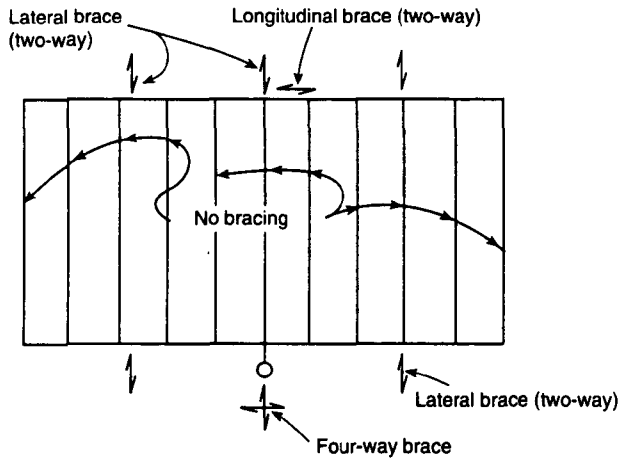

Figure A-4-14.4.3.5.3(c) Typical location of bracing on a gridded system.

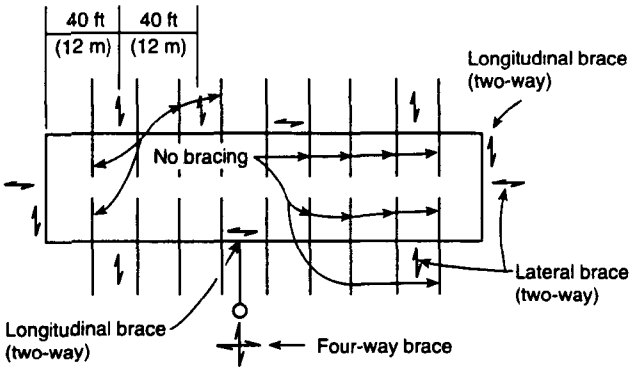

Figure A-4-14.4.3.5.3(d) Typical location of bracing on a looped system.

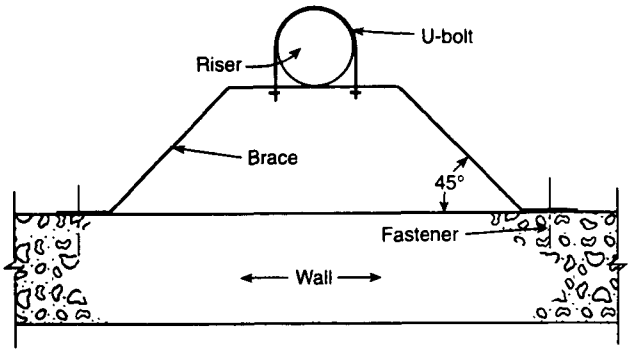

Figure A-4-14.4.3.5.3(e) Detail of four-way brace at riser.

Listed devices permitting connection of braces to both the pipe and the building structure are available and are recommended. However, alternate means of attachment capable of handling the expected loads are acceptable.

Connection of the brace to the pipe can be made with a pipe clamp or U-bolt. One bolt of the pipe clamp can pass through a flattened end of pipe or one leg of an angle. (The other leg and filet of the angle can be cut away.) Pipe rings should be avoided because they result in a loose fit. Once the pipe is able to vibrate within a loose fitting, the bolts in the ring assembly can be fractured.

The brace can be attached to the structural system directly through a leg of an angle or a flattened portion of pipe. Figures A-4-14.4.3.5.3(e) and (f) show acceptable connections. Where dimensions are tight or some play must be allowed, a special fitting can be used. [*See Figure A-4-14.4.3.5.3(g).*] This threads on an end of pipe. Rotation of the flat around the bolt allows play in the angle of the brace without sacrificing snugness.

Some adjustment can be provided in a pipe brace by use of a left-hand/right-hand coupling. For all threaded connections, sight holes or other means should be provided to permit indication that sufficient thread is engaged.

To properly size and space braces, it is necessary to employ the following steps:

(a) Based on the distance of mains from the structural members that will support the braces, choose brace shapes and sizes from Table 4-14.4.3.5.5 such that the maximum slenderness ratios l/r do not exceed 300. The angle of the braces from the vertical should be at least 30 degrees and preferably 45 degrees or more.

(b) Tentatively space lateral braces at 40-ft (12-m) maximum distances along mains and tentatively space longitudinal braces at 80-ft (24-m) maximum distances along mains. Lateral braces should meet the piping at right angles, and longitudinal braces should be aligned with the piping.

(c) Determine the total load tentatively applied to each brace in accordance with the examples shown in Figure A-4-14.4.3.5.3(h) and the following:

1. For the loads on lateral braces on cross mains, add one-half the weight of the branch to one-half the weight of the portion of the cross main within the zone of influence of the brace. [*See examples 1, 3, 6, and 7 in Figure A-4-14.4.3.5.3(h).*]

2. For the loads on longitudinal braces on cross mains, consider only one-half the weight of the cross mains and feed mains within the zone of influence. Branch lines need not be included. (*See examples 2, 4, 5, 7, and 8.*)

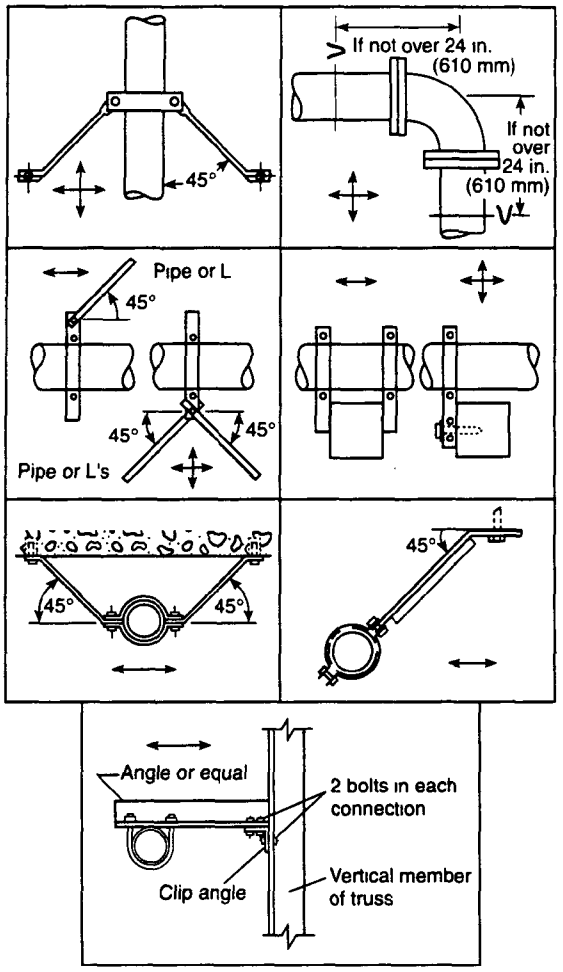

Figure A-4-14.4.3.5.3(f) Acceptable types of sway bracing.

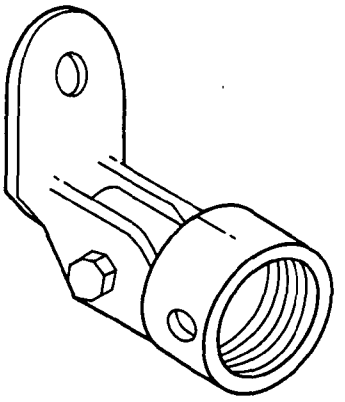

Figure A-4-14.4.3.5.3(g) Special fitting.

3. For the four-way brace at the riser, add the longitudinal and lateral loads within the zone of influence of the brace. [*See examples 2, 3, and 5 in Figure A-4-14.4.3.5.3(h).*]

Use the information on weights of water-filled piping contained within Table A-4-14.4.3.5.3.

(d) If the total expected loads are less than the maximums permitted in Table 4-14.4.3.5.5 for the particular brace and orientation, go on to step (e). If not, add additional braces to reduce the zones of influence of overloaded braces.

(e) Check that fasteners connecting the braces to structural supporting members are adequate to support the expected loads on the braces in accordance with Table 4-14.4.3.5.6. If not, again add additional braces or additional means of support.

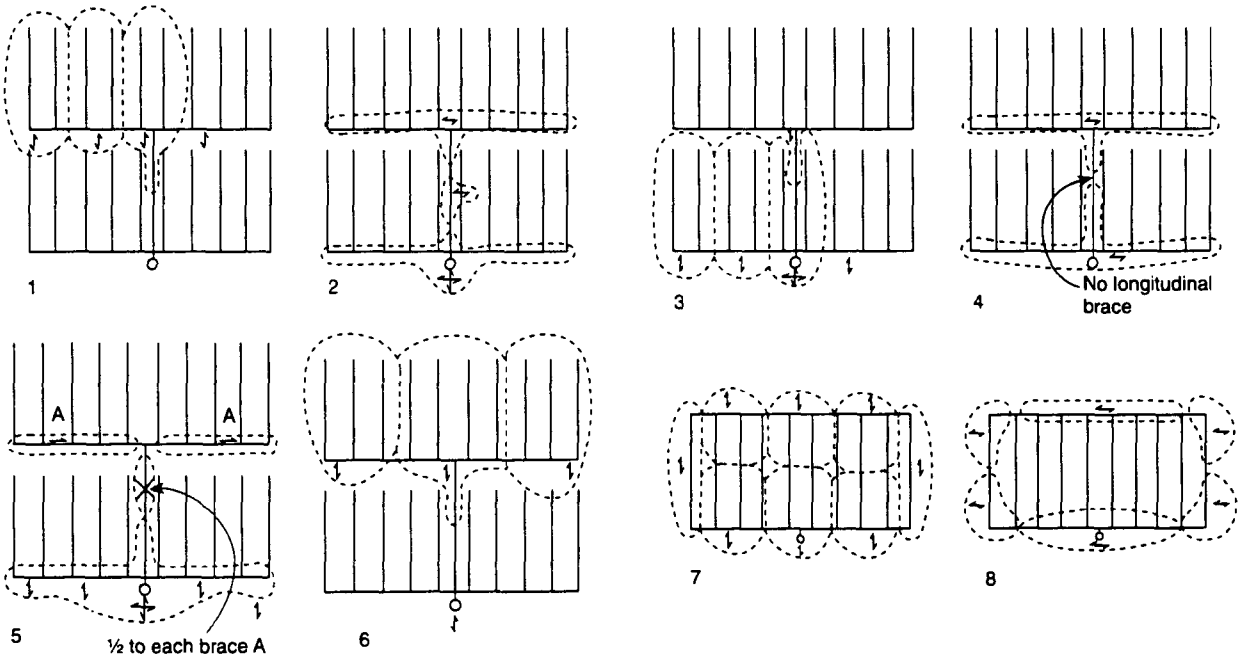

Figure A-4-14.4.3.5.3(h) Examples of load distribution to bracing.

Table A-4-14.4.3.5.3 Piping Weights for Determining Horizontal Load

Schedule 40 Pipe (in.)	Weight of Water-Filled Pipe (lb per ft)	½ Weight of Water-Filled Pipe (lb per ft)
1	2.05	1.03
1¼	2.93	1.47
1½	3.61	1.81
2	5.13	2.57
2½	7.89	3.95
3	10.82	5.41

For SI Units: 1 in. = 25.4 mm; 1 lb = 0.45 Kg; 1 ft = 0.3048 m.
* Schedule 30.

A-4-14.4.3.5.5 Sway brace members should be continuous. Where necessary, splices in sway bracing members should be designed and constructed to insure that brace integrity is maintained.

A-4-14.4.3.5.6 The criteria in Table 4-14.4.3.5.6 are based upon the use of a shield-type expansion anchor. Use of other anchors in concrete should be in accordance with the listing provisions of the anchor.

Current fasteners for anchoring to concrete are referred to as expansion anchors. Expansion anchors come in two types. Deformation-controlled anchors are set by driving a plug into the expansion port in the anchor or driving the anchor over a plug that expands the end of the anchor into the concrete. Torque-controlled expansion anchors are set by applying a torque to the anchor, usually to a nut, which causes the expansion sleeves to be pressed against the wall of the drilled hole.

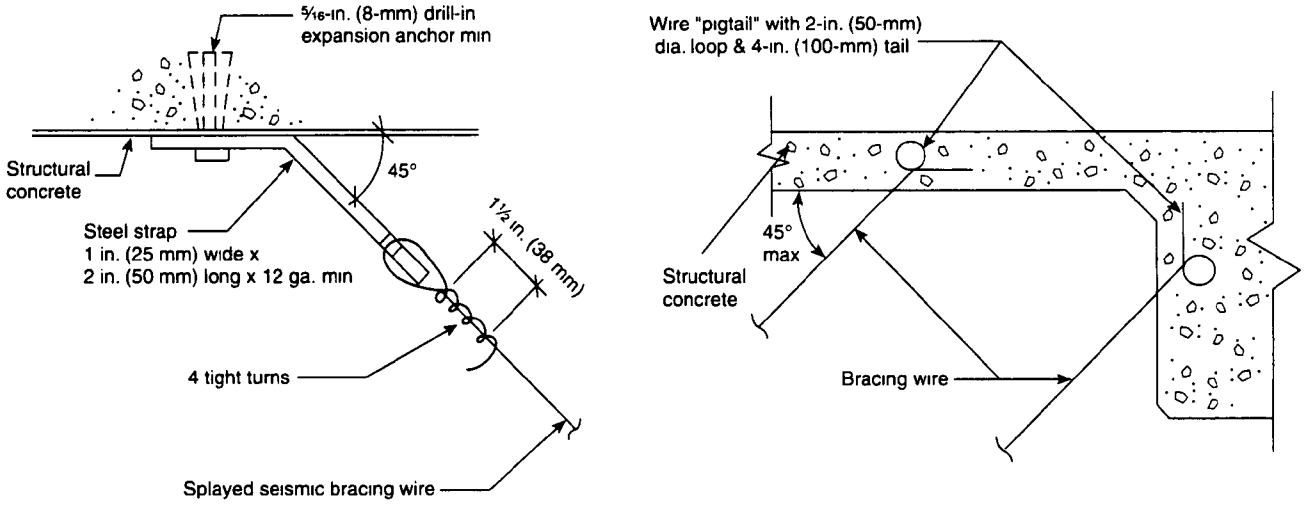
Consideration should be given with respect to the position near the edge of the concrete and to the type of bolts used in conjunction with the anchors.

A-4-14.4.3.5.9 The four-way brace provided at the riser may also provide longitudinal and lateral bracing for adjacent mains.

A-4-14.4.3.5.13 Wires used for piping restraints should be attached to the branch line with two tight turns around the pipe, and fastened with four tight turns within 1½ in. (37.5 mm), and should be attached to the structure in accordance with the details shown in Figures A-4-14.4.3.5.13(a) through (d) or other approved method.

A-4-14.4.3.5.13 Exception No. 2. The splayed seismic wire should be provided as close as possible to the hanger.

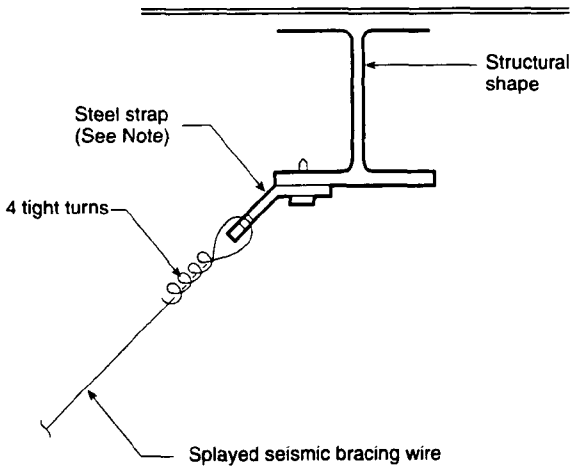
A-4-14.4.3.5.15 Such restraint can be provided by using the splayed seismic brace wire discussed in A-4-14.4.3.5.13 Exception No. 2.



Detail (A) Splayed seismic bracing wire attachment

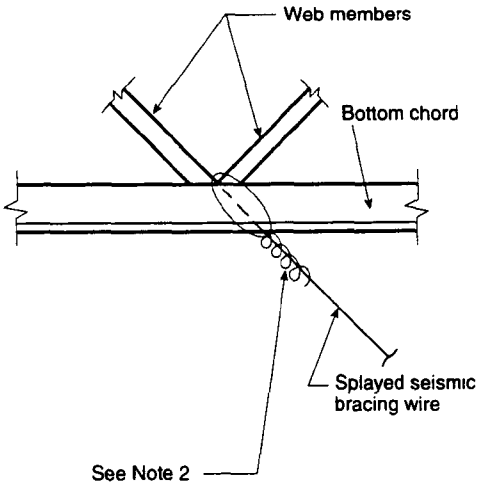
Detail (B)

Figure A-4-14.4.3.5.13(a) Wire attachment to cast-in-place concrete.



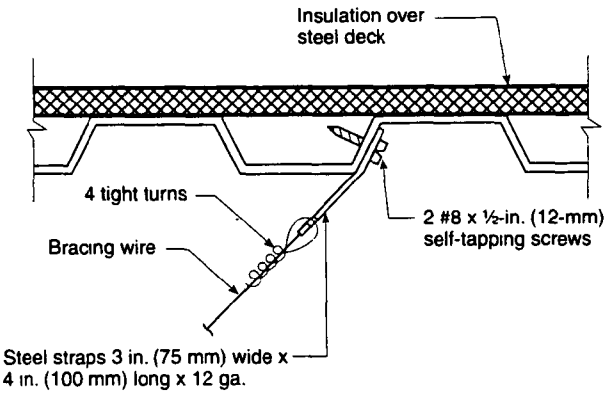
Note: See Figure A-4-14.4.3.5.13(a), Detail (B).

Detail (A) At steel beams



Note 1: Splay wires parallel to joist. Splay wires cannot be perpendicular to joist.
Note 2: See Figure A-4-14.4.3.5.13(a), Details (A) and (B).

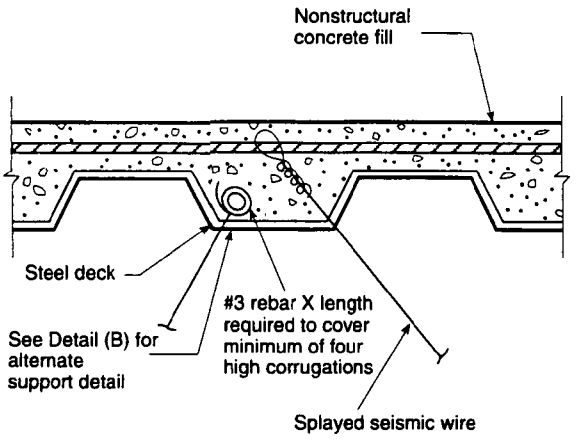
Detail (B) At open web steel joist



Note: If self-tapping screws are used with concrete fill, set screws before placing concrete.

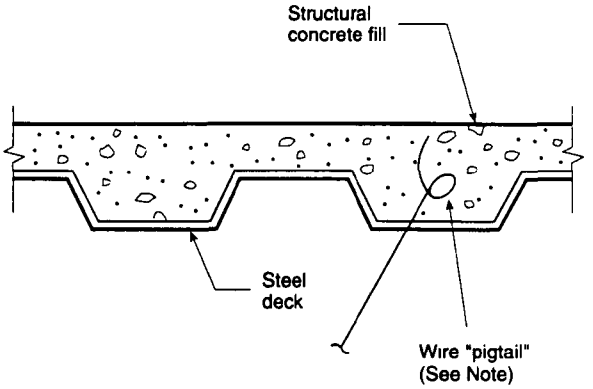
Detail (C) At steel roof deck

Figure A-4-14.4.3.5.13(b) Acceptable details—wire connections to steel framing.



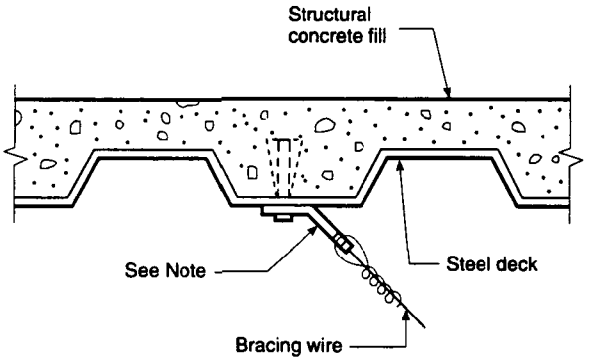
Note: Bracing wire detail similar.

Detail (A) At steel deck with insulating fill



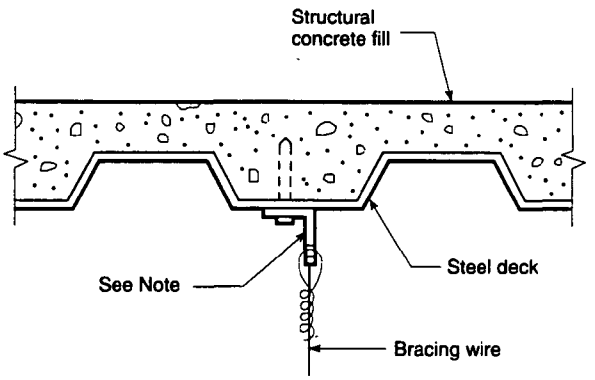
Note: See Figure A-4-14.4.3.5.13(a), Detail (B).

Detail (B) At steel deck with concrete fill



Note: See Figure A-4-14.4.3.5.13(a), Detail (B).

Detail (C) At steel deck with concrete fill



Note: See Figure A-4-14.4.3.5.13(a), Detail (A).

Detail (D) At steel deck with concrete fill

For SI units: 1 in. = 25.4 mm.
Note: If self-tapping screws are used with concrete fill, set screws before placing concrete.

Figure A-4-14.4.3.5.13(d) Acceptable details — wire connections to wood framing.

A-4-15.1.1 Central station, auxiliary, remote station, or proprietary protective signaling systems are a highly desirable supplement to local alarms, especially from a safety to life standpoint. (*See 4-15.1.1.6.*)

Identification Signs. Approved identification signs, as shown in Figure A-4-15.1.1, should be provided for outside alarm devices. The sign should be located near the device in a conspicuous position and should be worded as follows:

"SPRINKLER FIRE ALARM — WHEN BELL RINGS CALL FIRE DEPARTMENT OR POLICE."

Figure A-4-15.1.1 Identification sign.

A-4-15.1.1.5 Water-motor-operated devices should be located as near as practicable to the alarm valve, dry pipe valve, or other waterflow detecting device. The total length of the pipe to these devices should not exceed 75 ft (22.9 m), nor should the water-motor-operated device be located over 20 ft (6.1 m) above the alarm device or dry pipe valve.

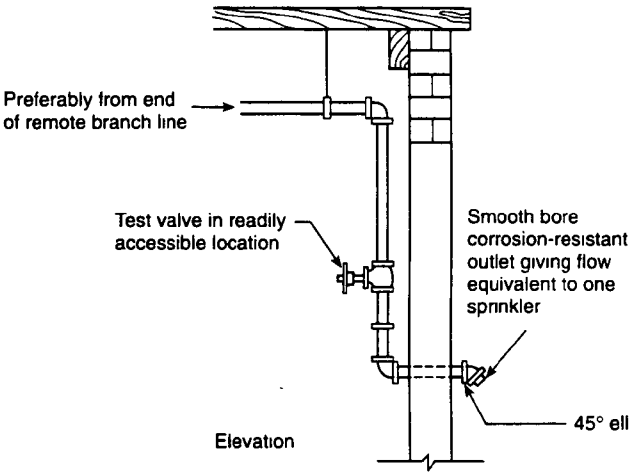
A-4-15.1.1.6 Monitoring should include but not be limited to control valves, building temperatures, fire pump power supplies and running conditions, and water tank levels and temperatures. Pressure supervision should also be provided on pressure tanks.

A-4-15.2 The fire department connection should be located not less than 18 in. (457 mm) and not more than 4 ft (1.22 m) above the level of the adjacent grade or access level.

A-4-15.2.1 Fire department connections should be located and arranged so that hose lines can be readily and conveniently attached without interference from nearby objects including buildings, fences, posts, or other fire department connections. Where a hydrant is not available, other water supply sources such as a natural body of water, a tank, or reservoir should be utilized. The water authority should be consulted when a nonpotable water supply is proposed as a suction source for the fire department.

A-4-15.2.3 The check valve should be located to maximize accessibility and minimize freezing potential.

A-4-15.4.2 This test connection should be in the upper story, and the connection preferably should be piped from the end of the most remote branch line. The discharge should be at a point where it can be readily observed. In locations where it is not practical to terminate the test connection outside the building, the test connection is permitted to terminate into a drain capable of accepting full flow under system pressure. In this event, the test connection should be made using an approved sight test connection containing a smooth bore corrosion-resistant orifice giving a flow equivalent to one sprinkler simulating the least flow from an individual sprinkler in the system. [*See Figures A-4-15.4.2(a) and A-4-15.4.2(b).*] The test valve should be located at an accessible point and preferably not over 7 ft (2.1 m) above the floor. The control valve on the test connection should be located at a point not exposed to freezing.



Note: Not less than 4 ft (1.2 m) of exposed test pipe in warm room beyond valve where pipe extends through wall to outside.

Figure A-4-15.4.2(a) System test connection on wet pipe system.

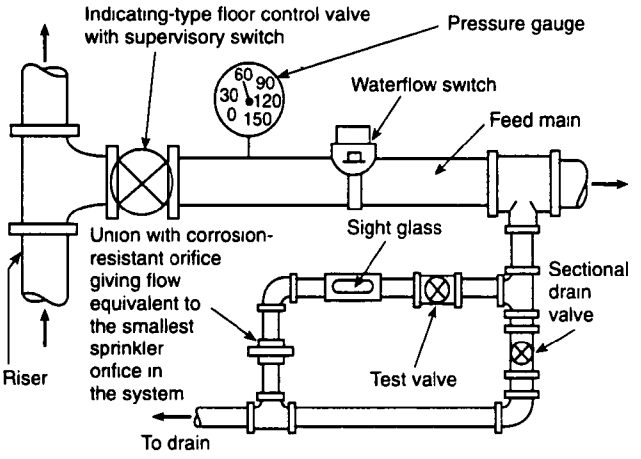


Figure A-4-15.4.2(b) Floor control valve.

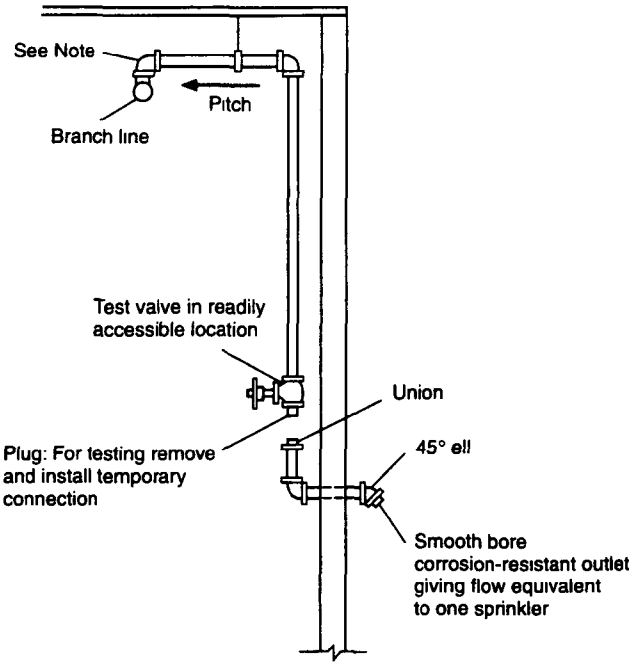
A-4-15.4.3 See Figure A-4-15.4.3.

A-4-15.4.6.2 The full flow test of the backflow prevention valve can be performed with a test header or other connection downstream of the valve. A bypass around the check valve in the fire department connector line with a control valve in the normally closed position can be an acceptable arrangement. When flow to a visible drain cannot be accomplished, closed loop flow can be acceptable if a flow meter or site glass is incorporated into the system to ensure flow.

A-5-2.1.3 When renovations occur in an existing building and no changes are made in the existing sprinkler system, it is not intended to require the replacement of existing standard sprinklers with quick-response sprinklers.



Note: To minimize condensation of water in the drop to the test connection, provide a nipple-up off of the branch line.

Figure A-4-15.4.3 System test connection on dry pipe system.

A-5-2.2.3 The additional pressure that is needed at the level of the water supply to account for sprinkler elevation is 0.433 psi per ft (9.8 kPa/m) of elevation above the water supply. When backflow prevention valves are installed on pipe schedule systems, the friction losses of the device must be accounted for when determining acceptable residual pressure at the top level of sprinklers. The friction loss (in psi) should be added to the elevation loss and the residual pressure at the top row of sprinklers to determine the total pressure needed at the water supply.

A-5-2.3.1.1 Appropriate area/density, other design criteria, and water supply requirements should be based on scientifically based engineering analyses that may include submitted fire testing, calculations, or results from appropriate computational models.

A-5-2.3.1.3(b) This section is included to compensate for possible delay in operation of sprinklers from fires in combustible concealed spaces found in wood frame, brick veneer, and ordinary construction.

A-5-2.3.1.3(b) Exception No. 2. Composite wood joists are not considered solid wood joists for the purposes of this section. Their web members are too thin and easily penetrated to adequately compartment a fire in an unsprinklered space.

A-5-2.3.1.3(b) Exception No. 3. This exception is intended to apply only when the exposed materials in the space are limited combustible materials or fire retardant treated wood as defined in NFPA 703, *Standard for Fire Retardant Impregnated Wood and Fire Retardant Coatings for Building Materials.*

A-5-2.3.2.3 Exception No. 1. It is not the intent of this exception to restrict the use of quick-response sprinklers in Extra Hazard Occupancies, but rather to indicate that the areas and densities shown in Figure 5-2.3 might not be appropriate for use with quick-response sprinklers in those environments due to a concern with water supplies.

A-5-2.3.3.1 This section allows for calculation of the sprinklers in the largest room, so long as the calculation produces the greatest hydraulic demand among selection of rooms and communicating spaces. For example, in a case where the largest room has 4 sprinklers and a smaller room has 2 sprinklers but communicates through unprotected openings with 3 other rooms, each having 2 sprinklers, the smaller room and group of communicating spaces should also be calculated.

Corridors are rooms and should be considered as such.

Walls can terminate at a substantial suspended ceiling and need not be extended to a rated floor slab above for this section to be applied.

A-5-3.2.1 The protection area for residential sprinklers with extended coverage areas is defined in the listing of the sprinkler as a maximum square or rectangular area. Listing information is presented in even 2-ft (.61-m) increments from 12 ft to 20 ft (3.6 m to 6.1 m) for residential sprinklers. When a sprinkler is selected for an application, its area of coverage must be equal to or greater than both the length and width of the hazard area. For example, if the hazard to be protected is a room 14 ft 6 in. (4.3 m) wide and 20 ft 8 in. (6.2 m) long, a sprinkler that is listed to protect an area of 16 ft × 22 ft (4.9 m x 6.8 m) must be selected. The flow used in the calculations is then selected as the flow required by the listing for the selected coverage. (*See Figure A-5-3.2.1.*)

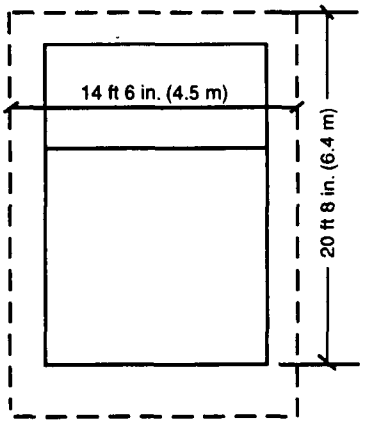


Figure A-5-3.2.1 Determination of protection area of coverage for residential sprinklers.

A-5-3.2.2 See Figure A-5-3.2.2.

A-5-3.4 See Table A-5-3.4.

A-5-3.5 See Table A-5-3.5.

A-5-3.5.1.1 While these sprinklers are intended primarily for use in high-pile storage situations, this section permits their use and extension into adjacent portions of an occupancy that might have a lesser classification.

A-5-3.6.1 If the system is a deluge type, then all the sprinklers need to be calculated even if they are located on different building faces.

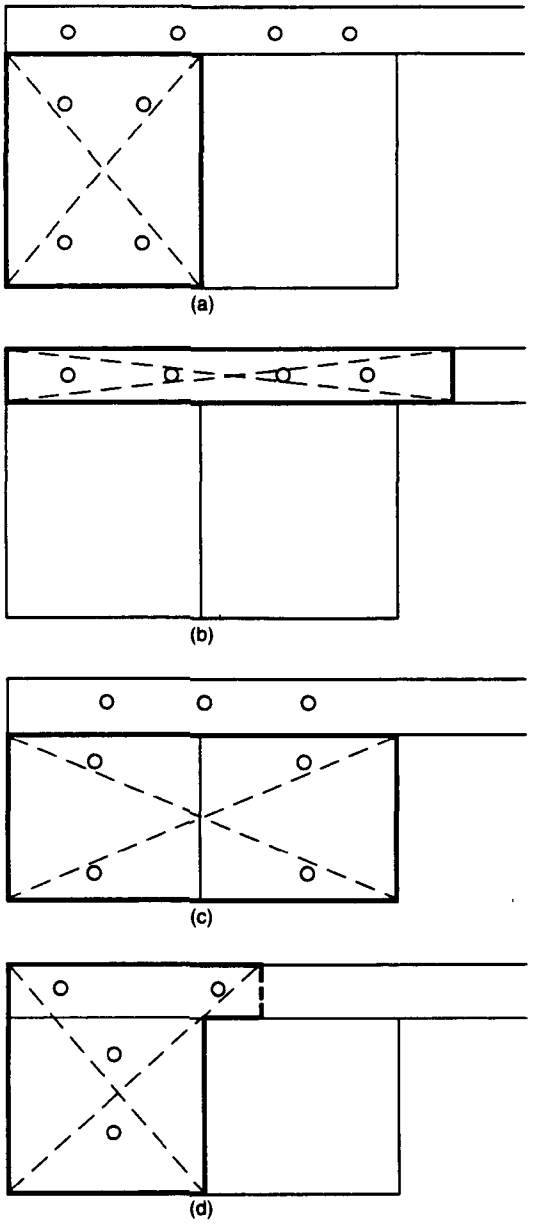

Figure A-5-3.2.2 Examples of design area for dwelling units. Calculate area indicated by heavy outline and X. Circle indicates sprinklers.

A-6-1 Preliminary layouts should be submitted for review to the authority having jurisdiction before any equipment is installed or remodeled in order to avoid error or subsequent misunderstanding. (*See Figure A-6-1.*) Any material deviation from approved plans will require permission of the authority having jurisdiction.

Preliminary layouts should show as much of the following information as is required to provide a clear representation of the system, hazard, and occupancy:

(a) Name of owner and occupant.

(b) Location, including street address.

(c) Point of compass.

(d) Construction and occupancy of each building.

NOTE: Data on special hazards should be submitted as they may require special rulings.

(e) Building height in feet.

(f) If it is proposed to use a city main as a supply, whether the main is dead-end or circulating, size of main and pressure in psi, and, if dead-end, direction and distance to nearest circulating main.

(g) Distance from nearest pumping station or reservoir.

(h) In cases where reliable, up-to-date information is not available, a waterflow test of the city main should be conducted in accordance with A-7-2.1. The preliminary plans should specify the person who conducted the test, date and time, the location of the hydrants where flow was taken, and where static and residual pressure readings were recorded; the size of main supplying these hydrants, and the results of the test, giving size and number of open hydrant butts flowed; also, data covering minimum pressure in the connection with the city main should be included.

(i) Data covering waterworks systems in small towns in order to expedite the review of plans.

(j) Fire walls, fire doors, unprotected window openings, large unprotected floor openings, and blind spaces.

(k) Distance to and construction and occupancy of exposing buildings—e.g., lumber yards, brick mercantiles, fire-resistive office buildings, etc.

(l) Spacing of sprinklers, number of sprinklers in each story or fire area and total number of sprinklers, number of sprinklers on each riser and on each system by floors, total area protected by each system on each floor, total number of sprinklers on each dry pipe system or preaction or deluge system and if extension to present equipment, sprinklers already installed.

(m) Capacities of dry pipe systems with bulk pipe included, see Table A-3-2.3; and, if an extension is made to an existing dry pipe system, the total capacity of the existing and also the extended portion of the system.

(n) Weight or class, size, and material of any proposed underground pipe.

(o) Whether property is located in a flood or earthquake area requiring consideration in the design of sprinkler system.

(p) Name and address of party submitting the layout.

A-6-1.1 See Figure A-6-1.1.

A-6-1.1.3 See Figures A-6-1.1.3(a) and (b).

A-6-2.2 See Figures A-6-2.2(a) through (d).

A-6-2.3 See Figure A-6-2.3.

A-6-2.3(o) See Figure A-6-2.3(o).

A-6-2.4 See Figure A-6-2.4.

A-6-4.1 When additional sprinkler piping is added to an existing system, the existing piping does not have to be increased in size to compensate for the additional sprinklers, provided the new work is calculated and the calculations include that portion of the existing system as may be required to carry water to the new work.

A-6-4.4 See Figure A-6-4.4.

A-6-4.4.1 See Figures A-6-4.4.1(a) and (b).

A-6-4.4.2 See Figure A-6-4.4.2.

A-6-4.4.3(a) See Figure A-6-4.4.3(a).

Table A-5-3.4 Large-Drop Sprinkler Data

Pressure and Number of Design Sprinklers Required for Various Hazards for Large-Drop Sprinklers

Hazard	Type of System	Minimum Operating Pressure,[1] psi (bar) 25 (1.7)	50 (3.4)	75 (5.2)	Hose Stream Demand gal/min (dm³/min)	Water Supply Duration, hr

Table A-5-3.4 (cont.)

Hazard	Type of System	Minimum Operating Pressure,[1] psi (bar) 25 (1.7)	50 (3.4)	75 (5.2)	Hose Stream Demand gal/min (dm³/min)	Water Supply Duration, hr
Unexpanded plastics up to 20 ft (6.1 m) with maximum 10 ft (3.0 m) clearance to ceiling	Wet	Does not apply	30	20	500 (1900)	2
	Dry	Does not apply	Does not apply	Does not apply		
Unexpanded plastics up to 25 ft (7.6 m) with maximum 10 ft (3.0 m) clearance to ceiling	Wet	Does not apply	30 plus one level of in-rack sprinklers[4]	20 plus one level of in-rack sprinklers[4]	500 (1900)	2
	Dry	Does not apply	Does not apply	Does not apply		
Class IV commodities and unexpanded plastics up to 20 ft (6.1 m) with maximum 5 ft (1.5 m) clearance to ceiling	Wet	Does not apply	15	Note 4	500 (1900)	2
	Dry	Does not apply	Does not apply	Does not apply		
Class IV commodities and unexpanded plastics up to 25 ft (7.6 m) with maximum 5 ft (1.5 m) clearance to ceiling	Wet	Does not apply	15 plus one level of in-rack sprinklers[4]	Note 4	500 (1900)	2
	Dry	Does not apply	Does not apply	Does not apply		
On-end Storage of Roll Paper[2]						
Heavyweight paper in closed array, banded in open array, or banded or unbanded in a standard array, up to 26 ft (7.9 m) with maximum 34 ft (10.4 m) clearance to ceiling	Wet	Does not apply	15	Note 4		
	Dry	Does not apply	Does not apply	Does not apply	0 (Note 6)	4 (Note 6)
Any grade of paper, except lightweight paper with stacks in closed array, or banded or unbanded in a standard array, up to 20 ft (6.1 m) with maximum 10 ft (3.0 m) clearance to ceiling	Wet	Does not apply	15	Note 4		
	Dry	Does not apply	25	Note 4	0 (Note 6)	4 (Note 6)
Medium weight paper completely wrapped (sides and ends) in one or more layers of heavyweight paper, or lightweight paper in two or more layers of heavyweight paper, with closed array, banded in open array, or unbanded in a standard array, up to 26 ft (7.9 m) with maximum 34 ft (10.4 m) clearance to ceiling	Wet	Does not apply	15	Note 4	Note 6	Note 6
	Dry	Does not apply	Does not apply	Does not apply	Does not apply	Does not apply
Record Storage						
Paper records and/or computer tapes in multitier steel shelving up to 5 ft (1.5 m) in width and with aisles 30 in. (76 cm) or wider, without catwalks in the aisles, up to 15 ft (4.6 m) with maximum 5 ft (1.5 m) clearance to ceiling	Wet	15	Note 4	Note 4	500 (1900)	1½
	Dry	25	Note 4	Note 4		
Same as above, but with catwalks of expanded metal or metal grid with minimum 50 percent open area in the aisles	Wet	Does not apply	15	Note 4	500 (1900)	1½
	Dry	Does not apply	15	Note 4		

For SI Units. 1 ft = 0 3048 m; 1 psi = 0 0689 bar.

NOTES:

1 Open wood joist construction. Fully firestop each joist channel to its full depth at intervals not exceeding 20 ft (6.2 m). In unfirestopped open wood joist construction, or if firestops are installed at intervals exceeding 20 ft (6.1 m), increase the minimum operating pressures of Table A-5-3.4 by 40 percent

2. See NFPA 231, *Standard for General Storage*.

3. With rack storage, use conventional wood pallets only; no slave pallets.

4. The high pressure may be used, but the required number of design sprinklers may not be reduced from that required for the lower pressure.

5 Install in-rack sprinklers in accordance with NFPA 231C, *Standard for Rack Storage*.

6 Hose stream demands and water supply durations may vary for roll paper storage depending on local conditions. See NFPA 231F, *Standard for the Storage of Roll Paper*

Table A-5-3.5 ESFR Sprinkler Data

Type of Storage	Commodity	Maximum Ht. of Storage in ft	Maximum Ht. of Building in ft (Note 1)	Nominal K Factor	Sprinkler Design Pressure in psi	Commodity Limitation
Palletized and solid pile storage and single, double, and multiple row rack storage (no open top containers or solid shelves)	Cartoned unexpanded plastic; cartoned, expanded plastic; uncartoned, unexpanded plastic; and Class I, II, III, or IV commodities encapsulated or unencapsulated	25 (7.6 m)	30 (9.1 m)	13.5–14.5	50 (3.4 bars)	
	Cartoned, unexpanded plastic; and Class I, II, III, or IV commodities, encapsulated or unencapsulated	35 (10.7 m)	40 (12.2 m)	13.5–14.5	75 (5.2 bars)	Note 2
		20 (6.1 m)	25 (7.6 m)	11.0–11.5	50 (3.4 bars)	
Roll paper on end, open/standard or closed array, banded or unbanded	Heavy weight or medium weight	20 (6.1 m)	30 (9.1 m)	13.5–14.5	50 (3.4 bars)	
Aerosol storage	See NFPA 30B					

For SI Units: 1 ft = 0.3048 m.

NOTE 1: Maximum building height is to be measured to the underside of the roof deck or ceiling.
NOTE 2: Only ESFR sprinklers specifically listed for 40-ft (12.2-m) high buildings should be used in buildings higher than 30 ft (9.1 m) up to 40 ft (12.2 m).

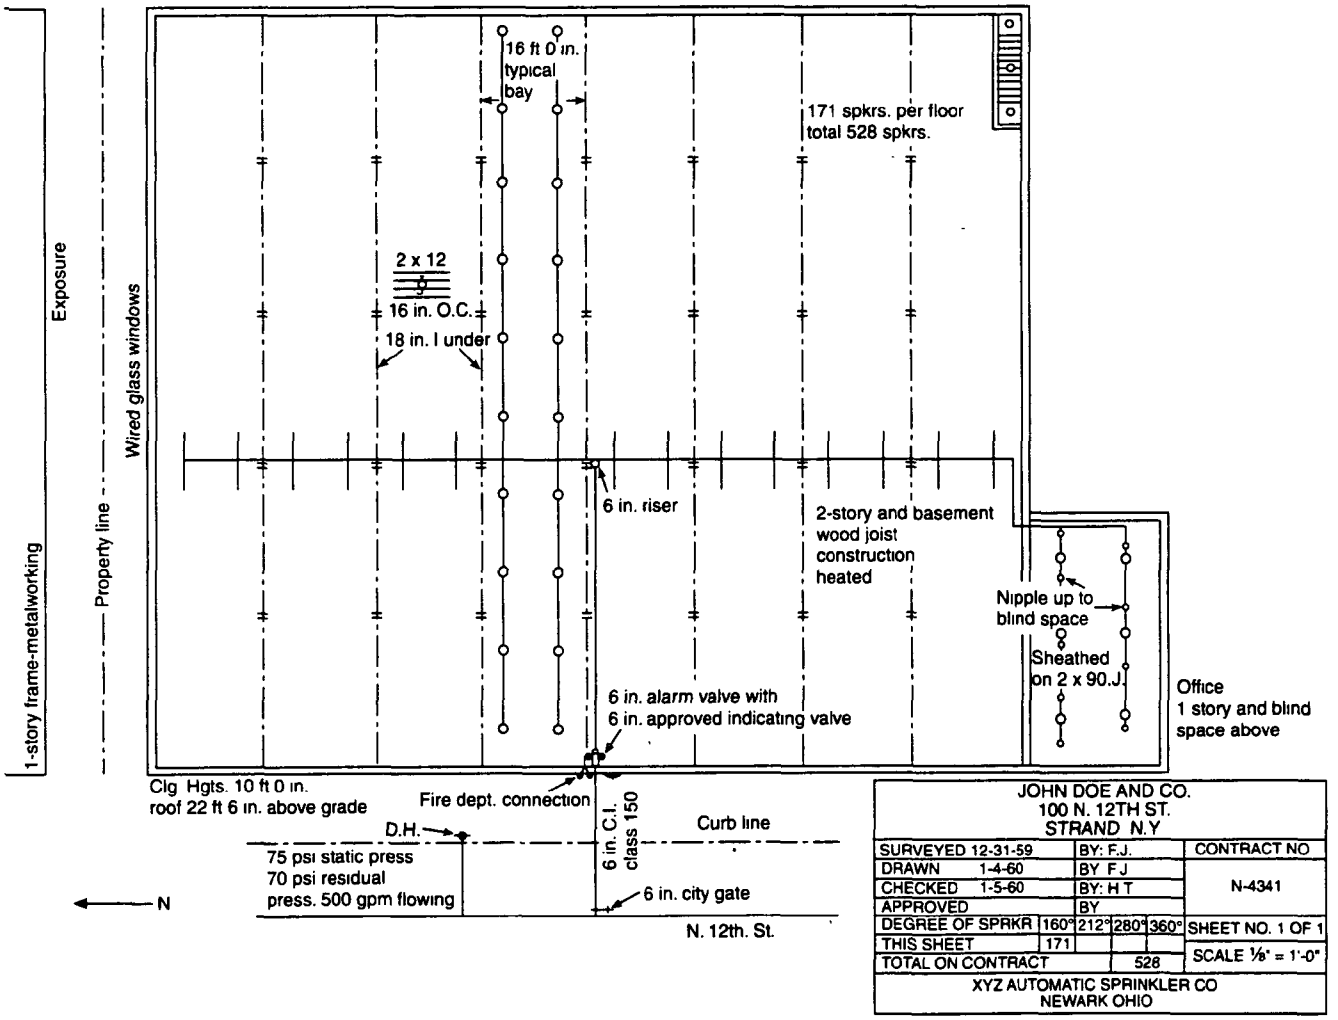

Figure A-6-1 Typical preliminary plan.

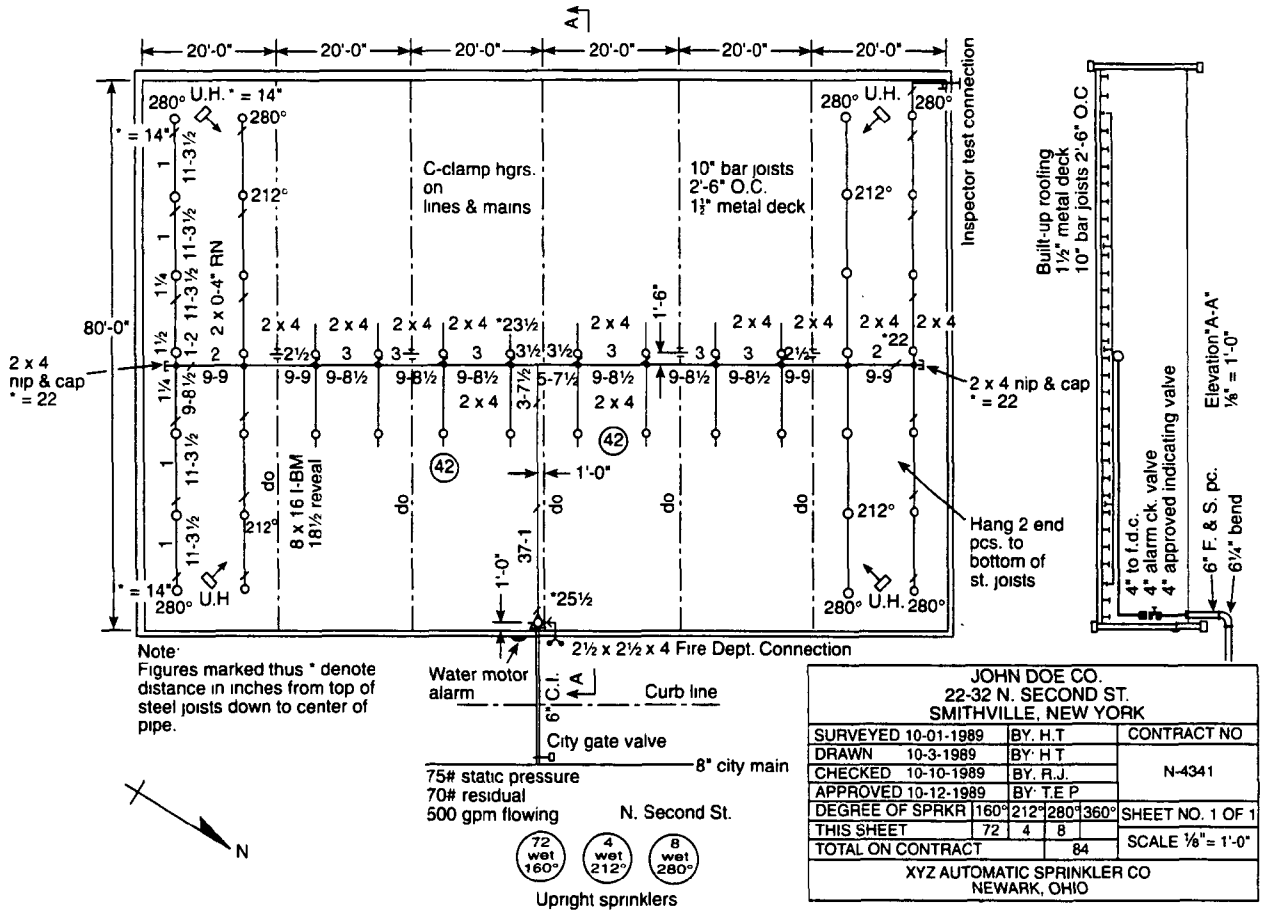

Note:
Figures marked thus * denote distance in inches from top of steel joists down to center of pipe.

Figure A-6-2.3 Sample work sheet.

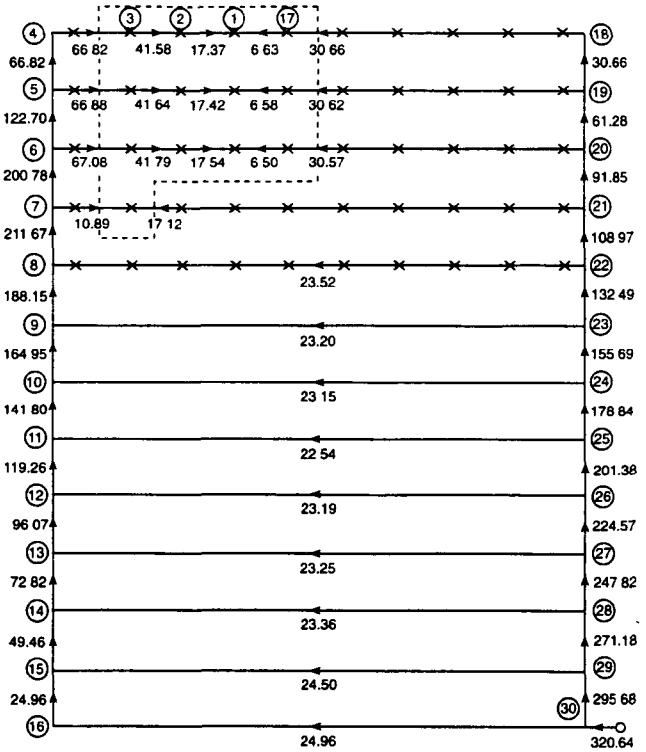

Figure A-6-2.3(o) Example of hydraulically remote area — grid system.

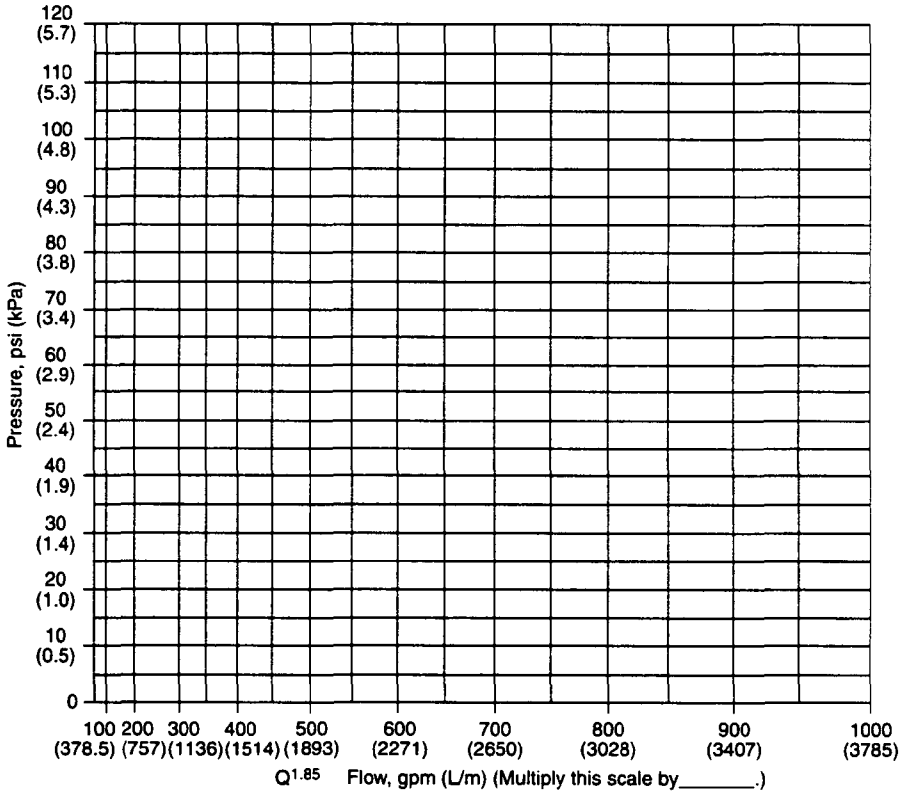

Figure A-6-2.4 Sample graph sheet.

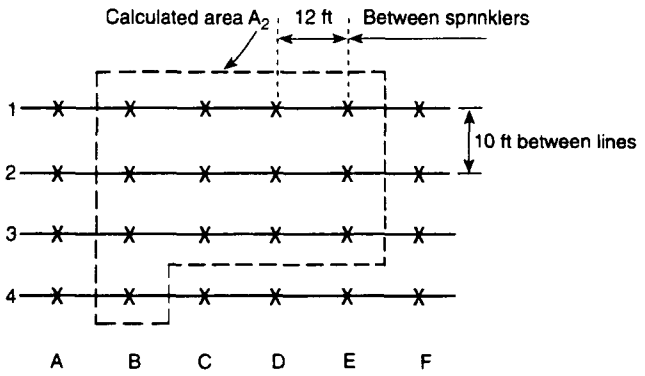


NOTE 1: For gridded systems, the extra sprinkler (or sprinklers) on branch line 4 may be placed in any adjacent location from B to E at the designer's option.
NOTE 2. For tree and looped systems, the extra sprinkler on line 4 should be placed closest to the cross main.

Assume a remote area of 1500 ft^2 with sprinkler coverage of 120 ft^2

$$\text{Total sprinklers to calculate} = \frac{\text{Design area}}{\text{Area per sprinkler}}$$

$$= \frac{1500}{120} = 12.5, \text{ calculate } 13$$

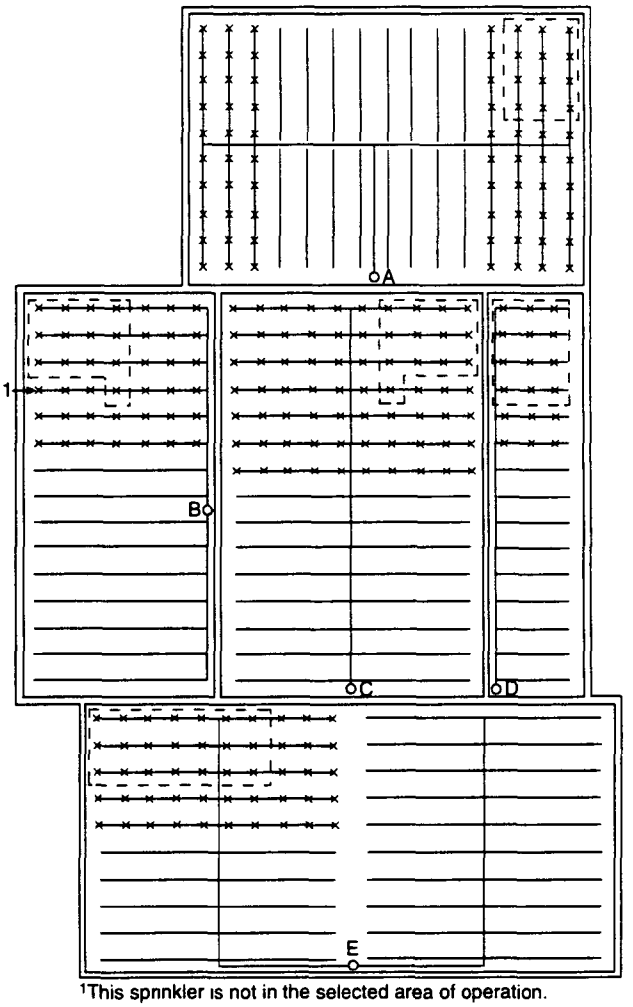
$$\text{Number of sprinklers on branch line} = \frac{1.2\sqrt{A}}{S}$$

Where A = Design area
S = Distance between sprinklers on branch line

$$\text{Number of sprinklers on branch line} = \frac{1.2\sqrt{1500}}{12} = 3.87.$$

For SI units: 1 ft = 0.3048 m; 1 ft^2 = 0.0929 m^2.

Figure A-6-4.4 Example of determining the number of sprinklers to be calculated.



[1]This sprinkler is not in the selected area of operation.

Figure A-6-4.4.1(a) Example of hydraulically most demanding area.

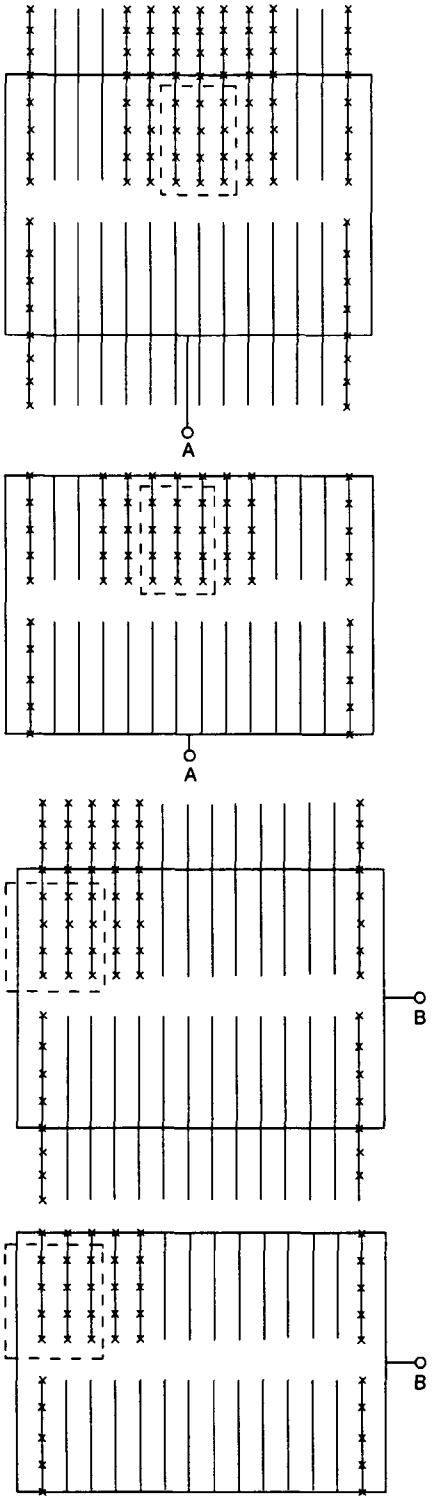


Figure A-6-4.4.1(b) Example of hydraulically most demanding area.

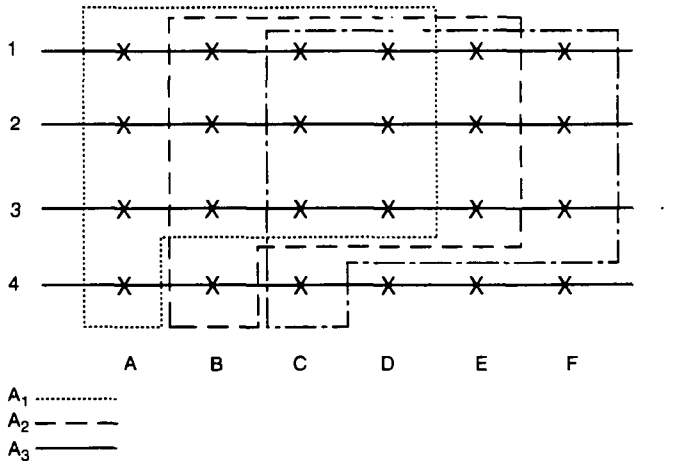

Figure A-6-4.4.2 Example of determining the most remote area for a gridded system.

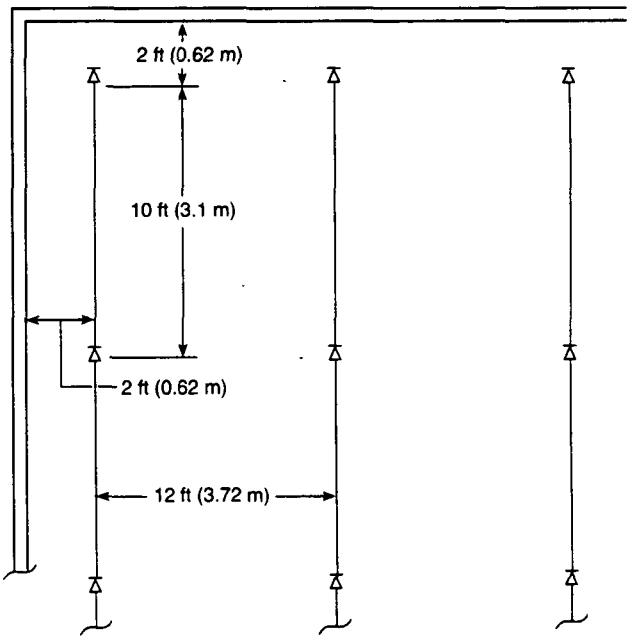

Figure A-6-4.4.3(a) Sprinkler design area.

A-6-4.4.3(b) This subsection assumes a ceiling constructed so as to reasonably assure that a fire on one side of the ceiling will operate sprinklers on one side only. Where a ceiling is sufficiently open, or of such construction that operation of sprinklers above and below the ceiling may be anticipated, the operation of such additional sprinklers should be considered in the calculations.

A-6-4.4.4 When it is not obvious by comparison that the design selected is the hydraulically most remote, additional calculations should be submitted. The most distant area is not necessarily the hydraulically most remote.

A-6-4.4.6 The use of sprinklers with differing orifice sizes in situations where different protection areas are needed is not considered balancing. An example would be a room that could be protected with sprinklers having different orifice size in closet, foyer, and room areas. However, this procedure introduces difficulties when restoring a system to service after operation since it is not always clear which sprinklers go where.

A-6-4.4.7 Where the normal pressure (P_n) is used to calculate the flow from an orifice, the following assumptions should be used.

(a) At any flowing outlet along a pipe, except the end outlet, only the normal pressure (P_n) can act on the outlet. At the end outlet the total pressure (P_t) can act. The following should be considered end outlets:

1. The last flowing sprinkler on a dead-end branch line
2. The last flowing branch line on a dead-end cross main
3. Any sprinkler where a flow split occurs on a gridded branch line
4. Any branch line where a flow split occurs on a looped system.

(b) At any flowing outlet along a pipe, except the end outlet, the pressure acting to cause flow from the outlet is equal to the total pressure (P_t) minus the velocity pressure (P_v) on the upstream (supply) side.

(c) To find the normal pressure (P_n) at any flowing outlet, except the end outlet, assume a flow from the outlet in question and determine the velocity pressure (P_v) for the total flow on the upstream side. Because normal pressure (P_n) equals total pressure (P_t) minus velocity pressure (P_v), the value of the normal pressure (P_n) so found should result in an outlet flow approximately equal to the assumed flow; if not, a new value should be assumed, and the calculations repeated.

A-6-5.1 The demonstrated effectiveness of pipe schedule systems is limited to their use with 1/2-in. (13-mm) orifice sprinklers. The use of other size orifices may require hydraulic calculations to prove their ability to deliver the required amount of water within the available water supply.

A-6-5.1.2 Long Runs of Pipe. Where the construction or conditions introduce unusually long runs of pipe or many angles in risers or feed or cross mains, an increase in pipe size over that called for in the schedules may be required to compensate for increased friction losses.

A-6-5.2.3.1 For example, a 2 1/2-in. (64-mm) steel pipe, which is permitted to supply 30 sprinklers, may supply a total of 50 sprinklers where not more than 30 sprinklers are above, or below, a ceiling.

A-6-5.3.3.1 For example, a 3-in. (76-mm) steel pipe, which is permitted to supply 40 sprinklers in an Ordinary Hazard area, may supply a total of 60 sprinklers where not more than 40 sprinklers protect the occupied space below the ceiling.

A-6-5.4 Schedule for Extra Hazard Occupancies. The piping schedule shown in Table A-6-5.4 is reprinted only as a guide for existing systems. New systems for Extra Hazard Occupancies should be hydraulically calculated as required in 6-5.4.

Table A-6-5.4 Extra Hazard Pipe Schedule

Steel		Copper	
1 in.	1 sprinkler	1 in.	1 sprinkler
1 1/4 in.	2 sprinklers	1 1/4 in.	2 sprinklers
1 1/2 in.	5 sprinklers	1 1/2 in.	5 sprinklers
2 in.	8 sprinklers	2 in.	8 sprinklers
2 1/2 in.	15 sprinklers	2 1/2 in.	20 sprinklers
3 in.	27 sprinklers	3 in.	30 sprinklers
3 1/2 in.	40 sprinklers	3 1/2 in.	45 sprinklers
4 in.	55 sprinklers	4 in.	65 sprinklers
5 in.	90 sprinklers	5 in.	100 sprinklers
6 in.	150 sprinklers	6 in.	170 sprinklers

For SI Units: 1 in. = 25.4 mm.

A-6-5.6 In the design of an exposure protection system, the flow rate from window and cornice sprinklers is shown in Table 6-5.6. The flow rates are based on the guide numbers selected from Table 2-3 of NFPA 80A, *Recommended Practice for Protection of Buildings from Exterior Fire Exposures.*

Section A of the table is for window sprinklers. The orifice size is selected according to the level on which the sprinkler is located.

Section B of the table is for cornice sprinklers.

A-7-1.2.3 Where the system riser is close to an outside wall, underground fittings of proper length should be used in order to avoid pipe joints located in or under the wall. Where the connection passes through the foundation wall below grade, a 1- to 3-in. (25- to 76-mm) clearance should be provided around the pipe and the clear space filled with asphalt mastic or similar flexible waterproofing material.

A-7-2.1 Water Supplies. Care should be taken in making water tests to be used in designing or evaluating the capability of sprinkler systems. The water supply tested should be representative of the supply that may be available at the time of a fire. For example, testing of public water supplies should be done at times of normal demand on the system. Public water supplies are likely to fluctuate widely from season to season and even within a 24-hour period. Allowance should be made for seasonal or daily fluctuations, for drought conditions, for possibility of interruption by flood, or for ice conditions in winter. Testing of water supplies also normally used for industrial use should be done while water is being drawn for industrial use. The range of industrial-use demand should be taken into account. In special situations where the domestic water demand could significantly reduce the sprinkler water supply, an increase in the size of the pipe supplying both the domestic and sprinkler water may be justified.

Future changes in water supplies should be considered. For example a large, established, urban supply is not likely to change greatly within a few years. However, the supply in a growing suburban industrial park might deteriorate quite rapidly as greater numbers of plants draw more water.

Testing of Water Supply. To determine the value of public water as a supply for automatic sprinkler systems, it is generally necessary to make a flow test to determine how much water can be discharged at a residual pressure at a rate sufficient to give the required residual pressure under the roof (with the volume flow hydraulically translated to the base of the riser), i.e., a pressure head represented by the height of the building plus the required residual pressure.

The proper method of conducting this test is to use two hydrants in the vicinity of the property. The static pressure should be measured on the hydrant in front of or nearest to the property and the water allowed to flow from the hydrant next nearest the property, preferably the one farthest from the source of supply if the main is fed only one way. The residual pressure will be that indicated at the hydrant where water is not flowing.

Referring to Figure A-7-2.1, the method of conducting the flow tests is as follows:

1. Attach gauge to hydrant (A) and obtain static pressure.
2. Either attach second gauge to hydrant (B) or use Pitot tube at outlet. Have hydrant (B) opened wide and read pressure at both hydrants.
3. Use the pressure at (B) to compute the gal flowing and read the gauge on (A) to determine the residual pressure or that which will be available on the top line of sprinklers in the property.

Water pressure in psi for a given height in ft equals height multiplied by 0.434.

In making flow tests, whether from hydrants or from nozzles attached to hose, always measure the size of the orifice. While hydrant outlets are usually 2½ in. (64 mm), they are sometimes smaller and occasionally larger. The UL play pipe is 1⅛ in. (29 mm) and 1¾ in. (44 mm) with tip removed, but occasionally nozzles will be 1 in. (25.4 mm) or 1¼ in. (33 mm), and with the tip removed the opening may be only 1½ in. (38 mm).

The Pitot tube should be held approximately one-half the diameter of the hydrant or nozzle opening away from the opening. It should be held in the center of the stream, except that in using hydrant outlets the stream should be explored to ascertain the average pressure.

For further information on water supply testing, see NFPA 291, *Recommended Practice for Fire Flow Testing and Marking of Hydrants*.

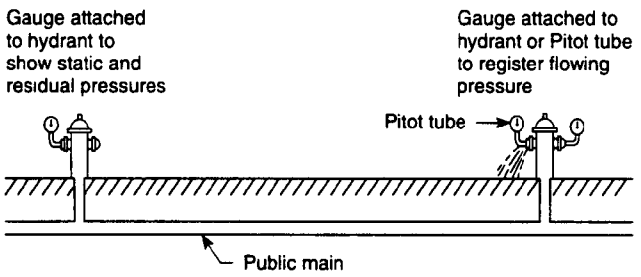

Figure A-7-2.1 Method of conducting flow tests.

A-7-2.2.1 An automatically controlled vertical turbine pump taking suction from a reservoir, pond, lake, river, or well complies with 7-2.2.1.

A-7-2.3.3 For pipe schedule systems, the air pressure to be carried and the proper proportion of air in the tank may be determined from the following formulas, in which

P = air pressure carried in pressure tank
A = proportion of air in tank
H = height of highest sprinkler above tank bottom.

When tank is placed above highest sprinkler

$$P = \frac{30}{A} - 15.$$

If A = ⅓ then P = 90 − 15 = 75 lb psi.
If A = ½ then P = 60 − 15 = 45 lb psi.
If A = ⅔ then P = 45 − 15 = 30 lb psi.

When tank is below level of the highest sprinkler

$$P = \frac{30}{A} - 15 + \frac{0.434H}{A}.$$

If A = ⅓ then P = 75 + 1.30H.
If A = ½ then P = 45 + 0.87H.
If A = ⅔ then P = 30 + 0.65H.

The respective air pressures above are calculated to ensure that the last water will leave the tank at a pressure of 15 psi (1.03 bars) when the base of the tank is on a level with the highest sprinkler, or at such additional pressure as is equivalent to a head corresponding to the distance between the base of the tank and the highest sprinkler when the latter is above the tank.

For hydraulically calculated systems, the following formula should be used to determine the tank pressure and ratio of air to water.

$$P_t = \frac{P_f + 15}{A} - 15$$

where:

P_t = tank pressure
P_f = pressure required from hydraulic calculations
A = proportion of air.

Example: Hydraulic calculations indicate 75 psi is required to supply the system. What tank pressure will be required?

$$P_t = \frac{75 + 15}{0.5} - 15$$

$$P_t = 180 - 15 = 165 \text{ psi}$$

For SI Units: 1 ft = 0.3048 m; 1 psi = 0.0689 bar.

In this case the tank would be filled with 50 percent air and 50 percent water and the tank pressure would be 165 psi (11.4 bars). If the pressure is too high, the amount of air carried in the tank will have to be increased.

Location of Pressure Tanks. Pressure tanks should be located above the top level of sprinklers, but may be located in the basement or elsewhere.

A-8-2.1 Underground mains and lead-in connections to system risers should be flushed through hydrants at dead ends of the system or through accessible aboveground flushing outlets allowing the water to run until clear. Figure A-8-2.1 shows acceptable examples of flushing the system. If water is supplied from more than one source or from a looped system, divisional valves should be closed to produce a high-velocity flow through each single line. The flows specified in Table 8-2.1 will produce a velocity of at least 10 ft/sec (3 m/s), which is necessary for cleaning the pipe and for lifting foreign material to an aboveground flushing outlet.

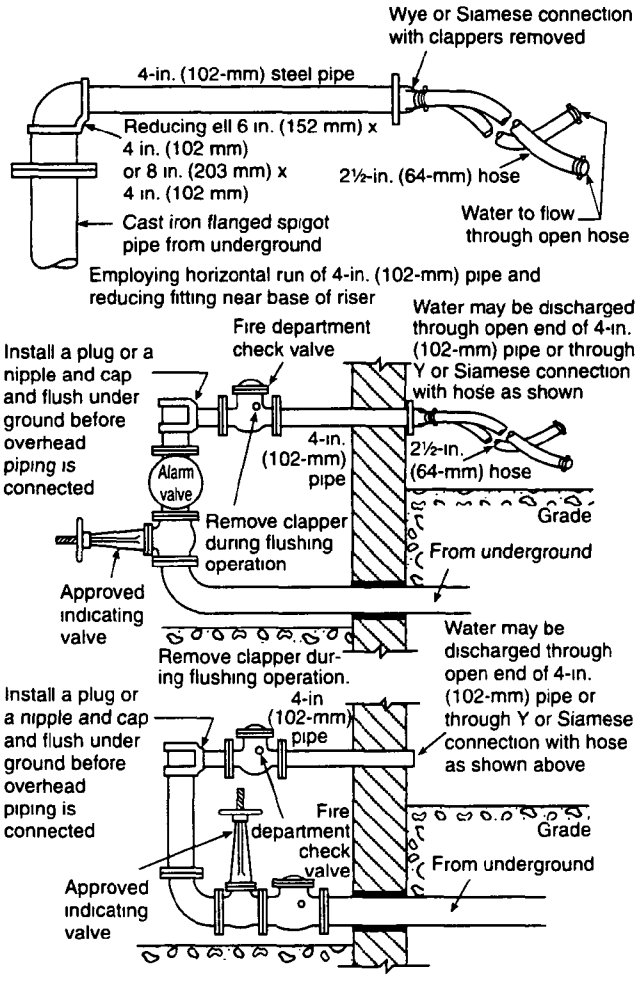

Figure A-8-2.1 Methods of flushing water supply connections.

A-8-2.2.1 A sprinkler system has for its water supply a connection to a public water service main. A 100-psi (6.9-bar) rated pump is installed in the connection. With a maximum normal public water supply of 70 psi (4.8 bars) at the low elevation point of the individual system or portion of the system being tested and a 120-psi (8.3-bar) pump (churn) pressure, the hydrostatic test pressure is 70 + 120 + 50 or 240 psi (16.5 bars).

To reduce the possibility of serious water damage in case of a break, pressure may be maintained by a small pump, the main controlling gate meanwhile being kept shut during the test.

Polybutylene pipe will undergo expansion during initial pressurization. In this case, a reduction in gauge pressure may not necessarily indicate a leak. The pressure reduction should not exceed the manufacturer's specifications and listing criteria.

When systems having rigid thermoplastic piping such as CPVC are pressure tested, the sprinkler system should be filled with water. The air should be bled from the highest and farthest sprinklers. Compressed air or compressed gas should never be used to test systems with rigid thermoplastic pipe.

A-8-2.2.7 Valves isolating the section to be tested may not be "drop-tight." When such leakage is suspected, test blanks of the type required in 8-2.2.7 should be used in a manner that includes the valve in the section being tested.

Figure A-8-5 Sample nameplate.

A-9-1.1 Heat-Sensitive Material. The backbone of the fire protection philosophy for U.S. flagged vessels and passenger vessels that trade internationally is limiting a fire to the compartment of origin by passive means. Materials that do not withstand a 1-hr fire exposure when tested in accordance with ASTM E 119, *Standard Test Methods for Fire Tests of Building Construction and Materials,* are considered "heat sensitive."

A-9-1.1 Marine Thermal Barrier. A marine thermal barrier is typically referred to as a B-15 boundary.

A-9-1.2 In addition to the examples provided in Appendix A-1-4.7 of the standard, Table A-9-1.2 provides additional examples of occupancy definitions of typical shipboard spaces.

The classifications in Table A-9-1.2 are not meant to be applied without giving consideration to the definition of each occupancy hazard given in the standard. Table A-9-1.2

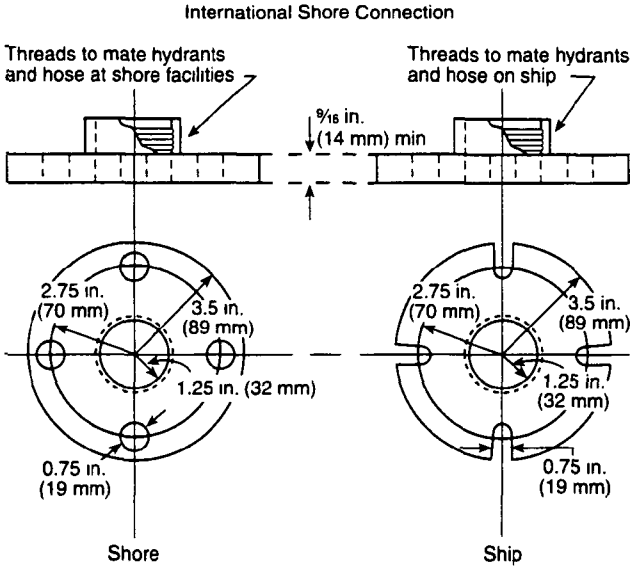

Figure A-9-1.1 International shore fire connection.

is general guidance for classification of typical spaces. Where a space is outfitted such that the occupancy definitions indicate that another classification would be more appropriate, the most representative and most demanding occupancy classification should be used. For example, it would certainly be possible to outfit a stateroom to require upgrading the occupancy to Ordinary Hazard Group 1.

When a vessel undergoes modifications, alterations, or service changes that significantly affect the fire risk of the occupancy of one or more compartments, the occupancy classification should be reevaluated to determine if it has changed.

A-9-1.3 Experience has shown that structures that are partially sprinklered can be overrun by well-developed fires originating in unsprinklered areas. Therefore, the entire vessel should be sprinklered whenever sprinkler systems are considered.

A-9-2.1 Sprinklers with a nominal orifice size 3/8 in. (9.5 mm) or less coupled with a system strainer minimize the potential for clogging. Attention is called to the minimum 10-psi (68.9-kPa) design and operating pressure requirement, which exceeds the typical 7 psi (48.3 kPa) required for land-based systems.

A-9-2.2 Where a marine thermal barrier is penetrated, limiting the opening around the sprinkler pipe to 1/16 in. (1.6 mm) is considered as meeting this requirement.

A-9-2.4.3(b) Materials that are not listed are permitted provided that they are shown to meet the performance requirements of International Maritime Organization Maritime Safety Committee Circular 580, *Guidelines for the Application of Plastic Pipes on Ships.*

A-9-2.5.1 When designing supports, the selection and spacing of pipe supports should take into account the pipe dimensions, mechanical and physical properties of piping materials and supports, operating temperature, thermal expansion effects, external loads, thrust forces, vibration, maximum accelerations, and differential motions to which the system might be subjected, and the type of support.

The route of the vessel is intended to be descriptive of its usual operating area. For example, expected motion of the system on an ocean vessel is expected to be considerably greater than the motion of a vessel that operates on a river. A vessel that operates within the confines of any of the Great Lakes is expected to subject the system pipe to greater motion than would a vessel that operates on a lake such as Lake Tahoe.

Table A-9-1.2 Examples of Shipboard Space Occupancy Classification

Occupancy Type	Space Types Included		Examples
	CFR[1]	SOLAS[2]	
Light Hazard	1[3], 2, 3, 4, 5, 8, 13	1[3], 2, 3, 4, 5, 9, 10	Public spaces Control stations
Ordinary Hazard (Group 1)	1[3], 6, 7, 8, 9	1[3], 3, 5, 9	Galleys Storage areas Laundries Pantries with high heat source equipment
Ordinary Hazard (Group 2)	9[4], 11[4]	5[4], 8[4], 9, 11	Sales shops Stages (with sets) Machine shops
Extra Hazard (Group 1)	1, 9[4], 10, 11[4]	1, 5[4], 7, 8[4]	Auxiliary machinery – limited combustible liquids Steering rooms – combustible hydraulic fluid in use
Extra Hazard (Group 2)	1, 9[4], 10, 11[4]	1, 5[4], 6, 7, 8[4]	Auxiliary machinery – with combustible liquids Machinery spaces

[1]Space type definitions are given in 46 CFR 72.05-5.
[2]Space type definitions are given in the *International Convention for the Safety of Life at Sea*, 1974 (SOLAS 74), as amended, regulations II-2/3 and II-2/26.
[3]Primarily for accommodation type control stations. This would not include generator or other similar type spaces.
[4]Depends on storage type, quantity and height and distance below sprinkler deflectors [must maintain 0.46 m (18 in.) clearance]

It is recommended that the designer review the requirements for automatic sprinkler systems that are subject to earthquakes. While it is obvious that shipboard motions and accelerations differ from those that occur during an earthquake, the general principle of protecting the piping system against damage applies. Individual hanger design, however, will be very similar. (*See 4-14.4.3.*)

Earthquake protection does not apply to ships; however, motions are similar to those that a ship will experience in a seaway. The design principles discussed in this section should be used as a guide for shipboard system design. See 2-6.1.

A-9-2.5.3 Use of heat sensitive materials for pipe hangers and supports might be desirable in some cases. Where heat-sensitive materials are used, the hangers and supports should be adequately protected by either the direct application of insulation or installation behind a marine thermal barrier. Insulation materials applied directly to hangers should be insulated in accordance with the method provided in Society of Naval Architects and Marine Engineers Technical Research Bulletin 2-21, "Aluminum Fire Protection Guidelines."

A-9-2.5.4 Consideration should be given to increasing the size of rods and U-hooks as necessary, to account for service and operational loading, including ship motion and vibrations.

A-9-2.6.1 Shipboard installations will normally require more than one valve per water supply. Locking valves in the open position is not an acceptable substitute for the requirement of 9-2.6.1 but can be done in addition to the supervision requirement.

A-9-2.7.1 International shore connections are portable universal couplings that permit connections of shipboard sprinkler or firemain systems between one ship and another or between a shore facility and a ship. Both the ship and the shore facility are expected to have an international shore connection fitting such that in an emergency they can be attached to their respective fire hoses and bolted together to permit charging the ship's system. It must be portable to accommodate hose-to-hose connection and allow assistance from any position.

Installation of an additional fire boat connection might be required on-board vessels whose route is such that regular access to fire boats is possible. An additional fire boat connection might not be necessary where fire boats are equipped to connect to the regular fire department connection. (*See A-9-2.7.3*).

A-9-2.7.3 Selection of the pipe thread for the fire department connection should be done very carefully. It is recommended that a 2½-in. Siamese connection with National Standard Hose Thread be used since a majority of fire department hose lines will be compatible with this thread. However, it must be noted that some fire jurisdictions might not be compatible with a connection of this type. Serious consideration should be given to the vessel's typical operating area. Precautions and planning should avert the possibility of the vessel being forced ashore by fire at a location where the fire department equipment is not compatible with this connection. Carriage of extra fittings and pre-voyage arrangements with all applicable jurisdictions should be considered. The international shore connection is required to ensure that all vessels fitted with sprinkler systems have at least one type of common connection.

A-9-3.1 Special consideration should be given to the installation of relief valves in all wet pipe systems. Ambient ship temperatures can vary greatly depending on operating environment, duration of voyage, and failure of climate control systems.

A-9-4.2 Areas fitted primarily with multiple staterooms and corridors should be considered sleeping accommodation areas.

A-9-4.4 If combustibles are present such that they constitute a threat, the space should be sprinklered. One example would be the presence of large bundles of unsheathed computer or electrical cable. Typical amounts of lighting or control cabling should not be considered to constitute a fire threat.

A-9-4.10 The objective of these requirements is to protect risers and cross mains, and to ensure that fire damage within one space or group of spaces will not inhibit the performance of the remainder of the sprinkler system. Heat-sensitive piping, as restricted by this section, should not be led between two spaces that are required to be separated by 60-min-rated divisions.

A-9-4.12.1 While not required, a dual annunciator alarm panel system is recommended. One panel should show the piping system layout and indicate status of zone valves, tank pressures, water supply valves, pump operation, etc. The second panel should show the vessel's general arrangement and indicate status of water flow (i.e., fire location) alarms.

A-9-5.2 For example, a design area of 1500 ft^2 (139.3 m^2) is used to design a sprinkler system for an unobstructed Light Hazard occupancy. In this case, the system must supply at least 7 sprinklers that are installed within that area. If 8 sprinklers are installed to protect windows within this design area, the water demand of these sprinklers is added to the total water demand. Thus, 15 sprinklers must be supplied by this system.

A-9-5.3 Hose stream flow need not be added to the water demand. The water supply for fire streams is supplied by separate fire pump(s) that supply the vessel's fire main.

A-9-6.2.6 The purpose of this is to ensure that the pressure tank air supply will not keep the tank "fully" pressurized while water is expelled, thus preventing pump actuation.

A-9-6.3.6(a) Pumps should not be located within the same compartment. However, where this is not reasonable or practical, special attention should be given to protecting pumps such that a single failure will not render the sprinkler system inoperative.

A-9-6.4.5 This procedure should be used to qualify each water supply to which the vessel is to be attached. For example, this might require testing of multiple hydrants or connections in the same mooring area. The pressure loss effect of the hose or piping leading from the water supply to the ship should also be considered when qualifying each hydrant.

A-10-1.1 Impairments. Before shutting off a section of the fire service system to make sprinkler system connections, notify the authority having jurisdiction, plan the work carefully, and assemble all materials to enable completion in the shortest possible time. Work started on connections should be completed without interruption and protection restored as promptly as possible. During the impairment, provide emergency hose lines and extinguishers and maintain extra watch service in the areas affected.

When changes involve shutting off water from any considerable number of sprinklers for more than a few hours, temporary water supply connections should be made to sprinkler systems so that reasonable protection can be maintained. In adding to old systems or revamping them, protection should be restored each night so far as possible. The members of the private fire brigade as well as public fire departments should be notified as to conditions.

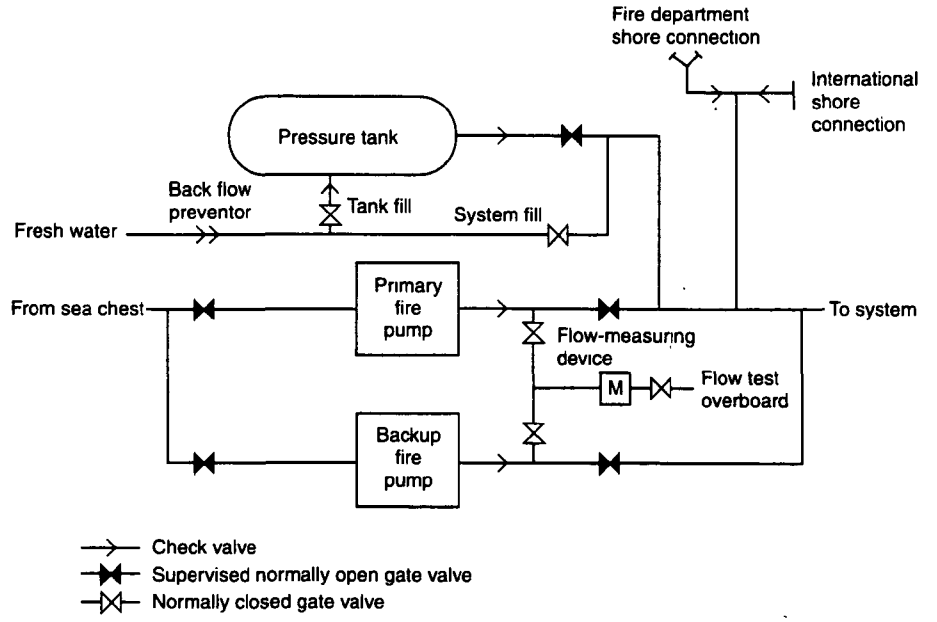

Figure A-9-6.3.6(a) Abbreviated example of a dual fire pump water supply.

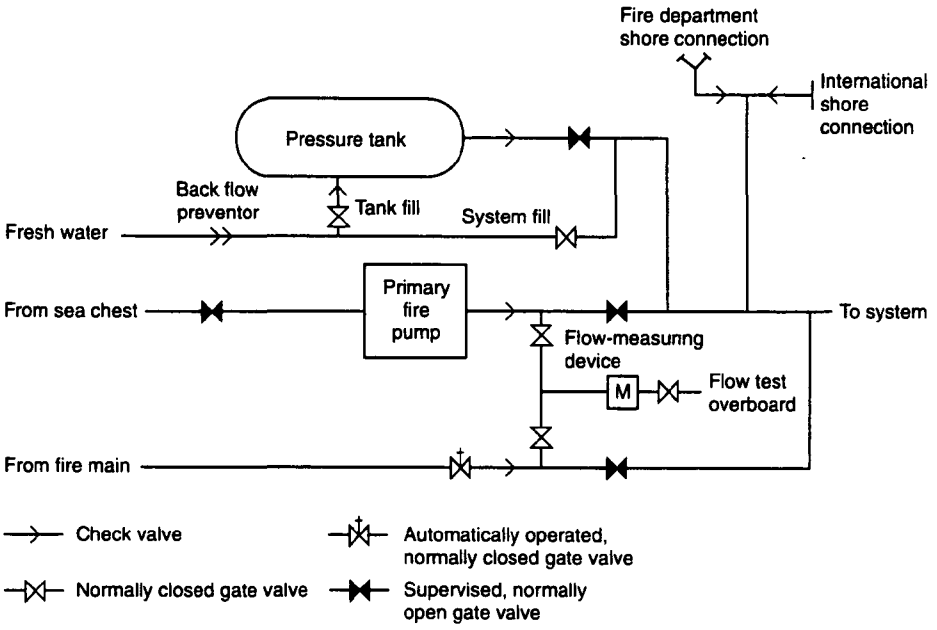

Figure A-9-6.3.7 Abbreviated example of a water supply with fire pump backup.

Maintenance Schedule. The items shown in Table A-10-1.1 should be checked on a routine basis.

Table A-10-1.1 Maintenance Schedule

Parts	Activity	Frequency
Flushing piping	Test	5 years
Fire department connections	Inspection	Monthly
Control valves	Inspection	Weekly—sealed
	Inspection	Monthly—locked
	Inspection	Monthly—tamper switch
	Maintenance	Yearly
Main drain	Flow test	Quarterly
Open sprinklers	Test	Annual
Pressure gauge	Calibration test	
Sprinklers	Test	50 years
Sprinklers—high temp	Test	5 years
Sprinklers—residential	Test	20 years
Waterflow alarms	Test	Quarterly
Preaction/deluge detection system	Test	Semiannually
Preaction/deluge systems	Test	Annually
Antifreeze solution	Test	Annually
Cold weather valves	Open and close valves	Fall, close; spring, open
Dry/preaction/deluge systems		
Air pressure and water pressure	Inspection	Weekly
Enclosure	Inspection	Daily—cold weather
Priming water level	Inspection	Quarterly
Low—point drains	Test	Fall
Dry pipe valves	Trip test	Annual—spring
Dry pipe valves	Full flow trip	3 years—spring
Quick-opening devices	Test	Semiannually

Appendix B Miscellaneous Topics

This Appendix is not a part of the requirements of this NFPA document, but is included for information purposes only.

B-1 Figure B-1 shows acceptable methods for interconnection of the fire protection and domestic water supply.

B-2 Sprinkler System Performance Criteria.

B-2.1 Sprinkler system performance criteria have been based on test data. The factors of safety are generally small and are not definitive, and can depend on expected (but not guaranteed) inherent characteristics of the sprinkler systems involved. These inherent factors of safety consist of the following:

(a) The flow-declining pressure characteristic of sprinkler systems whereby the initial operating sprinklers discharge at a higher flow than with all sprinklers operating within the designated area.

(b) The flow-declining pressure characteristic of water supplies. This is particularly steep where fire pumps are the water source. This characteristic similarly produces higher than design discharge at the initially operating sprinklers.

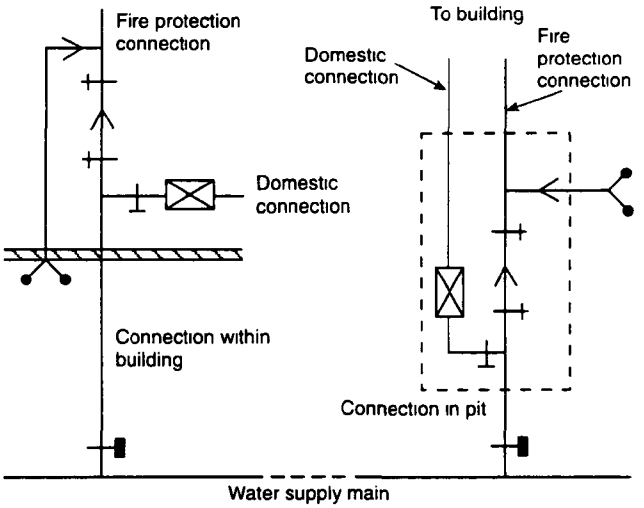

Figure B-1 Permitted arrangements between the fire protection water supply and the domestic water supply.

The user of these standards may elect an additional factor of safety if the inherent factors are not considered adequate.

B-2.1.1 Performance-specified sprinkler systems as opposed to scheduled systems can be designed to take advantage of multiple loops or gridded configurations. This results in minimum line losses at expanded sprinkler spacing, in contrast to the older tree-type configurations, where advantage cannot be taken of multiple path flows.

Where the water supply characteristics are relatively flat with pressures being only slightly above the required sprinkler pressure at the spacing selected, gridded systems with piping designed for minimal economic line losses can all but eliminate the inherent flow-declining pressure characteristic generally assumed to exist in sprinkler systems. In contrast, the economic design of a tree-type system would likely favor a system design with closer sprinkler spacing and greater line losses, demonstrating the inherent flow-declining pressure characteristic of the piping system.

Elements that enter into the design of sprinkler systems include:

(a) Selection of density and area of application.

(b) Geometry of the area of application (remote area).

(c) Permitted pressure range at sprinklers.

(d) Determination of the water supply available.

(e) Ability to predict expected performance from calculated performance.

(f) Future upgrading of system performance.

(g) Size of sprinkler systems.

In developing sprinkler specifications, each of these elements needs to be considered individually. The most conservative design will be based on the application of the most stringent conditions for each of the elements.

B-2.1.2 Selection of Density and Area of Application. Specifications for density and area of application are developed from NFPA and other standards. It is desirable to specify densities rounded upward to the nearest 0.005 gpm/sq ft (0.20 Lpm/m^2).

Prudent design should consider reasonable-to-expect variations in occupancy. This would include not only variations in type of occupancy, but also, in the case of warehousing, the anticipated future range of materials to be stored, clearances, types of arrays, packaging, pile height, and pile stability, as well as other factors.

Design also considers some degree of adversity at the time of a fire. To take this into account, the density and/or area of application may be increased. Another way is to use a dual-performance specification where, in addition to the normal primary specifications, a secondary density and area of application is specified. The objective of such a selection is to control the declining pressure-flow characteristic of the sprinkler system beyond the primary design flow.

A case can be made for designing feed and cross mains to lower velocities than branch lines to achieve the same result as specifying a second density and area of application.

B-2.1.3 Geometry of the Area of Application (Remote Area). It is expected that, over any portion of the sprinkler system equivalent in size to the area of application, the system will achieve the minimum specified density for each sprinkler within that area.

Where a system is computer-designed, ideally the program should verify the entire system by shifting the area of application the equivalent of one sprinkler at a time so as to cover all portions of the system. Such a complete computer verification of performance of the system is most desirable, but unfortunately not all available computer verification programs currently do this.

This selection of the proper Hazen-Williams coefficient is important. New unlined steel pipe has a Hazen-Williams coefficient close to 140. However, it quickly deteriorates to 130 and, after a few years of use, to 120. Hence, the basis for normal design is a Hazen-Williams coefficient of 120 for steel-piped wet systems. A Hazen-Williams coefficient of 100 is generally used for dry pipe systems because of the increased tendency for deposits and corrosion in these systems. However, it should be realized that a new system will have fewer line losses than calculated, and the distribution pattern will be affected accordingly.

Conservatism can also be built into systems by intentionally designing to a lower Hazen-Williams coefficient than that indicated.

B-2.1.4 Ability to Predict Expected Performance from Calculated Performance. Ability to accurately predict the performance of a complex array of sprinklers on piping is basically a function of the pipe line velocity. The greater the velocity, the greater is the impact on difficult-to-assess pressure losses. These pressure losses are presently determined by empirical means that lose validity as velocities increase. This is especially true for fittings with unequal and more than two flowing ports.

The inclusion of velocity pressures in hydraulic calculations improves the predictability of the actual sprinkler system performance. Calculations should come as close as practicable to predicting actual performance. Conservatism in design should be arrived at intentionally by known and deliberate means. It should not be left to chance.

B-2.1.5 Future Upgrading of System Performance. It may be desirable in some cases to build into the system the capability to achieve a higher level of sprinkler performance than needed at present. If this is to be a consideration in conservatism, consideration needs to be given to maintaining sprinkler operating pressures on the lower side of the optimum operating range, and/or designing for low pipe line velocities, particularly on feed and cross mains, to facilitate future reinforcement.

Refrigerated spaces 3-8, A-3-8
Relief valves 3-1.2, 3-2.6.4
Marine systems 9-3.1, A-9-3.1
Pressure tanks (marine systems) 9-6.2.2
Remote area of application B-2.1.3
Residential sprinklers 2-2.3.1, 4-4.5, A-4-4.5.1
Definition 1-4.5.2
Design approach 5-3.2, A-5-3.2

Light hazard occupancies 5-2.1.3, A-5-2.1.3
Marine systems 9-4.2, A-9-4.2
Residual pressure requirement 5-2.2.3, A-5-2.2.3
Response Time Index (RTI) ..... 1-4.5.1(a), A-1-4.5.1
Retroactivity of standard 1-3
Return bends 4-13.17, 9-4.8
Risers
Building service chutes 5-2.3.4.1
Definition 1-4.4
Outside refrigerated spaces ..... 3-8.2.5 to 3-8.2.6, A-3-8.2.5
Size 6-5.1.2, A-6-5.1.2
Support of 4-14.2.5
Sway bracing 4-14.4.3.5.9, A-4-14.4.3.5.9
System 3-8.2.6, 4-2
Definition 1-4.4
System subdivision 4-13.22, A-4-13.22
Rods 2-6.4.1
Eye 2-6.4.3
Lag screw ..... 2-6.4.9 to 2-6.4.10
Roof
Exterior 4-13.7, A-4-13.7
Peak, sprinklers at or near 4-6.4.1.3, A-4-6.4.1.3
Uninsulated, sprinklers under ..... 4-3.1.3.2(e)
Room design method ..... 5-2.3.1.2, 5-2.3.3, 6-4.4.1(b), A-5-2.3.3.1
Rooms, small 1-4.2

-S-

Scope of standard 1-1, A-1-1
Screws 2-6.4.8
Bolt/lag ..... 2-6.4.6, 2-6.4.9 to 2-6.4.10
Ceiling flanges 2-6.4.5
U-hook 2-6.4.5
Wood 2-6.4.7
Seismic separation assembly 4-14.4.3.3, A-4-14.4.3.3
Semi-mill construction (definition) ..... A-1-4.6(a)(iv)
Shafts, vertical 4-13.2, A-4-13.2.2
Shall (definition) 1-4.1
Shields
Electrical equipment protection 4-13.10
Expansion ..... 2-6.2.2 to 2-6.2.6
Sprinkler 2-2.7, A-2-2.7
Shop air supply 3-2.6.5
Shop welded
Definition 1-4.2
Piping 2-5.2.2, A-2-5.2.2
Should (definition) 1-4.1
Show windows, sprinklers under ..... 4-3.1.3.2(f)
Sidewall spray sprinklers 4-7, 5-2.3.2.5, A-4-7
Clearance to storage 4-7.6
Definition 1-4.5.3
Deflector position 4-7.4, 4-9.4
Elevator hoistways 4-13.5.1, A-4-13.5.1
Extended coverage 4-9, A-4-9
Light hazard occupancies 5-2.3.2.3
Obstructions to discharge 4-7.5, 4-9.5, A-4-9.5.3
Ordinary hazard occupancies 5-2.3.2.3
Protection areas 4-7.2, 4-9.2, A-4-9.2.1
Spacing 4-7.3, 4-9.3
Signs ..... *see* Identification signs
Skylights, sprinklers under ..... 4-3.1.3.2(d)
Slatted floors, pipe schedules 6-5.1.3
Small orifice sprinklers 2-2.3.2
Small rooms (definition) 1-4.2
Smooth ceiling construction (definition) ..... A-1-4.6(b)(iii)
Soldered joints 2-5.4, A-2-5.4
Spaces ..... *see* Concealed spaces
Spare detection devices, stock of 9-3.2
Spare sprinklers, stock of 2-2.8, 9-2.3
Special hazard occupancies 1-4.7.4, 4-4.4, 5-2.1.2, A-1-4.7.4.1
Special situations 4-13, A-4-13
Building service chutes 4-13.4, A-4-13.4
Concealed spaces 4-13, A-4-13.1.1
Drop-out ceilings 4-13.12, A-4-13.12
Dry pipe underground 4-13.19
Dwelling units 4-13.8, A-4-13.8.2
Electrical equipment 4-13.10
Elevator hoistways and machine rooms 4-13.5, A-4-13.5
Exterior roofs/canopies 4-13.7, A-4-13.7
Flushing systems, provision for 4-13.15
Ground floors/exterior docks/platforms, spaces under 4-13.6
Hose connections, fire department use 4-13.21, A-4-13.21
Library stack rooms 4-13.9
Old-style sprinklers 4-13.13, A-4-13.13
Open-grid ceilings 4-13.11, A-4-13.11
Piping to sprinklers below ceilings 4-13.18
Return bends 4-13.17
Stages 4-13.14
Stair towers 4-13.16
Stairways 4-13.3, A-4-13.3
Vertical shafts 4-13.2, A-4-13.2.2
Special sprinklers 1-4.5.2, 2-2.3.1, 4-4.9, A-4-4.9.1
Spray nozzles, cooking equipment protection 3-9, A-3-9.2
Spray sprinklers ..... 5-2.3.2.3; *see also* Sidewall spray sprinklers
Definition 1-4.5.2
Sprig-up
Definition 1-4.4
Sway bracing 4-14.4.3.5.15, A-4-14.4.3.5.15
Sprinkler alarms ..... 4-15.1, A-14-15.1; *see also* Waterflow alarms/detection devices
Sprinkler systems ..... *see also* Antifreeze systems; Combined dry pipe-preaction systems; Deluge systems; Dry pipe systems; Hydraulically designed systems; Pipe schedule systems; Preaction systems; System protection area; Wet pipe systems
Acceptance ..... Chap. 8, A-8
Components and hardware ..... Chap. 2, 9-2, A-2, A-9-2
Definition 1-4.2, A-1-4.2
Design ..... *see* Design, sprinkler system
Future upgrading of performance B-2.1.5
Installation ..... Chap. 4, A-4
Limited area 1-6.2
Maintenance ..... 9-9, Chap. 10, A-10
Marine systems ..... *see* Marine systems
Nonfire protection connections to 3-6, 8-6, A-3-6.1.2
Working plans 6-1.1.3, A-6-1.1.3
Partial systems ..... 5-2.3.1.3(e), 9-1.3, A-9-1.3
Performance criteria B-2
Protection, level of 1-6
Requirements ..... Chap. 3, A-3
Size of 3-2.3, 3-3.2.2, 4-12.1, A-3-2.3
Subdivision 4-13.22, A-4-13.22
Valves ..... *see* Valves
Working pressure ..... 2-1.2, 2-3.2 to 2-3.3
Sprinklers ..... *see also* Dry sprinklers; Early suppression fast-response (ESFR) sprinklers; High-temperature sprinklers; In-rack sprinklers; Large-drop sprinklers; Old-style sprinklers; Outside sprinklers; Pendent sprinklers; Residential sprinklers; Sidewall spray sprinklers; Upright sprinklers
Application of types 4-4, A-4-4
Clearance to storage 4-5.6, 4-6.6, 4-7.6, 4-8.6, 4-10.6, 4-11.6, A-4-6.6
Corrosion-resistant ..... *see* Corrosion-resistant sprinklers
Definitions 1-4.5, 1-4.5.3, A-1-4.5
Discharging capacities ..... 2-2.2, 2-2.3.2 to 2-2.3.3
Hydraulic calculations 6-4.4.4, A-6-4.4.4
Limitations 2-2.3
Location ..... 4-1.1, 4-5 to 4-11, A-4-1.1, A-4-5 to A-4-11
New sprinkler requirement 2-2.1
Open 4-4.4
Outside 3-7, A-3-7.2.1
Painting 2-2.5.3, A-2-2.5.3
Piping to, below ceilings 4-13.18
Positioning ..... 4-1.1, 4-5 to 4-11, A-4-5 to A-4-11
Protection area per sprinkler 4-5.2, 4-6.2, 4-7.2, 4-8.2, 4-9.2, 4-10.2, 4-11.2, A-4-8.2.1, A-4-9.2.1, A-4-10.2

Spacing 4-1.1, 4-5.3, 4-6.3, 4-7.3, 4-8.3, 4-9.3, 4-10.3, 4-11.3, A-4-1.1, A-4-6.3.2, A-4-10.3.1
Spare, stock of 2-2.8, 9-2.3
Temperature ratings 4-3.1.3
Thermal sensitivity (definition) ..... 1-4.5.1(a), A-1-4.5.1; *see also* Temperature ratings of sprinklers
Use of 4-3, 4-5, A-4-3, A-4-5
Stages 4-13.14
Stairways 4-13.3, A-4-13.3
Marine systems 9-4.5.2
Stair towers 4-13.16, 6-5.1.4
Type 1 (definition) 9-1.1
Standard (definition) 1-4.1
Standard mill construction (definition) ..... A-1-4.6(b)(iv)
Steel fittings 2-5.1.2, A-2-5.1.2
Steel pipe 4-4.7.2, A-4-4.7.2
Storage
Clearance to 4-5.6, 4-6.6, 4-7.6, 4-8.6, 4-10.6, 4-11.6, A-4-6.6
Design of system 5-2.3.2.2
Early suppression fast-response (ESFR) sprinklers use 5-3.5.1, A-5-3.5.1.2
High-piled 4-2
Definition 1-4.2
Large-drop sprinklers 5-3.4.1, 5-3.4.2.2
Miscellaneous ..... *see* Miscellaneous storage
Strainers ..... 2-2.3.2(c), 3-7.6, 3-9.10, 4-15.1.1.5
Structural members A-4-1
Studs 2-6.3, A-2-6.3

National Fire Protection Association Membership

When you join NFPA, you join more than 66,000 fire protection professionals worldwide in the fight against loss of life and property from fire.

There are many membership benefits, including full voting rights in the code-making process at the Annual and Fall meetings, free subscriptions to the NFPA *Journal*®, NFPA *Journal Buyers' Guide* and *Fire News* newsletter, a 10% discount on all NFPA products and services including videos, seminars, and meeting registration fees and much more!

Join today by calling 1-800-344-3555 and become an active leader in the fire protection industry.

Other Fire Protection Resources from NFPA

Automatic Sprinkler Systems Handbook

Just revised and expanded, the 1996 *Automatic Sprinkler Systems Handbook* is the indispensable guide to interpreting and applying the sprinkler standards. It includes the entire texts of the most recent editions of NFPA 13, 13D, and 13R. It explains the philosophy and history behind requirements – including the latest revisions – so you gain a full understanding of why and how to apply provisions correctly.

Automatic Sprinkler Systems Seminar

At this exclusive NFPA seminar, you learn directly from the experts who work with sprinkler systems standards. You can discuss specific problems and issues one-on-one with instructors. You'll gain the training you need to avoid mistakes, determine compliance of sprinkler designs and installations, understand various design approaches, and learn about proper system inspection, testing, and maintenance criteria.

NFPA 25: Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems

This informative document provides instruction on how to conduct inspections, tests, and maintenance activities to help ensure the successful operation of water-based fire protection systems. Requirements are provided for impairment procedures, notification processes, and system restoration.

For ordering information or to sign up for any of our seminars, call toll-free at 1-800-344-3555.

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of CENTRAL SPRINKLER CORP., and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

CPSC/OFC OF THE SECRETARY
FREEDOM OF INFORMATION
1998 APR 20 P 5:10

FIRST REQUESTS FOR PRODUCTION OF DOCUMENTS AND THINGS TO RESPONDENTS CENTRAL SPRINKLER CORP. AND CENTRAL SPRINKLER CO.

Complaint Counsel hereby propounds its First Requests for Production of Documents and Things upon Respondents Central Sprinkler Corp. and Central Sprinkler Co.

PLEASE TAKE NOTICE that pursuant to 16 C.F.R. § 1025.33, Respondents must respond to these Requests within 30 days after service of same; inspection of the items requested shall take place on that same day at the office of Complaint Counsel, Consumer Product Safety Commission, Office of Compliance, 4330 East West Highway, Bethesda, MD 20814.

PLEASE TAKE FURTHER NOTICE that pursuant to 16 C.F.R. § 1025.31, Respondents are under a continuing duty to supplement their responses to the staff's discovery requests to include information later obtained, regardless of whether the response to the discovery request was complete when made.

DEFINITIONS

Throughout the following Requests and Definitions, unless the context otherwise requires, the singular includes the plural, the masculine includes the feminine, and neuter, or vice versa.

As used herein, the terms below are defined as follows:

"Activate" in the context of Omega sprinklers means full opening (as opposed to partial opening) of the sprinkler -- i.e., full release of the plunger housing -- upon exposure to the Omega's triggering temperature.

"Adhesion" and "Adhered," in the context of a sprinkler "o" ring, refers to adhesion or adhered to the plunger housing and/or main housing of the sprinkler.

"Cause" means to bring about, effect, make happen, contribute to, induce, produce, and/or compel.

"Claim" refers to all lawsuits, governmental actions or orders, disputes, demands for payment, indemnification or reimbursement, complaints, and/or potential lawsuits that contain allegations against you and/or your agents and/or employees.

"Communication" means any transfer of information, ideas, opinions or thought by any means at any time or place under any circumstances, including any transfer of data from one location to another by electrical, electronic or similar means.

"Distribute" means to deliver, sell, give, allot, or otherwise provide, and includes the giving away of free samples and promotional items.

"Document" or "Record" shall have the broadest meanings permissible, and shall include the original and any non-identical copy of any written, graphic, photographic, audio,

electronic or visual material, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, facsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, memoranda, notes, transcripts, minutes, reports, recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendars, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated, no matter how produced or maintained, regardless of whether in your actual or constructive possession, custody or control, and regardless of whether or not communicated to any person other than the maker. A draft is a separate document or record within the meaning of this term.

If you claim that any document or record is privileged, specify the privilege claimed and the factual basis you contend supports the assertion of the privilege. If any document or record was, but is no longer, in your possession, custody, or control, provide the following information:

(a) state the disposition of the document or record;

(b) state the date such disposition was made;

(c) identify the present custodian of the document or record and state his or her

address or, if the document or record no longer exists, so state;

(d) identify the person who made the decision regarding the disposition of the document or record; and

(e) state the reason for the disposition and describe the document or record and the contents of the document or record, including the title, the author, the position or title of the author, addressee, the position or title of the addressee, whether indicated or blind copies were made, date, subject matter, number of pages, attachments or appendices, and all persons to whom the document was distributed, shown or explained.

"Field test," for purposes of these Interrogatories, shall mean any test performed on a sprinkler while it is installed in a sprinkler system.

"Identify" or "identity" shall mean, when referring to an individual person, the person's full name, present or last known employer, present or last known address, occupation, business position, and telephone number, and the relationship or association, if any, to a Respondent in this action.

When referring to an entity, the terms "identify" or "identity" shall mean its present and any former name(s), the business address of its principal place of business, its state of incorporation, registration, or organization, the identity and address of its registered agent in each state where it is present and doing business or has a place of business, its present officers, directors, and shareholders, and its relationship, if any, to a Respondent in this action. Once a person or entity has been identified in accordance with this paragraph, only the name of that person or entity need be listed in response to subsequent discovery

requesting the identification of that person or entity.

When referring to a document or record, the terms "identify" or "identity" shall mean a description of the document or record including its date of preparation and transmission, the author, sender and recipient, the custodian of the record, and a summary of the subject matter.

When referring to an Omega or other brand sprinkler, "identify" or "identity means to provide the following information:

(a) the sprinkler manufacturer

(b) model name and number;

(c) manufacture date;

(d) activation temperature;

(e) "o" ring type (if applicable)

(f) all dates of UL listing;

(g) the UL standards for safety under which the sprinkler is/was listed;

(h) the type of piping in which the sprinkler is or was installed (if applicable);

(i) the name, address and telephone number of the building in which the sprinkler was installed (if applicable); and the name, address and telephone number of the owner of that building;

"Manufacture" means to make, produce, assemble, fabricate, or work into usable form.

"Omega" means any and all models and makes (variations within a model) of Omega series or brand automatic fire sprinklers.

"Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing,

or bearing any logical or factual connection with the matter discussed.

"UL" or "Underwriters Laboratories, Inc." means Underwriters Laboratories, Inc., 333 Pfingsten Road, Northbrook, IL 60062 and any subsidiaries, divisions, or agents of Underwriters Laboratories, Inc.

"You," "your," "yourself" means the Respondent to whom this discovery is directed, including any officer, director, representative, insurer, agent or employee thereof, and also includes any agent, person or entity acting on your behalf.

INSTRUCTIONS

1. Each Request shall be answered completely, separately, and fully.

2. The following Requests are to be regarded as continuing. You are required to supplement or modify any response as additional or different information becomes known to you.

3. Each person consulted in answering any Response shall be identified in the body of the response to the particular Response.

4. If you cannot answer any Response in full after exercising due diligence, so state and answer or produce to the extent possible, specifying your inability to answer or produce the remainder, stating whatever information or knowledge you have concerning the unanswered portion or unproduced documents, and describing your efforts to secure the unknown information or unproduced documents.

5. If you assert any privilege in responding to any Response, state the type of privilege asserted and the basis for its assertion. In addition, briefly identify the document or record with respect to which the privilege is asserted. For any document or record with

respect to which a privilege is asserted, state:

(a) The type of document or record (e.g., letter, memorandum, contract, etc.), the date of the document, and the subject matter of the document or record;

(b) The name, address and position of the author of the document or record and of any person who assisted in its preparation;

(c) The name, address and position of each addressee or recipient of the document or record, or any copies of it; and

(d) The present location of the document or record and the name, address and position of the person having custody of it.

For any communication with respect to which a privilege is asserted, identify the persons or entities among whom the communication took place, the date of the communication, and the subject.

REQUESTS FOR PRODUCTION

REQUEST NO. 1

Provide all records relating in any way to your sale of any Omega sprinkler, including but not limited to purchase orders, shipping documents, billing statements and sales receipts.

REQUEST NO. 2

Provide all records relating in any way to your provision of any Omega sprinkler as a free sample or promotional item.

REQUEST NO. 3

Provide all records relating in any way to marketing and/or sale of Omega sprinklers by you.

REQUEST NO. 4

For each year in which you manufactured and/or distributed Omega sprinklers, provide all records relating in any way to

(a) your gross income;

(b) your net income;

(c) the amount in revenues generated from product sales;

(d) the amount in revenues generated from sales of Omega sprinklers.

REQUEST NO. 5

Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

(a) steel piping systems;

(b) copper piping systems;

(c) plastic piping systems;

(d) polybutylene piping systems;

(e) other piping systems not listed above (specify the type of piping system)?

REQUEST NO. 6

Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

a) private homes

b) apartment buildings

c) schools (including universities and colleges, public or private)

d) nursing homes

e) hospitals

f) detention facilities (including jails, juvenile detention facilities, etc.)

g) homeless shelters

h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)

i) hotels

j) museums

k) offices (including office buildings)

l) warehouses with no public access areas

m) industrial facilities with no public access areas

REQUEST NO. 7

Provide all records relating in any way to the current sales price for each Omega make and/or model listed in your response to Complaint Counsel's Interrogatory No. 13.

REQUEST NO. 8

Provide the complete personnel files for all persons identified in your response to Complaint Counsel's Interrogatory No. 15.

REQUEST NO. 9

Provide the complete personnel files for all persons involved in design and/or development of each make and/or model Omega sprinkler.

REQUEST NO. 10

Provide all records relating in any way to the design of and/or specifications for each component part and each chemical (including lubricants), tool and/or substance used in the

Omega manufacturing process.

REQUEST NO. 11

Provide all records relating in any way to your acquisition of any component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

REQUEST NO. 12

Provide the complete personnel files of any persons who were/are employed by you who in any way took part or were involved in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

REQUEST NO. 13

Provide all records relating in any way to the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time, including all tools, chemicals and substances used in the manufacture of same, including but not limited to cut sheets, drawings, and manufacturing instructions.

REQUEST NO. 14

Provide three samples of each make and model of Omega sprinkler that you have ever manufactured.

REQUEST NO. 15

Provide three samples of each tool, chemical and/or substance used in the manufacture of each make and model of Omega sprinkler. (If any such tools, chemicals and/or substances

are used for more than one make and/or model of Omega, you need only provide one set of three samples).

REQUEST NO. 16

Provide all records relating in any way to any chemical or substance used in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system.

REQUEST NO. 17

Provide all records relating in any way to any tests performed by you or anyone else to assess whether and/or how each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23 affects the operation of Omega sprinkler(s) or any Omega component part.

REQUEST NO. 18

Provide all records relating in any way to each communication between you and any persons and/or entities (including your employees, agents, and consultants) regarding each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23.

REQUEST NO. 19

Provide all records relating in any way to each prototypes and/or precursors of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

REQUEST NO. 20

Provide the complete personnel files of any and all employees who were in any way involved in designing, developing and/or reviewing any and all prototypes and/or precursors

of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

REQUEST NO. 21

Provide all records relating in any way to any and all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

REQUEST NO. 22

Provide all records relating in any way to any actual or alleged problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas (including whether any component part has been or alleged to have been out of tolerance) of which you have knowledge or have been advised.

REQUEST NO. 23

Provide all records relating in any way to the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

REQUEST NO. 24

Provide all records relating in any way to whether pressure (not internal to or part of the Omega itself) is required for activation of any make and/or model of Omega sprinkler.

REQUEST NO. 25

Provide all records relating in any way to the amount of pressure (not internal to or

part of the Omega itself) required for activation of each make and/or model of Omega sprinkler.

REQUEST NO. 26

Provide all records relating in any way to any non-Omega sprinklers that contain an "o" ring.

.REQUEST NO. 27

Provide all records relating in any way to the approval, listing and/or certification of each Omega make and/or model, and each adaptation or device to be used with any Omega make and/or model (such as the "helper spring"), including testing or submission for approval, listing and/or certification by a certifying laboratory or institution (such as UL or FM), and including all records relating in any way to whether approval, listing or certification was ever refused, withdrawn, discontinued or cancelled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler.

REQUEST NO. 28

Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM.

REQUEST NO. 29

Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or

certified by UL are listed or certified by UL.

REQUEST NO. 30

Provide all records relating in any way to any Omega that did not or allegedly did not activate in a fire.

REQUEST NO. 31

Provide all records relating in any way to anyone who was injured or allegedly was injured as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

REQUEST NO. 32

Provide all records relating in any way to anyone who died or allegedly died as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

REQUEST NO. 33

Provide all records relating in any way to any property damage or allegedly property damage as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

REQUEST NO. 34

Provide all records relating in any way to any testing and/or examination of each Omega that failed to activate or allegedly failed to activate in a fire, the system in which that

Omega was installed, and/or any other sprinkler from the same site.

REQUEST NO. 35

Provide all records relating in any way to each Omega sprinkler of which you are aware or have been notified that, when tested, did not activate at 7 psig or below when exposed to its activation/triggering temperature.

REQUEST NO. 36

Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate at 7 psig or below when exposed to its activation/triggering temperature in testing, the system in which it was installed, and/or any other sprinkler from the same site.

REQUEST NO. 37

Provide all records relating in any way to any Omega sprinkler of which you are aware that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature.

REQUEST NO. 38

Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate when exposed to its activation/triggering temperature when tested in the field.

REQUEST NO. 39

Provide all records relating in any way to the design and/or development of the Omega "helper spring," and/or specifications for the manufacture of the "helper spring."

REQUEST NO. 40

If you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation (triggering) temperature for long enough for its fusible like to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega), provide all records that you claim or believe support your contention.

REQUEST NO. 41

Provide all records relating in any way to the method of operation of "helper spring."

REQUEST NO. 42

Provide all records relating in any way to any and all tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part.

REQUEST NO. 43

Provide all records relating in any way to your communications with any persons and/or entities (including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring.

REQUEST NO. 44

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has cracked or broken, or allegedly cracked or broken.

REQUEST NO. 45

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has exhibited corrosion.

REQUEST NO. 46

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has leaked and/or weeped when tested or in a fire.

REQUEST NO. 47

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire

REQUEST NO. 48

If you contend that dezincification may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 49

Provide all records relating in any way to any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

REQUEST NO. 50

Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 51

Provide all records relating in any way to any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

REQUEST NO. 52

Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 53

Provide all records relating in any way to any Omega from a piping system that is neither copper or plastic that has exhibited or allegedly exhibited dezincification.

REQUEST NO. 54

Provide all records relating in any way to testing and/or examination of the system in which any Omega from a piping system that is neither copper or plastic, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 55

Provide all records relating in any way to any Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

REQUEST NO. 56

Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 57

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47.

REQUEST NO. 58

Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47 exhibits dezincification.

REQUEST NO. 59

Provide all records relating in any way to any and all substances that you contend have been used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems, that may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature).

REQUEST NO. 60

If you contend that the use of stop leak or other sealant, leakage prevention substance or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 61

Provide all records relating in any way to any and all Omegas that were exposed or were allegedly exposed to stop leak or any other sealant, leakage prevention substance or pipe cement.

REQUEST NO. 62

Provide all records relating in any way to testing and/or examination of the system in which any and all Omegas that have been exposed or allegedly have been exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, were installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 63

Provide all records relating in any way to any and all Omegas that were not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire?

REQUEST NO. 64

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51.

REQUEST NO. 65

Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51 was affected by the use of stop

leak or any other sealant, leakage prevention substance or pipe cement.

REQUEST NO. 66

If you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 67

Provide all records relating in any way to any Omega that was exposed or was allegedly exposed to cutting oils or other substances used to cut pipe.

REQUEST NO. 68

Provide all records relating in any way to testing and/or examination of the system in which any Omega that has been exposed or allegedly has been exposed to cutting oils or other substances used to cut pipe, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 69

Provide all records relating in any way to any Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

REQUEST NO. 70

Provide all records relating in any way to testing and/or examination of the system in which any Omega that was not exposed or allegedly exposed to cutting oils or other substances used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 71

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 55.

REQUEST NO. 72

Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 55, to determine whether it was exposed to cutting oil or other substance used to cut pipe

REQUEST NO. 73

If you contend that swelling of the "o" ring in an Omega sprinkler may cause the

Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you believe or claim support your contention.

REQUEST NO. 74

Provide all records relating in any way to any and all Omegas containing an EPDM "o" ring, from a steel piping system, that have exhibited or allegedly exhibited "o" ring swelling.

REQUEST NO. 75

Provide all records relating in any way to testing and/or examination of the system in which any Omega containing an EPDM "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 76

Provide all records relating in any way to any Omega containing a silicone "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling.

REQUEST NO. 77

Provide all records relating in any way to testing and/or examination of the system in which any Omega containing a silicone "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 78

Provide all records relating in any way to any Omega from a piping system that is not steel that has exhibited or allegedly exhibited "o" ring swelling.

REQUEST NO. 79

Provide all records relating in any way to testing and/or examination of the system in which any Omega, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 80

Provide all records relating in any way to any Omega from a steel piping system that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

REQUEST NO. 81

Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at

a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 82

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61.

REQUEST NO. 83

Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61, to determine whether it exhibits "o" ring swelling.

REQUEST NO. 84

Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega has a swollen "o" ring.

REQUEST NO. 85

If you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering

temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 86

Provide all records relating in any way to any Omega that has exhibited or allegedly exhibited "o" ring adhesion.

REQUEST NO. 87

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64.

REQUEST NO. 88

Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64, to determine whether the Omega exhibits "o" ring adhesion.

REQUEST NO. 89

Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega exhibits "o" ring adhesion.

REQUEST NO. 90

Provide all records relating in any way to any and all fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

REQUEST NO. 91

Provide all records relating in any way to any testing and/or examination of any Omegas from sites in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

REQUEST NO. 92

Provide all records relating in any way to any tests and/or examinations of Omega sprinklers conducted by you or anyone on your behalf.

REQUEST NO. 93

Provide all records relating in any way to any and all tests and/or examinations of Omega sprinklers conducted pursuant to the protocol in UL 199 or UL 1626, that one or more Omegas did not pass (according to the criteria listed in UL 199 for that test).

REQUEST NO. 94

Provide all records relating in any way to any testing of any Omega conducted by you or on your behalf in which the Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure.

REQUEST NO. 95

Provide all records relating in any way to any meetings, discussions and/or communications in which you were in any way involved, and/or which you have received, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;

b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;

c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;

d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;

e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;

f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;

g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;

h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;

k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;

l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;

m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems.

REQUEST NO. 96

Provide all records relating in any way to any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) or which you have been notified, regarding or in any way relating to an Omega sprinkler.

REQUEST NO. 97

Provide all records relating in any way to your notification (or notification on your behalf) of any person and/or entity of any and all problems, potential problems, complaints or concerns (including any reports of nonactivation or possibility of nonactivation) regarding or in any way related to any Omega sprinkler.

REQUEST NO. 98

Provide all records relating in any way to any and all requests for information by you (or on your behalf) to any sprinkler contractor or sprinkler owner regarding any Omega sprinkler, including the sprinkler contractor or owner's response.

REQUEST NO. 99

Provide all records relating in any way to your (or anyone on your behalf's) provision (either by sale or without charge) of sprinklers to anyone to replace some or all of the Omegas installed in a particular location.

REQUEST NO. 100

Provide all records relating in any way to the cost of replacement of any and all Omega sprinklers.

REQUEST NO. 101

Provide all records relating in any way to your testing (or testing on your behalf) of any Omega sprinklers from any building or structure in which Omega sprinklers are/were installed.

In the Matter of	)	
CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

FIRST SET OF INTERROGATORIES TO RESPONDENTS
CENTRAL SPRINKLER CORP. AND CENTRAL SPRINKLER CO.

Complaint Counsel hereby propounds its First Set of Interrogatories upon Respondents Central Sprinkler Corp. and Central Sprinkler Co.

PLEASE TAKE NOTICE that pursuant to 16 C.F.R. § 1025.32, Respondents must respond to these Interrogatories within 30 days after service of same.

PLEASE TAKE FURTHER NOTICE that pursuant to 16 C.F.R. § 1025.31, Respondents are under a continuing duty to supplement their responses to the staff's discovery requests to include information later obtained, regardless of whether the response to the discovery request was complete when made.

DEFINITIONS

Throughout the following Interrogatories and Definitions, unless the context otherwise requires, the singular includes the plural, the masculine includes the feminine, and neuter, or vice versa.

As used herein, the terms below are defined as follows:

"Activate" in the context of Omega sprinklers means full opening (as opposed to partial opening) of the sprinkler -- i.e., full release of the plunger housing -- upon exposure to the Omega's triggering temperature.

"Adhesion" and "Adhered," in the context of a sprinkler "o" ring, refers to adhesion or adhered to the plunger housing and/or main housing of the sprinkler.

"Cause" means to bring about, effect, make happen, contribute to, induce, produce, and/or compel.

"Claim" refers to all lawsuits, governmental actions or orders, disputes, demands for payment, indemnification or reimbursement, complaints, and/or potential lawsuits that contain allegations against you and/or your agents and/or employees.

"Communication" means any transfer of information, ideas, opinions or thought by any means at any time or place under any circumstances, including any transfer of data from one location to another by electrical, electronic or similar means.

"Distribute" means to deliver, sell, give, allot, or otherwise provide, and includes the giving away of free samples and promotional items.

"Document" or "Record" shall have the broadest meanings permissible, and shall include the original and any non-identical copy of any written, graphic, photographic, audio,

electronic or visual material, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, facsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, memoranda, notes, transcripts, minutes, reports, recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendars, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated, no matter how produced or maintained, regardless of whether in your actual or constructive possession, custody or control, and regardless of whether or not communicated to any person other than the maker. A draft is a separate document or record within the meaning of this term.

If you claim that any document or record is privileged, specify the privilege claimed and the factual basis you contend supports the assertion of the privilege. If any document or record was, but is no longer, in your possession, custody, or control, provide the following information:

a) state the disposition of the document or record;

b) state the date such disposition was made;

c) identify the present custodian of the document or record and state his or her

address or, if the document or record no longer exists, so state;

d) identify the person who made the decision regarding the disposition of the document or record; and

e) state the reason for the disposition and describe the document or record and the contents of the document or record, including the title, the author, the position or title of the author, addressee, the position or title of the addressee, whether indicated or blind copies were made, date, subject matter, number of pages, attachments or appendices, and all persons to whom the document was distributed, shown or explained.

"Field test," for purposes of these Interrogatories, shall mean any test performed on a sprinkler while it is installed in a sprinkler system.

"Identify" or "identity" shall mean, when referring to an individual person, the person's full name, present or last known employer, present or last known address, occupation, business position, and telephone number, and the relationship or association, if any, to a Respondent in this action.

When referring to an entity, the terms "identify" or "identity" shall mean its present and any former name(s), the business address of its principal place of business, its state of incorporation, registration, or organization, the identity and address of its registered agent in each state where it is present and doing business or has a place of business, its present officers, directors, and shareholders, and its relationship, if any, to a Respondent in this action. Once a person or entity has been identified in accordance with this paragraph, only the name of that person or entity need be listed in response to subsequent discovery

requesting the identification of that person or entity.

When referring to a document or record, the terms "identify" or "identity" shall mean a description of the document or record including its date of preparation and transmission, the author, sender and recipient, the custodian of the record, and a summary of the subject matter.

When referring to an Omega or other brand sprinkler, "identify" or "identity means to provide the following information:

a) the sprinkler manufacturer

b) model name and number;

c) manufacture date;

d) activation temperature;

e) "o" ring type (if applicable)

f) all dates of UL listing;

g) the UL standards for safety under which the sprinkler is/was listed;

h) the type of piping in which the sprinkler is or was installed (if applicable);

i) the name, address and telephone number of the building in which the sprinkler was installed (if applicable); and the name, address and telephone number of the owner of that building;

"Manufacture" means to make, produce, assemble, fabricate, or work into usable form.

"Omega" means any and all models and makes (variations within a model) of Omega series or brand automatic fire sprinklers.

"Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing,

or bearing any logical or factual connection with the matter discussed.

"UL" or "Underwriters Laboratories, Inc." means Underwriters Laboratories, Inc., 333 Pfingsten Road, Northbrook, IL 60062 and any subsidiaries, divisions, or agents of Underwriters Laboratories, Inc.

"You," "your," "yourself" means the Respondent to whom this discovery is directed, including any officer, director, representative, insurer, agent or employee thereof, and also includes any agent, person or entity acting on your behalf.

INSTRUCTIONS

1. Each Interrogatory shall be answered completely, separately, and fully.

2. The following Interrogatories are to be regarded as continuing. You are required to supplement or modify any response as additional or different information becomes known to you.

3. Each person consulted in answering any Interrogatory shall be identified in the body of the response to the particular Interrogatory.

4. If you cannot answer any Interrogatory in full after exercising due diligence, so state and answer or produce to the extent possible, specifying your inability to answer or produce the remainder, stating whatever information or knowledge you have concerning the unanswered portion or unproduced documents, and describing your efforts to secure the unknown information or unproduced documents.

5. If you assert any privilege in responding to any Interrogatory, state the type of privilege asserted and the basis for its assertion. In addition, briefly identify the document or record with respect to which the privilege is asserted. For any document or record with

respect to which a privilege is asserted, state:

a) The type of document or record (e.g., letter, memorandum, contract, etc.), the date of the document, and the subject matter of the document or record;

b) The name, address and position of the author of the document or record and of any person who assisted in its preparation;

c) The name, address and position of each addressee or recipient of the document or record, or any copies of it; and

d) The present location of the document or record and the name, address and position of the person having custody of it.

For any communication with respect to which a privilege is asserted, identify the persons or entities among whom the communication took place, the date of the communication, and the subject.

INTERROGATORIES

INTERROGATORY NO. 1

Identify the person(s) answering these Interrogatories.

INTERROGATORY NO. 2

Identify yourself.

INTERROGATORY NO. 3

Identify all officers, directors and/or shareholders of your company since its formation. For each such person, specify all positions they have held, and the dates they held each position.

INTERROGATORY NO. 4

Provide the date on which the first "Omega" sprinkler was sold or given away as a free sample or promotional item. Identify the fist "Omega" sprinkler sold or given away as a free sample.

INTERROGATORY NO. 5

Identify all makes and/or models of "Omega" sprinklers you have ever designed, manufactured, and/or distributed. For each model, indicate the date(s) it was designed, manufactured and distributed.

INTERROGATORY NO. 6

Provide the total number of Omega sprinklers that:

a) have been sold;

b) have been given away as free samples or promotional items;

c) are installed

in the United States and its territories. Of these, how many contain:

i) EPDM "o" rings;

ii) silicone "o" rings;

iii) neither EPDM or silicone "o" rings (specify whether the model has an "o" ring, and if so, the composition of the "o" ring).

INTERROGATORY NO. 7

How many Omega sprinklers:

a) have been sold;

b) have been given away as free samples or promotional items;

c) are installed

in each state and territory of the United States.

INTERROGATORY NO. 8

Provide the sales price for each Omega sold by you (or anyone on your behalf) in the United States and/or its territories.

INTERROGATORY NO. 9

For each year in which you manufactured and/or distributed Omega sprinklers, provide:

a) your gross income;

b) your net income;

c) the amount in revenues generated from product sales;

d) the amount in revenues generated from sales of Omega sprinklers.

INTERROGATORY NO. 10

How many total Omega sprinklers are installed in the United States and/or its territories in:

a) steel piping systems;

b) copper piping systems;

c) plastic piping systems;

d) polybutylene piping systems;

e) other piping systems not listed above (specify the type of piping system)?

INTERROGATORY NO. 11

How many Omega sprinklers are installed in each state and territory of the United

States in:

a) steel piping systems;

b) copper piping systems;

c) plastic piping systems;

d) polybutylene piping systems;

e) other piping systems not listed above (specify the type of piping system)?

INTERROGATORY NO. 12

How many Omega sprinklers are installed in the United States and/or its territories in:

a) private homes

b) apartment buildings

c) schools (including universities and colleges, public or private)

d) nursing homes

e) hospitals

f) detention facilities (including jails, juvenile detention facilities, etc.)

g) homeless shelters

h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)

i) hotels

j) museums

k) offices (including office buildings)

l) warehouses with no public access areas

m) industrial facilities with no public access areas

INTERROGATORY NO. 13

Identify which Omega makes and/or models you are currently manufacturing and/or selling.

INTERROGATORY NO. 14

What is the current sales price for each Omega make and/or model listed in your response to Interrogatory No. 13?

INTERROGATORY NO. 15

Identify all of your employees, agents, representatives or consultants who have held a supervisory, managerial, or executive position or role in the following areas of your company at any time:

1) sales;

2) marketing;

3) product design and/or development;

4) engineering and/or technical services;

5) customer service/customer relations;

6) public and/or governmental relations;

7) product manufacturing and/or production;

8) product sales, marketing and/or distribution;

9) corporate mergers and/or acquisitions;

10) quality assurance/control;

11) any divisions, subdivisions or areas that deal or dealt with Omega automatic fire sprinklers and/or any component parts of Omega automatic fire

sprinklers.

For each employee, agent, representative or consultant, please state the position(s) and title(s) of those position(s), term(s) of employment, and salary. If the person is no longer in your employ, please indicate their reason for leaving and, if known, provide their current address and telephone number.

INTERROGATORY NO. 16

Identify all persons and/or entities who were in any way involved in:

a) design and/or development;

b) testing

c) the UL listing process and/or submission of Omega sprinkler samples and/or prototypes for same;

d) marketing;

e) sale; or

f) manufacturing of any makes and/or models

of each make and/or model Omega sprinkler.

For each such person and entity, indicate:

i) whether the person or entity is currently employed by your company;

ii) their position in your company (or, if not in your company, elsewhere) at the time of their involvement;

iii) which makes and/or models the involvement related to; and

iii) describe in detail the nature of their involvement.

INTERROGATORY NO. 17

For each make and/or model of Omega sprinkler, identify and describe (including specifications for) each component part and each chemical (including lubricants), tool and/or substance used in the Omega manufacturing process.

INTERROGATORY NO. 18

Identify the manufacturer of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

INTERROGATORY NO. 19

Identify the person and/or entity who supplied to you each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

INTERROGATORY NO. 20

Identify all persons and/or entities who were involved in any way in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

INTERROGATORY NO. 21

Describe in detail the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time. Specify and describe all tools, chemicals and substances used, including when, how and in what amount they are used.

INTERROGATORY NO. 22

For each change in procedure or specification identified in your response to

Interrogatory No. 21:

a) explain the differences between the procedure or specification and its predecessor(s);

b) explain the reasons for the change;

c) identify all persons and/or entities involved in bringing about the change, and explain their role in same;

d) identify all persons and/or entities who implemented the change;

e) indicate whether any tests were done on the models before or after the change occurred. If so:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

INTERROGATORY NO. 23

Have you (or anyone on your behalf) ever utilized any chemical or substance in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system? If so, identify, for each such chemical or substance:

a) its name (and brand name, if applicable);

b) its chemical composition;

c) its manufacturer; and

d) the person and/or entity from whom you purchased and/or received the chemical or substance;

e) identify and describe any tests performed by you or anyone else to assess whether and/or how the substance affects the operation of Omega sprinkler(s) or any Omega component part, providing the following information:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

f) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such chemical or substance. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 24

Were/are there any prototypes or precursors of any of the Omega sprinklers listed in your response to Interrogatory No. 6? If so:

a) identify and describe each prototypes or precursor, including any modifications

in composition or design;

b) indicate the date on which it was designed and/or developed;

c) identify all persons and entities who were in any way involved in designing, developing and/or reviewing the prototype or precursor;

d) identify the Omega model to which the prototype or precursor corresponds;

e) describe all tests and evaluations performed on the prototype or precursor, providing the following information:

   i) the date on which the test or evaluation was conducted;

   ii) the protocol for the test or evaluation;

   iii) identify all persons and entities who conducted, attended, reviewed, and/or supervised the test or evaluation;

f) indicate whether the prototype or precursor was ever submitted to a testing laboratory for review, certification or listing. If so, fully describe the circumstances and outcome of the submission and testing, and identify the laboratory;

g) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such prototype or precursor. If so, provide the following information:

   i) identify all such persons and/or entities;

   ii) state the date of the communication;

   iii) describe the content of the communication;

   iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 25

Identify and describe all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

INTERROGATORY NO. 26

Have you ever known or been advised of any problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas, including whether any component part has been or alleged to have been out of tolerance? If so, for each such problem, flaw, defect and deficiency:

a) describe in full detail the problem, imperfection, flaw, defect, deficiency or extent to which the part was out of tolerance;

b) indicate the date on which you were notified or learned of the problem, flaw, defect or deficiency;

c) indicate how you became aware or were notified of the problem, flaw, defect or deficiency;

d) describe all actions, if any, you took as a result, indicating when those actions were taken; and

e) state whether the affected component part was ever delisted, recalled, discontinued. taken off the market, or requested to be returned to the manufacturer, supplier, distributor, etc. and, if so, explain the circumstances of

same.

INTERROGATORY NO. 27

Explain in full detail the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

INTERROGATORY NO. 28

Once the activation (triggering) temperature has been reached, indicate whether water pressure or any other source of pressure (not internal to or part of the Omega itself) is a prerequisite to or requirement for activation of any make and/or model of Omega sprinkler(s). If so:

a) identify the Omega

b) indicate, for each make and/or model of Omega, what the necessary pressure is (in psig);

c) indicate the expected or required source of that pressure;

d) explain how the pressure activates or assists the Omega's activation;

e) explain why the sprinkler will not activate without that pressure.

INTERROGATORY NO. 29

Are you aware of any non-Omega sprinklers that contain an "o" ring? If so:

a) identify the sprinkler make and/or model;

b) identify the manufacturer of the sprinkler;

c) indicate where in the sprinkler the "o" ring is located;

d) explain the mechanism of proper operation/activation of the sprinkler, including how the "o" ring is used; and

e) identify all persons and entities involved in any way in the design of each such sprinkler make and/or model;

f) indicate whether you are aware or have been notified of any instances in which a non-Omega sprinkler containing an "o" ring did not or allegedly did not activate, either in testing or in a fire, when exposed to its activation (triggering) temperature. If so, indicate when, how, and from whom you received such notification;

g) identify all tests of which you are aware that were conducted on the sprinkler to determine whether or not it operates properly, providing the following information:

i) identify the sprinkler;

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results;

h) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding the operation of any non-Omega sprinklers containing an "o" ring. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication;

INTERROGATORY NO. 30

Indicate which Omega makes and/or models, and which, if any, adaptations or devices to be used with any Omega make and/or model (such as the "helper spring"), have been tested or submitted for approval, listing and/or certification by a certifying laboratory or institution such as UL or FM? For each such Omega, for each testing and/or submission, and for each certifying laboratory or institution:

a) describe all efforts involved and steps taken in an effort to obtain approval, listing and/or certification;

b) indicate the date on which each such effort or step took place;

c) indicate the project number, if any, that each such effort or step related to or was part of;

d) identify all persons and/or entities involved in each effort or step;

e) with respect to any testing and/or examinations:

i) describe the tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results;

f) describe all communications regarding or relating in any way to the listing and/or certification, including the following information:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

g) indicate whether and when listing and/or certification was granted, refused, or postponed by the certifying laboratory or institution.

INTERROGATORY NO. 31

Indicate whether approval, listing or certification was ever refused, withdrawn, discontinued or cancelled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler. If so:

a) identify the Omega and/or Omega component part or allegedly assistive operating device;

b) explain the circumstances and date;

c) identify all persons and/or entities involved;

d) identify and describe all communications regarding or relating in any way to the refusal, withdrawal, discontinuation, cancellation, or objected to sale and/or distribution, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 32

Have you ever advertised, represented, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM? If so:

a) identify the advertisement or marketing material;

b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:

i) how and from whom you received the notification;

ii) when you received the notification;

iii) describe the contents of the notification;

iv) describe your response to the notification.

INTERROGATORY NO. 33

Have you ever advertised, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by UL are listed or certified by UL? If so:

a) identify the advertisement or marketing material;

b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:

i) how and from whom you received the notification;

ii) when you received the notification;

iii) describe the contents of the notification;

iv) describe your response to the notification.

INTERROGATORY NO. 34

Indicate whether you are aware or have ever been notified of an Omega that did not or allegedly did not activate in a fire? If so:

a) identify the Omega;

b) indicate when, where and how the fire occurred;

c) what was the system pressure was (in psig) at the time of the fire and/or nonactivation;

d) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:

i) identify the injured person;

ii) indicate how the injury was or was alleged to have been sustained;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide details of same;

e) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:

i) identify the decedent;

ii) indicate how and where the death occurred;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;

f) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:

i) identify the owner of the property;

ii) indicate how the property was or allegedly was damaged;

iii) indicate the value or alleged value of the property;

iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;

g) indicate whether the Omega was fitted with a "helper spring;"

h) indicate when and how you became aware of the fire and/or the nonactivation, including from whom you received the notification;

i) identify and describe all communications regarding or relating in any way to the fire and/or nonactivation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

j) indicate whether you or anyone else tested and/or examined any Omega that failed to activate or allegedly failed to activate in a fire, the sprinkler system in which the Omega was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

k) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

l) indicate whether the Omega and/or the system from which it came was tested

and/or examined for "stop leak" or any other leakage prevention substance. If so:

i) indicate whether "stop leak" or any other such substance was present;

ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

m) indicate whether the Omega was examined for dezincification. If so:

i) indicate whether dezincification had occurred;

ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

n) explain why the Omega failed to activate in the fire.

INTERROGATORY NO. 35

Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested, did not activate or allegedly did not activate at 7 psig or below when exposed to its activation/triggering temperature? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received such notification;

c) describe and explain the circumstances of the nonactivation at 7 psig, including

i) when and where the testing and nonactivation at or below 7 psig took

place;

ii) describe the tests and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests;

iv) describe and explain the results of the tests, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results.

d) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the sprinkler was subjected);

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to

the notification, the sprinkler, the testing and/or examination, and/or the nonactivation at 7 psig or below, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:

i) indicate whether "stop leak" or any other such substance was present;

ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether

"stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:

i) indicate whether dezincification had occurred;

ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate at or below 7 psig.

INTERROGATORY NO. 36

Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received such notification;

c) describe and explain the circumstances of the nonactivation, including:

i) when and where the testing and nonactivation took place;

ii) describe the tests and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests;

iv) describe and explain the results of the tests, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results.

d) indicate what the pressure of the system (in which the Omega was installed) was at the time of the field test;

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:

   i) identify the sprinkler;

   ii) describe the tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing and/or examination, and/or the nonactivation, including:

   i) the date on which the communication took place;

   ii) the persons and/or entities to and from whom the communication was directed;

   iii) the nature and content of the communication;

   iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

  i) indicate whether swelling and/or adhesion was present;

  ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

  iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:

  i) indicate whether "stop leak" or any other such substance was present;

  ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

  iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:

  i) indicate whether dezincification had occurred;

  ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

  iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate when field tested.

INTERROGATORY NO. 37

Do you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation (triggering) temperature for long enough for its fusible like to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega)? If so:

a) explain the basis for your contention;

b) describe in detail the method of operation of the "helper spring;"

c) describe in detail the specifications for the "helper spring;"

d) identify the manufacturer of the "helper spring;"

e) identify all persons and/or entities involved in the design and/or development of the "helper spring."

f) describe and any tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part, providing the following information:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

g) indicate whether you have communicated with any persons and/or entities

(including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring. If so, provide the following information:

i) identify all such persons and/or entities;

ii) state the date of the communication;

iii) describe the content of the communication;

iv) identify all persons and/or entities present during the communication;

h) if you allege that an Omega sprinkler fitted with a helper spring will activate at a lower system pressure than an Omega without a helper spring, please indicate:

i) how much lower the pressure required to activate the helper-spring fitted Omega is than the pressure required to activate an Omega not fitted with the helper spring; and

ii) explain the basis for your allegation;

iii) indicate what evidence supports your allegation.

INTERROGATORY NO. 38

Have you ever been aware or been notified of an Omega sprinkler or component that has cracked or broken? If so:

a) identify the Omega and, if applicable, its component part;

b) describe the circumstances of the cracking and/or breakage, including the date on which it occurred;

c) identify the person and/or entity (including your employees and/or consultants) who notified you of the cracking and/or breakage;

d) detail when and how you became aware or received notification of the cracking and/or breakage;

e) describe and explain your response to the notification;

f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:

i) describe all such tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iii) describe and explain the results of each test and/or examination, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the cracking and/or breakage, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

h) explain in full detail why the cracking and/or breakage occurred.

INTERROGATORY NO. 39

Have you ever been aware or been notified of an Omega sprinkler or any sprinkler component that has exhibited corrosion? If so:

a) identify the Omega and, if applicable, its component part;

b) describe the circumstances of the corrosion, including the date on which it occurred;

c) identify the person and/or entity (including your employees and/or consultants) who notified you of the corrosion;

d) detail when and how you became aware or received notification of the corrosion;

e) describe and explain your response to the notification;

f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:

i) describe all such tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iii) describe and explain the results of each test and/or examination, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test or

examination results;

g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the corrosion, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

h) explain in full detail how and why the corrosion occurred.

INTERROGATORY NO. 40

Indicate whether you are aware or have ever been notified of an Omega sprinkler that leaked and/or weeped when tested or in a fire? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received notification or became aware of the leakage and/or weeping;

c) describe and explain the circumstances of the leaking and/or weeping, including when and where the leakage and/or weeping took place. If the leakage and/or weeping took place in testing:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions (and including at what pressure the sprinkler leaked and/or wept);

iv) identify the persons and entities involved in evaluating the test and/or examination results.

d) indicate whether you or anyone else of whom you are aware tested and/or examined the Omega (after it leaked and/or wept), and/or any other sprinkler from the same site. If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the leakage and/or weeping, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

g) indicate whether the Omega that leaked or wept was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that leaked or wept was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

i) explain why the Omega leaked and/or wept.

INTERROGATORY NO. 41

Indicate whether you are aware or have ever been notified of an Omega sprinkler that activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire? If so:

a) identify the Omega;

b) indicate when, how, and from whom you received notification or became aware of the unnecessary or premature activation;

c) describe and explain the circumstances of the unnecessary and/or premature activation; including when and where the activation took place. If during

testing:

i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions (and including at what temperature and pressure the sprinkler activated);

iv) identify the persons and entities involved in evaluating the test results.

d) indicate whether you or anyone else of which you are aware tested and/or examined the Omega (after it activated prematurely and/or unnecessarily), and/or any other sprinkler from the same site. If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the premature and/or

unnecessary activation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

g) indicate whether the Omega that activated prematurely and/or unnecessarily was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that activated prematurely and/or unnecessarily was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was or was not present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

ii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

i) explain why the Omega activated prematurely and/or unnecessarily.

INTERROGATORY NO. 42

Do you contend that dezincification may cause an Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which dezincification causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which dezincification causes or may cause (a), (b), (c) and/or (d), above;

iv) describe the circumstances under which dezincification causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 43

Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of dezincification;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;

f) indicate how and when you were notified of the alleged dezincification;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega, the system in which it was installed and/or any other sprinkler from the same site? If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

   i) the date on which the communication took place;

   ii) the persons and/or entities to and from whom the communication was directed;

   iii) the nature and content of the communication;

   iv) identify all persons and/or entities present during the communication.

j) With respect to each such Omega, indicate whether you contend that the dezincification caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

INTERROGATORY NO. 44

Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of dezincification;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;

f) indicate how and when you were notified of the alleged dezincification;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

  iv) identify all persons and/or entities present during the communication.

j) With respect to each such Omega, indicate whether you or anyone else of

whom you are aware contend that the dezincification caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for their contention.

INTERROGATORY NO. 45

Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is neither copper or plastic exhibits dezincification? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of dezincification;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;

f) indicate how and when you were notified of the alleged dezincification;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

  iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 46

Are you aware or have you ever been notified of an Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether dezincification was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 47

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to dezincification? If so:

a) describe the alleged change, and indicate which Omega makes and models were changed;

b) indicate the date on which the change was effected;

c) identify all persons and/or entities involved in effecting the change, describing

each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits dezincification? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 48

Do you contend that the use of stop leak or other sealant, leakage prevention substance

or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the substances you contend are used;

v) describe the circumstances under which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 49

Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to stop leak or any other sealant, leakage prevention substance or pipe cement? If so:

a) identify the Omega;

b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;

c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;

e) describe the methods and criteria used to determine and confirm the existence of the stop leak or the other sealant, leak prevention substance or pipe cement;

f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;

g) indicate how and when you were notified of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;

h) detail your response to the notification or awareness;

i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

k) With respect to each such Omega, indicate whether you contend that the exposure to stop leak or any other sealant, leakage prevention substance or pipe cement caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature);

If so, explain fully the basis for your contention.

INTERROGATORY NO. 50

Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether stop leak or any other sealant, leakage prevention substance or pipe cement was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 51

Do you allege that any change in the manufacturing process and/or component parts,

including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so, for each such substance (stop leak or any other sealant, leakage prevention substance or pipe cement):

a) identify the substance;

b) describe the alleged change, and identify the Omega makes and models to which the change applies;

c) indicate the date on which the change was effected;

d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination,

including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 52

Do you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the substances you contend are used;

v) describe the circumstances under which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 53

Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to cutting oils or other substances used to cut pipe? If so:

a) identify the Omega;

b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;

c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;

e) describe the methods and criteria used to determine and confirm the existence of the cutting oil or other substance used to cut pipe;

f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to cutting oil or other substance to cut pipe;

g) indicate how and when you were notified of the alleged exposure to cutting oil or other substance to cut pipe;

h) detail your response to the notification or awareness;

i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to cutting oil or other substance to cut pipe, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

k) With respect to each such Omega, indicate whether you contend that the exposure to cutting oil or other substance to cut pipe caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

INTERROGATORY NO. 54

Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants)

who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether cutting oil or other substance to cut pipe was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

   i) the date on which the communication took place;

   ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 55

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so, for each such substance (cutting oil or other substance used to cut pipe):

a) identify the substance;

b) describe the alleged change, and identify the Omega makes and models to which the change applies;

c) indicate the date on which the change was effected;

d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

f) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 56

Do you contend that swelling of the "o" ring in an Omega sprinkler may cause the Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its

activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which "o" ring swelling causes or may cause (a), (b), (c), and/or (d), above, indicating what type of "o" ring (EPDM, silicone, or other) is used in that Omega;

iii) identify the systems in which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above;

iv) describe the circumstances under which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 57

Have you or anyone of whom you are aware ever determined or alleged that an Omega containing an EPDM "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;

f) indicate how and when you were notified of the alleged "o" ring swelling;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you contend that the "o" ring swelling caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

INTERROGATORY NO. 58

Have you or anyone of whom you are aware ever determined or alleged that an Omega containing a silicone "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;

e) identify the person and/or entity (including your employees or consultants) who

notified you of the alleged "o" ring swelling;

f) indicate how and when you were notified of the alleged "o" ring swelling;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

  iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you or anyone else of whom you are aware contend that the "o" ring swelling caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contends, and explain your understanding of their basis for that contention.

INTERROGATORY NO. 59

Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is not steel exhibits "o" ring swelling? If so:

a) identify the Omega;

b) indicate what type of "o" ring the Omega contained (EPDM, silicone, or other type of "o" ring);

c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;

e) describe the methods and criteria used to determine and confirm the existence

of "o" ring swelling;

f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;

g) indicate how and when you were notified of the alleged "o" ring swelling;

h) detail your response to the notification or awareness;

i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 60

Are you aware or have you ever been notified of an Omega sprinkler from a steel piping system that did not exhibit "o" ring swelling, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega and indicate what type of "o" ring it contained;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether "o" ring swelling was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 61

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring swelling? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;

b) indicate the date on which the change was effected;

c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring swelling; If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

   i) the date on which the communication took place;

   ii) the persons and/or entities to and from whom the communication was directed;

   iii) the nature and content of the communication;

   iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 62

Do you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

v) describe the circumstances under which "o" ring adhesion causes or may cause (a), b), (c) and/or (d), above.

INTERROGATORY NO. 63

Have you or anyone of whom you are aware ever determined or alleged that an

Omega exhibits "o" ring adhesion? If so:

a) identify the Omega, and indicate what type of "o" ring it contained (EPDM, silicone, or other);

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring adhesion;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring adhesion;

f) indicate how and when you were notified of the alleged "o" ring adhesion;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring adhesion, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you or anyone of whom you are aware contend that the "o" ring adhesion caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for that contention.

INTERROGATORY NO. 64

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring adhesion? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;

b) indicate the date on which the change was effected;

c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring adhesion; If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to

the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 65

Do you contend or are you aware of any fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated? If so:

a) identify each Omega;

b) indicate when, where and how the fire occurred;

c) what was the system pressure was (in psig) at the time of the fire and/or activation;

d) indicate how long after the Omega was first exposed to its activation/triggering temperature it activated;

e) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:

i) identify the injured person;

ii) indicate how the injury was or was alleged to have been sustained;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide

details of same;

f) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:

i) identify the decedent;

ii) indicate how and where the death occurred;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;

g) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:

i) identify the owner of the property;

ii) indicate how the property was or allegedly was damaged;

iii) indicate the value or alleged value of the property;

iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;

h) indicate whether the Omega was fitted with a "helper spring;"

i) indicate when and how you became aware of the fire and/or the activation, including from whom you received the notification;

j) identify and describe all communications regarding or relating in any way to the fire and/or activation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

k) indicate whether you or anyone else tested and/or examined any Omega that allegedly activated in a fire, or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

l) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen or adhered;

m) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:

i) indicate whether "stop leak" or any other such substance was present;

ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

n) indicate whether the Omega was examined for dezincification. If so:

i) indicate whether dezincification had occurred;

ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

INTERROGATORY NO. 66

Identify and describe all tests and/or examinations conducted by you or anyone on your behalf on Omega sprinklers. For each test:

a) identify the sprinklers tested;

b) describe the tests and provide a detailed protocol and the date on which each test was conducted;

c) identify the persons and entities involved in:

i) drafting and/or conceiving the protocol;

ii) setting up and/or conducting the tests;

d) describe and explain the results of the tests, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test results;

f) identify and describe all communications relating in any way to any such tests and/or test results, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 67

Have you or anyone of whom you are aware ever performed the "load on heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 68

Have you or anyone of whom you are aware ever performed the "strength of heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 69

Have you or anyone of whom you are aware ever performed the "leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 70

Have you or anyone of whom you are aware ever performed the "hydrostatic strength test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 71

Have you or anyone of whom you are aware ever performed the "30-day leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 72

Have you or anyone of whom you are aware ever performed the "water hammer test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 73

Have you or anyone of whom you are aware ever performed the "operating temperature (bath) test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the

test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 74

Have you or anyone of whom you are aware ever performed the "sensitivity tests" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 75

Have you or anyone of whom you are aware ever performed the "operation - lodgement test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 76

Have you or anyone of whom you are aware ever performed the "flow endurance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 77

Have you or anyone of whom you are aware ever performed the "operation - cold soldering test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 78

Have you or anyone of whom you are aware ever performed the "high temperature - test for uncoated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 79

Have you or anyone of whom you are aware ever performed the "high temperature - test for coated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 80

Have you or anyone of whom you are aware ever performed the "strength of frame test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 81

Have you or anyone of whom you are aware ever performed the "impact resistance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 82

Have you or anyone of whom you are aware ever performed the "rough usage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 83

Have you or anyone of whom you are aware ever performed the "vibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place:

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 84

Have you or anyone of whom you are aware ever performed the "calibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 85

Have you or anyone of whom you are aware ever performed the "10 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 86

Have you or anyone of whom you are aware ever performed the "16 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to

the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 87

Have you or anyone of whom you are aware ever performed the "water distribution test - conventional (old style) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 88

Have you or anyone of whom you are aware ever performed the "100 pan distribution test - sidewall sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 89

Have you or anyone of whom you are aware ever performed the "350 pound wood crib fire test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 90

Have you or anyone of whom you are aware ever performed the "10-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 91

Have you or anyone of whom you are aware ever performed the "30-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 92

Have you or anyone of whom you are aware ever performed the "90-day moist air test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to

the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 93

Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of brass sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 94

Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of stainless sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 95

Have you or anyone of whom you are aware ever performed the "operational tests on sprinklers incorporating gaskets or "o" ring seals" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 96

Have you or anyone of whom you are aware ever performed the "vacuum test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 97

Have you or anyone of whom you are aware ever performed the "elastomeric parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the

test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 98

Have you or anyone of whom you are aware ever performed the "freezing test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 99

Have you or anyone of whom you are aware ever performed the "fire test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 100

Have you or anyone of whom you are aware ever performed the "wall wetting test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 101

Have you or anyone of whom you are aware ever performed the "evaporation test for sprinkler coatings" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 102

Have you or anyone of whom you are aware ever performed the "cycling tests for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega

sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 103

Have you or anyone of whom you are aware ever performed the "piled stock fire test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and

the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 104

Have you or anyone of whom you are aware ever performed the "piled stock fire test for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 105

Have you or anyone of whom you are aware ever performed the "distribution tests for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 106

Have you or anyone of whom you are aware ever performed the "high temperature exposure test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 107

Have you or anyone of whom you are aware ever performed the "production leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 108

Have you ever tested an Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure?

If so:

a) identify the Omega;

b) explain why it failed to activate;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 109

Indicate whether you have attended or been present at any meetings or discussions, or issued or received any communications, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;

b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;

c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;

d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;

e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;

f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;

g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;

h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;

k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;

l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;

m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems. If so, for each such meeting, discussion, and communication, provide:

i) the date on which the meeting, discussion or communication took place;

ii) the persons and/or entities to and from whom the communication was directed or, if a meeting or discussion, identify all persons who were present and/or participated;

iii) the nature and content of the communication;

INTERROGATORY NO. 110

Have you ever been notified of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who notified you;

b) indicate how and when you were notified;

c) describe and explain the contents of the notification;

d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern;

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega about which you were notified of any problem, potential problem, complaint or concern, the system in which it was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, and/or any the testing and/or examination in part f), including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 111

Have you notified any person and/or entity of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who you notified, and all persons and/or entities who received the notification or copies thereof;

b) indicate how and when you notified the persons and/or entities identified in your response to part (a) above;

c) describe and explain the contents of the notification;

d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern, including who drafted, reviewed and/or approved the notification;

e) did you receive any response to the notification? If so:

i) identify the person and/or entity from whom you received a response;

ii) indicate how and when you received the response;

iii) describe and explain the contents of the response;

f) identify and describe all communications regarding or relating in any way to the notification and/or response, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 112

Indicate whether you ever requested any information from any sprinkler contractor or sprinkler owner regarding any Omega sprinkler. If so:

a) identify the persons and/or entities from whom you requested information;

b) indicate how and when you requested the information;

c) describe and explain what information you requested;

d) identify all persons who have knowledge of the request for information, including those who drafted, reviewed and/or approved the request for information;

e) did you receive any response to the request for information? If so:

i) identify the person and/or entity from whom you received a response;

ii) indicate how and when you received the response;

iii) describe and explain the contents of the response;

f) identify and describe all communications regarding or relating in any way to the request for information and/or the response to that request, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 113

Have you or anyone on your behalf provided (either by sale or without charge) sprinklers to anyone to replace some or all of the Omegas installed in a particular location? If so, indicate the total number of Omegas replaced, and the total value of the replacement (labor plus cost of sprinklers, and any other associated expenses).

INTERROGATORY NO. 114

With respect to each location in which you provided (either by sale or without charge)

sprinklers to anyone to replace some or all of the Omegas that were installed there:

a) identify the location;

b) indicate what make and/or model Omegas were replaced, and the quantity of each replaced;

c) indicate what make and/or model sprinkler were provided as a replacement, and the quantity of each provided;

d) identify the person and/or entity to whom you provided the replacements;

e) describe and explain the circumstances under which you provided the replacements;

f) identify the person and/or entity who paid the cost of the replacement;

g) indicate the cost of the replacement;

h) describe and explain what the replacement involved;

i) did you or anyone else of whom you are aware examine and/or test the Omega that was replaced, the system in which it was installed, and/or any other sprinkler from the same site? If so:

   i) identify the sprinkler;

   ii) describe the tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or

examination results;

j) identify and describe all communications regarding or relating in any way to the replacement of the sprinklers, the sprinkler that was replaced, the replacement sprinkler, and/or any the testing and/or examination the replaced sprinkler, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 115

Have you ever tested Omega sprinklers from a building or structure and indicated to the building owner/operator or anyone else that all Omegas activated properly? If so:

a) identify each Omega you tested;

b) identify the location in which the Omega had been installed;

c) for each location, indicate how many Omegas were installed there prior to testing, and how many were tested;

d) describe the tests and/or examinations, and provide a detailed protocol;

e) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

f) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

g) identify the persons and entities involved in evaluating the test and/or examination results;

h) did you or anyone else of whom you are aware examine and/or test the system in which it was installed? If so:

i) describe the tests and/or examinations, and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iii) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test and/or examination results;

i) did any person or entity other than you examine and/or test sprinklers from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to

the sprinklers, the testing and/or the results, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 116

Identify each person whom you expect to call as an expert witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the expert is expected to testify;

b) the substance of the facts and opinions to which the expert is expected to testify;

c) provide a summary of the grounds for each opinion to which the expert is expected to testify.

INTERROGATORY NO. 117

Identify each person whom you expect to call as a fact witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the witness is expected to testify;

b) the substance of the facts to which the witness is expected to testify.

In the Matter of	
CENTRAL SPRINKLER CORP.,	
and	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	
Respondents	

COMPLAINT COUNSEL'S RESPONSES TO RESPONDENTS' FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Complaint Counsel hereby responds to Respondents' First Request for Production of Documents and Things.

1. All documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint.

Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery pursuant to the work product privilege. The data compilation of failures was prepared by or for Complaint Counsel in anticipation of litigation. Without waiving its objection, Complaint Counsel will produce the data on which the compilation is based, and the information about the fires, to the extent that the information was not provided to Complaint Counsel by a third party on a confidential basis. Without waiving its objection, to the extent that the data or information was provided on a confidential basis, Complaint

Counsel will produce the data upon the execution of an appropriate confidentiality stipulation by Respondents, and the issuance of an appropriate protective order by the Presiding Officer.

2. All documents identified in the CPSC's responses to Respondents' First Set of Interrogatories.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. However, without waiving its objection, Complaint Counsel will produce non-privileged and non-confidential documents referenced in its responses to Respondents' Interrogatories.

3. All documents that constitute the entirety of the CPSC administrative file regarding the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the term "administrative file" is undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. To the extent that "administrative file" encompasses documents prepared by or for Complaint Counsel in anticipation of litigation, Complaint Counsel objects to this Request on the ground that it seeks documents protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel will produce all non-confidential and non-privileged documents referenced in its responses to Respondents' Interrogatories, and/or requested in these Requests for Production that are not already in Respondents' possession.

4. All documents that constitute subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel will produce subpoenas it served in this matter upon UL, FM and others.

5. All documents provided to the CPSC in response to subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel also objects to this Interrogatory to the extent that it seeks documents prohibited from disclosure pursuant to 15 U.S.C. § 2055. Without waiving its objections, Complaint Counsel will produce all non-confidential documents provided to Complaint Counsel by third parties in response to subpoenas issued by CPSC in this matter upon the receipt of permission from the third parties, and upon execution of an appropriate confidentiality stipulation by Respondents, and the issuance of any necessary protective orders by the Presiding Officer.

6. All documents provided to the CPSC by Respondents regarding the Omegas.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and on the ground that the information is already within the possession of Respondents (who continue to be represented by the same counsel who provided the information in the first place).

7. All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel would be pleased to produce specific documents, or specific categories of documents, that Respondents seek to discover, upon rephrasal of this Request.

8. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.

Response: Complaint Counsel objects to this Request on the grounds that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it will share with Respondents the results of any testing it intends to introduce into evidence at the hearing in this matter, once those determinations have been made.

9. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by on or behalf of any other person, organization, business, or other entity.

Response: Complaint Counsel objects to this Request on the grounds that the terms "other person, organization, business or other entity" are unclear, undefined, vague and ambiguous. Assuming that the terms "other person, organization, business or other entity" refer to

persons, organizations, businesses or entities other than CPSC and its staff, Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and includes information not within the knowledge or control of Complaint Counsel. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel also objects to this Interrogatory to the extent that it seeks documents prohibited from disclosure pursuant to 15 U.S.C. § 2055. Without waiving its objections, Complaint Counsel will produce responsive documents provided to Complaint Counsel by third parties regarding testing of Omega sprinklers upon the receipt of permission from the third parties, and upon execution of an appropriate confidentiality stipulation by Respondents, and the issuance of any necessary protective orders by the Presiding Officer.

10. All documents that constitute, provide evidence of, refer, or relate to any testing of non-Omega sprinkler heads conducted by on or behalf of the CPSC.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint counsel further objects to Respondents' Request on the ground that the terms "provide evidence of" call for a legal conclusion. Without waiving its objections, Complaint Counsel

responds that it currently has no documents regarding testing of non-Omega sprinklers.

11. All documents that constitute, provide evidence of, refer, or relate to testing of non-Omega sprinkler heads conducted by on or behalf of any other person, organization, business, or other entity.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint counsel further objects to Respondents' Request on the ground that the terms "provide evidence of" call for a legal conclusion. Without waiving its objections, Complaint Counsel responds that it currently has no documents regarding testing of non-Omega sprinklers.

12. All documents that constitute, provide evidence of, refer, or relate to the alleged jurisdiction of the CPSC over the Omegas.

Response: Complaint Counsel objects to this Request on the grounds that it is unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss, the case law and statutes cited therein, and the affidavit and exhibit submitted

therewith.

13. All documents that constitute, provide evidence of, refer, or relate to the jurisdiction of the CPSC over any product, including without limitation any memoranda or other internal correspondence that addresses the extent of or any limitations on the jurisdiction of the CPSC.

Response: Complaint Counsel objects to this Request on the grounds that it is unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence herein. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome, as CPSC exercises jurisdiction over tens of thousands of products, and every document in every CPSC file is arguably responsive to this Request. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this case, the case law and statutes cited therein, and the affidavit and exhibit submitted therewith, as well as the records of sprinkler testing provided in response to Request #1.

14. All documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground

that all documents that "constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas" are within CSC's possession, and have themselves been Requested by Complaint Counsel in discovery in this case. Without waiving its objections, Complaint Counsel refers Respondents to the documents provided in response to Request No. 1.

15. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly.

Response: Complaint Counsel objects to this Request on the grounds that the terms "failed to activate properly" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to the documents provided in response to Respondents' Request No. 1. .

16. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly activated properly.

Response: Complaint Counsel objects to this Request on the grounds that the terms "allegedly activated properly" are undefined, unclear, vague and ambiguous, and on the ground that the question as a whole is unclear, vague and ambiguous, as it does not indicate whether Respondents seek documents regarding only fires in which all Omegas "activated properly," or in which some Omegas "activated properly," though others did not. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by

the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its response to Respondents' Request No. 1.

17. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly failed to activate properly.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Request on the grounds that the terms "failed to activate properly" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objections, Complaint Counsel will provide documents relating to reports of fires in which sprinklers that are or possibly are non-Omegas failed to activate. CPSC is investigating whether these fires involved non-Omegas.

18. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly activated properly.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Request on the grounds that the terms "allegedly activated properly" are undefined, unclear, vague and ambiguous, and on the ground that the question as a whole is unclear, vague and ambiguous, as it does not indicate whether Respondents seek documents regarding only fires in which all non-Omegas "activated properly," or in which some non-Omegas "activated properly," though others did not. Complaint Counsel further objects to this Request on the ground that it is overbroad and

unduly burdensome.

19. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

20. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and current employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

21. All documents that constitute, provide evidence of, refer, or relate to "[the] multiple random inquiries of sprinkler contractors across the nation," as referenced in a

November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 106.

22. **All documents that constitute, provide evidence of, refer, or relate to "what has been, and remains, customarily required to remove and install sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.**

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 106.

23. **All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view [that] dezincification alone is the cause of the above-required operating pressures in Omegas from plastic pipes," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.**

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 107.

24. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 108.

25. All documents that constitute, provide evidence of, refer, or relate to "the data [which] point to multiple failure modes rooted in the design and construction of these sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks

information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 109.

26. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluation, consideration, or analyses done by or on behalf of the CPSC regarding the "testing based corrective action," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 110.

27. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, or analyses done by or on behalf of the CPSC which reflects the "serious concerns" of the CPSC regarding whether "Omega sprinklers with silicone o-rings will function in the long term," as referenced in a February 19,1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore

protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 111.

28. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, consideration, or analyses done by or on behalf of the CPSC which addressed Omegas where "the internal shaft was cocked or tipped slightly and jammed in that position," as referenced in a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 112. Complaint Counsel invites Respondents to inspect the x-ray it has of the sprinkler referred to in the February 24, 1998 letter.

29. All documents that constitute, provide evidence of, refer, or relate to "automatic fire sprinklers' historical rate of proving 99.5 percent effective," as referenced in a January 6, 1998 letter from Eric Singer of the CPSC to state attorneys general.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore

protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 113.

30. All documents that constitute, provide evidence of, refer, or relate to the CPSC Recall Handbook.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the grounds that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request to the extent that it seeks confidential and/or trade secret information pertaining to other companies investigated by CPSC. Without waiving its objections, Complaint Counsel will produce the CPSC Recall Handbook.

31. All documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and on the ground that the information is already within the possession of Respondents. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

32. All Omegas in possession of the CPSC.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad

and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks things provided to or currently being tested by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it has offered, and still intends, to preserve the Omega sprinkler heads it currently possesses from the Fort Wayne and Kent Manor Inn fire sites for testing in conjunction with Respondents. Complaint Counsel suggests that the parties to this action discuss a procedure for examination of each other's sprinkler samples.

33. All non-Omega sprinkler heads in the possession of the CPSC.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

34. All audio and/or video tapes regarding or relating to any testing of Omegas.

Response: Complaint Counsel objects to this Request on the ground that it seeks things prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it will share with Respondents the results and videotapes of any testing it intends to introduce into evidence at the hearing in this matter, once those determinations have been made.

35. All audio and/or video tape regarding or relating to any testing of non-Omega sprinkler heads.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant

information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel also objects to this Request on the ground that it seeks things prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it currently has no audio and/or video tapes regarding or relating to any testing of non-Omega sprinkler heads.

36. All documents that constitute, provide evidence of, refer, or relate to any personal journals, diaries, or correspondence maintained by the CPSC Staff regarding the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

37. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any dealers, retailers, contractors, or any distributors regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel will produce all non-privileged and non-confidential documents

referenced in response to Respondents' Interrogatory No. 106.

38. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any Authorities Having Jurisdiction regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel will produce all correspondence to Fire Marshals that are in the public domain.

39. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any consumers regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c).

40. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any state law enforcement authorities regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objections, Complaint Counsel will produce all correspondence to State Attorney Generals that are in the public domain.

41. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any federal law enforcement authorities regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret.

42. All documents that constitute, provide evidence of, refer, or relate to scripts, talking points, outlines, or any other material prepared by, for, or on behalf of the CPSC for any press conferences or news releases regarding the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant

information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel also objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it seeks documents protected from discovery by the attorney-client privilege. Without waiving its objections, Complaint Counsel will produce the press release and VNR that were prepared in this matter, and released to the public.

43. All documents that constitute, provide evidence of, refer, or relate to any material regarding the Omegas and/or Respondents created by or on behalf of the CPSC public relations department, media department, or any other CPSC internal department charged with communicating with or providing information to the public media.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel also objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it seeks documents protected from discovery by the attorney-client privilege. Without waiving its objections, Complaint Counsel will produce the press release and VNR that were prepared in this matter, and released to the public, as well as the Omega Sprinkler Questionnaire on CPSC's web site, and the Omega Sprinkler Questionnaire

available through CPSC's fax-on-demand service.

44. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products.

Response: See Response to Interrogatory Nos. 1 and 4.

45. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products."

Response: See Response to Interrogatory Nos. 5 through 25.

46. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13.

Response: See Response to Interrogatory Nos. 38, 39 and 40.

47. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures."

Response: See Response to Interrogatory No. 41.

48. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function in a significant percentage of instances."

Response: See Response to Interrogatory No. 52.

49. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the "Omegas are defective pursuant to

15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4."

Response: See Response to Interrogatory Nos. 53 through 73.

50. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death."

Response: See Response to Interrogatory No. 76.

51. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a substantial risk of injury to the public within the meaning of § 1 5(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)."

Response: See Response to Interrogatory No. 77.

52. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "Omegas present a substantial product hazard as described in Sections 15(a)(2), (c) and (d) of the CPSA, 15 U.S.C. §§ 2064(a)(2), (c) and (d)."

Response: See Response to Interrogatory No. 88.

53. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest."

Response: See Response to Interrogatory No. 89.

54. A current curriculum vitae or resume for each and every expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

Response: Complaint Counsel has not yet determined who will testify as an expert witness on its behalf in this matter. Complaint Counsel further points out that any expert witness that it will call will testify on behalf of Complaint Counsel and the staff, and not on behalf of the Commission.

55. All publications of any nature authored by any expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

Response: Complaint Counsel has not yet determined who will testify as an expert witness on its behalf in this matter. Complaint Counsel further points out that any expert witness that it will call will testify on behalf of Complaint Counsel and the staff, and not on behalf of the Commission.

56. Any and all written statements made by Respondents that the CPSC contends constitute an admission with reference to any of the issues raised in the Complaint.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome, and requests information already in Respondents' possession. Complaint Counsel further objects to this Request to the extent that it may seek information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel responds that any and all written statements made by Respondents may constitute an admission by Respondents in this matter.

57. All documents that constitute, provide evidence of, refer, or relate to the

use of silicone o-rings in sprinkler heads.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

58. All documents that constitute, provide evidence of, refer, or relate to the use of EPDM o-rings in sprinkler heads.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

59. All documents that constitute, provide evidence of, refer, or relate to the use in sprinkler heads of o-rings comprised of any other material or compound.

Response: Complaint Counsel objects to this Request on the ground that the terms "any other material or compound" are undefined, unclear, vague and ambiguous. Complaint Counsel also objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint

Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

60. All documents that constitute, provide evidence of, refer, or relate to the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's decision to investigate the risks associated with Omega sprinklers, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its response to Respondents' Request No. 1.

61. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage in connection with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the term "consumer complaints" is undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Request on the ground that it requests information pertaining to the identity of

consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Request on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will produce all non-privileged and non-confidential reports of fires in which Omegas have reportedly failed to activate. Complaint Counsel will supplement its response to this Request as additional information becomes available.

62. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of personal injury in connection with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the term "consumer complaints" is undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Request on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Request on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will produce all non-privileged and non-confidential reports of

fires in which Omegas have reportedly failed to activate. Complaint Counsel will supplement its response to this Request as additional information becomes available.

63. Any and all testing protocols used by the CPSC or by any expert or other person on behalf of the CPSC in testing the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Request Nos. 8, 9, 32 and 34.

64. All documents that constitute, provide evidence of, refer, or relate to any alternative design features for the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the terms "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, and that the question as a whole is unintelligible, and thus precludes Complaint Counsel from formulating a response without clarification of its meaning.

65. All documents that constitute, provide evidence of, refer, or relate to the feasibility and/or propriety of any alternative design features for the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the terms "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, as are the terms "feasibility and/or propriety" of same. Complaint Counsel objects to this Request on the ground that the question as a whole is unintelligible, and thus precludes

Complaint Counsel from formulating a response without clarification of its meaning.

66. All documents that constitute, provide evidence of, refer, or relate to the CPSC's preliminary determination of the alleged risks associated with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's preliminary determination of the risks associated with Omega sprinklers, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Respondents' Requests Nos. 1 and 60.

67. All documents that constitute, provide evidence of, refer, or relate to any changes in the CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's preliminary determination of the risks associated with Omega sprinklers, any changes thereto, and/or to the initial assignment of the level of hazard presented by Omegas, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in

anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Respondents' Requests Nos. 1 and 60.

68. All documents that constitute, provide evidence of, refer, or relate to any corrective action proposal for the Omegas.

Response: Complaint Counsel objects to this request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that any such proposal was proposed by Respondents themselves, and therefore the documents that constitute or provide evidence of any such corrective action proposal by Respondents are within Respondents' own possession.

69. All documents that constitute, provide evidence of, refer, or relate to the requested recall of the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome, as all documents related to this case relate to the requested recall of the Omegas. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

70. All documents that constitute, provide evidence of, refer, or relate to the corrective action proposal presented by Respondents regarding the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that any such proposal was proposed by Respondents themselves, and therefore the documents that constitute or provide evidence of any such corrective action proposal by Respondents are within Respondents' own possession. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Interrogatory Nos. 114 and 139.

71. All documents that constitute, provide evidence of, refer, or relate to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's decision to initiate this adjudicative proceeding against Central, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Respondents' Requests Nos. 1 and 60.

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of CENTRAL SPRINKLER CORP., and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

CPSC/OFC OF THE SECRETARY
FREEDOM OF INFORMATION
1998 APR 27 P 5:15

COMPLAINT COUNSEL'S RESPONSES TO
RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby responds to Respondents' First Set of Interrogatories.

A. **Allegations of the Complaint**

1. (a) State whether CSC manufactures Omegas.

If so:

(b) identify and describe any such manufacturing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such manufacturing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such manufacturing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central's

Carmine Schiavone and George Meyer, and Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC describes itself as "a leading manufacturer or automatic fire sprinkler heads"), and based on statements made by Central's Counsel (as late as an April 7, 1998 letter from Kathleen Sanzo to Eric Stone, Director of Administrative Litigation, in which Ms. Sanzo states that "Central has reviewed its manufacturing records . . ."), Complaint Counsel responds that CSC manufactures Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a description of such manufacturing. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' manufacture of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the identify of every person known or believed to have knowledge of the manufacture of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

2. (a) State whether CSC sells Omegas.

If so:

(b) identify and describe any such sales;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such sales;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such sales; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central's Carmine Schiavone and George Meyer, and Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC states that "approximately 56% of the Company's (defined as Central Sprinkler Corporation at the outset of the section) annual sales are derived from the manufacture and sale of fire sprinkler heads and valves . . . ," Complaint Counsel responds that CSC sells Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a description of such sales. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' sales of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the

identify of every person known or believed to have knowledge of the sale of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

3. (a) **State whether CSC markets Omegas.**

If so:

(b) identify and describe any such marketing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such marketing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such marketing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC states that "approximately 56% of the Company's (defined as Central Sprinkler Corporation at the outset of the section), based on brochures depicting the Omega line of sprinklers, and based on statements of Central's counsel and corporate officers in submissions and meetings with CPSC staff, Complaint Counsel responds that CSC markets Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a

description of such marketing. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' marketing of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the identify of every person known or believed to have knowledge of the marketing of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

4. With respect to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Complaint Counsel's Response to Interrogatory No. 1, and Complaint Counsel's Opposition to Respondents' Motion to Dismiss.

5. (a) **State whether the C-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

6. (a) **State whether the C-1 A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

7. (a) State whether the C-1A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

8. (a) State whether the C-lA PRO ID model of the Omegas constitutes a "consumer product" pursuant to I5 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the

exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

9. (a) State whether the EC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

10. (a) **State whether the EC-20A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

11. (a) **State whether the EC-20 AID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

12. (a) State whether the HEC- 12 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

13. (a) State whether the HEC-12 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the

exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

14. (a) State whether the HEC-12 PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

15. (a) State whether the HEC-12A PRO model of the Omegas

constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

16. (a) State whether the HEC-12 RES model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

17. (a) State whether the HEC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or

believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

18. (a) State whether the HEC-20 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for

a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

19. (a) State whether the R-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine

Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

20. (a) State whether the R-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

21. (a) State whether the R-1 M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C.§ 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion,

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

22. (a) State whether the AC model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

23. (a) State whether the M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

24. **(a) State whether the Flow Control model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided

in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

25. With respect to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

26. (a) Separately for each model of the Omegas listed in the Complaint, state whether such model is sold by Respondents directly to consumers. If so:

(b) identify all documents which describe, evidence, refer, or relate

to any such sales;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such sales; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that sale of an article directly to consumers is not necessary for CPSC jurisdiction.

27. (a) Separately for each model of the Omegas listed in the Complaint, state whether Respondents market such a model to consumers. If so:

(b) identify all documents which describe, evidence, refer, or relate to any such marketing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such marketing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that marketing of an article directly to consumers is not necessary for CPSC jurisdiction.

28. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is installed by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such installation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such installation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that installation of an article

(and other "direct interaction or manipulation" of a product) directly by consumers is not necessary for CPSC jurisdiction.

29. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is serviced by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such servicing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such servicing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that servicing of an article (and other forms of "direct interaction" or "active manipulation of a product) directly by consumers is not necessary for CPSC jurisdiction.

30. (a) Separately for each model of the Omegas listed in the

Complaint, state whether such a model is repaired by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such repairs;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such repairs; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that repair of an article (and other forms of "direct interaction" or "active manipulation of a product) directly by consumers is not necessary for CPSC jurisdiction.

31. State whether Omegas installed in buildings used only as storage facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "storage facility" is undefined, unclear, vague and ambiguous. If by "storage facility," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers**." As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

32. State whether Omegas installed in warehouses constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "warehouses" is undefined, unclear, vague and ambiguous. If by "warehouses," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

33. State whether Omegas installed in factories constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "factories" is undefined, unclear, vague and ambiguous. If by "factories," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers**." As stated in Complaint Counsel's Opposition, Omega

sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

33. State whether Omegas installed in computer facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "computer facilities" is undefined, unclear, vague and ambiguous. If by "computer facilities," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over

"products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

35. State whether there are any factual circumstances under which any Omegas would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for speculation. Complaint Counsel further objects to this Interrogatory requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel points Respondents to its Opposition to

Respondents' Motion to Dismiss this action, and the exhibits in support thereof, which demonstrate that Omegas are consumer products with CPSC's jurisdiction.

36. (a) State whether there are any factual circumstances under which any non- Omega sprinkler heads would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The jurisdictional question that Respondents have raised in this litigation is whether Omega sprinklers are consumer products. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof, which demonstrate that Omegas are consumer products with CPSC's jurisdiction.

37. (a) Separately for each model of the Omegas listed in the Complaint, describe any and all ways in which consumers use, consume, and/or enjoy such a model.

(b) identify all documents which describe, evidence, refer, or relate to any such use, consumption, or enjoyment;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such use, consumption, or enjoyment; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof.

38. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:

(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

39. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199:

(a) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of UL Standard 199, if any, address the required residual water pressure at the most remote sprinkler head in a

system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of UL Standard 199, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi the testing standard that Complainant contends is created by UL Standard 199 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

40. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

41. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures":

(a) describe in terms of both degrees Fahrenheit and Celsius what temperatures are meant by the phrase "certain temperatures";

(b) set forth the factual basis for this allegation,

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) The temperatures referred to are the activation/triggering temperatures of the Omega sprinklers.

(b) See (a), above. UL 199, and UL correspondence and listing files for Omega sprinklers, which were received by Complaint Counsel in confidence by a third party, and will be produced to Respondents upon receipt of permission from the third party for disclosure to Respondents.

(c) See response to (b), above. Complaint Counsel has requested this information from Respondents in discovery, but expects that various

Central and UL employees will be included.

(d) Complaint Counsel has requested this information from Respondents in discovery.

(e) See (d), above.

42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks irrelevant information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed

and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to previous Interrogatory. According to Respondents, Omega sprinklers are designed to activate at particularly defined activation/triggering temperatures, based on the temperature at which the fusible link in their heat collector is intended to convert from solid to liquid form.

44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory Nos. 42 and 43.

45. (a) State whether Complainant contends that there is a standard of "failure" that will accurately predict whether a particular Omega will fail to activate in a fire when used in a particular building without regard to the actual hydraulic pressure that exists in the building.

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel also objects to this Interrogatory

on the ground that the terms "standard of failure" and "actual hydraulic pressure that exists in the building" are undefined, unclear, vague and ambiguous. The pressure in a building may fluctuate depending on numerous factors. Without clarification of these terms, and additional information as to those factors, Complaint Counsel is unable to respond to this Interrogatory.

46. (a) State whether Complainant contends that if a particular Omega does not activate at a minimum of 7 psi when tested, such an Omega would not activate if a fire occurred in a building where such Omega was installed.

(b) set forth the factual basis for any such contention;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the term "activate" is undefined, unclear, vague and ambiguous. Without waiving its objection, Complaint Counsel responds that it contends that if a particular Omega does not activate, as that term is defined in Complaint Counsel's discovery requests, upon exposure to its activation/triggering temperature in testing, it would not activate when exposed to that same temperature in a fire that were to occur in a building in which it was installed.

Moreover, to the extent that Omegas have been found to fail at test pressures far in excess of 7 psig, Respondents' Interrogatory is irrelevant.

47. Describe the average static water pressure (in psi) present in the sprinkler systems of most residential buildings.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "most residential buildings" and "average static water pressure" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that it is confusing and ambiguous, as it fails to identify the location of the buildings, or define the other factors upon which the water pressure of a building at any given time depends. The water pressure in different areas of the country (and even in different areas of a state) is different, and the water pressure of a single building may fluctuate depending upon various factors. Without additional information as to each of those variants, a response to this question is impossible.

48. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most residential buildings, after the system has been activated.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "average residual water pressure," "most remote sprinkler head in the sprinkler systems," "most residential buildings" and "activated" are undefined, unclear, vague and

ambiguous. Complaint Counsel reiterates its objections and comments in response to Respondents' Interrogatory No. 47.

49. Describe the average static water pressure (in psi) present in the sprinkler systems of most commercial buildings.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "most commercial buildings" and "average static water pressure" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that it is confusing and ambiguous, as it fails to identify the location of the buildings, or define the other factors upon which the water pressure of a building at any given time depends. The water pressure in different areas of the country (and even in different areas of a state) is different, and the water pressure of a single building may fluctuate depending upon various factors. Without additional information as to each of those variants, a response to this question is impossible.

50. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most commercial buildings, after the system has been activated.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "average residual water pressure," "most remote sprinkler head in the sprinkler systems," "most commercial buildings" and "activated" are undefined, unclear, vague and

ambiguous. Complaint Counsel reiterates its objections and comments in response to Respondents' Interrogatory No. 49.

51. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. It is not relevant why Omegas do not and will not function -- it is relevant that they do not and will not function. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a definitive response to this Interrogatory at this time. Available information suggests that the Omega sprinkler design is inadequate for its

intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test results and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such

persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory.

52. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas do not and/or will not function in a "significant percentage" of instances:

(a) expressed in terms of a specific percentage, describe what constitutes "a significant percentage" regarding this allegation;

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) In the current case, CPSC's compilation of test data from various sources, including but not limited to Central, UL and FM, indicates that Omegas have an overall failure rate of approximately 40%.

(b) The factual basis for this allegation is the test data that indicates that

Omegas have an overall failure rate of approximately 40%.

(c) All non-privileged test data that forms the basis of Complaint Counsel's allegation will be produced to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omegas, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory.

53. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-l model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which

it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with

Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

54. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-l A model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function

in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce this evidence to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their

properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

55. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function

in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their

properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

56. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C- IA PRO ID model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has

requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who

have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

57. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate

to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s).

Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

58. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate

at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers,

as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

59. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 AID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is

inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals

knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

60. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of

Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

61. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-I 2 ID model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the

failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel

will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

62. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC- 12 PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires

in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers; which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

63. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it

intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about

Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

64. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 RES model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention.

Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the

knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

65. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would

reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas

that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

66. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on

these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

67. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the R-l model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate

at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers,

as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

68. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

If so:

(a) state whether Complainant contends that the R-1A model of the Omegas is defective;

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is

inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals

knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

69. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-IM model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of

Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

70. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the AC model of the Omegas

is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the

failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel

will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

71. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the M model of the Omegas is defective;

If so:

(b) identify and describe any such defect:

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will

produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

72. With respect to the allegation of Paragraph 10 of the Complaint that the

Omegas are "defective":

(a) state whether Complainant contends that the Flow Control model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a

significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint

Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

73. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel has already been asked and answered this Interrogatory. See Interrogatory No. 53, and Complaint Counsel's response thereto.

74. State whether the failure of any Omega to function has resulted in any bodily injury or injuries.

Response: Assuming that "failure of any Omega to function" is the failure of an Omega to activate when exposed to its activation/triggering temperature, Complaint Counsel responds that it has information at this time that would indicate that the failure of an Omega to function has resulted in injury or injuries. Complaint Counsel is continuing its investigation of this matter, and has requested this information from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding fires involving Omega sprinklers.

75. State whether the failure of any Omega to function has resulted in any death or deaths.

Response: Assuming that "failure of any Omega to function" is the failure of an Omega to activate when exposed to its activation/triggering temperature, Complaint Counsel responds that it has insufficient information at this time to respond to this Interrogatory. Complaint Counsel is continuing its investigation of this matter, and has requested this information from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding fires involving Omega sprinklers.

76. With respect to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) When an Omega sprinkler does not function in a fire situation, smoke and flames from the fire can cause injury and/or death.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. All persons who have knowledge of fires and/or fire behavior and/or the effects of fire on persons and property exposed to fire, have knowledge of the risk to which the public is exposed in a fire

situation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (c) is in part revealed in those documents.

77. With respect to the allegation of Paragraph 15 of the Complaint that the defect or the defects in the Omegas create a "substantial risk of injury to the public":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) When an Omega sprinkler does not function in a fire situation, smoke and flames from the fire can cause injury and/or death.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. All persons who have knowledge of fires and/or fire behavior and/or the effects of fire on persons and property exposed to fire, have knowledge of the risk to which the public is exposed in a fire situation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (c) is in part revealed in those documents.

78. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

79. (a) **State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.**

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers.

80. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

81. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate under any type of testing.

If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers.

82. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections,

Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

83. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.

If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged and non-confidential information it has with respect to testing of Omega sprinklers. Complaint Counsel adds that one of the three Omega

sprinklers it received from Respondents in February, 1998, which had just been manufactured a few weeks earlier and had never yet been installed in a sprinkler system, did not activate (as that term is defined in Complaint Counsel's discovery requests to Respondents) when exposed to its activation/triggering temperature. The sprinkler partially deployed, releasing drips of water only, and then the fusible link cold soldered, preventing activation. Complaint Counsel has shared this knowledge with respondents, and asked for an explanation of what, why and how this occurred.

84. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel

responds that it contends that all Omega sprinklers are substantial product hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities

of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

85. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel responds that it contends that all Omega sprinklers are substantial product

hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

86. (a) State whether Complainant contends that any Omegas manufactured using silicone o-rings constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel contends that all Omega sprinklers, including those with silicone "o" rings, are substantial product hazards pursuant to 15 U.S.C. § 2064.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention.

Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

87. (a) State whether the Complainant contends that the performance of

Omegas declines or deteriorates over time.

If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the phrase "performance of Omegas declines or deteriorates over time" is undefined, unclear, vague and ambiguous and, without clarification of same, it is impossible to formulate a response to this Interrogatory. However. deterioration of o-ring material and corrosion, which available evidence suggest may contribute to failure of Omega sprinklers, may be progressive events.

88. With respect to the allegation of Paragraph 16 of the Complaint that the Omegas present a "substantial product hazard":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

Response: (a) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(b) The Complaint refers, relates to, and provides evidence of Complaint Counsel's allegation that Omegas present a substantial product hazard. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this allegation, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

89. With respect to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest":

(a) identify and describe all of the public interest factors which Complainant believes favor "action under these provisions";

(b) set forth the factual basis for such an allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Preservation of life, health and public safety, and avoidance of the risk of injury and death created by Omega sprinklers, which may fail in a fire situation.

(b) Taking Omegas out of service will abolish the risk of injury and/or death they pose to the public.

(c) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome, as all documents relating to fire behavior and injury

and death caused or potentially caused by fire are responsive. Without waiving its objection, Complaint Counsel responds that the Complaint refers, relates to, and provides evidence of Complaint Counsel's allegation that action under 15 U.S.C. § 2064 is in the public interest. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this allegation, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's allegation that action under this section is in the public interest. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection,

Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

90. With respect to the allegation of Paragraph B(1) of the Complaint that Respondent give prompt "public notice of the defect in the Omegas," identify and describe the "public notice" that the Complainant seeks to impose.

Response: Complaint Counsel would seek to impose public notice pursuant to 15 U.S.C. § 2064 (c), including the following: public notice of the defect; mailing of notice to each person who is a manufacturer, distributor or retailer of Omega sprinklers; notice to every person to whom Respondents know Omega sprinklers were delivered or sold.

91. With respect to the allegation of Paragraph C(3) of the Complaint regarding repair of all Omegas so they will "perform properly," identify and describe what would constitute "performs properly" for purposes of the Complainant.

Response: Proper performance of an Omega sprinkler is full (rather than partial or no) activation of the sprinkler upon exposure to its activation/triggering temperature, as defined in Complaint Counsel's discovery to Respondents.

92. With respect to the allegation of Paragraph C(3) of the Complaint regarding the replacement of all Omegas "with a like or equivalent product which performs properly":

(a) identify and describe any and all "like or equivalent product which performs properly";

(b) state whether Complainant believes that Omegas with a silicone o-ring

qualify as a "like or equivalent product which performs properly"; and

(c) state whether Complainant believes that Omegas with a spring collar qualify as a "like or equivalent product which performs properly."

Response: (a) "Like or equivalent product which performs properly" is a fire sprinkler that, upon exposure to its activation/triggering temperature, activates fully (rather than partially or not at all).

(b) No. Complaint Counsel believes that Omegas with silicone o rings also do not or will not perform properly.

(c) No. Complaint Counsel believes that Omegas with a spring collar also do not or will not perform properly. Moreover, use of a spring collar with a sprinkler is prohibited in a number of, if not most, jurisdictions.

93. With respect to the allegation of Paragraph C(3) of the Complaint regarding a "refund to consumers [of] the purchase price of the Omegas," identify and describe how Complainant would calculate or determine a "refund to consumers [of] of the purchase price of the Omegas."

Response: Complaint Counsel has insufficient information at this time to determine how a refund of the purchase price of Omegas would be calculated. Complaint Counsel has requested from Respondents in discovery information pertaining to sale and installation prices for Omega sprinklers.

94. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(1), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant

contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). At minimum, it can be expected that consumers would face costs associated with contacting Respondents, obtaining replacement sprinklers, and installing same. The details of any such effort by Respondents will determine these and other expenses.

95. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(2), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or

information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). At minimum, it can be expected that consumers would face costs associated with contacting Respondents, obtaining replacement sprinklers, and installing same. The details of any such effort by Respondents will determine these and other expenses.

96. (a) **If the Commission orders Respondents to refund some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(3), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.**

(b) **identify all documents which describe, evidence, refer, support, or relate to any such contention;**

(c) **identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and**

(d) **describe in detail the substance of each such person's knowledge and/or information about any such contention.**

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). See also response to Interrogatory No. 94.

97. (a) **If the Commission orders Respondents to repair some or all of the**

Omegas pursuant to U.S.C. § 2064(d)(1), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

98. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to U.S.C. § 2064(d)(2), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or

believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

99. (a) If the Commission orders Respondents to refund the purchase price to some or all of the Omegas pursuant to U.S.C. § 2064(d)(3), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d)[sic] identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e)[sic] describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

B. Potential Witnesses

100. Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the person's last known position with Respondents;

(e) the date of any such contacts;

(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);

(f)[sic] a detailed description of the subject matter of such communication; and

(g) the identity of any other persons who were present during such contacts.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

101. For each and every contact describe an [sic] response to Interrogatory No. 100,

identify each and every document that describes, evidences, refers, or relates to such contacts, including without limitation any notes of such contacts, documents shown during the course of such contacts, lists of questions or answers given, or any reports of such communications.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the corporate or government affiliation of the person;

(e) whether the Complainant has contacted such person; and

(f) the specific subject matter of the person's knowledge.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome -- there are thousands of people and entities who have information concerning or related to Omega sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in

anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it believes that Respondents and their current and former employees have such knowledge and information.

103. Identify each and every fact witness that Complainant expects to testify on its behalf at the hearing in this matter. For each such fact witness, identify and describe:

(a) the name, title, business address, and home address for each such witness; and

(b) the subject matter about which each witness is expected to testify.

Response: Complaint Counsel has not yet determined which witnesses it will call to testify at the hearing in this matter.

104. Identify each and every expert witness whom the Complainant expects to testify on its behalf at the hearing in this matter. For each such expert, identify and describe:

(a) the expert's name, title, home address, business address, education, employment since graduation from high school, and all publications authored or edited by the expert;

(b) the subject matter on which each expert is expected to testify;

(c) the substance and facts upon which the expert relies in forming his or her opinion;

(d) the opinions to which the expert is expected to testify;

(e) a summary of the grounds for each such opinion;

(f) and a statement and description of all information and documents upon which the expert relies or expects to rely.

Response: Complaint Counsel objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts. Without waiving its objection, Complaint Counsel responds that it has not yet determined which witnesses it will call to testify at the hearing in this matter. Complaint Counsel will supplement its response as such decisions are made.

105. Identify and describe any and all oral or written statements made by Respondents that the Complainant contends constitute an admission with reference to any of the issues raised in the Complaint. For each such statement, identify and describe:

(a) the person making the alleged statement;

(b) that person's relationship to Respondents;

(c) the content of the statement;

(d) the date, time, and place of the statement;

(e) the nature of the alleged statement (e.g., written or oral); and

(f) the identity of each person who heard the statement or otherwise has personal knowledge of the statement.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome, and requests information already in Respondents' possession. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery

by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel responds that any and all statements made by Respondents may constitute an admission by Respondents in this matter.

C. Other Allegations Made By the CPSC

106. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "based on multiple random inquiries of sprinkler contractors across the nation in the recent past, we believe that Central's proposed labor payment falls considerably short of what has been, and remains, customarily required to remove and install sprinklers ...." With respect to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to the "multiple random inquiries of sprinkler contractors";

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such "multiple random inquires of sprinkler contractors";

(e) describe in detail the substance of each such person's knowledge and/or information of such "multiple random inquiries of sprinkler contractors";

(f) identify and describe in terms of a specific monetary amount "what has been, and remains, customarily required to remove and install sprinklers";

(g) identify each and every document that constitutes, evidences, refers, or

relates in any way to "what has been, and remains, customarily required to remove and install sprinklers";

(h) identify each and every person whom Complainant knows and/or believes to have knowledge of "what has been, and remains, customarily required to remove and install sprinklers"; and

(i) describe in detail the substance of each such person's knowledge and/or information of "what has been, and remains, customarily required to remove and install sprinklers."

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege and . Without waiving its objection, Complaint Counsel responds that a labor payment of $5.00 per sprinkler, as suggested by Central's George Meyer in November, 1997, is inadequate to compensate consumers for the charge of replacing their Omega sprinklers.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that Complaint Counsel conducted inquiries of many sprinkler contractors as to the labor expense involved in removing and replacing sprinkler heads. In all

instances, sprinkler contractors indicated that the figure suggested by Central's President was grossly low, and that on average the cost may be three to six times that amount, depending on the facility.

(c) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that Counsel's written notes of its conversations relate to and evidence its inquiries of sprinkler contractors, as does an invoice from a sprinkler contractor relating to replacement of Omegas, which Complaint Counsel will produce to Respondents.

(d) Eric Singer has knowledge of such inquiries. To a lesser extent, Eric Stone, Catherine Anne Cumberland, Andrew Stadnik, Rohit Khanna, and Nicholas Marchica have knowledge of such inquiries.

(e) See response to (b), above.

(f) See response to (b), above. Please note that this cost does not include the cost for the replacement sprinkler, nor can it account for special reconstruction of the sprinkler system such as recutting the drop.

(g) Other than the letter to which Respondents refer, as well as notes reflecting its inquiries of sprinkler contractors, which are Complaint Counsel's work product, Complaint Counsel possesses one invoice from a sprinkler contractor relating to replacement of Omegas, which it will produce to

Respondents.

(h) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies the following individuals of whom it is aware:

1) David Dixon, Exec. V.P., David Dixon, 4495 Mendenhall Road South, Memphis, TN 38141

2) Jeffrey Larson, Viking Automatic Sprinkler Company, 3434 First Avenue South, Seattle, Washington 98134-1894

3) Fred Jackson, President, Jackson Fire Protection, 1906 Grace Ave., Ft. Myers, FL 33901

4) William L. Oliver, President, Oliver Sprinkler Co., Inc., 501 Feheley Drive, King of Prussia, PA 19046

5) John C. Livingston, Jr. Chairman and CEO, Livingston Fire Protection, Inc., 5150 Lawrence Place, Hyattsville, MD 20781

6) Peter Miller, Miller Fire Protection, 2750 Marble Ct., Forestville, MD 20747

7) Thomas E. Strange, Vice President of Operations, Worsham Sprinkler Company, 400 East Arrowhead Drive, University Trade Center, Charlotte, North Carolina, 28213

8) James Lewis, American Fire Sprinkler Corp., 210 North 28A

Highway #B, Great Bend, Kansas 67530

Complaint Counsel believes that hundreds of other sprinkler contractors have knowledge of what has been and remains customarily required [in terms of labor costs] to remove and install sprinklers. At present, Complaint Counsel has insufficient information to identify them.

(i) Complaint Counsel objects to this subpart on the ground that it overbroad and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

107. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view that dezincification alone is the cause of above-required operating pressures in Omegas from plastic pipe ...." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or

believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that dezincification, Respondents' proposed explanation for the high activation pressures required to activate some Omegas that were installed in plastic pipe, cannot be the only explanation.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it has evidence of at least one fire (Kent Manor Inn) in which Omega sprinklers installed in a plastic piping system that contained no copper (which Respondents claim is a prerequisite to dezincification) did not activate, and showed no signs of dezincification upon visual inspection. A number of other Omegas that have required high activation pressures in order to activate in testing have also shown no sign of dezincification, e.g., a 1992 Omega from The Fairways at Piper Glen, N.C. As well, evidence

indicating dezincification in sprinklers that have activated tends to cast doubt on the existence of a causal connection between dezincification and high activation pressures required for, or non-activation of, Omegas. In one such instance (the Madison Park Condominiums), Central itself concluded that all eight Omegas that it tested showed signs "characteristic of dezincification," yet apparently four of eight Omegas that it tested failed to activate, in part, Central claimed, as a result of swollen "o" rings. At least one forensic study of which Complaint Counsel is aware has determined that dezincification is not the cause for failure of Omegas from plastic piping systems.

(c) See response to subpart (b), above.

(d) The letter to Ms. Sanzo constitutes and evidences the statement made therein. The results of tests of Omega sprinklers relate to the contention made therein, as does the evidence of the fire at the Kent Manor Inn, both of which will be produced to Respondents. The scientific study referred to above was supplied to Complaint Counsel under a claim of confidentiality; Complaint Counsel awaits authorization from a third party to release the documents to Respondents and, if necessary, a confidentiality stipulation by Respondents and/or protective order by the Presiding Officer.

(e) The letter to Ms. Sanzo is not a public document; Complaint Counsel, other members of the CPSC staff, and Respondents have knowledge of the statement made in the letter to which Respondents refer.

(f) Complaint Counsel objects to this subpart on the ground that it is overbroad

and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

108. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product

privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that swollen "o" rings due to cutting oil exposure Respondents' proposed explanation for the high activation pressures required to activate some Omegas that were installed in steel pipe) cannot be the only explanation for non-activation of Omegas.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that:

1) it had (and still has) received no evidence from Respondents that Omegas were in fact exposed to excessive hydrocarbons, or that hydrocarbons were the source of any "o" ring swelling;

2) there is evidence of Omegas that showed no "o" ring swelling that did not activate when exposed to their activation/triggering temperature in testing;

3) there are at least two studies that have attributed failure of Omegas to causes other than swollen "o" rings;

4) Central's own public statement in May, 1996, that "the presence of high concentrations of hydrocarbons (found in petroleum based cutting fluids), in conjunction with varying degrees of corrosion," (emphasis added), suggests that swelling due to excessive

hydrocarbons is not the only cause of failure in these Omegas;

5) A number of Omegas that have activated properly in testing have exhibited swollen "o" rings.

(c) See response to subpart (b), above.

(d) The letter to Ms. Sanzo constitutes and evidences the statement made therein. The results of tests of Omega sprinklers relate to the contention made therein, and will be produced to Respondents. The scientific studies referred to above were supplied to Complaint Counsel under a claim of confidentiality; Complaint Counsel awaits authorization from a third party to release the documents to Respondents, the execution of an appropriate confidentiality stipulation by Respondents, and/or a protective order from the Presiding Officer.

(e) The letter to Ms. Sanzo is not a public document; Complaint Counsel, other members of the CPSC staff, and Respondents have knowledge of the statement made in the letter to which Respondents refer.

(f) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

109. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "rather, primarily, the data points to multiple failure modes rooted in

the design and construction of these sprinklers." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe the "multiple failure modes rooted in the design and construction of these sprinklers";

(d) identify and describe "the data" referenced in the statement;

(e) identify and describe each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(g) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it misquotes the letter from Complaint Counsel to Counsel for Respondents. The letter states that preliminarily the data points to multiple failure modes rooted in the design and construction of these sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to

the discovery of admissible evidence. Complaint Counsel's theories on the basis for the activation failure of Omega sprinklers is irrelevant, as it is the fact that the Omegas fail, and not why they fail, that is at issue herein. Without waiving its objection, Complaint Counsel responds that it contends that none of the proposed explanations that Respondents have suggested are, alone, sufficient to explain the activation failures of Omegas. See responses to Interrogatories 107 and 108 for an explanation of Complaint Counsel's position, and the bases therefor.

110. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC refuses to accept a "testing based corrective action proposal" from Respondents. With regard to this rejection:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for rejecting a "testing based corrective action proposal";

(c) identify and describe any and all reasons that the CPSC believes are correct in rejecting such a proposal;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the rejection of this proposal;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of the rejection of this proposal; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory No. 114, below.

111. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC states that "Central continues to insist on selling Omega sprinklers with silicone o-rings despite serious concerns about whether they will function in the long term." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all "serious concerns" that the CPSC has regarding the functioning of Omega sprinklers with silicone o-rings;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such "serious concerns"; and

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such "serious concerns."

Response: a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that Central continues to insist on selling Omega sprinklers with silicone o-rings, and that Complaint Counsel has serious concerns about whether those sprinklers will function both currently and in the long term.

b) Complaint Counsel has evidence that, and Respondents have admitted that Central is continuing to sell Omegas with silicone o rings. The basis for Complaint Counsel's concerns regarding silicone o ring Omegas is the same as its concern regarding other Omegas -- that they are a substantial product hazard, as they may fail in a fire situation, thus exposing the public to substantial risk of injury and/or death. Complaint Counsel points Respondents to its response to Interrogatory No. 112, below, for an explanation of the problem with a silicone o ring sprinkler manufactured in February, 1998, and tested by CPSC only a few weeks later and found not to activate properly, but instead to 'drip' and cold-solder. Complaint Counsel's concerns with respect to silicone o ring Omegas relate to the design of the sprinkler, Respondents' manufacturing (and quality control) procedures, and to the silicone material itself -- including but not limited to the possibility of adhesion, susceptibility to corrosion, inadequate or improper lubrication, inadequate clearances, and possible malfunctioning parts. Complaint Counsel has requested information from Respondents in discovery regarding each of these (and other) issues.

c) See response to subparts (a) and (b), above.

d) See responses to Interrogatories 86 and 112.

e) Complaint Counsel has insufficient information at this time to provide full identification for each person or organization whom Complaint Counsel knows or believes to know of the serious concerns that Complaint Counsel

has with respect to Omegas utilizing a silicone o-ring. Provisionally, however, in addition to Respondents, it provides the following list:

Underwriters Laboratories
333 Pfingsten Road
Northbrook, IL 60062-2096
847-272-8800

Factory Mutual Research Corporation
1151 Boston-Providence Turnpike
Norwood, MA 02062
781-762-4300

Parco, Inc.
2150 Parco Ave.
Ontario, CA 91761
909-923-0288

Loss Prevention Council
Melrose Avenue
Borehamwood
Hertfordshire WD6 2BJ
United Kingdom
011-44-0181-207-2345

112. In a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, Stone states, "x-ray examination of the unit showed that the internal shaft was cocked or tipped slightly and jammed in that position" and that the CPSC "plans to conduct non-destructive analysis of the unit ...." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe any evidence that Omegas may be "cocked or tipped slightly and jammed in that position";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the statement that Omegas are "cocked or tipped slightly and jammed in that position";

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of any such problems;

(f) describe in detail the substance of each such person's knowledge and/or information; and

(g) describe any "non-destructive analysis of the unit" performed by or on behalf of the CPSC.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that although it does not at this time intend to rely on a letter it wrote to Ms. Sanzo, Complaint Counsel may rely on the evidence that the letter to Ms. Sanzo discusses.

(b) The factual basis for the statement is stated in the phrase quoted by Respondents.

(c) The evidence that the Omega referred to in the letter was cocked or tipped is described in the letter -- it is the x-ray of the unit described.

(d) Complaint Counsel objects to this interrogatory on the ground that it misquotes the statement in the letter. The statement refers to a single

Omega, manufactured in February, 1998, and never installed in a sprinkler system, that, when tested by Complainant a few weeks after it was manufactured by Central, failed to activate, as that term is defined in Complaint Counsel's discovery to Respondents, when exposed to its activation/triggering temperature, and instead "leaked" or "wept," dripping water and then cold-soldering. When the sprinkler was x-rayed, it demonstrated what was described in the letter. Complaint Counsel shared this information with Respondents to demonstrate to Respondents that their various theories of what is wrong with Omegas, including the installation-based explanations that point to installer error and/or mishandling of the Omegas, cannot suffice to account for the problem with Omega sprinklers. The sprinkler that exhibited this activation failure had never been installed, nor had it ever been exposed to cutting oils, stop leak, or any other substance, by any sprinkler contractor or installer. Further, Complaint Counsel sought efforts by Respondents to ensure that the sprinklers they are currently manufacturing are safe and will function properly.

(e) Complaint Counsel objects to this subpart on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies Complaint Counsel, its staff and consultants, Respondents and Counsel for Underwriters Laboratories.

(f) See (a) through (d), above.

113. In a January 6, 1998 letter from Eric Singer of the CPSC to the state attorneys general, Singer states, "this contrasts with automatic fire sprinklers' historical rate of proving 99.5 percent effective." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all evidence that automatic fire sprinklers have an "historical rate of proving 99.5 percent effective";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such historical rate of effectiveness;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such historical rate of effectiveness; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence in this case. The effectiveness of sprinklers other than Omegas is irrelevant herein. Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence in this case. Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that statistics on the high reliability of other automatic fire sprinklers is in the public domain, and is available from the National Fire Protection Association and National Fire Sprinkler Association. Complaint Counsel is in the process of gathering evidence on the historical rate of effectiveness of automatic fire sprinklers, but offers the following list:

1) Rural/Metro Fire Department (Scottsdale, Arizona), Automatic Sprinklers: A 10 Year Study (1997);

2) Fire Sprinkler Advisory Board of Southern California, City of Los Angeles Civil Disturbance: Report on the Buildings Protected by Automatic Fire Sprinkler Systems and Their Performance Record (1992);

3) H.W. Marryatt, Fire: Automatic Sprinkler Performance in Australia and New Zealand, 1886-1968 (Melbourne: Australian Fire Protection Association, 1971);

4) "Sprinklers for Your Home," This Old House (magazine) (Jan./Feb.

1998);

5) Walter W. Maybee, "Sprinkler Performance Update: 1952- to 1986," Bulletin of the Society of Fire Protection Engineers (1988).

(c) See response to subpart (b).

(d) See response to subpart (b).

(e) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel identifies the following as having information pertaining to the high rate of effectiveness of automatic fire sprinklers:

1) Russell P. Fleming, P.E., Vice President of Engineering, National Fire Sprinkler Association, Inc., Robin Hill Corporate Park, Route 22 - P.O. Box 1000, Patterson, New York 12563;

2) John A. Viniello, President, National Fire Sprinkler Association, Inc., Robin Hill Corporate Park, Route 22- P.O. Box 1000, Paterson, New York 12563.

f) Complaint Counsel objects to this subpart on the ground that it requests information pertaining to entities other than Complainant. Without waiving its objection, Complaint Counsel responds that it has insufficient information at this time to describe in detail the complete substance of each person's knowledge and/or information on the high rate of effectiveness of automatic fire sprinklers.

114. (a) State whether Complainant deems any corrective action proposal to be

acceptable that is based in part on testing of a sample of sprinkler heads from a building and comparing the results of the sample to the hydraulically calculated operating pressure of that building.

If so:

(b) identify and describe such an acceptable corrective action proposal;

If not:

(c) identify and describe all reasons for such unacceptability;

(e)[sic] identify each and every document that constitutes, evidences, refers, or relates in any way to such unacceptability;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of such unacceptability; and

(g) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that the terms "hydraulically calculated operating pressure" are undefined, unclear, vague and ambiguous. Without waiving its objection, and assuming that Respondents ask whether Complainant deems acceptable any corrective action plan that would involve a one-time test of a sample of Omegas from buildings in which Omegas are installed, Complaint Counsel responds that such a corrective action plan is unacceptable to correct the substantial product hazard presented by Omegas.

(b) (inapplicable in light of response to (a); no response necessary pursuant to

instructions)

(c) Complaint Counsel incorporates its response to (a), above. Complaint Counsel further objects to this Interrogatory on the ground that it seeks privileged work product, and legal conclusions. Without waiving its objections, Complaint Counsel responds that it deems such a corrective action plan unacceptable because (1) the overall failure rate of Omegas in testing, based on thousands of samples tested to date, is so high, coupled with the fact that fires have been documented in which Omegas reportedly failed to activate, that removal of Omegas cannot be delayed; (2) testing in light of the high failure rate of Omegas to date would divert resources and time unnecessarily from correcting the hazard presented by Omegas; (3) testing in this manner has been shown to be an unreliable indicator of whether any given Omega (that was not one of the sample tested from a building) will operate when exposed to its activation/triggering temperature; (4) the water pressure in a building is not a constant - it is a variable, based on numerous factors, and therefore there is no "static pressure" that can be used as a standard; and (5) once one or more sprinklers activate in a fire situation, the water pressure "seen" by any other sprinkler will always be less than the building's water pressure prior to the opening of any sprinklers.

(d) (no subpart (d) is included in this Interrogatory)

(e) All results of tests of Omega sprinklers provide evidence of the reasons stated by Complaint Counsel in section (c), above. As well, all reports of

fires in which Omegas allegedly failed to activate support same.

(f) Complaint Counsel and its staff have knowledge of their contention that such proposed corrective action plans are unacceptable. Respondents and their attorneys also have knowledge of Complaint Counsel's position, as that position has been communicated to them.

(g) The substance of the knowledge possessed by Complaint Counsel and its staff, as well as by Respondents, regarding Complaint Counsel's position on the unacceptability of a testing-based corrective action plan is as stated in subpart (c), above.

D. CPSC Investigation

115. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's investigation of the Omegas. For each person identified, describe his or her role in the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that the term "participated in the CPSC's investigation of the Omegas" is unclear, vague and ambiguous, as the use of the past tense indicates an intent to limit the Interrogatory to some time in the past, and the Interrogatory fails to specify the time period to which it refers. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies the following staff who have participated in the CPSC's investigation of Omega sprinklers prior to the assignment of Complaint Counsel of record to the case: Catherine Cumberland, Marc

Schoem, Eric Stone, Andrew Stadnik, Rohit Khanna, Nicholas Marchica, Mark Kumagi, James Hoebel. Complaint Counsel objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts. Without waiving its objection, Complaint Counsel further responds that it has not yet determined which witnesses it will call to testify at the hearing in this matter. Complaint Counsel will supplement its response as such decisions are made.

116. Describe the circumstances surrounding, and the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date that the CPSC decided to investigate the Omegas;

(b) the identity of all persons at the CPSC involved in the decision to investigate the Omegas; and

(c) the identity of all information (including, but not limited to, any consumer complaints) available to or otherwise relied upon by the CPSC in deciding to initiate an investigation of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that it seek irrelevant information not reasonably calculated to lead to the discovery of admissible evidence, as the CPSC's investigation of Omega

sprinklers, and the propriety thereof and bases therefore, are not at issue in this litigation. Without waiving its objections, Complaint Counsel responds as follows:

(a) CPSC initiated its investigation of Omega sprinklers on or about May, 1996.

(b) Catherine A. Cumberland and Marc J. Schoem, in consultation with Eric L. Stone.

(c) CPSC initiated its investigation after receiving information regarding two fires in which Central Omega sprinklers reportedly failed to operate: one at a VA hospital in New York, and the other at a Marriott Hotel in Michigan.

117. Describe in detail any investigation by the CPSC relating to consumer complaints and/or consumer reports of personal injury, property damage, non-activation, or any other problems allegedly associated with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of all consumers with whom the CPSC communicated in connection with this aspect of the investigation;

(c) the identity of all consumers who complained of or reported an incident relating to the Omegas;

(d) the identification of any consumer questionnaires or other surveys used by the CPSC in conducting this aspect of the investigation; and

(e) the identification of any and all data, reports, survey results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "non-activation" and "consumer complaints" are undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence, as the CPSC's investigation of Omega sprinklers, and the propriety thereof and bases therefore, are not at issue in this litigation. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will supplement its response to this Interrogatory as additional information becomes available.

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a

result of or associated with the fire.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is vague, ambiguous, and unclear as worded. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, and assuming that a fire "in connection with use of the Omegas" means a fire in which one or more Omegas exposed to their activation/triggering temperature may not have activated, as that term is defined in Complaint Counsel's discovery to Respondents, Complaint Counsel identifies the following fires of which it is aware:

1. (a) Location: Marriott International, Inc., 10400 Fernwood Road, Bethesda, MD 20817

   (b) 1/26/95

   (c) damage to room

   (d) employee injured

2. (a) Department of Veteran's Affairs, Veteran's Health Administration, Washington, DC

   (b) 5/16/95

   (c) smoke and water damage

   (d) Complaint Counsel has insufficient information at this time with which to

respond to this subpart.

3. (a) Location: Uptown Manor, 1354 N. Harper, West Hollywood, CA

(b) 1/18/97

(c) damage to property and contents

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

4. (a) Location: Ft. Wayne Children's Home/Crossroads, 2525 Lake Avenue, Ft. Wayne, IN

(b) 4/6/97

(c) damage to bed, bedding, and room

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

5. (a) Location: Mel's Marina, 300 Pensacola Beach Road, Gulf Breeze, FL 32561

(b) 9/28/97

(c) property damage; contents damage; total on the order of $3 million

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

6. (a) Location: Kent Manor Inn, 500 Kent Manor Dr., Stevensville, MD 21666

(b) 10/27/97

(c) approx. $50,000 damage - structural and contents

(d) Complaint Counsel has insufficient information at this time with which to

respond to this subpart.

7. (a) Location: Lorene Lodge, 470 Lorene Dr., SW, Marietta, GA 30060

(b) 2/6/98

(c) damage to room and contents

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

8. (a) Location: Monserrat School of Art, 31 Elliott St., Beverly, MA 01915

(b) 3/1/98

(c) approx. $15,000 damage to contents and structure

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

Complaint Counsel is continuing its investigation into possible fires in which an Omega failed to activate, and will supplement its response to this Interrogatory as additional information becomes available. Further, Complaint Counsel has requested information responsive to this Interrogatory from Respondents in discovery.

119. To the extent not already identified in response to Interrogatory Nos. 117-118, identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage or personal injury in connection with the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the alleged property damage and/or personal injury;

(c) a description of the type of property damage allegedly sustained; and

(d) a description of any and all personal injury allegedly sustained.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will supplement its response to this Interrogatory as additional information becomes available.

120. Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other

information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

121. Describe in detail any and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected

from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

122. Describe in detail any and all communications between the CPSC and any state law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all state law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such state law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such state law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide

copies of all such communications that are in the public domain.

123. Describe in detail any and all communications between the CPSC and any federal law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all federal law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such federal law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such federal law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

E. Design and Testing

124. Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the Omegas;

(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;

(c) a description of the methodology employed during each and every test of the Omegas;

(d) the date of each and every test of the Omegas;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

125. Identify any and all outside consultants, experts, or other persons who assisted, advised, or otherwise communicated with the CPSC with respect to any testing of the Omegas. For each such person, describe his or her role in the testing, and the communications between that person and the CPSC.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in preparation for litigation, and therefore protected from discovery pursuant to the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts, and on the ground that it violates 16 C.F.R. 1025.31(c)(4)(ii). Without waiving its objections, Complaint Counsel will produce all non-privileged results of testing of Omega sprinklers, and will identify, in its supplemental response to Interrogatory No. 104, all experts whom it expects to call at trial in this matter, and all information required to be disclosed pursuant to 16 C.F.R. § 1025.31(c)(4), once it is determined who those experts will be.

126. For each test of the Omegas conducted by the CPSC, describe in detail the condition and age of the specific Omegas used in the test. Your response should include, without limitation, the following:

(a) an identification of each specific Omega by model number;

(b) a description of how and when the CPSC obtained each specific Omega used in the testing;

(c) a description of the condition of each specific Omega used in the testing (e.g., new, used, damaged, dented, etc. . .);

(d) a statement of the age of each specific Omega used in the testing;

(e) a statement of whether the CPSC has retained and the current location of each specific Omega used in the testing; and

(f) if the CPSC has since destroyed or discarded any Omegas used in its testing, a statement of the reasons for that action.

Response: See Response to Interrogatory No. 126. Complaint Counsel also objects to this interrogatory on the ground that the terms "condition" and "age" are undefined, unclear, vague and ambiguous.

127. For each test of the Omegas conducted by the CPSC, describe in detail the piping used in the sprinkler system from which the Omegas were removed. Your response should include, without limitation, the following:

(a) the material constituting the piping;

(b) the presence of any treatments or substances applied to the piping;

(c) the contents of any and all materials or substances inside the piping; and

(d) a description of the overall condition of the piping.

Response: See Response to Interrogatories 124, 125 and 126. Complaint Counsel also objects to this Interrogatory on the ground that the terms "materials or substances inside" and

"overall condition" are undefined, unclear, vague and ambiguous.

128. For the time period 1990 through the present, identify and describe any and all testing of any non-Omega sprinkler heads conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the non-Omega sprinkler heads;

(b) the identity of the person(s) who created or established any such testing protocols for the non-Omega sprinkler heads;

(c) a description of the methodology employed during each and every test of the non-Omega sprinkler heads;

(d) the dates of each and every test of the non-Omega sprinkler heads;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the non-Omega sprinkler heads;

(f) a description of the results of each and every test of the non-Omega sprinkler heads; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the non-Omega sprinkler heads.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the

extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it has not at this time conducted any testing on non-Omega sprinklers.

129. To the extent that you contend, or otherwise intend to present at the hearing in this matter, the feasibility and/or propriety of any alternative design features for the Omegas, identify and describe any such proposed alternative design features. Your response should include, without limitation, a description of all data, testing, reports, or other information supporting this contention.

Response: Complaint Counsel objects to this Request on the ground that the terms "feasibility and/or propriety of" (in the context of "alternative design features for the Omegas"), and "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, and that the question as a whole is unintelligible, and thus precludes Complaint Counsel from formulating a response without clarification of its meaning.

F. Risk Assessment

130. Set forth the factual basis of your contention in Paragraph 15 of the Complaint that the Omegas "create a substantial risk of injury to the public within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)." Your response should include, without limitation, the following:

(a) a description of the specific risks of injury that you contend are presented by the Omegas;

(b) a description of the criteria or factors used by the CPSC in determining that each risk allegedly associated with the Omegas constitutes a "substantial risk" within the meaning of 15 U.S.C. § 2064(a)(2); and

(c) an identification of any and all data, survey information, or testing relating to the alleged risks associated with the Omegas.

Response: See Complaint Counsel's Response to Interrogatory No. 77.

131. Describe in detail any and all measures taken by the CPSC to determine the severity of the risk allegedly associated with the Omegas, including, without limitation:

(a) a description of how the CPSC measures the severity of the risk allegedly associated with the Omegas;

(b) a statement of whether the measurement employed by the CPSC incorporates, considers, or is in any way adjusted to reflect the number of products in use and the frequency of use of the Omegas;

(c) a description of all efforts taken by the CPSC to measure the severity of the risk or probability of injury allegedly associated with the Omegas; and

(d) an identification of all data, studies, and reports that quantify or otherwise provide an assessment of the risk or probability of injury allegedly associated with the Omegas.

Response: a) Complaint Counsel objects to this Interrogatory on the ground that the term "measures" is undefined, unclear, vague and ambiguous as used herein. Complaint Counsel also objects to this Interrogatory on the ground that it

calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that CPSC does not measure severity of the risk created by consumer products as the term "measure" is defined by Webster's Dictionary, to which Respondents point for definition of terms not otherwise defined. Without waiving its objection, Complaint Counsel responds that it determined the severity of the risk posed by Omega sprinklers according to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.12. Pursuant to 15 U.S.C. § 2064(a)(2), severity of the risk is one of the factors the staff may consider in determining whether a product defect creates a substantial risk of injury to the public. According to 16 C.F.R. § 1115.12(g)(1)(iii), a risk is severe if the injury which might occur is serious and/or if the injury is likely to occur. When a sprinkler does not activate in a fire, it cannot suppress or contain the fire, thus exposing the public to the risk of injury and/or death that are both serious and likely to occur.

b) Complaint Counsel objects to this Interrogatory on the ground that the term "measurement" is undefined, unclear, vague and ambiguous, as used herein. Without waiving its objection, and by way of clarification, Complaint Counsel responds that CPSC does not engage in a measurement of the severity of the risk created by consumer products as the term "measurement" is defined by Webster's Dictionary, to which Respondents

point for definition of terms not otherwise defined. Moreover, pursuant to 15 U.S.C. § 2064(a)(2), the number of defective products distributed in commerce is one of the factors the staff may consider in determining whether a product defect creates a substantial risk of injury to the public, and that factor is a distinct factor from the severity of the risk, pursuant to 16 C.F.R. § 1115.12(g)(1). By way of further clarification, Complaint Counsel states that one defective product can present a substantial risk of injury to the public, if the injury which might occur is serious and/or if the injury is likely to occur. 16 C.F.R. § 1115.12(g)(1)(ii).

c) Complaint Counsel reiterates its objections and responses to subparts (a) and (b) of this Interrogatory. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it reviewed Central's test results, and the results of testing of and incidents related to Omegas, by or for UL, FM and CPSC, S.E.A., Hughes Associates, BodyCote Taussig, University of Maryland, governmental entities (Office of the Maryland State Fire Marshall; Farifax County Virginia Fire Prevention Division), independent entities (NFPA) and other third parties.

d) See Response to subpart (c), above. Complaint Counsel objects to this

Interrogatory to the extent that it seeks information provided to Complaint Counsel on a confidential basis by third parties. Complaint Counsel will produce all non-privileged and non-confidential documents pertaining to the tests and fires. Complaint Counsel will produce other responsive documents received by third parties subject to a confidentiality claim upon receipt of permission by those parties, execution of an appropriate confidentiality stipulation by Respondents, and/or protective order by the Presiding Officer.

132. Describe the CPSC's preliminary determination of the alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date the CPSC Staff issued its preliminary determination of the alleged risks associated with the Omegas;

(b) the identity of all persons involved in the Staff's preliminary determination;

(c) the level of hazard assigned to the Omegas in accordance with the applicable provisions of the CPSC Recall Handbook; and

(d) an identification of all data, studies, reports, and/or testing upon which CPSC relied in making its preliminary determination.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of

admissible evidence. Without waiving its objection, Complaint Counsel responds as follows:

(a) 1/28/98

(b) Complaint Counsel objects to this subpart on the ground that the term "involved in the preliminary determination" is undefined, unclear, vague and ambiguous. Without waiving its objection, Complaint Counsel responds that Marc J. Schoem, Catherine A. Cumberland, and Eric H. Singer signed off on the preliminary determination. Eric Stone, Rohit Khanna, Nicholas Marchica, and Andrew Stadnik were all present for and/or contributed to the decision.

(c) Complaint Counsel objects to this subpart on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this subpart on the ground that it request irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this subpart on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not generally publicly disclosed. Without waiving its objections, Complaint Counsel responds that Omegas were classified as a class "a" hazard.

(d) See response to (c), above.

133. Explain the factual basis underlying the level of hazard assigned to the

Omegas in the CPSC Staffs preliminary determination of the alleged risks associated with the Omegas. Your response should include a statement of the specific factors considered, and the data or information relied upon, by the CPSC Staff in determining the level of hazard assigned to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "level of hazard assigned" are undefined, unclear, vague and ambiguous. Assuming that Respondents intend to refer to the Agency's internal hazard classification of Omega sprinklers, Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information protected from discovery by the work product and/or attorney client privileges. Complaint Counsel also objects to this Interrogatory on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not publicly disclosed. Without waiving its objections, Complaint Counsel responds that the basis for its hazard classification of Omega sprinklers was the results of testing by four organizations of a total of over 4,800 Omega sprinklers from sites around the nation, which yielded an approximately 40% failure rate, coupled with evidence of six fires in which Omegas reportedly failed to activate, and the fact that Omegas are designed to be a life safety device. When they do not function to suppress or contain a fire, the public is exposed to the risk of death or grievous injury.

134. State whether CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas has changed over time. If so, describe any such change and the information or testing giving rise to the change.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "initial assignment of the level of hazard" are undefined, unclear, vague and ambiguous. Assuming that Respondents intend to refer to the Agency's internal hazard classification of Omega sprinklers, Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information protected from discovery by the work product and/or attorney client privileges. Complaint Counsel also objects to this Interrogatory on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not generally publicly disclosed. Without waiving its objections, Complaint Counsel responds that its hazard classification for Omega sprinklers has not changed over time.

135. For the period from 1990 through the present, identify all consumer products classified by the CPSC as presenting a hazard level equal to, or greater than, the hazard level assigned to the Omegas. For example, if the Omegas have been classified as a "Class B" hazard, identify all other consumer products that have been classified as "Class B" hazards and all consumer products identified as "Class A" hazards. For each consumer

product identified in your response, you should provide the following:

(a) the identity of the consumer product by brand name or other description;

(b) the identification of the manufacturer of each such consumer product;

(c) the date of the CPSC's classification of the consumer product as presenting a hazard;

(d) the hazard level assigned each such consumer product;

(e) a description of the hazard presented by each such consumer product;

(f) for each such consumer product, the estimated total number of units manufactured as of the date the CPSC made its determination of the hazard level;

(g) for each such consumer product, the estimated total number of units in the hands of the consumers as of the date the CPSC made its determination of the hazard level;

(h) the number and severity of any and all personal injuries associated with each such consumer product;

(i) the number of deaths associated with each such consumer product; and

(j) the nature and number of property damage reports associated with each such consumer product.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

Information pertaining to other consumer products classified by the staff as presenting a hazard priority level equal to or greater than the hazard level assigned to the Omegas will not lead to the discovery of admissible evidence regarding the hazard presented by the Omegas. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks confidential and/or trade secret or other information whose disclosure is prohibited pursuant to 15 U.S.C. § 2074 and/or 15 U.S.C. § 2055. Plaintiffs also object to this question to the extent that it seeks information that is protected by the attorney-client and work product privileges. Without waiving its objections, Complaint Counsel will provide all non-privileged and non-confidential information pertaining to other consumer products classified at a level equal to or greater than the hazard level at which Omega sprinklers are classified.

G. Sufficiency of Corrective Action

136. For each consumer product identified in your response to Interrogatory No. 135, describe any and all corrective action taken with respect to that product. Your response should include, without limitation, the following:

(a) a statement of the CPSC's role in effecting the corrective action;

(b) a statement of whether the corrective action that was taken was completely voluntary on the part of the manufacturer, retailer, or distributor, was the result of a negotiated corrective action plan with the CPSC, or otherwise was compelled by the CPSC through the initiation of an adjudicative proceeding pursuant to 15 U.S.C. § 2064; and

(c) the identification of all documents evidencing the corrective action taken with respect to each such consumer product.

Response: See response to Interrogatory No. 135.

137. For each consumer product identified in your response to Interrogatory No. 135, describe the nature and extent of the public notice provided as part of the corrective action taken. Your response should include, without limitation, the following:

(a) the specific nature of the notice given (e.g., written notice to consumers and retailers, press releases, bill-boards, posters, etc. . .);

(b) a description of the media coverage associated with the corrective action (e.g., newspaper ads and reports, magazine ads and reports, wire services, other print media, television coverage, radio coverage, and/or internet exposure);

(c) a description of the extent of media coverage and exposure of the corrective action (e.g., a list of all newspapers, magazines, wire services, television stations, radio stations, and internet services that provided notice or otherwise covered the corrective action);

(d) a description of the frequency and amount of media coverage associated with the corrective action (e.g., the number of days newspapers carried a written notice, or the number of days the notice appeared on television); and

(e) a description of any and all point of purchase notification to consumers associated with the corrective action (e.g., posters and notices provided to retailers to

display at stores).

Response: See Response to Interrogatory No. 135.

138. For each consumer product identified in your response to Interrogatory No. 135, describe the nature of the recall component, if any, of the corrective action taken. Your response should include, without limitation, the following:

(a) the number of individual units recalled;

(b) the remedy options offered to consumers (e g., replacement, refund, substitute products);

(c) an assessment of consumer participation in the recall (e g, percentage of units in the hands of consumers that were actually received by the recall);

(d) identification of any and all documents revealing the level of consumer participation in the recall; and

(e) a description of any studies conducted by the manufacturer, distributor, or retailer of the consumer product, or by the CPSC, or by both, or by any other person or entity, assessing the effectiveness of the recall program.

Response: See Response to Interrogatory No. 135.

139. Explain the factual basis of your contention, if any, that the corrective action proposal of Respondents in connection with the Omegas is insufficient to protect the public or otherwise fails to provide adequate remedial measures under 15 U.S.C. § 2064.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Without waiving its objection, and assuming

that Respondents refer to their counsel's latest proposal for a testing-based corrective action program, Complaint Counsel reiterates its explanation in Response to Interrogatory No. 114.

140. Describe in detail the public notice, recall, and/or other remedial measures that you contend are necessary with respect to the Omegas to constitute a sufficient remedy and/or corrective action proposal under 15 U.S.C. § 2064.

Response: Complaint Counsel would seek to impose public notice pursuant to 15 U.S.C. § 2064 (c), including the following: public notice of the defect, including paid advertisements, video news releases, and other necessary and/or appropriate methods under the circumstances; mailing of notice to each person who is a manufacturer, distributor or retailer of Omega sprinklers; notice to every person to whom Respondents know Omega sprinklers were delivered or sold.

141. Identify and describe all efforts taken by the CPSC (including, without limitation, consumer surveys, press surveys, and public opinion polls) to evaluate, test, or otherwise determine the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, and assuming that Respondents refer to their counsel's latest

proposal for a testing-based corrective action program, Complaint Counsel refers Respondents to its Response to Interrogatory No. 114.

142. Identify and describe all criteria and factors considered by the CPSC in measuring the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its Response to Interrogatory No. 114.

143. Identify all public statements, press releases, or other information released to the public by the CPSC that in any way relates to or otherwise refers to the Omegas and/or Respondents.

Response: March 3, 1998 Administrative Complaint; March 4, 1998 press release and press statement; March 4, 1998 video news release relating to Omega sprinklers; Omega Sprinkler Questionnaire on CPSC web site; Omega Sprinkler Questionnaire on CPSC fax-on-demand service.

H. Initiation of Adjudicative Proceedings

144. For the time period beginning January 1, 1982 to the present, identify all

incidents in which the CPSC has filed an administrative complaint pursuant to Section 15 of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2064. Your response should include, without limitation, the following:

(a) the date the administrative action was filed;

(b) the identity of the manufacturers, distributors, or retailers of the consumer product named as respondents in the administrative action;

(c) the identity of the consumer product at issue;

(d) a description of the alleged "substantial product hazard" at issue in each case; and

(e) a description of the outcome of the administrative action and the nature of the remedy awarded.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Any other administrative litigation relating to any product other than the Omega is irrelevant to the instant action.

145. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

The propriety of the Commission's decision to initiate the instant adjudicative proceeding against Respondents is not at issue herein. Complaint Counsel further objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it fails to define "participated." Complaint Counsel also objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Without waiving its objections, Complaint Counsel responds that the Commissioners made the decision of whether to initiate the instant adjudicative proceeding, upon consultation with and advice of their staff and the Office of the General Counsel. Alan Schoem, Eric Singer, Eric Stone, Deborah Orlove and Catherine Cumberland could all be said to have participated in the decision to initiate the adjudicative proceeding.

146. State the date on which the CPSC authorized Complaint Counsel to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The timing of the Commission's decision to initiate the instant adjudicative proceeding, in relation to the filing of same, is not at issue herein. Without waiving its objections, Complaint Counsel responds that the Commissioners voted on whether to authorize the Complaint by ballot submitted on February 18, 1998, and voted on on February 18, 1998 (Chairman Ann Brown), February 26, 1998 (Commissioner Gall) and March 2, 1998 (Commissioner Moore).

147. Identify all communications and documents (including internal memoranda and correspondence) relating to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to disclosure of such information on the ground that it seeks information protected from discovery by the work-product and attorney-client privileges.

148. State the reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding are irrelevant to this action (though the basis for the staff's recommendation of same have been indicated herein). Complaint Counsel further objects to this Interrogatory on the ground that it calls for speculation on the part of Complaint Counsel as to the thoughts of the Commissioners. Complaint Counsel is unable to speak to the reasons for the individual Commissioner's authorizations of, and decisions to initiate, the instant adjudicative proceeding and, pursuant to proper agency procedure, is prohibited from making inquiry into such matters, other than to state that the Commission authorizes the issuance of administrative complaints upon information and belief that a product or products present a substantial product hazard. Complaint Counsel further responds that the Complaint speaks for itself.

CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S SURREPLY IN OPPOSITION TO RESPONDENTS' MOTION TO DISMISS

COMES NOW Complaint Counsel, pursuant to the Presiding Officer's Order of April 21, 1998, and respectfully submits its Surreply in Opposition to Respondents' Motion to Dismiss this matter.

I. INTRODUCTION

On March 3, 1998, the staff of the Consumer Product Safety Commission filed an Administrative Complaint against Respondents Central Sprinkler Corp. and Central Sprinkler Co. The Complaint seeks a nationwide recall of approximately 10 million "Omega" automatic fire sprinklers manufactured by Respondents since 1982.

On March 26, 1998, Respondents filed a Motion to Dismiss and supporting Memorandum (hereinafter, "Respondents' Motion"), claiming that CPSC lacks jurisdiction over Omega fire sprinklers, and that the staff's Complaint and List and Summary of Documentary Evidence are deficient. On April 6, 1998, Complaint Counsel filed its Opposition to that Motion. On or about April 20, 1998, Respondents filed a Motion for

Leave to Submit a Reply Brief in this matter, attaching their Reply Brief as an exhibit to that Motion (hereinafter, "Respondents' Reply"). Respondents' Motion for Leave was granted by Order of the Presiding Officer on April 21, 1998, and Complaint Counsel was permitted, by that same Order, to file this Surreply.

As detailed below, Respondents' Reply adds little if anything to their original arguments. CPSC clearly has jurisdiction over Omega fire sprinklers, and its Complaint and List and Summary of Documentary Evidence meet all applicable requirements.

II. OMEGA SPRINKLERS ARE CONSUMER PRODUCTS WITHIN THE CPSC'S JURISDICTION

The Consumer Product Safety Act, 15 U.S.C. § 2051 *et seq.,* imposes three basic requirements in order for an item to be a "consumer product" within the Commission's jurisdiction. *See* 15 U.S.C. § 2052 (1997). First, the item must be an "article" (or a component part of such "article") -- a final manufactured product, rather than anything at an intermediate stage of production. *See id.; Consumer Prod. Safety Comm'n v. The Anaconda Co.*, 593 F.2d 1314, 1319 (D.C. Cir. 1979). Second, the article must be customarily produced or distributed for sale to, or for the personal "use, consumption, or enjoyment of a consumer." *Id.* Lastly, the use, consumption or enjoyment of the article must be "in or around a permanent or temporary household or residence, a school, in recreation, or otherwise." *Id.*

As fully detailed in Complaint Counsel's Opposition, Omega sprinklers are "articles" that are "used or enjoyed by consumers in or around a permanent or temporary household or residence, a school, in recreation, or otherwise." Omega sprinklers are a final manufactured product. As recognized by Respondents, they are installed in a "wide range of residential,

commercial and industrial structures." *See* Respondents' Memorandum at 3. Consumers use or enjoy Omegas in their homes, schools, hospitals, recreational facilities and many other places, and are exposed to the risk they create. Omega sprinklers are, without question, "consumer products" within the Commission's jurisdiction.

A. Automatic Fire Sprinklers are Consumer Products Regardless of Whether They are Building Components

Respondents claim that fire sprinklers such as the Omega are not consumer products because they are "integral product components used in building construction." Respondents' Reply at 5. Respondents' argument is misplaced. First, CPSC jurisdiction extends to consumer products that are integrated or installed in buildings. Second, Omegas are not just, as Respondents claim, incorporated into a building as it is constructed.

1. CPSC Jurisdiction Extends to 'Building Components'

Respondents misconstrue *Consumer Product Safety Comm'n v. The Anaconda Co.*, 593 F.2d 1314 (D.C. Cir. 1979), in citing it to support their premise that "integral product components used in building construction" cannot be "consumer products." Respondents' Reply at 5. In *Anaconda*, 593 F.2d 1314, the United States Court of Appeals for the District of Columbia Circuit considered whether aluminum branch circuit wiring systems are consumer products subject to CPSC jurisdiction. Upon determining that such wiring systems are produced and distributed as component parts of residential structures, the *Anaconda* court

looked at whether "housing" is a consumer product. *Anaconda*, 593 F.2d at 1320-21.[1] The court held that "housing" per se is not a consumer product. *Id.* at 1320.

It's inquiry did not end there, however. Housing components, according to *Anaconda*, are consumer products as long as they are "articles." *Anaconda*, 593 F.2d at 1321. *Anaconda* held that as a component part of housing, wiring would nonetheless be a "consumer product" if it is "produced or distributed as a distinct article of commerce." *Id.* (holding that "since housing as such is not a consumer product, a component part of a residence, its aluminum branch circuit wiring system, cannot qualify as a consumer product unless it is produced or distributed as a distinct article of commerce") (emphasis added).[2] Respondents admit that sprinklers are "articles" under the CPSA. *See* Respondents' Reply at 2; Respondents' Reply at 8, n.3. By this admission, they concede the Commission's jurisdiction over Omegas.

---

[1] Although Complaint Counsel and Respondents may differ as to whether it was necessary for the *Anaconda* court to address this question, that issue need not be reached here. We assume, for purposes of this Memorandum, that the inquiry was proper.

[2] In *Anaconda*, the defect that gave rise to the fire hazard in the wiring systems resulted from faulty connections between the wires -- i.e., from "improper design or installation of the wiring system as a whole." *Anaconda*, 593 F.2d at 1317. The *Anaconda* decision ultimately turned on the fact that the wiring systems are not and cannot be sold or distributed as distinct articles of commerce. Although their component parts (the wires) are 'articles' distributed in commerce, the systems themselves are actually created as their components are installed. As such, the systems are not distinct 'articles' of commerce, and thus, are not "consumer products" under the CPSA.

Sprinklers, by contrast, are final, manufactured products distributed in commerce. They are 'articles' in their own right. Unlike wiring systems, sprinklers are not created through installation; they are created by the manufacturer, and are then distributed for the use and enjoyment of consumers.

For further evidence that Respondents misconstrue *Anaconda*, one need look no further than the D.C. Circuit's decision in *ASG Indus. v. Consumer Prod. Safety Comm'n*, 593 F.2d 1323, 1328 (D.C. Cir.), *cert. denied*, 444 U.S. 864 (1979). *ASG* was decided on the same day as *Anaconda*, by the same court, in a decision written by the same judge. In *ASG*, the court considered whether architectural glazing materials, including plastics and glass, are consumer products subject to CPSC jurisdiction. The petitioners in *ASG*, like Respondents herein, argued that such materials belong to a category of construction materials not encompassed by the CPSA's definition of consumer products, and thus outside the Commission's jurisdiction. *Id.* at 1327. **Citing Anaconda**, the ASG court held that glazing materials are consumer products -- they are distinct articles of commerce "customarily produced or distributed for sale to consumers or for the use of consumers in or around a household or residence, a school, in recreation, or otherwise." *Id.* (emphasis added).

The architectural glazing materials in *ASG*, including wired glass used in glazed panels, fire doors, and other fire-retardant barriers, were deemed consumer products despite the fact that they are, to borrow Central's terms, "integral parts of a building's basic structure." *See ASG*, 593 F.2d at 1327. *ASG* demonstrates that regardless of when, how and if a product is installed in a building, it is a consumer product if it is a distinct article of commerce, or component part thereof,

> produced or distributed (i) for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation, or otherwise, or (ii) for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise . . .

ASG, 593 F.2d at 1327. *ASG* demonstrates that the issue of whether an item is "free-standing" or "integrated" into a building, *see* Respondents' Reply at 5 (arguing that sprinklers have no use as a free standing item), is simply irrelevant to the jurisdictional inquiry. The Commission's authority over a consumer product is in no way diluted or eliminated because the product is 'integrated' or installed.

That products installed or incorporated into buildings, even during initial construction, do not lose their status as "consumer products" is demonstrated by the fact that CPSC has jurisdiction over blown-in fiberglass and household insulation (CPSC Advisory Op. No. 205 (1975); CPSC Advisory Op. No. 230 (1976)); wallpaper and doors (CPSC Advisory Op. No. 200 (1975)); architectural hardware (CPSC Advisory Op. No. 132 (1974)); furnaces (CPSC P.R. 97-012 (1996)); vent pipes (CPSC P.R. 98-073 (1998)); installed lighting fixtures (CPSC P.R. 91-84 (1991)); and pre-wired alarm systems and smoke detectors (*see* CPSC Advisory Op. No. 181 (1975); CPSC Advisory Op. No. 254 (1977)). Even escalators and elevators fall within CPSC's jurisdiction. CPSC Advisory Op. No. 262 (1978); CPSC Advisory Op. No. 182 (1973). Like fire sprinklers, these products are often installed by builders and/or contractors during initial construction or otherwise. Yet they, like fire sprinklers, are "consumer products."

2. Omega Sprinklers are Distinct Articles Used in Other than Initial Building Construction

Respondents attempt to 'back into' *Anaconda* by arguing that products used in construction of a building are not consumer products, because buildings are not consumer products. *See* Respondents' Reply at 5. As demonstrated above, Respondents' premise is invalid. Moreover, the evidence does not support Respondents' claim that fire sprinklers are

"a fixed and integral part of a building's basic structure and are incorporated into the building's fundamental structure as constructed." Respondents' Reply at 5. First, Respondents ignore the thousands of sprinklers they have provided to building owners and operators as replacements for Omegas that have failed in testing. These replacements were clearly not "incorporated into the building's fundamental structure as constructed."

Respondents also ignore the multitudes of existing buildings that have been retrofitted with sprinklers pursuant to numerous sprinkler retrofit ordinances now in effect across the country. *See* Virginia Statewide Fire Prevention Code § 108.0, Virginia Uniform Statewide Building Code, Vol. II (1993), attached hereto as Exhibit A; City of Louisville, Ky. Code of Ordinances § 95.85 (1995), attached hereto as Exhibit B; City of Los Angeles Uniform Building Code, Vol. I, § 8604.6.4 (1996), attached hereto as Exhibit C; City of Scottsdale, Az. Uniform Fire Code § 1003.2.13 (1997), attached hereto as Exhibit D; San Francisco, Ca. Building Code § 1746(a) (1993), attached hereto as Exhibit E; Louisiana Revised Statutes § 40:1641, *et seq.* (1992), attached hereto as Exhibit F; City of Glendale, Ca. Building and Safety Code § 1003.2.9 (1998), attached hereto as Exhibit G.[3] These retrofits are often constructed using exposed piping and, like replacements, are not a "fixed and integral part of a building's basic structure . . . incorporated into the building's fundamental structure as constructed." *See* Respondents' Reply at 5. The Kent Manor Inn in Stevensville, Maryland, one of the sites in which an Omega sprinkler failed to activate in a fire, is a 170-year-old building that was retrofitted with sprinklers in 1987. *See* Affidavit of Donna B. Towers and

[3] Violations of such ordinances carry heavy penalties, including fines and/or imprisonment. *See id.*

Office of the Maryland State Fire Marshal Investigation Report re: fire at Kent Manor Inn on October 27, 1997, attached hereto as Exhibit H. Like other retrofits and replacements, the Kent Manor Inn, which suffered an estimated $50,000 in property damage as a result of an Omega failure, *see id.*, is clear evidence against Respondents' claim that sprinklers exist only as components of new construction.

Sprinklers are distinct "articles" of commerce. That they are incorporated or installed in buildings, and when such installation or incorporation takes place, is irrelevant for purposes of CPSC jurisdiction.

B. By Respondents' Own Admissions, Omegas are Consumer Products

Forgetting that the statutory definition of "consumer product" includes articles produced or distributed for the "personal use, **consumption or enjoyment**" of the consumer, Respondents argued in their initial Motion that **use** of a product by consumers is absolutely necessary for the product to qualify as a "consumer product." *See* Respondents' Memorandum at 7; 10. Respondents further argued that use "must be understood as requiring some sort of active consumer interaction with the product," such as turning the sprinkler on and off, controlling it, activating it, holding it, occupying it, etc. *See* Respondents' Memorandum at 11.

In their Reply, Respondents acknowledge that "use" and "control" are unnecessary, and that consumer "enjoyment" or "availment" of a product is enough to bring a product within the Commission's jurisdiction. Respondents' Reply at 7. To "avail oneself of" something, according to the dictionary definition, is to "take advantage of" it. Webster's New World Dictionary (3d College ed. 1988). Consumers clearly avail themselves and take

advantage of fire sprinklers, relying on them to serve as the first line of defense in a fire. *See* Affidavit of Francis J. Teevan, attached as Exhibit A to Complaint Counsel's Opposition. Consumers "avail" themselves of fire sprinklers in exactly the same way that they "avail" themselves of smoke detectors and fire alarms -- two products that Respondents concede are "consumer products" within CPSC's jurisdiction. Respondents' Memorandum at 6. By Respondents' own admissions, Omega sprinklers are consumer products.

C. CPSC has Jurisdiction Over Fire Sprinklers Regardless of any State, Local or Other Codes that may Address Fire Safety and/or Installation of Sprinkler Systems

Respondents argue in their Reply that building construction is already extensively regulated by local jurisdictions. Respondents' Reply at 10. Respondents further claim that "without a clear statement that Congress intended the Act to displace that entire body of regulatory codes, the [Consumer Product Safety] Act cannot, and should not, be so broadly construed." *Id.* Respondents' argument fails on several grounds.

1. There is No Conflict Between State Law and CPSC Jurisdiction over Fire Sprinklers

Even if building construction is already extensively regulated by state and local authorities, the safety and efficacy of fire sprinklers is not. A review of NFPA 13, the model code which Respondents note "details virtually every aspect of implementing the codes' fire safety provisions," clearly demonstrates this. NFPA 13 is titled "Installation of Sprinkler Systems." *See* NFPA 13, 1996 Ed. (emphasis added), attached as Exhibit B to Respondents' Motion for Leave to File Reply. NFPA 13 regulates sprinkler system construction, design and installation. Although it discusses sprinkler installation, it provides no guidance on, and

in fact makes absolutely no mention of, sprinklers that do not and will not function.[4] NFPA 13 assumes that the sprinklers being put into the systems it regulates actually work.

Nowhere in NFPA 13 or any other local or state code is there anything that would conflict with a CPSC mandate that defective sprinklers not be used in sprinkler systems. If anything, the goals of local and state authorities are aligned with those of CPSC in this matter. There is no conflict between state and federal law such that a preemption or federalism issue even comes into play.[5]

2. Congress Intended for CPSC to Dominate the Field of Defective Consumer Products

Furthermore, even if there were state and local regulation of safety and efficacy of fire sprinklers, Congress has clearly stated its intent that CPSC requirements preempt state regulation of consumer products. Congress' primary goals in establishing the CPSC -- "to develop uniform safety standards for consumer products and to minimize conflicting State and local regulations," *see* H. R. 158, 97th Cong., 1st Sess., 390 (1981), have been cited by

---

[4] Section 2-2.1, beginning on page 13-10, requires that "only new sprinklers shall be installed." Section 2-2.2 discusses the "k factor" (relating to flow characteristics), and Section 2-2.3 discusses which sprinklers may be used in which occupancy classifications. Section 2-2.4 discusses temperature ratings of automatic fire sprinklers, and requires that sprinklers have their frame arms colored according to their temperature ratings. Section 2-2.5 requires that only sprinklers listed as "corrosion-resistant" be installed in locations were corrosion can exist. Section 2-2.6 discusses escutcheon plates (which surround the sprinkler head), and requires that they be part of a listed sprinkler assembly where used with a recessed or flush-type sprinklers. Section 2-2.8 requires all locations to maintain a supply of spare sprinklers in a cabinet on the premises. Chapter 4 of NFPA 13 discusses installation requirements, and indicates how far apart sprinklers may be positioned, where sprinklers are and are not required, and which type of sprinkler may be installed in which type of occupancy (and with which type of system or ceiling). *See* NFPA 13, p. 13-27, *et seq.*

[5] As discussed in Complaint Counsel's Opposition, the same is true of the OSHA regulations regarding workplace safety.

numerous courts that have unanimously rejected federalism arguments. *See, e.g., Butcher v. Robertshaw Controls Co.*, 550 F. Supp. 692, 700 (D. Md. 1981) (rejecting federalism argument on the ground that Congress made express finding that "control by State and local governments of unreasonable risks of injury associated with consumer products is inadequate and may be burdensome to manufacturers . . ." and that "regulation of consumer products . . . is necessary to carry out [the protection of the public against said unreasonable risks of injury]"); *Kaiser Alum. & Chem. Corp. v. Consumer Prod. Safety Comm'n*, 574 F.2d 178, 181 (3d Cir.), *cert. denied*, 439 U.S. 881 (1978) (holding that although local building codes continue to play a role in regulating installation and use of consumer products such as electric, gas, or plumbing appliances, design and performance standards for components are now a matter of national concern).[6] The Consumer Product Safety Act itself provides that:

> Whenever a consumer product safety standard under this Act is in effect and applies to a risk of injury associated with a consumer product, no State or political subdivision of a State shall have any authority either to establish or to continue in effect any provision of a safety standard or regulation which prescribes any requirements as to the performance, composition, contents design, finish, construction, packaging, or labeling of such product which are designed to deal with the same risk of injury associated with such consumer product, unless such requirements are identical to the requirements of the Federal standard.

15 U.S.C. § 2075(a) (1997). As such, even if local and state building codes regulate sprinkler system design and installation, the safety and efficacy of sprinklers is still within the Commission's authority.

---

[6] Despite arguing that *Kaiser* is "poorly-reasoned," *see* Respondents' Reply at 8, Respondents cite to and rely on *Kaiser* to support their arguments. *See* Respondents' Memorandum at 12, n. 4.

Based on the foregoing, it is clear that the Commission has jurisdiction over Omega sprinklers. Omegas are articles customarily produced or distributed for use or consumption by, or enjoyment of, consumers in or around households, residences, schools, recreational facilities or otherwise. No other standards, regulations or codes negate this jurisdiction.

III. THE COMPLAINT AND LIST AND SUMMARY OF DOCUMENTARY EVIDENCE ARE SUFFICIENT TO PROVIDE RESPONDENTS WITH AN UNDERSTANDING OF THE ALLEGATIONS AGAINST THEM

Respondents argue that the Complaint and List and Summary of Documentary Evidence do not provide them with sufficient information to understand the allegations against them. Having already responded to these arguments, Complaint Counsel now adds only that a perusal of Respondents' **148** Interrogatories and **71** Requests for Production to Complaint Counsel clearly demonstrate that Respondents know and understand the allegations against them. The over 2000 pages of documents provided by Complaint Counsel in response to Respondents' discovery requests in the last week are sufficient to provide Respondents with the documentary evidence supporting Complaint Counsel's allegations. The issues Respondents raise regarding sufficiency of the Complaint and List and Summary of Documentary Evidence are not only unsupported, they are moot.

IV. CONCLUSION

Based on the foregoing, the Commission has jurisdiction over Omega fire sprinklers, and the Complaint and List and Summary of Documentary Evidence meet all applicable requirements. Complaint Counsel respectfully requests that Respondents' Motion to Dismiss be denied.

Dated: May 4, 1998

Respectfully submitted,

Virginia Statewide Fire Prevention Code

Virginia Uniform Statewide Building Code

VOLUME II

COMMONWEALTH OF VIRGINIA
BOARD OF HOUSING AND COMMUNITY DEVELOPMENT

SECTION 107.0.
DEMOLITION OF BUILDINGS.

107.1. Procedures for demolition: Whenever a building is to be demolished pursuant to any provision of this code, the work shall be carried out in compliance with the requirements of Volume I of the USBC.

SECTION 108.0. SPECIAL PROVISIONS.

108.1. General: The provisions of this section contain requirements for improving the safety of certain buildings by requiring the installation of materials or equipment not originally required. Unless otherwise noted, these provisions shall apply equally to both pre- and post-USBC buildings.

108.2. Hotels and motels: Existing hotels and motels shall comply with the provisions of this section.

108.2.1. Fire sprinkler system: An automatic sprinkler system meeting the requirements of the USBC, Volume I, 1987 Edition, Second Amendment (effective date March 1, 1990), for Use Group R-1, shall be installed throughout existing hotels and motels by either March 1, 1997, or within seven years of the date upon which an adequate water supply is made available to meet the needs of the suppression system, whichever is later.

Exceptions:

1. Hotels and motels that are equipped throughout with an automatic sprinkler system.
2. Hotels and motels which are three stories or less in height.

108.2.2. Single and multiple station smoke detectors: Single and multiple station smoke detectors meeting the requirements of the USBC, Volume I, 1987 Edition, Second Amendment, for Use Group R-1, shall be installed in existing hotels and motels.

Exception: Hotels and motels that are equipped throughout with single and multiple station smoke detectors.

108.3. Nursing homes and nursing facilities: Existing nursing homes and nursing facilities licensed by the Virginia Department of Health shall comply with the provisions of this section.

108.3.1. Automatic sprinkler system: An automatic sprinkler system meeting the requirements of the USBC, Volume I, 1987 Edition, Third Amendment (effective date October 1, 1990), for Use Group I-2, shall be installed in existing nursing homes and nursing facilities, as follows:

1. NFiPA 13D Standard for one story buildings.
2. NFiPA 13R Standard for buildings two or three stories in height.
3. Nfipa 13 Standard for buildings four or more stories in height.

Exceptions:

1. Nursing homes and nursing facilities which are equipped throughout with an automatic sprinkler system.
2. Nursing facilities consisting of certified long-term care beds located on the ground floor of general hospitals.

108.3.1.1. Quick response sprinklers: Quick response sprinklers shall be installed in patient sleeping rooms of buildings subject to Section 108.3.1.

108.3.1.2. Exceptions provided for: Buildings equipped throughout with an automatic fire sprinkler system meeting the requirements of Nfipa 13 shall be permitted to use the exceptions provided in the USBC, Volume I, 1987 Edition, Third Amendment including, but not limited to, the following:

1. Section 502.3 (Area Increase)
2. Section 503.1 (Height Increase)
3. Section 610 (Use Group I-2 Areas)
4. Section 807 (Types and Location of Means of Egress)

5. Section 808 (Capacity of Egress Components)
6. Section 809 (Number of Exits)
7. Section 810 (Exit Access Passageways and Corridors)
8. Section 921 (Firestopping and Draftstopping)]

108.3.2. Fire protective signaling system: A fire protective signaling system meeting the requirements of the USBC, Volume I, 1987 Edition, Third Amendment, for Use Group I-2, shall be installed in existing nursing homes and nursing facilities by August 1, 1994.

Exception: Nursing homes and nursing facilities that are equipped throughout with an automatic fire protective signaling system.

108.3.3. Fire detection system: An automatic fire detection system meeting the requirements of the USBC, Volume I, 1987 Edition, Third Amendment, for Use Group I-2, shall be installed in existing nursing homes and nursing facilities by August 1, 1994.

108.3.3.1. Fire detection system in existing sprinklered facilities: Nursing homes and nursing facilities that are exempt from Section 108.3.1 because of an existing automatic sprinkler system shall install a fire detection system meeting the requirements of the USBC, Volume I, 1987 Edition, Second Amendment, for Use Group I-2.

108.4. Homes for Adults: Existing Homes for Adults licensed by the Virginia Department of Social Services shall comply with this section.

108.4.1. Fire protective signaling system and fire detection system: A fire protective signaling system and an automatic fire detection system meeting the requirements of the USBC, Volume I, 1987 Edition, Third Amendment, shall be installed in Homes for Adults by August 1, 1994.

Exception: Homes for Adults that are equipped throughout with a fire protective signaling system and an automatic fire detection system.

108.4.2. Single and multiple station smoke detectors: Battery or AC-powered single and multiple station smoke detectors meeting the requirements of the USBC, Volume I, 1987 Edition, Third Amendment, shall be installed in Homes for Adults by August 1, 1994.

Exception: Homes for adults that are equipped throughout with single and multiple station smoke detectors.

108.5. Identification of handicapped parking spaces: All spaces reserved for the use of handicapped persons shall be identified by an above grade sign with the bottom edge no lower than four feet nor higher than seven feet above the parking surface. Such signs shall be installed in accordance with applicable provisions of the current edition of Volume I of the USBC.

108.6. Family day homes: Family Day Homes as defined in § 63.1-195 of the Code of Virginia shall be provided with at least one exterior exit door from each floor used for the care of children.

NOTE: As of this printing, the above section was suspended by the BHCD.

subchapter. Such rules, regulations and procedures shall be effective when promulgated, and within ten days of promulgation shall be submitted to the Board of Aldermen for their approval.

(4) At least 15 days before the scheduled date of the dance hall event, an application for a dance hall event permit must be filed with the Fire Chief or his designee. Standard dance hall event: When the dance hall event is part of a series of scheduled events, occurring at least twice within a weekly period, all of which features the same activity, only one application may be required to cover the entire series. This application shall cover a period of 365 days from the occurrence of the first event within the series. At that point a new application must be filed.

(5) Such application shall be accompanied with the application fee of $25 and such information, floor plan, details of security, and the like as may be required by the Fire Chief or his designee.

(6) The Fire Chief or his designee shall forward a copy of each application and permit to the Director of Safety for coordination with police and emergency medical personnel. (Ord. 106-1988, approved 4-15-88) Penalty, see § 95.99

§ 95.71 NEGLIGENCE; NONCOMPLIANCE.

In the event of an emergency at a dance hall event from any willful omission or neglect to comply with any provision or condition of a permit or from violation of any of the ordinances pertaining to public assembly, then the person or persons promoting such dance hall event shall reimburse the city for any cost incurred in the assignment of city personnel or equipment to alleviate the emergency. .The cost shall be determined by the Director of Safety and shall be collected by civil action. (Ord. 106-1988, approved 4-15-88)

AUTOMATIC FIRE SPRINKLER SYSTEMS IN EXISTING HIGH-RISE BUILDINGS

§ 95.85 PURPOSE.

(A) The following provisions will require all existing high-rise buildings in the city having floors used for human occupancy located more than 75 feet above the lowest level of Fire Department vehicle access to be equipped throughout with an automatic fire sprinkler system within the time limits set out in § 95.92.

(B) The purpose of this subchapter is to provide a reasonable degree of protection for life and property from fire in high-rise buildings. (Ord. 123-1993, approved 6-25-93)

§ 95.86 INSTALLATION; EXEMPTIONS.

(A) An automatic fire sprinkler system shall be installed throughout all existing high-rise buildings having floors used for human occupancy located more than 75 feet above the lowest level of Fire Department vehicle access.

(B) Exempted from this requirement are the following:

(1) Airport control towers

(2) Open parking structures

(3) Buildings and structures used as use group A-5; outdoor assembly (see F-202.2.6 of Kentucky Standards of Safety)

(4) Low hazard special use. (See section 501.1.1 of the Kentucky Building Code)

(5) Within telephone central office equipment buildings, the automatic fire suppression system is not required in the following rooms or areas when such rooms or areas are protected with an approved automatic fire alarm system:

(a) Generator and transformer rooms.

(b) Communication equipment areas are separated with fire assemblies consisting of one-hour fire-resistance rated walls and two-hour fire resistance rated floor/ceiling assemblies, and are used exclusively for such equipment.

(6) Individual living units in high-rise, owner-occupied, residential condominiums classified as such as of January 1, 1993.

(C) The automatic fire sprinkler systems and related installations shall be installed in accordance with appropriate National Fire Association (NFPA) standards as approved by the City Department of Inspections, Permits and Licenses (I.P.L.). (Ord. 123-1993, approved 6-25-93)

§ 95.87 VARIANCES; ALTERNATIVE METHODS.

The provisions of this subchapter are not intended to prevent variations of the prescribed NFPA standards. An alternative method shall be approved when the Department of Inspections, Permits and Licenses finds that the proposed design is satisfactory and complies with the intent of the provisions of this subchapter and provided that the work offered is, for the purpose intended, at least the equivalent of that prescribed in this subchapter, in quality and effectiveness, durability and safety as related to the building occupants. An alternative method will only be approved by the Department of Inspections, Permits and Licenses when it is a part of an approved automatic fire sprinkler system. (Ord. 123-1993, approved 6-25-93)

§ 95.88 WRITTEN PLANS SUBMITTED FOR APPROVAL.

By July 1, 1994, the owner of every affected existing high-rise building which is not equipped throughout with an automatic fire sprinkler system shall submit to the Department of Inspections, Permits and Licenses, for its approval, a detailed written plan describing the methods to be used for compliance with this subchapter. Concurrently a time schedule for the installation of the automatic sprinkler installation shall be filed with the Department of Inspections, Permits and Licenses, and the City Division of Fire. (Ord. 123-1993, approved 6-25-93)

§ 95.89 PLANS AND SPECIFICATIONS.

Plans and specifications for the automatic fire sprinkler system shall be filed with the Department of Inspections, Permits and Licenses, Construction Review Section, prior to installation in accordance with Chapter 157 of this code of ordinances.
(Ord. 123-1993, approved 6-25-93)

§ 95.90 MODIFICATIONS.

When there are practical difficulties involved in complying with the time frames of this subchapter, the Fire Chief of the Division of Fire is permitted to vary or modify such time frames upon application of the owner's representative, provided that the spirit and intent of the law is observed and public welfare and safety are assured.
(Ord. 123-1993, approved 6-25-93)

§ 95.91 RIGHT TO APPEAL.

(A) Any party to a decision by the Department of Inspections, Permits and Licenses may appeal that decision to the local building code appeals board. Upon receipt of an appeal from a qualified party, the local appeals board shall convene a hearing to consider the appeal within 60 days of receipt.

(B) All parties to the appeal shall be notified of the time and place of the hearing by letter sent by certified mail no later than ten days prior to the date of the hearing.

(C) The local appeals board shall render a decision within 30 working days after the hearing. The board may uphold, amend or reverse the decision of the local building code official. (Ord. 123-1993, approved 6-25-93)

§ 95.92 TIME LIMITS.

(A) Time limits for the installation of automatic fire sprinkler systems, in all high-rise buildings (with exception of high-rise, owner-occupied, residential condominiums classified as such as of January 1, 1993), shall be as follows:

(1) By July 1, 1997, approved water supply shall be installed to all floors of the building. Also all lobby floors and below grade levels shall have installed and operational full automatic sprinkler system protection.

(2) By July 1, 1999, a minimum of 25% of the remaining unsprinklered square footage of the building shall have installed and operational full automatic sprinkler system protection.

(3) By July 1, 2001, a minimum of 50% of the remaining square footage of the building shall have installed and operational full automatic sprinkler system protection.

(4) By July 1, 2003, a minimum of 75% of the remaining square footage of the building shall have installed and operational full automatic sprinkler system protection.

(5) By July 1, 2005, total square footage of the building shall have completed, approved, operational automatic sprinkler system protection.

(B) Time limits for the installation of automatic fire sprinkler systems in high-rise, owner-occupied, residential condominiums shall be as follows:

(1) By July 1, 1997, approved water supply shall be installed to all floors of the building. Also, all lobby floors and below grade areas shall have installed and operational full automatic fire sprinkler protection.

(2) By July 1, 1999, with the exception of individual living units, a minimum of 25% of the remaining square footage of all hallways, stairways and other common areas shall have installed and operational full automatic sprinkler system protection.

(3) By July 1, 2001, with the exception of individual living units, a minimum of 50% of the remaining square footage of all hallways, stairways and other common areas shall have installed and operational full automatic sprinkler system protection.

(4) By July 1, 2003, with the exception of individual living units, a minimum of 75% of the remaining square footage of all hallways, stairways and other common areas shall have installed and operational full automatic sprinkler system protection.

(5) By July 1, 2005, with the exception of individual living units, total remaining square footage of the building shall have complete, approved operational full automatic sprinkler system protection. (Ord. 123-1993, approved 6-25-93)

§ 95.99 PENALTY.

(A) Any person who violates any provision of this chapter or any provision of a lawful order, rule or regulation made under the provisions of this chapter, or who induces another to violate any provisions of this chapter or of any lawful order, rule or regulation made thereunder, upon conviction thereof shall be fined not less than $25 nor more than $1,000, or imprisonment for not more than 60 days, or both. Each day such violations exist shall, in the discretion of the courts, be considered as a separate offense.

(B) The imposition of the penalties herein described shall not prevent the Chief of Fire on behalf of the city, from pursuing other administrative and legal measures to enforce the provisions of Chapter 95. Such measures may include but not be limited to actions to prevent unlawful construction or to restrain, correct or abate a violation; or to prevent illegal occupancy of a building, structure or premises; or to stop an illegal act, conduct of business or use of a building or structure on or about any premises; or to otherwise protect the lives and property of the residents of the city. (Ord. 20-1992, approved 2-11-93)

UNIFORM BUILDING CODE™

Volume 1

1994 EDITION

CITY OF LOS ANGELES 1996 AMENDMENTS

Item No. 133A94

SECTION 8604 — FIRE SAFETY STANDARDS

8604.1 General.

8604.1.1 Notification.

8604.1.1.1 Whenever the Department of Building and Safety determines by inspection that a building does not conform to the minimum requirements of either Section 8604.2, 8604.3, 8604.4 or 8604.5, the Department of Building and Safety shall prepare a written Fire Safety Standards Re-

CALALALALALALALALA

pair Order directing the owner to repair and modify the building so as to conform to those minimum requirements. The Department of Building and Safety shall serve the order either personally or by certified or registered mail, upon the owner as shown on the last equalized assessment roll and may serve the order upon the person, if any, in real or apparent charge or control of the building.

The order shall specify the manner in which the building fails to meet the minimum requirements of either Section 8604.2, 8604.3, 8604.4 or 8604.5. The order shall direct the owner of the building to submit plans, obtain the necessary permits and complete the necessary corrections.

8604.1.1.2 Whenever, pursuant to Section 57.01.22 of the Los Angeles Municipal Code, the fire department determines by inspection that a building does not conform to the minimum requirements of Section 8604.6, it shall prepare a written Fire/Life Safety Order directing the owner to repair and modify the building so as to conform to the minimum requirements of Section 8604.6.

The order shall specify the manner in which the building fails to meet the minimum requirements of Section 8604.6. The order shall direct the owner of the building to submit plans, obtain necessary permits and complete the necessary corrections.

The order shall be transmitted to the Department of Building and Safety for service, recordation and enforcement purposes. The Department of Building and Safety shall serve the order, either personally or by certified or registered mail, upon the owner as shown on the last equalized assessment roll and may serve the person, if any, in real or apparent charge or control of the building. The provisions of this section are not intended to prevent the Department of Building and Safety from also making a determination or issuing an order regarding failure to comply with Section 8604.6.

8604.1.2 Time for Compliance.

8604.1.2.1 Whenever the Department of Building and Safety serves a Fire Safety Standards Repair Order pursuant to Section 8604.1.1.1, the owner of a building shall submit plans and obtain necessary permits as required in that order not later than 90 days after service of the order and shall complete necessary corrections not later than one year after service of the order for work under Section 8604.2, 8604.3, 8604.4 or 8604.5. No extension of time, either to submit plans, obtain permits or complete the necessary corrections shall be granted except by the Board of Building and Safety Commissioners upon a finding of unusual circumstances which warrant an extension.

8604.1.2.2 Whenever the Department of Building and Safety serves a Fire/Life Safety Order pursuant to Section 8604.1.1.2, the owner of a building shall:

1. Submit main system plans, which include plans for any required water storage tank, fire pump(s), riser(s), fire department connection(s) and all sprinkler riser valves for sprinkler connections on each floor;

2. Obtain necessary main system permits as required in that order not later than one year after service of the order;

3. Complete necessary corrections required by the Fire/Life Safety Order not later than three years after service of the order for work required under Section 8604.6.

EXCEPTION: For work required under Section 8604.6:

1. Elevator lobbies. The owner of a building may request an extension of time to submit plans and obtain permits for work required by Section 8604.6.6 where strict compliance with the time requirements is not practical. Such an extension of time may be granted for a two-year period and may be renewed for three additional two-year time periods provided all permits for work required by Sections 8604.6.4, 8604.6.5 and 8604.6.7 are obtained prior to the granting of this exception and all necessary permits for work required by Section 8604.6.6 are obtained not later than nine years after service of the Fire/Life Safety Order and all required corrections are completed not later than 11 years after service of the order.

2. Vacant buildings. If a building is vacant and secured from unauthorized entry, the owner of the building may apply to the Department of Building and Safety for an extension of time to comply with the requirements of Section 8604.6. Such an extension of time may be granted for a two-year period and may be renewed for three additional two-year time periods, unless to do so poses a threat to health or safety, provided all necessary permits for compliance with Section 8604.6 are obtained not later than nine years after service of the Fire/Life Safety Order and all required corrections are completed not later than 11 years after service of the order.

3. Partially occupied buildings. If a building is only occupied below the second floor and all floors from the second floor and above are vacant and secured from unauthorized entry, the owner(s) of that building may apply to the Department of Building and Safety for an extension of time to comply with the requirements of Section 8604.6, provided sprinklers are installed on the occupied floor(s) and a two-hour fire-rated separation is provided between the vacant and occupied floors. Such an extension of time may be granted for a two-year period and may be renewed for three additional two-year time periods, unless to do so poses a threat to health or safety, provided all necessary permits for compliance with Section 8604.6 are obtained not later than nine years after service of the Fire/Life Safety Order and all required corrections are completed not later than 11 years after service of the order. No vacant portion of the building may be reoccupied until the requirements of Section 8604.6 are satisfied.

4. Asbestos. If an owner of a building commits to a program of abatement of asbestos, the Department of Building and Safety may grant an extension of time to complete the work required under Section 8604.6, provided that all necessary permits are obtained and the required water storage tank, fire pumps, riser and all sprinkler riser valves for sprinkler connections on each floor are installed and operational prior to the grant of any extension.

5. Other grounds for extension. The owner of a building cited for a violation of Section 8604.6 may request an extension of time to comply with those requirements. This extension shall not be granted in addition to those extensions granted pursuant to Items 1 through 4. The owner shall submit to the department a plan of action for compliance and specify why strict compliance is not practical at the time of application. Extensions of time may be granted for a period of one year from the date of application and may be renewed for three additional one-year periods. The above-referenced plan of action shall include but is not limited to the following:

A. A date for the submittal of plans;

B. A date to obtain plan approval no later than nine months from the extension approval date;

C. A date to obtain a permit for the work no more than one year from the extension approval date;

D. A reporting system designed to provide both the fire and building and safety departments with the status of job progress by the owner of the building; and

E. A copy to the Department of Building and Safety of an affidavit filed by the owner with the Office of the County Recorder agreeing to comply with the conditions of any granted approvals.

Subsequent extension approvals beyond the initial approval shall also be conditioned on progress of work to install sprinklers in conformance with the plan of work submitted with the approved extension of time.

Request for an extension of time under Items 1 through 5 shall be filed on an application form provided by the Department of Building and Safety and signed by the owner of the building. Applications are subject to review and action by the Department of Building and Safety with concurrence by the fire department. An extension of time may be granted only where a good faith effort to comply can be demonstrated by the applicant. Applications shall be processed according to the guidelines set forth in Section 98.0403.2 of the Los Angeles Municipal Code.

8604.1.2.3 Recordation. At the time that the Department of Building and Safety serves a Fire/Life Safety Order or Fire Safety Repair Order, the department shall file with the Office of the County Recorder a certificate stating that the building does not meet the minimum fire safety requirements of Section 8604.2, 8604.3, 8604.4, 8604.5 or 8604.6 and that the owner of the building has been so notified.

After all necessary corrective work has been performed, the Department of Building and Safety shall file with the Office of the County Recorder a certificate terminating the status of the building as nonconforming to the minimum fire safety requirements of Section 8604.2, 8604.3, 8604.4, 8604.5 or 8604.6.

8604.1.2.4 Enforcement. Notwithstanding any other provisions of this code to the contrary, it shall be unlawful for any person, firm or corporation to maintain, use or occupy any building within the scope of this section which does not meet the minimum standards specified in Section 8604.6.

Any person who fails to comply with an order issued pursuant to this section, within each of the time periods set forth in Section 8604.1.2.2, or who causes or permits another person to fail to comply with such an order, is guilty of a misdemeanor which is punishable by a fine of not more than $1,000.00 and/or six months' imprisonment.

For purposes of this section, the phrase "any person" includes an owner, lessor, sublessor, manager or any person in control of a building subject to this section. The legal owner of a building is that

person, firm, corporation, partnership or other entity whose name or title appears in the records in the Office of the County Recorder, as well as all successors or assignees of these owners.

In addition to any other remedy available at law, if the owner or other person in charge and control of the building fails to comply with an aforementioned order within the time periods set forth in Section 8604.1, the Department of Building and Safety may order that the building be vacated and that the building remain vacated until all required corrective work has been completed. Whenever compliance with an order issued pursuant to the provision of this section has not been accomplished within 90 days after the date the building has been ordered vacated, or such additional time as may have been granted by the board, the department may order demolition of the building, in accordance with the provisions of Chapter 89 of this code.

8604.2 Commercial Buildings.

8604.2.1 Purpose. The purpose of this section is to provide a reasonable degree of fire safety for persons occupying existing commercial and industrial buildings.

8604.2.2 Scope. The provisions of this section shall apply to all existing commercial and industrial buildings more than two stories in height which do not conform to the minimum shaft enclosure and exit requirements of this code and which are not required to comply with Section 403.11 of the California Building Code for existing buildings over 75 feet (22 860 mm) in height. The provisions of this section shall not authorize the modification of existing buildings or portions thereof which provide a greater degree of protection against fire than the minimum requirements established by this section.

EXCEPTION: The requirements of this section shall not apply to buildings erected after January 1, 1943.

8604.2.3 Shaft enclosures. Every opening in a floor shall be enclosed as required by Section 711 for shaft enclosures; however, existing enclosure walls constructed of wood lath and plaster or equivalent fire-resistive materials and which are in good condition may be accepted in lieu of enclosure wall construction.

Corridor exits which are interrupted by stairwell enclosures required by this section shall be provided with exit door fire assemblies which will close automatically when activated by an approved smoke detector.

EXCEPTIONS: 1. The shaft protection required by this section may be omitted if the building is sprinklered throughout.

2. Existing metal elevator doors need not be replaced if they are in good condition. Such doors may have openings protected with wire glass.

8604.2.4 Exits. Two reasonably separated and accessible exits shall be provided from each floor.

EXCEPTION: Existing fire escapes which are in structurally sound operational condition may be used as one means of egress.

An exit signal with letters at least 6 inches (152 mm) high shall be installed in conspicuous locations at each exit from the floor and whenever otherwise required to clearly indicate the direction of egress from the area served.

8604.3 Residential Buildings.

8604.3.1 Purpose. The purpose of this section is to provide a reasonable degree of fire safety for persons living and sleeping in apartment houses, hotels, apartment hotels, and in buildings housing Group I, Division 2 Occupancies by requiring alterations to such existing buildings which do not conform to the minimum exiting, shaft enclosure and corridor protection requirements of this code.

8604.3.2 Scope. The provisions of this section shall apply to all existing buildings more than two stories in height which contain Group R, Division 1 and Group I, Division 2 Occupancies. The provisions of this section shall not authorize the modification of existing buildings or portions thereof which provide a greater degree of protection against fire than the minimum requirements established by this section.

8604.3.3 Corridor walls and openings. The walls of every public corridor shall be protected by one-hour fire-resistive construction; however, existing walls constructed of wood lath and plaster and which are in good condition will be acceptable in lieu thereof.

Transoms and openings other than doors from public corridors to guest rooms and dwelling units shall be closed and solidly covered with material which will provide the degree of fire resistiveness as shall be provided by adjacent corridor walls.

All door openings from public corridors to guest rooms and dwelling units shall provide the same degree of fire resistiveness as shall be provided by adjacent corridor walls.

EXCEPTION: Door openings from public corridors to guest rooms and dwelling units may have 20-minute protection, provided:

1. All stairways, hallways, exitways and storage or closet areas adjacent thereto are sprinklered;
2. A sprinkler head is placed inside each unit adjacent to each door opening from the public corridor to the guest room or dwelling unit; and
3. An approved self-closing device is installed on each door opening from the public corridor into the guest room or dwelling unit.

8604.3.4 Shaft enclosures. All stairwells shall be enclosed in approved shaft enclosures; however, existing enclosure walls constructed of wood lath and plaster which are in good condition will be accepted in lieu of approved shaft wall construction.

EXCEPTION: In buildings erected prior to January 1, 1943, stair shaft enclosures may be omitted if the building is sprinklered throughout and the sprinkler system is interconnected to the alarm system required under Section 8604.5 of this code.

8604.3.5 Existing conditions.

8604.3.5.1 Existing means of exit, including fire escapes, are acceptable where they exist in the required number and are maintained in good condition.

8604.3.5.2 No standpipes will be required where none exist.

8604.3.5.3 No emergency hallway illumination will be required where none exists.

8604.3.5.4 Dead-end corridors not over 20 feet (6096 mm) in length may have access to a second exit through a stair shaft enclosure.

8604.4 Fire Safety for Existing Group I, Division 2 Occupancies. Every existing Group I, Division 2 Occupancy over two stories in height which does not conform to the minimum shaft and corridor protection requirements of this code shall be made to conform to the minimum requirements as specified in Section 8604.3.

8604.5 Fire Protection Standards for Existing Group R, Division 1 Occupancies Erected Prior to January 1, 1943.

8604.5.1 Scope. The provisions of this section are in addition to those in Section 8604.3 and apply to all existing buildings three or more stories in height which contain Group R, Division 1 Occupancies and which were erected prior to January 1, 1943.

8604.5.2 Closure of doors. All required stair shaft, cutoff and area separation doors shall be equipped with approved self-closing devices and electrically operated hold-open devices designed to release the door by the activation of smoke detectors located on each side of the doorway and within 12 inches (305 mm) of the ceiling.

8604.5.3 Sprinklers. All interior stairways, hallways, exits and storage or closet areas adjacent thereto shall be provided with an approved automatic sprinkler system connected with an alarm system that emits an audible signal throughout the premises. In any room having a door opening into an interior hallway, stairway or exitway, a sprinkler head shall be located inside the room directly over the door. Sprinklers so installed shall be equipped with listed residential sprinkler heads

and may utilize polybutylene plastic pipe for laterals only. Sprinkler materials and installation shall comply with the Plumbing Code and Supplemental Rules and Regulations.

8604.5.4 Self-closing device. Each apartment or guest room door opening into an interior stairway, hallway or exit shall be equipped with an approved self-closing device.

8604.5.5 State Fire Code. Where the Group R, Division 1 Occupancy regulated by this section has floors used for human occupancy more than 75 feet (22 860 mm) above the lowest floor level having building access, the provisions of Part 2, Title 24 of the California Building Code relating to such occupancy shall apply in lieu of any less restrictive provisions set forth in this section.

8604.6 Fire Safety Standards for Existing High-rise Buildings.

8604.6.1 Purpose. The purpose of this section is to provide a reasonable degree of fire safety for persons occupying existing high-rise buildings.

8604.6.2 Scope. The provisions of this section shall apply to every existing high-rise building for which a building permit was issued prior to July 1, 1974.

EXCEPTION: The provisions of this section shall not apply to Group R, Division 1 Occupancies, as defined in Section 310.1. The provisions of this section shall not authorize the modification of existing buildings or portions thereof which provide a greater degree of protection against fire than the minimum requirements established by this section.

8604.6.3 Definition. For the purposes of this section, a high-rise building is a building of any type of construction having floors (as measured from the top of the floor surface) that may be used for human occupancy located more than 75 feet (22 860 mm) above the lowest floor level having building access.

8604.6.4 Requirements. Every building within the scope of this section shall be provided with an automatic fire sprinkler system complying with all applicable sections of the Los Angeles Municipal Code. The sprinkler system shall cover all areas of the building.

EXCEPTIONS: 1. Sprinklers need not be installed in locations expressly excepted in the Los Angeles Plumbing Code provided other approved fire-protection equipment is installed.

2. The Department of Building and Safety may review, on a case-by-case basis, buildings within the scope of this section and may approve alternative fire-protection systems which meet the intent of the high-rise sprinkler requirements.

3. The Department of Building and Safety may, with the concurrence of the fire department, grant exceptions from the requirements of Division 20 of Article 4, Chapter IX, of the Los Angeles Municipal Code as specified in Section 8604.6.5.

8604.6.5 Conditional exceptions. The following exceptions from the requirements set forth in Section 94.2001.0 of the Los Angeles Municipal Code are available upon application to the department, provided all the stated conditions are met for each category of building.

8604.6.5.1 Existing buildings 75 feet to 150 feet (22 860 mm to 45 720 mm) in height.

EXCEPTIONS: 1. Existing risers may be used when maintained in a safe and operable condition.

2. New, on-site water storage need not be provided. (When existing on-site water storage is available, it may be integrated into the fire sprinkler system.)

CONDITIONS: 1. A 3-inch (76 mm) test drain shall be provided in stair shafts where pressure-regulator valves are used. Valves, equipment and devices shall conform to Los Angeles Plumbing Code requirements.

2. A single pump having a minimum capacity of 750 gallons per minute (gpm) (2839 L/m) shall be provided. (Diesel pumps shall have a four-hour fuel supply.)

3. There shall be a flow of 750 gpm (2839 L/m) at 65 psi (448 kPa) at the roof and the sprinkler system design shall meet code requirements.

4. Existing sprinkler systems, existing or new standpipe systems, and existing or new sprinkler risers shall be interconnected at the base of the riser system with a minimum of one fire department connection.

5. Emergency standby electrical power with a four-hour fuel supply shall be provided for fire pumps and the following new installations: fire-protective signaling systems, emergency exit lighting, and exit and directional signs.

8604.6.5.2 Existing buildings over 150 feet to 275 feet (45 720 mm to 83 820 mm) in height.

EXCEPTION: Existing risers may be used when maintained in a safe and operable condition.

CONDITIONS: 1. A 3-inch (76 mm) test drain shall be provided in each stair shaft where pressure-regulator valves are used. Valves, equipment and devices shall conform to Los Angeles Plumbing Code requirements.

2. At least two pumps connected to the automatic sprinkler system having a minimum capacity of 750 gpm (2839 L/m) each shall be provided. (Diesel pumps shall have a four-hour fuel supply.)

3. There shall be a flow of 750 gpm (2839 L/m) at 65 psi (448 kPa) at the roof and the sprinkler system design shall meet code requirements.

4. Existing sprinkler systems, new and existing standpipe systems, and new and existing sprinkler risers shall be interconnected at the base of the riser system with at least one fire department connection.

5. Emergency standby electrical power with a four-hour fuel supply shall be provided for fire pumps and the following new installations: fire-protective signaling systems, emergency exit lighting, and exit and directional signs.

6. A minimum usable capacity of a 20,000-gallon (75 700 L) storage tank shall be provided on site.

8604.6.5.3 Existing buildings greater than 275 feet (83 820 mm) in height.

EXCEPTION: Existing risers may be used when maintained in a safe and operable condition.

CONDITIONS: 1. A 3-inch (76 mm) test drain shall be provided in each stair shaft where pressure-regulator valves are used. Valves, equipment and devices shall conform to Los Angeles Plumbing Code requirements.

2. At least three pumps connected to the automatic sprinkler system having a minimum capacity of 750 gpm (2839 L/m) each shall be provided. At least one pump shall be an electric motor-driven pump. (Diesel pumps shall have a four-hour fuel supply.)

3. There shall be a flow of 1,000 gpm (3785 L/m) at 65 psi (448 kPa) at the roof and the sprinkler system design shall meet code requirements.

4. Existing sprinkler systems, new and existing standpipe systems, and new and existing sprinkler risers shall be interconnected at the base of the riser system with at least one fire department connection.

5. Emergency standby electrical power with a four-hour fuel supply shall be provided for fire pumps and the following new installations: fire-protective signaling systems, emergency exit lighting, and exit and directional signs.

6. A minimum usable capacity of a 40,000-gallon (151 400 L) water storage tank shall be provided on site.

8604.6.6 Elevator lobbies. Existing high-rise buildings within the scope of this section shall comply with the following:

1. Except for the main entrance level, every elevator on each floor shall open into an elevator lobby which is separated from the remainder of the building, including corridors and other exits, by walls having a fire-resistive rating of not less than one hour. All lobby openings other than those for elevator doors, stairway enclosures and ducts shall be protected with three-fourths-hour self-closing fire assemblies actuated by combustion products-type smoke detectors.

2. Except for the main entrance level, each elevator lobby shall be provided with an approved smoke detector located on the lobby ceiling. When the detector is activated, elevator doors shall not open and all cars serving that lobby shall return to the main floor and be under manual control only. The smoke detector shall meet the requirements of Title 8, California Administrative Code (Elevator Safety Orders). The detector may serve to close the lobby doors.

8604.6.7 Stair shaft ventilation. Each stair shaft which extends to the roof shall be provided with a minimum ventilation opening of 20 square feet (1.9 m^2) at the roof level.

ORDINANCE NO. 3100

AN ORDINANCE OF THE COUNCIL OF THE CITY OF SCOTTSDALE, MARICOPA COUNTY, ARIZONA, AMENDING ARTICLE II OF CHAPTER 36, RELATING TO FIRE PREVENTION AND PROTECTION, REPEALING THE ADOPTION OF THE UNIFORM FIRE CODE, 1994 EDITION AND RELATED STANDARDS AND AMENDMENT AND ADOPTING THE 1997 UNIFORM FIRE CODE VOLUME 1, 2, APPENDICES, AND AMENDMENTS TO IT.

BE IT ORDAINED by the Council of the City of Scottsdale, Arizona, as follows:

Sec. 36-16. Definitions.

The following words, terms and phrases, when used in this article, shall have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

Chief means the chief of the fire department.

Duly authorized agent shall mean an individual employed by Rural/Metro Fire Department who has been appointed by the fire chief, in writing, to have the authority to issue civil fire code violations. Such authorization shall be filed with the City Clerk.

Fire department means the Rural/Metro Fire Department or, in the event that the city shall provide its own fire protection service, that organization.

Hillside landform area, is defined as any parcel of land or portion thereof with surface slope that can easily exceed 15%. Where major collection streets have a maximum grade of 9%, and minor and local collector streets have a maximum grade 12%, and local residential streets have a maximum grade of 15%.

NICET means the national Institute for the Certification of Engineering Technologies, 1420 King Street, Alexander, VA. 22314-2915.

Uniform Fire Code means the Uniform Fire Code, 1997 Edition.

Uniform traffic complaint shall mean the form approved by the State Supreme Court in their Rules of Procedure in Civil Traffic Violation cases.

"1003.2.11 Group S occupancies."

"1003.2.11.1 General. An automatic sprinkler system shall be installed throughout all Group S occupancies in accordance with section 1003.1.2 through 1003.2.2, 1003.2.3 and written city Fire Department Standards."

"1003.2.12 Group U occupancies."

"1003.2.12.1 General. An automatic sprinkler system shall be installed throughout all Group U occupancies in accordance with section 1003.1.2 through 1003.2.2, 1003.2.3 and written city Fire Department Standards."

"1003.2.13 Additions, alterations and repairs."

"1003.2.13.1 General. When additions, alterations or repairs within a twelve-month period exceed fifty (50) percent of the value of an existing building or structure, such building or structure shall be made to conform to the requirements for new buildings or structures."

"Exception: Such building or structures shall be equipped with an approved fire sprinkler system when work exceeds ten (10) percent of the value of an existing building of assembly use or twenty-five (25) percent of the value of an existing building or structure of other occupancies."

"1003.2.13.2 Partial systems prohibited. In all new additions to existing buildings and structures an automatic sprinkler system shall be installed in accordance with this section. There shall be no partially sprinklered compartments. Sprinklered and unsprinklered parts of a structure shall be separated in accordance with all applicable codes and standards."

"Exception: Structures in existing R-3 developed parcels which contain existing non-sprinklered requirements (i.e. seven-hundred foot (213,360mm) hydrant spacing.)"

"1003.2.13.3 Furring, or other means of altering or modifying room sizes for the purpose of deleting fire sprinklers from compartments such as closets is prohibited without resubmittal of building plans thru building department review."

Section 1004 subsections, 1004.1.1, 1004.2, and 1004.5 are amended to read:

"1004.1.1 General. Standpipes shall comply with the requirements of this section, written city Fire Department Standards and U.B.C.Standards."

EXHIBIT E

FILE NO. 114-91-2

Amendment of the Whole as further amended 11/15/93

ORDINANCE NO. 777-93

(Automatic Sprinkler Systems - Existing High-Rise Buildings)

AMENDING PART II, CHAPTER 1, OF THE SAN FRANCISCO MUNICIPAL CODE (BUILDING CODE) BY AMENDING SECTION 1746 TO REQUIRE INSTALLATION OF AUTOMATIC SPRINKLER SYSTEMS IN EXISTING HIGH-RISE BUILDINGS EXCEPT FOR APARTMENT BUILDINGS, RESIDENTIAL HOTELS, AND MIXED-USE BUILDINGS CONTAINING AN R-1 OCCUPANCY; EFFECTIVE DATE.

NOTE: Additions or substitutions are underlined; deletions are indicated by ((double parentheses)).

Be it ordained by the People of the City and County of San Francisco:

Section 1. Part II, Chapter 1, of the San Francisco Municipal Code (Building Code) is hereby amended by amending Section 1746 thereof to read as follows:

Automatic Sprinkler Systems - Existing High-rise Buildings

Sec. 1746. (a) General. Regardless of any other provisions of these regulations, every existing high-rise building ((of Type II-N, Type III-N or Type V-N construction)) as defined in Section 1711 shall be provided with an approved sprinkler system conforming to ((NFPA 13)) Chapter 18. Existing high-rise buildings that are also qualified historical buildings as defined in California Health and Safety Code Section 18950 shall be provided with an approved automatic fire sprinkler system when and as required by the State Historical Building Code and need not comply with this section.

EXCEPTIONS: 1. An apartment house, condominium or other building used for "R-1" occupancy as defined in this Code, excluding tourist hotels as defined in Section 41.4(r) of the San Francisco Administrative Code.

2. A mixed-use occupancy building containing an "R-1" occupancy.

The following additional requirements shall also apply:

1. A sprinkler control valve and a waterflow detecting device shall be provided at the lateral connection to the riser for each floor.

2. A separate and distinct supervisory signal shall be provided to indicate a condition that will impair the satisfactory operation of the sprinkler system. This shall include, but not be limited to, monitoring control valves, fire pump power supplies, and pump running conditions. Such supervisory signals shall be annunciated at a constantly attended building security control center; when that location is not under constant supervision by qualified personnel, the signal shall be transmitted to a remote monitoring station in accordance with NFPA 72, NFPA 72C, or NFPA 71.

Supervisors Hsieh, Shelley, Bierman

BOARD OF SUPERVISORS

BOARD OF SUPERVISORS

3. The minimum water supply requirement for the sprinkler system shall be determined without regard to inside hose stream demand.

4. Existing standpipes may be converted to sprinkler risers, provided that they are hydrostatically tested for 2 hours at not less than 50 psi in excess of the maximum pressure to be maintained in the system.

5. Additional hangers, braces, or other attachments for support of existing standpipes which have been converted in accordance with Exception 4 shall be provided if they are necessary to meet the requirements of NFPA 13. The installation of additional flexible fittings in such risers is not required.

6. Any type pipe which has been listed by an approved testing agency for use in automatic sprinkler installations may be used when installed in accordance with its listing limitations.

(b) Permissible omissions. The following features required in new high-rise buildings are not required in systems installed under the provisions of this Section:

1. Redundant fire pump;

2. Secondary on-site supply of water;

3. More than one fire department connection;

4. Connection of the system to two risers on each floor. Hydraulic calculations may consider all risers in service.

5. In an R-1 occupancy building, sprinklers in bathrooms and closets.

See Section 1804 for additional permissible sprinkler omissions.

(c) Effective Date. The effective date of this ordinance shall be February 15, 1994.

(d) Notification. Not later than 60 days after the effective date of this ordinance, the Superintendent shall notify in writing by certified mail the owner of each building within the scope of this Section. The notice shall contain a copy of this Section, a commentary on it, and a Notice of Intent form. The Notice of Intent shall be designed to elicit information regarding proposed water supply connections, pumps, risers, and existing partial sprinkler systems. The Notice of Intent shall include a tentative schedule for phasing the installation of the complete sprinkler system.

If a building within the scope of this Section is not discovered by the Superintendent until after the deadline for notification, the building owner shall be notified within 30 days of such discovery.

Failure to receive notification does not exempt a building owner from compliance with this Section.

(e) Authority of Superintendent. For the purpose of applying the provisions of this Section, the Superintendent, in consultation with the Chief of the Division of Fire Prevention and Investigation, shall have the authority to be flexible in the event of extenuating circumstances that may exist in an individual case and to do the following, but only when it is clearly evident that a reasonable degree of fire safety consistent with the public interest is provided:

1. Consider alternate protection based on nationally recognized standards, principles and tests, and generally recognized and well-established methods of fire protection;

2. Waive specific individual requirements if it can be shown that such requirements are not physically possible, require disproportionate effort, or pose an undue hardship with little increase in life safety and that a practical alternative cannot be provided; and

3. Grant necessary extensions of time when it can be shown that the specified time periods are not physically practical or pose an undue hardship. The granting of an extension of time

for compliance shall be based on the showing of good cause and subject to the filing of an acceptable, systematic, progressive plan of correction with the Superintendent.

(f) Appeal; Board of Examiners - High-Rise Sprinklers. There is hereby created a Board of Examiners ("Board") consisting of nine (9) members. The Board shall hear and determine appeals concerning the application of the requirements of this Section filed by the owner or the authorized agent of the owner of a building subject to the provisions of this Section.

Six of the members of the Board shall be the same persons and with the same terms as those appointed to the Board of Examiners pursuant to Section 204 of this Code. One member of the Board shall be a licensed plumbing contractor, and shall be the same person and with the same term as the plumbing contractor member of the Board of Examiners - Plumbing, appointed pursuant to Section 28.13 of the San Francisco Plumbing Code. The two additional members of the Board shall be a registered fire protection engineer and a representative of owners of buildings subject to the requirements of this Section, and shall be appointed by the Director of Public Works pursuant to the provisions of Section 204 of this Code. The following shall constitute ex-officio members of the Board, without vote and without compensation: The Chief of the Bureau of Fire

Prevention and Investigation, and the Superintendent of the Bureau of Building Inspection who shall act as Secretary of the Board.

To the extent they reasonably apply, the procedures set forth in Section 204 of this Code shall govern the proceedings of the Board.

(e) Implementation. The requirements stated in Paragraph (a) above shall be accomplished by the following steps. Failure to complete any step within the required time frame is a violation of this code, and the Superintendent shall have the power to abate the building in accordance with Section 203.

Step 1. Notice of Intent. The owner shall submit a properly completed, Bureau-provided Notice of Intent to the Superintendent not later than three years after the effective date of this ordinance.

EXCEPTION: No Notice of Intent is required if an approved sprinkler system is completed prior to the deadline above.

Step 2. Water supply. The owner shall install the system riser, including floor-control valves, and shall connect it to an approved automatic water supply not later than five years after the effective date of this ordinance. For purposes of this paragraph, an automatic water supply shall consist of a connection to the public water works system and, if required by hydraulic analysis, installation of a fire pump.

Step 3. Piping and Sprinklers. The owner shall complete the sprinkler system, including required electrical monitoring, not later than twelve years after the effective date of this ordinance.

APPROVED AS TO FORM:

LOUISE H. RENNE
City Attorney

Judith A. Boyajian
Deputy City Attorney

(Automatic Sprinkler Systems - Existing High-Rise Buildings)
ENDORSING THOSE CHANGES AND PROVIDING FINDINGS AS TO THE LOCAL CONDITIONS REQUIRING CHANGES FROM THE CALIFORNIA BUILDING STANDARDS CODE, AS REQUIRED BY THE CALIFORNIA HEALTH AND SAFETY CODE.

WHEREAS, The Board of Supervisors is enacting an amendment to the Building Code for the City and County of San Francisco; and

WHEREAS, This San Francisco Building Code amendment changes or modifies the requirements contained in the California Building Standards Code by adding more stringent requirements regarding fire sprinkler protection in existing high-rise buildings; and

WHEREAS, California Health and Safety Code Sections 17958.5 and 17958.7 require the City to furnish reasons to the State Building Standards Commission for such modifications based upon local conditions; and

WHEREAS, San Francisco is in a zone of high seismic risk; therefore, it requires additional fire safety standards particularly in high-rise buildings; and

WHEREAS, Wind conditions in San Francisco are conducive to the spread of fire; and

WHEREAS, San Francisco has many narrow lots, often smaller than lots in other California communities; most buildings extend the entire width of the lot and abut against neighboring buildings; these abutting buildings result in openings being

close to property lines; building and rental costs Francisco lead to more people in smaller spaces; a

WHEREAS, Special fire hazards exist in San F result of these crowded conditions and high popula both in the City as a whole and within individual

WHEREAS, San Francisco has many steep hills, and sidewalks, and old, wood-frame buildings, all additional dangers to the public health, safety an unless special provisions are added to the Califor Code; and

WHEREAS, The San Francisco Fire Department u size firefighting equipment than specified in the Housing Code; and

WHEREAS, It is well known that sprinklers pr fastest water response to a fire; and

WHEREAS, The Board of Supervisors has review set forth above for the modifications to the Calif Code, and the Board finds and determines that the are reasonably necessary based upon local conditio therefore, be it

RESOLVED, That the Board of Supervisors does and determine that the aforesaid amendment to the Building Code is reasonably necessary due to local the reasons set forth above; and be it

///

FURTHER RESOLVED, That the Clerk of the Board of Supervisors is hereby directed to transmit this Resolution together with the San Francisco Building Code amendment to the State Building Standards Commission for filing, pursuant to the applicable provisions of law.

SUB-PART D-1. FIRE SPRINKLER SYSTEMS IN EXISTING BUILDINGS

40:1641. Purpose

A. The legislature hereby finds that existing high rise buildings which do not have fire protection sprinkler systems represent a serious threat to life and property. High rise building fires are particularly dangerous due to the fact that present fire fighting apparatus can only reach floor levels below seventy-five feet in height, leaving upper floors in high rise facilities vulnerable to the unchecked spread of fire, thereby endangering the occupants of those upper floor levels.

B. It is therefore the policy of this state in order to protect life and property from the hazards of fire and panic which may arise from fire or from the threat of fire in high rise buildings to require existing high rise buildings to be protected throughout by an approved fire protection sprinkler system.

40:1642. Definitions

As used in this Subpart, the following terms have these meanings:

(1) "Fire protection sprinkler system" means a system of overhead piping designed in accordance with fire protection engineering standards. The system must be supplied from a reliable, constant, and sufficient water supply such as a gravity tank, fire pump, reservoir or pressure tank, or connection by underground piping to a city main or any combination of these. The portion of the sprinkler system above ground is considered the fire protection sprinkler system for purposes of this Subpart and is a network of specially sized or hydraulically designed piping installed in a building, structure, or area, generally overhead, and to which sprinklers are connected in a systematic pattern. The system includes a controlling valve and device for actuating an alarm when the system is in operation. The system is usually activated by heat from a fire and discharges water over the fire area. Fire protection sprinkler system, dry-pipe systems, preaction systems, deluge systems, combined dry-pipe and preaction systems, antifreeze systems, and circulating closed loop systems, have meanings as defined and continuously revised in National Fire Protection Association Pamphlet 13, entitled Standard for the Installation of Sprinkler Systems.

(2) "Existing high rise buildings" means any building having floor surfaces used for human occupation located more than seventy-five feet above the lowest level of fire department vehicle access constructed before January 1, 1975.

(3) "Master plan" means a specific scheme or plan detailing the number of floors, total square footage, present occupancy and a proposed completion date of the implementation and completion date of total compliance with the requirement of this Subpart.

40:1643. Fire protection sprinkler system required in existing high rise buildings

A. All existing high rise buildings as defined in this Subpart shall be protected throughout by an approved fire protection sprinkler system.

B. All existing high rise buildings shall comply with the rules and regulations to be promulgated by the fire marshal in conformity with the Administrative Procedure Act, which shall establish as minimum standards the provisions of NFPA 13 as published by National Fire Protection Association, and the fire marshal shall be the authority having jurisdiction to enforce compliance with such regulations.

C. Notwithstanding any provision to the contrary, all existing high rise buildings as defined in this Subpart shall be protected throughout by an approved fire protection sprinkler system by January 1, 1999.

D. The owners of existing high-rise buildings which are not, as of September 1, 1988, protected throughout by an approved fire protection sprinkler system shall submit a written master plan to the state fire marshal on or before January 1, 1991, detailing with specificity a schedule for compliance with this Subpart.

E. Notwithstanding any other provision of law to the contrary, the state fire marshal may authorize alternative approaches for existing high-rise telephone equipment buildings occupied solely by telecommunications service providers which were not, as of September 1, 1988, protected throughout by an approved fire protection sprinkler system but which will provide an equivalent level of safety as provided by an approved automatic sprinkler system. Such alternative approaches shall be implemented on or before January 1, 1999. To obtain such approval, the telecommunications service provider shall submit a written master plan or a completed

fire safety evaluation form, as published by the National Fire Protection Association, to the state fire marshal on or before January 1, 1993. Upon receipt, such master plan or fire safety evaluation shall be evaluated by the state fire marshal to ensure that the building complies with either:

(1) The 1967 edition of the NFPA 101 (Life Safety Code). Such plan or evaluation shall also indicate that an equivalent level of safety is achieved by the proposed alternative.

(2) The compartmentation exception of Section 506 of the 1988 Standard Building Code. Such compliance shall be documented by a certificate signed by a licensed architect or civil engineer.

Suspension in Part

House Concurrent Resolution No. 23 of the 1990 Regular Session provides in part:

"WHEREAS, ACT No. 422 of the 1988 Regular Session of the Louisiana Legislature requires all existing high rise buildings over seventy-five feet in height with occupancies to be protected throughout with an approved automatic sprinkler system by the year 1999 and R.S. 40:1643(D) further requires that an implementation plan be submitted to the state fire marshal prior to January 1, 1991; and

"WHEREAS, 'business occupancies' include those occupancies used for the transaction of business, other than 'mercantile', for the keeping of accounts and records, and similar purposes as defined in NFPA 101:4-1.8; and

"WHEREAS, alternative features have not been considered that may provide an equivalent level of protection or safety for occupants within high rise buildings with business occupancies as that level of safety provided by the sprinkler protection required by Act No. 422.

"THEREFORE, BE IT RESOLVED that the Legislature of Louisiana hereby suspends the provisions of R.S. 40:1643(D), to the extent that those provisions require the submission of a written master plan to the state fire marshal for the installation of fire protection sprinkler systems in business occupancies in existing high rise buildings on or before January 1, 1991.

as to if the valve was adjusted or not, and if so, what the results were before and after adjustment; statement that by order of the Chief the tag shall not be removed.

SECTION 108. Section 1003.1.2, Exception 3 of Volume VI of the Building and Safety Code is repealed.

SECTION 109. Section 1003.2.1.1 of Volume VI of the Building and Safety Code is added to read:

1003.2.1.1 New Occupancies. An automatic fire sprinkler system shall be installed in all new occupancies.

EXCEPTION: Group B, Group F, Divisions 1 and 2, Group M, and Group S, Divisions 1 and 2 occupancies less than 1000 total square feet (92.9 m^2).

SECTION 110. Section 1003.2.9 of Volume VI of the Building and Safety Code is added to read:

1003.2.9 Existing occupancies. An automatic fire sprinkler system shall be installed and maintained in all existing occupancies as follows:

1. Throughout existing and new sections of any existing building whenever total additions result in an increase of more than 1000 square feet (92.9 m^2) in the total floor area, including mezzanines or additional stories, regardless of ownership. Additions shall be cumulative with each application for building permit from the effective date of Ordinance 4850 (7-20-89).

   EXCEPTION: Group R, Division 3 occupancies.

2. Throughout existing and new sections of any existing building whenever alterations exceed fifty percent (50%) of the replacement value, as determined by the buildin

official. Alteration values shall be cumulative with each application for a building permit from the effective date of Ordinance 4850 (7-20-89).

EXCEPTION: Expenditures for tenant improvements, maintenance and repairs such as interior and exterior painting, carpeting, interior window coverings, drapes, movable partitions, surface re-roofing or plumbing, mechanical and electrical repairs.

3. Throughout existing and new sections of any existing building for which there is an occupancy classification change to a more hazardous use, as determined by the Chief.

SECTION 111. Section 1003.2.9.1 of Volume VI of the Building and Safety Code is added to read:

1003.2.9.1 Existing High-Rise Buildings. Existing high-rise buildings, as defined in Volume VI, Section 209-H of the Glendale Building and Safety Code, shall have an automatic fire sprinkler system installed and operational throughout within forty-eight (48) months of the effective date of Ordinance 4850 (7-20-89).

SECTION 112. Section 1003.2.9.2 of Volume VI of the Building and Safety Code is added to read:

1003.2.9.2 Existing Mid-Rise Buildings. Existing mid-rise buildings, as defined in Volume VI, Section 214-M of the Glendale Building and Safety Code, shall have an automatic fire sprinkler system installed and operational throughout within sixty (60) months of the effective date of Ordinance 4850 (7-20-89).

SECTION 113. Section 1003.2.9.3 of Volume VI of the Building and Safety Code is added to read:

1003.2.9.3 Existing Low-Rise Building. Existing low-

rise buildings, as defined in Volume VI, Section 213-L of the Glendale Building and Safety Code, shall have an automatic fire sprinkler system installed and operational throughout within seventy-two (72) months of the effective date of Ordinance 4850 (7-20-89).

SECTION 114. Section 1003.2.9.4 of Volume VI of the Building and Safety Code is added to read:

1003.2.9.4 Notification, Recordation, Enforcement, and Standards. Notification, recordation, enforcement and standards addressed in this subsection shall be enforced by the Chief to ensure compliance with Sections 1003.2.9.1, 1003.2.9.2 and 1003.2.9.3.

1. Notification. Whenever, pursuant to Section 1003.2 of Volume VI of the Glendale Building and Safety Code, the Chief determines by inspection, that a building does not conform to the minimum requirements of Subsections 1003.2.9.1, 1003.2.9.2 or 1003.2.9.3 of this Code, the Chief shall prepare a fire/life safety notice in writing that the building be repaired and modified to conform to the minimum requirements of those Subsections.

The notice shall specify in what manner the building fails to meet the minimum requirements of Subsections, 1003.2.9.1, 1003.2.9.2 or 1003.2.9.3 of this Code. It shall direct that plans be submitted, and that necessary permits be obtained not later than one year after the service of the notice, and that necessary corrections be completed not later than three years thereafter for work required under Subsection 1003.2.9.1, not later than four years thereafter for work required under Subsection 1003.2.9.2 a

not later than five years thereafter for work required under Subsection 1003.2.9.3.

The notice shall be transmitted by the Chief for enforcement purposes. The Chief shall serve the notice either personally or by certified or registered mail upon the owner as shown on the last equalized assessment roll and upon the person, if any, in real or apparent charge or control of the building. The provisions of this Section are not intended to prevent the Chief from also making a determination or issuing an order regarding failure to comply with Subsections 1003.2.9.1, 1003.2.9.2 or 1003.2.9.3 of this Code.

2. Recordation. At the time that the Chief serves the aforementioned order or notice, the Chief shall file with the Office of the County Recorder, a certificate stating that the subject building does not meet the minimum fire safety requirements of Subsections 1003.2.9.1, 1003.2.9.2 or 1003.2.9.3 of this Code and that the owner thereof has been so notified.

After all necessary corrective work has been performed, the Chief shall file with the Office of the County Recorder, a certificate terminating the status of the subject building as nonconforming to the minimum fire safety requirements of Subsection 1003.2.9.1, 1003.2.9.2 or 1003.2.9.3 of this Code.

3. Enforcement. If the owner or other person in charge and control of the subject building fails to comply with the aforementioned order or notice within the time periods set forth in Section 1003, such person is guilty of a misdemeanor punishable by a fine of not more than five hundred dollars ($500), or by imprisonment for not more than six (6) months, or by both such

fine and imprisonment. A person is guilty of a separate offense each day during which he or she commits, continues or permits a violation of Subsection 1003.2.9.1, 1003.2.9.2 or 1003.2.9.3 of this Code.

The Chief shall also order that the building post a notice of non-conformance. The notice shall be placed in a conspicuous area of the building until all required corrective work has been completed. Permits for work required under Subsections 1003.2.9.1, 1003.2.9.2 and 1003.2.9.3 of this Code that have not been obtained prior to one year following notification will be subject to a fee three times the amount of the customarily required permit fee.

4. Standards. All automatic fire sprinkler systems required by this Section, shall comply with those standards and policies established by the Chief.

SECTION 115. Section 1003.3.1 of Volume VI of the Building and Safety Code is amended to read:

1003.3.1 Sprinkler System Monitoring and Alarms. Where required. All new and existing automatic sprinkler systems shall be monitored for water flow and control valve supervision by a central station, remote station or proprietary monitoring station as defined by U.F.C. Standard 10-2 and shall be listed by Underwriters Laboratories, Inc., and hold a valid fire permit as specified under Section 105 when the number of sprinklers are:

1. Twenty or more in Group I, Divisions 1.1 and 1.2 Occupancies.
2. One hundred or more in all other occupancies.

3. As required by the Chief for special hazards.

Exception: Local alarms may be supervised at a constantly attended location when approved by the Chief.

SECTION 116. Section 1003.4 of Volume VI of the Building and Safety Code is amended to read:

1003.4 **Permissible Sprinkler Omissions.** Subject to the approval of the Chief, sprinklers may be omitted in rooms or areas as follows:

1. When the application of water or flame and water to the contents may constitute a serious life or fire hazard, as in the manufacture or storage of quantities of aluminum powder, calcium carbide, calcium phosphide, metallic sodium and potassium, quicklime, magnesium powder and sodium peroxide;

2. When other automatic fire-extinguishing systems are installed to protect special hazards or occupancies.

SECTION 117. Section 1003.5 of Volume VI of the Building and Safety Code is added to read:

1003.5 **Fire Protection System Valves - Identification.** All fire protection system valves shall be provided with approved custom signage of plastic or metal engraved materials which shall state the specific function of the valve and its normal position. If more than one valve controls the same function or zone, the signage shall so indicate and give the location of the other valve(s).

NARRATIVE

ITEM NO.

Building:

This fire occurred in a three story wood frame building. The building was a originally constructed in 1820. The entire building was renovated in 1987. The building was retro-fitted with complete automatic sprinkler protection in 1987. This building is equipped with a local fire alarm system consisting of manual pull stations, heat detectors, smoke detectors and a/v devices. The building contains twenty four guest rooms and has no after hours staff. The building manager resides in a dwelling adjacent to the hotel.

Guest:

The hotel was occupied by four guests at the time of this fire. Guest (b) (6) (#18-1) and guest (b) (6) (#18-2) were interviewed by DFM (b) (6) at the scene on 10-27-97. (b) (6) and (b) (6) stated that they and their female companions were alerted to the fire by the building fire alarm system. (b) (6) and (b) (6) stated that they went to the rear of the building and observed smoke coming from the rear kitchen window. (b) (6) stated that he and (b) (6) obtained portable fire extinguishers and attempted to extinguish the fire. According to (b) (6) the fire was near the window and the corner of the kitchen by the dining room. The female companions stated that they had attempted to call 911 from a cellular phone but had been cut off. The women stated that they re-entered Kent Manor Inn to call 911. The Queen Anne's County 911 center was advised only of an alarm sounding.

Queen Anne's County Sheriff's Department:

Deputies (b) (6) were dispatched to the Kent Manor Inn for a 911 hang up reporting an unknown type of alarm. The Sheriff's Department units arrived at approximately 0250 hrs. to find smoke coming from the rear of the kitchen area. Deputy (b) (6) conducted a search of the entire building in an attempt to locate anyone remaining in the building. Deputy (b) (6) obtained the portable fire extinguisher from his vehicle and went to the rear of the building. Upon arrival at the rear of the structure Deputy (b) (6) observed fire and smoke coming from the rear kitchen window. Deputy (b) (6) gained access to the window and discharged the fire extinguisher knocking down the main body of fire. Deputy (b) (6) acted to coordinate the efforts of the Sheriff's Department and the responding fire departments.

Fire Department:

This fire occurred in the first due area of the Kent Island Volunteer Fire Department. The first arriving units on the scene of this fire were Chief 1 and Engine 16. Chief (b) (6) assumed incident command. Second Assistant Chief (b) (6) assumed operations at the rear of the building. Initial attack was made from the rear of the building utilizing a single 1¾ inch hose line. A single 3 inch line was connected to the fire department connection of the sprinkler system. The line was charged for a few seconds by Engine 16 utilizing tank water. According to Chief (b) (6) the 3 inch line had not been fully charged when it was shut down. The installed fire pump was operating upon the arrival of the fire department. Second Assistant Chief (b) (6) stated that no problems were encountered during suppression efforts. Overhaul of the fire had begun prior to the arrival of DFM (b) (6) The following equipment responded to this fire:

Kent Island Volunteer Fire Department- Chief 1, Engine 16, Engine/Tanker 1, Rescue 1, Utility 1, and Ambulance 10

Grasonville Volunteer Fire Department- Truck 2, Engine/Tanker 2,

Queenstown Volunteer Fire Department- Engine 32, Engine/Tanker 3

United Communities Volunteer Fire Department- Engine 91, Engine/Tanker 9

Queen Anne's County Advanced Life Support

No injuries were reported to this investigator.

Origin and Cause:

DFM (b) (6) was contacted by the Queen Anne's County 911 center to respond to the Kent Manor Inn for a building fire at the request of Chief (b) (6) Upon arrival DFM (b) (6) was directed by suppression personnel to the rear of the kitchen area. Exterior examination showed only fire damage on the rear of the building. Smoke staining and some evidence of flame damage was noted at the rear window of the cooking area. Interior examination showed smoke light smoke staining in the food preparation area of the kitchen. Examination of the cooking area showed heavier smoke staining than had been noted in the food preparation area. DFM (b) (6) determined this area to be the area of origin. Examination showed the area of most burn to be in the area of the rear wall near a vertical cooler. According to suppression personnel a wheeled cart had been located next to the vertical cooler. The cart and its contents had been removed during overhaul operations. Examination of the cooler showed the side and rear of the cooler to have been exposed to high heat as evidenced by the melting of the outer metal covering of the cooler. The melting of the cooler case appears to have originated at approximately two feet from the floor surface. Examination of the electrical components of the cooler showed no apparent fire damage. An exhaust fan is located in the rear wall of the cooking area near the area of origin. Examination of the fan showed it to have minimal fire damage. The damage to the fan appears to be from fire exposure. The fan motor was not seized and spun freely. The wiring for the fan showed no evidence of internal heating. DFM (b) (6) located the wheeled cart outside of the rear of the building. Examination of the wheeled cart showed the aluminum frame to be melted starting at a point approximately two feet from the bottom of the cart. At the time of this examination it was unclear as to what was stored on the wheeled cart other than food. On 10-27-97 DFM (b) (6) interviewed (b) (6) who was in charge of the kitchen on the night prior to this fire. (b) (6) stated that he left the building at approximately 2100 hours on 10-26-97.

Origin and Cause (continued):

(b) (6) stated that he had washed and dried rags and aprons. (b) (6) stated that he had removed the rags and aprons from the dryer at approximately 2015 to 2030 hours on 10-26-97. (b) (6) stated that he placed the rags and aprons in a plastic trash bag and placed the bag on the wheeled cart. According to (b) (6) the rags and aprons seemed to be warm to the touch when he placed the rags and aprons in the plastic bag. (b) (6) stated that the only other items on the rack were bread, rolls and pans. Two 5 gallon containers of cooking oil were located on the floor adjacent to the wheeled cart. The cause of this fire could not be determined as the items from the area of origin had been removed from the building prior to the initiation of origin and cause investigation. The cause of this fire is undetermined.

Sprinkler system:

The sprinkler system in this building is regularly serviced by Livingston Fire Protection Company. On 10-27-97 DFM (b) (6) met with a service technician from Livingston Fire Protection. The sprinkler heads in the cooking area and from the food preparation area were removed by the service technician and collected as evidence by DFM (b) (6) A total of eight Omega heads were removed from the building. DFM (b) (6) prepared a diagram showing the location of each head. The numbers on the diagram correspond to the exhibit number of each head collected. DFM (b) (6) placed each sprinkler head in a quart evidence container and covered each sprinkler head with water drained from the building sprinkler system. The heads were submitted to the United States Consumer Product Safety Commission for testing. The results of the testing have not been received by this investigator.

INCIDENT, OFFENSE OR CHARGE ON ORIGINAL REPORT

CORRECT INCIDENT OR OFFENSE CLASS

CHANGED? ☐ YES

MULTIPLE CLEAR-UP ☐ YES ☐ NO

NARRATIVE

ITEM NO.

On October 28, 1997 the writer, accompanied by DFM (b) (6) of this Office, returned to the scene of the fire at the above referenced location. This fire incident occurred in the ground floor Kitchen of the above referenced property at 0250 hrs. on October 27, 1997. The cause of the fire is currently under investigation by DFM (b) (6) The purpose of this inspection was to review the location and operation of automatic sprinklers installed in this area of the building.

This building is a three-story structure of wood frame construction with automatic sprinkler protection provided throughout in accordance with the protection of residential properties. Although the actual installation of this system predated the adoption of NFPA 13R, the system design was intended to provide the level of protection intended for installation in residential properties including the use of residential style sprinklers, limited water supplies, and elimination of protection from unoccupied spaces. This building was converted from a single-family residence to a hotel occupancy with 24 guest rooms and dining room in 1987. At that time, automatic wet pipe sprinkler protection supplied by a 150 gpm @ 95 psi electrically driven fire pump and on-site water storage tank was installed as described herein. A static pressure of 80 psi was maintained in the system at all times by a small jockey pump installed as a part of this system. Since that date, several additions and modifications have been completed to the system, but not documented by this office. Sprinklers installed in the area of fire origin were Central C-1 Omega heads on CPVC pipe, and located beneath a smooth, flat horizontal ceiling of drywall construction.

The sprinkler closest to the origin of the fire was installed approximately 1 ft. from that point. The exhaust duct from the kitchen hood was approximately 1-2 in. from the side of this sprinkler and located on the side of the sprinkler opposite the point of fire origin. The top of this duct was approximately 3 in. below the sprinkler deflector and extended 6 in. to 8 in. below that level. This sprinkler did not activate at the time of the fire. The next closest sprinkler was installed at a horizontal distance of approximately 11 ft. 6 in. from the point of fire origin. This sprinkler was positioned adjacent to a 2 in. metal channel used to support a suspended rack for the hanging storage of cooking utensils, with no obvious obstructions. This sprinkler did not activate at the time of the fire, however a fixed temperature heat detector installed adjacent to this sprinkler did activate and sounded the building fire alarm. The next closest sprinkler was installed at an additional 7 ft. horizontally away from the point of fire origin with no horizontal or vertical obstructions. This sprinkler did activate at the time of the fire. The next closest sprinkler was installed approximately 8 ft. horizontally and at an angle of 90 degrees to the point of fire origin. This sprinkler did not activate. The next closest sprinkler was installed 8 ft. from the fourth described sprinkler in a direction toward the point of fire origin, but on the opposite side of the kitchen commercial-style cooking equipment and full height partition from that point. This sprinkler did activate at the time of the fire. The remaining sprinklers in the room were at greater distances from the point of fire origin, and did not activate at the time of the fire. There were no horizontal or vertical obstructions to the fourth or fifth sprinklers described herein. (Also see attached diagram).

Seven sprinklers, including all of those described above, were removed from the room of fire origin by service personnel from Livingston Fire Protection Co. An additional sprinkler was removed from the corridor adjacent to the kitchen. The purpose of this sprinkler was to act as a control for any testing that is to be conducted. All such sprinklers were placed in metal evidence containers and immersed in water drawn from the building sprinkler system. These sprinklers were forwarded to the Consumer Product Safety Commission Laboratory in Washington DC for operational testing. The results of those tests have not been received by this office at this time.

Further investigation on the cause and origin of the fire, and the circumstance of automatic sprinkler operation continue at this time.

NARRATIVE

ITEM NO.

At the direction of Fire Marshal (b) (6) on October 29, 1997 the writer met BC (b) (6) Capt. (b) (6) and three other representatives of the Fairfax County Fire and Rescue Department at the above referenced location. The purpose of this meeting was to describe the results of the sprinkler operation at the time of the 10/27/97 fire incident, as well as to provide information regarding the general fire protection measures installed at this location.

It was understood that this information will be used by that department as a part of the study regarding the operational failures of Central Omega residential sprinklers. During this meeting, a general survey, including photographs, was made of the kitchen area and selected locations in the building where various fire protection system equipment was installed. All information was recorded by representatives of Fairfax County, who also requested copies of all official reports from this office concerning this incident, and offered assistance available from that department regarding the study of Omega sprinkler operations.

No further action in this regard is required by this office at this time.

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' First Request for Production of Documents

Dear Counsel:

Pursuant to the parties' continuing duty to supplement discovery responses as mandated by 16 C.F.R. § 1025.31(f), enclosed please find a supplemental package of documents responsive to Respondents' First Request for Production of Documents. Bates pages 2141 - 2212 are or may be responsive to Request Nos. 1, 9, 48, 49, 50, 51, 52, 53 and 60; Bates page 2213 may be responsive to Request Nos. 42 and/or 43; Bates pages 2214 - 2215 are responsive to Request No. 4; Bates page 2216 is responsive to Request No. 5; and Bates pages 2217 - 2227 are or may be responsive to Request Nos. 1, 9, 48, 49, 50, 51, 52, 53 and 60. All documents are provided without waiving objections stated in Complaint Counsel's Responses to Respondents' First Request for Production of Documents.

As we indicated in our letter yesterday, a number of documents that Complaint Counsel has that may be responsive to Respondents' requests were provided to Complaint Counsel by third parties. As you know, Complaint Counsel is prohibited by statute from disclosing any information received from third parties that may be confidential commercial information or trade secret. To ensure speedy disclosure of information to Respondents, Complaint Counsel has attempted to negotiate with the third parties directly to obtain permission to provide all such information to Central.

At this time, we have received such permission from two parties - Marriott and Sheraton. The Marriott documents were produced in the box of documents forwarded to you

last week. Having just received final permission from counsel for Sheraton, those documents have been Bates stamped and copied, and are being produced to you at this time.

We continue to await a final response regarding possible claims of confidentiality and/or trade secret from counsel for a testing laboratory that has provided information to Complaint Counsel regarding the Omega. Complaint Counsel will prepare and forward those documents to Respondents immediately upon receipt of permission to disclose. If such permission is not granted by next Wednesday, May 13, 1998, we will forward the documents to the Presiding Officer for a determination of whether the third party's claims are valid, and for appropriate disclosure procedures.

You indicated in your correspondence your desire to obtain a copy of the data compilation prepared by Complaint Counsel with respect to Omega failures. Although Complaint Counsel has provided you with the underlying test data upon which its compilation is based, and although the compilation is continually evolving and is Complaint Counsel and its staff's work product, in the interest of full disclosure, Complaint Counsel has included in this supplemental response a copy of its compilation as it existed at the time the complaint was filed, with probability range categories (which are Complaint Counsel's analysis of the compilation) redacted.

Sincerely,

Deborah S. Orlove

Deborah S. Orlove, Esq.

ORDER ON MOTION TO DISMISS COMPLAINT FOR LACK OF JURISDICTION AND FOR INSUFFICIENT PLEADINGS

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") filed, on March 26, 1998, a Motion to Dismiss the Administrative Complaint in this matter on the basis that the Consumer Product Safety Commission ("CPSC") lacks jurisdiction over Central's Omega-brand fire sprinkler heads. Respondents also assert that the Complaint fails to comport with the requirements of 16 C.F.R. § 1025.11(b)(3) by failing to sufficiently inform Central with reasonable definiteness of the factual basis of the allegations of violation or hazard, an omission also requiring dismissal or at least amendment of the Complaint. Complaint Counsel for CPSC filed a response to Central's Motion on April 13, 1998. Thereafter, Central filed a Motion for Leave to Submit Reply Brief in Support of the Motion to Dismiss. On April 21, 1998, I granted this Motion, pursuant to the discretion afforded at 16 C.F.R. § 1025.23 (c) and additionally permitted CPSC the opportunity to respond to Central's Reply Brief. Complaint

Counsel's response was filed on May 4, 1998.

Central maintains that sprinkler heads are not consumer products. Rather, along with fire sprinkler systems, they are an integral part of the buildings in which they are installed. In its view, the aim of the Consumer Product Safety Act ("CPSA" or "Act") is limited to regulating those common household products which present a danger in the consumers' homes. Noting that sprinkler systems are not customarily marketed, sold, distributed or used by consumers, it is Central's position that it was not Congress's intent for the Consumer Product Safety Act to reach such products, as they are extensively regulated by state and local authorities. Motion at 1-2.

Central argues that as its various models of its Omega-brand sprinkler heads "are designed to be incorporated in integrated fire-suppression systems built into a wide range of *residential*, commercial and industrial structures" (emphasis added), the entire fire suppression system effectively becomes merged with the structure, in a manner similar to framing, ventilation, or wiring. Id. at 3. Central also believes that its method of selling its sprinkler heads is a relevant consideration, as its marketing approach is selective, being aimed at the affected industry or trade, and to the professional contractors within that field, and because it is devoid of "customary consumer marketing" techniques such as jingles and celebrity spokespersons. Id. at 5.

Turning to the Act's statutory definition of "consumer product," including its specific listed exceptions, Central notes that, under the first listed exception, a product must be customarily produced or distributed for consumer sale or use. Taking the position that the product in question must be "available for separate acquisition by consumers," Central observes that its sprinkler heads are not available in retail outlets and are only sold to professional

contractors. From this, Central deduces that there must be significant marketing of the product to consumers as a distinct article of commerce. Id. at 8-9. Continuing with its argument in this regard, Central notes that its sprinklers are designed for use in commercial or industrial settings, and that there is only occasional crossover of its industrial products into consumer use.

Central also argues that consumers do not *use* its sprinkler heads, in the sense of "enjoying, holding, occupying, or actively availing oneself of a product," and infers that a product must be available for purchase and use by the general public "off the shelf" at a retail store outlet. Id. While conceding that the term "use" is not defined, Central looks to the legislative history for assistance, noting that the Senate version of the Act included "exposure" to the product but that the "exposure" language was not included in the final conference version. "Use," in its view, requires some sort of active consumer interaction with the product. As an example, it points with approval to State Fair of Texas v. United States Consumer Product Safety Commission, 650 F.2d 1324, 1329 (5th Cir. 1981) ("State Fair II"), a case in which consumers "used" the gondola skyride by taking a ride on the amusement. With sprinkler heads, by contrast, Consumers do not "interact with, enjoy, hold, occupy or actively avail themselves of the sprinkler system or sprinkler heads." Motion at 11.

In addition to the proper "use" of the product at issue, Central maintains that another relevant consideration is *where* the product is used. Noting that the statutory definition refers to use "in or around a household, residence or school, in recreation or otherwise," Id. at 12. Central, citing to Consumer Product Safety Commission v. Anaconda Company, 593 F.2d 1314 (D.C.

Cir. 1979)[1] ("Anaconda"), asserts that the definition does not encompass the house or building itself nor products which lose their identity by virtue of their incorporation into such structures and that, accordingly, the D.C. Circuit thereby rejected arguments that the Act's jurisdiction extends to every such incorporated component part of a dwelling.

Central also refers to state and local building and fire codes, professional organizations that have developed model building codes for fire safety and a decision of the U.S. Tax Court, as additional authorities for the proposition that sprinkler systems are an integral part of the buildings in which they are installed.

Observing that the Commission's authority to seek adjudicated relief is less broad than its authority to engage in investigation and rulemaking, Central argues that if it is determined that fire sprinkler heads are within its adjudicative authority, such a conclusion would infer that the Commission's authority in the investigative and rulemaking realms extends to sprinkler systems, a conclusion contrary to the intent of Congress that the Commission, with its limited resources, focus only on those areas clearly intended for its oversight, and not intrude into areas already well regulated on the state and local level.

Alternatively, Central argues that, at a minimum, those Omega-brand sprinkler heads installed into commercial and industrial buildings are beyond the CPSC's jurisdiction. Conceding that some of its "residential" sprinkler heads may also be installed in commercial and

---

[1]Noting that the Third Circuit in Kaiser Alum. and Chem. Co. v. Consumer Product Safety Comm'n, 574 F. 2d 178 (3rd Cir. 1978), reached a contrary result holding that branch circuit wiring was a consumer product, Central argues that the Third Circuit wrongly construed the statutory provision and that, in any event, the case is distinguishable as consumers there "used" the wiring systems in order to enjoy appliances that consume electricity. Motion at 14.

industrial facilities, Central takes the position that their location matters because the Act was intended to focus on dangerous *household* products. In support of this position, Central refers to the Act's proscription over risks of injury associated with a consumer product where OSHA actions could eliminate or reduce the hazards. Central maintains that OSHA has indeed promulgated standards specifically addressing automatic sprinkler systems.

As a separate basis for dismissal of the Complaint, Central asserts that it has not been informed of the factual basis of the alleged defect and that the Complaint also fails to include a list of supporting documentary evidence, in contravention of 16 C.F.R. § 1025.11(b)(3). While made aware that the Complaint alleges that the sprinkler heads fail to operate in a significant number of instances, Central protests that the Complaint fails to inform *how* the sprinklers fail to operate. Central also asserts that the Complaint's "List and Summary of Documentary Evidence" is inadequate because the list was inadequately descriptive and no "comprehensive summary" of the documents on the list was provided.

In response, the CPSC asserts that fire sprinklers are "consumer products" within its jurisdiction, relying upon the definition of that term under Section 3 of the Act (15 U.S.C. § 2052) and in particular under subsection (a)(1)(ii). CPSC also notes that this is remedial legislation and consequently is to be liberally construed in a manner consistent with its intended purpose of protecting consumers from unsafe products. In this respect, CPSC points to expansive constructions by the Commission with their inclusion of fire extinguishers, elevators, portable gas heaters, and fire alarm equipment as consumer products and by the courts, with their inclusion of glazing materials and aluminum wiring within the term. In its view, the key requirement is that the product be a distinct and final article of commerce, not an article that

exists only at an intermediate stage of production.

CPSC also maintains that Central blurs that distinction between sprinkler *systems* and the *sprinklers themselves.* In this regard, CPSC disavows jurisdiction over sprinkler *systems* but maintains jurisdiction exists over the sprinklers, a distinction "crucial to the jurisdictional inquiry." Complaint Counsel's Opposition ("Opposition") at 7. CPSC further notes that courts have drawn similar distinctions between a system and its components as, for example, between aluminum wiring and wiring *systems.*

CPSC further asserts that sprinklers qualify as "consumer products" because they are produced or distributed for the personal use, consumption, or enjoyment of consumers. Thus, it argues, while the Act clearly contemplates coverage of an article that is produced or distributed for sale to consumers, *use, consumption or enjoyment by consumers* is also sufficient. For this reason marketing, availability in retail sales, or actual sale to the general public are not prerequisites to jurisdiction. Rather, CPSC maintains, the "true test [is] . . . whether consumers are exposed to the hazards associated with them." Id. at 11. (Emphasis in Opposition.) As the sprinklers at issue have been installed in homes, apartments, nursing homes, hospitals, schools, and recreational facilities, consumers have been exposed to the significant hazard of uncontained fire.

As to Central's assertion that consumers "use" contemplates that they "actively interact" or "manipulate" the product, CPSC notes that other similar products such as smoke detectors require no more interaction or manipulation than sprinklers, and they also only activate in an emergency. From CPSC's perspective, the consumers "use or enjoyment" is their reliance on the devices functioning during a fire. Id. at 13.

Referring to the statutory language that the consumer product be "in or around a permanent or temporary household or residence, a school, in recreation, or otherwise", CPSC asserts that this language is to be construed as an "assurance of comprehensiveness rather than a limitation on jurisdiction."[2] Id. at 13, quoting from ASG Industries, Inc. v. Consumer Product Safety Comm'n, 593 F. 2d 1323, 1328 (D.C. Cir. 1979).

Addressing Central's argument that the sprinklers become merged with the structure in which they are installed and thus become part of the housing itself and thereby excluded from coverage, CPSC refers to the Third Circuit's rejection of that argument on the basis that such an approach would result in the exclusion of many common consumer products, such as dishwashers, furnaces, or lighting fixtures.

As to Central's "partial" jurisdiction argument, CPSC asserts that, factually, the assertion that some of Central's sprinkler models are installed in commercial and industrial settings is inaccurate and that hospitals, schools, shelters and libraries are "commercial" facilities and covered by the statutory language which includes "residence(s), schools, recreational facilities and other places . . . ." Id. at 15.

Responding to Central's assertion that OSHA has supplanted its jurisdiction, CPSC maintains that the mere potential for authority, unexercised, is insufficient for Section 31(a) of the Act to be triggered, that OSHA applies only to the workplace, whereas the sprinklers here are found in a broader range of locations, and that, in any event, current OSHA regulations only apply to sprinkler *systems* and do not address the problem of defective sprinklers. Similarly,

---

[2]While substantively unaffected, the quoted language actually provides, "is not a limitation on jurisdiction, but rather an assurance of comprehensiveness."

addressing Central's assertion that the CPSC is precluded from asserting jurisdiction because state and local jurisdictions already regulate the subject, CPSC asserts that these entities again only regulate sprinkler *systems*, not defective *sprinklers*, and that in any event it was Congress' intention, where the CPSC develops safety standards, that those standards preempt state and local laws.

Discussion

I. Whether Central's Sprinklers are "Consumer Products" within the Consumer Product Safety Act

The definition of "consumer product" has been described as "complex"[3] and ambiguous.[4] Added to this, the resolution of jurisdictional questions as to whether an item is a "consumer product" is made more difficult by the fact that the term "consumer" is not defined in the Act. Nevertheless, the resolution of each particular question must begin with the statutory language, which provides:

> Sec. 3 [15 U.S.C. 2052]
>
> (a) For purposes of this chapter:
>
> (1) The term "consumer product" means any article, or component part thereof, produced or distributed (i) for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation, or otherwise, or (ii) for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise; but such term does not include (Emphasis added.)
>
> (A) any article which is not customarily produced or distributed for sale to, or use or consumption by, or enjoyment of, a consumer,

---

[3]ASG at 1327.

[4]Consumer Product Safety Commission v. Chance, 441 F.Supp. 228, 231 (D.D.C. 1977).

(B) tobacco and tobacco products,

(C) motor vehicles or motor vehicle equipment (as defined by sections 102(3) and (4) of the National Traffic and Motor Vehicle Safety Act of 1966 (15 U.S.C. @ 1391(3) and (4))),

(D) pesticides (as defined by the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. @ 136 et seq.)),

(E) any article which, if sold by the manufacturer, producer, or importer, would be subject to the tax imposed by section 4181 of the Internal Revenue Code of 1954 (26 U.S.C. @ 4181) (determined without regard to any exemptions from such tax provided by section 4182 or 4221, or any other provision of such Code), or any component of any such article,

(F) aircraft, aircraft engines, propellers, or appliances (as defined in section 101 of the Federal Aviation Act of 1958 (49 U.S.C. @ 1301)),

(G) boats which could be subjected to safety regulation under the Federal Boat Safety Act of 1971 (46 U.S.C. @ 1451 et seq.); vessels and appurtenances to vessels (other than such boats), which could be subjected to safety regulation under title 52 of the Revised Statutes or other marine safety statutes administered by the department in which the Coast Guard is operating; and equipment (including associated equipment, as defined in section 3(8) of the Federal Boat Safety Act of 1971 (46 U.S.C. @ 1452(8)) to the extent that a risk of injury associated with the use of such equipment on boats or vessels could be eliminated or reduced by actions taken under any statute referred to in this subparagraph,

(H) drugs, devices or cosmetics (as such terms are defined in sections 201(g), (h) and (i) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. @ 321(g), (h) and (i))), or

(I) food. The term "food," as used in this subparagraph means all "food", as defined in section 201(f) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. @ 321(f)), including poultry and poultry products (as defined in sections 4(e) and (f) of the Poultry Products Inspection Act (21 U.S.C. @ 453(e) and (f)), meat, meat food products (as defined in section 1(j) of the Federal Meat Inspection Act (21 U.S.D. @ 601(j))), and eggs and egg products (as defined in section 4 of the Egg Products Inspection Act (21 U.S.C. @ 1033)).

Except for the regulation under this chapter or the Federal Hazardous Substances Act (15 U.S.C. @ 1261 et seq.) of fireworks devices or any substances

> intended for use as a component of any such device, the Commission shall have no authority under the functions transferred pursuant to section 2079 of this title to regulate any product or article described in subparagraph (E) of this paragraph or described, without regard to quantity, in section 845(a)(5) of title 18. See sections 2079(d) and 2080 of this title, for other limitations on Commission's authority to regulate certain consumer products.

As the text reflects, Congress chose to define the term "consumer product" generally, followed by the enumeration of specific exceptions to the term. It is plain that none of the specific exceptions, (although particular enough to exclude motor vehicles, tobacco, aircraft, and boats, among others), expressly address sprinklers, nor has Central contended otherwise. Thus present, is the issue of whether the general, albeit ambiguous, language defining "consumer product" applies to the sprinklers in question. As the statute does not provide an explicit answer, this question must be resolved in the context of a remedial statute intended to be broadly construed to effect its overarching purpose of protecting consumers from hazardous products. Reliance upon the remedial nature of the Consumer Product Safety Act is appropriate, especially where, as the Fifth Circuit aptly pointed out, the statute need not be read "as if it were a wonderfully constructed jig-saw puzzle, with each word having only one precise place, yielding, when assembled, an unambiguous picture." State Fair II at 1331. For the reasons which follow, I find that the sprinklers are "consumer products."

Central argues that, once installed, sprinkler heads become an integral part of the building and that, so merged, they are indistinguishable from the structure itself, just as framing, ventilation, and wiring become incorporated into the structure.[5] While it is accurate that *housing*

---

[5]Central also expresses concern that if jurisdiction is found in this litigation over its *sprinklers*, given that the CPSC's authority to conduct investigations and engage in rulemaking is broader than its authority to seek adjudicated relief, the Commission would then have the

itself is not a consumer product and that the Act does not extend to every component part of a structure, particular components may be covered. In Anaconda, the D.C. Circuit explained that for a component to qualify as a consumer product it must be produced or distributed as a distinct article of commerce or at least as a component part of such a distinct article. Id. at 1319-1320. Excluded from coverage as component parts are those parts of a product that are not distinct, existing only at an intermediate stage of production. Id. at 1319. Although the Court was only facing whether *aluminum wiring systems as a whole* were "consumer products," it acknowledged that such systems are made up of a number of products, "some or all of which may qualify as 'consumer products' within the applicable definition." Id. at 1317.

In Kaiser Aluminum and Chemical Corp. v. The United States Consumer Product Safety Commission, 574 F.2d 178 (3rd Cir. 1978), ("Kaiser"), the Third Circuit, addressing arguments similar to those advanced here by Central, rejected the idea that the CPSA incorporates "all the arcane knowledge" as to when personal property becomes part of a building, as such an interpretation would exclude many common products such as furnaces, dishwashers and lighting fixtures. Instead, the Court focused upon the exposure of consumers to hazards created by a product, noting that even an undisputed industrial product " may lose its claim for exclusion if a significant number of consumers are thereby exposed to hazards associated with the product." Id. at 181.

There is no contention by Central that its sprinklers are not produced and sold as distinct articles of commerce. While Anaconda and Kaiser potentially arrived at different results on the

---

implicit authority to regulate sprinkler *systems* themselves. It is sufficient to note that this specter is not in issue here.

issue of whether aluminum wiring *systems*[6] were consumer products, both rejected the idea that jurisdiction turns on whether a particular fixture becomes part of the house and therefore excludable from the Act's coverage. These Courts concluded that component parts may be "consumer products," and focused on the issue of whether consumers were exposed to hazards associated with the products.

Central also takes the position that the Act is limited to regulating hazardous products found in consumers' homes. Consistent with this assertion, Central maintains that the product must be available "off the shelf" at the retail level. In this regard Central notes that its product advertising is directed only to the relevant industrial trade and to the professional contractors within it.

Several federal courts have addressed the general definition of the term "consumer product." While the decisions have reflected some differences[7] among the courts in their

---

[6]The Anaconda Court remanded the matter for further proceedings.

[7]In Walt Disney Productions v. U.S. CPSC, No. 79-0170-Lew-(Px), 1979 U.S. Dist. LEXIS 12996, (C.D. Cal 1979), the District Court, influenced by the fact that riders on an aerial tram attraction were only passive participants, concluded that the ride was not, as a whole, for the personal use, consumption, or enjoyment of consumers. The Court took the view that the Act only contemplated coverage over products for which it was practicable to obtain a sample and that it was concerned that an overly expansive reading would put the Commission at risk of spreading its limited resources too thin. Id. at ¶ 20-22. As noted, other courts have concluded that occupancy of such a ride and exposure to the hazards they present are sufficient to satisfy the "personal use, consumption or enjoyment" clause in the definition of "consumer product." State Fair of Texas, 481 F. Supp. 1070,1077 (N.D.Tx. 1979). The Fifth Circuit in State Fair II at 1334, also rejected the view set forth in Walt Disney and in Bell Enterprises, Inc. v. Consumer Product Safety Commission 645 F.2d 26 (10th Cir. 1981) that consumers need to "control" a product in order to satisfy the "consumer use" provision, noting that no legislative history supported this view and that consumers inability to control products in an institutional setting exposes them to the potential for greater risk of injury. Accepting, for the moment, the other concerns expressed by the California District Court in Walt Disney, it is noted that in this instance it would be

construction of the term, most have spoken about the broad purposes behind clauses (i) and (ii). In Anaconda the Court stated that, taken together, the clauses were designed to include the various ways "through which consumers acquire products and *are exposed to the risks of injury associated with those products*." Id. at 1320. (emphasis added). In Consumer Product Safety Commission v. Chance, 441 F. Supp. 228 (D.D.C. 1977) ("Chance") the Court held that the definition's phrase "in recreation or otherwise" is an independent basis of jurisdiction and accordingly rejected the argument that the definition is limited to household and school products holding that jurisdiction depends upon the extent to which consumers were exposed to the risks associated with the product. Id. at 231, 233. So too, the Court in ASG, in discussing the definitional phrase that a consumer product must be used or intended for use "in or around a permanent or temporary household or residence, a school or otherwise," held that the enumeration of locations and activities is *not* a limitation on jurisdiction, but rather an assurance of comprehensiveness. Id. at 1328. The Fifth Circuit, relying upon the language employed in the Act, the broad remedial policy underlying it and the legislative history, has reached the same conclusion. The Fifth Circuit rejects the argument that the phrase "in recreation" is tied to activity at a household, residence or school, by holding that each part identified in the definition is an independent basis for jurisdiction and, accordingly, that a consumer product is not necessarily a household product. Thus, the Court stated that the Act is broader than the sale of merchandise to consumers, that use of articles is sufficient and that a critical factor is the

---

practicable to obtain a sample of the sprinklers in issue, and that with regard to the concern over limited resources, the Fifth Circuit has observed that it is not the courts' prerogative to second-guess agency decisions properly within their discretion and that the Commission is in the best position to decide what to accomplish within its budget. Id. at 1334.

consumer's exposure to a product, not the legal relation to it. State Fair II at 1328.

Quoting from the legislative history, the Anaconda Court also explained that the scope of the term "individual" within the phrase that the article in question must be one "capable of production for sale to an individual," by noting that "products which are primarily or exclusively sold to industrial or institutional buyers would be included within the definition of consumer product so long as they were produced or distributed for the ***use*** of consumers." Id. (emphasis added). The Court, aware of some indicators of a legislative intent to exclude "industrial products" from the Act's coverage, pointedly noted that subsection 3(a)(1)(A) does *not* accomplish this, concluding that even where a large portion of a product is distributed for industrial purposes, the product remains a "consumer product" as long as the sale *or* use is customary and more than occasional. Id. 1322. Thus, the Court cited with approval to Chance, which upheld CPSC jurisdiction over an amusement ride even though the ride was sold to an institutional buyer and not to consumers directly.

I concur with the weight of judicial opinion rejecting the narrow interpretation, urged here by Central, that the Act is limited to hazardous products found in residences. As these courts have concluded, the focus of the Act is directed towards consumers' exposure to hazards associated with products[8]. Thus, several courts have found that the Act applies to hazardous products completely unassociated with residences, such as the amusement park rides in Chance

---

[8]For this reason the Court in U.S. v. One Hazardous Product Consisting of a Refuse Bin, 487 F. Supp 581 (D.N.J. 1980) also concluded that refuse bins found in apartment complexes, supermarkets, motels, retail businesses and other locations, were found to be "consumer products." The Court found that the term encompasses products whose distribution results in a significant number of **consumers being exposed to the hazard** associated with the product. Id. at 584. (emphasis added).

and State Fair II.[9]

I also note that it would be incongruous with the overall intent of this remedial legislation to conclude that a product whose entire function is safety related, and not specifically excepted from the definition's scope, is outside of the Consumer Product Safety Act's coverage. Further, even if for arguments sake it were momentarily accepted that, under Central's interpretation, the Act is limited to products found in residences, it would be untenable to conclude that Congress would have intended that protection from a hazardous product would be so incomplete, being limited to homes, when an identical or related model of the product, presenting the same hazard, would not be subject to the Act's reach merely because it was located in a hotel or other building. Thus, in the alternative, I conclude that at a minimum, once a product is found in a home, the ability to regulate it under the Act applies to all other locations where it is found, as Congress could not have intended such incomplete and irrational coverage of hazardous products.

Last, Central's arguments that OSHA and state and local regulation operate to preempt the CPSC are also rejected. As the D.C. Circuit observed in ASG, there must be actual, not potential, regulation of the product. The Court went on to note that OSHA's focus is providing a safe workplace and that this may be apart from producing articles that are themselves hazardous to consumers. Id. at 1328-1329. Further, as noted by the Third Circuit in Kaiser in addressing the role of local building codes in regulating consumer products, the "design and performance standards for components are now a matter of national concern." Id. at 181. So too, the Fifth

---

[9]Central appears to want it both ways, by citing State Fair II with approval in part for its position that consumer "use" of a product requires interaction with it, accepting that the consumers' riding on amusements constitutes such interaction, while maintaining that such amusements are still outside of the Act's coverage as they are not part of consumers' homes.

Circuit observed that the Act intended a broad remedial purpose and that Congress determined that local government regulation of hazards posed by consumer products is inadequate. State Fair II at 1333.

II. Whether the Complaint Satisfies the Procedural Rules by Providing Reasonable Definiteness of the Charges

Central's arguments in this regard may be summarily resolved. The purpose of the complaint is to notify the respondent in a general way of the violation charged. Certainly the complaint accomplishes this. Central has been made aware that the Consumer Product Safety Commission asserts that its Omega brand sprinklers are hazardous in the sense that they have been alleged to malfunction in significant numbers. While the requirement that a "list and summary of documentary evidence supporting the charges" be provided, raises legitimate concerns, the rule does not call for a "comprehensive" summary and, in any event, this issue is moot as the documents themselves are being provided during discovery, a process that has already begun with intensity.

Central's suggestion that CPSC has some duty to explain the particular reason for the alleged failures is rejected. Even at hearing, Complaint Counsel has no duty to provide an explanation of how it is that the sprinklers malfunction. It is sufficient only to demonstrate that they *do* have a significant failure rate. Assuming that Complaint Counsel can demonstrate this, it would be Central's responsibility to figure out why it is happening, not that of the CPSC.

Accordingly, Central Sprinkler Corporation's and Central Sprinkler Company's Motion

to Dismiss the Administrative Complaint of the Consumer Product Safety Commission is DENIED.

So Ordered.

ORDER ON MOTION TO DISMISS COMPLAINT FOR LACK OF JURISDICTION AND FOR INSUFFICIENT PLEADINGS

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") filed, on March 26, 1998, a Motion to Dismiss the Administrative Complaint in this matter on the basis that the Consumer Product Safety Commission ("CPSC") lacks jurisdiction over Central's Omega-brand fire sprinkler heads. Respondents also assert that the Complaint fails to comport with the requirements of 16 C.F.R. § 1025.11(b)(3) by failing to sufficiently inform Central with reasonable definiteness of the factual basis of the allegations of violation or hazard, an omission also requiring dismissal or at least amendment of the Complaint. Complaint Counsel for CPSC filed a response to Central's Motion on April 13, 1998. Thereafter, Central filed a Motion for Leave to Submit Reply Brief in Support of the Motion to Dismiss. On April 21, 1998, I granted this Motion, pursuant to the discretion afforded at 16 C.F.R. § 1025.23 (c) and additionally permitted CPSC the opportunity to respond to Central's Reply Brief. Complaint

Counsel's response was filed on May 4, 1998.

Central maintains that sprinkler heads are not consumer products. Rather, along with fire sprinkler systems, they are an integral part of the buildings in which they are installed. In its view, the aim of the Consumer Product Safety Act ("CPSA" or "Act") is limited to regulating those common household products which present a danger in the consumers' homes. Noting that sprinkler systems are not customarily marketed, sold, distributed or used by consumers, it is Central's position that it was not Congress's intent for the Consumer Product Safety Act to reach such products, as they are extensively regulated by state and local authorities. Motion at 1-2.

Central argues that as its various models of its Omega-brand sprinkler heads "are designed to be incorporated in integrated fire-suppression systems built into a wide range of *residential*, commercial and industrial structures" (emphasis added), the entire fire suppression system effectively becomes merged with the structure, in a manner similar to framing, ventilation, or wiring. Id. at 3. Central also believes that its method of selling its sprinkler heads is a relevant consideration, as its marketing approach is selective, being aimed at the affected industry or trade, and to the professional contractors within that field, and because it is devoid of "customary consumer marketing" techniques such as jingles and celebrity spokespersons. Id. at 5.

Turning to the Act's statutory definition of "consumer product," including its specific listed exceptions, Central notes that, under the first listed exception, a product must be customarily produced or distributed for consumer sale or use. Taking the position that the product in question must be "available for separate acquisition by consumers," Central observes that its sprinkler heads are not available in retail outlets and are only sold to professional

contractors. From this, Central deduces that there must be significant marketing of the product to consumers as a distinct article of commerce. Id. at 8-9. Continuing with its argument in this regard, Central notes that its sprinklers are designed for use in commercial or industrial settings, and that there is only occasional crossover of its industrial products into consumer use.

Central also argues that consumers do not *use* its sprinkler heads, in the sense of "enjoying, holding, occupying, or actively availing oneself of a product," and infers that a product must be available for purchase and use by the general public "off the shelf" at a retail store outlet. Id. While conceding that the term "use" is not defined, Central looks to the legislative history for assistance, noting that the Senate version of the Act included "exposure" to the product but that the "exposure" language was not included in the final conference version. "Use," in its view, requires some sort of active consumer interaction with the product. As an example, it points with approval to State Fair of Texas v. United States Consumer Product Safety Commission, 650 F.2d 1324, 1329 (5th Cir. 1981) ("State Fair II"), a case in which consumers "used" the gondola skyride by taking a ride on the amusement. With sprinkler heads, by contrast, Consumers do not "interact with, enjoy, hold, occupy or actively avail themselves of the sprinkler system or sprinkler heads." Motion at 11.

In addition to the proper "use" of the product at issue, Central maintains that another relevant consideration is *where* the product is used. Noting that the statutory definition refers to use "in or around a household, residence or school, in recreation or otherwise," Id. at 12. Central, citing to Consumer Product Safety Commission v. Anaconda Company, 593 F.2d 1314 (D.C.

Cir. 1979)[1] ("Anaconda"), asserts that the definition does not encompass the house or building itself nor products which lose their identity by virtue of their incorporation into such structures and that, accordingly, the D.C. Circuit thereby rejected arguments that the Act's jurisdiction extends to every such incorporated component part of a dwelling.

Central also refers to state and local building and fire codes, professional organizations that have developed model building codes for fire safety and a decision of the U.S. Tax Court, as additional authorities for the proposition that sprinkler systems are an integral part of the buildings in which they are installed.

Observing that the Commission's authority to seek adjudicated relief is less broad than its authority to engage in investigation and rulemaking, Central argues that if it is determined that fire sprinkler heads are within its adjudicative authority, such a conclusion would infer that the Commission's authority in the investigative and rulemaking realms extends to sprinkler systems, a conclusion contrary to the intent of Congress that the Commission, with its limited resources, focus only on those areas clearly intended for its oversight, and not intrude into areas already well regulated on the state and local level.

Alternatively, Central argues that, at a minimum, those Omega-brand sprinkler heads installed into commercial and industrial buildings are beyond the CPSC's jurisdiction. Conceding that some of its "residential" sprinkler heads may also be installed in commercial and

---

[1]Noting that the Third Circuit in Kaiser Alum. and Chem. Co. v. Consumer Product Safety Comm'n, 574 F. 2d 178 (3rd Cir. 1978), reached a contrary result holding that branch circuit wiring was a consumer product, Central argues that the Third Circuit wrongly construed the statutory provision and that, in any event, the case is distinguishable as consumers there "used" the wiring systems in order to enjoy appliances that consume electricity. Motion at 14.

industrial facilities, Central takes the position that their location matters because the Act was intended to focus on dangerous *household* products. In support of this position, Central refers to the Act's proscription over risks of injury associated with a consumer product where OSHA actions could eliminate or reduce the hazards. Central maintains that OSHA has indeed promulgated standards specifically addressing automatic sprinkler systems.

As a separate basis for dismissal of the Complaint, Central asserts that it has not been informed of the factual basis of the alleged defect and that the Complaint also fails to include a list of supporting documentary evidence, in contravention of 16 C.F.R. § 1025.11(b)(3). While made aware that the Complaint alleges that the sprinkler heads fail to operate in a significant number of instances, Central protests that the Complaint fails to inform *how* the sprinklers fail to operate. Central also asserts that the Complaint's "List and Summary of Documentary Evidence" is inadequate because the list was inadequately descriptive and no "comprehensive summary" of the documents on the list was provided.

In response, the CPSC asserts that fire sprinklers are "consumer products" within its jurisdiction, relying upon the definition of that term under Section 3 of the Act (15 U.S.C. § 2052) and in particular under subsection (a)(1)(ii). CPSC also notes that this is remedial legislation and consequently is to be liberally construed in a manner consistent with its intended purpose of protecting consumers from unsafe products. In this respect, CPSC points to expansive constructions by the Commission with their inclusion of fire extinguishers, elevators, portable gas heaters, and fire alarm equipment as consumer products and by the courts, with their inclusion of glazing materials and aluminum wiring within the term. In its view, the key requirement is that the product be a distinct and final article of commerce, not an article that

exists only at an intermediate stage of production.

CPSC also maintains that Central blurs that distinction between sprinkler *systems* and the *sprinklers themselves.* In this regard, CPSC disavows jurisdiction over sprinkler *systems* but maintains jurisdiction exists over the sprinklers, a distinction "crucial to the jurisdictional inquiry." Complaint Counsel's Opposition ("Opposition") at 7. CPSC further notes that courts have drawn similar distinctions between a system and its components as, for example, between aluminum wiring and wiring *systems.*

CPSC further asserts that sprinklers qualify as "consumer products" because they are produced or distributed for the personal use, consumption, or enjoyment of consumers. Thus, it argues, while the Act clearly contemplates coverage of an article that is produced or distributed for sale to consumers, *use, consumption or enjoyment by consumers* is also sufficient. For this reason marketing, availability in retail sales, or actual sale to the general public are not prerequisites to jurisdiction. Rather, CPSC maintains, the "true test [is] . . . whether consumers are exposed to the hazards associated with them." Id. at 11. (Emphasis in Opposition.) As the sprinklers at issue have been installed in homes, apartments, nursing homes, hospitals, schools, and recreational facilities, consumers have been exposed to the significant hazard of uncontained fire.

As to Central's assertion that consumers "use" contemplates that they "actively interact" or "manipulate" the product, CPSC notes that other similar products such as smoke detectors require no more interaction or manipulation than sprinklers, and they also only activate in an emergency. From CPSC's perspective, the consumers "use or enjoyment" is their reliance on the devices functioning during a fire. Id. at 13.

Referring to the statutory language that the consumer product be "in or around a permanent or temporary household or residence, a school, in recreation, or otherwise", CPSC asserts that this language is to be construed as an "assurance of comprehensiveness rather than a limitation on jurisdiction."[2] Id. at 13, quoting from ASG Industries, Inc. v. Consumer Product Safety Comm'n, 593 F. 2d 1323, 1328 (D.C. Cir. 1979).

Addressing Central's argument that the sprinklers become merged with the structure in which they are installed and thus become part of the housing itself and thereby excluded from coverage, CPSC refers to the Third Circuit's rejection of that argument on the basis that such an approach would result in the exclusion of many common consumer products, such as dishwashers, furnaces, or lighting fixtures.

As to Central's "partial" jurisdiction argument, CPSC asserts that, factually, the assertion that some of Central's sprinkler models are installed in commercial and industrial settings is inaccurate and that hospitals, schools, shelters and libraries are "commercial" facilities and covered by the statutory language which includes "residence(s), schools, recreational facilities and other places . . . ." Id. at 15.

Responding to Central's assertion that OSHA has supplanted its jurisdiction, CPSC maintains that the mere potential for authority, unexercised, is insufficient for Section 31(a) of the Act to be triggered, that OSHA applies only to the workplace, whereas the sprinklers here are found in a broader range of locations, and that, in any event, current OSHA regulations only apply to sprinkler *systems* and do not address the problem of defective sprinklers. Similarly,

---

[2]While substantively unaffected, the quoted language actually provides, "is not a limitation on jurisdiction, but rather an assurance of comprehensiveness."

addressing Central's assertion that the CPSC is precluded from asserting jurisdiction because state and local jurisdictions already regulate the subject, CPSC asserts that these entities again only regulate sprinkler *systems*, not defective *sprinklers*, and that in any event it was Congress' intention, where the CPSC develops safety standards, that those standards preempt state and local laws.

Discussion

I. Whether Central's Sprinklers are "Consumer Products" within the Consumer Product Safety Act

The definition of "consumer product" has been described as "complex"[3] and ambiguous.[4] Added to this, the resolution of jurisdictional questions as to whether an item is a "consumer product" is made more difficult by the fact that the term "consumer" is not defined in the Act. Nevertheless, the resolution of each particular question must begin with the statutory language, which provides:

> Sec. 3 [15 U.S.C. 2052]
>
> (a) For purposes of this chapter:
>
> (1) The term "consumer product" means any article, or component part thereof, produced or distributed (i) for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation, or otherwise, or (ii) for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise; but such term does not include (Emphasis added.)
>
> (A) any article which is not customarily produced or distributed for sale to, or use or consumption by, or enjoyment of, a consumer,

---

[3]ASG at 1327.

[4]Consumer Product Safety Commission v. Chance, 441 F.Supp. 228, 231 (D.D.C. 1977).

(B) tobacco and tobacco products,

(C) motor vehicles or motor vehicle equipment (as defined by sections 102(3) and (4) of the National Traffic and Motor Vehicle Safety Act of 1966 (15 U.S.C. @ 1391(3) and (4))),

(D) pesticides (as defined by the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. @ 136 et seq.)),

(E) any article which, if sold by the manufacturer, producer, or importer, would be subject to the tax imposed by section 4181 of the Internal Revenue Code of 1954 (26 U.S.C. @ 4181) (determined without regard to any exemptions from such tax provided by section 4182 or 4221, or any other provision of such Code), or any component of any such article,

(F) aircraft, aircraft engines, propellers, or appliances (as defined in section 101 of the Federal Aviation Act of 1958 (49 U.S.C. @ 1301)),

(G) boats which could be subjected to safety regulation under the Federal Boat Safety Act of 1971 (46 U.S.C. @ 1451 et seq.); vessels and appurtenances to vessels (other than such boats), which could be subjected to safety regulation under title 52 of the Revised Statutes or other marine safety statutes administered by the department in which the Coast Guard is operating; and equipment (including associated equipment, as defined in section 3(8) of the Federal Boat Safety Act of 1971 (46 U.S.C. @ 1452(8)) to the extent that a risk of injury associated with the use of such equipment on boats or vessels could be eliminated or reduced by actions taken under any statute referred to in this subparagraph,

(H) drugs, devices or cosmetics (as such terms are defined in sections 201(g), (h) and (i) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. @ 321(g), (h) and (i))), or

(I) food. The term "food," as used in this subparagraph means all "food", as defined in section 201(f) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. @ 321(f)), including poultry and poultry products (as defined in sections 4(e) and (f) of the Poultry Products Inspection Act (21 U.S.C. @ 453(e) and (f)), meat, meat food products (as defined in section 1(j) of the Federal Meat Inspection Act (21 U.S.D. @ 601(j))), and eggs and egg products (as defined in section 4 of the Egg Products Inspection Act (21 U.S.C. @ 1033)).

Except for the regulation under this chapter or the Federal Hazardous Substances Act (15 U.S.C. @ 1261 et seq.) of fireworks devices or any substances

> intended for use as a component of any such device, the Commission shall have no authority under the functions transferred pursuant to section 2079 of this title to regulate any product or article described in subparagraph (E) of this paragraph or described, without regard to quantity, in section 845(a)(5) of title 18. See sections 2079(d) and 2080 of this title, for other limitations on Commission's authority to regulate certain consumer products.

As the text reflects, Congress chose to define the term "consumer product" generally, followed by the enumeration of specific exceptions to the term. It is plain that none of the specific exceptions, (although particular enough to exclude motor vehicles, tobacco, aircraft, and boats, among others), expressly address sprinklers, nor has Central contended otherwise. Thus present, is the issue of whether the general, albeit ambiguous, language defining "consumer product" applies to the sprinklers in question. As the statute does not provide an explicit answer, this question must be resolved in the context of a remedial statute intended to be broadly construed to effect its overarching purpose of protecting consumers from hazardous products. Reliance upon the remedial nature of the Consumer Product Safety Act is appropriate, especially where, as the Fifth Circuit aptly pointed out, the statute need not be read "as if it were a wonderfully constructed jig-saw puzzle, with each word having only one precise place, yielding, when assembled, an unambiguous picture." State Fair II at 1331. For the reasons which follow, I find that the sprinklers are "consumer products."

Central argues that, once installed, sprinkler heads become an integral part of the building and that, so merged, they are indistinguishable from the structure itself, just as framing, ventilation, and wiring become incorporated into the structure.[5] While it is accurate that *housing*

---

[5]Central also expresses concern that if jurisdiction is found in this litigation over its *sprinklers*, given that the CPSC's authority to conduct investigations and engage in rulemaking is broader than its authority to seek adjudicated relief, the Commission would then have the

itself is not a consumer product and that the Act does not extend to every component part of a structure, particular components may be covered. In Anaconda, the D.C. Circuit explained that for a component to qualify as a consumer product it must be produced or distributed as a distinct article of commerce or at least as a component part of such a distinct article. Id. at 1319-1320. Excluded from coverage as component parts are those parts of a product that are not distinct, existing only at an intermediate stage of production. Id. at 1319. Although the Court was only facing whether *aluminum wiring systems as a whole* were "consumer products," it acknowledged that such systems are made up of a number of products, "some or all of which may qualify as 'consumer products' within the applicable definition." Id. at 1317.

In Kaiser Aluminum and Chemical Corp. v. The United States Consumer Product Safety Commission, 574 F.2d 178 (3rd Cir. 1978), ("Kaiser"), the Third Circuit, addressing arguments similar to those advanced here by Central, rejected the idea that the CPSA incorporates "all the arcane knowledge" as to when personal property becomes part of a building, as such an interpretation would exclude many common products such as furnaces, dishwashers and lighting fixtures. Instead, the Court focused upon the exposure of consumers to hazards created by a product, noting that even an undisputed industrial product " may lose its claim for exclusion if a significant number of consumers are thereby exposed to hazards associated with the product." Id. at 181.

There is no contention by Central that its sprinklers are not produced and sold as distinct articles of commerce. While Anaconda and Kaiser potentially arrived at different results on the

---

implicit authority to regulate sprinkler *systems* themselves. It is sufficient to note that this specter is not in issue here.

issue of whether aluminum wiring *systems*[6] were consumer products, both rejected the idea that jurisdiction turns on whether a particular fixture becomes part of the house and therefore excludable from the Act's coverage. These Courts concluded that component parts may be "consumer products," and focused on the issue of whether consumers were exposed to hazards associated with the products.

Central also takes the position that the Act is limited to regulating hazardous products found in consumers' homes. Consistent with this assertion, Central maintains that the product must be available "off the shelf" at the retail level. In this regard Central notes that its product advertising is directed only to the relevant industrial trade and to the professional contractors within it.

Several federal courts have addressed the general definition of the term "consumer product." While the decisions have reflected some differences[7] among the courts in their

---

[6]The Anaconda Court remanded the matter for further proceedings.

[7]In Walt Disney Productions v. U.S. CPSC, No. 79-0170-Lew-(Px), 1979 U.S. Dist. LEXIS 12996, (C.D. Cal 1979), the District Court, influenced by the fact that riders on an aerial tram attraction were only passive participants, concluded that the ride was not, as a whole, for the personal use, consumption, or enjoyment of consumers. The Court took the view that the Act only contemplated coverage over products for which it was practicable to obtain a sample and that it was concerned that an overly expansive reading would put the Commission at risk of spreading its limited resources too thin. Id. at ¶ 20-22. As noted, other courts have concluded that occupancy of such a ride and exposure to the hazards they present are sufficient to satisfy the "personal use, consumption or enjoyment" clause in the definition of "consumer product." State Fair of Texas, 481 F. Supp. 1070,1077 (N.D.Tx. 1979). The Fifth Circuit in State Fair II at 1334, also rejected the view set forth in Walt Disney and in Bell Enterprises, Inc. v. Consumer Product Safety Commission 645 F.2d 26 (10th Cir. 1981) that consumers need to "control" a product in order to satisfy the "consumer use" provision, noting that no legislative history supported this view and that consumers inability to control products in an institutional setting exposes them to the potential for greater risk of injury. Accepting, for the moment, the other concerns expressed by the California District Court in Walt Disney, it is noted that in this instance it would be

construction of the term, most have spoken about the broad purposes behind clauses (i) and (ii). In Anaconda the Court stated that, taken together, the clauses were designed to include the various ways "through which consumers acquire products and *are exposed to the risks of injury associated with those products*." Id. at 1320. (emphasis added). In Consumer Product Safety Commission v. Chance, 441 F. Supp. 228 (D.D.C. 1977) ("Chance") the Court held that the definition's phrase "in recreation or otherwise" is an independent basis of jurisdiction and accordingly rejected the argument that the definition is limited to household and school products holding that jurisdiction depends upon the extent to which consumers were exposed to the risks associated with the product. Id. at 231, 233. So too, the Court in ASG, in discussing the definitional phrase that a consumer product must be used or intended for use "in or around a permanent or temporary household or residence, a school or otherwise," held that the enumeration of locations and activities is *not* a limitation on jurisdiction, but rather an assurance of comprehensiveness. Id. at 1328. The Fifth Circuit, relying upon the language employed in the Act, the broad remedial policy underlying it and the legislative history, has reached the same conclusion. The Fifth Circuit rejects the argument that the phrase "in recreation" is tied to activity at a household, residence or school, by holding that each part identified in the definition is an independent basis for jurisdiction and, accordingly, that a consumer product is not necessarily a household product. Thus, the Court stated that the Act is broader than the sale of merchandise to consumers, that use of articles is sufficient and that a critical factor is the

---

practicable to obtain a sample of the sprinklers in issue, and that with regard to the concern over limited resources, the Fifth Circuit has observed that it is not the courts' prerogative to second-guess agency decisions properly within their discretion and that the Commission is in the best position to decide what to accomplish within its budget. Id. at 1334.

consumer's exposure to a product, not the legal relation to it. State Fair II at 1328.

Quoting from the legislative history, the Anaconda Court also explained that the scope of the term "individual" within the phrase that the article in question must be one "capable of production for sale to an individual," by noting that "products which are primarily or exclusively sold to industrial or institutional buyers would be included within the definition of consumer product so long as they were produced or distributed for the ***use*** of consumers." Id. (emphasis added). The Court, aware of some indicators of a legislative intent to exclude "industrial products" from the Act's coverage, pointedly noted that subsection 3(a)(1)(A) does *not* accomplish this, concluding that even where a large portion of a product is distributed for industrial purposes, the product remains a "consumer product" as long as the sale *or* use is customary and more than occasional. Id. 1322. Thus, the Court cited with approval to Chance, which upheld CPSC jurisdiction over an amusement ride even though the ride was sold to an institutional buyer and not to consumers directly.

I concur with the weight of judicial opinion rejecting the narrow interpretation, urged here by Central, that the Act is limited to hazardous products found in residences. As these courts have concluded, the focus of the Act is directed towards consumers' exposure to hazards associated with products[8]. Thus, several courts have found that the Act applies to hazardous products completely unassociated with residences, such as the amusement park rides in Chance

---

[8]For this reason the Court in U.S. v. One Hazardous Product Consisting of a Refuse Bin, 487 F. Supp 581 (D.N.J. 1980) also concluded that refuse bins found in apartment complexes, supermarkets, motels, retail businesses and other locations, were found to be "consumer products." The Court found that the term encompasses products whose distribution results in a significant number of **consumers being exposed to the hazard** associated with the product. Id. at 584. (emphasis added).

and State Fair II.[9]

I also note that it would be incongruous with the overall intent of this remedial legislation to conclude that a product whose entire function is safety related, and not specifically excepted from the definition's scope, is outside of the Consumer Product Safety Act's coverage. Further, even if for arguments sake it were momentarily accepted that, under Central's interpretation, the Act is limited to products found in residences, it would be untenable to conclude that Congress would have intended that protection from a hazardous product would be so incomplete, being limited to homes, when an identical or related model of the product, presenting the same hazard, would not be subject to the Act's reach merely because it was located in a hotel or other building. Thus, in the alternative, I conclude that at a minimum, once a product is found in a home, the ability to regulate it under the Act applies to all other locations where it is found, as Congress could not have intended such incomplete and irrational coverage of hazardous products.

Last, Central's arguments that OSHA and state and local regulation operate to preempt the CPSC are also rejected. As the D.C. Circuit observed in ASG, there must be actual, not potential, regulation of the product. The Court went on to note that OSHA's focus is providing a safe workplace and that this may be apart from producing articles that are themselves hazardous to consumers. Id. at 1328-1329. Further, as noted by the Third Circuit in Kaiser in addressing the role of local building codes in regulating consumer products, the "design and performance standards for components are now a matter of national concern." Id. at 181. So too, the Fifth

---

[9]Central appears to want it both ways, by citing State Fair II with approval in part for its position that consumer "use" of a product requires interaction with it, accepting that the consumers' riding on amusements constitutes such interaction, while maintaining that such amusements are still outside of the Act's coverage as they are not part of consumers' homes.

Circuit observed that the Act intended a broad remedial purpose and that Congress determined that local government regulation of hazards posed by consumer products is inadequate. State Fair II at 1333.

II. Whether the Complaint Satisfies the Procedural Rules by Providing Reasonable Definiteness of the Charges

Central's arguments in this regard may be summarily resolved. The purpose of the complaint is to notify the respondent in a general way of the violation charged. Certainly the complaint accomplishes this. Central has been made aware that the Consumer Product Safety Commission asserts that its Omega brand sprinklers are hazardous in the sense that they have been alleged to malfunction in significant numbers. While the requirement that a "list and summary of documentary evidence supporting the charges" be provided, raises legitimate concerns, the rule does not call for a "comprehensive" summary and, in any event, this issue is moot as the documents themselves are being provided during discovery, a process that has already begun with intensity.

Central's suggestion that CPSC has some duty to explain the particular reason for the alleged failures is rejected. Even at hearing, Complaint Counsel has no duty to provide an explanation of how it is that the sprinklers malfunction. It is sufficient only to demonstrate that they *do* have a significant failure rate. Assuming that Complaint Counsel can demonstrate this, it would be Central's responsibility to figure out why it is happening, not that of the CPSC.

Accordingly, Central Sprinkler Corporation's and Central Sprinkler Company's Motion

to Dismiss the Administrative Complaint of the Consumer Product Safety Commission is DENIED.

So Ordered.

RESPONDENTS' OPPOSITION TO COMPLAINT COUNSEL'S MOTION FOR PROTECTIVE ORDER REGARDING ANONYMOUS LETTER

I. INTRODUCTION

Complaint Counsel asserts that they are in possession of an anonymous letter from an employee of Respondents. Complaint Counsel acknowledges that this letter contains information that is both relevant to this case and responsive to Respondents' discovery requests. Nevertheless, Complaint Counsel has refused to produce the letter to Respondents, claiming that is subject to the so-called "informant's privilege."[1/]

Pursuant to 16 C.F.R. § 1045(c)(2), Respondents Central Sprinkler Company and Central Sprinkler Corporation hereby request that the Court order Complaint Counsel to produce this anonymous letter to Respondents. It is obviously discoverable under the CPSC rules of practice. Moreover, because the "informant's privilege" only protects the identity of an informant, not the information provided, an anonymous letter is not covered by the privilege. In any event, the alleged facts described in the letter are not privileged. In addition, because Complaint Counsel

---

1/ See Complaint Counsel's Motion For Protective Order And In Camera Submission ("Complaint Counsel's Motion"), filed May 15, 1998.

admits that it is using the information in the letter to build its own case, the letter constitutes critical information necessary to Respondents for their defense in this case, and thus the "informant's privilege" is overcome. Finally, to the extent the letter suggests facts that defense counsel and the Respondents should evaluate, public safety warrants that the letter be disclosed to Respondents. Therefore, the Court should order Complaint Counsel to produce the letter to Respondents.[2/]

II. ARGUMENT

A. The Anonymous Letter Is Discoverable Material.

The CPSC rules of practice provide: "Parties may obtain discovery regarding any matter, not privileged, which is within the Commission's statutory authority and is relevant to the subject matter invoked in the proceedings." 16 C.F.R. § 1025.31(c)(1). Permissible discovery includes information that "appears reasonably calculated to lead to the discovery of admissible evidence." Id.

There should be little dispute that the anonymous letter constitutes discoverable material under these definitions. Complaint Counsel states that the letter "contains information and suggestions regarding Omega sprinkler failures." Complaint Counsel's Motion, p. 1. The operation of Omega sprinkler heads is a central issue in this case. Thus, the anonymous letter

---

2/ Respondents are only requesting that the letter be turned over to them, not placed in the public record. Pursuant to 16 C.F.R. § 1045(c)(2), the Court has the authority to "enter a protective order prohibiting unnecessary disclosure." As discussed infra, Respondents have the right and need to see the letter. However, there is no reason to make an anonymous letter publicly available.

falls squarely within the definition of relevant material under the CPSC rules of practice. See 16 C.F.R. § 1025.31(c)(1).

Moreover, Complaint Counsel admits that the anonymous letter is responsive to a multitude of Respondents' discovery requests. See Complaint Counsel's Motion, pp. 1-2. Complaint Counsel also states that they are "using the information contained in the document to further its investigation . . . and to channel its discovery in this matter." Id., pp. 2-3. Thus, according to Complaint Counsel's own evaluation of the anonymous letter, it is both responsive and highly relevant to the instant proceedings. Therefore, pursuant to 16 C.F.R. § 1025.31(c)(1), the anonymous letter is discoverable material which should be produced to Respondents.

B. The "Informant's Privilege" Does Not Apply To The Contents Of An Anonymous Letter.

While conceding that the anonymous letter contains responsive and relevant materials, Complaint Counsel has refused to produce it. Instead, Complaint Counsel relies on the so-called "informant's privilege" in requesting that the letter be shielded from normal discovery. See Complaint Counsel's Motion, p. 3.

However, the "informant's privilege" by its very nature does not apply to the contents of an anonymous letter. This privilege protects only the identity of an informant, not the information provided by the informant. See Rovario v. United States, 353 U.S. 56, 60 (1957); see also Wright & Graham, Federal Practice and Procedure: Evidence § 5704 (The privilege does not protect "information provided by the informer . . . . Communications of an informant are not privileged . . . .").

The document at issue is an anonymous letter. Complaint Counsel states that the letter itself purposely does not reveal the identity of the author. See Complaint Counsel's Motion, p. 2 ("The author of the letter purposely did not reveal his or her identity . . . ."). Thus, because the "informant's privilege" only protects the identity of an informant, not the information provided, and the anonymous letter does not reveal the identity of the author, the "informant's privilege" simply does not apply in this situation. Accordingly, the letter, admittedly relevant and responsive, should be produced by Complaint Counsel to Respondents.

C. The "Informant's Privilege" Is Easily Overcome In This Case.

Even if the anonymous letter at issue had been signed, the so-called "informant's privilege" would be superseded in this case based on the admitted importance of the information provided in the letter.

The "informant's privilege" at one time was proposed as a formal rule of evidence, but was rejected. See Wright & Graham, §§ 5701-17. The privilege thus is a common law creation. Id. However, the privilege is not absolute -- it is, at best, a qualified privilege. The Supreme Court has clearly stated: "Where the disclosure of an informant's identity, or the contents of his communication, is relevant and helpful to the defense of an accused, or is essential to a fair determination of a cause, the privilege must give way. In these situations the trial court may require disclosure and, if the government withholds the information, dismiss the action." Rovario, 353 U.S. at 60-61.

As admitted by Complaint Counsel, the contents of the anonymous letter fall squarely within the circumstances where "the privilege must give way." Complaint Counsel concedes that they are "using the information contained in the document to further its investigation . . . and to

channel its discovery in this matter." Complaint Counsel's Motion, pp. 2-3. Thus, Complaint Counsel is treating the contents of the anonymous letter as extremely important information for purposes of this case. There should be little doubt that knowledge of this information would be "relevant and helpful" in the defense of this case for Respondents, and that giving Respondents equal access to this important information would be "essential to a fair determination" of this case. Rovario, 353 U.S. at 60-61.

Complaint Counsel makes two arguments in an attempt to justify its claim of privilege. First, Complaint Counsel asserts that it does not intend to use the document itself at trial. See Complaint Counsel's Motion, p. 2. This argument simply misses the point. The proper issue is whether Complaint Counsel intends to use the information contained in the letter and the investigatory fruits of that information in the trial of this case. The answer to that question clearly is "Yes," as Complaint Counsel had stated that it is using the information for investigatory and discovery purposes. Id. at pp. 2-3. Therefore, Respondents should have equal access to this document, to be given an equal opportunity to use it to "further [Respondents'] investigation" and "channel [Respondents'] discovery," in order to prepare for trial. Id.

Furthermore, public safety dictates that Respondents and their counsel be advised of the contents of this anonymous letter. Central Sprinkler Company manufactures the Omega sprinkler heads in question. To the extent that the letter reveals or explains any potential problems with the Omegas, Central, its Board of Directors, and its counsel affirmatively want to receive such information to address any potential problems appropriately. Central, its Board of Directors, and its counsel are committed to addressing properly any problems with the Omegas. If there are any identifiable problems with the Omegas, nobody has a greater interest in or right

to address those problems than Respondents. Complaint Counsel's decision to deny Respondents access to the contents of the letter is thus both procedurally unsound and contrary to Complaint Counsel's statutory mandate.[3/]

Complaint Counsel's second argument is that the document should be withheld to prevent any retaliation against the letter's author. Respondents assure the Court that they will not "retaliate" against any person for providing information to CPSC. Moreover, Complaint Counsel has not produced any evidence that Respondents would retaliate in any way. Thus, there is no reason to withhold the letter.

When viewed from an objective perspective, the course of action requested by Complaint Counsel here should not be followed. Complaint Counsel requests that a document that Complaint Counsel has possession of, admits is important, plans to use to prepare for trial, and has provided to this Court, not be given to Respondents. Thus, everyone involved in the trial of this matter with the exception of Respondents, who are defending their product, will have access to this document.[4/] Such a situation would be highly prejudicial to Respondents, a basic denial of due process rights, and fundamentally unfair.

3/ The Court should not assume that Respondents are unwilling to take corrective action. To the contrary, Respondents have proposed to Complaint Counsel several alternative corrective action proposals, the future cost of which has been estimated to exceed $13.2 million. Complaint Counsel has rejected these proposals. Nor should the Court assume that Central, its counsel, or its Board of Directors are aware of each alleged fact claimed to be known by a third party. To the extent a third party has provided important information to Complaint Counsel, Respondents should be given the opportunity to address that information and take it into account in resolving this matter.

4/ The fact that the Court is the trier-of-fact in this matter makes the instant situation much more problematical than in a jury trial, where a court can make in camera determinations without exposing the trier-of-fact (the jury) to potentially prejudicial materials.

Thus, in the instant case, the qualified "informant's privilege" is easily overcome. The contents of the anonymous letter, as conceded by Complaint Counsel, are important enough to Respondents' defense in this matter and a fair determination of this case that "the privilege must give way." Rovario, 353 U.S. at 60-61. Therefore, the Court should order Complaint Counsel to produce the letter to Respondents. At a minimum, Complaint Counsel should disclose the underlying facts or contentions set forth in the letter.

III. CONCLUSION

Given the fact that there appears to be little basis for Complaint Counsel's Motion, it would appear that Complaint Counsel's true goal is to prejudice the Court against Central by forcing the Court to focus on an admittedly inadmissible and perhaps unreliable and inaccurate letter, while depriving Central the opportunity even to know of the letter's contents. Complaint Counsel's attempt to sway the Court in this manner is particularly unfortunate because Respondents' counsel repeatedly warned Complaint Counsel that such a course of conduct was inappropriate. See Correspondence from Respondents' Counsel to Complaint Counsel, attached hereto as Exhibits "A" and "B".

Resolving the motion on the merits should be straightforward, however. The letter clearly is discoverable material under 16 C.F.R. § 1025.31(c)(1). Because it is an anonymous letter, with the identity of the author already hidden by the author himself or herself, the "informant's privilege" -- which only protects the identity of an informant -- simply does not apply. Moreover, even if the letter had been signed, the "informant's privilege" is overcome in this case by the admittedly important nature of the contents of the letter.

Based on all of the foregoing, pursuant to 16 C.F.R. § 1045(c)(2), Respondents respectfully request that the Court deny Complaint Counsel's Motion and order Complaint Counsel to produce the anonymous letter to Respondents. At a minimum, Respondents request that the Court direct Complaint Counsel to state with specificity the factual or other information provided in the letter so that Respondents may prepare for trial and address any public safety issues raised in the letter.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter responds to your letter of May 6, 1998.

First, regarding the scope of discovery provided by the Staff, your letter fails to address the multiple deficiencies with the Staff's discovery responses raised in my letter of May 4. For example, you still refuse or fail to identify persons with knowledge regarding the key allegations in the Complaint. By failing to provide such information, you completely block Central's ability to take depositions of your witnesses and effectively shut down discovery. Moreover, you fail to address the large number of interrogatories and document requests for which the Staff has provided no response whatsoever. These are only two examples of your letter's failure to address the many deficiencies described in my letter of May 4. It would thus appear that the Staff is refusing to engage in any good faith attempt to resolve this discovery dispute. Therefore, in the absence of full and complete supplemental responses from the Staff as discussed in my letter of May 4, we will be forced to file a motion to compel.

Second, in your letter, you represented that the Staff will provide us with a privilege log. You have not indicated when you will provide it, however. Given the pervasive nature of your privilege objections, the timing requirements established for motions to compel by the CPSC rules of practice, and the fact that such a log already is tardy, we will expect to receive the Staff's privilege log no later than May 8, 1998, as we requested in my letter of May 4.

Your letter also represents that you will begin to provide the Staff's initial test results, but again you do not provide a set date for production. As indicated to you in my letter of May 4, we will expect to receive a full supplemental production by no later than May 8, 1998.

In addition, your letter reiterates a refusal to produce purportedly confidential documents from third parties absent a confidentiality agreement. In my letter to you of May 1, we provided you with a draft Confidentiality Agreement. Despite your stated willingness to produce the referenced documents pursuant to such an agreement, your letter does not comment on or otherwise address the proposed Confidentiality Agreement. In the absence of your comments, we will submit the Confidentiality Agreement for Court approval contemporaneously with any necessary motion to compel. Moreover, please be advised that if you refuse to produce any document for any reason, Central will oppose the admission of that document or class of documents into evidence at the trial of this matter.

Finally, we hereby reiterate our request that the Staff not attempt to engage in any ex parte contacts with the Court.

To date, the Staff has not provided any meaningful discovery to Respondents. Of the 2000 pages of documents produced, approximately 1500 consist of test results provided to you by Central, and many of the remaining 500 consist of publicly available documents. Your discovery provides no meaningful information to Central regarding the bases of your claims and substantially impairs Central's ability to prepare for trial. The Staff cannot and should not be permitted to file a public Complaint, but then refuse to provide the evidence purportedly supporting such claims. We hope that the Staff will choose to take a more reasonable and forthcoming approach going forward in this litigation.

Regards,

Thomas P. Hogan, Jr.

RESPONDENTS' OPPOSITION TO COMPLAINT COUNSEL'S MOTION FOR PROTECTIVE ORDER REGARDING ANONYMOUS LETTER

I. INTRODUCTION

Complaint Counsel asserts that they are in possession of an anonymous letter from an employee of Respondents. Complaint Counsel acknowledges that this letter contains information that is both relevant to this case and responsive to Respondents' discovery requests. Nevertheless, Complaint Counsel has refused to produce the letter to Respondents, claiming that is subject to the so-called "informant's privilege."[1/]

Pursuant to 16 C.F.R. § 1045(c)(2), Respondents Central Sprinkler Company and Central Sprinkler Corporation hereby request that the Court order Complaint Counsel to produce this anonymous letter to Respondents. It is obviously discoverable under the CPSC rules of practice. Moreover, because the "informant's privilege" only protects the identity of an informant, not the information provided, an anonymous letter is not covered by the privilege. In any event, the alleged facts described in the letter are not privileged. In addition, because Complaint Counsel

---

1/ See Complaint Counsel's Motion For Protective Order And In Camera Submission ("Complaint Counsel's Motion"), filed May 15, 1998.

admits that it is using the information in the letter to build its own case, the letter constitutes critical information necessary to Respondents for their defense in this case, and thus the "informant's privilege" is overcome. Finally, to the extent the letter suggests facts that defense counsel and the Respondents should evaluate, public safety warrants that the letter be disclosed to Respondents. Therefore, the Court should order Complaint Counsel to produce the letter to Respondents.[2/]

II. ARGUMENT

A. The Anonymous Letter Is Discoverable Material.

The CPSC rules of practice provide: "Parties may obtain discovery regarding any matter, not privileged, which is within the Commission's statutory authority and is relevant to the subject matter invoked in the proceedings." 16 C.F.R. § 1025.31(c)(1). Permissible discovery includes information that "appears reasonably calculated to lead to the discovery of admissible evidence." Id.

There should be little dispute that the anonymous letter constitutes discoverable material under these definitions. Complaint Counsel states that the letter "contains information and suggestions regarding Omega sprinkler failures." Complaint Counsel's Motion, p. 1. The operation of Omega sprinkler heads is a central issue in this case. Thus, the anonymous letter

---

2/ Respondents are only requesting that the letter be turned over to them, not placed in the public record. Pursuant to 16 C.F.R. § 1045(c)(2), the Court has the authority to "enter a protective order prohibiting unnecessary disclosure." As discussed infra, Respondents have the right and need to see the letter. However, there is no reason to make an anonymous letter publicly available.

falls squarely within the definition of relevant material under the CPSC rules of practice. See 16 C.F.R. § 1025.31(c)(1).

Moreover, Complaint Counsel admits that the anonymous letter is responsive to a multitude of Respondents' discovery requests. See Complaint Counsel's Motion, pp. 1-2. Complaint Counsel also states that they are "using the information contained in the document to further its investigation . . . and to channel its discovery in this matter." Id., pp. 2-3. Thus, according to Complaint Counsel's own evaluation of the anonymous letter, it is both responsive and highly relevant to the instant proceedings. Therefore, pursuant to 16 C.F.R. § 1025.31(c)(1), the anonymous letter is discoverable material which should be produced to Respondents.

B. The "Informant's Privilege" Does Not Apply To The Contents Of An Anonymous Letter.

While conceding that the anonymous letter contains responsive and relevant materials, Complaint Counsel has refused to produce it. Instead, Complaint Counsel relies on the so-called "informant's privilege" in requesting that the letter be shielded from normal discovery. See Complaint Counsel's Motion, p. 3.

However, the "informant's privilege" by its very nature does not apply to the contents of an anonymous letter. This privilege protects only the identity of an informant, not the information provided by the informant. See Rovario v. United States, 353 U.S. 56, 60 (1957); see also Wright & Graham, Federal Practice and Procedure: Evidence § 5704 (The privilege does not protect "information provided by the informer . . . . Communications of an informant are not privileged . . . .").

The document at issue is an anonymous letter. Complaint Counsel states that the letter itself purposely does not reveal the identity of the author. See Complaint Counsel's Motion, p. 2 ("The author of the letter purposely did not reveal his or her identity . . . ."). Thus, because the "informant's privilege" only protects the identity of an informant, not the information provided, and the anonymous letter does not reveal the identity of the author, the "informant's privilege" simply does not apply in this situation. Accordingly, the letter, admittedly relevant and responsive, should be produced by Complaint Counsel to Respondents.

C. The "Informant's Privilege" Is Easily Overcome In This Case.

Even if the anonymous letter at issue had been signed, the so-called "informant's privilege" would be superseded in this case based on the admitted importance of the information provided in the letter.

The "informant's privilege" at one time was proposed as a formal rule of evidence, but was rejected. See Wright & Graham, §§ 5701-17. The privilege thus is a common law creation. Id. However, the privilege is not absolute -- it is, at best, a qualified privilege. The Supreme Court has clearly stated: "Where the disclosure of an informant's identity, or the contents of his communication, is relevant and helpful to the defense of an accused, or is essential to a fair determination of a cause, the privilege must give way. In these situations the trial court may require disclosure and, if the government withholds the information, dismiss the action." Rovario, 353 U.S. at 60-61.

As admitted by Complaint Counsel, the contents of the anonymous letter fall squarely within the circumstances where "the privilege must give way." Complaint Counsel concedes that they are "using the information contained in the document to further its investigation . . . and to

channel its discovery in this matter." Complaint Counsel's Motion, pp. 2-3. Thus, Complaint Counsel is treating the contents of the anonymous letter as extremely important information for purposes of this case. There should be little doubt that knowledge of this information would be "relevant and helpful" in the defense of this case for Respondents, and that giving Respondents equal access to this important information would be "essential to a fair determination" of this case. Rovario, 353 U.S. at 60-61.

Complaint Counsel makes two arguments in an attempt to justify its claim of privilege. First, Complaint Counsel asserts that it does not intend to use the document itself at trial. See Complaint Counsel's Motion, p. 2. This argument simply misses the point. The proper issue is whether Complaint Counsel intends to use the information contained in the letter and the investigatory fruits of that information in the trial of this case. The answer to that question clearly is "Yes," as Complaint Counsel had stated that it is using the information for investigatory and discovery purposes. Id. at pp. 2-3. Therefore, Respondents should have equal access to this document, to be given an equal opportunity to use it to "further [Respondents'] investigation" and "channel [Respondents'] discovery," in order to prepare for trial. Id.

Furthermore, public safety dictates that Respondents and their counsel be advised of the contents of this anonymous letter. Central Sprinkler Company manufactures the Omega sprinkler heads in question. To the extent that the letter reveals or explains any potential problems with the Omegas, Central, its Board of Directors, and its counsel affirmatively want to receive such information to address any potential problems appropriately. Central, its Board of Directors, and its counsel are committed to addressing properly any problems with the Omegas. If there are any identifiable problems with the Omegas, nobody has a greater interest in or right

to address those problems than Respondents. Complaint Counsel's decision to deny Respondents access to the contents of the letter is thus both procedurally unsound and contrary to Complaint Counsel's statutory mandate.[3/]

Complaint Counsel's second argument is that the document should be withheld to prevent any retaliation against the letter's author. Respondents assure the Court that they will not "retaliate" against any person for providing information to CPSC. Moreover, Complaint Counsel has not produced any evidence that Respondents would retaliate in any way. Thus, there is no reason to withhold the letter.

When viewed from an objective perspective, the course of action requested by Complaint Counsel here should not be followed. Complaint Counsel requests that a document that Complaint Counsel has possession of, admits is important, plans to use to prepare for trial, and has provided to this Court, not be given to Respondents. Thus, everyone involved in the trial of this matter with the exception of Respondents, who are defending their product, will have access to this document.[4/] Such a situation would be highly prejudicial to Respondents, a basic denial of due process rights, and fundamentally unfair.

3/ The Court should not assume that Respondents are unwilling to take corrective action. To the contrary, Respondents have proposed to Complaint Counsel several alternative corrective action proposals, the future cost of which has been estimated to exceed $13.2 million. Complaint Counsel has rejected these proposals. Nor should the Court assume that Central, its counsel, or its Board of Directors are aware of each alleged fact claimed to be known by a third party. To the extent a third party has provided important information to Complaint Counsel, Respondents should be given the opportunity to address that information and take it into account in resolving this matter.

4/ The fact that the Court is the trier-of-fact in this matter makes the instant situation much more problematical than in a jury trial, where a court can make in camera determinations without exposing the trier-of-fact (the jury) to potentially prejudicial materials.

Thus, in the instant case, the qualified "informant's privilege" is easily overcome. The contents of the anonymous letter, as conceded by Complaint Counsel, are important enough to Respondents' defense in this matter and a fair determination of this case that "the privilege must give way." Rovario, 353 U.S. at 60-61. Therefore, the Court should order Complaint Counsel to produce the letter to Respondents. At a minimum, Complaint Counsel should disclose the underlying facts or contentions set forth in the letter.

III. CONCLUSION

Given the fact that there appears to be little basis for Complaint Counsel's Motion, it would appear that Complaint Counsel's true goal is to prejudice the Court against Central by forcing the Court to focus on an admittedly inadmissible and perhaps unreliable and inaccurate letter, while depriving Central the opportunity even to know of the letter's contents. Complaint Counsel's attempt to sway the Court in this manner is particularly unfortunate because Respondents' counsel repeatedly warned Complaint Counsel that such a course of conduct was inappropriate. See Correspondence from Respondents' Counsel to Complaint Counsel, attached hereto as Exhibits "A" and "B".

Resolving the motion on the merits should be straightforward, however. The letter clearly is discoverable material under 16 C.F.R. § 1025.31(c)(1). Because it is an anonymous letter, with the identity of the author already hidden by the author himself or herself, the "informant's privilege" -- which only protects the identity of an informant -- simply does not apply. Moreover, even if the letter had been signed, the "informant's privilege" is overcome in this case by the admittedly important nature of the contents of the letter.

Based on all of the foregoing, pursuant to 16 C.F.R. § 1045(c)(2), Respondents respectfully request that the Court deny Complaint Counsel's Motion and order Complaint Counsel to produce the anonymous letter to Respondents. At a minimum, Respondents request that the Court direct Complaint Counsel to state with specificity the factual or other information provided in the letter so that Respondents may prepare for trial and address any public safety issues raised in the letter.

Respectfully submitted,

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter responds to your letter of May 6, 1998.

First, regarding the scope of discovery provided by the Staff, your letter fails to address the multiple deficiencies with the Staff's discovery responses raised in my letter of May 4. For example, you still refuse or fail to identify persons with knowledge regarding the key allegations in the Complaint. By failing to provide such information, you completely block Central's ability to take depositions of your witnesses and effectively shut down discovery. Moreover, you fail to address the large number of interrogatories and document requests for which the Staff has provided no response whatsoever. These are only two examples of your letter's failure to address the many deficiencies described in my letter of May 4. It would thus appear that the Staff is refusing to engage in any good faith attempt to resolve this discovery dispute. Therefore, in the absence of full and complete supplemental responses from the Staff as discussed in my letter of May 4, we will be forced to file a motion to compel.

Second, in your letter, you represented that the Staff will provide us with a privilege log. You have not indicated when you will provide it, however. Given the pervasive nature of your privilege objections, the timing requirements established for motions to compel by the CPSC rules of practice, and the fact that such a log already is tardy, we will expect to receive the Staff's privilege log no later than May 8, 1998, as we requested in my letter of May 4.

Your letter also represents that you will begin to provide the Staff's initial test results, but again you do not provide a set date for production. As indicated to you in my letter of May 4, we will expect to receive a full supplemental production by no later than May 8, 1998.

In addition, your letter reiterates a refusal to produce purportedly confidential documents from third parties absent a confidentiality agreement. In my letter to you of May 1, we provided you with a draft Confidentiality Agreement. Despite your stated willingness to produce the referenced documents pursuant to such an agreement, your letter does not comment on or otherwise address the proposed Confidentiality Agreement. In the absence of your comments, we will submit the Confidentiality Agreement for Court approval contemporaneously with any necessary motion to compel. Moreover, please be advised that if you refuse to produce any document for any reason, Central will oppose the admission of that document or class of documents into evidence at the trial of this matter.

Finally, we hereby reiterate our request that the Staff not attempt to engage in any ex parte contacts with the Court.

To date, the Staff has not provided any meaningful discovery to Respondents. Of the 2000 pages of documents produced, approximately 1500 consist of test results provided to you by Central, and many of the remaining 500 consist of publicly available documents. Your discovery provides no meaningful information to Central regarding the bases of your claims and substantially impairs Central's ability to prepare for trial. The Staff cannot and should not be permitted to file a public Complaint, but then refuse to provide the evidence purportedly supporting such claims. We hope that the Staff will choose to take a more reasonable and forthcoming approach going forward in this litigation.

Regards,

Thomas P. Hogan, Jr.

IV. CONCLUSION 40

I. INTRODUCTION

Pursuant to 16 C.F.R. § 1025.36, Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby move this Court to compel Complaint Counsel to provide full and complete responses to Central's interrogatories and document requests.

To date, Complaint Counsel has refused to provide virtually any discovery to Central. For instance:

- Complaint Counsel has refused to produce the documents described in the "List and Summary of Documentary Evidence" filed with the Complaint.
- Complaint Counsel has declined to identify persons with knowledge of relevant information.
- Complaint Counsel has failed to provide responses to over half of the interrogatories and document requests propounded by Central.
- Complaint Counsel has asserted that virtually all documents or information in its possession from any source are privileged, but then refused to provide a log of such privileged documents.
- Complaint Counsel has represented that certain documents provided by third parties are confidential and could only be produced subject to a confidentiality agreement, but then refused even to consider a confidentiality agreement proposed by Central.
- Complaint Counsel has refused to provide discovery regarding its potentially impermissible ex parte contacts with Central's former and current employees.

These examples represent only a few of the shortcomings evident in Complaint Counsel's discovery responses. In essence, Complaint Counsel only has produced documents and information to Central that either are publicly available or were originally produced to Complaint Counsel by Central. Therefore, Central now is forced to ask the Court to intervene, and respectfully requests that the Court order Complaint Counsel to provide full and complete responses to Central's interrogatories and document requests.

II. PROCEDURAL BACKGROUND

A. The Complaint and List of Supporting Documents

Complaint Counsel filed its Complaint in the instant case on March 3, 1998. The Complaint alleges that Central manufactures approximately 20 models of fire sprinkler heads, known as "Omegas." (Compl. ¶ 6). The Complaint asserts that the Omegas "do not and will not function in a significant percentage of instances," and thus create a "substantial risk of injury to the public." (Compl. ¶¶ 10, 15). Based on these allegations, the Complaint requests a total recall of approximately 10 million Omegas allegedly installed over the past 15-plus years. (Compl., Relief Sought, pp. 4-6).

The Complaint, however, provides little further information. It does not state which models of Omegas allegedly are defective, what percentage are defective, what constitutes a "defective" Omega for purposes of testing, whether Omegas from particular years or using particular piping systems are defective, or similar basic details. Presumably, the information supporting Complaint Counsel's claims would be provided in discovery.

In addition to the Complaint, as required by 16 C.F.R. § 1025.11(b)(3), Complaint Counsel filed a List and Summary of Documentary Evidence. In its entirety, this list consisted of two categories:

1. Data compilations depicting over 40% failure rates in testing of Central's Omega brand fire sprinklers.

2. Documents evidencing failure of Omega fire sprinklers in actual fire situations.

See List and Summary of Documentary Evidence, p. 1.

B. Central's Discovery Requests

On March 26, 1998, Central served: (1) Respondents' First Request for Documents and Things ("Central's Document Requests"), attached hereto as Exhibit "A"; and (2) Respondents' First Set of Interrogatories ("Central's Interrogatories"), attached hereto as Exhibit "B".1/

Central's Document Requests and Interrogatories requested extremely basic information from Complaint Counsel. For instance, Central requested the documents identified by Complaint Counsel in the List and Summary of Documentary Evidence. See Central's Document Requests, No. 1. Central also requested detailed information regarding the allegations of the Complaint (Interrogatory Nos. 1-99), persons with knowledge of relevant material (Interrogatory Nos. 100-105), other allegations made by Complaint Counsel regarding the Omegas (Interrogatory Nos. 106-14), the CPSC's investigation of the Omegas (Interrogatory Nos. 115-23, 130-48), and any testing and/or design analysis of the Omegas (Interrogatory Nos. 124-129).

1/ Because of their bulk, the exhibits listed herein are being provided to the Court in a separate appendix.

In total, Central propounded 71 document requests and 140 interrogatories to Complaint Counsel. The detailed nature of these discovery requests was necessitated by the lack of information in the Complaint and the technical complexity of the subject matter. By way of comparison, Complaint Counsel has propounded 101 document requests and 117 interrogatories to Central.

C. **Complaint Counsel's Discovery Responses**

On April 27, 1998, Complaint Counsel served: (1) Complaint Counsel's Responses to Respondents' First Request For Production of Documents and Things ("Complaint Counsel's Document Responses"), attached hereto as Exhibit "C"; and (2) Complaint Counsel's Responses to Respondents' First Set of Interrogatories ("Complaint Counsel's Interrogatory Responses"), attached hereto as Exhibit "D". Pursuant to the instructions included in Central's discovery requests, Complaint Counsel also produced Complaint Counsel's Index of Responsive Documents, attached hereto as Exhibit "E". Complaint Counsel actually produced approximately 2100 pages of documents.

However, Complaint Counsel's discovery responses provided virtually no information to Central. Out of the 2100 pages of documents produced, roughly 1600 were documents previously provided to Complaint Counsel by Central itself. The remaining 500 documents mainly consisted of marginally relevant, publicly available documents, such as the CPSC's newsletter to the public, pleadings from cases involving Central, CPSC news releases, and other miscellaneous material.

According to Complaint Counsel's Index of Responsive Documents, Complaint Counsel only provided responses to 12 out Central's 71 document requests. See Exhibit "E". Regarding

virtually every document request, Complaint Counsel claimed that the responsive documents were "protected from discovery by the work product privilege." See, e.g., Complaint Counsel's Document Responses, Nos. 1, 3, 4, 5, 7, 8, 10, 11, 12, 13, 15, 16, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 56, 57, 58, 59, 61, 62, 63, 68, 69, 70, 71.

Complaint Counsel's Interrogatory Responses did not provide any further information. Complaint Counsel either refused to answer or answered incompletely regarding the majority of the interrogatories. In its responses, Complaint Counsel generally raised a multitude of objections (e.g., relevance, vagueness, privilege), then provided virtually no information. Complaint Counsel also claimed that responsive information to many document requests and interrogatories would only be produced if Central agreed to a Confidentiality stipulation. See, e.g., Complaint Counsel's Document Responses, Nos. 1 and 5; Complaint Counsel's Interrogatory Responses, Nos. 107(d) and 108(d).

D. Central's Attempts To Resolve This Discovery Dispute

Rather than immediately force the Court to rule on the deficiencies with Complaint Counsel's discovery responses, Central attempted to resolve this discovery dispute amicably. Central sent letters to Complaint Counsel on May 1, 4, 7, and 13, 1998. These letters addressed the deficiencies in Complaint Counsel's responses, and requested full and complete supplemental discovery responses. See Correspondence Between Central's Counsel and Complaint Counsel (in chronological order), attached hereto as Exhibit "F". Because Complaint Counsel requested a confidentiality agreement before producing certain documents, Central also provided a draft Confidentiality Agreement. See Letter of May 1. In addition, Central requested a privilege log

from Complaint Counsel to support Complaint Counsel's repeated invocation of a "work product privilege." See Letters of May 1, 4, 7, and 13.

Complaint Counsel responded in letters of May 6 and 8, 1998. See Exhibit "F". Complaint Counsel promised to deliver a privilege log, but has not done so to date. Complaint Counsel refused to accept or even comment on Central's proposed Confidentiality Agreement. Complaint Counsel did provide a supplemental production, consisting of a summary compilation of its test results, but refused to provide the methodology and supporting data underlying those results. Finally, Complaint Counsel chose to ignore entirely the multiple deficiencies in its discovery responses raised by Central, and refused to produce any further information.

Therefore, pursuant to 16 C.F.R. § 1025.36, Central now is forced to file the instant motion to compel. Central respectfully requests that the Court compel Complaint Counsel to provide full and complete responses to Central's Documents Requests and Interrogatories. The deficiencies with Complaint Counsel's responses are described in greater length below.

III. ARGUMENT

According to the CPSC rules of practice:

> Parties may obtain discovery regarding any matter, not privileged, which is within the Commission's statutory authority and is relevant to the subject matter involved in the proceedings, whether it relates to the claim or defense of the party seeking discovery or to the claim or defense of any other party, including the existence, description, nature, custody, condition and location of any books, documents, or other tangible things and the identity and location of persons having knowledge of any discoverable matter. It is not ground for objection that the information sought will be inadmissible at the hearing if the information sought appears reasonably calculated to lead to the discovery of admissible evidence.

16 C.F.R. § 1025.31(c)(1). Discovery responses must be "responsive, unevasive and complete." Cornaglia v. Ricciardi, 63 F.R.D. 416, 149 (E.D. Pa. 1974).

It is "beyond question" that a defendant or respondent is entitled to discover the factual basis of claims asserted in a complaint. Cornaglia, 63 F.R.D. at 419; see also Scovill Manuf. Co. v. Sunbeam Corp., 61 F.R.D. 598, 601 (D. Del. 1973); Dubois Brewing Co. v. United States, 34 F.R.D. 126, 127 (W.D. Pa. 1963) (because plaintiffs brought the claim, presumably they know the factual basis for it). Moreover, a defendant or respondent is entitled to know the factual content of claim "with a reasonable degree of specificity." Martin v. Easton Publishing Co., 85 F.R.D. 312, 315 (E.D. Pa. 1980).

Complaint Counsel's Document Responses and Interrogatory Responses, however, fail to meet these fundamental rules of discovery. The specific deficiencies of Complaint Counsel's discovery responses and the individual responses where those deficiencies occur are described below. Because of the pervasiveness of such deficiencies, Central will not attempt to discuss each response separately. Instead, Central will describe the specific problem, provide several representative examples from Complaint Counsel's responses, then list all of the responses where the problem occurs.

A. Complaint Counsel Has Failed To Produce The Documents Provided In The "List And Summary Of Documentary Evidence."

The CPSC rules of practice require that Complaint Counsel provide a "list and summary of documentary evidence supporting the charges" in the Complaint. 16 C.F.R. § 1025.11(b)(3). Such documents represent the most basic and fundamental discovery to be provided by Complaint Counsel in any case. Indeed, the documents described in Complaint Counsel's List

and Summary of Documentary Evidence are the first documents requested in Central's Document Requests. See Request No. 1. Moreover, in the instant case, the Court already has stated that it presumed that "the documents themselves [from the list] are being provided during discovery, a process that has already begun with intensity." See Order On Motion To Dismiss Complaint For Lack of Jurisdiction And for Insufficient Pleadings, p. 16.

Nevertheless, Complaint Counsel has refused to produce these fundamental documents. Instead, Complaint Counsel responded as follows to Central's request that the list be produced:

> Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery pursuant to the work product privilege. The data compilation of failures was prepared by or for Complaint Counsel in anticipation of litigation. Without waiving its objection, Complaint Counsel will produce the data on which the compilation is based, and the information about the fires, to the extent that the information was not provided to Complaint Counsel by a third party on a confidential basis. Without waiving its objection, to the extent that the data or information was provided on a confidential basis, Complaint Counsel will produce the data upon the execution of an appropriate confidentiality stipulation by Respondents, and the issuance of an appropriate protective order by the Presiding Officer.

See Complaint Counsel's Document Responses, No. 1.

In refusing to provide the documents described in Complaint Counsel's List and Summary of Documentary Evidence, Complaint Counsel is violating the CPSC's rules of practice and failing to engage in good faith discovery efforts. The logical purpose of 16 C.F.R. § 1025.11(b)(3), requiring Complaint Counsel to list the "documentary evidence supporting the charges" in the Complaint, is to permit respondents to discover and examine such information. Otherwise, this provision would be reduced to a nullity.

If respondents are not permitted to discover the "documentary evidence supporting the charges" in the Complaint, then Complaint Counsel has no discovery obligations whatsoever. Even a criminal proceeding, where Jencks and Brady material must be produced by the Government, would provide greater discovery opportunities to respondents. In short, if Complaint Counsel is required to produce any documents to Central, it must logically be required to produce the documents described in the List and Summary of Documentary Evidence.[2/]

Thus, Complaint Counsel has no reasonable or good faith basis to continue to withhold from Central the documents described in the List and Summary of Documentary Evidence. Therefore, pursuant to 16 C.F.R. § 1025.36, Central respectfully requests that the Court compel Complaint Counsel to produce such documents.

B. Complaint Counsel Has Refused To Identify Persons Having Knowledge Of Discoverable Material.

In Central's Interrogatories, Central requests that Complaint Counsel identify persons having knowledge relevant to the Complaint or other discoverable information. Central poses this request in both one general request, see Interrogatory No. 102, and regarding certain specific issues in more precise requests, see, e.g., Interrogatory Nos. 83 and 87.

The CPSC rules of practice explicitly permit such requests. Section 1025.31 states that "Parties may obtain discovery regarding any matter involved in the proceedings . . . including . . . the identity and location of persons having knowledge of any discoverable matter." 16 C.F.R.

2/ The individual objections raised by Complaint Counsel in Document Response No. 1 are equally lacking in validity, and are addressed in the following sections of this brief. The deficiencies with Complaint Counsel's claim to a "work product privilege" are addressed in § III.D., infra. The fact that Complaint Counsel, despite its own request, has refused to enter into a confidentiality stipulation is addressed in § III.E., infra.

§ 1025.31(c)(1) (emphasis added). In fact, under the Federal Rules of Civil Procedure, the identity of persons likely to have knowledge of discoverable material is considered so fundamental a part of discovery that it is a required disclosure for all parties, without any discovery request being served. See Fed. R. Civ. P. 26(a)(1)(A); cf. Interrogatory No. 102.

Despite the fact that discovery of such "persons with knowledge" is plainly permitted, Complaint Counsel has refused to identify such persons in response to Central's Interrogatories. Complaint Counsel's failure to identify "persons with knowledge" falls into three categories: (1) Complaint Counsel refuses to identify any persons with knowledge; (2) Complaint Counsel only identifies broad groups of people rather than individual persons; and (3) Complaint Counsel identifies only Central personnel as having knowledge, despite the fact that it is self-evident that other persons with knowledge are known to Complaint Counsel. Each one of these categories is demonstrated below.

In many instances, Complaint Counsel completely ignores the request to identify persons with knowledge:

> Interrogatory No. 83. **(a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.**
> **If so:**
> **(b) identify and describe any such testing;**
> **(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**
> **(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**
> **(e) describe in detail the substance of each such person's knowledge and/or information.**
> Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections. Complaint Counsel will provide all non-privileged and non-confidential information it has with respect to testing of Omega sprinklers. Complaint Counsel adds that one of the three Omega sprinklers it received from Respondents in February, 1998, which had just been manufactured a few weeks earlier and had never yet been installed in a sprinkler system, did not activate (as that term is defined in Complaint Counsel's discovery requests to Respondents) when exposed to its activation/triggering temperature. The sprinkler partially deployed, releasing drips of water only, and then the fusible link cold soldered, preventing activation. Complaint Counsel has shared this knowledge with respondents, and asked for an explanation of what, why and how this occurred.

Interrogatory No. 87. **(a) State whether the Complainant contends that the performance of Omegas declines or deteriorates over time.**
If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the phrase "performance of Omegas declines or deteriorates over time" is undefined, unclear, vague and ambiguous and, without clarification of same, it is impossible to formulate a response to this Interrogatory. However, deterioration of o-ring material and corrosion, which available evidence suggest may contribute failure of Omega sprinklers, may be progressive events.

See Complaint Counsel's Interrogatory Responses, Nos. 83 and 87 (emphasis added).

For other responses, Complaint Counsel provides an inadequate identification of "persons with knowledge." Such a deficiency is exemplified where Complaint Counsel refuses to identify individual people, instead identifying vague groups of people:

Interrogatory No. 51. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":**

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: [(a) and (b) omitted]

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatories.

See Complaint Counsel's Interrogatory Responses, No. 51 (emphasis added; sub-parts (a) and (b) omitted).

Finally, in some instances, Complaint Counsel fails to identify sufficiently "persons with knowledge" by only listing Central personnel as having any knowledge of a particular subject matter, despite the fact that Complaint Counsel clearly knows of other persons:

Interrogatory No. 102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the corporate or government affiliation of the person;

(e) whether the Complainant has contacted such person; and

(f) the specific subject matter of the person's knowledge.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome -- there are thousands of people and entities who have

information concerning or related to Omega sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it believes that Respondents and their current and former employees have such knowledge and information.

See Complaint Counsel's Interrogatory Responses, No. 102 (emphasis added).

Thus, Complaint Counsel has effectively refused to identify "persons with knowledge" of discoverable material.[3/] Without a precise identification of specific individuals with specific knowledge of relevant issues, Central will not be able to pursue discovery via depositions. Such a failure to identify persons with knowledge is not permitted under 16 C.F.R. § 1025.31(c)(1), which expressly permits such discovery. In this situation, Complaint Counsel should be required either to identify persons with knowledge or be limited at the trial of this matter to calling as witnesses those persons actually identified by name in Complaint Counsel's Interrogatory Responses.

Central respectfully requests that the Court compel Complaint Counsel to identify persons with knowledge of discoverable information. Complaint Counsel failed to provide such information in the following discovery responses:

Interrogatory Response Nos.: 5-25, 40-42, 51-73, 76-77, 81-88, 102.

C. Complaint Counsel Has Failed To Respond Or Has Provided Incomplete Responses To A Significant Number Of Central's Discovery Requests.

The CPSC rules of practice provide for an extremely broad scope of permissible discovery. See 16 C.F.R. § 1025.31(c)(1). Despite these provisions, Complaint Counsel has

---

3/ Moreover, Complaint Counsel has failed to provide Central with documents from which such information could be ascertained.

refused to respond to many of Central's Document Requests and Interrogatories, or has provided materially incomplete answers. For instance, Complaint Counsel's Index of Responsive Documents indicates that Complaint Counsel has responded to only of 12 out of Central's 71 document requests. See Exhibit "E".

Complaint Counsel also has refused to respond to many of Central's Interrogatories, even those posing extremely straightforward and fundamental questions. For instance, a plainly critical issue in the instant case is the water pressure and temperature at which Omegas should activate when tested, and the percentage of heads that should activate when tested, to be considered acceptable. However, Complaint Counsel avoids responding to discovery requests about these subjects:

> Interrogatory No. 42. **(a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;**
> **If so:**
>
> **(b) identify and describe any such standard;**
> **(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;**
> **(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and**
> **(e) describe in detail the substance of each such person's knowledge and/or information.**
>
> Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

Interrogatory No. 43. **(a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;**
If so:

(b) identify and describe any such standard;
(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;
(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and
(e) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to previous Interrogatory. According to Respondents, Omega sprinklers are designed to activate at particularly defined activation/triggering temperatures, based on the temperature at which the fusible link in their heat collector is intended to convert from solid to liquid form.

Interrogatory No. 44. **(a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;**

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;
(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and
(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory Nos. 42 and 43.

See Complaint Counsel's Interrogatory Responses, Nos. 42-44.

In the foregoing responses, Complaint Counsel completely avoids providing any responsive information. Either Complaint Counsel does not know the answers to these basic questions, in which case the Complaint never should have been brought, or Complaint Counsel is simply refusing to provide the relevant information. Given the fact that Complaint Counsel has provided documents that purport to show a failure rate of 40% for tested Omegas (based on an

unspecified standard), it is apparent that Complaint Counsel has established some standards for water pressure, activation temperature, and activation percentage in testing. This information is plainly relevant and discoverable under 16 C.F.R. § 1025.31(c)(1). Therefore, Complaint Counsel should be required to provide such basic information.

Similarly, another basic issue in this case is whether Complaint Counsel has identified any particular alternative design for the Omegas. Complaint Counsel also refuses to provide this information when requested:

> Interrogatory No. 129. **To the extent that you contend, or otherwise intend to present at the hearing in this matter, the feasibility and/or propriety of any alternative design features for the Omegas, identify and describe any such proposed alternative design features. Your response should include, without limitation, a description of all data, testing, reports, or other information supporting this contention.**
> Response: Complaint Counsel objects to this Request on the ground that the terms "feasibility and/or propriety of" (in the context of "alternative design features for the Omegas"), and "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, and that the question as a whole is unintelligible, and thus precludes Complaint Counsel from formulating a response without clarification of its meaning.

See Complaint Counsel's Interrogatory Responses, No. 129.

Once again, in response to Interrogatory No. 129, Complaint Counsel refuses to provide extremely basic and plainly relevant information. This interrogatory is not complex or difficult to understand, despite Complaint Counsel's feigned inability to comprehend it. If Complaint Counsel contends that there is an alternative design for the Omegas that presents no "substantial product hazard," they should identify such design, both as a matter of public safety and as information that is plainly discoverable. Central has a right to study and prepare comments on any such alternative design proposal before the trial of this matter. On the other hand, if

Complaint Counsel does not contend that there are feasible alternative designs for the Omegas, then Central will not be forced be to expend further discovery resources pursuing this issue. Thus, by responding to this interrogatory, Complaint Counsel would provide information necessary for trial and/or would focus the areas of dispute in this case, both of which are permissible discovery goals.

Complaint Counsel should not be permitted to refuse to provide discovery responses. Where simple questions are asked, Complaint Counsel should provide simple, responsive, unevasive responses. Respondents have a right to discover the information defined as relevant in 16 C.F.R. § 1025.31(c)(1); to date, Complaint Counsel has refused to provide such information. Therefore, Central respectfully requests that the Court compel Complaint Counsel to provide such responses.

The following responses from Complaint Counsel suffer from the above-described deficiency:

Document Response Nos.: 1-3, 5-8, 10-14, 18-21, 23-29, 31-37, 39, 41, 44-71.

Interrogatory Response Nos: 42-46, 53-76, 87, 93-99, 106-13, 119, 129, 136-38, 140-41.

D. Complaint Counsel Has Refused To Produce Documents Based On Invalid Claims To A "Work Product Privilege."

Complaint Counsel has objected to virtually all of Central's Document Requests and many of Central's Interrogatories on the ground that such discovery "seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [is] protected from discovery by the work product privilege." See, e.g., Complaint Counsel's Document Responses, Nos. 5, 7, 8, 19-29, 34-43; Complaint Counsel's Interrogatory Responses, Nos. 120-23.

Complaint Counsel essentially claims that all documents and information that have been reviewed by Complaint Counsel are subject to a claim of "work product privilege." The only documents not covered by this "privilege," according to Complaint Counsel, are publicly available documents or documents originally produced to Complaint Counsel by Central. See, e.g., Complaint Counsel's Interrogatory Responses, Nos. 120-23 (stating that Complaint Counsel will only provide documents "that are in the public domain").

The work product doctrine was established in Hickman v. Taylor, 329 U.S. 495 (1947). This doctrine is codified in the CPSC rules of practice at 16 C.F.R. § 1025.31(c)(3). Section 1025.31(c)(3) provides that to the extent "documents and tangible things [were] . . . prepared in anticipation of litigation," such documents and tangible things are subject to discovery "only upon a showing that the party seeking discovery has substantial need of the materials in the preparation of his case and that he is unable without unique hardship to obtain the substantial equivalent of the material by other means." 16 C.F.R. § 1025.31(c)(3).

In the instant case, Complaint Counsel has invoked the work product doctrine to claim that virtually all material in its possession is protected from discovery. Such privilege claims are specious and should be ruled invalid for several reasons. First, Complaint Counsel has provided no "privilege log" to substantiate its claims to privilege. Second, documents created by independent third parties then provided to Complaint Counsel do not qualify as "prepared in anticipation of litigation," and thus are not protected by the work product doctrine. Third, to the extent any documents are considered work product material, the facts contained in such documents are not protected from discovery, and must be provided in response to Central's Interrogatories. Finally, the documents and information that constitute the underlying

methodology and rationale behind Complaint Counsel's testing of Omegas is information required by Respondents to evaluate Complaint Counsel's claims, and Complaint Counsel would be required to present such evidence at trial to prove its claims; therefore, the need for such information and documents overcome any work product protection.

Central respectfully requests that the Court compel Complaint Counsel to respond to the discovery requests where Complaint Counsel has objected invalidly based on a claim to work product protection. To the extent that Complaint Counsel refuses to produce documents or information based on a claim of "work product privilege," Complaint Counsel then should be precluded from presenting any evidence on such subjects at trial.

1. **Complaint Counsel Has Failed To Provide A Privilege Log.**

As an initial matter, Complaint Counsel's invocation of the "work product privilege" is suspect because Complaint Counsel has not provided a "privilege log." A privilege log describes certain fundamental information about the documents which assertedly are privileged, such as the type of document, the general subject matter of the document, and the author and recipient of the document.

Such a privilege log was requested in Central's Documents Requests and Interrogatories, and is required by relevant case law. See, e.g., United States v. Exxon Corp., 87 F.R.D. 624, 637 (D.D.C. 1980); Mixing Equipment Co., Inc. v. Innova-Tech, Inc., 1986 WL 9501, *4 (E.D. Pa. August 29, 1986). Moreover, Complaint Counsel did not object to providing a privilege log. In fact, Complaint Counsel affirmatively promised to provide a privilege log to Central. See May 6 Letter, Exhibit "F". However, to date, Complaint Counsel has not provided a privilege log to Central.

The absence of a privilege log calls into serious question the validity of Complaint Counsel's claim to a privilege. The Court should order Complaint Counsel either to produce a privilege log or withdraw such objections. In addition, in the absence of the basic background information provided by a privilege log, it is difficult for Central to challenge Complaint Counsel's blanket assertions of privilege.[4/] Nevertheless, there are certain areas where Complaint Counsel's assertions of the "work product privilege" are obviously unsound.

2. Documents And Information Provided To Complaint Counsel By Independent Third Parties Are Not Protected By The Work Product Doctrine.

Several of Central's Document Requests seek information provided to Complaint Counsel by independent third parties:

> **Request No. 7.: All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.**
> **Response:** Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel would be pleased to produce specific documents, or specific categories of documents, that Respondents seek to discover, upon rephrasal of this Request.

See Complaint Counsel's Document Responses, No. 7 (emphasis added).

Central sought similar information in Central's Interrogatories:

> **Interrogatory No. 120.: Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:**

4/ Central expressly reserves the right to supplement this motion to compel based on any later-disclosed privilege log from Complaint Counsel.

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus [sic] protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

Interrogatory No. 121.: Describe in detail and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus [sic] protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

See Complaint Counsel's Interrogatory Responses, Nos. 120-21(emphasis added).

These discovery requests from Central seek information created by independent third parties, then supplied to Complaint Counsel. It is self-evident that such information and documents were not prepared "in anticipation of litigation" by or on behalf of Complaint Counsel. See 16 C.F.R. § 1025.31(c)(3). Such documents and information were prepared by the independent third parties, for their own reasons, which certainly do not include the preparation of Complaint Counsel's case. Moreover, the mere fact that Complaint Counsel has received and reviewed such documents does not convert these documents into work product material. Therefore, the Court should compel Complaint Counsel to provide to Central all documents and information in Complaint Counsel's possession that were created or provided by independent third parties.

3. **The Work Product Doctrine Only Protects Documents, Not Facts.**

Even in areas where Complaint Counsel might be in possession of some documents constituting work product material, Complaint Counsel still must produce the facts and data underlying such documents. The work product doctrine by its very terms only protects "documents and tangible things" from discovery. See 16 C.F.R. § 1025.31(c)(3). The underlying facts contained in such documents are not protected from discovery. See Wright, Miller & Marcus, Federal Practice and Procedure: Civil 2d § 2024; Resolution Trust Corp. v. Dabney, 73 F.3d 262, 266 (10th Cir. 1995).

Thus, even where Complaint Counsel objects to producing actual documents based on the work product doctrine, Complaint Counsel still must provide the information and facts contained in those documents in response to Central's Interrogatories. For instance, Complaint Counsel has raised a work product objection to Central's Document Request No. 8:

> **Request No. 8.: All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.**
> **Response:** Complaint Counsel objects to this Request on the grounds that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it will share with Respondents the results of any testing it intends to introduce into evidence at the hearing in this matter, once those determinations have been made.

See Complaint Counsel's Document Responses, No. 8.

However, even if Complaint Counsel could avoid producing responsive documents to Request No. 8 based on a claim of work product protection, Complaint Counsel must supply the underlying facts and data contained in such documents in response to an interrogatory which requests such information. Central's Interrogatory No. 124 requests such information, but Complaint Counsel has refused to provide a full and complete response:

> **Interrogatory No. 124.: Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:**
>
> **(a) a description of any testing protocols used by the CPSC in testing the Omegas;**
>
> **(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;**
>
> **(c) a description of the methodology employed during each and every test of the Omegas;**
>
> **(d) the date of each and every test of the Omegas;**
>
> **(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;**
>
> **(f) a description of the results of each and every test of the Omegas; and**
>
> **(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.**
>
> **Response:** Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus [sic] protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

See Complaint Counsel's Interrogatory Responses, No. 124.

Thus, Complaint Counsel may not totally block discovery by asserting the "work product privilege." If Complaint Counsel does not provide documents based on a claim to work product protection, it still must provide responsive information to Central in response to Central's Interrogatories. Because Complaint Counsel has refused to provide such information to date, either in the form of documents or interrogatory responses, Central respectfully requests that the Court compel Complaint Counsel to produce responsive information.

4. The Data And Methodology Underlying Complaint Counsel's Test Results Regarding The Omegas Must Be Produced Despite A Work Product Objection.

Complaint Counsel has produced a data compilation of their test results for the Omegas. See Complaint Counsel's Data Compilation, attached hereto as Exhibit "G". However, these documents only show the sample size and the purported number and percentage of failures. Id. Complaint Counsel's Data Compilation does not reveal such basic information as what is considered a "failure" (in terms of water pressure and activating temperature), the location of the building, the testing methodology, and other basic underlying data. Complaint Counsel has refused to produce such information on the ground that it is protected by the work product doctrine. See Complaint Counsel's Interrogatory Responses, Nos. 124-27; Complaint Counsel's Document Responses, Nos. 8-9.

However, the work product doctrine is not an absolute privilege. Documents that constitute work product material are discoverable where a party can demonstrate a "substantial need" for the materials, and that such documents cannot otherwise be obtained without "unique hardship." 16 C.F.R. § 1025.31(c)(3).

In the instant case, to the extent the work product doctrine applies to any documents regarding the underlying data and methodology for Complaint Counsel's Data Compilation, such documents are still discoverable based on Central's "substantial need" and "unique hardship." It is well established that, once data compilations of test results have been produced, a party seeking discovery is entitled to the underlying rationale and methodology supporting the data compilations despite a work product objection. See, e.g., Wheeling-Pittsburgh Steel Corp. v. Underwriters Laboratories, Inc., 18 F.R.D. 8, 12 (N.D. Ill. 1978) (ordering production of underlying data); Handgards, Inc. v. Johnson & Johnson, 413 F. Supp. 926, 931 (N.D. Cal. 1976) (same); see also United States v. Nobles, 422 U.S. 225, 240-41 (1975) (party must either produce underlying data or all related testimony is excluded); In Re Sealed Case, 676 F.2d 793, 824 (D.C. Cir. 1982) (documents underlying investigative report ordered produced.)

There are two rationales for this exception to the work product doctrine, both applicable in the instant case. First, without the supporting documents and information, a compilation of test results "cannot properly be analyzed" and "would prove meaningless." Wheeling-Pittsburgh, 81 F.R.D. at 12; Handgards, 413 F. Supp. at 931. In the instant case, unless Complaint Counsel supplies the methodology and support for the Data Compilation, Central will not be able to ascertain or challenge the validity of the results, which consist of naked conclusions.

The second rationale for this exception to the work product doctrine is that because the supporting data must be introduced at trial in order to prove the statistical conclusions, the opposing party is entitled to examine such information in discovery. Wheeling-Pittsburgh, 81 F.R.D. at 12. This reasoning also applies in the instant case. To delay allowing Central the

opportunity to examine the methodology and data underlying Complaint Counsel's Data Compilation until trial would be highly prejudicial to Central.[5/]

Thus, even to the extent that certain documents fall within the work product doctrine, such documents must be produced in the instant case pursuant to an exception to that doctrine. Moreover, to the extent that Complaint Counsel refuses to produce the underlying information regarding its Data Compilation, the Court should exclude from evidence the results set forth in the Data Compilation. See Nobles, 422 U.S. at 240-41. Thus, Complaint Counsel has a clear choice: produce the documents and information, or assert the work product doctrine and be barred from producing evidence regarding that subject at trial.

* * * * *

Complaint Counsel has repeatedly asserted an unfounded claim to a "work product privilege." Complaint Counsel's objections are invalid because: (1) Complaint Counsel has not produced a privilege log; (2) information and documents from independent third parties are not work product material; (3) facts, as opposed to documents, are not protected by the work product doctrine; and (4) the methodology and rationale underlying Complaint Counsel's Data Compilation are subject to an exception to the work product doctrine. Therefore, the Court should compel Complaint Counsel to produce full and complete responses to the discovery

---

5/ This rationale, however, does not mean that Complaint Counsel can selectively produce only the underlying information that is favorable to Complaint Counsel. Complaint Counsel must produce full and complete responses, including all of the required background information, good or bad. Permitting Complaint Counsel to produce only the information it plans to introduce at trial would violate the broad scope of permissible discovery provided for under 16 C.F.R. § 1025.31, and would render the adversary process meaningless.

requests, where Complaint Counsel previously asserted a specious claim to work product protection. Those responses are as follows:

Document Request Nos.: 4-5, 7-8, 10-13, 15-16, 19-29, 34-53, 56-59, 61-63, 68-71.

Interrogatory Nos.: 78-85, 100-02, 106-13, 117, 119-24, 126-27, 147.

E. Complaint Counsel Has Refused To Produce Documents Pending Entry Of A Confidentiality Agreement, But Has Refused To Enter Into A Confidentiality Agreement.

Regarding a number of Central's Document Requests and Interrogatories, Complaint Counsel has refused to produce responsive information until "the execution of an appropriate confidentiality stipulation by Respondents." For instance:

> **Request No 1.: All documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint.**
> **Response:** Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery pursuant to the work product privilege. The data compilation of failures was prepared by or for Complaint Counsel in anticipation of litigation. Without waiving its objection, Complaint Counsel will produce the data on which the compilation is based, and the information about the fires, to the extent that the information was not provided to Complaint Counsel by a third party on a confidential basis. Without waiving its objection, to the extent that the data or information was provided on a confidential basis, Complaint Counsel will produce the data upon the execution of an appropriate confidentiality stipulation by Respondents, and the issuance of an appropriate protective order by the Presiding Officer.
>
> **Request No. 5.: All documents provided to the CPSC in response to subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.**
> **Response:** Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Complaint Counsel also objects to this Interrogatory to the extent that it seeks documents prohibited from disclosure pursuant to 15 U.S.C. § 2055. Without waiving its objections, Complaint Counsel will produce all nonconfidential documents provided to Complaint Counsel by third parties in response to subpoenas issued by CPSC in this matter upon the receipt of permission from the third parties, and upon execution of an appropriate confidentiality

stipulation by Respondents, and the issuance of any necessary protective orders by the Presiding Officer.

See Complaint Counsel's Document Responses, Nos. 1 and 5 (emphasis added).

As a matter of law, the purportedly confidential documents are subject to discovery by Central in this administrative proceeding. Title 15 U.S.C. § 2055(a)(8) provides that restrictions on disclosure of material provided to the CPSC by third parties "shall not prohibit the disclosure of information . . . when relevant in any administrative proceeding under this Act." Nevertheless, in the interests of protecting the concerns of third parties who provided documents to the CPSC and in order to permit discovery to go forward, Central was and is willing to enter into a confidentiality stipulation.

However, it has become apparent that Complaint Counsel's stated desire for a confidentiality agreement is merely an excuse not to produce discovery responses. On May 1, 1998, in response to Complaint Counsel's request for a confidentiality agreement in its discovery responses, Respondents provided a draft Confidentiality Agreement to Complaint Counsel. See Letter of May 1, 1988 with attached Confidentiality Agreement, Exhibit "F". This Confidentiality Agreement provided a large degree of protection from public disclosure for confidential documents produced to the CPSC by third parties, while permitting discovery in this case to proceed.

Complaint Counsel did not comment on or respond to this proposed Confidentiality Agreement. Respondents sent follow-up letters on May 7 and 13, requesting comments or agreement from Complaint Counsel regarding the Confidentiality Agreement. See Letters of May 7 and 13, 1998, Exhibit "F". Complaint Counsel still provided no response. Instead, with

no prior notice, Complaint Counsel unilaterally began to submit documents for in camera review by the Court.

As a result, Central has been forced to file a motion requesting that the Court enter the proposed Confidentiality Agreement as a protective order. See Proposed Protective Order and Opposition of Respondents To Complaint Counsel's Submission of Documents Filed In Camera, filed May 19, 1998. If the Court enters the Protective Order Regarding Confidentiality presented by that motion, Complaint Counsel will no longer have an excuse not to produce these purportedly confidential documents.

The following discovery responses from Complaint Counsel withhold documents and/or information based upon this apparently contrived claim to confidentiality:

Document Response Nos.: 1, 5 , 9, 39-41, 61-62.

Interrogatory Response Nos.: 107-08, 119-23, 131.

F. Complaint Counsel May Not Refer To Its Own Self-Serving Pleadings And Other Non-Responsive Discovery Answers Rather Than Providing Full And Complete Responses.

In many of Complaint Counsel's responses to Central's discovery requests, rather than provide full and complete responses, Complaint Counsel merely refers Central to Complaint Counsel's own self-serving pleadings. See, e.g., Complaint Counsel's Interrogatory Responses, Nos. 85-86 (referring Central to the Complaint as substantive evidence). Complaint Counsel avoids responding to other discovery requests by cross-referencing Central to other, equally unresponsive discovery answers from Complaint Counsel. See, e.g., Complaint Counsel's Document Responses, Nos. 21-29 (referring Central to interrogatory responses).

Courts are in agreement that incorporation by reference to a party's own self-serving testimony and pleadings is not a sufficient and responsive answer to a discovery request. See Martin v. Easton Publishing Co., 85 F.R.D. 312, 315 (E.D. Pa. 1980); Scovill Manuf. Co. v. Sunbeam Corp., 61 F.R.D. 598, 601 (D. Del. 1973); Atlanta Coca- Cola Bottling Co. v. Transamerica Insurance Co., 61 F.R.D. 115, 120 (N.D. Ga. 1972); J.J. Delaney Carpet Co. v. Forrest Mills, Inc., 34 F.R.D. 152, 153 (S.D.N.Y. 1963). Instead, a defendant is entitled to know the factual content of plaintiff's claims "with a reasonable degree of specificity." Martin, 85 F.R.D. at 315. "Plaintiff cannot simply rely on [an] amalgamation of material to meet . . . discovery obligations." Id. at 315.

Thus, Complaint Counsel should not be permitted to respond to Central's discovery requests by reference to Complaint Counsel's own pleadings and other non-responsive discovery answers. The Court should compel Complaint Counsel to provide full, complete, and precise responses. The following responses encompass areas where Complaint Counsel has responded improperly by reference, in whole or in part, to its own pleadings and other discovery responses:

Document Response Nos.: 12-13, 21-29, 44-53, 63, 70.

Interrogatory Response Nos.: 4-37, 43-44, 51, 76-77, 81-86, 88.

G. Complaint Counsel Has Delayed Producing Information And Documents For No Apparent Reason.

In Complaint Counsel's discovery responses, Complaint Counsel repeatedly represents that it "will produce" responsive information or documents at some unspecified future time. However, Complaint Counsel has not yet provided this promised information.

For instance:

Request No. 61.: **All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage in connection with the Omegas.**
Response: Complaint Counsel objects to this Request on the ground that the term "consumer complaints" is undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Request on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Request on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will produce all non-privileged and non-confidential reports of fires in which Omegas have reportedly failed to activate. Complaint Counsel will supplement its response to this Request as additional information becomes available.

See Complaint Counsel's Document Responses, No. 61 (emphasis added).

Interrogatory No. 124.: **Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:**

(a) a description of any testing protocols used by the CPSC in testing the Omegas;
(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;
(c) a description of the methodology employed during each and every test of the Omegas;
(d) the date of each and every test of the Omegas;
(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;
(f) a description of the results of each and every test of the Omegas; and
(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus [sic] protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

See Complaint Counsel's Interrogatory Responses, No. 124 (emphasis added).

Complaint Counsel has represented that it "will produce" the requested information and documents. In letters of May 4, 7, and 13, Central reminded Complaint Counsel of these unanswered discovery requests, but received no response. See Exhibit "F". Central delayed filing the instant motion to compel to the statutory limit of time in the hope of receiving this promised discovery. However, despite the fact that almost three weeks have elapsed since Complaint Counsel served its responses, it has not produced the promised information, nor has it provided any explanation.

This failure to produce promised discovery responses is particularly disturbing in the instant case because the CPSC rules of practice provide a limited time for discovery and preparation for trial. See 16 C.F.R. § 1025.3(g) (discovery to be completed within 150 days of the filing of the Complaint). According to 16 C.F.R. § 1025.31(g), discovery in the instant case should be completed by approximately August 1. Thus, the discovery period is more that half over, and Complaint Counsel still has not provided any meaningful discovery to Central. By delaying its production of discovery responses, Complaint Counsel is greatly prejudicing Central's ability to prepare for trial and defend itself in this matter.

Complaint Counsel has promised that it "will produce" the requested information and documents. Because Complaint Counsel has failed to do so, Central now requests that the Court compel Complaint Counsel to produce these discovery responses.

The following discovery responses demonstrate the above-referenced problem:

Document Response Nos.: 8, 17, 61-63.

Interrogatory Response Nos.: 74-77, 81, 86 , 88, 117, 119, 124, 126-27, 135-38.

H. Complaint Counsel Has Raised Groundless Objections Based On Relevance And Vagueness.

Complaint Counsel objects to many of Central's Document Requests and Interrogatories on the grounds that the information requested is not relevant or that the question is vague. A quick review of a few of these responses reveals that these objections lack merit. For instance:

> **Request No. 57.: All documents that constitute, provide evidence of, refer, or relate to the use of silicone o-rings in sprinkler heads.**
> **Response:** Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege.

See Complaint Counsel's Document Responses, No. 57.

Despite Complaint Counsel's relevance objection, the information requested in Document Request No. 57 is plainly relevant. The Omegas currently use silicone o-rings, and most models have used such o-rings since 1996. Complaint Counsel's Data Compilation does not reveal any problems with any Omegas using silicone o-rings. If there are no alleged problems with Omegas using silicone o-rings, then a major issue is removed from this case. Thus, Request No. 57 is not merely relevant, it is of extreme importance to the instant proceedings. Therefore, Complaint Counsel's relevance objection is not well-founded, and Complaint Counsel should respond to this request.

Another tactic used by Complaint Counsel to avoid responding to Central's discovery requests is to object that a request is "vague, ambiguous and confusing," then provide no answer or an incomplete answer. For instance:

Interrogatory No. 42.: **(a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard; If so:**

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks irrelevant information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

See Complaint Counsel's Interrogatory Responses, No. 42 (emphasis added).

Interrogatory No. 42 asks a simple and straightforward question -- the water pressure at which Omegas must activate when tested to be deemed acceptable. By pretending not to understand this request, claiming that it is "vague, ambiguous and confusing," Complaint Counsel avoids providing a response that: (a) is simple to provide; (b) is plainly relevant to this case; and (c) would greatly focus the dispute between Complaint Counsel and Central. Complaint Counsel should not be permitted to avoid answering by raising a sham vagueness objection.

Complaint Counsel has been treating discovery to date as a game of "hide-and-seek." Such gamesmanship should not be allowed by the Court. The following discovery responses contain similar examples of invalid relevance and/or vagueness objections:

Document Response Nos.: 9-11, 15-18, 33, 35, 42-43, 57-59, 61-62, 64.

Interrogatory Response Nos.: 26-34, 42-51, 78-85, 87, 129.

I. Complaint Counsel Is Not Permitted To Object Based On Its Belief That Some Documents Are Equally Available To Central.

Complaint Counsel objects to a significant number of Central's interrogatories on the ground that responsive documents or information "are within [Central's] possession." See, e.g., Complaint Counsel's Document Responses, No. 14. There are two obvious problems with this objection. First, Complaint Counsel does not actually know whether Central is in possession of such documents -- this is an objection based on a guess. Second, Central is entitled to determine via discovery what documents and information are in Complaint Counsel's possession.

Based on this reasoning, courts have held that it is not a valid ground for objection that information or documents are equally available to the interrogator. Petruska v. Johns-Manville, 83 F.R.D. 32, 35 (E.D. Pa. 1979). As long as a document request demands relevant information, the party must respond even if the opposing party has equal access to the information. Dykes v. Morris, 85 F.R.D. 373, 375 (N.D. Ill. 1980). Thus, Complaint Counsel must identify documents in its control that are responsive to Central's discovery requests, even if Complaint Counsel believes that Central might have equal access to such information.

The following responses include Complaint Counsel's impermissible objection that responsive documents are within Central's possession:

Document Response Nos.: 3, 14, 31, 56, 68, 70.

Interrogatory Response Nos.: 1-3.

J. Complaint Counsel Is Required To Answer Interrogatories Applying The Law To The Facts Of This Case.

The CPSC rules of practice explicitly permit interrogatories to require an answer that involves the application of law to facts. Section 1025.32 provides: "An interrogatory otherwise proper is not objectionable merely because an answer to the interrogatory would involve an opinion or contention which relates to fact or to the application of law to fact . . . ." 16 C.F.R. § 1025.32(c) (emphasis added).

Despite this explicit language, each time Central poses an interrogatory requiring the application of law to fact, Complaint Counsel objects on the ground that such discovery "calls for a legal conclusion." For instance:

> Interrogatory No. 38.: **With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:**
>
> **(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;**
>
> **(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;**
>
> **(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;**
>
> **(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and**
>
> **(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.**
>
> Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

See Complaint Counsel's Interrogatory Responses, No. 38.

The language of the CPSC rules of practice is plain and unambiguous -- Central is permitted to pose interrogatories requiring Complaint Counsel to apply the law to the facts of this case. Accordingly, Complaint Counsel's objection that a request "calls for a legal conclusion" is invalid, and the Court should compel Complaint Counsel to provide full and complete responses to the following interrogatories:

Interrogatory Response Nos.: 5-25, 31-40.

K. Central Is Permitted To Seek Discovery Regarding Complaint Counsel's Potentially Impermissible Ex Parte Contacts With Central's Former And Current Employees.

Central has requested that Complaint Counsel provide documents and information related to potentially impermissible ex parte contacts by Complaint Counsel with Central's former and/or current employees. Central previously has been advised that Complaint Counsel was attempting to engage in such contacts. Complaint Counsel has refused to provide any responses to these discovery requests.

The discovery requests involved are as follows:

> Request No. 19.: **All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.**
> Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege.
>
> Request No. 20: **All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and current employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.**

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

Request No. 31.: All documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents.
Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and on the ground that the information is already within the possession of Respondents. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

See Complaint Counsel's Document Responses, Nos. 19-20, 31.

Interrogatory No. 100.: Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;
(b) the person's last known home and business address;
(c) the person's last known telephone number;
(d) the person's last known position with Respondents;
(e) the date of any such contacts;
(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);
(f)[sic] a detailed description of the subject matter of such communication; and
(g) the identity of any other persons who were present during such contacts.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

See Complaint Counsel's Interrogatory Responses, No. 100.

As explained supra, Complaint Counsel cannot claim that such contacts are shielded by the work product doctrine. Contacts with not just independent third parties, but the former employees or current employees of the opposing party can hardly be classified as privileged. See supra § III.D.1. Moreover, even if Complaint Counsel has created working documents that might fall within the work product doctrine, the fact of the contacts and the facts regarding what occurred during such contacts are not subject to the work product doctrine; the doctrine only protects documents, not underlying facts. See supra § III.D.3. Thus, Complaint counsel's objections to Central's discovery requests on this subject are invalid.

Moreover, such discovery is directly relevant to determine whether Complaint Counsel has breached its ethical obligations and must be disqualified in the instant case. Complaint Counsel is operating out of Maryland, so the Maryland Rules of Professional Conduct should apply to Complaint Counsel. Maryland Rule of Professional Conduct 4.2 provides that: "In representing a client, a lawyer shall not communicate about the subject of the representation with a party the lawyer knows to be represented by another lawyer in the matter, unless the lawyer has the consent of the other lawyer or is authorized by law to do so."

The courts have held that this restriction extends to former employees who may have access to confidential or sensitive information. See Zachair, Ltd. v. Driggs, 965 F. Supp. 741 (D. Md. 1997); Camden v. State of Maryland, 910 F. Supp. 1115 (D. Md. 1996); see also In Re Allen, 106 F.3d 582 (4th Cir. 1997) (extending attorney-client protection to former employees). The penalty for violating this ethical obligation is the disqualification of counsel. See Zachair, 965 F. Supp. at 754 (disqualifying counsel who contacted former employees); Camden, 910 F. Supp. at 1124 (same).

Thus, Central clearly is entitled to discovery regarding which former or current employees Complaint Counsel has contacted, when such contacts occurred, and a detailed description of the ex parte communications that took place. If Complaint Counsel violated Rule 4.2 of the Maryland Rules of Professional Conduct, as interpreted by Zachair and Camden, then Complaint Counsel will be subject to disqualification and potential sanctions.[6/] Therefore, Central respectfully requests that the Court compel Complaint Counsel to provide full and complete responses to Document Requests Nos. 19-20 and 31 and Interrogatory No. 100.

IV. CONCLUSION

Complaint Counsel has done everything in its power to avoid providing meaningful discovery to Central in this case. Complaint Counsel has refused to provide basic documents supporting its charges, declined to answer simple and straightforward interrogatories, raised baseless objections, failed to provide a privilege log, and avoided entering into a confidentiality agreement simply to further delay discovery.

As a result, Central has suffered serious prejudice. A significant portion of the statutory discovery period has elapsed in this case, and Central still has not received basic information from Complaint Counsel. As a result, Central has been prevented from preparing adequately for the trial of this matter.

6/ As soon as they were informed of such contacts, Central's counsel requested that Complaint Counsel cease and desist all such potentially impermissible actions, and informed Complaint Counsel of the relevant case law regarding disqualification.

Complaint Counsel's refusal to provide meaningful discovery violates the CPSC rules of practice and all standards of fair discovery. Therefore, based on all of the foregoing, pursuant to 16 C.F.R. § 1025.36, Central respectfully requests that the Court compel Complaint Counsel to provide full and complete responses to Central's Document Requests and Interrogatories.

Respectfully submitted,

ORDER

AND NOW, this __ day of _____, 1998, upon consideration of Respondents' Motion To Compel Full And Complete Responses To Interrogatories And Document Requests, Complaint Counsel's response thereto, and all other evidence before the Court, it is hereby ORDERED that Respondents' Motion is GRANTED.

Pursuant to 16 C.F.R. § 1025.36, Complaint Counsel is hereby ordered to provide full and complete responses to Respondents within ten (10) days of the date of this Order regarding the following Respondents' discovery requests:

Document Request Nos.: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71.

Interrogatory Nos.: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73,

74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 106, 107,108, 109, 110, 111, 112, 113, 117, 119, 120, 121, 122, 123, 124, 126, 127,129, 135, 136, 137, 138, 140, 141,147.

IN THE MATTER OF CENTRAL SPRINKLER CORP. and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

RESPONDENTS' FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Respondents Central Sprinkler Corp. ("CSC") and Central Sprinkler Co. ("Central") (collectively, "Respondents"), through their undersigned counsel, hereby propound to the Consumer Product Safety Commission (the "CPSC" or the "Complainant") the following request for documents pursuant to 16 C.F.R. § 1025.33. Complainant is requested to produce the documents and things described herein within thirty (30) days of the service of this request. Complainant's responses should be sent to the offices of Morgan, Lewis and Bockius LLP, 2000 One Logan Square, Philadelphia, PA 19103.

For the purposes of this Request, the following instructions and definitions apply:

INSTRUCTIONS

Respondents hereby fully incorporate by reference the Instructions set forth in Respondents' First Set of Interrogatories.

DEFINITIONS

Respondents hereby fully incorporate by reference the Definitions set forth in Respondents' First Set of Interrogatories.

DOCUMENTS AND THINGS TO BE PRODUCED

1. All documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint.

2. All documents identified in the CPSC's responses to Respondents' First Set of Interrogatories.

3. All documents that constitute the entirety of the CPSC administrative file regarding the Omegas.

4. All documents that constitute subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

5. All documents provided to the CPSC in response to subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

6. All documents provided to the CPSC by Respondents regarding the Omegas.

7. All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.

8. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.

9. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by on or behalf of any other person, organization, business, or other entity.

10. All documents that constitute, provide evidence of, refer, or relate to any testing of non-Omega sprinkler heads conducted by on or behalf of the CPSC.

11. All documents that constitute, provide evidence of, refer, or relate to testing of non-Omega sprinkler heads conducted by on or behalf of any other person, organization, business, or other entity.

12. All documents that constitute, provide evidence of, refer, or relate to the alleged jurisdiction of the CPSC over the Omegas.

13. All documents that constitute, provide evidence of, refer, or relate to the jurisdiction of the CPSC over any product, including without limitation any memoranda or other interanal correspondence that addresses the extent of or any limitations on the jurisdiction of the CPSC.

14. All documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas.

15. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly.

16. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly activated properly.

17. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly failed to activate properly.

18. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly activated properly.

19. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents, including but not

limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

20. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and current employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

21. All documents that constitute, provide evidence of, refer, or relate to "[the] multiple random inquiries of sprinkler contractors across the nation," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

22. All documents that constitute, provide evidence of, refer, or relate to "what has been, and remains, customarily required to remove and install sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

23. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view [that] dezincification alone is the cause of the above-required operating pressures in Omegas from plastic pipes," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

24. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

25. All documents that constitute, provide evidence of, refer, or relate to "the data [which] point to multiple failure modes rooted in the design and construction of these sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

26. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluation, consideration, or analyses done by or on behalf of the CPSC regarding the "testing based corrective action," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

27. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, or analyses done by or on behalf of the CPSC which reflects the "serious concerns" of the CPSC regarding whether "Omega sprinklers with silicone o-rings will function in the long term," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

28. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, consideration, or analyses done by or on behalf of the CPSC which addressed Omegas where "the internal shaft was cocked or tipped slightly and jammed in that position," as referenced in a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

29. All documents that constitute, provide evidence of, refer, or relate to "automatic fire sprinklers' historical rate of proving 99.5 percent effective," as referenced in a January 6, 1998 letter from Eric Singer of the CPSC to state attorneys general.

30. All documents that constitute, provide evidence of, refer, or relate to the CPSC Recall Handbook.

31. All documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents.

32. All Omegas in possession of the CPSC.

33. All non-Omega sprinkler heads in the possession of the CPSC.

34. All audio and/or video tapes regarding or relating to any testing of Omegas.

35. All audio and/or video tape regarding or relating to any testing of non-Omega sprinkler heads.

36. All documents that constitute, provide evidence of, refer, or relate to any personal journals, diaries, or correspondence maintained by the CPSC Staff regarding the Omegas and/or Respondents.

37. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any dealers, retailers, contractors, or any distributors regarding or related to the Omegas and/or Respondents.

38. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any Authorities Having Jurisdiction regarding or related to the Omegas and/or Respondents.

39. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any consumers regarding or related to the Omegas and/or Respondents.

40. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any state law enforcement authorities regarding or related to the Omegas and/or Respondents.

41. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any federal law enforcement authorities regarding or related to the Omegas and/or Respondents.

42. All documents that constitute, provide evidence of, refer, or relate to scripts, talking points, outlines, or any other material prepared by, for, or on behalf of the CPSC for any press conferences or news releases regarding the Omegas and/or Respondents.

43. All documents that constitute, provide evidence of, refer, or relate to any material regarding the Omegas and/or Respondents created by or on behalf of the CPSC public relations department, media department, or any other CPSC internal department charged with communicating with or providing information to the public media.

44. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products.

45. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products."

46. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13.

47. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures."

48. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function in a significant percentage of instances."

49. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the "Omegas are defective pursuant to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4."

50. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death."

51. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a

substantial risk of injury to the public within the meaning of § 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)."

52. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "Omegas present a substantial product hazard as described in Sections 15(a)(2), (c) and (d) of the CPSA, 15 U.S.C. §§ 2064(a) (2), (c) and (d)."

53. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest."

54. A current curriculum vitae or resume for each and every expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

55. All publications of any nature authored by any expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

56. Any and all written statements made by Respondents that the CPSC contends constitute an admission with reference to any of the issues raised in the Complaint.

57. All documents that constitute, provide evidence of, refer, or relate to the use of silicone o-rings in sprinkler heads.

58. All documents that constitute, provide evidence of, refer, or relate to the use of EPDM o-rings in sprinkler heads.

59. All documents that constitute, provide evidence of, refer, or relate to the use in sprinkler heads of o-rings comprised of any other material or compound.

60. All documents that constitute, provide evidence of, refer, or relate to the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas.

61. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage in connection with the Omegas.

62. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of personal injury in connection with the Omegas.

63. Any and all testing protocols used by the CPSC or by any expert or other person on behalf of the CPSC in testing the Omegas.

64. All documents that constitute, provide evidence of, refer, or relate to any alternative design features for the Omegas.

65. All documents that constitute, provide evidence of, refer, or relate to the feasibility and/or propriety of any alternative design features for the Omegas.

66. All documents that constitute, provide evidence of, refer, or relate to the CPSC's preliminary determination of the alleged risks associated with the Omegas.

67. All documents that constitute, provide evidence of, refer, or relate to any changes in the CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas.

68. All documents that constitute, provide evidence of, refer, or relate to any corrective action proposal for the Omegas.

69. All documents that constitute, provide evidence of, refer, or relate to the requested recall of the Omegas.

70. All documents that constitute, provide evidence of, refer, or relate to the corrective action proposal presented by Respondents regarding the Omegas.

71. All documents that constitute, provide evidence of, refer, or relate to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

ALL-STATE® LEGAL 800-222-0510 EDR11 RECYCLED

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

IN THE MATTER OF **CENTRAL SPRINKLER CORP.** **and** **CENTRAL SPRINKLER CO.,** **Respondents**	**CPSC DOCKET NO. 98-2**

RESPONDENTS' FIRST SET OF INTERROGATORIES

Respondents Central Sprinkler Corp. ("CSC") and Central Sprinkler Co. ("Central") (collectively, "Respondents"), through their undersigned counsel, hereby propound the following interrogatories to the Consumer Product Safety Commission (the "CPSC" or the "Complainant") pursuant to 16 C.F.R. § 1025.32. Complainant is requested to respond within thirty (30) days of the service of these interrogatories. Complainant's responses should be sent to the offices of Morgan, Lewis & Bockius LLP, 2000 One Logan Square, Philadelphia, PA 19103.

For the purposes of these Interrogatories, the following definitions and instructions apply:

INSTRUCTIONS

A. In answering these Interrogatories, Document Requests, and/or Requests for Admissions (collectively, the "Discovery Requests"), furnish all information available to you, including any such information in possession of your attorneys or anyone acting on your behalf, and not merely such information known of your own personal knowledge. If you cannot answer the Discovery Requests in full after exercising due diligence to secure the information to do so, so state and answer to the extent possible.

B. If the answer to any of the Discovery Requests is that you lack knowledge of some or all of the requested information, describe all efforts made by you to obtain the information necessary to answer that Discovery Request.

C. If any matter responsive to any of the Discovery Requests is withheld based on any claim of privilege, describe generally the matter withheld, state the privilege being relied upon, and identify all persons or entities who have or have had access to said matters. If you refuse to describe and/or produce any document on the basis of a claim of privilege or protection from discovery of any kind, with respect to each such document, set forth the following information:

(i) the date of the document;

(ii) its authors;

(iii) all recipients of the document;

(iv) the present location and custodian of the document; and

(v) the basis of the claim of privilege or protection from discovery.

D. Each lettered sub-part of a numbered Discovery Request is to be considered a separate Discovery Request for the purpose of Complainant's answers and objections. You must object separately to each sub-part and must answer any other sub-parts.

E. These Discovery Requests are to be deemed continuing in nature, and you shall promptly supply, by way of supplemental response, any additional responsive information that may become known to you or anyone acting on your behalf after your answers have been prepared or served.

F. For all documents produced by Complainant, identify by Bates number which document or documents are responsive to each separate Interrogatory and/or each separate Request for Documents.

DEFINITIONS

A. The "Complaint" means whichever version of the Complaint was last filed and in effect at the time of service of the relevant Discovery Request.

B. "Complainant" and/or the "CPSC" refers to the Consumer Product Safety Commission, the Legal Division of the Office of Compliance of the CPSC, and any employees or agents thereof.

C. "Respondents" refers to Central Sprinkler Corp. and Central Sprinkler Co., all corporate affiliates thereof, and all current or former employees of Central and corporate affiliates

thereof.

D. "CSC" refers to Central Sprinkler Corporation.

E. "Central" refers to Central Sprinkler Company.

F. "Omega" or "Omegas" refers to the line of sprinkler heads identified in the Complaint, including the following models: C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control.

G. "Person" or "persons" means all individuals and entities, including natural persons, representative persons, public or private corporations, companies, unincorporated associations, partnerships, organizations, government entities or groups, plus any divisions, departments, or units thereof.

H. "Document" or "documents" means any written, printed, typed, recorded, or graphic matter, whether produced or reproduced or stored on paper, cards, tapes, film, electronic facsimile, computer storage devices or any other devices or media, including, but not limited to papers; books; letter; photographs; objects; tangible things; correspondence; telegrams; cables; telex messages; memoranda; notes; notations; records; work papers; transcripts; minutes; reports and recordings of telephone or other conversations, or of interviews, or of conferences, or of other meetings; affidavits; statements; opinions; proposals; reports; studies; analyses; audits; evaluations; contracts; agreements; journals; statistical records; ledgers; books of account; bookkeeping entries; financial statements; tax returns; vouchers; checks; check stubs; invoices; receipts; desk calendars; appointment books; diaries; lists; tabulations; summaries; sound recordings; computer printouts; data processing input and output; microfilms; all records kept by electronic, photographic, or mechanical means; and things similar to any of the foregoing, however denominated. When one or more of the following documents is requested or referred to, the request or reference shall include, but is not limited to, the original and each and every copy and draft thereof having writings, notations, corrections, or markings unique to such copy or draft.

I. "Oral communication" means any and all non-written forms of expression or communication, whether face-to-face or by telephone, in a conference or otherwise.

J. "Identify" or "identification", when used in reference to a document, means to:

1. state the type of document (e.g., letter, log, report, etc.);

2. state its date;

3. state its title, heading or other designation and any other information (e.g., index or file number) which would facilitate the identification thereof;

4. identify the person(s) who prepared and/or signed the document;

5. identify the persons (or if widely distributed, the organization or classes of persons) to whom it was sent;

6. identify the last known location of the document and of each copy thereof having notations or markings unique to such copy;

7. if the document was, but no longer is, in your possession or subject to your control, identify its last know custodian, describe the circumstances under which it passed from your control to that person, and identify each person having knowledge of such circumstances;

8. describe its general subject matter and contents; and

9. if the document exceeds one page in length, or is contained in a series of documents or a larger portion, identify the specific document by appropriate identifying name or symbol, the number of the particular page or pages (or other descriptive aid) and of the line or lines thereof upon which the information referred to in the Discovery Request or your response appears.

K. "Identify" or "identification", when used in reference to a natural person, means to provide the following information:

1. his or her full name;

2. his or her business affiliation(s), position(s), title(s), and job description(s) during the period delineated in the Discovery Request (and the dates during which each affiliation, position, title, and job description applied to him or her);

3. his or her present or last known business address (and the date of that last knowledge); and

4. his or her present or last known residence address (and the date of that last knowledge).

L. "Identify" or "identification", when used in reference to an oral communication or statement, means to:

1. state the date of the oral communication or statement;

2. state the place where it occurred;

3. identify the persons(s) making and listening to the oral communication or statement;

4. identify all other persons present at the time it was made;

5. if by telephone, identify the persons participating in the conversation and where each was located at the time of the call; and

6. describe the substance of the oral communication or statement.

M. "Date" means the exact day, month, and year if ascertainable, or, if not, the best approximation thereof or best approximation in relation to other events.

N. "Describe" means to set forth fully and clearly every relevant fact and/or event, including particulars of time, place and manner.

O. Where the context so requires:

1. the terms "and" and "or" mean "and/or";

2. the plural of a word includes the singular, and the singular includes the plural;

3. the past tense of verb includes the present, and the present tense includes the past;

4. the masculine gender includes feminine and neuter genders, and the neuter gender include the masculine and feminine.

P. All other words are to be given their ordinary and usual meanings, according to a current edition of Webster's Dictionary.

INTERROGATORIES

A. Allegations of the Complaint

1. (a) State whether CSC manufactures Omegas.

If so:

(b) identify and describe any such manufacturing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such manufacturing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such manufacturing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

2. (a) State whether CSC sells Omegas.

If so:

(b) identify and describe any such sales;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such sales;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such sales; and

(e) describe in detail the substance of each such person's knowledge and/or information.

3. (a) State whether CSC markets Omegas.

If so:

(b) identify and describe any such marketing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such marketing;

(d) identify each and every person whom Complainant knows and/or believes

have knowledge of such marketing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

4. With respect to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

5. (a) State whether the C-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

6. (a) State whether the C-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

7. (a) State whether the C-1A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

8. (a) State whether the C-1A PRO ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or

information.

9. (a) State whether the EC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

10. (a) State whether the EC-20A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

11. (a) State whether the EC-20 AID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

12. (a) State whether the HEC-12 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

13. (a) State whether the HEC-12 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

14. (a) State whether the HEC-12 PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

15. (a) State whether the HEC-12A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

16. (a) State whether the HEC-12 RES model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

17. (a) State whether the HEC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

18. (a) State whether the HEC-20 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

19. (a) State whether the R-1 model of the Omegas constitutes a "consumer product"

pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

20. (a) State whether the R-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

21. (a) State whether the R-1M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to

have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

22. (a) State whether the AC model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

23. (a) State whether the M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

24. (a) State whether the Flow Control model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

25. With respect to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

26. (a) Separately for each model of the Omegas listed in the Complaint, state whether such model is sold by Respondents directly to consumers.

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such sales;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such sales; and

(d) describe in detail the substance of each such person's knowledge and/or information.

27. (a) Separately for each model of the Omegas listed in the Complaint, state whether Respondents market such a model to consumers.

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such marketing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such marketing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

28. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is installed by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such installation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such installation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

29. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is serviced by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such servicing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such servicing; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

30. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is repaired by consumers themselves (as opposed to professional contractors). If so:

(b) identify all documents which describe, evidence, refer, or relate to any such repairs;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such repairs; and

(d) describe in detail the substance of each such person's knowledge and/or information.

31. State whether Omegas installed in buildings used only as storage facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

32. State whether Omegas installed in warehouses constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates

in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

33. State whether Omegas installed in factories constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

34. State whether Omegas installed in computer facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

35. State whether there are any factual circumstances under which any Omegas would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

36. (a) State whether there are any factual circumstances under which any non-Omega sprinkler heads would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

37. (a) Separately for each model of the Omegas listed in the Complaint, describe any and all ways in which consumers use, consume, and/or enjoy such a model.

(b) identify all documents which describe, evidence, refer, or relate to any such use, consumption, or enjoyment;

(c) identify each and every person whom Complainant knows and/or believes to

have knowledge of any such use, consumption, or enjoyment; and

(d) describe in detail the substance of each such person's knowledge and/or information.

38. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:

(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

39. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199:

(a) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of UL Standard 199, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of UL Standard 199, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi the testing standard that Complainant contends is created by UL Standard 199 that applies to the Omegas.

40. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

41. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures":

(a) describe in terms of both degrees Fahrenheit and Celsius what temperatures are meant by the phrase "certain temperatures";

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or

information.

42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

45. (a) State whether Complainant contends that there is a standard of "failure" that will accurately predict whether a particular Omega will fail to activate in a fire when used in a particular building without regard to the actual hydraulic pressure that exists in the building. If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

46. (a) State whether Complainant contends that if a particular Omega does not activate at a minimum of 7 psi when tested, such an Omega would not activate if a fire occurred in a building where such Omega was installed.

(b) set forth the factual basis for any such contention;

(c) identify all documents which describe, evidence, refer, support, or relate to

any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

47. Describe the average static water pressure (in psi) present in the sprinkler systems of most residential buildings.

48. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most residential buildings, after the system has been activated.

49. Describe the average static water pressure (in psi) present in the sprinkler systems of most commercial buildings.

50. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most commercial buildings, after the system has been activated.

51. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

52. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas do not and/or will not function in a "significant percentage" of instances:

(a) expressed in terms of a specific percentage, describe what constitutes "a significant percentage" regarding this allegation;

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

53. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

54. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

55. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

56. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

57. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

58. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

59. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 AID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

60. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

61. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

62. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

63. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

64. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 RES model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

65. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

66. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

67. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

68. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

69. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1M model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

70. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the AC model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

71. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the M model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

72. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the Flow Control model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

73. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to

have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

74. State whether the failure of any Omega to function has resulted in any bodily injury or injuries.

75. State whether the failure of any Omega to function has resulted in any death or deaths.

76. With respect to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

77. With respect to the allegation of Paragraph 15 of the Complaint that the defect or the defects in the Omegas create a "substantial risk of injury to the public":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

78. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

79. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

80. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

81. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate under any type of testing.
If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

82. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in a fire.
If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

83. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.

If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

84. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

85. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

86. (a) State whether Complainant contends that any Omegas manufactured using silicone o-rings constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

87. (a) State whether the Complainant contends that the performance of Omegas declines or deteriorates over time.

If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or

information.

88. With respect to the allegation of Paragraph 16 of the Complaint that the Omegas present a "substantial product hazard":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

89. With respect to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest":

(a) identify and describe all of the public interest factors which Complainant believes favor "action under these provisions";

(b) set forth the factual basis for such an allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

90. With respect to the allegation of Paragraph B(1) of the Complaint that Respondent give prompt "public notice of the defect in the Omegas," identify and describe the "public notice" that the Complainant seeks to impose.

91. With respect to the allegation of Paragraph C(3) of the Complaint regarding repair of all Omegas so they will "perform properly," identify and describe what would constitute "performs properly" for purposes of the Complainant.

92. With respect to the allegation of Paragraph C(3) of the Complaint regarding the replacement of all Omegas "with a like or equivalent product which performs properly":

(a) identify and describe any and all "like or equivalent product which performs properly";

(b) state whether Complainant believes that Omegas with a silicone o-ring qualify as a "like or equivalent product which performs properly"; and

(c) state whether Complainant believes that Omegas with a spring collar qualify as a "like or equivalent product which performs properly."

93. With respect to the allegation of Paragraph C(3) of the Complaint regarding a "refund to consumers [of] the purchase price of the Omegas," identify and describe how Complainant would calculate or determine a "refund to consumers [of] of the purchase price of the Omegas."

94. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(1), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

95. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(2), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

96. (a) If the Commission orders Respondents to refund some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(3), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

97. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to U.S.C. § 2064(d)(1), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to

any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

98. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to U.S.C. § 2064(d)(2), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

99. (a) If the Commission orders Respondents to refund the purchase price to some or all of the Omegas pursuant to U.S.C. § 2064(d)(3), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or

information about any such contention.

B. Potential Witnesses

100. Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the person's last known position with Respondents;

(e) the date of any such contacts;

(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);

(f) a detailed description of the subject matter of such communication; and

(g) the identity of any other persons who were present during such contacts.

101. For each and every contact describe an response to Interrogatory No. 100, identify each and every document that describes, evidences, refers, or relates to such contacts, including without limitation any notes of such contacts, documents shown during the course of such contacts, lists of questions or answers given, or any reports of such communications.

102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the corporate or government affiliation of the person;

(e) whether the Complainant has contacted such person; and

(e) the specific subject matter of the person's knowledge.

103. Identify each and every fact witness that Complainant expects to testify on its behalf at the hearing in this matter. For each such fact witness, identify and describe:

(a) the name, title, business address, and home address for each such witness; and

(b) the subject matter about which each witness is expected to testify.

104. Identify each and every expert witness whom the Complainant expects to testify on its behalf at the hearing in this matter. For each such expert, identify and describe:

(a) the expert's name, title, home address, business address, education, employment since graduation from high school, and all publications authored or edited by the expert;

(b) the subject matter on which each expert is expected to testify;

(c) the substance and facts upon which the expert relies in forming his or her opinion;

(d) the opinions to which the expert is expected to testify;

(e) a summary of the grounds for each such opinion; and

(f) a statement and description of all information and documents upon which the expert relies or expects to rely.

105. Identify and describe any and all oral or written statements made by Respondents that the Complainant contends constitute an admission with reference to any of the issues raised in the Complaint. For each such statement, identify and describe:

(a) the person making the alleged statement;

(b) that person's relationship to Respondents;

(c) the content of the statement;

(d) the date, time, and place of the statement;

(e) the nature of the alleged statement (e.g., written or oral); and

(f) the identity of each person who heard the statement or otherwise has personal knowledge of the statement.

C. Other Allegations Made By the CPSC

106. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "based on multiple random inquiries of sprinkler contractors across the nation in the recent past, we believe that Central's proposed labor payment falls considerably short of what has been, and remains, customarily required to remove and install sprinklers . . . ." With respect to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to the "multiple random inquiries of sprinkler contractors";

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such "multiple random inquires of sprinkler contractors";

(e) describe in detail the substance of each such person's knowledge and/or information of such "multiple random inquiries of sprinkler contractors";

(f) identify and describe in terms of a specific monetary amount "what has been, and remains, customarily required to remove and install sprinklers";

(g) identify each and every document that constitutes, evidences, refers, or relates in any way to "what has been, and remains, customarily required to remove and install sprinklers";

(h) identify each and every person whom Complainant knows and/or believes to have knowledge of "what has been, and remains, customarily required to remove and install sprinklers"; and

(i) describe in detail the substance of each such person's knowledge and/or

information of "what has been, and remains, customarily required to remove and install sprinklers."

107. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view that dezincification alone is the cause of above-required operating pressures in Omegas from plastic pipe . . . ." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

108. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to

have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

109. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "rather, primarily, the data points to multiple failure modes rooted in the design and construction of these sprinklers." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe the "multiple failure modes rooted in the design and construction of these sprinklers";

(d) identify and describe "the data" referenced in the statement;

(e) identify and describe each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(g) describe in detail the substance of each such person's knowledge and/or information.

110. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC refuses to accept a "testing based corrective action proposal" from Respondents. With regard to this rejection:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for rejecting a "testing based corrective action proposal";

(c) identify and describe any and all reasons that the CPSC believes are correct in

rejecting such a proposal;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the rejection of this proposal;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of the rejection of this proposal; and

(f) describe in detail the substance of each such person's knowledge and/or information.

111. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC states that "Central continues to insist on selling Omega sprinklers with silicone o-rings despite serious concerns about whether they will function in the long term." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all "serious concerns" that the CPSC has regarding the functioning of Omega sprinklers with silicone o-rings;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such "serious concerns"; and

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such "serious concerns."

112. In a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, Stone states, "x-ray examination of the unit showed that the internal shaft was cocked or tipped slightly and jammed in that position" and that the CPSC "plans to conduct non-destructive analysis of the unit . . . ." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe any evidence that Omegas may be "cocked or tipped slightly and jammed in that position";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the statement that Omegas are "cocked or tipped slightly and jammed in that position";

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of any such problems;

(f) describe in detail the substance of each such person's knowledge and/or information; and

(g) describe any "non-destructive analysis of the unit" performed by or on behalf of the CPSC.

113. In a January 6, 1998 letter from Eric Singer of the CPSC to the state attorneys general, Singer states, "this contrasts with automatic fire sprinklers' historical rate of proving 99.5 percent effective." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all evidence that automatic fire sprinklers have an "historical rate of proving 99.5 percent effective";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such historical rate of effectiveness;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such historical rate of effectiveness; and

(f) describe in detail the substance of each such person's knowledge and/or information.

114. (a) State whether Complainant deems any corrective action proposal to be acceptable that is based in part on testing of a sample of sprinkler heads from a building and comparing the results of the sample to the hydraulically calculated operating pressure of that building.

If so:

(b) identify and describe such an acceptable corrective action proposal;

If not:

(c) identify and describe all reasons for such unacceptability;

(e) identify each and every document that constitutes, evidences, refers, or relates in any way to such unacceptability;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of such unacceptability; and

(g) describe in detail the substance of each such person's knowledge and/or information.

D. CPSC Investigation

115. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's investigation of the Omegas. For each person identified, describe his or her role in the investigation.

116. Describe the circumstances surrounding, and the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date that the CPSC decided to investigate the Omegas;

(b) the identity of all persons at the CPSC involved in the decision to investigate the Omegas; and

(c) the identity of all information (including, but not limited to, any consumer complaints) available to or otherwise relied upon by the CPSC in deciding to initiate an

investigation of the Omegas.

117. Describe in detail any investigation by the CPSC relating to consumer complaints and/or consumer reports of personal injury, property damage, non-activation, or any other problems allegedly associated with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of all consumers with whom the CPSC communicated in connection with this aspect of the investigation;

(c) the identity of all consumers who complained of or reported an incident relating to the Omegas;

(d) the identification of any consumer questionnaires or other surveys used by the CPSC in conducting this aspect of the investigation; and

(e) the identification of any and all data, reports, survey results, or other information revealing the results of this aspect of the investigation.

118. Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a result of or associated with the fire.

119. To the extent not already identified in response to Interrogatory Nos. 117-118,

identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage or personal injury in connection with the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the alleged property damage and/or personal injury;

(c) a description of the type of property damage allegedly sustained; and

(d) a description of any and all personal injury allegedly sustained.

120. Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

121. Describe in detail any and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

122. Describe in detail any and all communications between the CPSC and any state law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all state law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such state law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such state law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

123. Describe in detail any and all communications between the CPSC and any federal law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all federal law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such federal law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such federal law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

E. Design and Testing

124. Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the Omegas;

(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;

(c) a description of the methodology employed during each and every test of the Omegas;

(d) the date of each and every test of the Omegas;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

125. Identify any and all outside consultants, experts, or other persons who assisted, advised, or otherwise communicated with the CPSC with respect to any testing of the Omegas. For each such person, describe his or her role in the testing, and the communications between that

person and the CPSC.

126. For each test of the Omegas conducted by the CPSC, describe in detail the condition and age of the specific Omegas used in the test. Your response should include, without limitation, the following:

(a) an identification of each specific Omega by model number;

(b) a description of how and when the CPSC obtained each specific Omega used in the testing;

(c) a description of the condition of each specific Omega used in the testing (e.g., new, used, damaged, dented, etc. . .);

(d) a statement of the age of each specific Omega used in the testing;

(e) a statement of whether the CPSC has retained and the current location of each specific Omega used in the testing; and

(f) if the CPSC has since destroyed or discarded any Omegas used in its testing, a statement of the reasons for that action.

127. For each test of the Omegas conducted by the CPSC, describe in detail the piping used in the sprinkler system from which the Omegas were removed. Your response should include, without limitation, the following:

(a) the material constituting the piping;

(b) the presence of any treatments or substances applied to the piping;

(c) the contents of any and all materials or substances inside the piping; and

(d) a description of the overall condition of the piping.

128. For the time period 1990 through the present, identify and describe any and all testing of any non-Omega sprinkler heads conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the non-

Omega sprinkler heads;

(b) the identity of the person(s) who created or established any such testing protocols for the non-Omega sprinkler heads;

(c) a description of the methodology employed during each and every test of the non-Omega sprinkler heads;

(d) the dates of each and every test of the non-Omega sprinkler heads;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the non-Omega sprinkler heads;

(f) a description of the results of each and every test of the non-Omega sprinkler heads; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the non-Omega sprinkler heads.

129. To the extent that you contend, or otherwise intend to present at the hearing in this matter, the feasibility and/or propriety of any alternative design features for the Omegas, identify and describe any such proposed alternative design features. Your response should include, without limitation, a description of all data, testing, reports, or other information supporting this contention.

F. Risk Assessment

130. Set forth the factual basis of your contention in Paragraph 15 of the Complaint that the Omegas "create a substantial risk of injury to the public within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)." Your response should include, without limitation, the following:

(a) a description of the specific risks of injury that you contend are presented by the Omegas;

(b) a description of the criteria or factors used by the CPSC in determining that each risk allegedly associated with the Omegas constitutes a "substantial risk" within the meaning of 15 U.S.C. § 2064(a)(2); and

(c) an identification of any and all data, survey information, or testing relating to the alleged risks associated with the Omegas.

131. Describe in detail any and all measures taken by the CPSC to determine the severity of the risk allegedly associated with the Omegas, including, without limitation:

(a) a description of how the CPSC measures the severity of the risk allegedly associated with the Omegas;

(b) a statement of whether the measurement employed by the CPSC incorporates, considers, or is in any way adjusted to reflect the number of products in use and the frequency of use of the Omegas;

(c) a description of all efforts taken by the CPSC to measure the severity of the risk or probability of injury allegedly associated with the Omegas; and

(d) an identification of all data, studies, and reports that quantify or otherwise provide an assessment of the risk or probability of injury allegedly associated with the Omegas.

132. Describe the CPSC's preliminary determination of the alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date the CPSC Staff issued its preliminary determination of the alleged risks associated with the Omegas;

(b) the identity of all persons involved in the Staff's preliminary determination;

(c) the level of hazard assigned to the Omegas in accordance with the applicable provisions of the CPSC Recall Handbook; and

(d) an identification of all data, studies, reports, and/or testing upon which CPSC relied in making its preliminary determination.

133. Explain the factual basis underlying the level of hazard assigned to the Omegas in the CPSC Staff's preliminary determination of the alleged risks associated with the Omegas. Your response should include a statement of the specific factors considered, and the data or information

relied upon, by the CPSC Staff in determining the level of hazard assigned to the Omegas.

134. State whether CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas has changed over time. If so, describe any such change and the information or testing giving rise to the change.

135. For the period from 1990 through the present, identify all consumer products classified by the CPSC as presenting a hazard level equal to, or greater than, the hazard level assigned to the Omegas. For example, if the Omegas have been classified as a "Class B" hazard, identify all other consumer products that have been classified as "Class B" hazards and all consumer products identified as "Class A" hazards. For each consumer product identified in your response, you should provide the following:

(a) the identity of the consumer product by brand name or other description;

(b) the identification of the manufacturer of each such consumer product;

(c) the date of the CPSC's classification of the consumer product as presenting a hazard;

(d) the hazard level assigned each such consumer product;

(e) a description of the hazard presented by each such consumer product;

(f) for each such consumer product, the estimated total number of units manufactured as of the date the CPSC made its determination of the hazard level;

(g) for each such consumer product, the estimated total number of units in the hands of the consumers as of the date the CPSC made its determination of the hazard level;

(h) the number and severity of any and all personal injuries associated with each such consumer product;

(i) the number of deaths associated with each such consumer product; and

(j) the nature and number of property damage reports associated with each such consumer product.

G. Sufficiency of Corrective Action

136. For each consumer product identified in your response to Interrogatory No. 135, describe any and all corrective action taken with respect to that product. Your response should include, without limitation, the following:

(a) a statement of the CPSC's role in effecting the corrective action;

(b) a statement of whether the corrective action that was taken was completely voluntary on the part of the manufacturer, retailer, or distributor, was the result of a negotiated corrective action plan with the CPSC, or otherwise was compelled by the CPSC through the initiation of an adjudicative proceeding pursuant to 15 U.S.C. § 2064; and

(c) the identification of all documents evidencing the corrective action taken with respect to each such consumer product.

137. For each consumer product identified in your response to Interrogatory No. 135, describe the nature and extent of the public notice provided as part of the corrective action taken. Your response should include, without limitation, the following:

(a) the specific nature of the notice given (e.g., written notice to consumers and retailers, press releases, bill-boards, posters, etc. . .);

(b) a description of the media coverage associated with the corrective action (e.g., newspaper ads and reports, magazine ads and reports, wire services, other print media, television coverage, radio coverage, and/or internet exposure);

(c) a description of the extent of media coverage and exposure of the corrective action (e.g., a list of all newspapers, magazines, wire services, television stations, radio stations, and internet services that provided notice or otherwise covered the corrective action);

(d) a description of the frequency and amount of media coverage associated with the corrective action (e.g., the number of days newspapers carried a written notice, or the number of days the notice appeared on television); and

(e) a description of any and all point of purchase notification to consumers associated with the corrective action (e.g., posters and notices provided to retailers to display at

stores).

138. For each consumer product identified in your response to Interrogatory No. 135, describe the nature of the recall component, if any, of the corrective action taken. Your response should include, without limitation, the following:

(a) the number of individual units recalled;

(b) the remedy options offered to consumers (e.g., replacement, refund, substitute products);

(c) an assessment of consumer participation in the recall (e.g., percentage of units in the hands of consumers that were actually received by the recall);

(d) identification of any and all documents revealing the level of consumer participation in the recall; and

(e) a description of any studies conducted by the manufacturer, distributor, or retailer of the consumer product, or by the CPSC, or by both, or by any other person or entity, assessing the effectiveness of the recall program.

139. Explain the factual basis of your contention, if any, that the corrective action proposal of Respondents in connection with the Omegas is insufficient to protect the public or otherwise fails to provide adequate remedial measures under 15 U.S.C. § 2064.

140. Describe in detail the public notice, recall, and/or other remedial measures that you contend are necessary with respect to the Omegas to constitute a sufficient remedy and/or corrective action proposal under 15 U.S.C. § 2064.

141. Identify and describe all efforts taken by the CPSC (including, without limitation, consumer surveys, press surveys, and public opinion polls) to evaluate, test, or otherwise determine the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

142. Identify and describe all criteria and factors considered by the CPSC in measuring the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

143. Identify all public statements, press releases, or other information released to the public by the CPSC that in any way relates to or otherwise refers to the Omegas and/or Respondents.

H. Initiation of Adjudicative Proceedings

144. For the time period beginning January 1, 1982 to the present, identify all incidents in which the CPSC has filed an administrative complaint pursuant to Section 15 of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2064. Your response should include, without limitation, the following:

(a) the date the administrative action was filed;

(b) the identity of the manufacturers, distributors, or retailers of the consumer product named as respondents in the administrative action;

(c) the identity of the consumer product at issue;

(d) a description of the alleged "substantial product hazard" at issue in each case; and

(e) a description of the outcome of the administrative action and the nature of the remedy awarded.

145. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

146. State the date on which the CPSC authorized Complaint Counsel to initiate the instant adjudicative proceeding against the Respondents.

147. Identify all communications and documents (including internal memoranda and correspondence) relating to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

148. State the reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding against the Respondents.

CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S RESPONSES TO RESPONDENTS' FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Complaint Counsel hereby responds to Respondents' First Request for Production of Documents and Things.

1. All documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint.

Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery pursuant to the work product privilege. The data compilation of failures was prepared by or for Complaint Counsel in anticipation of litigation. Without waiving its objection, Complaint Counsel will produce the data on which the compilation is based, and the information about the fires, to the extent that the information was not provided to Complaint Counsel by a third party on a confidential basis. Without waiving its objection, to the extent that the data or information was provided on a confidential basis, Complaint

Counsel will produce the data upon the execution of an appropriate confidentiality stipulation by Respondents, and the issuance of an appropriate protective order by the Presiding Officer.

2. **All documents identified in the CPSC's responses to Respondents' First Set of Interrogatories.**

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. However, without waiving its objection, Complaint Counsel will produce non-privileged and non-confidential documents referenced in its responses to Respondents' Interrogatories.

3. **All documents that constitute the entirety of the CPSC administrative file regarding the Omegas.**

Response: Complaint Counsel objects to this Request on the ground that the term "administrative file" is undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. To the extent that 'administrative file' encompasses documents prepared by or for Complaint Counsel in anticipation of litigation, Complaint Counsel objects to this Request on the ground that it seeks documents protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel will produce all non-confidential and non-privileged documents referenced in its responses to Respondents' Interrogatories, and/or requested in these Requests for Production that are not already in Respondents' possession.

4. **All documents that constitute subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.**

Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel will produce subpoenas it served in this matter upon UL, FM and others.

5. All documents provided to the CPSC in response to subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

Response: Complaint Counsel objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel also objects to this Interrogatory to the extent that it seeks documents prohibited from disclosure pursuant to 15 U.S.C. § 2055. Without waiving its objections, Complaint Counsel will produce all non-confidential documents provided to Complaint Counsel by third parties in response to subpoenas issued by CPSC in this matter upon the receipt of permission from the third parties and upon execution of an appropriate confidentiality stipulation by Respondents, and the issuance of any necessary protective orders by the Presiding Officer.

6. All documents provided to the CPSC by Respondents regarding the Omegas.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and on the ground that the information is already within the possession of Respondents (who continue to be represented by the same counsel who provided the information in the first place).

7. **All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.**

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel would be pleased to produce specific documents, or specific categories of documents, that Respondents seek to discover, upon rephrasal of this Request.

8. **All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.**

Response: Complaint Counsel objects to this Request on the grounds that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it will share with Respondents the results of any testing it intends to introduce into evidence at the hearing in this matter, once those determinations have been made.

9. **All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by on or behalf of any other person, organization, business, or other entity.**

Response: Complaint Counsel objects to this Request on the grounds that the terms "other person, organization, business or other entity" are unclear, undefined, vague and ambiguous. Assuming that the terms "other person, organization, business or other entity" refer to

persons, organizations, businesses or entities other than CPSC and its staff, Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and includes information not within the knowledge or control of Complaint Counsel. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel also objects to this Interrogatory to the extent that it seeks documents prohibited from disclosure pursuant to 15 U.S.C. § 2055. Without waiving its objections, Complaint Counsel will produce responsive documents provided to Complaint Counsel by third parties regarding testing of Omega sprinklers upon the receipt of permission from the third parties, and upon execution of an appropriate confidentiality stipulation by Respondents, and the issuance of any necessary protective orders by the Presiding Officer.

10. All documents that constitute, provide evidence of, refer, or relate to any testing of non-Omega sprinkler heads conducted by on or behalf of the CPSC.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint counsel further objects to Respondents' Request on the ground that the terms "provide evidence of" call for a legal conclusion. Without waiving its objections, Complaint Counsel

responds that it currently has no documents regarding testing of non-Omega sprinklers.

11. All documents that constitute, provide evidence of, refer, or relate to testing of non-Omega sprinkler heads conducted by on or behalf of any other person, organization, business, or other entity.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint counsel further objects to Respondents' Request on the ground that the terms "provide evidence of" call for a legal conclusion. Without waiving its objections, Complaint Counsel responds that it currently has no documents regarding testing of non-Omega sprinklers.

12. All documents that constitute, provide evidence of, refer, or relate to the alleged jurisdiction of the CPSC over the Omegas.

Response: Complaint Counsel objects to this Request on the grounds that it is unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss, the case law and statutes cited therein, and the affidavit and exhibit submitted

therewith.

13. All documents that constitute, provide evidence of, refer, or relate to the jurisdiction of the CPSC over any product, including without limitation any memoranda or other internal correspondence that addresses the extent of or any limitations on the jurisdiction of the CPSC.

Response: Complaint Counsel objects to this Request on the grounds that it is unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence herein. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome, as CPSC exercises jurisdiction over tens of thousands of products, and every document in every CPSC file is arguably responsive to this Request. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this case, the case law and statutes cited therein, and the affidavit and exhibit submitted therewith, as well as the records of sprinkler testing provided in response to Request #1.

14. All documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground

that all documents that "constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas" are within CSC's possession, and have themselves been Requested by Complaint Counsel in discovery in this case. Without waiving its objections, Complaint Counsel refers Respondents to the documents provided in response to Request No. 1.

15. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly.

Response: Complaint Counsel objects to this Request on the grounds that the terms "failed to activate properly" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to the documents provided in response to Respondents' Request No. 1.

16. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly activated properly.

Response: Complaint Counsel objects to this Request on the grounds that the terms "allegedly activated properly" are undefined, unclear, vague and ambiguous, and on the ground that the question as a whole is unclear, vague and ambiguous, as it does not indicate whether Respondents seek documents regarding only fires in which all Omegas "activated properly," or in which some Omegas "activated properly," though others did not. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by

the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its response to Respondents' Request No. 1.

17. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly failed to activate properly.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Request on the grounds that the terms "failed to activate properly" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objections, Complaint Counsel will provide documents relating to reports of fires in which sprinklers that are or possibly are non-Omegas failed to activate. CPSC is investigating whether these fires involved non-Omegas.

18. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly activated properly.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Request on the grounds that the terms "allegedly activated properly" are undefined, unclear, vague and ambiguous, and on the ground that the question as a whole is unclear, vague and ambiguous, as it does not indicate whether Respondents seek documents regarding only fires in which all non-Omegas "activated properly," or in which some non-Omegas "activated properly," though others did not. Complaint Counsel further objects to this Request on the ground that it is overbroad and

unduly burdensome.

19. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

20. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and current employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

21. All documents that constitute, provide evidence of, refer, or relate to "[the] multiple random inquiries of sprinkler contractors across the nation," as referenced in a

November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 106.

22. **All documents that constitute, provide evidence of, refer, or relate to "what has been, and remains, customarily required to remove and install sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.**

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 106.

23. **All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view [that] dezincification alone is the cause of the above-required operating pressures in Omegas from plastic pipes," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.**

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 107.

24. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 108.

25. All documents that constitute, provide evidence of, refer, or relate to "the data [which] point to multiple failure modes rooted in the design and construction of these sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks

information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 109.

26. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluation, consideration, or analyses done by or on behalf of the CPSC regarding the "testing based corrective action," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 110.

27. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, or analyses done by or on behalf of the CPSC which reflects the "serious concerns" of the CPSC regarding whether "Omega sprinklers with silicone o-rings will function in the long term," as referenced in a February 19,1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore

protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 111.

28. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, consideration, or analyses done by or on behalf of the CPSC which addressed Omegas where "the internal shaft was cocked or tipped slightly and jammed in that position," as referenced in a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 112. Complaint Counsel invites Respondents to inspect the x-ray it has of the sprinkler referred to in the February 24, 1998 letter.

29. All documents that constitute, provide evidence of, refer, or relate to "automatic fire sprinklers' historical rate of proving 99.5 percent effective," as referenced in a January 6, 1998 letter from Eric Singer of the CPSC to state attorneys general.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore

protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Interrogatory No. 113.

30. All documents that constitute, provide evidence of, refer, or relate to the CPSC Recall Handbook.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the grounds that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request to the extent that it seeks confidential and/or trade secret information pertaining to other companies investigated by CPSC. Without waiving its objections, Complaint Counsel will produce the CPSC Recall Handbook.

31. All documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome, and on the ground that the information is already within the possession of Respondents. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

32. All Omegas in possession of the CPSC.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad

and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks things provided to or currently being tested by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it has offered, and still intends, to preserve the Omega sprinkler heads it currently possesses from the Fort Wayne and Kent Manor Inn fire sites for testing in conjunction with Respondents. Complaint Counsel suggests that the parties to this action discuss a procedure for examination of each other's sprinkler samples.

33. All non-Omega sprinkler heads in the possession of the CPSC.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

34. All audio and/or video tapes regarding or relating to any testing of Omegas.

Response: Complaint Counsel objects to this Request on the ground that it seeks things prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it will share with Respondents the results and videotapes of any testing it intends to introduce into evidence at the hearing in this matter, once those determinations have been made.

35. All audio and/or video tape regarding or relating to any testing of non-Omega sprinkler heads.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant

information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel also objects to this Request on the ground that it seeks things prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it currently has no audio and/or video tapes regarding or relating to any testing of non-Omega sprinkler heads.

36. All documents that constitute, provide evidence of, refer, or relate to any personal journals, diaries, or correspondence maintained by the CPSC Staff regarding the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

37. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any dealers, retailers, contractors, or any distributors regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel will produce all non-privileged and non-confidential documents

referenced in response to Respondents' Interrogatory No. 106.

38. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any Authorities Having Jurisdiction regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel will produce all correspondence to Fire Marshals that are in the public domain.

39. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any consumers regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c).

40. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any state law enforcement authorities regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objections, Complaint Counsel will produce all correspondence to State Attorney Generals that are in the public domain.

41. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any federal law enforcement authorities regarding or related to the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret.

42. All documents that constitute, provide evidence of, refer, or relate to scripts, talking points, outlines, or any other material prepared by, for, or on behalf of the CPSC for any press conferences or news releases regarding the Omegas and/or Respondents.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant

information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel also objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it seeks documents protected from discovery by the attorney-client privilege. Without waiving its objections, Complaint Counsel will produce the press release and VNR that were prepared in this matter, and released to the public.

43. All documents that constitute, provide evidence of, refer, or relate to any material regarding the Omegas and/or Respondents created by or on behalf of the CPSC public relations department, media department, or any other CPSC internal department charged with communicating with or providing information to the public media.

Response: Complaint Counsel objects to this Request on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel also objects to this Request on the ground that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it seeks documents protected from discovery by the attorney-client privilege. Without waiving its objections, Complaint Counsel will produce the press release and VNR that were prepared in this matter, and released to the public, as well as the Omega Sprinkler Questionnaire on CPSC's web site, and the Omega Sprinkler Questionnaire

available through CPSC's fax-on-demand service.

44. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products.

Response: See Response to Interrogatory Nos. 1 and 4.

45. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products."

Response: See Response to Interrogatory Nos. 5 through 25.

46. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13.

Response: See Response to Interrogatory Nos. 38, 39 and 40.

47. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures."

Response: See Response to Interrogatory No. 41.

48. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function in a significant percentage of instances."

Response: See Response to Interrogatory No. 52.

49. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the "Omegas are defective pursuant to

15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4."

Response: See Response to Interrogatory Nos. 53 through 73.

50. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death."

Response: See Response to Interrogatory No. 76.

51. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a substantial risk of injury to the public within the meaning of § 1 5(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)."

Response: See Response to Interrogatory No. 77.

52. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "Omegas present a substantial product hazard as described in Sections 15(a)(2), (c) and (d) of the CPSA, 15 U.S.C. §§ 2064(a)(2), (c) and (d)."

Response: See Response to Interrogatory No. 88.

53. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest."

Response: See Response to Interrogatory No. 89.

54. A current curriculum vitae or resume for each and every expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

Response: Complaint Counsel has not yet determined who will testify as an expert witness on its behalf in this matter. Complaint Counsel further points out that any expert witness that it will call will testify on behalf of Complaint Counsel and the staff, and not on behalf of the Commission.

55. All publications of any nature authored by any expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

Response: Complaint Counsel has not yet determined who will testify as an expert witness on its behalf in this matter. Complaint Counsel further points out that any expert witness that it will call will testify on behalf of Complaint Counsel and the staff, and not on behalf of the Commission.

56. Any and all written statements made by Respondents that the CPSC contends constitute an admission with reference to any of the issues raised in the Complaint.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome, and requests information already in Respondents' possession. Complaint Counsel further objects to this Request to the extent that it may seek information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel responds that any and all written statements made by Respondents may constitute an admission by Respondents in this matter.

57. All documents that constitute, provide evidence of, refer, or relate to the

use of silicone o-rings in sprinkler heads.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

58. All documents that constitute, provide evidence of, refer, or relate to the use of EPDM o-rings in sprinkler heads.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

59. All documents that constitute, provide evidence of, refer, or relate to the use in sprinkler heads of o-rings comprised of any other material or compound.

Response: Complaint Counsel objects to this Request on the ground that the terms "any other material or compound" are undefined, unclear, vague and ambiguous. Complaint Counsel also objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint

Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

60. All documents that constitute, provide evidence of, refer, or relate to the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's decision to investigate the risks associated with Omega sprinklers, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its response to Respondents' Request No. 1.

61. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage in connection with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the term "consumer complaints" is undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Request on the ground that it requests information pertaining to the identity of

consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Request on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will produce all non-privileged and non-confidential reports of fires in which Omegas have reportedly failed to activate. Complaint Counsel will supplement its response to this Request as additional information becomes available.

62. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of personal injury in connection with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the term "consumer complaints" is undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Request on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Request on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will produce all non-privileged and non-confidential reports of

fires in which Omegas have reportedly failed to activate. Complaint Counsel will supplement its response to this Request as additional information becomes available.

63. Any and all testing protocols used by the CPSC or by any expert or other person on behalf of the CPSC in testing the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel refers Respondents to its Response to Respondents' Request Nos. 8, 9, 32 and 34.

64. All documents that constitute, provide evidence of, refer, or relate to any alternative design features for the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the terms "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, and that the question as a whole is unintelligible, and thus precludes Complaint Counsel from formulating a response without clarification of its meaning.

65. All documents that constitute, provide evidence of, refer, or relate to the feasibility and/or propriety of any alternative design features for the Omegas.

Response: Complaint Counsel objects to this Request on the ground that the terms "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, as are the terms "feasibility and/or propriety" of same. Complaint Counsel objects to this Request on the ground that the question as a whole is unintelligible, and thus precludes

Complaint Counsel from formulating a response without clarification of its meaning.

66. All documents that constitute, provide evidence of, refer, or relate to the CPSC's preliminary determination of the alleged risks associated with the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's preliminary determination of the risks associated with Omega sprinklers, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Respondents' Requests Nos. 1 and 60.

67. All documents that constitute, provide evidence of, refer, or relate to any changes in the CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's preliminary determination of the risks associated with Omega sprinklers, any changes thereto, and/or to the initial assignment of the level of hazard presented by Omegas, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in

anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Respondents' Requests Nos. 1 and 60.

68. All documents that constitute, provide evidence of, refer, or relate to any corrective action proposal for the Omegas.

Response: Complaint Counsel objects to this request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that any such proposal was proposed by Respondents themselves, and therefore the documents that constitute or provide evidence of any such corrective action proposal by Respondents are within Respondents' own possession.

69. All documents that constitute, provide evidence of, refer, or relate to the requested recall of the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome, as all documents related to this case relate to the requested recall of the Omegas. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

70. All documents that constitute, provide evidence of, refer, or relate to the corrective action proposal presented by Respondents regarding the Omegas.

Response: Complaint Counsel objects to this Request on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Request on the ground that any such proposal was proposed by Respondents themselves, and therefore the documents that constitute or provide evidence of any such corrective action proposal by Respondents are within Respondents' own possession. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Interrogatory Nos. 114 and 139.

71. All documents that constitute, provide evidence of, refer, or relate to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks irrelevant information not likely to lead to the discovery of admissible evidence, as the Agency's decision to initiate this adjudicative proceeding against Central, and the bases therefore, are not at issue herein. Complaint Counsel further objects to this Request on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its responses to Respondents' Requests Nos. 1 and 60.

ALL-STATE® LEGAL 800-222-0510 EDR11 RECYCLED

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of	)	
CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S RESPONSES TO
RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby responds to Respondents' First Set of Interrogatories.

A. Allegations of the Complaint

1. (a) State whether CSC manufactures Omegas.

If so:

(b) identify and describe any such manufacturing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such manufacturing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such manufacturing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central's

Carmine Schiavone and George Meyer, and Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC describes itself as "a leading manufacturer or automatic fire sprinkler heads"), and based on statements made by Central's Counsel (as late as an April 7, 1998 letter from Kathleen Sanzo to Eric Stone, Director of Administrative Litigation, in which Ms. Sanzo states that "Central has reviewed its manufacturing records . . ."), Complaint Counsel responds that CSC manufactures Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a description of such manufacturing. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' manufacture of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the identify of every person known or believed to have knowledge of the manufacture of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

2. (a) State whether CSC sells Omegas.

If so:

(b) **identify and describe any such sales;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such sales;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such sales; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: (a) Based on, among other things, representations made by Central's Carmine Schiavone and George Meyer, and Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC states that "approximately 56% of the Company's (defined as Central Sprinkler Corporation at the outset of the section) annual sales are derived from the manufacture and sale of fire sprinkler heads and valves . . . ," Complaint Counsel responds that CSC sells Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a description of such sales. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' sales of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the

identify of every person known or believed to have knowledge of the sale of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

3. (a) State whether CSC markets Omegas.

If so:

(b) identify and describe any such marketing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such marketing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such marketing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC states that "approximately 56% of the Company's (defined as Central Sprinkler Corporation at the outset of the section), based on brochures depicting the Omega line of sprinklers, and based on statements of Central's counsel and corporate officers in submissions and meetings with CPSC staff, Complaint Counsel responds that CSC markets Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a

description of such marketing. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' marketing of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the identify of every person known or believed to have knowledge of the marketing of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

4. With respect to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Complaint Counsel's Response to Interrogatory No. 1, and Complaint Counsel's Opposition to Respondents' Motion to Dismiss.

5. (a) **State whether the C-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

6. (a) **State whether the C-1 A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

7. (a) **State whether the C-1A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

8. (a) **State whether the C-lA PRO ID model of the Omegas constitutes a "consumer product" pursuant to I5 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the

exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

9. (a) **State whether the EC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

10. (a) **State whether the EC-20A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

11. (a) **State whether the EC-20 AID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

12. (a) **State whether the HEC- 12 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

13. (a) State whether the HEC-12 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the

exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

14. (a) State whether the HEC-12 PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

15. (a) State whether the HEC-12A PRO model of the Omegas

constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

16. (a) State whether the HEC-12 RES model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

17. (a) **State whether the HEC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or**

believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

18. (a) State whether the HEC-20 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for

a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

19. (a) State whether the R-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine

Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

20. (a) State whether the R-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

21. (a) State whether the R-1 M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C.§ 2052(a)(1).

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion,**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

22. (a) **State whether the AC model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

23. (a) State whether the M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

24. (a) State whether the Flow Control model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided

in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

25. With respect to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

26. (a) Separately for each model of the Omegas listed in the Complaint, state whether such model is sold by Respondents directly to consumers. If so:

(b) identify all documents which describe, evidence, refer, or relate

to any such sales;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such sales; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that sale of an article directly to consumers is not necessary for CPSC jurisdiction.

27. (a) Separately for each model of the Omegas listed in the Complaint, state whether Respondents market such a model to consumers. If so:

(b) identify all documents which describe, evidence, refer, or relate to any such marketing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such marketing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that marketing of an article directly to consumers is not necessary for CPSC jurisdiction.

28. **(a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is installed by consumers themselves (as opposed to professional contractors).**

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such installation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such installation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that installation of an article

(and other "direct interaction or manipulation" of a product) directly by consumers is not necessary for CPSC jurisdiction.

29. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is serviced by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such servicing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such servicing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that servicing of an article (and other forms of "direct interaction" or "active manipulation of a product) directly by consumers is not necessary for CPSC jurisdiction.

30. (a) Separately for each model of the Omegas listed in the

Complaint, state whether such a model is repaired by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such repairs;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such repairs; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that repair of an article (and other forms of "direct interaction" or "active manipulation of a product) directly by consumers is not necessary for CPSC jurisdiction.

31. State whether Omegas installed in buildings used only as storage facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "storage facility" is undefined, unclear, vague and ambiguous. If by "storage facility," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

32. State whether Omegas installed in warehouses constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "warehouses" is undefined, unclear, vague and ambiguous. If by "warehouses," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

33. State whether Omegas installed in factories constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "factories" is undefined, unclear, vague and ambiguous. If by "factories," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed for use of consumers." As stated in Complaint Counsel's Opposition, Omega

sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

33. **State whether Omegas installed in computer facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "computer facilities" is undefined, unclear, vague and ambiguous. If by "computer facilities," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over

"products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

35. State whether there are any factual circumstances under which any Omegas would <u>not</u> constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for speculation. Complaint Counsel further objects to this Interrogatory requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel points Respondents to its Opposition to

Respondents' Motion to Dismiss this action, and the exhibits in support thereof, which demonstrate that Omegas are consumer products with CPSC's jurisdiction.

36. (a) State whether there are any factual circumstances under which any non- Omega sprinkler heads would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The jurisdictional question that Respondents have raised in this litigation is whether Omega sprinklers are consumer products. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof, which demonstrate that Omegas are consumer products with CPSC's jurisdiction.

37. (a) Separately for each model of the Omegas listed in the Complaint, describe any and all ways in which consumers use, consume, and/or enjoy such a model.

(b) identify all documents which describe, evidence, refer, or relate to any such use, consumption, or enjoyment;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such use, consumption, or enjoyment; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof.

38. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:

(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

39. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199:

(a) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of UL Standard 199, if any, address the required residual water pressure at the most remote sprinkler head in a

system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of UL Standard 199, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi the testing standard that Complainant contends is created by UL Standard 199 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

40. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

41. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures":

(a) describe in terms of both degrees Fahrenheit and Celsius what temperatures are meant by the phrase "certain temperatures";

(b) set forth the factual basis for this allegation,

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) The temperatures referred to are the activation/triggering temperatures of the Omega sprinklers.

(b) See (a), above. UL 199, and UL correspondence and listing files for Omega sprinklers, which were received by Complaint Counsel in confidence by a third party, and will be produced to Respondents upon receipt of permission from the third party for disclosure to Respondents.

(c) See response to (b), above. Complaint Counsel has requested this information from Respondents in discovery, but expects that various

Central and UL employees will be included.

(d) Complaint Counsel has requested this information from Respondents in discovery.

(e) See (d), above.

42. (a) **State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;**

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks irrelevant information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed

and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to previous Interrogatory. According to Respondents, Omega sprinklers are designed to activate at particularly defined activation/triggering temperatures, based on the temperature at which the fusible link in their heat collector is intended to convert from solid to liquid form.

44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory Nos 42 and 43.

45. (a) State whether Complainant contends that there is a standard of "failure" that will accurately predict whether a particular Omega will fail to activate in a fire when used in a particular building without regard to the actual hydraulic pressure that exists in the building.

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel also objects to this Interrogatory

on the ground that the terms "standard of failure" and "actual hydraulic pressure that exists in the building" are undefined, unclear, vague and ambiguous. The pressure in a building may fluctuate depending on numerous factors. Without clarification of these terms, and additional information as to those factors, Complaint Counsel is unable to respond to this Interrogatory.

46. (a) State whether Complainant contends that if a particular Omega does not activate at a minimum of [redacted] psi when tested, such an Omega would not activate if a fire occurred in a building where such Omega was installed.

(b) set forth the factual basis for any such contention:

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention:

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the term "activate" is undefined, unclear, vague and ambiguous. Without waiving its objection, Complaint Counsel responds that it contends that if a particular Omega does not activate, as that term is defined in Complaint Counsel's discovery requests, upon exposure to its activation/triggering temperature in testing, it would not activate when exposed to that same temperature in a fire that were to occur in a building in which it was installed.

Moreover, to the extent that Omegas have been found to fail at test pressures far in excess of 7 psig, Respondents' Interrogatory is irrelevant.

47. Describe the average static water pressure (in psi) present in the sprinkler systems of most residential buildings.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "most residential buildings" and "average static water pressure" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that it is confusing and ambiguous, as it fails to identify the location of the buildings, or define the other factors upon which the water pressure of a building at any given time depends. The water pressure in different areas of the country (and even in different areas of a state) is different, and the water pressure of a single building may fluctuate depending upon various factors. Without additional information as to each of those variants, a response to this question is impossible.

48. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most residential buildings, after the system has been activated.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "average residual water pressure," "most remote sprinkler head in the sprinkler systems," "most residential buildings" and "activated" are undefined, unclear, vague and

ambiguous. Complaint Counsel reiterates its objections and comments in response to Respondents' Interrogatory No. 47.

49. Describe the average static water pressure (in psi) present in the sprinkler systems of most commercial buildings.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "most commercial buildings" and "average static water pressure" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that it is confusing and ambiguous, as it fails to identify the location of the buildings, or define the other factors upon which the water pressure of a building at any given time depends. The water pressure in different areas of the country (and even in different areas of a state) is different, and the water pressure of a single building may fluctuate depending upon various factors. Without additional information as to each of those variants, a response to this question is impossible.

50. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most commercial buildings, after the system has been activated.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "average residual water pressure," "most remote sprinkler head in the sprinkler systems," "most commercial buildings" and "activated" are undefined, unclear, vague and

ambiguous. Complaint Counsel reiterates its objections and comments in response to Respondents' Interrogatory No. 49.

51. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. It is not relevant why Omegas do not and will not function -- it is relevant that they do not and will not function. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a definitive response to this Interrogatory at this time. Available information suggests that the Omega sprinkler design is inadequate for its

intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.
