d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination,

including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 52

Do you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the substances you contend are used;

v) describe the circumstances under which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 53

Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to cutting oils or other substances used to cut pipe? If so:

a) identify the Omega;

b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;

c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;

e) describe the methods and criteria used to determine and confirm the existence of the cutting oil or other substance used to cut pipe;

f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to cutting oil or other substance to cut pipe;

g) indicate how and when you were notified of the alleged exposure to cutting oil or other substance to cut pipe;

h) detail your response to the notification or awareness;

i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to cutting oil or other substance to cut pipe, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

k) With respect to each such Omega, indicate whether you contend that the exposure to cutting oil or other substance to cut pipe caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

INTERROGATORY NO. 54

Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants)

who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether cutting oil or other substance to cut pipe was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

   i) the date on which the communication took place;

   ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 55

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so, for each such substance (cutting oil or other substance used to cut pipe):

a) identify the substance;

b) describe the alleged change, and identify the Omega makes and models to which the change applies;

c) indicate the date on which the change was effected;

d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

f) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 56

Do you contend that swelling of the "o" ring in an Omega sprinkler may cause the Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its

activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which "o" ring swelling causes or may cause (a), (b), (c), and/or (d), above, indicating what type of "o" ring (EPDM, silicone, or other) is used in that Omega;

iii) identify the systems in which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above;

iv) describe the circumstances under which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above.

INTERROGATORY NO. 57

Have you or anyone of whom you are aware ever determined or alleged that an Omega containing an EPDM "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;

f) indicate how and when you were notified of the alleged "o" ring swelling;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you contend that the "o" ring swelling caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

INTERROGATORY NO. 58

Have you or anyone of whom you are aware ever determined or alleged that an Omega containing a silicone "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;

e) identify the person and/or entity (including your employees or consultants) who

notified you of the alleged "o" ring swelling;

f) indicate how and when you were notified of the alleged "o" ring swelling;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you or anyone else of whom you are aware contend that the "o" ring swelling caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contends, and explain your understanding of their basis for that contention.

INTERROGATORY NO. 59

Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is not steel exhibits "o" ring swelling? If so:

a) identify the Omega;

b) indicate what type of "o" ring the Omega contained (EPDM, silicone, or other type of "o" ring);

c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;

e) describe the methods and criteria used to determine and confirm the existence

of "o" ring swelling;

f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;

g) indicate how and when you were notified of the alleged "o" ring swelling;

h) detail your response to the notification or awareness;

i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 60

Are you aware or have you ever been notified of an Omega sprinkler from a steel piping system that did not exhibit "o" ring swelling, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega and indicate what type of "o" ring it contained;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;

e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;

f) indicate on what basis and by what criteria it was determined whether "o" ring swelling was present;

g) detail your response to the notification or awareness;

h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test results;

i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) explain in full detail why the Omega did not activate.

INTERROGATORY NO. 61

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring swelling? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;

b) indicate the date on which the change was effected;

c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring swelling; If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 62

Do you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

a) leak and/or weep;

b) activate prematurely and/or unnecessarily;

c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

v) describe the circumstances under which "o" ring adhesion causes or may cause (a), b), (c) and/or (d), above.

INTERROGATORY NO. 63

Have you or anyone of whom you are aware ever determined or alleged that an

Omega exhibits "o" ring adhesion? If so:

a) identify the Omega, and indicate what type of "o" ring it contained (EPDM, silicone, or other);

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring adhesion;

e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring adhesion;

f) indicate how and when you were notified of the alleged "o" ring adhesion;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

i) identify the Omega;

ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring adhesion, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you or anyone of whom you are aware contend that the "o" ring adhesion caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for that contention.

INTERROGATORY NO. 64

Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring adhesion? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;

b) indicate the date on which the change was effected;

c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring adhesion; If so:

   i) identify the Omega;

   ii) describe all such tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to

the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 65

Do you contend or are you aware of any fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated? If so:

a) identify each Omega;

b) indicate when, where and how the fire occurred;

c) what was the system pressure was (in psig) at the time of the fire and/or activation;

d) indicate how long after the Omega was first exposed to its activation/triggering temperature it activated;

e) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:

i) identify the injured person;

ii) indicate how the injury was or was alleged to have been sustained;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide

details of same;

f) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:

i) identify the decedent;

ii) indicate how and where the death occurred;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;

g) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:

i) identify the owner of the property;

ii) indicate how the property was or allegedly was damaged;

iii) indicate the value or alleged value of the property;

iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;

h) indicate whether the Omega was fitted with a "helper spring;"

i) indicate when and how you became aware of the fire and/or the activation, including from whom you received the notification;

j) identify and describe all communications regarding or relating in any way to the fire and/or activation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication;

k) indicate whether you or anyone else tested and/or examined any Omega that allegedly activated in a fire, or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

l) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen or adhered;

m) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:

i) indicate whether "stop leak" or any other such substance was present;

ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

n) indicate whether the Omega was examined for dezincification. If so:

i) indicate whether dezincification had occurred;

ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;

iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

INTERROGATORY NO. 66

Identify and describe all tests and/or examinations conducted by you or anyone on your behalf on Omega sprinklers. For each test:

a) identify the sprinklers tested;

b) describe the tests and provide a detailed protocol and the date on which each test was conducted;

c) identify the persons and entities involved in:

i) drafting and/or conceiving the protocol;

ii) setting up and/or conducting the tests;

d) describe and explain the results of the tests, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test results;

f) identify and describe all communications relating in any way to any such tests and/or test results, indicating:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 67

Have you or anyone of whom you are aware ever performed the "load on heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 68

Have you or anyone of whom you are aware ever performed the "strength of heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 69

Have you or anyone of whom you are aware ever performed the "leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 70

Have you or anyone of whom you are aware ever performed the "hydrostatic strength test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 71

Have you or anyone of whom you are aware ever performed the "30-day leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 72

Have you or anyone of whom you are aware ever performed the "water hammer test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 73

Have you or anyone of whom you are aware ever performed the "operating temperature (bath) test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the

test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 74

Have you or anyone of whom you are aware ever performed the "sensitivity tests" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 75

Have you or anyone of whom you are aware ever performed the "operation - lodgement test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 76

Have you or anyone of whom you are aware ever performed the "flow endurance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 77

Have you or anyone of whom you are aware ever performed the "operation - cold soldering test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 78

Have you or anyone of whom you are aware ever performed the "high temperature - test for uncoated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 79

Have you or anyone of whom you are aware ever performed the "high temperature - test for coated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 80

Have you or anyone of whom you are aware ever performed the "strength of frame test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 81

Have you or anyone of whom you are aware ever performed the "impact resistance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 82

Have you or anyone of whom you are aware ever performed the "rough usage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 83

Have you or anyone of whom you are aware ever performed the "vibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 84

Have you or anyone of whom you are aware ever performed the "calibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 85

Have you or anyone of whom you are aware ever performed the "10 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 86

Have you or anyone of whom you are aware ever performed the "16 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to

the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 87

Have you or anyone of whom you are aware ever performed the "water distribution test - conventional (old style) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 88

Have you or anyone of whom you are aware ever performed the "100 pan distribution test - sidewall sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 89

Have you or anyone of whom you are aware ever performed the "350 pound wood crib fire test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 90

Have you or anyone of whom you are aware ever performed the "10-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 91

Have you or anyone of whom you are aware ever performed the "30-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 92

Have you or anyone of whom you are aware ever performed the "90-day moist air test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to

the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 93

Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of brass sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 94

Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of stainless sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 95

Have you or anyone of whom you are aware ever performed the "operational tests on sprinklers incorporating gaskets or "o" ring seals" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 96

Have you or anyone of whom you are aware ever performed the "vacuum test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 97

Have you or anyone of whom you are aware ever performed the "elastomeric parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the

test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 98

Have you or anyone of whom you are aware ever performed the "freezing test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 99

Have you or anyone of whom you are aware ever performed the "fire test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 100

Have you or anyone of whom you are aware ever performed the "wall wetting test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 101

Have you or anyone of whom you are aware ever performed the "evaporation test for sprinkler coatings" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 102

Have you or anyone of whom you are aware ever performed the "cycling tests for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega

sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 103

Have you or anyone of whom you are aware ever performed the "piled stock fire test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and

the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 104

Have you or anyone of whom you are aware ever performed the "piled stock fire test for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 105

Have you or anyone of whom you are aware ever performed the "distribution tests for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 106

Have you or anyone of whom you are aware ever performed the "high temperature exposure test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 107

Have you or anyone of whom you are aware ever performed the "production leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 108

Have you ever tested an Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure?

If so:

a) identify the Omega;

b) explain why it failed to activate;

c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;

e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 109

Indicate whether you have attended or been present at any meetings or discussions, or issued or received any communications, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;

b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;

c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;

d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;

e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;

f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;

g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;

h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;

k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;

l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;

m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems. If so, for each such meeting, discussion, and communication, provide:

i) the date on which the meeting, discussion or communication took place;

ii) the persons and/or entities to and from whom the communication was directed or, if a meeting or discussion, identify all persons who were present and/or participated;

iii) the nature and content of the communication;

INTERROGATORY NO. 110

Have you ever been notified of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who notified you;

b) indicate how and when you were notified;

c) describe and explain the contents of the notification;

d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern;

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega about which you were notified of any problem, potential problem, complaint or concern, the system in which it was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, and/or any the testing and/or examination in part f), including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 111

Have you notified any person and/or entity of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who you notified, and all persons and/or entities who received the notification or copies thereof;

b) indicate how and when you notified the persons and/or entities identified in your response to part (a) above;

c) describe and explain the contents of the notification;

d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern, including who drafted, reviewed and/or approved the notification;

e) did you receive any response to the notification? If so:

i) identify the person and/or entity from whom you received a response;

ii) indicate how and when you received the response;

iii) describe and explain the contents of the response;

f) identify and describe all communications regarding or relating in any way to the notification and/or response, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 112

Indicate whether you ever requested any information from any sprinkler contractor or sprinkler owner regarding any Omega sprinkler. If so:

a) identify the persons and/or entities from whom you requested information;

b) indicate how and when you requested the information;

c) describe and explain what information you requested;

d) identify all persons who have knowledge of the request for information, including those who drafted, reviewed and/or approved the request for information;

e) did you receive any response to the request for information? If so:

i) identify the person and/or entity from whom you received a response;

ii) indicate how and when you received the response;

iii) describe and explain the contents of the response;

f) identify and describe all communications regarding or relating in any way to the request for information and/or the response to that request, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 113

Have you or anyone on your behalf provided (either by sale or without charge) sprinklers to anyone to replace some or all of the Omegas installed in a particular location? If so, indicate the total number of Omegas replaced, and the total value of the replacement (labor plus cost of sprinklers, and any other associated expenses).

INTERROGATORY NO. 114

With respect to each location in which you provided (either by sale or without charge)

sprinklers to anyone to replace some or all of the Omegas that were installed there:

a) identify the location;

b) indicate what make and/or model Omegas were replaced, and the quantity of each replaced;

c) indicate what make and/or model sprinkler were provided as a replacement, and the quantity of each provided;

d) identify the person and/or entity to whom you provided the replacements;

e) describe and explain the circumstances under which you provided the replacements;

f) identify the person and/or entity who paid the cost of the replacement;

g) indicate the cost of the replacement;

h) describe and explain what the replacement involved;

i) did you or anyone else of whom you are aware examine and/or test the Omega that was replaced, the system in which it was installed, and/or any other sprinkler from the same site? If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or

examination results;

j) identify and describe all communications regarding or relating in any way to the replacement of the sprinklers, the sprinkler that was replaced, the replacement sprinkler, and/or any the testing and/or examination the replaced sprinkler, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 115

Have you ever tested Omega sprinklers from a building or structure and indicated to the building owner/operator or anyone else that all Omegas activated properly? If so:

a) identify each Omega you tested;

b) identify the location in which the Omega had been installed;

c) for each location, indicate how many Omegas were installed there prior to testing, and how many were tested;

d) describe the tests and/or examinations, and provide a detailed protocol;

e) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

f) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

g) identify the persons and entities involved in evaluating the test and/or examination results;

h) did you or anyone else of whom you are aware examine and/or test the system in which it was installed? If so:

   i) describe the tests and/or examinations, and provide a detailed protocol;

   ii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

   iii) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

   iv) identify the persons and entities involved in evaluating the test and/or examination results;

i) did any person or entity other than you examine and/or test sprinklers from the same site? If so:

   i) identify the sprinkler;

   ii) describe the tests and/or examinations, and provide a detailed protocol;

   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

   v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to

the sprinklers, the testing and/or the results, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

INTERROGATORY NO. 116

Identify each person whom you expect to call as an expert witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the expert is expected to testify;

b) the substance of the facts and opinions to which the expert is expected to testify;

c) provide a summary of the grounds for each opinion to which the expert is expected to testify.

INTERROGATORY NO. 117

Identify each person whom you expect to call as a fact witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the witness is expected to testify;

b) the substance of the facts to which the witness is expected to testify.

In the Matter of	)	
CENTRAL SPRINKLER CORP.,	)	
and	)	CPSC DOCKET NO. 98-2
CENTRAL SPRINKLER CO.,	)	
Respondents	)	

FIRST REQUESTS FOR PRODUCTION OF DOCUMENTS AND THINGS TO RESPONDENTS CENTRAL SPRINKLER CORP. AND CENTRAL SPRINKLER CO.

Complaint Counsel hereby propounds its First Requests for Production of Documents and Things upon Respondents Central Sprinkler Corp. and Central Sprinkler Co.

PLEASE TAKE NOTICE that pursuant to 16 C.F.R. § 1025.33, Respondents must respond to these Requests within 30 days after service of same; inspection of the items requested shall take place on that same day at the office of Complaint Counsel, Consumer Product Safety Commission, Office of Compliance, 4330 East West Highway, Bethesda, MD 20814.

PLEASE TAKE FURTHER NOTICE that pursuant to 16 C.F.R. § 1025.31, Respondents are under a continuing duty to supplement their responses to the staff's discovery requests to include information later obtained, regardless of whether the response to the discovery request was complete when made.

DEFINITIONS

Throughout the following Requests and Definitions, unless the context otherwise requires, the singular includes the plural, the masculine includes the feminine, and neuter, or vice versa.

As used herein, the terms below are defined as follows:

"Activate" in the context of Omega sprinklers means full opening (as opposed to partial opening) of the sprinkler -- i.e., full release of the plunger housing -- upon exposure to the Omega's triggering temperature.

"Adhesion" and "Adhered," in the context of a sprinkler "o" ring, refers to adhesion or adhered to the plunger housing and/or main housing of the sprinkler.

"Cause" means to bring about, effect, make happen, contribute to, induce, produce, and/or compel.

"Claim" refers to all lawsuits, governmental actions or orders, disputes, demands for payment, indemnification or reimbursement, complaints, and/or potential lawsuits that contain allegations against you and/or your agents and/or employees.

"Communication" means any transfer of information, ideas, opinions or thought by any means at any time or place under any circumstances, including any transfer of data from one location to another by electrical, electronic or similar means.

"Distribute" means to deliver, sell, give, allot, or otherwise provide, and includes the giving away of free samples and promotional items.

"Document" or "Record" shall have the broadest meanings permissible, and shall include the original and any non-identical copy of any written, graphic, photographic, audio,

electronic or visual material, however produced or reproduced, of any kind or description, whether sent or received or neither, including, but not limited to: papers, books, letters, facsimiles, photographs, motion pictures, video tapes, audio recordings, correspondence, drawings, sketches, schematics, manuals, blueprints, work papers, intra- and interoffice communications, memoranda, notes, transcripts, minutes, reports, recordings of telephone or other conversations, or of interviews, conferences, or meetings, affidavits, statements, summaries, opinions, court pleadings, reports, indices, studies, analyses, evaluations, contracts, licenses, agreements, questionnaires, answers to questionnaires, statistical records, desk calendars, appointment books, diaries, telephone logs, lists, tabulations, charts, graphs, data sheets, computer tapes, disks, printouts or programs, microfilms, all other records kept by electronic, photographic, or mechanical means, and things similar to any of the foregoing, regardless of their author or origin, however denominated, no matter how produced or maintained, regardless of whether in your actual or constructive possession, custody or control, and regardless of whether or not communicated to any person other than the maker. A draft is a separate document or record within the meaning of this term.

If you claim that any document or record is privileged, specify the privilege claimed and the factual basis you contend supports the assertion of the privilege. If any document or record was, but is no longer, in your possession, custody, or control, provide the following information:

(a) state the disposition of the document or record;

(b) state the date such disposition was made;

(c) identify the present custodian of the document or record and state his or her

address or, if the document or record no longer exists, so state;

(d) identify the person who made the decision regarding the disposition of the document or record; and

(e) state the reason for the disposition and describe the document or record and the contents of the document or record, including the title, the author, the position or title of the author, addressee, the position or title of the addressee, whether indicated or blind copies were made, date, subject matter, number of pages, attachments or appendices, and all persons to whom the document was distributed, shown or explained.

"Field test," for purposes of these Interrogatories, shall mean any test performed on a sprinkler while it is installed in a sprinkler system.

"Identify" or "identity" shall mean, when referring to an individual person, the person's full name, present or last known employer, present or last known address, occupation, business position, and telephone number, and the relationship or association, if any, to a Respondent in this action.

When referring to an entity, the terms "identify" or "identity" shall mean its present and any former name(s), the business address of its principal place of business, its state of incorporation, registration, or organization, the identity and address of its registered agent in each state where it is present and doing business or has a place of business, its present officers, directors, and shareholders, and its relationship, if any, to a Respondent in this action. Once a person or entity has been identified in accordance with this paragraph, only the name of that person or entity need be listed in response to subsequent discovery

requesting the identification of that person or entity.

When referring to a document or record, the terms "identify" or "identity" shall mean a description of the document or record including its date of preparation and transmission, the author, sender and recipient, the custodian of the record, and a summary of the subject matter.

When referring to an Omega or other brand sprinkler, "identify" or "identity means to provide the following information:

(a) the sprinkler manufacturer

(b) model name and number;

(c) manufacture date;

(d) activation temperature;

(e) "o" ring type (if applicable)

(f) all dates of UL listing;

(g) the UL standards for safety under which the sprinkler is/was listed;

(h) the type of piping in which the sprinkler is or was installed (if applicable);

(i) the name, address and telephone number of the building in which the sprinkler was installed (if applicable); and the name, address and telephone number of the owner of that building;

"Manufacture" means to make, produce, assemble, fabricate, or work into usable form.

"Omega" means any and all models and makes (variations within a model) of Omega series or brand automatic fire sprinklers.

"Relating to" shall mean consisting of, referring to, describing, discussing, constituting, evidencing, containing, mentioning, concerning, pertaining to, citing, summarizing, analyzing,

or bearing any logical or factual connection with the matter discussed.

"UL" or "Underwriters Laboratories, Inc." means Underwriters Laboratories, Inc., 333 Pfingsten Road, Northbrook, IL 60062 and any subsidiaries, divisions, or agents of Underwriters Laboratories, Inc.

"You," "your," "yourself" means the Respondent to whom this discovery is directed, including any officer, director, representative, insurer, agent or employee thereof, and also includes any agent, person or entity acting on your behalf.

INSTRUCTIONS

1. Each Request shall be answered completely, separately, and fully.

2. The following Requests are to be regarded as continuing. You are required to supplement or modify any response as additional or different information becomes known to you.

3. Each person consulted in answering any Response shall be identified in the body of the response to the particular Response.

4. If you cannot answer any Response in full after exercising due diligence, so state and answer or produce to the extent possible, specifying your inability to answer or produce the remainder, stating whatever information or knowledge you have concerning the unanswered portion or unproduced documents, and describing your efforts to secure the unknown information or unproduced documents.

5. If you assert any privilege in responding to any Response, state the type of privilege asserted and the basis for its assertion. In addition, briefly identify the document or record with respect to which the privilege is asserted. For any document or record with

respect to which a privilege is asserted, state:

(a) The type of document or record (e.g., letter, memorandum, contract, etc.), the date of the document, and the subject matter of the document or record;

(b) The name, address and position of the author of the document or record and of any person who assisted in its preparation;

(c) The name, address and position of each addressee or recipient of the document or record, or any copies of it; and

(d) The present location of the document or record and the name, address and position of the person having custody of it.

For any communication with respect to which a privilege is asserted, identify the persons or entities among whom the communication took place, the date of the communication, and the subject.

REQUESTS FOR PRODUCTION

REQUEST NO. 1

Provide all records relating in any way to your sale of any Omega sprinkler, including but not limited to purchase orders, shipping documents, billing statements and sales receipts.

REQUEST NO. 2

Provide all records relating in any way to your provision of any Omega sprinkler as a free sample or promotional item.

REQUEST NO. 3

Provide all records relating in any way to marketing and/or sale of Omega sprinklers by you.

REQUEST NO. 4

For each year in which you manufactured and/or distributed Omega sprinklers, provide all records relating in any way to

(a) your gross income;

(b) your net income;

(c) the amount in revenues generated from product sales;

(d) the amount in revenues generated from sales of Omega sprinklers.

REQUEST NO. 5

Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

(a) steel piping systems;

(b) copper piping systems;

(c) plastic piping systems;

(d) polybutylene piping systems;

(e) other piping systems not listed above (specify the type of piping system)?

REQUEST NO. 6

Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

a) private homes

b) apartment buildings

c) schools (including universities and colleges, public or private)

d) nursing homes

e) hospitals

f) detention facilities (including jails, juvenile detention facilities, etc.)

g) homeless shelters

h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)

i) hotels

j) museums

k) offices (including office buildings)

l) warehouses with no public access areas

m) industrial facilities with no public access areas

REQUEST NO. 7

Provide all records relating in any way to the current sales price for each Omega make and/or model listed in your response to Complaint Counsel's Interrogatory No. 13.

REQUEST NO. 8

Provide the complete personnel files for all persons identified in your response to Complaint Counsel's Interrogatory No. 15.

REQUEST NO. 9

Provide the complete personnel files for all persons involved in design and/or development of each make and/or model Omega sprinkler.

REQUEST NO. 10

Provide all records relating in any way to the design of and/or specifications for each component part and each chemical (including lubricants), tool and/or substance used in the

Omega manufacturing process.

REQUEST NO. 11

Provide all records relating in any way to your acquisition of any component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

REQUEST NO. 12

Provide the complete personnel files of any persons who were/are employed by you who in any way took part or were involved in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

REQUEST NO. 13

Provide all records relating in any way to the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time, including all tools, chemicals and substances used in the manufacture of same, including but not limited to cut sheets, drawings, and manufacturing instructions.

REQUEST NO. 14

Provide three samples of each make and model of Omega sprinkler that you have ever manufactured.

REQUEST NO. 15

Provide three samples of each tool, chemical and/or substance used in the manufacture of each make and model of Omega sprinkler. (If any such tools, chemicals and/or substances

are used for more than one make and/or model of Omega, you need only provide one set of three samples).

REQUEST NO. 16

Provide all records relating in any way to any chemical or substance used in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system.

REQUEST NO. 17

Provide all records relating in any way to any tests performed by you or anyone else to assess whether and/or how each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23 affects the operation of Omega sprinkler(s) or any Omega component part.

REQUEST NO. 18

Provide all records relating in any way to each communication between you and any persons and/or entities (including your employees, agents, and consultants) regarding each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23.

REQUEST NO. 19

Provide all records relating in any way to each prototypes and/or precursors of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

REQUEST NO. 20

Provide the complete personnel files of any and all employees who were in any way involved in designing, developing and/or reviewing any and all prototypes and/or precursors

of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

REQUEST NO. 21

Provide all records relating in any way to any and all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

REQUEST NO. 22

Provide all records relating in any way to any actual or alleged problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas (including whether any component part has been or alleged to have been out of tolerance) of which you have knowledge or have been advised.

REQUEST NO. 23

Provide all records relating in any way to the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

REQUEST NO. 24

Provide all records relating in any way to whether pressure (not internal to or part of the Omega itself) is required for activation of any make and/or model of Omega sprinkler.

REQUEST NO. 25

Provide all records relating in any way to the amount of pressure (not internal to or

part of the Omega itself) required for activation of each make and/or model of Omega sprinkler.

REQUEST NO. 26

Provide all records relating in any way to any non-Omega sprinklers that contain an "o" ring.

.REQUEST NO. 27

Provide all records relating in any way to the approval, listing and/or certification of each Omega make and/or model, and each adaptation or device to be used with any Omega make and/or model (such as the "helper spring"), including testing or submission for approval, listing and/or certification by a certifying laboratory or institution (such as UL or FM), and including all records relating in any way to whether approval, listing or certification was ever refused, withdrawn, discontinued or cancelled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler.

REQUEST NO. 28

Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM.

REQUEST NO. 29

Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or

certified by UL are listed or certified by UL.

REQUEST NO. 30

Provide all records relating in any way to any Omega that did not or allegedly did not activate in a fire.

REQUEST NO. 31

Provide all records relating in any way to anyone who was injured or allegedly was injured as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

REQUEST NO. 32

Provide all records relating in any way to anyone who died or allegedly died as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

REQUEST NO. 33

Provide all records relating in any way to any property damage or allegedly property damage as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

REQUEST NO. 34

Provide all records relating in any way to any testing and/or examination of each Omega that failed to activate or allegedly failed to activate in a fire, the system in which that

Omega was installed, and/or any other sprinkler from the same site.

REQUEST NO. 35

Provide all records relating in any way to each Omega sprinkler of which you are aware or have been notified that, when tested, did not activate at 7 psig or below when exposed to its activation/triggering temperature.

REQUEST NO. 36

Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate at 7 psig or below when exposed to its activation/triggering temperature in testing, the system in which it was installed, and/or any other sprinkler from the same site.

REQUEST NO. 37

Provide all records relating in any way to any Omega sprinkler of which you are aware that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature.

REQUEST NO. 38

Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate when exposed to its activation/triggering temperature when tested in the field.

REQUEST NO. 39

Provide all records relating in any way to the design and/or development of the Omega "helper spring," and/or specifications for the manufacture of the "helper spring."

REQUEST NO. 40

If you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation (triggering) temperature for long enough for its fusible like to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega), provide all records that you claim or believe support your contention.

REQUEST NO. 41

Provide all records relating in any way to the method of operation of "helper spring."

REQUEST NO. 42

Provide all records relating in any way to any and all tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part.

REQUEST NO. 43

Provide all records relating in any way to your communications with any persons and/or entities (including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring.

REQUEST NO. 44

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has cracked or broken, or allegedly cracked or broken.

REQUEST NO. 45

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has exhibited corrosion.

REQUEST NO. 46

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has leaked and/or weeped when tested or in a fire.

REQUEST NO. 47

Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire

REQUEST NO. 48

If you contend that dezincification may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 49

Provide all records relating in any way to any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

REQUEST NO. 50

Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 51

Provide all records relating in any way to any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

REQUEST NO. 52

Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 53

Provide all records relating in any way to any Omega from a piping system that is neither copper or plastic that has exhibited or allegedly exhibited dezincification.

REQUEST NO. 54

Provide all records relating in any way to testing and/or examination of the system in which any Omega from a piping system that is neither copper or plastic, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 55

Provide all records relating in any way to any Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

REQUEST NO. 56

Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 57

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47.

REQUEST NO. 58

Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47 exhibits dezincification.

REQUEST NO. 59

Provide all records relating in any way to any and all substances that you contend have been used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems, that may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature).

REQUEST NO. 60

If you contend that the use of stop leak or other sealant, leakage prevention substance or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 61

Provide all records relating in any way to any and all Omegas that were exposed or were allegedly exposed to stop leak or any other sealant, leakage prevention substance or pipe cement.

REQUEST NO. 62

Provide all records relating in any way to testing and/or examination of the system in which any and all Omegas that have been exposed or allegedly have been exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, were installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 63

Provide all records relating in any way to any and all Omegas that were not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire?

REQUEST NO. 64

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51.

REQUEST NO. 65

Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51 was affected by the use of stop

leak or any other sealant, leakage prevention substance or pipe cement.

REQUEST NO. 66

If you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 67

Provide all records relating in any way to any Omega that was exposed or was allegedly exposed to cutting oils or other substances used to cut pipe.

REQUEST NO. 68

Provide all records relating in any way to testing and/or examination of the system in which any Omega that has been exposed or allegedly has been exposed to cutting oils or other substances used to cut pipe, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 69

Provide all records relating in any way to any Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

REQUEST NO. 70

Provide all records relating in any way to testing and/or examination of the system in which any Omega that was not exposed or allegedly exposed to cutting oils or other substances used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 71

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 55.

REQUEST NO. 72

Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 55, to determine whether it was exposed to cutting oil or other substance used to cut pipe

REQUEST NO. 73

If you contend that swelling of the "o" ring in an Omega sprinkler may cause the

Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you believe or claim support your contention.

REQUEST NO. 74

Provide all records relating in any way to any and all Omegas containing an EPDM "o" ring, from a steel piping system, that have exhibited or allegedly exhibited "o" ring swelling.

REQUEST NO. 75

Provide all records relating in any way to testing and/or examination of the system in which any Omega containing an EPDM "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 76

Provide all records relating in any way to any Omega containing a silicone "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling.

REQUEST NO. 77

Provide all records relating in any way to testing and/or examination of the system in which any Omega containing a silicone "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 78

Provide all records relating in any way to any Omega from a piping system that is not steel that has exhibited or allegedly exhibited "o" ring swelling.

REQUEST NO. 79

Provide all records relating in any way to testing and/or examination of the system in which any Omega, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 80

Provide all records relating in any way to any Omega from a steel piping system that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

REQUEST NO. 81

Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at

a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

REQUEST NO. 82

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61.

REQUEST NO. 83

Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61, to determine whether it exhibits "o" ring swelling.

REQUEST NO. 84

Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega has a swollen "o" ring.

REQUEST NO. 85

If you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

(a) leak and/or weep;

(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering

temperature),

provide all records that you claim or believe support your contention.

REQUEST NO. 86

Provide all records relating in any way to any Omega that has exhibited or allegedly exhibited "o" ring adhesion.

REQUEST NO. 87

Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64.

REQUEST NO. 88

Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64, to determine whether the Omega exhibits "o" ring adhesion.

REQUEST NO. 89

Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega exhibits "o" ring adhesion.

REQUEST NO. 90

Provide all records relating in any way to any and all fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

REQUEST NO. 91

Provide all records relating in any way to any testing and/or examination of any Omegas from sites in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

REQUEST NO. 92

Provide all records relating in any way to any tests and/or examinations of Omega sprinklers conducted by you or anyone on your behalf.

REQUEST NO. 93

Provide all records relating in any way to any and all tests and/or examinations of Omega sprinklers conducted pursuant to the protocol in UL 199 or UL 1626, that one or more Omegas did not pass (according to the criteria listed in UL 199 for that test).

REQUEST NO. 94

Provide all records relating in any way to any testing of any Omega conducted by you or on your behalf in which the Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure.

REQUEST NO. 95

Provide all records relating in any way to any meetings, discussions and/or communications in which you were in any way involved, and/or which you have received, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;

b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;

c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;

d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;

e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;

f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;

g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;

h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"

j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;

k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;

l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;

m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems.

REQUEST NO. 96

Provide all records relating in any way to any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) or which you have been notified, regarding or in any way relating to an Omega sprinkler.

REQUEST NO. 97

Provide all records relating in any way to your notification (or notification on your behalf) of any person and/or entity of any and all problems, potential problems, complaints or concerns (including any reports of nonactivation or possibility of nonactivation) regarding or in any way related to any Omega sprinkler.

REQUEST NO. 98

Provide all records relating in any way to any and all requests for information by you (or on your behalf) to any sprinkler contractor or sprinkler owner regarding any Omega sprinkler, including the sprinkler contractor or owner's response.

REQUEST NO. 99

Provide all records relating in any way to your (or anyone on your behalf's) provision (either by sale or without charge) of sprinklers to anyone to replace some or all of the Omegas installed in a particular location.

REQUEST NO. 100

Provide all records relating in any way to the cost of replacement of any and all Omega sprinklers.

REQUEST NO. 101

Provide all records relating in any way to your testing (or testing on your behalf) of any Omega sprinklers from any building or structure in which Omega sprinklers are/were installed.

In the Matter of	:	
	:	
Central Sprinkler Corp.	:	
	:	**CPSC Docket No. 98-2**
and	:	
	:	
Central Sprinkler Co.,	:	
	:	
Respondents.	:	
	:	

RESPONDENTS' RESPONSES AND OBJECTIONS TO COMPLAINT COUNSEL'S FIRST SET OF INTERROGATORIES

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central"), pursuant to 16 C.F.R. § 1025.32, hereby provide responses and objections to Complaint Counsel's First Set of Interrogatories. Central's responses may be supplemented in accordance with 16 C.F.R. § 1025.31(f).

PREFATORY STATEMENT

Central hereby fully incorporates by reference the Prefatory Statement set forth in Respondents' Responses and Objections to Complaint Counsel's First Request for Production of Documents and Things.

OBJECTIONS TO EACH AND EVERY DISCOVERY REQUEST

Central hereby full incorporates by reference the Objections To Each and Every Discovery Request set forth in Respondents' Responses and Objections to Complaint Counsel's First Set of Interrogatories.

INTERROGATORY RESPONSES

INTERROGATORY NO. 1: Identify the person(s) answering these Interrogatories.

RESPONSE NO. 1: Carmine Schiavone and counsel for Central.

INTERROGATORY NO. 2: Identify yourself.

RESPONSE NO. 2: Counsel for Central.

INTERROGATORY NO. 3: Identify all officers, directors and/or shareholders of your company since its formation. For each such person, specify all positions they have held, and the dates they held each position.

RESPONSE NO. 3: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, organizational charts.

INTERROGATORY NO. 4: Provide the date on which the first "Omega" sprinkler was sold or given away as a free sample or promotional item. Identify the fist [sic] "Omega" sprinkler sold or given away as a free sample.

RESPONSE NO. 4: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably

calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: The first Flow Control was sold in 1978, and the first Omega sprinkler was sold in 1982.

INTERROGATORY NO. 5: Identify all makes and/or models of "Omega" sprinklers you have ever designed, manufactured, and/or distributed. For each model, indicate the date(s) it was designed, manufactured and distributed.

RESPONSE NO. 5: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: cut sheets, product catalogues, engineering drawings.

INTERROGATORY NO. 6: Provide the total number of Omega sprinklers that:

a) have been sold;
b) have been given away as free samples or promotional items;
c) are installed in the United States and its territories. Of these, how many contain:
    i) EPDM "o" rings;
    ii) silicone "o" rings;
    iii) neither EPDM or silicone "o" rings (specify whether the model has an "o" ring, and if so, the composition of the "o" ring).

RESPONSE NO. 6: Central estimates that approximately 8.9 million Omegas have been sold and installed. All Omegas contain either EPDM or silicone o-rings. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: sales reports.

INTERROGATORY NO. 7: How many Omega sprinklers:

a) have been sold;
b) have been given away as free samples or promotional items;
c) are installed

in each state and territory of the United States.

RESPONSE NO. 7: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: Central estimates that approximately 8.9 million Omegas have been sold. Central is not able to provide precise information in response to the remaining questions in this interrogatory. Because Central generally does not sell to end-users and generally does not install sprinkler heads, Central lacks specific knowledge regarding the number of Omegas sold to end-users and installed for end-users. To the extent that Central has any such information, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 8: Provide the sales price for each Omega sold by you (or anyone on your behalf) in the United States and/or its territories.

RESPONSE NO. 8: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: price books, product catalogues.

INTERROGATORY NO. 9: For each year in which you manufactured and/or distributed Omega sprinklers, provide:

a) your gross income;
b) your net income;
c) the amount in revenues generated from product sales;
d) the amount in revenues generated from sales of Omega sprinklers.

RESPONSE NO. 9: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred

to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, sales reports.

INTERROGATORY NO. 10: How many total Omega sprinklers are installed in the United States and/or its territories in:

a) steel piping systems;
b) copper piping systems;
c) plastic piping systems;
d) polybutylene piping systems;
e) other piping systems not listed above (specify the type of piping system)?

RESPONSE NO. 10: Central responds as follows: Central is not able to provide precise information in response to this interrogatory. Because Central generally does not sell to end-users and generally does not install sprinkler heads, Central lacks specific knowledge regarding the number of Omegas installed in the various types of piping systems. Central has estimated that there are approximately 5.0 million Omegas installed in steel piping systems, and approximately 3.9 million Omegas installed in non-steel piping systems. To the extent that Central has any such information, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 11: How many Omega sprinklers are installed in each state and territory of the United States in:

a) steel piping systems;
b) copper piping systems;
c) plastic piping systems;
d) polybutylene piping systems;

e) other piping systems not listed above (specify the type of piping system)?

RESPONSE NO. 11: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10.

INTERROGATORY NO. 12: How many Omega sprinklers are installed in the United States and/or its territories in:

a) private homes
b) apartment buildings
c) schools (including universities and colleges, public or private)
d) nursing homes
e) hospitals
f) detention facilities (including jails, juvenile detention facilities, etc.)
g) homeless shelters
h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)
i) hotels
j) museums
k) offices (including office buildings)
1) warehouses with no public access areas
m) industrial facilities with no public access areas

RESPONSE NO. 12: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. In addition, to the extent that Central has any such information, pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 13: Identify which Omega makes and/or models you are currently manufacturing and/or selling.

RESPONSE NO. 13: Central responds as follows: C-1A; C-1A PRO; C-1A PRO ID; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12 RES; HEC-20 ID; R-1M; and Flow Control. In addition, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: product catalogues, cut sheets, price books.

INTERROGATORY NO. 14: What is the current sales price for each Omega make and/or model listed in your response to Interrogatory No. 13?

RESPONSE NO. 14: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome, it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: product catalogues, price books.

INTERROGATORY NO. 15: Identify all of your employees, agents, representatives or consultants who have held a supervisory, managerial, or executive position or role in the following areas of your company at any time:

1) sales;
2) marketing;
3) product design and/or development;
4) engineering and/or technical services;
5) customer service/customer relations;
6) public and/or governmental relations;
7) product manufacturing and/or production;
8) product sales, marketing and/or distribution;
9) corporate mergers and/or acquisitions;
10) quality assurance/control;
11) any divisions, subdivisions or areas that deal or dealt with Omega automatic fire sprinklers and/or any component parts of Omega automatic fire sprinklers.

For each employee, agent, representative or consultant, please state the position(s) and title(s) of those position(s), term(s) of employment, and salary. If the person is no longer in your employ, please indicate their reason for leaving and, if known, provide their current address and telephone number.

RESPONSE NO. 15: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, employee status reports.

INTERROGATORY NO. 16: Identify all persons and/or entities who were in any way involved in:

a) design and/or development;
b) testing
c) the UL listing process and/or submission of Omega sprinkler samples and/or prototypes for same;
d) marketing;
e) sale; or
f) manufacturing of any makes and/or models of each make and/or model Omega sprinkler.

For each such person and entity, indicate:

i) whether the person or entity is currently employed by your company;
ii) their position in your company (or, if not in your company, elsewhere) at the time of their involvement;
iii) which makes and/or models the involvement related to; and
iv) describe in detail the nature of their involvement.

RESPONSE NO. 16: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: annual reports, employee status reports.

INTERROGATORY NO. 17: For each make and/or model of Omega sprinkler, identify and describe (including specifications for) each component part and each chemical (including lubricants), tool and/or substance used in the Omega manufacturing process.

RESPONSE NO. 17: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: bills of materials, sub-assembly drawings, work instructions.

INTERROGATORY NO. 18: Identify the manufacturer of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

RESPONSE NO. 18: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel

is specifically referred to the following categories of documents: bills of materials, purchase orders.

INTERROGATORY NO. 19: Identify the person and/or entity who supplied to you each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

RESPONSE NO. 19: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: bills of materials; purchase orders.

INTERROGATORY NO. 20: Identify all persons and/or entities who were involved in any way in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Interrogatory No. 17.

RESPONSE NO. 20: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial

information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 21: Describe in detail the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time. Specify and describe all tools, chemicals and substances used, including when, how and in what amount they are used.

RESPONSE NO. 21: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: bills of materials, sub-assembly drawings, work instructions, engineering change notices, project proposals, corrective action reports.

INTERROGATORY NO. 22: For each change in procedure or specification identified in your response to Interrogatory No. 21:

a) explain the differences between the procedure or specification and its predecessor(s);
b) explain the reasons for the change;
c) identify all persons and/or entities involved in bringing about the change, and explain their role in same;
d) identify all persons and/or entities who implemented the change;

e) indicate whether any tests were done on the models before or after the change occurred. If so:
   i) describe the tests and provide a detailed protocol;
   ii) identify the persons and entities involved in setting up and/or conducting the tests;
   iii) describe and explain the results of the tests, including all observations and conclusions;
   iv) identify the persons and entities involved in evaluating the test results.

RESPONSE NO. 22: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: engineering change notices, project proposals, material review board minutes, first article reports, vendor certifications, corrective action reports.

INTERROGATORY NO. 23: Have you (or anyone on your behalf) ever utilized any chemical or substance in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system? If so, identify, for each such chemical or substance:

a) its name (and brand name, if applicable);
b) its chemical composition;
c) its manufacturer; and
d) the person and/or entity from whom you purchased and/or received the chemical or substance;
e) identify and describe any tests performed by you or anyone else to assess whether and/or how the substance affects the operation of Omega sprinkler(s) or any Omega component part, providing the following information:
   i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;
iii) describe and explain the results of the tests, including all observations and conclusions;
iv) identify the persons and entities involved in evaluating the test results.

f) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such chemical or substance. If so, provide the following information:
i) identify all such persons and/or entities;
ii) state the date of the communication;
iii) describe the content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 23: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: to the extent that this interrogatory is referring to products such as "Stop-Leak," Central has not utilized such substances.

INTERROGATORY NO. 24: Were/are there any prototypes or precursors of any of the Omega sprinklers listed in your response to Interrogatory No. 6? If so:

a) identify and describe each prototypes or precursor, including any modifications in composition or design;
b) indicate the date on which it was designed and/or developed;
c) identify all persons and entities who were in any way involved in designing, developing and/or reviewing the prototype or precursor;
d) identify the Omega model to which the prototype or precursor corresponds;
(e) describe all tests and evaluations performed on the prototype or precursor, providing the following information:
i) the date on which the test or evaluation was conducted;
ii) the protocol for the test or evaluation;
iii) identify all persons and entities who conducted, attended, reviewed, and/or supervised the test or evaluation;
f) indicate whether the prototype or precursor was ever submitted to a testing laboratory for review, certification or listing. If so, fully describe the circumstances and outcome of the submission and testing, and identify the laboratory;

g) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding any such prototype or precursor. If so, provide the following information:
   i) identify all such persons and/or entities;
   ii) state the date of the communication;
   iii) describe the content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 24: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 25: Identify and describe all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

RESPONSE NO. 25: A general, non-exhaustive description of such measures and procedures may be described as follows: Central maintains work instructions on its manufacturing floor to ensure that the employees know the process and procedure for assembly of Omega sprinklers. In addition, there is a quality plan for the assembly of Omegas, which is inspected by

quality control inspectors to ensure that it is being followed for proper assembly. The quality control inspectors may conduct visual and/or measurement tasks to verify that the heads coming from the production line meet or exceed the specifications in the quality plan. Moreover, quality control personnel conduct random bath tests of the eutectic to ensure proper temperature operation. UL inspections also are conducted by quality control personnel to ensure that the Omegas produced meet or exceed UL 199 and UL 1626 requirements.

For a more detailed description of such measures and procedures, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals, work instructions.

INTERROGATORY NO. 26: Have you ever known or been advised of any problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas, including whether any component part has been or alleged to have been out of tolerance? If so, for each such problem, flaw, defect and deficiency:

a) describe in full detail the problem, imperfection, flaw, defect, deficiency or extent to which the part was out of tolerance;

b) indicate the date on which you were notified or learned of the problem, flaw, defect or deficiency;

c) indicate how you became aware or were notified of the problem, flaw, defect or deficiency;

d) describe all actions, if any, you took as a result, indicating when those actions were taken; and

e) state whether the affected component part was ever delisted, recalled, discontinued. taken off the market, or requested to be returned to the manufacturer, supplier, distributor, etc. and, if so, explain the circumstances of same.

RESPONSE NO. 26: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: incoming inspection reports, first article reports, non-conformance reports.

INTERROGATORY NO. 27: Explain in full detail the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

RESPONSE NO. 27: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, the general mechanism of operation for most Omegas may be described as follows: A fusible alloy pellet is compressed by a bearing disc into a copper housing by a ball plunger. Heat is absorbed by the heat collecting fins and conducted to the alloy pellet. At the rated temperature, the alloy melts, causing the ball plunger to drop, freeing balls from the retaining groove. This movement allows system water pressure to force the orifice reeling mechanism and deflector assembly open. Water is then discharged in a designed flow pattern. For specific

information regarding each different make and models of Omega sprinklers, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 28: Once the activation (triggering) temperature has been reached, indicate whether water pressure or any other source of pressure (not internal to or part of the Omega itself) is a prerequisite to or requirement for activation of any make and/or model of Omega sprinkler(s). If so:

a) identify the Omega
b) indicate, for each make and/or model of Omega, what the necessary pressure is (in psig);
c) indicate the expected or required source of that pressure;
d) explain how the pressure activates or assists the Omega's activation;
e) explain why the sprinkler will not activate without that pressure.

RESPONSE NO. 28: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Water pressure is one element in the activation of Omegas. Central also incorporates its Response No. 27. The necessary pressure for activation varies depending on the Omega model and the specific building and system in which it is installed. The appropriate testing criteria is based on the hydraulically calculated operating pressure specific to the particular installed system in each individual building. In order to calculate that pressure, Complaint Counsel is referred to information and/or documents that are not in Central's possession, custody, or control; and/or pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 29: Are you aware of any non-Omega sprinklers that contain an "o" ring? If so:

a) identify the sprinkler make and/or model;
b) identify the manufacturer of the sprinkler;
c) indicate where in the sprinkler the "o" ring is located;
d) explain the mechanism of proper operation/activation of the sprinkler, including how the "o" ring is used; and
e) identify all persons and entities involved in any way in the design of each such sprinkler make and/or model;
f) indicate whether you are aware or have been notified of any instances in which a non-Omega sprinkler containing an "o" ring did not or allegedly did not activate, either in testing or in a fire, when exposed to its activation (triggering) temperature. If so, indicate when, how, and from whom you received such notification;
g) identify all tests of which you are aware that were conducted on the sprinkler to determine whether or not it operates properly, providing the following information:
    i) identify the sprinkler;
    ii) describe the tests and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests;
    iv) describe and explain the results of the tests, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
h) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding the operation of any non-Omega sprinklers containing an "o" ring. If so, provide the following information:
    i) identify all such persons and/or entities;
    ii) state the date of the communication;
    iii) describe the content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 29: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it seeks information and/or documents protected from discovery by the

attorney-client privilege and/or work product doctrine. Subject to and without waiver of the foregoing objections, Central responds as follows: Central is aware of non-Omega sprinklers that contain o-rings, including other sprinklers manufactured by Central Sprinkler Company and certain sprinkler models manufactured by other companies. For the remaining information requested by this interrogatory, Complaint Counsel is referred to information and/or documents that are not in Central's possession, custody, or control; and/or pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 30: Indicate which Omega makes and/or models, and which, if any, adaptations or devices to be used with any Omega make and/or model (such as the "helper spring"), have been tested or submitted for approval, listing and/or certification by a certifying laboratory or institution such as UL or FM? For each such Omega, for each testing and/or submission, and for each certifying laboratory or institution:

a) describe all efforts involved and steps taken in an effort to obtain approval, listing and/or certification;
b) indicate the date on which each such effort or step took place;
c) indicate the project number, if any, that each such effort or step related to or was part of,
d) identify all persons and/or entities involved in each effort or step;
e) with respect to any testing and/or examinations:
    i) describe the tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests;
    iii) describe and explain the results of the tests, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test results;
f) describe all communications regarding or relating in any way to the listing and/or certification, including the following information:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;

g) indicate whether and when listing and/or certification was granted, refused, or postponed by the certifying laboratory or institution.

RESPONSE NO. 30: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: correspondence from UL and/or FM, listing books, listing documents and cards.

INTERROGATORY NO. 31: Indicate whether approval, listing or certification was ever refused, withdrawn, discontinued or canceled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler. If so:

a) identify the Omega and/or Omega component part or allegedly assistive operating device;
b) explain the circumstances and date;
c) identify all persons and/or entities involved;
d) identify and describe all communications regarding or relating in any way to the refusal, withdrawal, discontinuation, cancellation, or objected to sale and/or distribution, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was

directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 31: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: correspondence from UL and/or FM, listing documents.

INTERROGATORY NO. 32: Have you ever advertised, represented, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM? If so:

a) identify the advertisement or marketing material;

b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:

i) how and from whom you received the notification;

ii) when you received the notification;

iii) describe the contents of the notification;

iv) describe your response to the notification.

RESPONSE NO. 32: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has never knowingly engaged in such actions.

INTERROGATORY NO. 33: Have you ever advertised, indicated or suggested in any marketing material that Omega sprinklers that are not listed or certified by UL are listed or certified by UL? If so:

a) identify the advertisement or marketing material;
b) indicate whether and when you were notified of the false advertisement, representation, indication or suggestion. If so, indicate:
   i) how and from whom you received the notification;
   ii) when you received the notification;
   iii) describe the contents of the notification;
   iv) describe your response to the notification.

RESPONSE NO. 33: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has never knowingly engaged in such actions. Regarding the EC-20A model Omega, at one time, UL had completed the review process for the model and actually had issued a listing card for the corresponding commercial model, but, as an unintentional oversight, the actual listing card for the EC-20A was not issued at the same time. For more detailed information, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 34: Indicate whether you are aware or have ever been notified of an Omega that did not or allegedly did not activate in a fire? If so:

a) identify the Omega;
b) indicate when, where and how the fire occurred;
c) what was the system pressure was (in psig) at the time of the fire and/or nonactivation;
d) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:
    i) identify the injured person;
    ii) indicate how the injury was or was alleged to have been sustained;
    iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide details of same;
e) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:
    i) identify the decedent;
    ii) indicate how and where the death occurred;
    iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;
f) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:
    i) identify the owner of the property;
    ii) indicate how the property was or allegedly was damaged;
    iii) indicate the value or alleged value of the property;
    iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;
g) indicate whether the Omega was fitted with a "helper spring;"
h) indicate when and how you became aware of the fire and/or the nonactivation, including from whom you received the notification;
i) identify and describe all communications regarding or relating in any way to the fire and/or nonactivation, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

j) indicate whether you or anyone else tested and/or examined any Omega that failed to activate or allegedly failed to activate in a fire, the sprinkler system in which the Omega was installed, and/or any other sprinkler from the same site?
If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

k) indicate whether the Omega "o" ring was examined for swelling and/or adhesion.
If so:
   i) indicate whether swelling and/or adhesion was present;
   ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
   iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

1) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
   i) indicate whether "stop leak" or any other such substance was present;
   ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;
   iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

m) indicate whether the Omega was examined for dezincification. If so:
   i) indicate whether dezincification had occurred;
   ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
   iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

n) explain why the Omega failed to activate in the fire.

RESPONSE NO. 34: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that

constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion.

Subject to and without waiver of the foregoing objections, Central responds as follows: Following is a list of locations regarding which Central has "been notified of an Omega that did not or allegedly did not activate in a fire." By listing the locations below, Central does not concede that any Omega sprinkler involved did not activate properly or that any non-activation was caused by a defect in the sprinkler. To the contrary, for example, certain of the locations listed below involved fires that burned from outside the structure to the inside, systems that were contaminated with prohibited substances (e.g., Stop-Leak), or systems where the water supply may have been shut off or otherwise disabled. Central has not had an opportunity to investigate fully a number of locations listed below, and Central also is in the process of investigating other fires where Omegas were or allegedly were involved. To the extent that any responsive information is discovered during such ongoing investigations, Central will provide supplemental information in response to this interrogatory.

A. Jackson Memorial Hospital, Miami, Florida

B. Marriott Hotel, Romulus, Michigan

C. Veterans' Affairs Building, Lake Canandaqua, New York

D. Crossroads, Ft. Wayne, Indiana

E. Mel's Marina, Gulf Breeze, Florida

F. Kent Manor Inn, Annapolis, Maryland

G. Casa Reale Apartments, Los Angeles, California

H. Escondido Gardens, Escondido, California

I. Joshua Tree Apartments, Scottsdale, Arizona

J. Lorene Lodge, Marietta, Georgia

K. Yorba Residence, Riverside, California

L. Days Inn, Horsham, Pennsylvania

M. Monserrat School of Art, Beverly, Massachusetts

N. Boarding House, Milford, Massachusetts

O. Private Residence, Dallas, Texas

P. The Fairway at Piper Glen, Charlotte, North Carolina

Q. Lockemill Plaza, Concord, North Carolina

For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: For information responsive to the remaining questions in this interrogatory, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 35: Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested, did not activate or allegedly did not activate at 7 psig or below when exposed to its activation/triggering temperature? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received such notification;
c) describe and explain the circumstances of the nonactivation at 7 psig, including

i) when and where the testing and nonactivation at or below 7 psig took place;
ii) describe the tests and provide a detailed protocol:
iii) identify the persons and entities involved in setting up and/or conducting the tests;
iv) describe and explain the results of the tests, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test results.

d) indicate at what pressure, if any, the Omega activated (or if it failed to activate together, indicate the highest pressure to which the sprinkler was subjected);

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:
i) identify the sprinkler;
ii) describe the tests and/or examinations
iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing and/or examination, and/or the nonactivation at 7 psig or below, including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:
i) indicate whether swelling and/or adhesion was present;
ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
i) indicate whether "stop leak" or any other such substance was present;
ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:
   i) indicate whether dezincification had occurred;
   ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
   iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate at or below 7 psig.

RESPONSE NO. 35: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 36: Indicate whether you are aware or have ever been notified of an Omega sprinkler that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received such notification;

c) describe and explain the circumstances of the nonactivation, including:
   i) when and where the testing and nonactivation took place;
   ii) describe the tests and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests;
   iv) describe and explain the results of the tests, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test results.

d) indicate what the pressure of the system (in which the Omega was installed) was at the time of the field test;

e) describe and explain your response to the notification;

f) did you or anyone else of whom you are aware examine and/or test the Omega that failed to activate (after it failed to activate), the system in which it was installed, and/or any other sprinkler from the same site? If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing and/or examination, and/or the nonactivation, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

h) indicate whether the Omega was equipped or fitted with a "helper spring;"

i) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:
   i) indicate whether swelling and/or adhesion was present;
   ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;
   iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

j) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
   i) indicate whether "stop leak" or any other such substance was present;
   ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;

iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

k) indicate whether the Omega was examined for dezincification. If so:
   i) indicate whether dezincification had occurred;
   ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
   iii) identify all persons and/or entities involved in determining whether dezincification had occurred;

l) explain why each such Omega did not activate when field tested.

RESPONSE NO. 36: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 37: Do you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation triggering temperature for long enough for its fusible like [sic] to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega)? If so:

a) explain the basis for your contention;
b) describe in detail the method of operation of the "helper spring;"
c) describe in detail the specifications for the "helper spring;"
d) identify the manufacturer of the "helper spring;"

e) identify all persons and/or entities involved in the design and/or development of the "helper spring."

f) describe and any tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part, providing the following information:
   i) describe the tests and provide a detailed protocol;
   ii) identify the persons and entities involved in setting up and/or conducting the tests;
   iii) describe and explain the results of the tests, including all observations and conclusions;
   iv) identify the persons and entities involved in evaluating the test results.

g) indicate whether you have communicated with any persons and/or entities (including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring. If so, provide the following information:
   i) identify all such persons and/or entities;
   ii) state the date of the communication;
   iii) describe the content of the communication;
   iv) identify all persons and/or entities present during the communication;

h) if you allege that an Omega sprinkler fitted with a helper spring will activate at a lower system pressure than an Omega without a helper spring, please indicate:
   i) how much lower the pressure required to activate the helper-spring fitted Omega is than the pressure required to activate an Omega not fitted with the helper spring; and
   ii) explain the basis for your allegation;
   iii) indicate what evidence supports your allegation.

RESPONSE NO. 37: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Omegas fitted with "helper springs" will activate at the appropriate

hydraulically calculated operating pressure specific to the particular installed system in each building. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports, activity reports, purchase orders, engineering reports, listing documents.

INTERROGATORY NO. 38: Have you ever been aware or been notified of an Omega sprinkler or component that has cracked or broken? If so:

a) identify the Omega and, if applicable, its component part;
b) describe the circumstances of the cracking and/or breakage, including the date on which it occurred;
c) identify the person and/or entity (including your employees and/or consultants) who notified you of the cracking and/or breakage;
d) detail when and how you became aware or received notification of the cracking and/or breakage;
e) describe and explain your response to the notification;
f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:
    i) describe all such tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iii) describe and explain the results of each test and/or examination, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test and/or examination results;
g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the cracking and/or breakage, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
h) explain in full detail why the cracking and/or breakage occurred.

RESPONSE NO. 38: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 39: Have you ever been aware or been notified of an Omega sprinkler or any sprinkler component that has exhibited corrosion? If so:

a) identify the Omega and, if applicable, its component part;
b) describe the circumstances of the corrosion, including the date on which it occurred;
c) identify the person and/or entity (including your employees and/or consultants) who notified you of the corrosion;
d) detail when and how you became aware or received notification of the corrosion;
e) describe and explain your response to the notification;
f) indicate whether you or anyone of whom you are aware examined and/or tested the affected sprinkler, its component part (if applicable), and/or other sprinklers from that site. If so:
    i) describe all such tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iii) describe and explain the results of each test and/or examination, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test or examination results;

g) identify and describe all communications regarding or relating in any way to the affected sprinkler, the corrosion, and/or tests and/or examinations relating thereto, indicating:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication;

h) explain in full detail how and why the corrosion occurred.

RESPONSE NO. 39: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 40: Indicate whether you are aware or have ever been notified of an Omega sprinkler that leaked and/or weeped when tested or in a fire? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received notification or became aware of the leakage and/or weeping;
c) describe and explain the circumstances of the leaking and/or weeping, including when and where the leakage and/or weeping took place. If the leakage and/or weeping took place in testing:
   i) describe the tests and provide a detailed protocol;

ii) identify the persons and entities involved in setting up and/or conducting the tests;

iii) describe and explain the results of the tests, including all observations and conclusions (and including at what pressure the sprinkler leaked and/or wept);

iv) identify the persons and entities involved in evaluating the test and/or examination results.

d) indicate whether you or anyone else of whom you are aware tested and/or examined the Omega (after it leaked and/or wept), and/or any other sprinkler from the same site. If so:

i) identify the sprinkler;

ii) describe the tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the leakage and/or weeping, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

g) indicate whether the Omega that leaked or wept was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that leaked or wept was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen and/or adhered;

i) explain why the Omega leaked and/or wept.

RESPONSE NO. 40: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of

admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 41: Indicate whether you are aware or have ever been notified of an Omega sprinkler that activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire? If so:

a) identify the Omega;
b) indicate when, how, and from whom you received notification or became aware of the unnecessary or premature activation;
c) describe and explain the circumstances of the unnecessary and/or premature activation; including when and where the activation took place. If during testing:
    i) describe the tests and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests;
    iii) describe and explain the results of the tests, including all observations and conclusions (and including at what temperature and pressure the sprinkler activated);
    iv) identify the persons and entities involved in evaluating the test results.
d) indicate whether you or anyone else of which you are aware tested and/or examined the Omega (after it activated prematurely and/or unnecessarily), and/or any other sprinkler from the same site. If so:
    i) identify the sprinkler;
    ii) describe the tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results.

e) describe and explain your response to the notification;

f) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, the testing, and/or the premature and/or unnecessary activation, including:

i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;

iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication-

g) indicate whether the Omega that activated prematurely and/or unnecessarily was equipped or fitted with a "helper spring;"

h) indicate whether the "o" ring of the Omega that activated prematurely and/or unnecessarily was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was or was not present;

ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen and/or adhered;

iii) identify all persons and/or entities involved in determining whether the ,lo" ring was swollen and/or adhered;

i) explain why the Omega activated prematurely and/or unnecessarily.

RESPONSE NO. 41: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 42: Do you contend that dezincification may cause an Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which dezincification causes or may cause (a), (b), (c), and/or (d), above;
    iii) identify the systems in which dezincification causes or may cause (a), (b), (c) and/or (d), above;
    iv) describe the circumstances under which dezincification causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 42: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 43: Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of dezincification;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;
f) indicate how and when you were notified of the alleged dezincification;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega, the system in which it was installed and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.
j) With respect to each such Omega, indicate whether you contend that the dezincification caused the Omega to:
    i) leak and/or weep;
    ii) prematurely and/or unnecessarily activate;
    iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
    iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
    v) fail to activate in a fire (when exposed to its activation/triggering temperature).

    If so, explain fully the basis for your contention.

RESPONSE NO. 43: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 44: Have you or anyone of whom you are aware ever determined or alleged that an Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, exhibits dezincification? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of dezincification;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;
f) indicate how and when you were notified of the alleged dezincification;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

j) With respect to each such Omega, indicate whether you or anyone else of whom you are aware contend that the dezincification caused the Omega to:
   i) leak and/or weep;
   ii) prematurely and/or unnecessarily activate;
   iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
   iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
   v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for their contention.

RESPONSE NO. 44: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence ; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 45: Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is neither copper or plastic exhibits dezincification? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of dezincification;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged dezincification;
f) indicate how and when you were notified of the alleged dezincification;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
i) identify and describe all communications regarding or relating in any way to the Omega, the alleged dezincification, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 45: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential

research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 46: Are you aware or have you ever been notified of an Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether dezincification was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

j) explain in full detail why the Omega did not activate.

RESPONSE NO. 46: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 47: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to dezincification? If so:

a) describe the alleged change, and indicate which Omega makes and models were changed;
b) indicate the date on which the change was effected;
c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;

d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits dezincification? If so:
   i) identify the Omega;
   ii) describe all such tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
   iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 47: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: There is no brass material which is totally "unsusceptible to dezincification," as they all contain some percentage of zinc. This is an industry-wide issue. However, changes made to the Omega sprinklers during 1990 make for a more stable and resistive sprinkler when the brass alloy is exposed to conditions which promote dezincification. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents:

engineering change notices, bills of materials, diagnostic reports, return authorizations, project proposals, first article reports, vendor certifications, material review board minutes.

INTERROGATORY NO. 48: Do you contend that the use of stop leak or other sealant, leakage prevention substance or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c), and/or (d), above;
    iii) identify the systems in which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above;
    iv) identify the substances you contend are used;
    v) describe the circumstances under which the use of stop leak or other sealant, leakage prevention substance or pipe cement causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 48: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: the use of "Stop-Leak" or other sealant materials, which are prohibited from use in sprinkler systems, may cause activation problems for Omegas. For the remainder of the information requested by this

interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 49: Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to stop leak or any other sealant, leakage prevention substance or pipe cement? If so:

a) identify the Omega;
b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;
c) identify the person and/or entity that made the determination or allegation;
d) indicate the date on which the determination or allegation was made;
e) describe the methods and criteria used to determine and confirm the existence of the stop leak or the other sealant, leak prevention substance or pipe cement;
f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;
g) indicate how and when you were notified of the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement;
h) detail your response to the notification or awareness;
i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to stop leak or any other sealant, leakage prevention substance or pipe cement, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

k) With respect to each such Omega, indicate whether you contend that the exposure to stop leak or any other sealant, leakage prevention substance or pipe cement caused the Omega to:

i) leak and/or weep;

ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

v) fail to activate in a fire (when exposed to its activation/triggering temperature);

If so, explain fully the basis for your contention.

RESPONSE NO. 49: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Yes. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 50: Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;

b) describe the circumstances under which the Omega did not activate;

c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);

d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether stop leak or any other sealant, leakage prevention substance or pipe cement was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) explain in full detail why the Omega did not activate.

RESPONSE NO. 50: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and

without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 51: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so, for each such substance (stop leak or any other sealant, leakage prevention substance or pipe cement):

a) identify the substance;
b) describe the alleged change, and identify the Omega makes and models to which the change applies;
c) indicate the date on which the change was effected;
d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 48 are caused or may be caused by the use of stop leak or any other sealant, leakage prevention substance or pipe cement? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 51: Central Sprinkler responds as follows: to the best of its knowledge, there are no changes in the manufacturing process that would render Omegas "unsusceptible" to the effects of "Stop-Leak" and similar materials expressly forbidden for use in sprinkler systems.

INTERROGATORY NO. 52: Do you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c), and/or (d), above;
    iii) identify the systems in which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above;
    iv) identify the substances you contend are used;
    v) describe the circumstances under which the use of cutting oils or other substances used to cut pipe causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 52: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the use of cutting oils does not cause any of the stated effects in

currently manufactured Omegas, which use silicone o-rings. Testing of the sprinklers using silicone o-rings is ongoing. Cutting oils used by sprinkler installers may have some effect on activation of Omegas that use EPDM o-rings; any such effect may be ascertained through appropriate testing. For the rest of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 53: Have you or anyone of whom you are aware ever determined or alleged that an Omega sprinkler was exposed to cutting oils or other substances used to cut pipe? If so:

a) identify the Omega;
b) identify the substance to which the Omega was allegedly exposed, including the manufacturer, chemical name, brand name, and chemical composition;
c) identify the person and/or entity that made the determination or allegation;
d) indicate the date on which the determination or allegation was made;
e) describe the methods and criteria used to determine and confirm the existence of the cutting oil or other substance used to cut pipe;
f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged exposure to cutting oil or other substance to cut pipe;
g) indicate how and when you were notified of the alleged exposure to cutting oil or other substance to cut pipe;
h) detail your response to the notification or awareness;
i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same sites If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the Omega, the alleged exposure to cutting oil or other substance to cut pipe, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication;

k) With respect to each such Omega, indicate whether you contend that the exposure to cutting oil or other substance to cut pipe caused the Omega to:
i) leak and/or weep;
ii) prematurely and/or unnecessarily activate;
iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
v) fail to activate in a fire (when exposed to its activation/triggering temperature).
If so, explain fully the basis for your contention.

RESPONSE NO. 53: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Yes. For the remainder of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 54: Are you aware or have you ever been notified of an Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, and that when

exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants)who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether cutting oil or other substance to cut pipe was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) explain in full detail why the Omega did not activate.

RESPONSE NO. 54: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that

constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 55: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so, for each such substance (cutting oil or other substance used to cut pipe):

a) identify the substance;
b) describe the alleged change, and identify the Omega makes and models to which the change applies;
c) indicate the date on which the change was effected;
d) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
e) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits the effects that you allege in your response to Interrogatory No. 52 are caused or may be caused by the use of cutting oil or other substance used to cut pipe? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
f) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 55: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the use of cutting oils does not cause any of the stated effects in currently manufactured Omegas, which use silicone o-rings. Testing of the sprinklers using silicone o-rings is ongoing. For the rest of the information requested by this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 56: Do you contend that swelling of the "o" ring in an Omega sprinkler may cause the Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature), and/or
d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
e) fail to activate in a Fire (when the Omega is exposed to its activation/triggering temperature). If so:
    i) explain the basis for your contention;
    ii) identify the Omegas in which "o" ring swelling causes or may cause (a), (b), (1c), and/or (d), above, indicating what type of "o" ring (EPDM, silicone, or other) is used in that Omega;
    iii) identify the systems in which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above;

iv) describe the circumstances under which "o" ring swelling causes or may cause (a), (b), (c) and/or (d), above.

RESPONSE NO. 56: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 57: Have you or anyone of whom you are aware ever determined or alleged that an Omega containing an EPDM "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;
f) indicate how and when you were notified of the alleged "o" ring swelling;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;

iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination,
iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you contend that the "o" ring swelling caused the Omega to:
i) leak and/or weep;
ii) prematurely and/or unnecessarily activate;
iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
iv) fail to activate in field testing (when exposed to its activation/triggering temperature);
v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention.

RESPONSE NO. 57: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 58: Have you or anyone of whom you are aware ever determined or alleged that an Omega containing a silicone "o" ring, from a steel piping system, exhibits "o" ring swelling? If so:

a) identify the Omega;
b) identify the person and/or entity that made the determination or allegation;
c) indicate the date on which the determination or allegation was made;
d) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;
e) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;
f) indicate how and when you were notified of the alleged "o" ring swelling;
g) detail your response to the notification or awareness;
h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) With respect to each such Omega, indicate whether you or anyone else of whom you are aware contend that the "o" ring swelling caused the Omega to:
    i) leak and/or weep;
    ii) prematurely and/or unnecessarily activate;

iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;
iv) fail to activate in field testing (when exposed to its activation/triggering temperature),
v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain f-ally the basis for your contention or, if not your contention, identify the person and/or entity who so contends, and explain your understanding of their basis for that contention.

RESPONSE NO. 58: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 59: Have you or anyone of whom you are aware ever determined or alleged that an Omega from a piping system that is not steel exhibits "o" ring swelling? If so:

a) identify the Omega;
b) indicate what type of "o" ring the Omega contained (EPDM, silicone, or other type of "o" ring);
c) identify the person and/or entity that made the determination or allegation;

d) indicate the date on which the determination or allegation was made;
e) describe the methods and criteria used to determine and confirm the existence of "o" ring swelling;
f) identify the person and/or entity (including your employees or consultants) who notified you of the alleged "o" ring swelling;
g) indicate how and when you were notified of the alleged "o" ring swelling;
h) detail your response to the notification or awareness;
i) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring swelling, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 59: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. §

1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 60: Are you aware or have you ever been notified of an Omega sprinkler from a steel piping system that did not exhibit "o" ring swelling, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega and indicate what type of "o" ring it contained;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether "o" ring swelling was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication;
j) explain in full detail why the Omega did not activate.

RESPONSE NO. 60: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 61: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring swelling? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;
b) indicate the date on which the change was effected;
c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
d) indicate whether you or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring swelling; If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;

iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results;

e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 61: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the silicone o-rings currently used in Omegas render them "unsusceptible" to o-ring swelling. Testing of sprinklers using the silicone o-rings is ongoing. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: engineering change notices, bills of materials, project proposals, first article reports, vendor certifications, testing documents.

INTERROGATORY NO. 62: Do you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

a) leak and/or weep;
b) activate prematurely and/or unnecessarily;
c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or

d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or

e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature). If so:

i) explain the basis for your contention;

ii) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c), and/or (d), above;

iii) identify the systems in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

iv) identify the Omegas in which "o" ring adhesion causes or may cause (a), (b), (c) and/or (d), above;

v) describe the circumstances under which "o" ring adhesion causes or may cause (a), b), (c) and/or (d), above.

RESPONSE NO. 62: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 63: Have you or anyone of whom you are aware ever determined or alleged that an Omega exhibits "o" ring adhesion? If so:

a) identify the Omega, and indicate what type of "o" ring it contained (EPDM, silicone, or other);

b) identify the person and/or entity that made the determination or allegation;

c) indicate the date on which the determination or allegation was made;

d) describe the methods and criteria used to determine and confirm the existence of "o" ring adhesion;

e) identify the person and/or entity (including your employees or consultants) ,who notified vou of the alleged "o" ring adhesion;

f) indicate how and when you were notified of the alleged "o" ring adhesion;

g) detail your response to the notification or awareness;

h) did you or anyone else of whom you are aware test and/or examine the Omega and/or any other sprinkler from the same site? If so:

  i) identify the Omega;

  ii) describe all such tests and/or examinations, and provide a detailed protocol;

  iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;

  iv) describe and explain the results of each test and/or examination, including all observations and conclusions;

  v) identify the persons and entities involved in evaluating the test and/or examination results;

i) identify and describe all communications regarding or relating in any way to the Omega, the alleged "o" ring adhesion, the examination and/or conclusion, and any tests and/or examinations relating thereto, indicating:

  i) the date on which the communication took place;

  ii) the persons and/or entities to and from whom the communication was directed;

  iii) the nature and content of the communication;

  iv) identify all persons and/or entities present during the communication;

j) With respect to each such Omega, indicate whether you or anyone of whom you are aware contend that the "o" ring adhesion caused the Omega to:

  i) leak and/or weep;

  ii) prematurely and/or unnecessarily activate;

  iii) fail to activate at 7 psig or below in testing (when exposed to its activation/triggering temperature;

  iv) fail to activate in field testing (when exposed to its activation/triggering temperature);

  v) fail to activate in a fire (when exposed to its activation/triggering temperature).

If so, explain fully the basis for your contention or, if not your contention, identify the person and/or entity who so contended, and explain your understanding of the basis for that contention.

RESPONSE NO. 63: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of

admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports.

INTERROGATORY NO. 64: Do you allege that any change in the manufacturing process and/or component parts, including any tools, substances or chemicals used in the manufacturing process, renders the Omegas manufactured after a certain date unsusceptible to "o" ring adhesion? If so:

a) describe the alleged change, and identify the Omega makes and models to which the change applies;
b) indicate the date on which the change was effected;
c) identify all persons and/or entities involved in effecting the change, describing each such person's role in effecting the change;
d) indicate whether vou or anyone else of whom you are aware has tested and/or examined an Omega manufactured after the change to determine whether it exhibits "o" ring adhesion; If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
e) identify and describe all communications regarding or relating in any way to the change and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 64: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: Central contends that the silicone o-rings currently used in the Omegas may render them "unsusceptible" to o-ring adhesion. Testing of sprinklers using the silicone o-rings is ongoing. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: engineering change notices, bills of materials, project proposals, first article reports, vendor certifications, testing documents.

INTERROGATORY NO. 65: Do you contend or are you aware of any fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated? If so:

a) identify each Omega;
b) indicate when, where and how the fire occurred;
c) what was the system pressure was (in psig) at the time of the fire and/or activation;
d) indicate how long after the Omega was first exposed to its activation/triggering temperature it activated;
e) indicate whether anyone sustained or allegedly sustained bodily injury as a result of or in association with the fire (including injuries sustained or allegedly sustained in attempting to escape the fire). If so:
    i) identify the injured person;
    ii) indicate how the injury was or was alleged to have been sustained;

iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or injury; provide details of same;

f) indicate whether anyone died or allegedly died as a result of or in association with the fire (including death incurred or allegedly incurred in attempting to escape the fire). If so:
   i) identify the decedent;
   ii) indicate how and where the death occurred;
   iii) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or death; provide details of same;

g) indicate whether any property was or allegedly was damaged, lost or destroyed as a result of or in association with the fire (including damage sustained or allegedly sustained in attempting to remove the property from the fire, or in attempting to put out the fire). If so:
   i) identify the owner of the property;
   ii) indicate how the property was or allegedly was damaged;
   iii) indicate the value or alleged value of the property;
   iv) indicate whether a suit, claim, or demand was ever made against you or in which you were implicated relating to the incident or damage; provide details of same;

h) indicate whether the Omega was fitted with a "helper spring;"

i) indicate when and how you became aware of the fire and/or the activation, including from whom you received the notification;

j) identify and describe all communications regarding or relating in any way to the fire and/or activation, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication;

k) indicate whether you or anyone else tested and/or examined any Omega that allegedly activated in a fire, or any other sprinkler from the same site? If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol-,
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

l) indicate whether the Omega "o" ring was examined for swelling and/or adhesion. If so:

i) indicate whether swelling and/or adhesion was present;
ii) indicate on what basis and by what criteria it was determined whether the "o" ring was swollen or adhered;
iii) identify all persons and/or entities involved in determining whether the "o" ring was swollen or adhered;

m) indicate whether the Omega and/or the system from which it came was tested and/or examined for "stop leak" or any other leakage prevention substance. If so:
i) indicate whether "stop leak" or any other such substance was present;
ii) indicate on what basis and by what criteria it was determined whether "stop leak" or any other such substance was present;
iii) identify all persons and/or entities involved in determining whether "stop leak" or any other such substance was present;

n) indicate whether the Omega was examined for dezincification. If so:
i) indicate whether dezincification had occurred;
ii) indicate on what basis and by what criteria it was determined whether dezincification had occurred;
iii) identify all persons and/or entities involved in determining whether dezincification had occurred.

RESPONSE NO. 65: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: Over the course of the fifteen-plus years that the Omegas have been used, the Omegas have successfully activated and controlled many fires. Central is not in possession of all of the documentation regarding every fire in which Omegas activated and controlled a fire. For the remainder of the information requested in this interrogatory, pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the

business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 66: Identify and describe all tests and/or examinations conducted by you or anyone on your behalf on Omega sprinklers. For each test:

a) identify the sprinklers tested;
b) describe the tests and provide a detailed protocol and the date on which each test was conducted;
c) identify the persons and entities involved in:
    i) drafting and/or conceiving the protocol;
    ii) setting up and/or conducting the tests;
d) describe and explain the results of the tests, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test results;
f) identify and describe all communications relating in any way to any such tests and/or test results, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 66: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 67: Have-you or anyone of whom you are aware ever performed the "load on heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 67: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 68: Have you or anyone of whom you are aware ever performed the "strength of heat responsive element test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 68: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 69: Have you or anyone of whom you are aware ever performed the "leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 69: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 70: Have you or anyone of whom you are aware ever performed the "hydrostatic strength test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 70: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 71: Have you or anyone of whom you are aware ever performed the "30-day leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 71: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 72: Have you or anyone of whom you are aware ever performed the "water hammer test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 72: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to

and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 73: Have you or anyone of whom you are aware ever performed the "operating temperature (bath) test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 73: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel

is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 74: Have you or anyone of whom you are aware ever performed the "sensitivity tests" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 74: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 75: Have you or anyone of whom you are aware ever performed the "operation - lodgement test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega,
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 75: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 76: Have you or anyone of whom you are aware ever performed the "flow endurance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;

c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 76: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 77: Have you or anyone of whom you are aware ever performed the "operation - cold soldering test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 77: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 78: Have you or anyone of whom you are aware ever performed the "high temperature test for uncoated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega,
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 78: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 79: Have you or anyone of whom you are aware ever performed the "high temperature test for coated sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 79: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 80: Have you or anyone of whom you are aware ever performed the "strength of frame test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested. including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 80: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by

Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 81: Have you or anyone of whom you are aware ever performed the "impact resistance test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 81: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 82: Have you or anyone of whom you are aware ever performed the "rough usage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 82: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 83: Have you or anyone of whom you are aware ever performed the "vibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 83: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 84: Have you or anyone of whom you are aware ever performed the "calibration test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test,
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;

ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 84: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 85: Have you or anyone of whom you are aware ever performed the "10 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 85: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 86: Have you or anyone of whom you are aware ever performed the "16 pan distribution test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place,
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 86: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 87: Have you or anyone of whom you are aware ever performed the "water distribution test - conventional (old style) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 87: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by

Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 88: Have you or anyone of whom you are aware ever performed the "100 pan distribution test - sidewall sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 88: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 89: Have you or anyone of whom you are aware ever performed the "350 pound wood crib fire test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 89: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 90: Have you or anyone of whom you are aware ever performed the "10-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 90: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 91: Have you or anyone of whom you are aware ever performed the "30-day corrosion test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 91: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 92: Have you or anyone of whom you are aware ever performed the "90-day moist air test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 92: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 93: Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of brass sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 93: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client

privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 94: Have you or anyone of whom you are aware ever performed the "stress-corrosion cracking of stainless sprinkler parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place:
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 94: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16

C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 95: Have you or anyone of whom you are aware ever performed the "operational tests on sprinklers incorporating gaskets or "o" ring seals" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 95: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel

is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 96: Have you or anyone of whom you are aware ever performed the "vacuum test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 96: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 97: Have you or anyone of whom you are aware ever performed the "elastomeric parts test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 97: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 98: Have you or anyone of whom you are aware ever performed the "freezing test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;

d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 98: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 99: Have you or anyone of whom you are aware ever performed the "fire test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:
a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:

i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 99: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 100: Have you or anyone of whom you are aware ever performed the "wall wetting test for extended coverage sprinklers intended for light hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinklers If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 100: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 101: Have you or anyone of whom you are aware ever performed the "evaporation test for sprinkler coatings" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 101: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 102: Have you or anyone of whom you are aware ever performed the "cycling tests for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 102: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by

Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 103: Have you or anyone of whom you are aware ever performed the "piled stock fire test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 103: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 104: Have you or anyone of whom you are aware ever performed the "piled stock fire test for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 104: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 105: Have you or anyone of whom you are aware ever performed the "distribution tests for extended coverage sprinklers intended for ordinary hazard occupancies" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;

b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 105: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 106: Have you or anyone of whom you are aware ever performed the "high temperature exposure test for flow control (FC) sprinklers" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega;
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;

f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 106: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 107: Have you or anyone of whom you are aware ever performed the "production leakage test" according to the testing protocol in UL 199 on an Omega sprinkler? If so:

a) identify the Omega,
b) indicate what version (by date) of UL 199 the testing protocol followed, and the date on which each test was performed;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;

iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 107: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: quality control manuals and reports, testing and diagnostic reports, engineering reports.

INTERROGATORY NO. 108: Have you ever tested an Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure? If so:

a) identify the Omega;
b) explain why it failed to activate;
c) identify the persons and entities involved in setting up and/or conducting the test;
d) describe and explain the results of the test, including all observations and conclusions;
e) identify the persons and entities involved in evaluating the test;
f) identify and describe all communications regarding or relating in any way to the testing or the Omega tested, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 108: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents

protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: return authorizations, diagnostic reports, quality control reports.

INTERROGATORY NO. 109: Indicate whether you have attended or been present at any meetings or discussions, or issued or received any communications, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;
b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;
c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;
d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;
e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;
f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;
g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;
h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;
k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;
l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;
m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems. if so, for each such meeting, discussion, and communication, provide:

i) the date on which the meeting, discussion or communication took place;
ii) the persons and/or entities to and from whom the communication was directed or, if a meeting or discussion, identify all persons who were present and/or participated;
iii) the nature and content of the communication;

RESPONSE NO. 109: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

INTERROGATORY NO. 110: Have you ever been notified of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who notified you;
b) indicate how and when you were notified;
c) describe and explain the contents of the notification;
d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern;
e) describe and explain your response to the notification;
f) did you or anyone else of whom you are aware examine and/or test the Omega about which you were notified of any problem, potential problem, complaint or concern, the system in which it was installed, and/or any other sprinkler from the same site? If so:
    i) identify the sprinkler;
    ii) describe the tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;

iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
v) identify the persons and entities involved in evaluating the test and/or examination results,

g) identify and describe all communications regarding or relating in any way to the notification, the sprinkler, and/or any the testing and/or examination in part f), including:
i) the date on which the communication took place;
ii) the persons and/or entities to and from whom the communication was directed;
iii) the nature and content of the communication;
iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 110: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 111: Have you notified any person and/or entity of any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) regarding or in any way relating to an Omega sprinkler? If so:

a) identify who you notified, and all persons and/or entities who received the notification or copies thereof,
b) indicate how and when you notified the persons and/or entities identified in your response to part (a) above;
c) describe and explain the contents of the notification;
d) identify all persons who have knowledge of the notification and/or the problem, potential problem, complaint or concern, including who drafted, reviewed and/or approved the notification;
e) did you receive any response to the notification? If so:
    i) identify the person and/or entity from whom you received a response;
    ii) indicate how and when you received the response;
    iii) describe and explain the contents of the response;
f) identify and describe all communications regarding or relating in any way to the notification and/or response, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 111: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel.

Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 112: Indicate whether you ever requested any information from any sprinkler contractor or sprinkler owner regarding any Omega sprinkler. If so:

a) identify the persons and/or entities from whom you requested information;
b) indicate how and when you requested the information;
c) describe and explain what information you requested-,
d) identify all persons who have knowledge of the request for information, including those who drafted. reviewed and/or approved the request for information;
e) did you receive any response to the request for information? If so:
    i) identify the person and/or entity from whom you received a response;
    ii) indicate how and when you received the response;
    iii) describe and explain the contents of the response;
f) identify and describe all communications regarding or relating in any way to the request for information and/or the response to that request, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 112: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 113: Have you or anyone on your behalf provided (either by sale or without charge) sprinklers to anyone to replace some or all of the Omegas installed in a particular location? If so, indicate the total number of Omegas replaced, and the total value of the replacement (labor plus cost of sprinklers, and any other associated expenses).

RESPONSE NO. 113: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 114: With respect to each location in which you provided (either by sale or without charge) sprinklers to anyone to replace some or all of the Omegas that were installed there:

a) identify the location;
b) indicate what make and/or model Omegas were replaced, and the quantity of each replaced;
c) indicate what make and/or model sprinkler were provided as a replacement, and the quantity of each provided;
d) identify the person and/or entity to whom you provided the replacements;
e) describe and explain the circumstances under which you provided the replacements;
f) identify the person and/or entity who paid the cost of the replacement;
g) indicate the cost of the replacement;
h) describe and explain what the replacement involved;

i) did you or anyone else of whom you are aware examine and/or test the Omega that was replaced, the system in which it was installed, and/or any other sprinkler from the same site? If so:
   i) identify the sprinkler;
   ii) describe the tests and/or examinations, and provide a detailed protocol;
   iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
   iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
   v) identify the persons and entities involved in evaluating the test and/or examination results;

j) identify and describe all communications regarding or relating in any way to the replacement of the sprinklers, the sprinkler that was replaced, the replacement sprinkler, and/or any the testing and/or examination the replaced sprinkler, including:
   i) the date on which the communication took place;
   ii) the persons and/or entities to and from whom the communication was directed;
   iii) the nature and content of the communication;
   iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 114: Central objects to this interrogatory on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 115: Have you ever tested Omega sprinklers from a building or structure and indicated to the building owner/operator or anyone else that all Omegas activated properly? If so:

a) identify each Omega you tested;
b) identify the location in which the Omega had been installed;
c) for each location, indicate how many Omegas were installed there prior to testing, and how many were tested;
d) describe the tests and/or examinations, and provide a detailed protocol;
e) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
f) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
g) identify the persons and entities involved in evaluating the test and/or examination results;
h) did you or anyone else of whom you are aware examine and/or test the system in which it was installed? If so:
    i) describe the tests and/or examinations, and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations,
    iii) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
    iv) identify the persons and entities involved in evaluating the test and/or examination results;
i) did any person or entity other than you examine and/or test sprinklers from the same site? If so:
    i) identify the sprinkler;
    ii) describe the tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting the tests and/or examinations;
    iv) describe and explain the results of the tests and/or examinations, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test and/or examination results;
j) identify and describe all communications regarding or relating in any way to the sprinklers, the testing and/or the results, including:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.

RESPONSE NO. 115: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.32(d), Complaint Counsel is hereby referred to the business records produced by Central, from which such information may be derived by Complaint Counsel. Complaint Counsel is specifically referred to the following categories of documents: customer service department files, return authorizations, diagnostic reports.

INTERROGATORY NO. 116: Identify each person whom you expect to call as an expert witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the expert is expected to testify;
b) the substance of the facts and opinions to which the expert is expected to testify;
c) provide a summary of the grounds for each opinion to which the expert is expected to testify.

RESPONSE NO. 116: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it is premature. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has not yet determined which witnesses it will call at trial. Central will provide supplemental information on a timely basis pursuant to the applicable rules of practice.

INTERROGATORY NO. 117: Identify each person whom you expect to call as a fact witness at trial or hearing in this matter, and provide the following information:

a) the subject matter on which the witness is expected to testify;
b) the substance of the facts to which the witness is expected to testify.

RESPONSE NO. 117: Central objects to this interrogatory on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it is premature. Subject to and without waiver of the foregoing objections, Central responds as follows: Central has not yet determined which witnesses it will call at trial. Central will provide supplemental information on a timely basis pursuant to the applicable rules of practice.

IV. CONCLUSION 37

I. INTRODUCTION

Pursuant to 16 C.F.R. § 1025.36, Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby renew their request that the Presiding Officer compel Complaint Counsel to provide full and complete responses to Central's interrogatories and document requests.

To date, Complaint Counsel has refused to provide discovery that is essential to the preparation of Central's defense in this matter. For instance:

- Complaint Counsel has declined to identify persons with knowledge of relevant information.
- Complaint Counsel has failed to provide complete responses to nearly all of the interrogatories and document requests propounded by Central.
- Complaint Counsel has invalidly asserted that many documents or information in its possession are privileged, even documents created by independent third parties.

These examples represent only a few of the shortcomings evident in Complaint Counsel's discovery responses. Complaint Counsel's numerous "supplemental disclosures" have not cured these errors. Therefore, Central now is forced to ask the Presiding Officer to intervene, and respectfully requests that the Presiding Officer order Complaint Counsel to provide full and complete responses to Central's interrogatories and document requests.

II. PROCEDURAL BACKGROUND

A. The Complaint

Complaint Counsel filed its Complaint in the instant case on March 3, 1998. The Complaint alleges that Central manufactures approximately 20 different models of Omega-brand fire sprinklers. (Compl. ¶ 6). The Complaint asserts that the Omegas "do not and will not function in a significant percentage of instances," and thus create a "substantial risk of injury to the public." (Compl. ¶¶ 10, 15). Based on these allegations, the Complaint requests a total recall of approximately 10 million Omegas allegedly installed over the past 15-plus years. (Compl., Relief Sought, pp. 4-6).

The Complaint, however, provides little further information. It does not state which models of Omegas allegedly are defective. Moreover, although the Complaint alleges that Omegas "fail" or are likely to fail testing, it does not identify what constitutes a "failure," it does not articulate the standard by which Complaint Counsel believes failure is to be measured, and it fails to provide similar basic details. Presumably, the information supporting Complaint Counsel's claims would be provided in discovery.

B. Central's Discovery Requests

On March 26, 1998, Central served: (1) Respondents' First Request for Documents and Things ("Central's Document Requests"), attached hereto as Exhibit "A"; and (2) Respondents' First Set of Interrogatories ("Central's Interrogatories"), attached hereto as Exhibit "B".[1/]

1/ Because of their bulk, the exhibits listed herein are being provided to the Presiding Officer in a separate appendix.

Central's Document Requests and Interrogatories requested extremely basic information from Complaint Counsel. For instance, Central requested specific information regarding the allegations of the Complaint (Interrogatory Nos. 1-99), identification of persons with knowledge of relevant material (Interrogatory Nos. 100-105), information supporting other allegations made by Complaint Counsel regarding the Omegas (Interrogatory Nos. 106-14), information concerning the CPSC's investigation of the Omegas (Interrogatory Nos. 115-23, 130-48), and information relating to any testing and/or design analysis of the Omegas (Interrogatory Nos. 124-129).[2/] Central also requested all of the documents in Complaint Counsel's possession regarding these subjects.

Central's Interrogatories are fundamentally different from Complaint Counsel's Interrogatories. See Respondents' Opposition To Complaint Counsel's Motion To Compel, filed July 1, 1998. As an initial matter, Central's Interrogatories ask generally simple and straightforward questions that are calculated to learn Complaint Counsel's basic contentions in this matter, rather than the incredibly detailed requests for information posed in Complaint Counsel's 1,482 interrogatories. Moreover, the subparts to Central's Interrogatories merely request background information regarding the subject matter of the interrogatory (e.g., persons

---

2/ Most of the bulk of the interrogatories was required because there are 20 different models of Omega sprinklers. Complaint Counsel continuously has lumped together each model without recognizing that the design differs from model to model, the test results differ from model to model, and the jurisdictional inquiry differs from model to model since certain models are installed nearly exclusively in commercial settings. In order to gain an understanding of Complaint Counsel's position, therefore, it was necessary to repeat certain interrogatories for each model. Thus, Interrogatory Nos. 5-24 are the same interrogatories, simply repeated for each Omega model; the same is true for Interrogatory Nos. 53-72.

with knowledge, supporting documents); the subparts to Complaint Counsel's Interrogatories ask entirely separate questions. Finally, Central's Interrogatories are much more limited in duration and scope, as they inquire into only information and documents made available to Complaint Counsel during the course of its investigation, which appears to cover about 18 months and approximately 10,000 documents. Complaint Counsel's Interrogatories seek to require Central to provide information compiled from the entire history of Central as a company and from over 600,000 documents.

C. Complaint Counsel's Discovery Responses

On April 27, 1998, Complaint Counsel served: (1) Complaint Counsel's Responses to Respondents' First Request For Production of Documents and Things ("Complaint Counsel's Document Responses"), attached hereto as Exhibit "C"; and (2) Complaint Counsel's Responses to Respondents' First Set of Interrogatories ("Complaint Counsel's Interrogatory Responses"), attached hereto as Exhibit "D". Pursuant to the instructions included in Central's discovery requests, Complaint Counsel also produced Complaint Counsel's Index of Responsive Documents, attached hereto as Exhibit "E". On June 1, 1998, after repeated requests from Central, Complaint Counsel produced a privilege log ("Complaint Counsel's Privilege Log"), attached hereto as Exhibit "F".

However, Complaint Counsel's discovery responses provided little information to Central. According to Complaint Counsel's Index of Responsive Documents, Complaint Moreover, Counsel only provided responses to 12 out Central's 71 document requests. See Exhibit "E". Moreover, regarding virtually every document request, Complaint Counsel claimed that the responsive documents were "protected from discovery by the work product

privilege." See, e.g., Complaint Counsel's Document Responses, Nos. 1, 3, 4, 5, 7, 8, 10, 11, 12, 13, 15, 16, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 56, 57, 58, 59, 61, 62, 63, 68, 69, 70, 71.

Complaint Counsel's Interrogatory Responses did not provide any further information. Complaint Counsel either refused to answer or answered incompletely regarding the majority of the interrogatories. In its responses, Complaint Counsel generally raised a multitude of objections (e.g., relevance, vagueness, privilege), then provided virtually no substantive information.

Complaint Counsel has repeatedly been forced to supplement its discovery responses. To date, Complaint Counsel has served multiple sets of supplemental document productions, either by order of the Presiding Officer or addressing omissions pointed out by Respondents. Complaint Counsel also has submitted several supplemental interrogatory responses. However, none of these supplemental responses cures the deficiencies with Complaint Counsel's discovery responses, which remain substantially incomplete.

Indeed, Complaint Counsel's discovery responses, which were due three weeks before Respondents' discovery responses, set the tenor for discovery in this litigation. Complaint Counsel has been investigating issues related to the Omega sprinkler for over a year, has had the full use of subpoena power during that time, and believed it had sufficient evidence to warrant commencement of this administrative proceeding. Nevertheless, Complaint Counsel's discovery responses -- including its repeated objections and apparent claims that the fruits of its administrative investigation are privileged -- made clear that Complaint Counsel has no intention

of providing to Respondents full and fair discovery responses in this matter, without which Respondents will not be able to defend themselves at trial.

D. Central's Attempts To Resolve This Discovery Dispute

Rather than immediately force the Presiding Officer to rule on the deficiencies with Complaint Counsel's discovery responses, Central attempted to resolve this discovery dispute amicably. Central sent letters to Complaint Counsel on May 1, 4, 7, and 13, 1998. These letters addressed the deficiencies in Complaint Counsel's responses, and requested full and complete supplemental discovery responses. Complaint Counsel responded in letters of May 6, 8, and 20, 1998. In these letters, Complaint Counsel refused to provide certain substantive supplemental discovery responses. See Correspondence Between Complaint Counsel and Respondent's Counsel, attached hereto as Exhibit "G".

On May 20, Respondents filed Respondents' Motion to Compel Full and Complete Responses To Interrogatories And Document Requests. Complaint Counsel then attempted to supplement their discovery responses. The Presiding Officer requested that Respondents take into consideration these supplemental disclosures, and, if necessary, re-file the motion to compel.

Because Complaint Counsel's supplemental responses have not cured many of the multiple deficiencies with Complaint Counsel's original discovery responses, pursuant to 16 C.F.R. § 1025.36, Central now is forced to renew its motion to compel. Central respectfully requests that the Presiding Officer compel Complaint Counsel to provide full and complete responses to Central's Interrogatories and Document Requests. The deficiencies with Complaint Counsel's responses are described in greater length below.

III. ARGUMENT

According to the CPSC rules of practice:

> Parties may obtain discovery regarding any matter, not privileged, which is within the Commission's statutory authority and is relevant to the subject matter involved in the proceedings, whether it relates to the claim or defense of the party seeking discovery or to the claim or defense of any other party, including the existence, description, nature, custody, condition and location of any books, documents, or other tangible things and the identity and location of persons having knowledge of any discoverable matter. It is not ground for objection that the information sought will be inadmissible at the hearing if the information sought appears reasonably calculated to lead to the discovery of admissible evidence.

16 C.F.R. § 1025.31(c)(1). Discovery responses must be "responsive, unevasive and complete." Cornaglia v. Ricciardi, 63 F.R.D. 416, 149 (E.D. Pa. 1974).

It is "beyond question" that a defendant or respondent is entitled to discover the factual basis of claims asserted in a complaint. Cornaglia, 63 F.R.D. at 419; see also Scovill Manuf. Co. v. Sunbeam Corp., 61 F.R.D. 598, 601 (D. Del. 1973); Dubois Brewing Co. v. United States, 34 F.R.D. 126, 127 (W.D. Pa. 1963) (because plaintiffs brought the claim, presumably they know the factual basis for it). Moreover, a defendant or respondent is entitled to know the factual content of claim "with a reasonable degree of specificity." Martin v. Easton Publishing Co., 85 F.R.D. 312, 315 (E.D. Pa. 1980).

Complaint Counsel's Interrogatory Responses and Document Responses, however, fail to meet these fundamental rules of discovery. The specific deficiencies of Complaint Counsel's discovery responses and the individual responses where those deficiencies occur are described below. Because of the pervasiveness of such deficiencies, Central will not attempt to discuss each response separately. Instead, Central will describe the specific problem, provide several

representative examples from Complaint Counsel's responses, then list all of the responses where the problem occurs.

A. Complaint Counsel Has Refused To Identify Persons Having Knowledge Of Discoverable Material.

In Central's Interrogatories, Central requests that Complaint Counsel identify persons having knowledge relevant to the Complaint or other discoverable information. Central poses this request both in one general request, see Interrogatory No. 102, and regarding certain specific issues in more precise requests, see, e.g., Interrogatory Nos. 83 and 87.

The CPSC rules of practice explicitly permit such requests. Section 1025.31 states that "Parties may obtain discovery regarding any matter involved in the proceedings . . . including . . . the identity and location of persons having knowledge of any discoverable matter." 16 C.F.R. § 1025.31(c)(1) (emphasis added). In fact, under the Federal Rules of Civil Procedure, the identity of persons likely to have knowledge of discoverable material is considered so fundamental a part of discovery that it is a required disclosure for all parties, without any discovery request being served. See Fed. R. Civ. P. 26(a)(1)(A); cf. Interrogatory No. 102.

Despite the fact that discovery of such "persons having knowledge" is plainly permitted, Complaint Counsel has refused to identify such persons in response to Central's Interrogatories. Complaint Counsel's failure to identify "persons having knowledge" falls into three categories: (1) Complaint Counsel refuses to identify any persons having knowledge; (2) Complaint Counsel only identifies broad groups of people rather than individual persons; and (3) Complaint Counsel identifies only Central personnel as having knowledge, despite the fact that it is self-evident that

other persons having knowledge are known to Complaint Counsel. Each one of these categories is described below.

In most instances, however, Complaint Counsel completely ignores the request to identify persons having knowledge:

> **Interrogatory No. 83. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.**
> **If so:**
>
> **(b) identify and describe any such testing;**
> **(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**
> **(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**
> **(e) describe in detail the substance of each such person's knowledge and/or information.**
>
> **Response:** Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections. Complaint Counsel will provide all non-privileged and non-confidential information it has with respect to testing of Omega sprinklers. Complaint Counsel adds that one of the three Omega sprinklers it received from Respondents in February, 1998, which had just been manufactured a few weeks earlier and had never yet been installed in a sprinkler system, did not activate (as that term is defined in Complaint Counsel's discovery requests to Respondents) when exposed to its activation/triggering temperature. The sprinkler partially deployed, releasing drips of water only, and then the fusible link cold soldered, preventing activation. Complaint Counsel has shared this knowledge with respondents, and asked for an explanation of what, why and how this occurred.

> **Interrogatory No. 87. (a) State whether the Complainant contends that the performance of Omegas declines or deteriorates over time.**
> **If so:**
>
> **(b) identify and describe any such performance decline or deterioration;**
> **(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the phrase "performance of Omegas declines or deteriorates over time" is undefined, unclear, vague and ambiguous and, without clarification of same, it is impossible to formulate a response to this Interrogatory. However, deterioration of o-ring material and corrosion, which available evidence suggest may contribute failure of Omega sprinklers, may be progressive events.

See Complaint Counsel's Interrogatory Responses, Nos. 83 and 87 (emphasis added).

For other responses, Complaint Counsel provides an inadequate identification of "persons having knowledge." Such a deficiency is exemplified where Complaint Counsel refuses to identify individual people, instead identifying vague groups of people:

Interrogatory No. 51. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":**

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: [(a) and (b) omitted]

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatories.

See Complaint Counsel's Interrogatory Responses, No. 51 (emphasis added; sub-parts (a) and (b) omitted).

Finally, in some instances, Complaint Counsel fails to identify sufficiently "persons having knowledge" by only listing Central personnel as having any knowledge of a particular subject matter, despite the fact that Complaint Counsel clearly knows of other persons:

> **Interrogatory No. 102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:**
>
> **(a) the person's name;**
> **(b) the person's last known home and business address;**
> **(c) the person's last known telephone number;**
> **(d) the corporate or government affiliation of the person;**
> **(e) whether the Complainant has contacted such person; and**
> **(f) the specific subject matter of the person's knowledge.**
>
> **Response:** Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome -- there are thousands of people and entities who have information concerning or related to Omega sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it believes that Respondents and their current and former employees have such knowledge and information.

See Complaint Counsel's Interrogatory Responses, No. 102 (emphasis added).

Thus, Complaint Counsel has effectively refused to identify "persons having knowledge" of discoverable material.[3/] Without a precise identification of particular individuals with specific

---

3/ Moreover, Complaint Counsel has failed to provide Central with documents from which such information could be ascertained.

knowledge of relevant issues, Central will not be able to pursue discovery via depositions. Such a failure to identify persons having knowledge is not permitted under 16 C.F.R. § 1025.31(c)(1), which expressly permits such discovery.

In the Pre-hearing Conference in this matter conducted on June 16, 1998, the Presiding Officer addressed the issue of identifying persons having knowledge. The Presiding Officer clearly stated that the parties have a duty to provide an identification of specific "persons having knowledge." Central now simply seeks enforcement of that ruling.

Other than interrogatories identifying CPSC staff personnel, the only areas where Complaint Counsel has specified any names of persons having knowledge is in response to interrogatories regarding the labor costs of installing sprinklers and the overall historical effectiveness of sprinklers. See Complaint Counsel's Interrogatory Responses, Nos. 106 and 113. If Complaint Counsel is able to provide specific names regarding these areas, then Complaint Counsel surely must be able to provide the names of persons having knowledge regarding the central areas of dispute in this case. However, Complaint Counsel has refused to provide such information.[4/]

Central respectfully requests that the Presiding Officer compel Complaint Counsel to identify persons having knowledge of discoverable information pursuant to Interrogatory Nos. 5-25, 40-42, 51-73, 76-77, 81-88, 102.

4/ The only other area where Complaint Counsel has provided specific names is in identifying the names of the lawyers and Complaint Counsel's staff members involved in their investigation. See Complaint Counsel Interrogatory Responses, Nos. 115, 132, and 145.

B. **Complaint Counsel Has Provided Substantially Incomplete Responses.**

The CPSC rules of practice provide for a broad scope of permissible discovery. See 16 C.F.R. § 1025.31(c)(1). Despite these provisions, Complaint Counsel has refused to respond to many of Central's Document Requests and Interrogatories, or has provided materially incomplete answers.

For instance, Complaint Counsel's Index of Responsive Documents indicates that Complaint Counsel has provided responsive documents only to Document Request Nos. 1, 4, 9, 15-17, 22, 30, 38, 40, 42, and 43. See Exhibit "E". Thus, Complaint Counsel has actually responded to only of 12 out of Central's 71 document requests. Id.

Complaint Counsel also has refused to respond to many of Central's Interrogatories, even those posing extremely straightforward and fundamental questions. For instance, a plainly critical issue in the instant case concerns what constitutes a "failure" in Complaint Counsel's view. Thus, Respondents served interrogatories concerning the water pressure and temperature at which Complaint Counsel asserts Omegas should activate when tested, and the percentage of heads that should activate when tested, to be considered acceptable. However, Complaint Counsel has avoided responding to discovery requests about these subjects:

> **Interrogatory No. 42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;**
> **If so:**
> **(b) identify and describe any such standard;**
> **(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;**
> **(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and**

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

Interrogatory No. 43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to previous Interrogatory. According to Respondents, Omega sprinklers are designed to activate at particularly defined activation/triggering temperatures, based on the temperature at which the fusible link in their heat collector is intended to convert from solid to liquid form.

Interrogatory No. 44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory Nos. 42 and 43.

See Complaint Counsel's Interrogatory Responses, Nos. 42-44.

In the foregoing responses, Complaint Counsel completely avoids providing any responsive information. Because Complaint Counsel's action is grounded largely on alleged "failures" of laboratory tests, Central absolutely is entitled to know the specific benchmark that Complaint Counsel has used and will use at trial to establish a failure. This information is plainly relevant and discoverable under 16 C.F.R. § 1025.31(c)(1). Therefore, Complaint Counsel should be required to provide such basic information.

Central also has requested that Complaint Counsel articulate the contentions that they intend to attempt to prove at trial. For instance, Central has requested that Complaint Counsel disclose: (1) whether they contend that there are specific cause or causes responsible for the alleged defect in the Omega sprinklers (Interrogatory Nos. 53-73); (2) whether they contend that Omegas fail at a rate greater than comparable sprinklers (Interrogatory No. 113); (3) whether they contend that any alleged Omega non-activations in a fire was the result of any specific product defect (Interrogatory Nos. 78, 80, 82, 84-86); (4) whether they contend that any personal injuries resulted from any alleged Omega non-activation (Interrogatory Nos. 74-77); (5) whether they contend that the remediation program established by Central is inadequate in any way (Interrogatory Nos.110, 114, 136-43); and (6) whether they contend that Omegas using silicone o-rings are defective (Interrogatory Nos. 82-83, 86, 111).

Complaint Counsel has refused to commit themselves regarding these issues. The Complaint merely alleges, without elaboration, that "Omegas do not and will not function in a significant percentage of instances." (Compl. ¶ 10). In response to multiple interrogatories asking for further details regarding the nature of Complaint Counsel's contentions in this case,

the entire substance of Complaint Counsel's responses is summarized by one conclusory and ambiguous paragraph, repeated over and over again:

> Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

See Interrogatory Response Nos. 53(b) - 73(b).

Central clearly is entitled to request that Complaint Counsel identify their contentions. See 16 C.F.R. § 1025.33(c) (interrogatory not objectionable "merely because an answer . . . would involve an opinion or contention"). It is "beyond question" that a defendant or respondent is entitled to discover the factual basis of claims asserted in a complaint. Cornaglia, 63 F.R.D. at 419; see also Scovill 61 F.R.D. at 601; Dubois Brewing, 34 F.R.D. at 127 (because plaintiffs brought the claim, presumably they know the factual basis for it). Moreover, a defendant or respondent is entitled to know the factual content of claim "with a reasonable degree of specificity." Martin, 85 F.R.D. at 315. Identification of such contentions is crucial to allow Central to engage in discovery and prepare for trial of this matter. See Local 194 v. Standard

Brands, Inc., 27 Fed. R. Serv. 2d 588, 589 (N.D. Ill. 1979) (government must disclose in discovery contentions that it intends to prove at trial).

Moreover, the Presiding Officer already has addressed this issue. At the June 16 Pre-hearing Conference, the Presiding Officer stated that Central was entitled to have Complaint Counsel clearly identify the contentions they intended to place into issue at the trial of this matter. As with the identification of "persons having knowledge," Central now is merely seeking enforcement of that ruling.

Central has been pressing Complaint Counsel to clarify the issues in dispute in this case from the outset, both through formal discovery and informal requests. However, to date, Complaint Counsel's allegations and discovery responses have focused on one narrow issue -- whether laboratory tests allegedly demonstrate that Omegas do not activate at certain minimal amounts of water pressure. If Complaint Counsel intends to interject other contentions at trial, Complaint Counsel must identify those contentions during discovery in order to permit Central to plan its own discovery and prepare for trial; if Complaint Counsel will not reveal such contentions during discovery, then Complaint Counsel should be limited at trial to the single contention it has made to date.

The CPSC rules of practice permit Central to discover the scope of Complaint Counsel's contentions, and such discovery is necessary for Central to plan its discovery and prepare for trial in this matter. Thus, Complaint Counsel should be compelled to provide such fundamental information. Complaint Counsel should not be permitted to refuse to provide discovery responses. Where simple questions are asked, Complaint Counsel should provide simple, responsive, unevasive responses. Respondents have a right to discover the information defined

as relevant in 16 C.F.R. § 1025.31(c)(1); to date, Complaint Counsel has refused to provide such information. Therefore, Central respectfully requests that the Presiding Officer compel Complaint Counsel to provide full and complete responses to Central's discovery requests.

The following responses from Complaint Counsel are materially incomplete: Interrogatory Response Nos. 42-46, 53-76, 78, 80, 82-87, 93-99, 106-14, 119, 129, 136-43; and Document Response Nos. 1-3, 5-8, 10-14, 18-21, 23-29, 31-37, 39, 41, 44-71.

C. Complaint Counsel Has Refused To Produce Documents Based On Invalid Claims To A "Work Product Privilege."

Complaint Counsel has objected to virtually all of Central's Document Requests and many of Central's Interrogatories on the ground that such discovery "seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore [is] protected from discovery by the work product privilege." See, e.g., Complaint Counsel's Document Responses, Nos. 5, 7, 8, 19-29, 34-43; Complaint Counsel's Interrogatory Responses, Nos. 120-23. Complaint Counsel essentially claims that all documents and information that have been reviewed by Complaint Counsel are subject to a claim of "work product privilege." The only documents not covered by this "privilege," according to Complaint Counsel, are publicly available documents or documents originally produced to Complaint Counsel by Central. See, e.g., Complaint Counsel's Interrogatory Responses, Nos. 120-23 (stating that Complaint Counsel will only provide documents "that are in the public domain"). It is thus apparent that Complaint Counsel has attempted to hide much of its case behind a legally flawed invocation of privilege.

The work product doctrine was established in Hickman v. Taylor, 329 U.S. 495 (1947). This doctrine is codified in the CPSC rules of practice at 16 C.F.R. § 1025.31(c)(3). Section 1025.31(c)(3) provides that to the extent "documents and tangible things [were] . . . prepared in anticipation of litigation," such documents and tangible things are subject to discovery "only upon a showing that the party seeking discovery has substantial need of the materials in the preparation of his case and that he is unable without unique hardship to obtain the substantial equivalent of the material by other means." 16 C.F.R. § 1025.31(c)(3).

In the instant case, Complaint Counsel has invoked the work product doctrine to claim that virtually all material in its possession is protected from discovery. Such privilege claims are specious and should be ruled invalid for several reasons. First, for many of the documents listed in Complaint Counsel's Privilege Log, such documents do not meet the substantive requirements of the work product doctrine or attorney-client privilege. Second, to the extent any documents could be considered work product material, the facts contained in such documents are not protected from discovery, and must be provided in response to Central's Interrogatories. Third, the documents and information that constitute the underlying methodologies and rationale behind Complaint Counsel's testing of Omegas is information required by Respondents to evaluate Complaint Counsel's claims, and Complaint Counsel would be required to present such evidence at trial to prove its claims; therefore, the need for such information and documents overcomes any work product protection.

Central respectfully requests that the Presiding Officer compel Complaint Counsel to respond to the discovery requests where Complaint Counsel has objected invalidly based on a claim to work product protection and/or attorney-client privilege.

1. Complaint Counsel Has Not Demonstrated That Documents Withheld Meet The Basic Requirements For Invoking Any Privilege.

Complaint Counsel has withheld certain documents from discovery, listing the documents on Complaint Counsel's Privilege Log and asserting that the attorney-client privilege and/or the work product doctrine protect the documents from discovery. Because Complaint Counsel has not carried its burden of establishing that certain documents on the privilege log are entitled to any protection from discovery, the documents must be produced to Central.

a. Documents And Information Provided to Complaint Counsel By Independent Third Parties Are Not Protected By The Work Product Doctrine.

Several of Central's Document Requests seek information provided to Complaint Counsel by independent third parties:

> **Request No. 7.: All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.**
> **Response:** Complaint Counsel objects to this Request on the grounds that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel would be pleased to produce specific documents, or specific categories of documents, that Respondents seek to discover, upon rephrasal of this Request.

See Complaint Counsel's Document Responses, No. 7 (emphasis added).

Central sought similar information in Central's Interrogatories:

> **Interrogatory No. 120.: Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:**
> **(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;**

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus [sic] protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

Interrogatory No. 121.: Describe in detail and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus [sic] protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

See Complaint Counsel's Interrogatory Responses, Nos. 120-21(emphasis added).

These discovery requests from Central seek information created by independent third parties, then supplied to Complaint Counsel. It is self-evident that such information and

documents are not protected by the work product doctrine. The CPSC's regulations provide that the work product doctrine protects against "disclosure of the mental impressions, conclusions, opinions, or legal theories of an attorney or other representative of a party." See 16 C.F.R. § 1025.31(c)(3) (emphasis added). If a document is prepared for or by a non-party to the litigation, the work product protection does not apply. 6 Moore's Fed. Practice, § 26.70[4] (Matthew Bender 3d ed.)

Further, a party cannot shield information from discovery by hiring as a "litigation consultant" a person who might otherwise be a fact witness in the case. Id.; see also State of New York v. Solvent Chem. Co., Inc., 166 F.R.D. 284, 286, 289 (W.D.N.Y. 1996) (conduct of party in retaining former employee, an important fact witness, as a litigation consultant, threatened to undermine integrity of adversary process). Moreover, the mere fact that Complaint Counsel has received and reviewed such documents does not convert these documents into work product material. Therefore, the Presiding Officer should compel Complaint Counsel to provide to Central all documents and information in Complaint Counsel's possession that were created or provided by independent third parties.

For example, Complaint Counsel has asserted the work product protection regarding notes made by Frank Teevan, concerning a November 5, 1996 meeting between Teevan and Central. See Complaint Counsel's Privilege Log, Document No. 116. Mr. Teevan, however, is an assistant fire marshall in Virginia. It is difficult to conceive how documents created by such a third party, years prior to the filing of the instant Complaint, about a meeting between Central and the third party, qualify for any work product protection. Such documents must be produced.

Similarly, Complaint Counsel has claimed work product protection regarding communications (letters, audiotapes, e-mails) from former employees of Central. See Complaint Counsel's Privilege Log, Document Nos. 57, 60, 63, 64, 73, 81, 85, 86, 88, 93-97, 103, 104, 106, 111, and 112. Because these communications originate from independent third parties (who cannot be classified as informants, consultants, or agents of the CPSC), rather than from "an attorney or other representative of a party" under 16 C.F.R. § 1025.31(c)(3), such communications are not protected by the work product doctrine. The Presiding Officer already has addressed this issue, and held that such communications are not protected from discovery. See Order Regarding Complaint Counsel's Second Motion for Protective Order and In Camera Submission, filed June 19, 1998. Accordingly, such communications must be produced to Central.

b. Documents And Information Provided Or Prepared For Independent Third Parties Are Not Protected By The Work Product Doctrine.

Documents addressed to or received by third party entities that are neither Complaint Counsel, the CPSC, nor their representatives are not protected by the work product doctrine because the doctrine does not protect documents prepared for a non-party. See 6 Moore's Fed. Practice, § 26.70[4] (Matthew Bender 3d ed.). For example, Document Nos. 65 and 70 were addressed to "State Attorney General." See Complaint Counsel's Privilege Log. Because the State Attorneys General are not parties to this administrative action between the CPSC and Central, documents prepared for them are not protected by the work product doctrine and are discoverable by Central. Similarly, Document Nos. 13, 63, 64, 73, 76, 84, 88, 90, 93, 94, 97, 103, 104, 106, 111, and 112 are discoverable as documents prepared for non-parties and must be

produced. Further, if any of the individuals listed as "Addressees" or "Recipients" in Complaint Counsel's Privilege Log are not attorneys or other representatives of the CPSC, the documents addressed to or received by them must also be produced forthwith.

Because Complaint Counsel has not carried its burden of establishing that certain documents on its Privilege Log are entitled to the protection of the work product doctrine, the documents identified therein are discoverable and must be produced to Central.

c. Complaint Counsel Has Not Established That The Claimed Attorney-Client Privilege Is Applicable To The Documents It Seeks To Withhold.

In order for the attorney-client privilege to apply to a communication, several criteria must be satisfied. See Montgomery v. Leftwich, Moore & Douglas, 161 F.R.D. 224, 225-26 (D.D.C. 1995). Among them, the communication must be made by a client to an attorney or the attorney's subordinate, and the communication must be made outside the presence of strangers. Id. at 225. Further, communications made by the attorney to the client are shielded only if such communications rest on confidential information obtained from the client. Id. at 226. Based on these principles, many of the documents claimed as privileged by Complaint Counsel must be produced to Central.

There is no indication from Complaint Counsel's privilege log that many of the individuals named in the log are either CPSC employees and thus "clients" of Complaint Counsel, or, conversely, are Complaint Counsel or their subordinates receiving communications from a client. For example, although attorneys Eric Stone, Eric Singer, Alan Schoem, Deborah Orlove, and Howard Tarnoff have been representing the CPSC in this matter, there is no indication that other named individuals (except Jeffrey Bromme and Stephen Lemberg) are also

attorneys representing the CPSC. Nor is there any suggestion that many of the named individuals in the Privilege Log are CPSC employees who could be considered as the clients of Complaint Counsel. Thus, Complaint Counsel must identify with precision the status of the individuals listed in their Privilege Log, or the privilege cannot be maintained. See Montgomery, 161 F.R.D. at 225 (party asserting the privilege has burden of establishing its applicability).

In summary, many of the documents for which Complaint Counsel has invoked the attorney-client privilege do not appear to represent communications between an attorney and a client. Therefore, at the most basic level, such documents are not protected by the attorney-client privilege.

2. The Work Product Doctrine Only Protects Documents, Not Facts.

Even in areas where Complaint Counsel might be in possession of some documents constituting work product material, Complaint Counsel still must produce the facts and data underlying such documents. The work product doctrine by its very terms only protects "documents and tangible things" from discovery. See 16 C.F.R. § 1025.31(c)(3). The underlying facts contained in such documents are not protected from discovery. See Wright, Miller & Marcus, Federal Practice and Procedure: Civil 2d § 2024; Resolution Trust Corp. v. Dabney, 73 F.3d 262, 266 (10th Cir. 1995).

Thus, even where Complaint Counsel objects to producing actual documents based on the work product doctrine, Complaint Counsel still must provide the information and facts contained in those documents in response to Central's Interrogatories. For instance, Complaint Counsel has raised a work product objection to Central's Document Request No. 8:

Request No. 8.: All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.
Response: Complaint Counsel objects to this Request on the grounds that it seeks documents prepared by or for Complaint Counsel in anticipation of litigation, and therefore [sic] protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it will share with Respondents the results of any testing it intends to introduce into evidence at the hearing in this matter, once those determinations have been made.

See Complaint Counsel's Document Responses, No. 8.

However, even if Complaint Counsel could avoid producing responsive documents to Request No. 8 based on a claim of work product protection, Complaint Counsel must supply the underlying facts and data contained in such documents in response to an interrogatory which requests such information. Central's Interrogatory No. 124 requests such information, but Complaint Counsel has refused to provide a full and complete response:

Interrogatory No. 124.: Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the Omegas;

(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;

(c) a description of the methodology employed during each and every test of the Omegas;

(d) the date of each and every test of the Omegas;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus [sic] protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

See Complaint Counsel's Interrogatory Responses, No. 124.

Thus, Complaint Counsel may not totally block discovery by asserting the "work product privilege." If Complaint Counsel does not provide documents based on a claim to work product protection, it still must provide responsive information to Central in response to Central's Interrogatories. Because Complaint Counsel has refused to provide such information to date, either in the form of documents or interrogatory responses, Central respectfully requests that the Presiding Officer compel Complaint Counsel to produce responsive information.

3. The Data And Methodology Underlying Complaint Counsel's Test Results Regarding The Omegas Must Be Produced Despite A Work Product Objection.

Complaint Counsel has produced a data compilation of their test results for the Omegas. See Complaint Counsel's Data Compilation, attached hereto as Exhibit "H". However, these documents only show the sample size and the purported number and percentage of alleged failures. Id. Complaint Counsel's Data Compilation does not reveal such basic information as what is considered a "failure" (in terms of water pressure and activating temperature), the location of the building, the testing methodology, and other basic underlying data. Complaint Counsel has refused to produce such information on the ground that it is protected by the work product doctrine. See Complaint Counsel's Interrogatory Responses, Nos. 124-27; Complaint Counsel's Document Responses, Nos. 8-9.

However, the work product doctrine is not an absolute privilege. Documents that constitute work product material are discoverable where a party can demonstrate a "substantial need" for the materials, and that such documents cannot otherwise be obtained without "unique hardship." 16 C.F.R. § 1025.31(c)(3).

In the instant case, to the extent the work product doctrine applies to any documents regarding the underlying data and methodology for Complaint Counsel's Data Compilation, such documents are still discoverable based on Central's "substantial need" and "unique hardship." It is well established that, once data compilations of test results have been produced, a party seeking discovery is entitled to the underlying rationale and methodology supporting the data compilations despite a work product objection. See, e.g., Wheeling-Pittsburgh Steel Corp. v. Underwriters Laboratories, Inc., 18 F.R.D. 8, 12 (N.D. Ill. 1978) (ordering production of underlying data); Handgards, Inc. v. Johnson & Johnson, 413 F. Supp. 926, 931 (N.D. Cal. 1976) (same); see also United States v. Nobles, 422 U.S. 225, 240-41 (1975) (party must either produce underlying data or all related testimony is excluded); In Re Sealed Case, 676 F.2d 793, 824 (D.C. Cir. 1982) (documents underlying investigative report ordered produced.)

There are two rationales for this exception to the work product doctrine, both applicable in the instant case. First, without the supporting documents and information, a compilation of test results "cannot properly be analyzed" and "would prove meaningless." Wheeling-Pittsburgh, 81 F.R.D. at 12; Handgards, 413 F. Supp. at 931. In the instant case, unless Complaint Counsel supplies the methodology and support for the Data Compilation, Central will not be able to ascertain or challenge the validity of the results, which consist of naked conclusions.

The second rationale for this exception to the work product doctrine is that because the supporting data must be introduced at trial in order to prove the statistical conclusions, the opposing party is entitled to examine such information in discovery. Wheeling-Pittsburgh, 81 F.R.D. at 12. This reasoning also applies in the instant case. To delay allowing Central the

opportunity to examine the methodology and data underlying Complaint Counsel's Data Compilation until trial would be highly prejudicial to Central.[5/]

Thus, even to the extent that certain documents fall within the work product doctrine, such work product protection is overcome in the instant case. Moreover, to the extent that Complaint Counsel refuses to produce the underlying information regarding its Data Compilation, the Presiding Officer should exclude from evidence the results set forth in the Data Compilation. See Nobles, 422 U.S. at 240-41. Thus, Complaint Counsel has a clear choice: produce the documents and information, or assert the work product doctrine and be barred from producing evidence regarding that subject at trial.

* * * * *

Complaint Counsel has repeatedly asserted an unfounded claim to a "work product privilege." Complaint Counsel's objections are invalid because: (1) as revealed by Complaint Counsel's Privilege Log, many purportedly protected documents withheld from discovery by Complaint Counsel do not meet the basic requirements of any privilege; (2) facts, as opposed to documents, are not protected by the work product doctrine; and (3) the methodology and rationale underlying Complaint Counsel's Data Compilation are discoverable because any work product protection regarding such documents is overcome under the circumstances of the instant

---

5/ This rationale, however, does not mean that Complaint Counsel can selectively produce only the underlying information that is favorable to Complaint Counsel. Complaint Counsel must produce full and complete.responses, including all of the required background information, good or bad. Permitting Complaint Counsel to produce only the information it plans to introduce at trial would violate the broad scope of permissible discovery provided for under 16 C.F.R. § 1025.31, and would render the adversary process meaningless.

case. Therefore, where Complaint Counsel previously asserted a specious claim to work product protection or attorney-client privilege, the Presiding Officer should compel Complaint Counsel to produce full and complete responses to the discovery requests. Those responses are as follows: Interrogatory Response Nos. 78-85, 100-02, 106-13, 117, 119-24, 126-27, 147; and Document Response Nos. 4-5, 7-8, 10-13, 15-16, 19-29, 34-53, 56-59, 61-63, 68-71.

D. Complaint Counsel Has Delayed Producing Information And Documents For No Apparent Reason.

In Complaint Counsel's discovery responses, Complaint Counsel repeatedly represents that it "will produce" responsive information or documents at some unspecified future time. However, Complaint Counsel has neither provided this promised information nor indicated when they will provide it. For instance:

> Interrogatory No. 124.: **Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:**
>
> **(a) a description of any testing protocols used by the CPSC in testing the Omegas;**
>
> **(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;**
>
> **(c) a description of the methodology employed during each and every test of the Omegas;**
>
> **(d) the date of each and every test of the Omegas;**
>
> **(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;**
>
> **(f) a description of the results of each and every test of the Omegas; and**
>
> **(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.**
>
> Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus [sic] protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

See Complaint Counsel's Interrogatory Responses, No. 124 (emphasis added).

Complaint Counsel has represented that it "will produce" the requested information and documents. In letters of May 4, 7, and 13, Central reminded Complaint Counsel of these unanswered discovery requests, but received no response. However, despite the fact that almost two months have elapsed since Complaint Counsel served its responses, it has not produced the promised information, nor has it provided any date when such a production will occur.

This failure to produce promised discovery responses is particularly disturbing in the instant case because the CPSC rules of practice provide a limited time for discovery and preparation for trial. See 16 C.F.R. § 1025.3(g). By delaying its production of discovery responses regardless of any explanation, Complaint Counsel is greatly prejudicing Central's ability to prepare for trial and defend itself in this matter.

Complaint Counsel has promised that it "will produce" the requested information and documents. Because Complaint Counsel has failed to do so, Central now requests that the Presiding Officer compel Complaint Counsel to produce these discovery responses. The following discovery responses demonstrate the above-referenced problem: Interrogatory Response Nos. 74-77, 81, 86 , 88, 117, 119, 124, 126-27, 135-38; and Document Response Nos. 8, 17, 61-63.

E. Complaint Counsel's Interrogatory Responses Have Not Been Verified.

The CPSC rules of practice require that interrogatory responses be signed by the person making such responses "in writing under oath." 16 C.F.R. § 1025.32(b). Such a requirement assures the reliability of the responses and permits a party to depose the person who verified the responses.

Complaint Counsel has failed to provide a verification under oath supporting their interrogatory responses. The Presiding Officer should require Complaint Counsel immediately to submit such a verification.

F. Complaint Counsel May Not Refer To Its Own Self-Serving Pleadings And Other Non-Responsive Discovery Answers Rather Than Providing Full And Complete Responses.

In many of Complaint Counsel's responses to Central's discovery requests, rather than provide full and complete responses, Complaint Counsel merely refers Central to Complaint Counsel's own self-serving pleadings. See, e.g., Complaint Counsel's Interrogatory Responses, Nos. 85-86 (referring Central to the Complaint as substantive evidence). Complaint Counsel avoids responding to other discovery requests by cross-referencing Central to other, equally unresponsive discovery answers from Complaint Counsel. See, e.g., Complaint Counsel's Document Responses, Nos. 21-29 (referring Central to interrogatory responses).

Courts are in agreement that incorporation by reference to a party's own self-serving testimony and pleadings is not a sufficient and responsive answer to a discovery request. See Martin v. Easton Publishing Co., 85 F.R.D. 312, 315 (E.D. Pa. 1980); Scovill Manuf. Co. v. Sunbeam Corp., 61 F.R.D. 598, 601 (D. Del. 1973); Atlanta Coca- Cola Bottling Co. v. Transamerica Insurance Co., 61 F.R.D. 115, 120 (N.D. Ga. 1972); J.J. Delaney Carpet Co. v. Forrest Mills, Inc., 34 F.R.D. 152, 153 (S.D.N.Y. 1963). Instead, a defendant is entitled to know the factual content of plaintiff's claims "with a reasonable degree of specificity." Martin, 85 F.R.D. at 315.

Thus, Complaint Counsel should not be permitted to respond to Central's discovery requests by reference to Complaint Counsel's own pleadings and other non-responsive discovery

answers. The Presiding Officer should compel Complaint Counsel to provide full, complete, and precise responses. The following responses encompass areas where Complaint Counsel has responded improperly by reference, in whole or in part, to its own pleadings and other discovery responses: Interrogatory Response Nos. 4-37, 43-44, 51, 76-77, 81-86, 88; and Document Response Nos. 12-13, 21-29, 44-53, 63, 70.

G. Complaint Counsel Has Raised Groundless Objections Based On Relevance And Vagueness.

Complaint Counsel objects to many of Central's Document Requests and Interrogatories on the grounds that the information requested is not relevant or that the question is vague. A quick review of a few of these responses reveals that these objections lack merit. For instance:

> Interrogatory No. 42.: **(a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard; If so:**
>
> **(b) identify and describe any such standard;**
>
> **(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;**
>
> **(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and**
>
> **(e) describe in detail the substance of each such person's knowledge and/or information.**
>
> **Response:** Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks irrelevant information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

See Complaint Counsel's Interrogatory Responses, No. 42 (emphasis added).

Interrogatory No. 42 asks a simple and straightforward question -- the water pressure at which Omegas must activate when tested to be deemed acceptable. By pretending not to understand this request, claiming that it is "vague, ambiguous and confusing," Complaint Counsel avoids providing a response that: (a) is simple to provide; (b) is plainly relevant to this case; and (c) would greatly focus the dispute between Complaint Counsel and Central. Complaint Counsel should not be permitted to avoid answering by raising a sham vagueness objection.

Complaint Counsel has been treating discovery to date as a game of "hide-and-seek." Such gamesmanship should not be allowed by the Presiding Officer. The following discovery responses contain similar examples of invalid relevance and/or vagueness objections: Interrogatory Response Nos. 26-34, 42-51, 78-85, 87, 129; and Document Response Nos. 9-11, 15-18, 33, 35, 42-43, 57-59, 61-62, 64.

H. Complaint Counsel Is Not Permitted To Object Based On Its Belief That Some Documents Are Equally Available To Central.

Complaint Counsel objects to a significant number of Central's interrogatories on the ground that responsive documents or information "are within [Central's] possession." See, e.g., Complaint Counsel's Document Responses, No. 14. There are two obvious problems with this objection. First, Complaint Counsel does not actually know whether Central is in possession of such documents -- this is an objection based on a guess. Second, Central is entitled to determine via discovery what documents and information are in Complaint Counsel's possession.

Based on this reasoning, courts have held that it is not a valid ground for objection that information or documents are equally available to the interrogator. Petruska v. Johns-Manville,

83 F.R.D. 32, 35 (E.D. Pa. 1979). As long as a document request demands relevant information, the party must respond even if the opposing party has equal access to the information. Dykes v. Morris, 85 F.R.D. 373, 375 (N.D. Ill. 1980). Thus, Complaint Counsel must identify documents in its control that are responsive to Central's discovery requests, even if Complaint Counsel believes that Central might have equal access to such information.

The following responses include Complaint Counsel's impermissible objection that responsive documents are within Central's possession: Interrogatory Response Nos. 1-3; and Document Response Nos. 3, 14, 31, 56, 68, and 70.

I. Complaint Counsel Is Required To Answer Interrogatories Applying The Law To The Facts Of This Case.

The CPSC rules of practice explicitly permit interrogatories to require an answer that involves the application of law to facts. Section 1025.32 provides: "An interrogatory otherwise proper is not objectionable merely because an answer to the interrogatory would involve an opinion or contention which relates to fact or to the application of law to fact . . . ." 16 C.F.R. § 1025.32(c) (emphasis added).

Despite this explicit language, each time Central poses an interrogatory requiring the application of law to fact, Complaint Counsel objects on the ground that such discovery "calls for a legal conclusion." For instance:

> Interrogatory No. 38.: **With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:**
>
> **(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;**
>
> **(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads**

should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

See Complaint Counsel's Interrogatory Responses, No. 38.

The language of the CPSC rules of practice is plain and unambiguous -- Central is permitted to pose interrogatories requiring Complaint Counsel to apply the law to the facts of this case. Accordingly, Complaint Counsel's objection that a request "calls for a legal conclusion" is invalid, and the Presiding Officer should compel Complaint Counsel to provide full and complete responses to the following interrogatories: Interrogatory Response Nos.: 5-25, 31-40.

IV. CONCLUSION

Complaint Counsel has deprived Central of the opportunity to begin to prepare its defense in this matter. Complaint Counsel has failed to identify persons having knowledge of potentially relevant information, declined to answer simple and straightforward interrogatories, refused to provide basic documents supporting their charges of failures, and raised baseless objections, the net effect of which has been to delay discovery.

As a result, Central has suffered serious prejudice. A significant portion of the discovery period has elapsed in this case, and Central still has not received basic information from Complaint Counsel. Moreover, Complaint Counsel has succeeded in hiding the substance of any contentions they intend to raise and evidence they plan to introduce at the trial of this matter. As a result, Central has been prevented from preparing adequately for trial, and is being denied an adequate opportunity to defend itself.

Complaint Counsel's refusal to provide meaningful discovery violates the CPSC rules of practice and all standards of fair discovery. Therefore, based on all of the foregoing, pursuant to 16 C.F.R. § 1025.36, Central respectfully requests that the Presiding Officer compel Complaint Counsel to provide full and complete responses to Central's Document Requests and Interrogatories.

Respectfully submitted,

ORDER

AND NOW, this __ day of _____, 1998, upon consideration of Respondents' Renewed Motion To Compel Full And Complete Responses To Interrogatories And Document Requests, Complaint Counsel's response thereto, and all other evidence before the Presiding Officer, it is hereby ORDERED that Respondents' Motion is GRANTED.

Pursuant to 16 C.F.R. § 1025.36, Complaint Counsel is hereby ordered to provide full and complete responses to Respondents within ten (10) days of the date of this Order. Specifically, Complaint Counsel shall provide the following information:

1. Identification of specific persons having knowledge of potentially relevant material, pursuant to Interrogatory Nos. 5-25, 40-42, 51-73, 76-77, 81-88, and 102.

2. Full and complete responses, including the scope of Complaint Counsel's contentions in the instant case, to Interrogatory Nos. 42-46, 53-76, 78, 80, 82-87, 93-99, 106-14, 119, 129, and 136-43; and Document Request Nos. 1-3, 5-8, 10-14, 18-21, 23-29, 31-37, 39, 41, and 44-71.

3. Full and complete responses to discovery requests where Complaint Counsel has invalidly asserted a claim to the protection of the work product doctrine or attorney-client privilege, pursuant to the following rulings:

a. All documents and information provided to Complaint Counsel by third parties are not protected by the work product doctrine and/or attorney-client privilege;

b. All documents and information provided to or prepared for third parties by Complaint Counsel are not protected by the work product doctrine and/or attorney-client privilege;

c. For all persons named in Complaint Counsel's Privilege Log, Complaint Counsel shall identify whether the individual is an employee of the CPSC, and if so, their position with the CPSC;

d. Because the work product doctrine only protects the production of documents and tangible things, not facts, Complaint Counsel shall provide information responsive to all of Central's Interrogatories without asserting the work product doctrine as an objection; and

e. Pursuant to 16 C.F.R. § 1025.31(c)(3), Complaint Counsel shall produce to Central the data and methodology underlying Complaint Counsel's test results, because Central has demonstrated a substantial need for such materials and such materials cannot otherwise be obtained by Central without unique hardship.

4. Full and complete responses to discovery requests where Complaint Counsel has delayed producing documents or information, pursuant to Interrogatory Nos. 74-77, 81, 86 , 88, 117, 119, 124, 126-27, and 135-38; and Document Request Nos. 8, 17, and 61-63.

5. A written verification under oath for all of Complaint Counsel's interrogatory responses.

6. Full and complete responses, not limited to references to Complaint Counsel's own pleadings and/or other discovery answers, pursuant to Interrogatory Nos. 4-37, 43-44, 51, 76-77, 81-86, and 88; and Document Request Nos. 12-13, 21-29, 44-53, 63, and 70.

7. Full and complete responses, despite and without regard to any relevance or vagueness objections made by Complaint Counsel, pursuant to Interrogatory Nos. 26-34, 42-51, 78-85, 87, and 129; and Document Request Nos. 9-11, 15-18, 33, 35, 42-43, 57-59, 61-62, and 64.

8. Full and complete responses, despite and without regard to any objections by Complaint Counsel that documents or information are equally available to Respondents, pursuant to Interrogatory Nos.1-3; and Document Request Nos. 3, 14, 31, 56, 68, and 70.

9. Full and complete responses applying the law to the fact of this case, pursuant to Interrogatory Nos. 5-25, and 31-40.

BY THE PRESIDING OFFICER:

The Hon. William B. Moran
United States Administrative Law Judge

CERTIFICATE OF SERVICE

I, Thomas P. Hogan, Jr., hereby certify that on this date a true and correct copy of the foregoing Respondents' Renewed Motion To Compel Full And Complete Responses To Interrogatories And Document Requests was served via regular mail upon the following:

CONSUMER PRODUCT SAFETY COMMISSION

IN THE MATTER OF CENTRAL SPRINKLER CORP. and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

RESPONDENTS' FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Respondents Central Sprinkler Corp. ("CSC") and Central Sprinkler Co. ("Central") (collectively, "Respondents"), through their undersigned counsel, hereby propound to the Consumer Product Safety Commission (the "CPSC" or the "Complainant") the following request for documents pursuant to 16 C.F.R. § 1025.33. Complainant is requested to produce the documents and things described herein within thirty (30) days of the service of this request. Complainant's responses should be sent to the offices of Morgan, Lewis and Bockius LLP, 2000 One Logan Square, Philadelphia, PA 19103.

For the purposes of this Request, the following instructions and definitions apply:

INSTRUCTIONS

Respondents hereby fully incorporate by reference the Instructions set forth in Respondents' First Set of Interrogatories.

DEFINITIONS

Respondents hereby fully incorporate by reference the Definitions set forth in Respondents' First Set of Interrogatories.

DOCUMENTS AND THINGS TO BE PRODUCED

1. All documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint.

2. All documents identified in the CPSC's responses to Respondents' First Set of Interrogatories.

3. All documents that constitute the entirety of the CPSC administrative file regarding the Omegas.

4. All documents that constitute subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

5. All documents provided to the CPSC in response to subpoenas from the CPSC or other requests for documents to any person, organization, business, or any other entity regarding or related to the Omegas.

6. All documents provided to the CPSC by Respondents regarding the Omegas.

7. All documents provided to the CPSC by any person, organization, business, or any other entity regarding or related to the Omegas and/or Respondents.

8. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by or on behalf of the CPSC.

9. All documents that constitute, provide evidence of, refer, or relate to any testing of the Omegas conducted by on or behalf of any other person, organization, business, or other entity.

10. All documents that constitute, provide evidence of, refer, or relate to any testing of non-Omega sprinkler heads conducted by on or behalf of the CPSC.

11. All documents that constitute, provide evidence of, refer, or relate to testing of non-Omega sprinkler heads conducted by on or behalf of any other person, organization, business, or other entity.

12. All documents that constitute, provide evidence of, refer, or relate to the alleged jurisdiction of the CPSC over the Omegas.

13. All documents that constitute, provide evidence of, refer, or relate to the jurisdiction of the CPSC over any product, including without limitation any memoranda or other interanal correspondence that addresses the extent of or any limitations on the jurisdiction of the CPSC.

14. All documents that constitute, provide evidence of, refer, or relate to CSC manufacturing, selling, or marketing Omegas.

15. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly failed to activate properly.

16. All documents that constitute, provide evidence of, refer, or relate to any fires where Omegas allegedly activated properly.

17. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly failed to activate properly.

18. All documents that constitute, provide evidence of, refer, or relate to any fires where non-Omega sprinkler heads allegedly activated properly.

19. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and former employees of Respondents, including but not

limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

20. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and current employees of Respondents, including but not limited to interview notes, questions asked, answers received, documents exchanged or revealed by or between either party, and any audiotape or videotape of such communications.

21. All documents that constitute, provide evidence of, refer, or relate to "[the] multiple random inquiries of sprinkler contractors across the nation," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

22. All documents that constitute, provide evidence of, refer, or relate to "what has been, and remains, customarily required to remove and install sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

23. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view [that] dezincification alone is the cause of the above-required operating pressures in Omegas from plastic pipes," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

24. All documents that constitute, provide evidence of, refer, or relate to "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

25. All documents that constitute, provide evidence of, refer, or relate to "the data [which] point to multiple failure modes rooted in the design and construction of these sprinklers," as referenced in a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo.

26. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluation, consideration, or analyses done by or on behalf of the CPSC regarding the "testing based corrective action," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

27. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, or analyses done by or on behalf of the CPSC which reflects the "serious concerns" of the CPSC regarding whether "Omega sprinklers with silicone o-rings will function in the long term," as referenced in a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

28. All documents that constitute, provide evidence of, refer, or relate to any testing, evaluations, consideration, or analyses done by or on behalf of the CPSC which addressed Omegas where "the internal shaft was cocked or tipped slightly and jammed in that position," as referenced in a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo.

29. All documents that constitute, provide evidence of, refer, or relate to "automatic fire sprinklers' historical rate of proving 99.5 percent effective," as referenced in a January 6, 1998 letter from Eric Singer of the CPSC to state attorneys general.

30. All documents that constitute, provide evidence of, refer, or relate to the CPSC Recall Handbook.

31. All documents received by the CPSC from Respondents or any agent, employee, or representative of Respondents.

32. All Omegas in possession of the CPSC.

33. All non-Omega sprinkler heads in the possession of the CPSC.

34. All audio and/or video tapes regarding or relating to any testing of Omegas.

35. All audio and/or video tape regarding or relating to any testing of non-Omega sprinkler heads.

36. All documents that constitute, provide evidence of, refer, or relate to any personal journals, diaries, or correspondence maintained by the CPSC Staff regarding the Omegas and/or Respondents.

37. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any dealers, retailers, contractors, or any distributors regarding or related to the Omegas and/or Respondents.

38. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any Authorities Having Jurisdiction regarding or related to the Omegas and/or Respondents.

39. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any consumers regarding or related to the Omegas and/or Respondents.

40. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any state law enforcement authorities regarding or related to the Omegas and/or Respondents.

41. All documents that constitute, provide evidence of, refer, or relate to any communications between the CPSC and any federal law enforcement authorities regarding or related to the Omegas and/or Respondents.

42. All documents that constitute, provide evidence of, refer, or relate to scripts, talking points, outlines, or any other material prepared by, for, or on behalf of the CPSC for any press conferences or news releases regarding the Omegas and/or Respondents.

43. All documents that constitute, provide evidence of, refer, or relate to any material regarding the Omegas and/or Respondents created by or on behalf of the CPSC public relations department, media department, or any other CPSC internal department charged with communicating with or providing information to the public media.

44. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products.

45. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products."

46. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13.

47. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures."

48. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function in a significant percentage of instances."

49. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 10 of the Complaint that the "Omegas are defective pursuant to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4."

50. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death."

51. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 15 of the Complaint that the "defect or defects in the Omegas create a

substantial risk of injury to the public within the meaning of § 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)."

52. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "Omegas present a substantial product hazard as described in Sections 15(a)(2), (c) and (d) of the CPSA, 15 U.S.C. §§ 2064(a) (2), (c) and (d)."

53. All documents that constitute, provide evidence of, refer, or relate to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest."

54. A current curriculum vitae or resume for each and every expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

55. All publications of any nature authored by any expert witness whom the CPSC expects to testify on its behalf at the hearing in this matter.

56. Any and all written statements made by Respondents that the CPSC contends constitute an admission with reference to any of the issues raised in the Complaint.

57. All documents that constitute, provide evidence of, refer, or relate to the use of silicone o-rings in sprinkler heads.

58. All documents that constitute, provide evidence of, refer, or relate to the use of EPDM o-rings in sprinkler heads.

59. All documents that constitute, provide evidence of, refer, or relate to the use in sprinkler heads of o-rings comprised of any other material or compound.

60. All documents that constitute, provide evidence of, refer, or relate to the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas.

61. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage in connection with the Omegas.

62. All documents that constitute, provide evidence of, refer, or relate to any and all incidents known to the CPSC in which a consumer or other person has reported any form of personal injury in connection with the Omegas.

63. Any and all testing protocols used by the CPSC or by any expert or other person on behalf of the CPSC in testing the Omegas.

64. All documents that constitute, provide evidence of, refer, or relate to any alternative design features for the Omegas.

65. All documents that constitute, provide evidence of, refer, or relate to the feasibility and/or propriety of any alternative design features for the Omegas.

66. All documents that constitute, provide evidence of, refer, or relate to the CPSC's preliminary determination of the alleged risks associated with the Omegas.

67. All documents that constitute, provide evidence of, refer, or relate to any changes in the CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas.

68. All documents that constitute, provide evidence of, refer, or relate to any corrective action proposal for the Omegas.

69. All documents that constitute, provide evidence of, refer, or relate to the requested recall of the Omegas.

70. All documents that constitute, provide evidence of, refer, or relate to the corrective action proposal presented by Respondents regarding the Omegas.

71. All documents that constitute, provide evidence of, refer, or relate to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

98 MAR 26 P 3:56

IN THE MATTER OF CENTRAL SPRINKLER CORP. and CENTRAL SPRINKLER CO., Respondents	CPSC DOCKET NO. 98-2

RESPONDENTS' FIRST SET OF INTERROGATORIES

Respondents Central Sprinkler Corp. ("CSC") and Central Sprinkler Co. ("Central") (collectively, "Respondents"), through their undersigned counsel, hereby propound the following interrogatories to the Consumer Product Safety Commission (the "CPSC" or the "Complainant") pursuant to 16 C.F.R. § 1025.32. Complainant is requested to respond within thirty (30) days of the service of these interrogatories. Complainant's responses should be sent to the offices of Morgan, Lewis & Bockius LLP, 2000 One Logan Square, Philadelphia, PA 19103.

For the purposes of these Interrogatories, the following definitions and instructions apply:

INSTRUCTIONS

A. In answering these Interrogatories, Document Requests, and/or Requests for Admissions (collectively, the "Discovery Requests"), furnish all information available to you, including any such information in possession of your attorneys or anyone acting on your behalf, and not merely such information known of your own personal knowledge. If you cannot answer the Discovery Requests in full after exercising due diligence to secure the information to do so, so state and answer to the extent possible.

B. If the answer to any of the Discovery Requests is that you lack knowledge of some or all of the requested information, describe all efforts made by you to obtain the information necessary to answer that Discovery Request.

C. If any matter responsive to any of the Discovery Requests is withheld based on any claim of privilege, describe generally the matter withheld, state the privilege being relied upon, and identify all persons or entities who have or have had access to said matters. If you refuse to describe and/or produce any document on the basis of a claim of privilege or protection from discovery of any kind, with respect to each such document, set forth the following information:

(i) the date of the document;

(ii) its authors;

(iii) all recipients of the document;

(iv) the present location and custodian of the document; and

(v) the basis of the claim of privilege or protection from discovery.

D. Each lettered sub-part of a numbered Discovery Request is to be considered a separate Discovery Request for the purpose of Complainant's answers and objections. You must object separately to each sub-part and must answer any other sub-parts.

E. These Discovery Requests are to be deemed continuing in nature, and you shall promptly supply, by way of supplemental response, any additional responsive information that may become known to you or anyone acting on your behalf after your answers have been prepared or served.

F. For all documents produced by Complainant, identify by Bates number which document or documents are responsive to each separate Interrogatory and/or each separate Request for Documents.

DEFINITIONS

A. The "Complaint" means whichever version of the Complaint was last filed and in effect at the time of service of the relevant Discovery Request.

B. "Complainant" and/or the "CPSC" refers to the Consumer Product Safety Commission, the Legal Division of the Office of Compliance of the CPSC, and any employees or agents thereof.

C. "Respondents" refers to Central Sprinkler Corp. and Central Sprinkler Co., all corporate affiliates thereof, and all current or former employees of Central and corporate affiliates

thereof.

D. "CSC" refers to Central Sprinkler Corporation.

E. "Central" refers to Central Sprinkler Company.

F. "Omega" or "Omegas" refers to the line of sprinkler heads identified in the Complaint, including the following models: C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control.

G. "Person" or "persons" means all individuals and entities, including natural persons, representative persons, public or private corporations, companies, unincorporated associations, partnerships, organizations, government entities or groups, plus any divisions, departments, or units thereof.

H. "Document" or "documents" means any written, printed, typed, recorded, or graphic matter, whether produced or reproduced or stored on paper, cards, tapes, film, electronic facsimile, computer storage devices or any other devices or media, including, but not limited to papers; books; letter; photographs; objects; tangible things; correspondence; telegrams; cables; telex messages; memoranda; notes; notations; records; work papers; transcripts; minutes; reports and recordings of telephone or other conversations, or of interviews, or of conferences, or of other meetings; affidavits; statements; opinions; proposals; reports; studies; analyses; audits; evaluations; contracts; agreements; journals; statistical records; ledgers; books of account; bookkeeping entries; financial statements; tax returns; vouchers; checks; check stubs; invoices; receipts; desk calendars; appointment books; diaries; lists; tabulations; summaries; sound recordings; computer printouts; data processing input and output; microfilms; all records kept by electronic, photographic, or mechanical means; and things similar to any of the foregoing, however denominated. When one or more of the following documents is requested or referred to, the request or reference shall include, but is not limited to, the original and each and every copy and draft thereof having writings, notations, corrections, or markings unique to such copy or draft.

I. "Oral communication" means any and all non-written forms of expression or communication, whether face-to-face or by telephone, in a conference or otherwise.

J. "Identify" or "identification", when used in reference to a document, means to:

1. state the type of document (e.g., letter, log, report, etc.);

2. state its date;

3. state its title, heading or other designation and any other information (e.g., index or file number) which would facilitate the identification thereof;

4. identify the person(s) who prepared and/or signed the document;

5. identify the persons (or if widely distributed, the organization or classes of persons) to whom it was sent;

6. identify the last known location of the document and of each copy thereof having notations or markings unique to such copy;

7. if the document was, but no longer is, in your possession or subject to your control, identify its last know custodian, describe the circumstances under which it passed from your control to that person, and identify each person having knowledge of such circumstances;

8. describe its general subject matter and contents; and

9. if the document exceeds one page in length, or is contained in a series of documents or a larger portion, identify the specific document by appropriate identifying name or symbol, the number of the particular page or pages (or other descriptive aid) and of the line or lines thereof upon which the information referred to in the Discovery Request or your response appears.

K. "Identify" or "identification", when used in reference to a natural person, means to provide the following information:

1. his or her full name;

2. his or her business affiliation(s), position(s), title(s), and job description(s) during the period delineated in the Discovery Request (and the dates during which each affiliation, position, title, and job description applied to him or her);

3. his or her present or last known business address (and the date of that last knowledge); and

4. his or her present or last known residence address (and the date of that last knowledge).

L. "Identify" or "identification", when used in reference to an oral communication or statement, means to:

1. state the date of the oral communication or statement;

2. state the place where it occurred;

3. identify the persons(s) making and listening to the oral communication or statement;

4. identify all other persons present at the time it was made;

5. if by telephone, identify the persons participating in the conversation and where each was located at the time of the call; and

6. describe the substance of the oral communication or statement.

M. "Date" means the exact day, month, and year if ascertainable, or, if not, the best approximation thereof or best approximation in relation to other events.

N. "Describe" means to set forth fully and clearly every relevant fact and/or event, including particulars of time, place and manner.

O. Where the context so requires:

1. the terms "and" and "or" mean "and/or";

2. the plural of a word includes the singular, and the singular includes the plural;

3. the past tense of verb includes the present, and the present tense includes the past;

4. the masculine gender includes feminine and neuter genders, and the neuter gender include the masculine and feminine.

P. All other words are to be given their ordinary and usual meanings, according to a current edition of Webster's Dictionary.

INTERROGATORIES

A. Allegations of the Complaint

1. (a) State whether CSC manufactures Omegas.

If so:

(b) identify and describe any such manufacturing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such manufacturing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such manufacturing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

2. (a) State whether CSC sells Omegas.

If so:

(b) identify and describe any such sales;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such sales;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such sales; and

(e) describe in detail the substance of each such person's knowledge and/or information.

3. (a) State whether CSC markets Omegas.

If so:

(b) identify and describe any such marketing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such marketing;

(d) identify each and every person whom Complainant knows and/or believes to

have knowledge of such marketing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

4. With respect to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

5. (a) State whether the C-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

6. (a) State whether the C-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

7. (a) State whether the C-1A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

8. (a) State whether the C-1A PRO ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or

information.

9. (a) State whether the EC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

10. (a) State whether the EC-20A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

11. (a) State whether the EC-20 AID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

12. (a) State whether the HEC-12 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

13. (a) State whether the HEC-12 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

14. (a) State whether the HEC-12 PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

15. (a) State whether the HEC-12A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

16. (a) State whether the HEC-12 RES model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

17. (a) State whether the HEC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

18. (a) State whether the HEC-20 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

19. (a) State whether the R-1 model of the Omegas constitutes a "consumer product"

pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

20. (a) State whether the R-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

21. (a) State whether the R-1M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to

have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

22. (a) State whether the AC model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

23. (a) State whether the M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

24. (a) State whether the Flow Control model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

25. With respect to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

26. (a) Separately for each model of the Omegas listed in the Complaint, state whether such model is sold by Respondents directly to consumers.

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such sales;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such sales; and

(d) describe in detail the substance of each such person's knowledge and/or information.

27. (a) Separately for each model of the Omegas listed in the Complaint, state whether Respondents market such a model to consumers.

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such marketing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such marketing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

28. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is installed by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such installation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such installation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

29. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is serviced by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such servicing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such servicing; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

30. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is repaired by consumers themselves (as opposed to professional contractors). If so:

(b) identify all documents which describe, evidence, refer, or relate to any such repairs;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such repairs; and

(d) describe in detail the substance of each such person's knowledge and/or information.

31. State whether Omegas installed in buildings used only as storage facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

32. State whether Omegas installed in warehouses constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates

in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

33. State whether Omegas installed in factories constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

34. State whether Omegas installed in computer facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

35. State whether there are any factual circumstances under which any Omegas would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

36. (a) State whether there are any factual circumstances under which any non-Omega sprinkler heads would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information.

37. (a) Separately for each model of the Omegas listed in the Complaint, describe any and all ways in which consumers use, consume, and/or enjoy such a model.

(b) identify all documents which describe, evidence, refer, or relate to any such use, consumption, or enjoyment;

(c) identify each and every person whom Complainant knows and/or believes to

have knowledge of any such use, consumption, or enjoyment; and

(d) describe in detail the substance of each such person's knowledge and/or information.

38. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:

(a) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

39. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199:

(a) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of UL Standard 199, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of UL Standard 199, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi the testing standard that Complainant contends is created by UL Standard 199 that applies to the Omegas.

40. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

41. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures":

(a) describe in terms of both degrees Fahrenheit and Celsius what temperatures are meant by the phrase "certain temperatures";

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or

information.

42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

45. (a) State whether Complainant contends that there is a standard of "failure" that will accurately predict whether a particular Omega will fail to activate in a fire when used in a particular building without regard to the actual hydraulic pressure that exists in the building. If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

46. (a) State whether Complainant contends that if a particular Omega does not activate at a minimum of 7 psi when tested, such an Omega would not activate if a fire occurred in a building where such Omega was installed.

(b) set forth the factual basis for any such contention;

(c) identify all documents which describe, evidence, refer, support, or relate to

any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

47. Describe the average static water pressure (in psi) present in the sprinkler systems of most residential buildings.

48. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most residential buildings, after the system has been activated.

49. Describe the average static water pressure (in psi) present in the sprinkler systems of most commercial buildings.

50. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most commercial buildings, after the system has been activated.

51. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

52. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas do not and/or will not function in a "significant percentage" of instances:

(a) expressed in terms of a specific percentage, describe what constitutes "a significant percentage" regarding this allegation;

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

53. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

54. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

55. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

56. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

57. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

58. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

59. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 AID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

60. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

61. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

62. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

63. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

64. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 RES model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

65. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

66. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-20 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

67. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

68. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

69. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-1M model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

70. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the AC model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

71. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the M model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

72. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the Flow Control model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

73. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to

have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

74. State whether the failure of any Omega to function has resulted in any bodily injury or injuries.

75. State whether the failure of any Omega to function has resulted in any death or deaths.

76. With respect to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

77. With respect to the allegation of Paragraph 15 of the Complaint that the defect or the defects in the Omegas create a "substantial risk of injury to the public":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

78. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

79. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.

If so:

(b) identify and describe any such a contention;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

80. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

81. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate under any type of testing.
If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

82. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in a fire.
If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

83. (a) State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.

If so:

(b) identify and describe any such testing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

84. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

85. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

86. (a) State whether Complainant contends that any Omegas manufactured using silicone o-rings constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

87. (a) State whether the Complainant contends that the performance of Omegas declines or deteriorates over time.

If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or

information.

88. With respect to the allegation of Paragraph 16 of the Complaint that the Omegas present a "substantial product hazard":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

89. With respect to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest":

(a) identify and describe all of the public interest factors which Complainant believes favor "action under these provisions";

(b) set forth the factual basis for such an allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

90. With respect to the allegation of Paragraph B(1) of the Complaint that Respondent give prompt "public notice of the defect in the Omegas," identify and describe the "public notice" that the Complainant seeks to impose.

91. With respect to the allegation of Paragraph C(3) of the Complaint regarding repair of all Omegas so they will "perform properly," identify and describe what would constitute "performs properly" for purposes of the Complainant.

92. With respect to the allegation of Paragraph C(3) of the Complaint regarding the replacement of all Omegas "with a like or equivalent product which performs properly":

(a) identify and describe any and all "like or equivalent product which performs properly";

(b) state whether Complainant believes that Omegas with a silicone o-ring qualify as a "like or equivalent product which performs properly"; and

(c) state whether Complainant believes that Omegas with a spring collar qualify as a "like or equivalent product which performs properly."

93. With respect to the allegation of Paragraph C(3) of the Complaint regarding a "refund to consumers [of] the purchase price of the Omegas," identify and describe how Complainant would calculate or determine a "refund to consumers [of] of the purchase price of the Omegas."

94. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(1), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

95. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(2), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

96. (a) If the Commission orders Respondents to refund some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(3), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

97. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to U.S.C. § 2064(d)(1), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to

any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

98. (a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to U.S.C. § 2064(d)(2), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

99. (a) If the Commission orders Respondents to refund the purchase price to some or all of the Omegas pursuant to U.S.C. § 2064(d)(3), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or

information about any such contention.

B. Potential Witnesses

100. Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the person's last known position with Respondents;

(e) the date of any such contacts;

(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);

(f) a detailed description of the subject matter of such communication; and

(g) the identity of any other persons who were present during such contacts.

101. For each and every contact describe an response to Interrogatory No. 100, identify each and every document that describes, evidences, refers, or relates to such contacts, including without limitation any notes of such contacts, documents shown during the course of such contacts, lists of questions or answers given, or any reports of such communications.

102. Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the corporate or government affiliation of the person;

(e) whether the Complainant has contacted such person; and

(e) the specific subject matter of the person's knowledge.

103. Identify each and every fact witness that Complainant expects to testify on its behalf at the hearing in this matter. For each such fact witness, identify and describe:

(a) the name, title, business address, and home address for each such witness; and

(b) the subject matter about which each witness is expected to testify.

104. Identify each and every expert witness whom the Complainant expects to testify on its behalf at the hearing in this matter. For each such expert, identify and describe:

(a) the expert's name, title, home address, business address, education, employment since graduation from high school, and all publications authored or edited by the expert;

(b) the subject matter on which each expert is expected to testify;

(c) the substance and facts upon which the expert relies in forming his or her opinion;

(d) the opinions to which the expert is expected to testify;

(e) a summary of the grounds for each such opinion; and

(f) a statement and description of all information and documents upon which the expert relies or expects to rely.

105. Identify and describe any and all oral or written statements made by Respondents that the Complainant contends constitute an admission with reference to any of the issues raised in the Complaint. For each such statement, identify and describe:

(a) the person making the alleged statement;

(b) that person's relationship to Respondents;

(c) the content of the statement;

(d) the date, time, and place of the statement;

(e) the nature of the alleged statement (e.g., written or oral); and

(f) the identity of each person who heard the statement or otherwise has personal knowledge of the statement.

C. Other Allegations Made By the CPSC

106. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "based on multiple random inquiries of sprinkler contractors across the nation in the recent past, we believe that Central's proposed labor payment falls considerably short of what has been, and remains, customarily required to remove and install sprinklers . . . ." With respect to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to the "multiple random inquiries of sprinkler contractors";

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such "multiple random inquires of sprinkler contractors";

(e) describe in detail the substance of each such person's knowledge and/or information of such "multiple random inquiries of sprinkler contractors";

(f) identify and describe in terms of a specific monetary amount "what has been, and remains, customarily required to remove and install sprinklers";

(g) identify each and every document that constitutes, evidences, refers, or relates in any way to "what has been, and remains, customarily required to remove and install sprinklers";

(h) identify each and every person whom Complainant knows and/or believes to have knowledge of "what has been, and remains, customarily required to remove and install sprinklers"; and

(i) describe in detail the substance of each such person's knowledge and/or

information of "what has been, and remains, customarily required to remove and install sprinklers."

107. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view that dezincification alone is the cause of above-required operating pressures in Omegas from plastic pipe . . . ." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

108. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to

have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

109. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "rather, primarily, the data points to multiple failure modes rooted in the design and construction of these sprinklers." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe the "multiple failure modes rooted in the design and construction of these sprinklers";

(d) identify and describe "the data" referenced in the statement;

(e) identify and describe each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(g) describe in detail the substance of each such person's knowledge and/or information.

110. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC refuses to accept a "testing based corrective action proposal" from Respondents. With regard to this rejection:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for rejecting a "testing based corrective action proposal";

(c) identify and describe any and all reasons that the CPSC believes are correct in

rejecting such a proposal;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the rejection of this proposal;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of the rejection of this proposal; and

(f) describe in detail the substance of each such person's knowledge and/or information.

111. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC states that "Central continues to insist on selling Omega sprinklers with silicone o-rings despite serious concerns about whether they will function in the long term." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all "serious concerns" that the CPSC has regarding the functioning of Omega sprinklers with silicone o-rings;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such "serious concerns"; and

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such "serious concerns."

112. In a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, Stone states, "x-ray examination of the unit showed that the internal shaft was cocked or tipped slightly and jammed in that position" and that the CPSC "plans to conduct non-destructive analysis of the unit . . . ." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe any evidence that Omegas may be "cocked or tipped slightly and jammed in that position";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the statement that Omegas are "cocked or tipped slightly and jammed in that position";

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of any such problems;

(f) describe in detail the substance of each such person's knowledge and/or information; and

(g) describe any "non-destructive analysis of the unit" performed by or on behalf of the CPSC.

113. In a January 6, 1998 letter from Eric Singer of the CPSC to the state attorneys general, Singer states, "this contrasts with automatic fire sprinklers' historical rate of proving 99.5 percent effective." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all evidence that automatic fire sprinklers have an "historical rate of proving 99.5 percent effective";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such historical rate of effectiveness;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such historical rate of effectiveness; and

(f) describe in detail the substance of each such person's knowledge and/or information.

RESPONDENTS' RESPONSES AND OBJECTIONS TO COMPLAINT COUNSEL'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND THINGS

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central"), pursuant to 16 C.F.R. § 1025.33, hereby provide responses and objections to Complaint Counsel's First Request For Production of Documents and Things. Central's responses may be supplemented in accordance with 16 C.F.R. § 1025.31(f).

PREFATORY STATEMENT

Complaint Counsel has made extremely broad discovery requests. The responses to Complaint Counsel's request will exceed 400 boxes of documents, and the copying to make the documents available for inspection will cost Central in excess of $100,000.00. Despite this extraordinary volume and expense, Central will make every effort to comply with Complaint Counsel's requests.

Pursuant to 16 C.F.R. § 1025.33, Central will permit Complaint Counsel to inspect and designate for copying the responsive documents described below. This inspection will take place at a mutually convenient time at the offices of Morgan, Lewis & Bockius LLP, 1800 M Street, N.W., Washington, DC 20036. Because of the extremely large volume of documents, such

documents will be made available for inspection on a "rolling basis," with the documents made available to Complaint Counsel at their request after Central's counsel has reviewed such documents. Central anticipates that it will be able to make available immediately approximately 100 boxes for review by Complaint Counsel, and Central's counsel will continue to review the remaining responsive documents, estimated to encompass 300 boxes, as quickly as possible. Central also anticipates providing Complaint Counsel with a privilege log corresponding to the documents produced on a rolling basis.[1/]

In addition to the approximately 400 boxes described above, Central is in possession of more than 1,000 additional boxes consisting of the following categories: accounts payable purchase journals, accounts payable cash disbursement journals, sales commission reports, accounts receivable trial balances, customer sales activity reports, flash reports, general ledger statements, inventory accounting summaries, accounts payable post reports, labor tickets, invoices and credits, vendor invoices, sales analyses, accounts payable batch files, and miscellaneous documents located in multiple field offices across the nation. Central does not regard these documents to be responsive or relevant to this matter. In addition, the time and expense of reviewing and producing these documents would be prohibitive. Nevertheless, if Complaint Counsel desires to inspect such documents, they should notify Central's counsel, and Central will attempt to provide Complaint Counsel an opportunity to inspect such documents.

1/ If Complaint Counsel desires an independent copy of all of the documents contained in the 400 boxes, and Complaint Counsel is willing to pay for the cost of copying and transporting such documents, Central will of course cooperate fully with Complaint Counsel to arrange for such copying.

As with Complaint Counsel's discovery responses, Central's production of documents is subject to the entry of a reasonable Confidentiality Agreement.

OBJECTIONS TO EACH AND EVERY DISCOVERY REQUEST

Central objects to each and every Interrogatory, Document Request, and/or Request for Admission (collectively, the "Discovery Requests") stated by Complaint Counsel for the reasons set forth herein, and each stated objection is incorporated into the response to each numbered sub-part of the Discovery Requests as if set forth fully therein.

1. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence, and thus exceed the scope of permissible discovery as defined by 16 C.F.R. § 1025.31(c)(1).

2. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that are not in the possession, custody, or control of Central.

3. Central objects to each and every Discovery Request on the ground and to the extent that they call for a conclusion of law.

4. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents protected from discovery by the attorney-client privilege pursuant to 16 C.F.R. § 1025.31(c)(2); specifically, any information or documents that contain, describe, refer, relate to, or reflect confidential communications between Central and their attorneys or their representatives regarding legal advice, opinions, counsel, or

confidential communications that were created, produced, written, prepared, typed, transcribed, copied, photographed, duplicated, or reproduced.

5. Central objects to each and every Discovery Request on the ground and to the extent they seek information and/or documents protected from discovery by the self-critical privilege or any other applicable privilege.

6. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents prepared in anticipation of litigation or for trial by or for Central, Central's counsel, or Central's representative, because such materials are protected from discovery pursuant to 16 C.F.R. § 1025.31(c)(3).

7. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that contain, report, describe, reflect, refer, or relate to facts or opinions held or known by an expert retained or specially employed by Central in anticipation of litigation or preparation for trial, and who is not expected to be called as a witness at trial, because such material is protected from discovery pursuant to 16 C.F.R. § 1025.31(c)(4).

8. Central objects to each and every Discovery Request on the grounds and to the extent that they are overly vague, unduly broad, and/or unnecessarily burdensome.

9. Central objects to each and every Discovery Request on the grounds and to the extent that they are duplicative of other discovery requests, request information already provided to Complaint Counsel by Central, and/or request information equally available to or ascertainable by Complaint Counsel.

10. Central objects to each and every Discovery Request on the grounds and to the extent that such requests seek documents or information that constitute a trade secret or other confidential research, development, or commercial information.

11. Central objects to each and every Discovery Request on the ground and to the extent that they seek information and/or documents that are not owned by Central and/or are documents in which other parties have a proprietary interest.

12. Central objects to each and every Discovery Request on the grounds and to the extent that it fails to distinguish between Central Sprinkler Corporation and Central Sprinkler Company.

13. To the extent that a document request refers to or incorporates an interrogatory, or any part thereof, Central hereby fully incorporates by reference into the response to the document request any objections raised in responding to the interrogatory.

14. Central objects to each and every Discovery Request on the ground and to the extent that they exceed the scope of discovery permitted under 16 C.F.R. § 1025.31.

15. Central objects to the instruction and definitions included in the Discovery Requests on the ground and to the extent that they exceed the scope of permissible discovery under 16 C.F.R. § 1025.31.

16. To the extent that Central objects to a particular Discovery Request on the basis of a specific objection, Central hereby states that they do not thereby waive the General Objections. To the extent that Central objects to a particular Discovery Request but then proceeds to answer said Discovery Request in whole or in part, Central hereby states that they do not thereby waive any objection to the Discovery Request in question.

RESPONSES

REQUEST NO. 1: Provide all records relating in any way to your sale of any Omega sprinkler, including but not limited to purchase orders, shipping documents, billing statements and sales receipts.

RESPONSE NO. 1: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: Central keeps records such as those requested for up to ten years. Thus, Central has an extremely large number of potentially responsive documents. Total compliance with this request would require production of approximately 900 boxes of invoices (each box containing 3000 to 5000 invoices), as well as similar numbers of shipping documents stored on-site at fourteen locations throughout the United States. In addition, Central generates multiple sales reports, including "flash reports" (total sales activity), sales by part, sales by product, sales by salesman, sales by region, and sales by warehouse. These weekly reports generally are kept for seven years and number in the thousands of boxes.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 2: Provide all records relating in any way to your provision of any Omega sprinkler as a free sample or promotional item.

RESPONSE NO. 2: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 3: Provide all records relating in any way to marketing and/or sale of Omega sprinklers by you.

RESPONSE NO. 3: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: Potentially responsive documents include all of the documents created by two entire

departments of Central: Technical Service and Sales. Technical Services creates all marketing documents, including product cut sheets, sales catalogues, pricebooks, and instructional videos. An entire floor of a building is dedicated to storage of current and obsolete Technical Services documents. Central's Sales Department is comprised of individuals working and creating documents on three continents, including every state in the United States.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 4: For each year in which you manufactured and/or distributed Omega sprinklers, provide all records relating in any way to

(a) your gross income;
(b) your net income;
(c) the amount in revenues generated from product sales;
(d) the amount in revenues generated from sales of Omega sprinklers.

RESPONSE NO. 4: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: There are thousands of potentially responsive reports created on a weekly or monthly basis over sixteen years. While many of these reports exist in paper form, most are stored as data on tape. To retrieve this data, each tape would have to be located, loaded, and queried for relevant information. Central's Information Services department estimates that it would take a person working full-time at least two months to complete this task. Moreover, this request alone could amount to well over a million pages.

Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. To the extent Central has any such information, pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 5: Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

(a) steel piping systems;
(b) copper piping systems;
(c) plastic piping systems;
(d) polybutylene piping systems;
(e) other piping systems not listed above (specify the type of piping system)?

RESPONSE NO. 5: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. To the extent Central has any

such information, pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 6: Provide all records relating in any way to the number of Omega sprinklers installed in the United States and/or its territories in:

a) private homes
b) apartment buildings
c) schools (including universities and colleges, public or private)
d) nursing homes
e) hospitals
f) detention facilities (including jails, juvenile detention facilities, etc.)
g) homeless shelters
h) facilities used for recreation (e.g., health clubs, gymnasiums, sports arenas, public pools, country clubs, etc.)
i) hotels
j) museums
k) offices (including office buildings)
l) warehouses with no public access areas
m) industrial facilities with no public access areas

RESPONSE NO. 6: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; and it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence. Subject to and without waiver of the foregoing objections, Central responds as follows: See Interrogatory Response No. 10. To the extent Central has any such information, pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 7: Provide all records relating in any way to the current sales price for each Omega make and/or model listed in your response to Complaint Counsel's Interrogatory No. 13.

RESPONSE NO. 7: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: The final price paid by a particular customer will vary because price is contingent on several factors, including negotiation, discounts for timely payment, credit, quantity and purchasing history.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 8: Provide the complete personnel files for all persons identified in your response to Complaint Counsel's Interrogatory No. 15.

RESPONSE NO. 8: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade

secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 9: Provide the complete personnel files for all persons involved in design and/or development of each make and/or model Omega sprinkler.

RESPONSE NO. 9: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 10: Provide all records relating in any way to the design of and/or specifications for each component part and each chemical (including lubricants), tool and/or substance used in the Omega manufacturing process.

RESPONSE NO. 10: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents

available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 11: Provide all records relating in any way to your acquisition of any component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

RESPONSE NO. 11: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information.

By way of further explanation of these objections, Central states as follows: In addition to the documents Central will produce, there are at least 700 additional boxes of Accounts Payable documents called "batch files" that might contain minimally responsive documents. Batch files are created and stored in such a fashion that responsive documents cannot be separated from non-responsive documents without reading every file. Batch files are stored according to the day a vendor invoice was paid, rather than by a vendor or part. In addition, there are over 700 boxes of Purchase Orders that may contain some responsive materials.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents

available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 12: Provide the complete personnel files of any persons who were/are employed by you who in any way took part or were involved in the design, specifications, and/or development of each component part, chemical (including lubricants, etc.), tool and/or substance identified in your response to Complaint Counsel's Interrogatory No. 17.

RESPONSE NO. 12: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 13: Provide all records relating in any way to the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time, including all tools, chemicals and substances used in the manufacture of same, including but not limited to cut sheets, drawings, and manufacturing instructions.

RESPONSE NO. 13: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or

commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 14: Provide three samples of each make and model of Omega sprinkler that you have ever manufactured.

RESPONSE NO. 14: Central responds as follows: Because the design of many of the Omega models has changed over time, it is possible that samples of every make and model of Omega sprinkler ever manufactured may not still be in existence. Pursuant to 16 C.F.R. § 1025.33, to the extent available, Central will make responsive Omega models manufactured by Central Sprinkler Company available to Complaint Counsel for inspection, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 15: Provide three samples of each tool, chemical and/or substance used in the manufacture of each make and model of Omega sprinkler. (If any such tools, chemicals and/or substances are used for more than one make and/or model of Omega, you need only provide one set of three samples).

RESPONSE NO. 15: Central objects to this request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks things that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks things that constitute trade secrets or other confidential research, development, or commercial information; it is duplicative of other discovery requests; and it seeks things that are not in

Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel.

REQUEST NO. 16: Provide all records relating in any way to any chemical or substance used in the manufacture of Omega sprinkler(s) to prevent leaking of those sprinklers when they are later installed into a sprinkler system.

RESPONSE NO. 16: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: to the extent that this document request is referring to products such as "Stop-Leak," no such documents are known to exist.

REQUEST NO. 17: Provide all records relating in any way to any tests performed by you or anyone else to assess whether and/or how each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23 affects the operation of Omega sprinkler(s) or any Omega component part.

RESPONSE NO. 17: Central hereby incorporates its response and objections to Interrogatory No. 23.

REQUEST NO. 18: Provide all records relating in any way to each communication between you and any persons and/or entities (including your employees, agents, and consultants) regarding each chemical and/or substance listed in your response to Complaint Counsel's Interrogatory No. 23.

RESPONSE NO. 18: Central hereby incorporates its response and objections to Interrogatory No. 23.

REQUEST NO. 19: Provide all records relating in any way to each prototypes and/or precursors of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

RESPONSE NO. 19: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 20: Provide the complete personnel files of any and all employees who were in any way involved in designing, developing and/or reviewing any and all prototypes and/or precursors of any of the Omega sprinklers listed in your response to Complaint Counsel's Interrogatory No. 5.

RESPONSE NO. 20: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, commercial, or otherwise proprietary information.

REQUEST NO. 21: Provide all records relating in any way to any and all measures and/or procedures taken by you or anyone on your behalf at any time before, during, and/or after each Omega sprinkler is manufactured, to ensure that each Omega sprinkler will fully and properly activate when exposed to its activation (triggering) temperature.

RESPONSE NO. 21: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 22: Provide all records relating in any way to any actual or alleged problems with, imperfections or flaws in, defects or deficiencies in or associated with any component part(s) of any Omega sprinkler, or any chemical, tool or substance used in manufacturing Omegas (including whether any component part has been or alleged to have been out of tolerance) of which you have knowledge or have been advised.

RESPONSE NO. 22: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the

foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 23: Provide all records relating in any way to the mechanism of proper operation of each different make and model of Omega sprinkler, once exposed to its activation (triggering) temperature.

RESPONSE NO. 23: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 24: Provide all records relating in any way to whether pressure (not internal to or part of the Omega itself) is required for activation of any make and/or model of Omega sprinkler.

RESPONSE NO. 24: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or

other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 25: Provide all records relating in any way to the amount of pressure (not internal to or part of the Omega itself) required for activation of each make and/or model of Omega sprinkler.

RESPONSE NO. 25: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 26: Provide all records relating in any way to any non-Omega sprinklers that contain an "o" ring.

RESPONSE NO. 26: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome ; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from

discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel; and it is duplicative of other discovery requests.

By way of further explanation of these objections, Central states as follows: Most of the sprinkler heads manufactured by Central contain an o-ring. However, only the Omegas use a dynamic o-ring. The remaining models use a static o-ring seal. In addition, there are sprinklers manufactured by other companies that contain o-rings.

Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 27: Provide all records relating in any way to the approval, listing and/or certification of each Omega make and/or model, and each adaptation or device to be used with any Omega make and/or model (such as the "helper spring"), including testing or submission for approval, listing and/or certification by a certifying laboratory or institution (such as LJL or FM), and including all records relating in any way to whether approval, listing or certification was ever refused, withdrawn, discontinued or canceled for any Omega sprinkler, sprinkler component part or allegedly assistive operating device (such as the helper spring), and/or whether any certifying laboratory or institution has ever objected to your sale and/or distribution of any Omega sprinkler.

RESPONSE NO. 27: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or

work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 28: Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or certified by FM are listed or certified by FM.

RESPONSE NO. 28: Central hereby incorporates its response and objections to Interrogatory No. 32.

REQUEST NO. 29: Provide all records relating in any way to any advertisement, representation, indication and/or suggestion in any marketing material that Omega sprinklers that are not listed or certified by UL are listed or certified by UL.

RESPONSE NO. 29: Central hereby incorporates its response and objections to Interrogatory No. 33.

REQUEST NO. 30: Provide all records relating in any way to any Omega that did not or allegedly did not activate in a fire.

RESPONSE NO. 30: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client

privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 31: Provide all records relating in any way to anyone who was injured or allegedly was injured as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

RESPONSE NO. 31: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 32: Provide all records relating in any way to anyone who died or allegedly died as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

RESPONSE NO. 32: Central responds as follows: no such documents are known to exist.

REQUEST NO. 33: Provide all records relating in any way to any property damage or allegedly property damage as a result of or in association with a fire (including death incurred or allegedly incurred in attempting to escape the fire) in which any Omega did not or allegedly did not activate.

RESPONSE NO. 33: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 34: Provide all records relating in any way to any testing and/or examination of each Omega that failed to activate or allegedly failed to activate in a fire, the system in which that Omega was installed, and/or any other sprinkler from the same site.

RESPONSE NO. 34: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it seeks information and/or documents that are not in Central's possession, are not owned by Central,

and/or are equally accessible to or ascertainable by Complaint Counsel; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 35: Provide all records relating in any way to each Omega sprinkler of which you are aware or have been notified that, when tested, did not activate at 7 psig or below when exposed to its activation/triggering temperature.

RESPONSE NO. 35: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it calls for a legal conclusion; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 36: Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate at 7 psig or below when exposed to its activation/triggering temperature in testing, the system in which it was installed, and/or any other sprinkler from the same site.

RESPONSE NO. 36: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; it calls for a legal conclusion; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 37: Provide all records relating in any way to any Omega sprinkler of which you are aware that, when tested in the field, did not activate or allegedly did not activate when exposed to its activation/triggering temperature.

RESPONSE NO. 37: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 38: Provide all records relating in any way to any examination and/or test on any Omega of which you are aware that failed to activate or allegedly failed to activate when exposed to its activation/triggering temperature when tested in the field.

RESPONSE NO. 38: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 39: Provide all records relating in any way to the design and/or development of the Omega "helper spring," and/or specifications for the manufacture of the "helper spring."

RESPONSE NO. 39: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 40: If you contend that an Omega that is installed into a sprinkler system containing water at a pressure of at least 7 psig, that does not activate upon being exposed to its activation (triggering) temperature for long enough for its fusible like to melt, will activate if fitted with the "helper spring" (that Central has proposed for use with the Omega), provide all records that you claim or believe support your contention.

RESPONSE NO. 40: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 41: Provide all records relating in any way to the method of operation of "helper spring."

RESPONSE NO. 41: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 42: Provide all records relating in any way to any and all tests performed by you or anyone else to assess whether and/or how the "helper spring" affects the operation of an Omega sprinkler or any Omega component part.

RESPONSE NO. 42: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 43: Provide all records relating in any way to your communications with any persons and/or entities (including your employees, agents, and consultants) regarding the operation and/or efficacy of the helper spring.

RESPONSE NO. 43: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 44: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has cracked or broken, or allegedly cracked or broken.

RESPONSE NO. 44: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 45: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has exhibited corrosion.

RESPONSE NO. 45: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 46: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has leaked and/or weeped when tested or in a fire.

RESPONSE NO. 46: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 47: Provide all records relating in any way to any Omega sprinkler or component of which you are aware or have been notified has activated unnecessarily or prematurely (either without or before being exposed to its activation/triggering temperature) when tested or in a fire.

RESPONSE NO. 47: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or

commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 48: If you contend that dezincification may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

RESPONSE NO. 48: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 49: Provide all records relating in any way to any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

RESPONSE NO. 49: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 50: Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of an alloy other than CDA 35330, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 50: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 51: Provide all records relating in any way to any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification.

RESPONSE NO. 51: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 52: Provide all records relating in any way to testing and/or examination of the system in which any Omega with a plunger housing made of CDA 35330 alloy, from a plastic or copper piping system, that has exhibited or allegedly exhibited dezincification was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 52: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 53: Provide all records relating in any way to any Omega from a piping system that is neither copper or plastic that has exhibited or allegedly exhibited dezincification.

RESPONSE NO. 53: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 54: Provide all records relating in any way to testing and/or examination of the system in which any Omega from a piping system that is neither copper or plastic, that has exhibited or allegedly exhibited dezincification, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 54: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 55: Provide all records relating in any way to any Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

RESPONSE NO. 55: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 56: Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 56: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information

and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 57: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47.

RESPONSE NO. 57: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 58: Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 47 exhibits dezincification.

RESPONSE NO. 58: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 59: Provide all records relating in any way to any and all substances that you contend have been used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems, that may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature).

RESPONSE NO. 59: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from

discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 60: If you contend that the use of stop leak or other sealant, leakage prevention substance or pipe cement by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature), provide all records that you claim or believe support your contention.

RESPONSE NO. 60: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents

available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 61: Provide all records relating in any way to any and all Omegas that were exposed or were allegedly exposed to stop leak or any other sealant, leakage prevention substance or pipe cement.

RESPONSE NO. 61: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 62: Provide all records relating in any way to testing and/or examination of the system in which any and all Omegas that have been exposed or allegedly have been exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, were installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 62: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing

objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 63: Provide all records relating in any way to any and all Omegas that were not exposed to stop leak or any other sealant, leakage prevention substance or pipe cement, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire?

RESPONSE NO. 63: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 64: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51.

RESPONSE NO. 64: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks

information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 65: Provide all records relating in any way to any and all tests and/or examinations conducted to determine whether an Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 51 was affected by the use of stop leak or any other sealant., leakage prevention substance or pipe cement.

RESPONSE NO. 65: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 66: If you contend that the use of cutting oil or other substances used by sprinkler installers/contractors, plumbers and/or others directly involved in installation and/or maintenance of sprinkler systems to cut pipe may cause an Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;

(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

RESPONSE NO. 66: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 67: Provide all records relating in any way to any Omega that was exposed or was allegedly exposed to cutting oils or other substances used to cut pipe.

RESPONSE NO. 67: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or

work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 68: Provide all records relating in any way to testing and/or examination of the system in which any Omega that has been exposed or allegedly has been exposed to cutting oils or other substances used to cut pipe, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 68: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 69: Provide all records relating in any way to any Omega sprinkler that was not exposed to cutting oil or other substance used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

RESPONSE NO. 69: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 70: Provide all records relating in any way to testing and/or examination of the system in which any Omega that was not exposed or allegedly exposed to cutting oils or other substances used to cut pipe, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 70: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the

discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 71: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 55.

RESPONSE NO. 71: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 72: Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to

Complaint Counsel's Interrogatory No. 55, to determine whether it was exposed to cutting oil or other substance used to cut pipe.

RESPONSE NO. 72: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 73: If you contend that swelling of the "o" ring in an Omega sprinkler may cause the Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you believe or claim support your contention.

RESPONSE NO. 73: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information

and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 74: Provide all records relating in any way to any and all Omegas containing an EPDM "o" ring, from a steel piping system, that have exhibited or allegedly exhibited "o" ring swelling.

RESPONSE NO. 74: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 75: Provide all records relating in any way to testing and/or examination of the system in which any Omega containing an EPDM "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 75: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks

information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 76: Provide all records relating in any way to any Omega containing a silicone "o" ring, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling.

RESPONSE NO. 76: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 77: Provide all records relating in any way to testing and/or examination of the system in which any Omega containing a silicone "o" ring, from a steel

piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 77: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 78: Provide all records relating in any way to any Omega from a piping system that is not steel that has exhibited or allegedly exhibited "o" ring swelling.

RESPONSE NO. 78: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 79: Provide all records relating in any way to testing and/or examination of the system in which any Omega, from a steel piping system, that has exhibited or allegedly exhibited "o" ring swelling, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 79: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it seeks information and/or documents that are not in Central's possession, are not owned by Central, and/or are equally accessible to or ascertainable by Complaint Counsel. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 80: Provide all records relating in any way to any Omega from a steel piping system that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire.

RESPONSE NO. 80: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information

and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 81: Provide all records relating in any way to testing and/or examination of the system in which any Omega that did not exhibit "o" ring swelling, but that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire, was installed, and/or testing and/or examination of any other sprinkler from the same site.

RESPONSE NO. 81: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 82: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61.

RESPONSE NO. 82: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 83: Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 61, to determine whether it exhibits "o" ring swelling.

RESPONSE NO. 83: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 84: Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega has a swollen "o" ring.

RESPONSE NO. 84: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 85: If you contend that adhesion of an Omega sprinkler's "o" ring to the plunger housing or main housing of the Omega may cause the Omega to:

(a) leak and/or weep;
(b) activate prematurely and/or unnecessarily;
(c) fail to activate at 7 psig or below in testing (when the Omega is exposed to its activation/triggering temperature); and/or
(d) fail to activate in field testing (when the Omega is exposed to its activation/triggering temperature); and/or
(e) fail to activate in a fire (when the Omega is exposed to its activation/triggering temperature),

provide all records that you claim or believe support your contention.

RESPONSE NO. 85: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or

commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 86: Provide all records relating in any way to any Omega that has exhibited or allegedly exhibited "o" ring adhesion.

RESPONSE NO. 86: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 87: Provide all records relating in any way to any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64.

RESPONSE NO. 87: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or

other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 88: Provide all records relating in any way to the testing and/or examination of any Omega manufactured after any and all changes listed in your response to Complaint Counsel's Interrogatory No. 64, to determine whether the Omega exhibits "o" ring adhesion.

RESPONSE NO. 88: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 89: Provide all records relating in any way to the methods used by you or anyone on your behalf to determine whether an Omega exhibits "o" ring adhesion.

RESPONSE NO. 89: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from

discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 90: Provide all records relating in any way to any and all fires in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

RESPONSE NO. 90: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 91: Provide all records relating in any way to any testing and/or examination of any Omegas from sites in which all Omegas exposed to temperatures at or in excess of their activation/triggering temperature activated.

RESPONSE NO. 91: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute

trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 92: Provide all records relating in any way to any tests and/or examinations of Omega sprinklers conducted by you or anyone on your behalf.

RESPONSE NO. 92: Central objects to this document request on the grounds and to the extent that it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 93: Provide all records relating in any way to any and all tests and/or examinations of Omega sprinklers conducted pursuant to the protocol in UL 199 or UL 1626, that one or more Omegas did not pass (according to the criteria listed in UL 199 for that test).

RESPONSE NO. 93: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or

other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 94: Provide all records relating in any way to any testing of any Omega conducted by you or on your behalf in which the Omega that, upon being exposed to its activation/triggering temperature, did not activate within 5 seconds at a pressure at or below 7 psig pressure.

RESPONSE NO. 94: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 95: Provide all records relating in any way to any meetings, discussions and/or communications in which you were in any way involved, and/or which you have received, in which the following were discussed:

a) failure of Omega sprinklers to activate in testing or in a fire;

b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;
c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;
d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;
e) if o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;
f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;
g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;
h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;
k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;
l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;
m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems.

RESPONSE NO. 95: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will

make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 96: Provide all records relating in any way to any problem, potential problem, complaint or concern (including any reports of nonactivation or possibility of nonactivation) or which you have been notified, regarding or in any way relating to an Omega sprinkler.

RESPONSE NO. 96: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 97: Provide all records relating in any way to your notification (or notification on your behalf) of any person and/or entity of any and all problems, potential problems, complaints or concerns (including any reports of nonactivation or possibility of nonactivation) regarding or in any way related to any Omega sprinkler.

RESPONSE NO. 97: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the

discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it calls for a legal conclusion. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 98: Provide all records relating in any way to any and all requests for information by you (or on your behalf) to any sprinkler contractor or sprinkler owner regarding any Omega sprinkler, including the sprinkler contractor or owner's response.

RESPONSE NO. 98: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 99: Provide all records relating in any way to your (or anyone on your behalf) provision (either by sale or without charge) of sprinklers to anyone to replace some or all of the Omegas installed in a particular location.

RESPONSE NO. 99: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 100: Provide all records relating in any way to the cost of replacement of any and all Omega sprinklers.

RESPONSE NO. 100: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents that are neither relevant nor reasonably calculated to lead to the discovery of admissible evidence; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; and it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information. Subject to and without waiver of the foregoing objections, Central

responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

REQUEST NO. 101: Provide all records relating in any way to your testing (or testing on your behalf) of any Omega sprinklers from any building or structure in which Omega sprinklers are/were installed.

RESPONSE NO. 101: Central objects to this document request on the grounds and to the extent that it is overly vague, unduly broad, and/or unnecessarily burdensome; it seeks information and/or documents protected from discovery by the attorney-client privilege and/or work product doctrine; it seeks information and/or documents that constitute trade secrets or other confidential research, development, or commercial information; and it is duplicative of other discovery requests. Subject to and without waiver of the foregoing objections, Central responds as follows: pursuant to 16 C.F.R. § 1025.33, Central will make responsive documents available for inspection and copying by Complaint Counsel, subject to the entry of a reasonable Confidentiality Agreement.

CENTRAL SPRINKLER CO.,	)	
Respondents	)	

COMPLAINT COUNSEL'S RESPONSES TO RESPONDENTS' FIRST SET OF INTERROGATORIES

Complaint Counsel hereby responds to Respondents' First Set of Interrogatories.

A. Allegations of the Complaint

1. (a) State whether CSC manufactures Omegas.

If so:

(b) identify and describe any such manufacturing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such manufacturing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such manufacturing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central's

RECEIVED
APR 2 9 1998
MORGAN, LEWIS & BOCK

Carmine Schiavone and George Meyer, and Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC describes itself as "a leading manufacturer or automatic fire sprinkler heads"), and based on statements made by Central's Counsel (as late as an April 7, 1998 letter from Kathleen Sanzo to Eric Stone, Director of Administrative Litigation, in which Ms. Sanzo states that "Central has reviewed its manufacturing records . . ."), Complaint Counsel responds that CSC manufactures Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a description of such manufacturing. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' manufacture of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the identify of every person known or believed to have knowledge of the manufacture of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

2. (a) State whether CSC sells Omegas.

If so:

(b) **identify and describe any such sales;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such sales;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such sales; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: (a) Based on, among other things, representations made by Central's Carmine Schiavone and George Meyer, and Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC states that "approximately 56% of the Company's (defined as Central Sprinkler Corporation at the outset of the section) annual sales are derived from the manufacture and sale of fire sprinkler heads and valves . . . ," Complaint Counsel responds that CSC sells Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a description of such sales. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' sales of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the

identify of every person known or believed to have knowledge of the sale of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

3. (a) State whether CSC markets Omegas.

If so:

(b) identify and describe any such marketing;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such marketing;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such marketing; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Based on, among other things, representations made by Central Sprinkler Corporation in its "Company Information" section on its web site (in which CSC states that "approximately 56% of the Company's (defined as Central Sprinkler Corporation at the outset of the section), based on brochures depicting the Omega line of sprinklers, and based on statements of Central's counsel and corporate officers in submissions and meetings with CPSC staff, Complaint Counsel responds that CSC markets Omegas.

(b) Complaint Counsel is in the process of requesting from Respondents a

description of such marketing. This information is within Respondents' possession.

(c) Complaint Counsel is in the process of requesting from Respondents the identification of all documents describing, evidencing and referring to Respondents' marketing of Omega sprinklers. This information is within Respondents' possession.

(d) Complaint Counsel is in the process of requesting from Respondents the identify of every person known or believed to have knowledge of the marketing of Omega sprinklers. This information is within Respondents' possession.

(e) See response to (d), above.

4. With respect to the allegation of Paragraph 5 of the Complaint that CSC is a "manufacturer" of consumer products:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Complaint Counsel's Response to Interrogatory No. 1, and Complaint Counsel's Opposition to Respondents' Motion to Dismiss.

5. (a) **State whether the C-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

6. (a) **State whether the C-1 A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

7. (a) **State whether the C-1A PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

8. (a) State whether the C-lA PRO ID model of the Omegas constitutes a "consumer product" pursuant to I5 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the

exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

9. (a) State whether the EC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

10. (a) **State whether the EC-20A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

11. (a) **State whether the EC-20 AID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

12. (a) **State whether the HEC- 12 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

13. (a) State whether the HEC-12 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the

exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

14. (a) State whether the HEC-12 PRO model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

15. (a) State whether the HEC-12A PRO model of the Omegas

constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

16. (a) State whether the HEC-12 RES model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

17. (a) **State whether the HEC-20 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or**

believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

18. (a) State whether the HEC-20 ID model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for

a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

19. (a) State whether the R-1 model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine

Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

20. (a) State whether the R-1A model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

21. (a) State whether the R-1 M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C.§ 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion,

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

22. (a) State whether the AC model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

23. (a) **State whether the M model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **set forth the factual basis for this assertion;**

(c) **identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

24. (a) State whether the Flow Control model of the Omegas constitutes a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided

in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

25. **With respect to the allegation of Paragraph 6 of the Complaint that the Omegas are "consumer products":**

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory to the extent that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof. Further evidence is found in the records of testing provided in response to Respondents' Requests for Production, and in Respondents' files. Carmine Schiavone and George Meyer, among others at Central, have knowledge of this assertion.

26. **(a) Separately for each model of the Omegas listed in the Complaint, state whether such model is sold by Respondents directly to consumers. If so:**

(b) identify all documents which describe, evidence, refer, or relate

to any such sales;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such sales; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that sale of an article directly to consumers is not necessary for CPSC jurisdiction.

27. **(a) Separately for each model of the Omegas listed in the Complaint, state whether Respondents market such a model to consumers. If so:**

(b) identify all documents which describe, evidence, refer, or relate to any such marketing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such marketing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that marketing of an article directly to consumers is not necessary for CPSC jurisdiction.

28. (a) Separately for each model of the Omegas listed in the Complaint, state whether such a model is installed by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such installation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such installation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that installation of an article

(and other "direct interaction or manipulation" of a product) directly by consumers is not necessary for CPSC jurisdiction.

29. (a) **Separately for each model of the Omegas listed in the Complaint, state whether such a model is serviced by consumers themselves (as opposed to professional contractors).**

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such servicing;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such servicing; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that servicing of an article (and other forms of "direct interaction" or "active manipulation of a product) directly by consumers is not necessary for CPSC jurisdiction.

30. (a) **Separately for each model of the Omegas listed in the**

Complaint, state whether such a model is repaired by consumers themselves (as opposed to professional contractors).

If so:

(b) identify all documents which describe, evidence, refer, or relate to any such repairs;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such repairs; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that repair of an article (and other forms of "direct interaction" or "active manipulation of a product) directly by consumers is not necessary for CPSC jurisdiction.

31. State whether Omegas installed in buildings used only as storage facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "storage facility" is undefined, unclear, vague and ambiguous. If by "storage facility," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

32. State whether Omegas installed in warehouses constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "warehouses" is undefined, unclear, vague and ambiguous. If by "warehouses," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

33. State whether Omegas installed in factories constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "factories" is undefined, unclear, vague and ambiguous. If by "factories," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over "products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers**." As stated in Complaint Counsel's Opposition, Omega

sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

33. **State whether Omegas installed in computer facilities constitute "consumer products" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) set forth the factual basis for this assertion;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this assertion;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this assertion;

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that the term "computer facilities" is undefined, unclear, vague and ambiguous. If by "computer facilities," Respondents intend to refer to industrial facilities, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, the exhibits in support thereof, and the applicable statutes and case law cited therein, which indicate that the CPSC has jurisdiction even over

"products which are primarily or exclusively sold to industrial or institutional buyers so long as they were produced or distributed **for use of consumers.**" As stated in Complaint Counsel's Opposition, Omega sprinklers are produced and distributed for use of and enjoyment by consumers, and therefore are consumer products subject to CPSC's jurisdiction.

35. State whether there are any factual circumstances under which any Omegas would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).

If so:

(b) identify and describe any such circumstances;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and

(e) describe in detail the substance of each such person's knowledge and/or information

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for speculation. Complaint Counsel further objects to this Interrogatory requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel points Respondents to its Opposition to

Respondents' Motion to Dismiss this action, and the exhibits in support thereof, which demonstrate that Omegas are consumer products with CPSC's jurisdiction.

36. (a) **State whether there are any factual circumstances under which any non- Omega sprinkler heads would not constitute a "consumer product" pursuant to 15 U.S.C. § 2052(a)(1).**

If so:

(b) **identify and describe any such circumstances;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such circumstances;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such circumstances; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The jurisdictional question that Respondents have raised in this litigation is whether Omega sprinklers are consumer products. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof, which demonstrate that Omegas are consumer products with CPSC's jurisdiction.

37. (a) **Separately for each model of the Omegas listed in the Complaint, describe any and all ways in which consumers use, consume, and/or enjoy such a model.**

(b) **identify all documents which describe, evidence, refer, or relate to any such use, consumption, or enjoyment;**

(c) **identify each and every person whom Complainant knows and/or believes to have knowledge of any such use, consumption, or enjoyment; and**

(d) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel points Respondents to its Opposition to Respondents' Motion to Dismiss this action, and the exhibits in support thereof.

38. **With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" NFPA Standard 13:**

(a) **identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;**

(b) **identify which specific sub-sections of NFPA Standard 13, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;**

(c) identify which specific sub-sections of NFPA Standard 13, if any, address the required residual water pressure at the most remote sprinkler head in a system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of NFPA Standard 13, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi (pounds per square inch) the testing standard that Complainant contends is created by NFPA Standard 13 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

39. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199:

(a) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which previously installed sprinkler heads should activate when such heads are removed and tested;

(b) identify which specific sub-sections of UL Standard 199, if any, address the operating water pressure at which installed sprinkler heads should activate when such heads are still incorporated into the sprinkler system;

(c) identify which specific sub-sections of UL Standard 199, if any, address the required residual water pressure at the most remote sprinkler head in a

system after the other sprinkler heads are open and flowing;

(d) identify which specific sub-sections of UL Standard 199, if any, are applicable to the allegations of the Complaint; and

(e) describe in terms of psi the testing standard that Complainant contends is created by UL Standard 199 that applies to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

40. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are "designed to perform in accordance with" UL Standard 199 and NFPA Standard 13:

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that the Standard speaks for itself.

41. With respect to the allegation of Paragraph 8 of the Complaint that the Omegas are designed to perform in accordance with certain standards "when exposed to certain temperatures":

(a) describe in terms of both degrees Fahrenheit and Celsius what temperatures are meant by the phrase "certain temperatures";

(b) set forth the factual basis for this allegation,

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) The temperatures referred to are the activation/triggering temperatures of the Omega sprinklers.

(b) See (a), above. UL 199, and UL correspondence and listing files for Omega sprinklers, which were received by Complaint Counsel in confidence by a third party, and will be produced to Respondents upon receipt of permission from the third party for disclosure to Respondents.

(c) See response to (b), above. Complaint Counsel has requested this information from Respondents in discovery, but expects that various

Central and UL employees will be included.

(d) Complaint Counsel has requested this information from Respondents in discovery.

(e) See (d), above.

42. (a) State whether Complainant contends that there is a single standard of water pressure (in psi) at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such a standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad, and seeks irrelevant information pertaining to sprinklers other than Omegas. Without waiving its objections, Complaint Counsel responds that once an Omega is removed from service, it will not create the substantial risk of injury to the public of which Complainant complains. Omega sprinklers fail to activate as designed

and, in many cases, will not activate at pressures that far exceed the water pressure that may be available in the system at the time of a fire.

43. (a) State whether Complainant contends that there is a single standard of temperature at which previously installed sprinkler heads must activate when tested to be deemed by the Complainant as not presenting any substantial risk of injury to the public and/or substantial product hazard;

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to previous Interrogatory. According to Respondents, Omega sprinklers are designed to activate at particularly defined activation/triggering temperatures, based on the temperature at which the fusible link in their heat collector is intended to convert from solid to liquid form.

44. (a) Describe the percentage of previously installed sprinkler heads that must activate at the standards described in Interrogatory Nos. 42-43 when tested in order to be deemed by the Complainant as not presenting any substantial risk of injury to public and/or substantial product hazard;

(b) identify all documents which describe, evidence, refer, support, or relate to such a percentage;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of such a percentage; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory Nos. 42 and 43.

45. (a) State whether Complainant contends that there is a standard of "failure" that will accurately predict whether a particular Omega will fail to activate in a fire when used in a particular building without regard to the actual hydraulic pressure that exists in the building.

If so:

(b) identify and describe any such standard;

(c) identify all documents which describe, evidence, refer, support, or relate to any such standard

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such standard; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the grounds that it is vague, ambiguous and confusing. Complaint Counsel also objects to this Interrogatory

on the ground that the terms "standard of failure" and "actual hydraulic pressure that exists in the building" are undefined, unclear, vague and ambiguous. The pressure in a building may fluctuate depending on numerous factors. Without clarification of these terms, and additional information as to those factors, Complaint Counsel is unable to respond to this Interrogatory.

46. (a) State whether Complainant contends that if a particular Omega does not activate at a minimum of 7 psi when tested, such an Omega would not activate if a fire occurred in a building where such Omega was installed.

(b) set forth the factual basis for any such contention;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the term "activate" is undefined, unclear, vague and ambiguous. Without waiving its objection, Complaint Counsel responds that it contends that if a particular Omega does not activate, as that term is defined in Complaint Counsel's discovery requests, upon exposure to its activation/triggering temperature in testing, it would not activate when exposed to that same temperature in a fire that were to occur in a building in which it was installed.

Moreover, to the extent that Omegas have been found to fail at test pressures far in excess of 7 psig, Respondents' Interrogatory is irrelevant.

47. Describe the average static water pressure (in psi) present in the sprinkler systems of most residential buildings.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "most residential buildings" and "average static water pressure" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that it is confusing and ambiguous, as it fails to identify the location of the buildings, or define the other factors upon which the water pressure of a building at any given time depends. The water pressure in different areas of the country (and even in different areas of a state) is different, and the water pressure of a single building may fluctuate depending upon various factors. Without additional information as to each of those variants, a response to this question is impossible.

48. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most residential buildings, after the system has been activated.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "average residual water pressure," "most remote sprinkler head in the sprinkler systems," "most residential buildings" and "activated" are undefined, unclear, vague and

ambiguous. Complaint Counsel reiterates its objections and comments in response to Respondents' Interrogatory No. 47.

49. Describe the average static water pressure (in psi) present in the sprinkler systems of most commercial buildings.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "most commercial buildings" and "average static water pressure" are undefined, unclear, vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel also objects to this Interrogatory on the ground that it is confusing and ambiguous, as it fails to identify the location of the buildings, or define the other factors upon which the water pressure of a building at any given time depends. The water pressure in different areas of the country (and even in different areas of a state) is different, and the water pressure of a single building may fluctuate depending upon various factors. Without additional information as to each of those variants, a response to this question is impossible.

50. Describe the average residual water pressure (in psi) present at the most remote sprinkler head in the sprinkler systems of most commercial buildings, after the system has been activated.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "average residual water pressure," "most remote sprinkler head in the sprinkler systems," "most commercial buildings" and "activated" are undefined, unclear, vague and

ambiguous. Complaint Counsel reiterates its objections and comments in response to Respondents' Interrogatory No. 49.

51. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas "do not and/or will not function":

(a) separately for each Omega model listed in the Complaint, describe in detail all of the causes and/or reasons that the Omegas "do not and/or will not function";

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not likely to lead to the discovery of admissible evidence. It is not relevant why Omegas do not and will not function -- it is relevant that they do not and will not function. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a definitive response to this Interrogatory at this time. Available information suggests that the Omega sprinkler design is inadequate for its

intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test results and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such

persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory.

52. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas do not and/or will not function in a "significant percentage" of instances:**

(a) expressed in terms of a specific percentage, describe what constitutes "a significant percentage" regarding this allegation;

(b) set forth the factual basis for this allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) In the current case, CPSC's compilation of test data from various sources, including but not limited to Central, UL and FM, indicates that Omegas have an overall failure rate of approximately 40%.

(b) The factual basis for this allegation is the test data that indicates that

Omegas have an overall failure rate of approximately 40%.

(c) All non-privileged test data that forms the basis of Complaint Counsel's allegation will be produced to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omegas, are all knowledgeable about the basis for this allegation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory.

53. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-I model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which

it intends to produce to Respondents, that Om-gas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with

Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

54. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-l A model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function

in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce this evidence to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their

properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

55. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C-1A PRO model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function

in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their

properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

56. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the C- IA PRO ID model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has

requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who

have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

57. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the EC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate

to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s).

Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

58. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the EC-20A model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate

at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers,

as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

59. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the EC-20 AID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is

inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals

knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

60. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of

Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

61. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-I 2 ID model of the

Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the

failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel

will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

62. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC- 12 PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires

in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

63. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12A PRO model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it

intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about

Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

64. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the HEC-12 RES model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) **describe in detail the substance of each such person's knowledge and/or information about any such contention.**

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention.

Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the

knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

65. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the HEC-20 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would

reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas

that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

66. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the HEC-20 ID model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on

these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

67. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the R-1 model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate

at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers,

as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

68. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

If so:

(a) state whether Complainant contends that the R-1A model of the Omegas is defective;

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is

inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals

knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

69. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the R-IM model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of

Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

70. With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":

(a) state whether Complainant contends that the AC model of the Omegas

is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the

failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel

will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

71. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) state whether Complainant contends that the M model of the Omegas is defective;

If so:

(b) identify and describe any such defect:

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant

to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will

produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

72. **With respect to the allegation of Paragraph 10 of the Complaint that the**

Omegas are "defective":

(a) state whether Complainant contends that the Flow Control model of the Omegas is defective;

If so:

(b) identify and describe any such defect;

(c) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: (a) Complaint Counsel contends that all Omega sprinklers are defective pursuant to 15 U.S.C. § 2064.

(b) Complaint Counsel's allegation that Omega sprinklers are defective pursuant to 15 U.S.C. § 2064 is based upon the results of testing of approximately 6,000 Omega sprinklers, of which approximately 40% have failed to activate at or below 7 psig when exposed to their activation/triggering temperature. Omega sprinklers have also reportedly failed to activate in at least eight fires. Complaint Counsel has insufficient information at this time that would reveal why Omegas do not function in a significant percentage of instances; however, Complaint Counsel knows from the data it has, and which it intends to produce to Respondents, that Omegas do fail to function in a

significant percentage of instances. Complaint Counsel has requested information from Respondents in discovery as to the cause and nature of the failure of Omegas to activate in testing and in actual fire situations. Available information suggests that the Omega sprinkler design is inadequate for its intended use, and that Respondents' poor manufacturing and quality control procedures may have exacerbated the design problem(s). Complaint Counsel has requested further information from Respondents on these issues in discovery.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas are defective. Complaint

Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (d) is in part revealed in those documents.

73. **With respect to the allegation of Paragraph 10 of the Complaint that the Omegas are "defective":**

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel has already been asked and answered this Interrogatory. See Interrogatory No. 53, and Complaint Counsel's response thereto.

74. **State whether the failure of any Omega to function has resulted in any bodily injury or injuries.**

Response: Assuming that "failure of any Omega to function" is the failure of an Omega to activate when exposed to its activation/triggering temperature, Complaint Counsel responds that it has information at this time that would indicate that the failure of an Omega to function has resulted in injury or injuries. Complaint Counsel is continuing its investigation of this matter, and has requested this information from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding fires involving Omega sprinklers.

75. **State whether the failure of any Omega to function has resulted in any death or deaths.**

Response: Assuming that "failure of any Omega to function" is the failure of an Omega to activate when exposed to its activation/triggering temperature, Complaint Counsel responds that it has insufficient information at this time to respond to this Interrogatory. Complaint Counsel is continuing its investigation of this matter, and has requested this information from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding fires involving Omega sprinklers.

76. **With respect to the allegation of Paragraph 13 of the Complaint that "failure of the Omegas to function exposes the public to bodily injury and/or death":**

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) When an Omega sprinkler does not function in a fire situation, smoke and flames from the fire can cause injury and/or death.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. All persons who have knowledge of fires and/or fire behavior and/or the effects of fire on persons and property exposed to fire, have knowledge of the risk to which the public is exposed in a fire

situation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (c) is in part revealed in those documents.

77. **With respect to the allegation of Paragraph 15 of the Complaint that the defect or the defects in the Omegas create a "substantial risk of injury to the public":**

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) When an Omega sprinkler does not function in a fire situation, smoke and flames from the fire can cause injury and/or death.

(b) The Complaint refers, relates to, and provides evidence of this allegation. Central's test results, and the results of testing of Omegas by or for UL, FM and CPSC are the basis for this allegation, as is the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, and any sprinkler contractors and/or AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about the basis for this allegation. All persons who have knowledge of fires and/or fire behavior and/or the effects of fire on persons and property exposed to fire, have knowledge of the risk to which the public is exposed in a fire situation. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery. Complaint Counsel will produce all non-privileged and non-confidential documents regarding testing and fires involving Omega sprinklers, which identify the individuals knowledgeable about same.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is

overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel has insufficient information upon which to formulate a response to this Interrogatory, beyond stating that the knowledge possessed by the persons identified by the documents referenced in (c) is in part revealed in those documents.

78. (a) **State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate in a fire.**

If so:

(b) **identify and describe any such failures;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

79. (a) **State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 have ever failed to activate under any type of testing.**

If so:

(b) **identify and describe any such a contention;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers.

80. (a) State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate in a fire.

If so:

(b) identify and describe any such failures;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to

activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

81. (a) **State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 have ever failed to activate under any type of testing.**

If so:

(b) **identify and describe any such testing;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Complaint Counsel further objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged information it has with respect to testing of Omega sprinklers.

82. (a) **State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in a fire.**

If so:

(b) **identify and describe any such failures;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections,

Complaint Counsel will provide all non-privileged information it has with respect to fires that have occurred in which Omegas reportedly did not activate, as that term is defined by Complaint Counsel in its discovery to Respondents.

83. (a) **State whether the Complainant contends that any Omegas manufactured from 1996 through the present and using silicone o-rings have ever failed to activate in any type of testing.**

If so:

(b) **identify and describe any such testing;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: Complaint Counsel objects to this Interrogatory to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that the term "failed to activate" is undefined, unclear, vague and ambiguous. Complaint Counsel is unable to formulate a response to this Interrogatory without clarification of how Respondents define a failure to activate. Without waiving its objections, Complaint Counsel will provide all non-privileged and non-confidential information it has with respect to testing of Omega sprinklers. Complaint Counsel adds that one of the three Omega

sprinklers it received from Respondents in February, 1998, which had just been manufactured a few weeks earlier and had never yet been installed in a sprinkler system, did not activate (as that term is defined in Complaint Counsel's discovery requests to Respondents) when exposed to its activation/triggering temperature. The sprinkler partially deployed, releasing drips of water only, and then the fusible link cold soldered, preventing activation. Complaint Counsel has shared this knowledge with respondents, and asked for an explanation of what, why and how this occurred.

84. (a) State whether the Complainant contends that any Omegas used with plastic piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel

responds that it contends that all Omega sprinklers are substantial product hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities

of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

85. (a) **State whether the Complainant contends that any Omegas used with copper piping systems installed after 1990 constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).**

If so:

(b) **identify and describe any such hazards;**

(c) **identify each and every document that describes, evidences, refers, or relates in any way to such a contention;**

(d) **identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and**

(e) **describe in detail the substance of each such person's knowledge and/or information.**

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it is impossible to ascertain whether the Interrogatory seeks information regarding piping systems installed after 1990, or regarding Omegas installed after 1990 (regardless of when the system was installed). Without waiving its objection, Complaint Counsel responds that it contends that all Omega sprinklers are substantial product

hazards pursuant to 15 U.S.C. § 2064, regardless of the type of piping in which they may be used.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

86. (a) State whether Complainant contends that any Omegas manufactured using silicone o-rings constitute a "substantial product hazard" pursuant to 15 U.S.C. § 2064(a).

If so:

(b) identify and describe any such hazards;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel contends that all Omega sprinklers, including those with silicone "o" rings, are substantial product hazards pursuant to 15 U.S.C. § 2064.

(b) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(c) The Complaint refers, relates to, and provides evidence of this contention.

Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this contention, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

87. (a) **State whether the Complainant contends that the performance of**

Omegas declines or deteriorates over time.

If so:

(b) identify and describe any such performance decline or deterioration;

(c) identify each and every document that describes, evidences, refers, or relates in any way to such a contention;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such a contention; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that the phrase "performance of Omegas declines or deteriorates over time" is undefined, unclear, vague and ambiguous and, without clarification of same, it is impossible to formulate a response to this Interrogatory. However, deterioration of o-ring material and corrosion, which available evidence suggest may contribute to failure of Omega sprinklers, may be progressive events.

88. With respect to the allegation of Paragraph 16 of the Complaint that the Omegas present a "substantial product hazard":

(a) set forth the factual basis for such an allegation;

(b) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(d) describe in detail the substance of each such person's knowledge and/or

information.

Response: (a) Omega sprinklers are defective pursuant to 15 U.S.C. § 2064, as they may fail in a fire situation, and thus create a substantial risk of injury to the public.

(b) The Complaint refers, relates to, and provides evidence of Complaint Counsel's allegation that Omegas present a substantial product hazard. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this allegation, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(c) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's contention. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's contention that Omegas present a substantial product hazard. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(d) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection, Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

89. With respect to the allegation of Paragraph 16 of the Complaint that "action under these provisions is in the public interest":

(a) identify and describe all of the public interest factors which Complainant believes favor "action under these provisions";

(b) set forth the factual basis for such an allegation;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to this allegation;

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of this allegation; and

(e) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Preservation of life, health and public safety, and avoidance of the risk of injury and death created by Omega sprinklers, which may fail in a fire situation.

(b) Taking Omegas out of service will abolish the risk of injury and/or death they pose to the public.

(c) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome, as all documents relating to fire behavior and injury

and death caused or potentially caused by fire are responsive. Without waiving its objection, Complaint Counsel responds that the Complaint refers, relates to, and provides evidence of Complaint Counsel's allegation that action under 15 U.S.C. § 2064 is in the public interest. Central's test results, and the results of testing of Omegas by or for, among others, UL, FM and CPSC support and relate to this allegation, as does the evidence of fires in which Omegas have reportedly failed to activate. Complaint Counsel will produce all non-privileged and non-confidential test and fire data to Respondents.

(d) Respondents, CPSC, the media and the general public have knowledge of Complaint Counsel's allegation. The Complaint is a public document. Respondents, CPSC, UL, FM, and others who have tested Omega sprinklers, as well as all homeowners and building owners and/or managers who have had problems with Omega sprinklers, and/or who have experienced fires on their properties, damage to their property, or injury as a result of Omegas that have failed to function, as well as sprinkler contractors and AHJs who have dealt with defective Omega sprinklers, are all knowledgeable about Complaint Counsel's allegation that action under this section is in the public interest. Complaint Counsel is in the process of investigating the identities of all such persons, and has requested same from Respondents in discovery.

(e) Complaint Counsel objects to this Interrogatory on the ground that it is overly broad and unduly burdensome. Without waiving its objection,

Complaint Counsel responds that it has insufficient information upon which to formulate a response to this Interrogatory.

90. With respect to the allegation of Paragraph B(1) of the Complaint that Respondent give prompt "public notice of the defect in the Omegas," identify and describe the "public notice" that the Complainant seeks to impose.

Response: Complaint Counsel would seek to impose public notice pursuant to 15 U.S.C. § 2064 (c), including the following: public notice of the defect; mailing of notice to each person who is a manufacturer, distributor or retailer of Omega sprinklers; notice to every person to whom Respondents know Omega sprinklers were delivered or sold.

91. With respect to the allegation of Paragraph C(3) of the Complaint regarding repair of all Omegas so they will "perform properly," identify and describe what would constitute "performs properly" for purposes of the Complainant.

Response: Proper performance of an Omega sprinkler is full (rather than partial or no) activation of the sprinkler upon exposure to its activation/triggering temperature, as defined in Complaint Counsel's discovery to Respondents.

92. With respect to the allegation of Paragraph C(3) of the Complaint regarding the replacement of all Omegas "with a like or equivalent product which performs properly":

(a) identify and describe any and all "like or equivalent product which performs properly";

(b) state whether Complainant believes that Omegas with a silicone o-ring

qualify as a "like or equivalent product which performs properly"; and

(c) state whether Complainant believes that Omegas with a spring collar qualify as a "like or equivalent product which performs properly."

Response: (a) "Like or equivalent product which performs properly" is a fire sprinkler that, upon exposure to its activation/triggering temperature, activates fully (rather than partially or not at all).

(b) No. Complaint Counsel believes that Omegas with silicone o rings also do not or will not perform properly.

(c) No. Complaint Counsel believes that Omegas with a spring collar also do not or will not perform properly. Moreover, use of a spring collar with a sprinkler is prohibited in a number of, if not most, jurisdictions.

93. With respect to the allegation of Paragraph C(3) of the Complaint regarding a "refund to consumers [of] the purchase price of the Omegas," identify and describe how Complainant would calculate or determine a "refund to consumers [of] of the purchase price of the Omegas."

Response: Complaint Counsel has insufficient information at this time to determine how a refund of the purchase price of Omegas would be calculated. Complaint Counsel has requested from Respondents in discovery information pertaining to sale and installation prices for Omega sprinklers.

94. (a) If the Commission orders Respondents to repair some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(1), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant

contends should be reimbursed to persons by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). At minimum, it can be expected that consumers would face costs associated with contacting Respondents, obtaining replacement sprinklers, and installing same. The details of any such effort by Respondents will determine these and other expenses.

95. **(a) If the Commission orders Respondents to replace some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(2), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.**

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or

information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). At minimum, it can be expected that consumers would face costs associated with contacting Respondents, obtaining replacement sprinklers, and installing same. The details of any such effort by Respondents will determine these and other expenses.

96. (a) **If the Commission orders Respondents to refund some or all of the Omegas pursuant to 15 U.S.C. § 2064(d)(3), identify and describe the nature and amount of the "reasonable and foreseeable expenses" under 15 U.S.C. § 2064(e)(1) that Complainant contends should be reimbursed to persons by Respondents.**

(b) **identify all documents which describe, evidence, refer, support, or relate to any such contention;**

(c) **identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and**

(d) **describe in detail the substance of each such person's knowledge and/or information about any such contention.**

Response: Complaint Counsel has insufficient information at this time to identify all reasonable and foreseeable expenses that will be incurred by people in availing themselves of any remedy provided under an order issued under 15 U.S.C. § 2064(d), pursuant to 15 U.S.C. § 2064(e). See also response to Interrogatory No. 94.

97. (a) **If the Commission orders Respondents to repair some or all of the**

Omegas pursuant to U.S.C. § 2064(d)(1), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

98. (a) **If the Commission orders Respondents to replace some or all of the Omegas pursuant to U.S.C. § 2064(d)(2), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.**

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(c) identify each and every person whom Complainant knows and/or

believes to have knowledge of any such contention; and

(d) describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

99. (a) If the Commission orders Respondents to refund the purchase price to some or all of the Omegas pursuant to U.S.C. § 2064(d)(3), identify and describe the nature and amount of the reimbursement to "any other person who is a manufacturer, distributor, or retailer of such product for such other person's expenses in connection with carrying out the order" that Complainant contends should be made by Respondents.

(b) identify all documents which describe, evidence, refer, support, or relate to any such contention;

(d)[sic] identify each and every person whom Complainant knows and/or believes to have knowledge of any such contention; and

(e)[sic] describe in detail the substance of each such person's knowledge and/or information about any such contention.

Response: Complaint Counsel has insufficient information at this time to identify all expenses in connection with carrying out an order under 15 U.S.C. § 2064(c) or (d), that Respondents would have to reimburse other manufacturers, distributors or retailers of Omega sprinklers. See also response to Interrogatory No. 94.

B. Potential Witnesses

100. Identify all former and/or current employees of Respondents with whom Complainant has had any contact regarding the Omegas. For each such person, identify and describe:

(a) the person's name;

(b) the person's last known home and business address;

(c) the person's last known telephone number;

(d) the person's last known position with Respondents;

(e) the date of any such contacts;

(f) the nature of any such contacts (e.g., letter, telephone conversation, in-person interview);

(f)[sic] a detailed description of the subject matter of such communication; and

(g) the identity of any other persons who were present during such contacts.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel intends to submit certain information to the Presiding Officer for in camera review and determination of whether to provide the material to Respondents, and under what conditions.

101. For each and every contact describe an [sic] response to Interrogatory No. 100,

identify each and every document that describes, evidences, refers, or relates to such contacts, including without limitation any notes of such contacts, documents shown during the course of such contacts, lists of questions or answers given, or any reports of such communications.

Response: Complaint Counsel objects to the phrase "any contact" on the ground that it is vague and ambiguous. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

102. **Identify each and every person whom Complainant knows and/or believes to have knowledge or information concerning or related to the subject matter of the Complaint or other discoverable information. For each such person, describe:**

(a) **the person's name;**

(b) **the person's last known home and business address;**

(c) **the person's last known telephone number;**

(d) **the corporate or government affiliation of the person;**

(e) **whether the Complainant has contacted such person; and**

(f) **the specific subject matter of the person's knowledge.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome -- there are thousands of people and entities who have information concerning or related to Omega sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in

anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it believes that Respondents and their current and former employees have such knowledge and information.

103. **Identify each and every fact witness that Complainant expects to testify on its behalf at the hearing in this matter. For each such fact witness, identify and describe:**

(a) the name, title, business address, and home address for each such witness; and

(b) the subject matter about which each witness is expected to testify.

Response: Complaint Counsel has not yet determined which witnesses it will call to testify at the hearing in this matter.

104. **Identify each and every expert witness whom the Complainant expects to testify on its behalf at the hearing in this matter. For each such expert, identify and describe:**

(a) the expert's name, title, home address, business address, education, employment since graduation from high school, and all publications authored or edited by the expert;

(b) the subject matter on which each expert is expected to testify;

(c) the substance and facts upon which the expert relies in forming his or her opinion;

(d) the opinions to which the expert is expected to testify;

(e) a summary of the grounds for each such opinion;

(f) and a statement and description of all information and documents upon which the expert relies or expects to rely.

Response: Complaint Counsel objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts. Without waiving its objection, Complaint Counsel responds that it has not yet determined which witnesses it will call to testify at the hearing in this matter. Complaint Counsel will supplement its response as such decisions are made.

105. Identify and describe any and all oral or written statements made by Respondents that the Complainant contends constitute an admission with reference to any of the issues raised in the Complaint. For each such statement, identify and describe:

(a) the person making the alleged statement;

(b) that person's relationship to Respondents;

(c) the content of the statement;

(d) the date, time, and place of the statement;

(e) the nature of the alleged statement (e.g., written or oral); and

(f) the identity of each person who heard the statement or otherwise has personal knowledge of the statement.

Response: Complaint Counsel objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome, and requests information already in Respondents' possession. Complaint Counsel further objects to this Request to the extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery

by the work product privilege. Complaint Counsel further objects to this Request on the ground that it calls for a legal conclusion. Without waiving its objections, Complaint Counsel responds that any and all statements made by Respondents may constitute an admission by Respondents in this matter.

C. Other Allegations Made By the CPSC

106. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "based on multiple random inquiries of sprinkler contractors across the nation in the recent past, we believe that Central's proposed labor payment falls considerably short of what has been, and remains, customarily required to remove and install sprinklers ...." With respect to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify each and every document that constitutes, evidences, refers, or relates in any way to the "multiple random inquiries of sprinkler contractors";

(d) identify each and every person whom Complainant knows and/or believes to have knowledge of such "multiple random inquires of sprinkler contractors";

(e) describe in detail the substance of each such person's knowledge and/or information of such "multiple random inquiries of sprinkler contractors";

(f) identify and describe in terms of a specific monetary amount "what has been, and remains, customarily required to remove and install sprinklers";

(g) identify each and every document that constitutes, evidences, refers, or

relates in any way to "what has been, and remains, customarily required to remove and install sprinklers";

(h) identify each and every person whom Complainant knows and/or believes to have knowledge of "what has been, and remains, customarily required to remove and install sprinklers"; and

(i) describe in detail the substance of each such person's knowledge and/or information of "what has been, and remains, customarily required to remove and install sprinklers."

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege and . Without waiving its objection, Complaint Counsel responds that a labor payment of $5.00 per sprinkler, as suggested by Central's George Meyer in November, 1997, is inadequate to compensate consumers for the charge of replacing their Omega sprinklers.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that Complaint Counsel conducted inquiries of many sprinkler contractors as to the labor expense involved in removing and replacing sprinkler heads. In all

instances, sprinkler contractors indicated that the figure suggested by Central's President was grossly low, and that on average the cost may be three to six times that amount, depending on the facility.

(c) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that Counsel's written notes of its conversations relate to and evidence its inquiries of sprinkler contractors, as does an invoice from a sprinkler contractor relating to replacement of Omegas, which Complaint Counsel will produce to Respondents.

(d) Eric Singer has knowledge of such inquiries. To a lesser extent, Eric Stone, Catherine Anne Cumberland, Andrew Stadnik, Rohit Khanna, and Nicholas Marchica have knowledge of such inquiries.

(e) See response to (b), above.

(f) See response to (b), above. Please note that this cost does not include the cost for the replacement sprinkler, nor can it account for special reconstruction of the sprinkler system such as recutting the drop.

(g) Other than the letter to which Respondents refer, as well as notes reflecting its inquiries of sprinkler contractors, which are Complaint Counsel's work product, Complaint Counsel possesses one invoice from a sprinkler contractor relating to replacement of Omegas, which it will produce to

Respondents.

(h) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies the following individuals of whom it is aware:

1) David Dixon, Exec. V.P., David Dixon, (b) (6) (b) (6)

2) Jeffrey Larson, Viking Automatic Sprinkler Company, 3434 First Avenue South, Seattle, Washington 98134-1894

3) Fred Jackson, President, Jackson Fire Protection, 1906 Grace Ave., Ft. Myers, FL 33901

4) William L. Oliver, President, Oliver Sprinkler Co., Inc., 501 Feheley Drive, King of Prussia, PA 19046

5) John C. Livingston, Jr. Chairman and CEO, Livingston Fire Protection, Inc., 5150 Lawrence Place, Hyattsville, MD 20781

6) Peter Miller, Miller Fire Protection, 2750 Marble Ct., Forestville, MD 20747

7) Thomas E. Strange, Vice President of Operations, Worsham Sprinkler Company, 400 East Arrowhead Drive, University Trade Center, Charlotte, North Carolina, 28213

8) James Lewis, American Fire Sprinkler Corp., 210 North 28A

Highway #B, Great Bend, Kansas 67530

Complaint Counsel believes that hundreds of other sprinkler contractors have knowledge of what has been and remains customarily required [in terms of labor costs] to remove and install sprinklers. At present, Complaint Counsel has insufficient information to identify them.

(i) Complaint Counsel objects to this subpart on the ground that it overbroad and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

107. **In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view that dezincification alone is the cause of above-required operating pressures in Omegas from plastic pipe ...." With regard to this statement:**

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or

believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that dezincification, Respondents' proposed explanation for the high activation pressures required to activate some Omegas that were installed in plastic pipe, cannot be the only explanation.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it has evidence of at least one fire (Kent Manor Inn) in which Omega sprinklers installed in a plastic piping system that contained no copper (which Respondents claim is a prerequisite to dezincification) did not activate, and showed no signs of dezincification upon visual inspection. A number of other Omegas that have required high activation pressures in order to activate in testing have also shown no sign of dezincification, e.g., a 1992 Omega from The Fairways at Piper Glen, N.C. As well, evidence

indicating dezincification in sprinklers that have activated tends to cast doubt on the existence of a causal connection between dezincification and high activation pressures required for, or non-activation of, Omegas. In one such instance (the Madison Park Condominiums), Central itself concluded that all eight Omegas that it tested showed signs "characteristic of dezincification," yet apparently four of eight Omegas that it tested failed to activate, in part, Central claimed, as a result of swollen "o" rings. At least one forensic study of which Complaint Counsel is aware has determined that dezincification is not the cause for failure of Omegas from plastic piping systems.

(c) See response to subpart (b), above.

(d) The letter to Ms. Sanzo constitutes and evidences the statement made therein. The results of tests of Omega sprinklers relate to the contention made therein, as does the evidence of the fire at the Kent Manor Inn, both of which will be produced to Respondents. The scientific study referred to above was supplied to Complaint Counsel under a claim of confidentiality; Complaint Counsel awaits authorization from a third party to release the documents to Respondents and, if necessary, a confidentiality stipulation by Respondents and/or protective order by the Presiding Officer.

(e) The letter to Ms. Sanzo is not a public document; Complaint Counsel, other members of the CPSC staff, and Respondents have knowledge of the statement made in the letter to which Respondents refer.

(f) Complaint Counsel objects to this subpart on the ground that it is overbroad

and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

108. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "the evidence we have gathered does not support the view . . . that swollen o-rings due to cutting oil exposure are the exclusive cause of non-activation in Omegas manufactured before 1996." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all of the "evidence we have gathered";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product

privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that swollen "o" rings due to cutting oil exposure Respondents' proposed explanation for the high activation pressures required to activate some Omegas that were installed in steel pipe) cannot be the only explanation for non-activation of Omegas.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that:

1) it had (and still has) received no evidence from Respondents that Omegas were in fact exposed to excessive hydrocarbons, or that hydrocarbons were the source of any "o" ring swelling;

2) there is evidence of Omegas that showed no "o" ring swelling that did not activate when exposed to their activation/triggering temperature in testing;

3) there are at least two studies that have attributed failure of Omegas to causes other than swollen "o" rings;

4) Central's own public statement in May, 1996, that "the presence of high concentrations of hydrocarbons (found in petroleum based cutting fluids), in conjunction with varying degrees of corrosion," (emphasis added), suggests that swelling due to excessive

hydrocarbons is not the only cause of failure in these Omegas;

5) A number of Omegas that have activated properly in testing have exhibited swollen "o" rings.

(c) See response to subpart (b), above.

(d) The letter to Ms. Sanzo constitutes and evidences the statement made therein. The results of tests of Omega sprinklers relate to the contention made therein, and will be produced to Respondents. The scientific studies referred to above were supplied to Complaint Counsel under a claim of confidentiality; Complaint Counsel awaits authorization from a third party to release the documents to Respondents, the execution of an appropriate confidentiality stipulation by Respondents, and/or a protective order from the Presiding Officer.

(e) The letter to Ms. Sanzo is not a public document; Complaint Counsel, other members of the CPSC staff, and Respondents have knowledge of the statement made in the letter to which Respondents refer.

(f) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome, and requests information pertaining to the knowledge of persons other than the Complainant. Without waiving its objection, Complaint Counsel reiterates its response to subpart (b), and indicates that it otherwise has insufficient information with which to respond to this subpart.

109. In a November 24, 1997 letter from Eric Singer of the CPSC to Kathleen Sanzo, Singer states, "rather, primarily, the data points to multiple failure modes rooted in

the design and construction of these sprinklers." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe the "multiple failure modes rooted in the design and construction of these sprinklers";

(d) identify and describe "the data" referenced in the statement;

(e) identify and describe each and every document that constitutes, evidences, refers, or relates in any way to this statement;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of this statement; and

(g) describe in detail the substance of each such person's knowledge and/or information.

Response: Complaint Counsel objects to this Interrogatory on the ground that it misquotes the letter from Complaint Counsel to Counsel for Respondents. The letter states that preliminarily the data points to multiple failure modes rooted in the design and construction of these sprinklers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to

the discovery of admissible evidence. Complaint Counsel's theories on the basis for the activation failure of Omega sprinklers is irrelevant, as it is the fact that the Omegas fail, and not why they fail, that is at issue herein. Without waiving its objection, Complaint Counsel responds that it contends that none of the proposed explanations that Respondents have suggested are, alone, sufficient to explain the activation failures of Omegas. See responses to Interrogatories 107 and 108 for an explanation of Complaint Counsel's position, and the bases therefor.

110. **In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC refuses to accept a "testing based corrective action proposal" from Respondents. With regard to this rejection:**

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for rejecting a "testing based corrective action proposal";

(c) identify and describe any and all reasons that the CPSC believes are correct in rejecting such a proposal;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the rejection of this proposal;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of the rejection of this proposal; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: See Response to Interrogatory No. 114, below.

111. In a February 19, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, the CPSC states that "Central continues to insist on selling Omega sprinklers with silicone o-rings despite serious concerns about whether they will function in the long term." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all "serious concerns" that the CPSC has regarding the functioning of Omega sprinklers with silicone o-rings;

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such "serious concerns"; and

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such "serious concerns."

Response: a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege, and on the ground that it inquires into confidential settlement discussions. Without waiving its objection, Complaint Counsel responds that it contends that Central continues to insist on selling Omega sprinklers with silicone o-rings, and that Complaint Counsel has serious concerns about whether those sprinklers will function both currently and in the long term.

b) Complaint Counsel has evidence that, and Respondents have admitted that Central is continuing to sell Omegas with silicone o rings. The basis for Complaint Counsel's concerns regarding silicone o ring Omegas is the same as its concern regarding other Omegas -- that they are a substantial product hazard, as they may fail in a fire situation, thus exposing the public to substantial risk of injury and/or death. Complaint Counsel points Respondents to its response to Interrogatory No. 112, below, for an explanation of the problem with a silicone o ring sprinkler manufactured in February, 1998, and tested by CPSC only a few weeks later and found not to activate properly, but instead to 'drip' and cold-solder. Complaint Counsel's concerns with respect to silicone o ring Omegas relate to the design of the sprinkler, Respondents' manufacturing (and quality control) procedures, and to the silicone material itself -- including but not limited to the possibility of adhesion, susceptibility to corrosion, inadequate or improper lubrication, inadequate clearances, and possible malfunctioning parts. Complaint Counsel has requested information from Respondents in discovery regarding each of these (and other) issues.

c) See response to subparts (a) and (b), above.

d) See responses to Interrogatories 86 and 112.

e) Complaint Counsel has insufficient information at this time to provide full identification for each person or organization whom Complaint Counsel knows or believes to know of the serious concerns that Complaint Counsel

has with respect to Omegas utilizing a silicone o-ring. Provisionally, however, in addition to Respondents, it provides the following list:

Underwriters Laboratories
333 Pfingsten Road
Northbrook, IL 60062-2096
847-272-8800

Factory Mutual Research Corporation
1151 Boston-Providence Turnpike
Norwood, MA 02062
781-762-4300

Parco, Inc.
2150 Parco Ave.
Ontario, CA 91761
909-923-0288

Loss Prevention Council
Melrose Avenue
Borehamwood
Hertfordshire WD6 2BJ
United Kingdom
011-44-0181-207-2345

112. **In a February 24, 1998 letter from Eric Stone of the CPSC to Kathleen Sanzo, Stone states, "x-ray examination of the unit showed that the internal shaft was cocked or tipped slightly and jammed in that position" and that the CPSC "plans to conduct non-destructive analysis of the unit ...." With regard to this statement:**

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe any evidence that Omegas may be "cocked or tipped slightly and jammed in that position";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to the statement that Omegas are "cocked or tipped slightly and jammed in that position";

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of any such problems;

(f) describe in detail the substance of each such person's knowledge and/or information; and

(g) describe any "non-destructive analysis of the unit" performed by or on behalf of the CPSC.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that although it does not at this time intend to rely on a letter it wrote to Ms. Sanzo, Complaint Counsel may rely on the evidence that the letter to Ms. Sanzo discusses.

(b) The factual basis for the statement is stated in the phrase quoted by Respondents.

(c) The evidence that the Omega referred to in the letter was cocked or tipped is described in the letter -- it is the x-ray of the unit described.

(d) Complaint Counsel objects to this interrogatory on the ground that it misquotes the statement in the letter. The statement refers to a single

Omega, manufactured in February, 1998, and never installed in a sprinkler system, that, when tested by Complainant a few weeks after it was manufactured by Central, failed to activate, as that term is defined in Complaint Counsel's discovery to Respondents, when exposed to its activation/triggering temperature, and instead "leaked" or "wept," dripping water and then cold-soldering. When the sprinkler was x-rayed, it demonstrated what was described in the letter. Complaint Counsel shared this information with Respondents to demonstrate to Respondents that their various theories of what is wrong with Omegas, including the installation-based explanations that point to installer error and/or mishandling of the Omegas, cannot suffice to account for the problem with Omega sprinklers. The sprinkler that exhibited this activation failure had never been installed, nor had it ever been exposed to cutting oils, stop leak, or any other substance, by any sprinkler contractor or installer. Further, Complaint Counsel sought efforts by Respondents to ensure that the sprinklers they are currently manufacturing are safe and will function properly.

(e) Complaint Counsel objects to this subpart on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies Complaint Counsel, its staff and consultants, Respondents and Counsel for Underwriters Laboratories.

(f) See (a) through (d), above.

113. In a January 6, 1998 letter from Eric Singer of the CPSC to the state attorneys general, Singer states, "this contrasts with automatic fire sprinklers' historical rate of proving 99.5 percent effective." With regard to this statement:

(a) state whether Complainant intends to rely on this contention in any way at the hearing in this matter;

(b) set forth the factual basis for this statement;

(c) identify and describe all evidence that automatic fire sprinklers have an "historical rate of proving 99.5 percent effective";

(d) identify each and every document that constitutes, evidences, refers, or relates in any way to such historical rate of effectiveness;

(e) identify each and every person whom Complainant knows and/or believes to have knowledge of such historical rate of effectiveness; and

(f) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence in this case. The effectiveness of sprinklers other than Omegas is irrelevant herein. Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege.

(b) Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence in this case. Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that statistics on the high reliability of other automatic fire sprinklers is in the public domain, and is available from the National Fire Protection Association and National Fire Sprinkler Association. Complaint Counsel is in the process of gathering evidence on the historical rate of effectiveness of automatic fire sprinklers, but offers the following list:

1) Rural/Metro Fire Department (Scottsdale, Arizona), Automatic Sprinklers: A 10 Year Study (1997);

2) Fire Sprinkler Advisory Board of Southern California, City of Los Angeles Civil Disturbance: Report on the Buildings Protected by Automatic Fire Sprinkler Systems and Their Performance Record (1992);

3) H.W. Marryatt, Fire: Automatic Sprinkler Performance in Australia and New Zealand, 1886-1968 (Melbourne: Australian Fire Protection Association, 1971);

4) "Sprinklers for Your Home," This Old House (magazine) (Jan./Feb.

1998);

5) Walter W. Maybee, "Sprinkler Performance Update: 1952- to 1986," Bulletin of the Society of Fire Protection Engineers (1988).

(c) See response to subpart (b).

(d) See response to subpart (b).

(e) Complaint Counsel objects to this subpart on the ground that it is overbroad and unduly burdensome. Without waiving its objection, Complaint Counsel identifies the following as having information pertaining to the high rate of effectiveness of automatic fire sprinklers:

1) Russell P. Fleming, P.E., Vice President of Engineering, National Fire Sprinkler Association, Inc., Robin Hill Corporate Park, Route 22 - P.O. Box 1000, Patterson, New York 12563;

2) John A. Viniello, President, National Fire Sprinkler Association, Inc., Robin Hill Corporate Park, Route 22- P.O. Box 1000, Paterson, New York 12563.

f) Complaint Counsel objects to this subpart on the ground that it requests information pertaining to entities other than Complainant. Without waiving its objection, Complaint Counsel responds that it has insufficient information at this time to describe in detail the complete substance of each person's knowledge and/or information on the high rate of effectiveness of automatic fire sprinklers.

114. (a) State whether Complainant deems any corrective action proposal to be

acceptable that is based in part on testing of a sample of sprinkler heads from a building and comparing the results of the sample to the hydraulically calculated operating pressure of that building.

If so:

(b) identify and describe such an acceptable corrective action proposal;

If not:

(c) identify and describe all reasons for such unacceptability;

(e)[sic] identify each and every document that constitutes, evidences, refers, or relates in any way to such unacceptability;

(f) identify each and every person whom Complainant knows and/or believes to have knowledge of such unacceptability; and

(g) describe in detail the substance of each such person's knowledge and/or information.

Response: (a) Complaint Counsel objects to this Interrogatory on the ground that the terms "hydraulically calculated operating pressure" are undefined, unclear, vague and ambiguous. Without waiving its objection, and assuming that Respondents ask whether Complainant deems acceptable any corrective action plan that would involve a one-time test of a sample of Omegas from buildings in which Omegas are installed, Complaint Counsel responds that such a corrective action plan is unacceptable to correct the substantial product hazard presented by Omegas.

(b) (inapplicable in light of response to (a); no response necessary pursuant to

instructions)

(c) Complaint Counsel incorporates its response to (a), above. Complaint Counsel further objects to this Interrogatory on the ground that it seeks privileged work product, and legal conclusions. Without waiving its objections, Complaint Counsel responds that it deems such a corrective action plan unacceptable because (1) the overall failure rate of Omegas in testing, based on thousands of samples tested to date, is so high, coupled with the fact that fires have been documented in which Omegas reportedly failed to activate, that removal of Omegas cannot be delayed; (2) testing in light of the high failure rate of Omegas to date would divert resources and time unnecessarily from correcting the hazard presented by Omegas; (3) testing in this manner has been shown to be an unreliable indicator of whether any given Omega (that was not one of the sample tested from a building) will operate when exposed to its activation/triggering temperature; (4) the water pressure in a building is not a constant - it is a variable, based on numerous factors, and therefore there is no "static pressure" that can be used as a standard; and (5) once one or more sprinklers activate in a fire situation, the water pressure "seen" by any other sprinkler will always be less than the building's water pressure prior to the opening of any sprinklers.

(d) (no subpart (d) is included in this Interrogatory)

(e) All results of tests of Omega sprinklers provide evidence of the reasons stated by Complaint Counsel in section (c), above. As well, all reports of

fires in which Omegas allegedly failed to activate support same.

(f) Complaint Counsel and its staff have knowledge of their contention that such proposed corrective action plans are unacceptable. Respondents and their attorneys also have knowledge of Complaint Counsel's position, as that position has been communicated to them.

(g) The substance of the knowledge possessed by Complaint Counsel and its staff, as well as by Respondents, regarding Complaint Counsel's position on the unacceptability of a testing-based corrective action plan is as stated in subpart (c), above.

D. CPSC Investigation

115. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's investigation of the Omegas. For each person identified, describe his or her role in the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that the term "participated in the CPSC's investigation of the Omegas" is unclear, vague and ambiguous, as the use of the past tense indicates an intent to limit the Interrogatory to some time in the past, and the Interrogatory fails to specify the time period to which it refers. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel identifies the following staff who have participated in the CPSC's investigation of Omega sprinklers prior to the assignment of Complaint Counsel of record to the case: Catherine Cumberland, Marc

Schoem, Eric Stone, Andrew Stadnik, Rohit Khanna, Nicholas Marchica, Mark Kumagi, James Hoebel. Complaint Counsel objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts. Without waiving its objection, Complaint Counsel further responds that it has not yet determined which witnesses it will call to testify at the hearing in this matter. Complaint Counsel will supplement its response as such decisions are made.

116. Describe the circumstances surrounding, and the reasons giving rise to the CPSC's decision to investigate alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date that the CPSC decided to investigate the Omegas;

(b) the identity of all persons at the CPSC involved in the decision to investigate the Omegas; and

(c) the identity of all information (including, but not limited to, any consumer complaints) available to or otherwise relied upon by the CPSC in deciding to initiate an investigation of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that it seek irrelevant information not reasonably calculated to lead to the discovery of admissible evidence, as the CPSC's investigation of Omega

sprinklers, and the propriety thereof and bases therefore, are not at issue in this litigation. Without waiving its objections, Complaint Counsel responds as follows:

(a) CPSC initiated its investigation of Omega sprinklers on or about May, 1996.

(b) Catherine A. Cumberland and Marc J. Schoem, in consultation with Eric L. Stone.

(c) CPSC initiated its investigation after receiving information regarding two fires in which Central Omega sprinklers reportedly failed to operate: one at a VA hospital in New York, and the other at a Marriott Hotel in Michigan.

117. **Describe in detail any investigation by the CPSC relating to consumer complaints and/or consumer reports of personal injury, property damage, non-activation, or any other problems allegedly associated with the Omegas. Your response should include, without limitation, the following:**

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of all consumers with whom the CPSC communicated in connection with this aspect of the investigation;

(c) the identity of all consumers who complained of or reported an incident relating to the Omegas;

(d) the identification of any consumer questionnaires or other surveys used by the CPSC in conducting this aspect of the investigation; and

(e) the identification of any and all data, reports, survey results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "non-activation" and "consumer complaints" are undefined, unclear, vague and ambiguous. Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence, as the CPSC's investigation of Omega sprinklers, and the propriety thereof and bases therefore, are not at issue in this litigation. Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will supplement its response to this Interrogatory as additional information becomes available.

118. **Identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported a fire in connection with use of the Omegas. For each such incident, state the following:**

(a) the name and address of the consumer;

(b) the date of the incident involving the fire;

(c) a description of any and all property damage, if any, caused by or associated with the fire; and

(d) a description of any and all personal injuries, if any, sustained as a

result of or associated with the fire.

Response: Complaint Counsel objects to this Interrogatory on the ground that it is vague, ambiguous, and unclear as worded. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, and assuming that a fire "in connection with use of the Omegas" means a fire in which one or more Omegas exposed to their activation/triggering temperature may not have activated, as that term is defined in Complaint Counsel's discovery to Respondents, Complaint Counsel identifies the following fires of which it is aware:

1. (a) Location: Marriott International, Inc., 10400 Fernwood Road, Bethesda, MD 20817

   (b) 1/26/95

   (c) damage to room

   (d) employee injured

2. (a) Department of Veteran's Affairs, Veteran's Health Administration, Washington, DC

   (b) 5/16/95

   (c) smoke and water damage

   (d) Complaint Counsel has insufficient information at this time with which to

respond to this subpart.

3. (a) Location: Uptown Manor, 1354 N. Harper, West Hollywood, CA

(b) 1/18/97

(c) damage to property and contents

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

4. (a) Location: Ft. Wayne Children's Home/Crossroads, 2525 Lake Avenue, Ft. Wayne, IN

(b) 4/6/97

(c) damage to bed, bedding, and room

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

5. (a) Location: Mel's Marina, 300 Pensacola Beach Road, Gulf Breeze, FL 32561

(b) 9/28/97

(c) property damage; contents damage; total on the order of $3 million

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

6. (a) Location: Kent Manor Inn, 500 Kent Manor Dr., Stevensville, MD 21666

(b) 10/27/97

(c) approx. $50,000 damage - structural and contents

(d) Complaint Counsel has insufficient information at this time with which to

respond to this subpart.

7. (a) Location: Lorene Lodge, 470 Lorene Dr., SW, Marietta, GA 30060

(b) 2/6/98

(c) damage to room and contents

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

8. (a) Location: Monserrat School of Art, 31 Elliott St., Beverly, MA 01915

(b) 3/1/98

(c) approx. $15,000 damage to contents and structure

(d) Complaint Counsel has insufficient information at this time with which to respond to this subpart.

Complaint Counsel is continuing its investigation into possible fires in which an Omega failed to activate, and will supplement its response to this Interrogatory as additional information becomes available. Further, Complaint Counsel has requested information responsive to this Interrogatory from Respondents in discovery.

119. To the extent not already identified in response to Interrogatory Nos. 117-118, identify and describe any and all incidents known to the CPSC in which a consumer or other person has reported any form of property damage or personal injury in connection with the Omegas. For each such incident, state the following:

(a) the name and address of the consumer;

(b) the date of the incident involving the alleged property damage and/or personal injury;

(c) a description of the type of property damage allegedly sustained; and

(d) a description of any and all personal injury allegedly sustained.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information pertaining to the identity of consumers in prohibition of 15 U.S.C. § 2074(c). Without waiving its objections, Complaint Counsel responds that it is currently investigating whether reports that it has received regarding sprinklers are "in connection with the Omegas," and whether they report property damage and/or personal injury in connection therewith. Complaint Counsel will supplement its response to this Interrogatory as additional information becomes available.

120. **Describe in detail any and all communications between the CPSC and any dealer, retailer, or distributor in connection with the Omegas. Your response should include, without limitation, the following:**

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all dealers, retailers, or distributors with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such dealer, retailer, or distributor;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such dealer, retailer, or distributor; and

(e) the identification of any and all data, reports, surveys results, or other

information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

121. Describe in detail any and all communications between the CPSC and any Authority Having Jurisdiction ("AHJ") in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all AHJ's with whom the CPSC communicated in connection with this aspect of the investigation;

(c) a description of the content of the CPSC's communication with each such AHJ;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such AHJ; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected

from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

122. Describe in detail any and all communications between the CPSC and any state law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all state law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such state law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such state law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide

copies of all such communications that are in the public domain.

123. Describe in detail any and all communications between the CPSC and any federal law enforcement authorities in connection with the Omegas. Your response should include, without limitation, the following:

(a) the identity of any and all persons employed or otherwise retained by the CPSC who participated in this aspect of the investigation;

(b) the identity of any and all federal law enforcement authorities with whom the CPSC communicated in connection with this aspect of the investigation of the Omegas;

(c) a description of the content of the CPSC's communications with each such federal law enforcement authority;

(d) the identification of any questionnaires or other surveys used by the CPSC in communicating with each such federal law enforcement authority; and

(e) the identification of any and all data, reports, surveys results, or other information revealing the results of this aspect of the investigation.

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in preparation for litigation, and thus protected from discovery by the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it seeks information provided to CPSC by third parties who claim confidentiality or trade secret. Without waiving its objection, Complaint Counsel will provide copies of all such communications that are in the public domain.

E. Design and Testing

124. Identify and describe any and all testing of the Omegas conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the Omegas;

(b) the identity of the person(s) who created or established any such testing protocols for the Omegas;

(c) a description of the methodology employed during each and every test of the Omegas;

(d) the date of each and every test of the Omegas;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the Omegas;

(f) a description of the results of each and every test of the Omegas; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objection, Complaint Counsel responds that it is currently in the process of testing Omega sprinklers, and will produce all non-privileged documents relating thereto as soon as they are available.

125. **Identify any and all outside consultants, experts, or other persons who assisted, advised, or otherwise communicated with the CPSC with respect to any testing of the Omegas. For each such person, describe his or her role in the testing, and the communications between that person and the CPSC.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in preparation for litigation, and therefore protected from discovery pursuant to the work product privilege. Complaint Counsel further objects to this Interrogatory to the extent that it exceeds the requirements of 16 C.F.R. § 1026.31 regarding discovery of facts known and opinions held by experts, and on the ground that it violates 16 C.F.R. 1025.31(c)(4)(ii). Without waiving its objections, Complaint Counsel will produce all non-privileged results of testing of Omega sprinklers, and will identify, in its supplemental response to Interrogatory No. 104, all experts whom it expects to call at trial in this matter, and all information required to be disclosed pursuant to 16 C.F.R. § 1025.31(c)(4), once it is determined who those experts will be.

126. **For each test of the Omegas conducted by the CPSC, describe in detail the condition and age of the specific Omegas used in the test. Your response should include, without limitation, the following:**

(a) an identification of each specific Omega by model number;

(b) a description of how and when the CPSC obtained each specific Omega used in the testing;

(c) a description of the condition of each specific Omega used in the testing (e.g., new, used, damaged, dented, etc. . .);

(d) a statement of the age of each specific Omega used in the testing;

(e) a statement of whether the CPSC has retained and the current location of each specific Omega used in the testing; and

(f) if the CPSC has since destroyed or discarded any Omegas used in its testing, a statement of the reasons for that action.

Response: See Response to Interrogatory No. 126. Complaint Counsel also objects to this interrogatory on the ground that the terms "condition" and "age" are undefined, unclear, vague and ambiguous.

127. For each test of the Omegas conducted by the CPSC, describe in detail the piping used in the sprinkler system from which the Omegas were removed. Your response should include, without limitation, the following:

(a) the material constituting the piping;

(b) the presence of any treatments or substances applied to the piping;

(c) the contents of any and all materials or substances inside the piping; and

(d) a description of the overall condition of the piping.

Response: See Response to Interrogatories 124, 125 and 126. Complaint Counsel also objects to this Interrogatory on the ground that the terms "materials or substances inside" and

"overall condition" are undefined, unclear, vague and ambiguous.

128. For the time period 1990 through the present, identify and describe any and all testing of any non-Omega sprinkler heads conducted by or on behalf of the CPSC. Your response should include, without limitation, the following:

(a) a description of any testing protocols used by the CPSC in testing the non-Omega sprinkler heads;

(b) the identity of the person(s) who created or established any such testing protocols for the non-Omega sprinkler heads;

(c) a description of the methodology employed during each and every test of the non-Omega sprinkler heads;

(d) the dates of each and every test of the non-Omega sprinkler heads;

(e) an identification of the person(s) who conducted, participated in, or were otherwise present during each test of the non-Omega sprinkler heads;

(f) a description of the results of each and every test of the non-Omega sprinkler heads; and

(g) the identification of any and all documents (including videotapes and audiotapes) relating to any testing of the non-Omega sprinkler heads.

Response: Complaint Counsel objects to this Request to the extent that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Request on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Request on the ground that to the

extent that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it has not at this time conducted any testing on non-Omega sprinklers.

129. To the extent that you contend, or otherwise intend to present at the hearing in this matter, the feasibility and/or propriety of any alternative design features for the Omegas, identify and describe any such proposed alternative design features. Your response should include, without limitation, a description of all data, testing, reports, or other information supporting this contention.

Response: Complaint Counsel objects to this Request on the ground that the terms "feasibility and/or propriety of" (in the context of "alternative design features for the Omegas"), and "any alternative design features for the Omegas" are undefined, unclear, vague and ambiguous, and that the question as a whole is unintelligible, and thus precludes Complaint Counsel from formulating a response without clarification of its meaning.

F. Risk Assessment

130. Set forth the factual basis of your contention in Paragraph 15 of the Complaint that the Omegas "create a substantial risk of injury to the public within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2)." Your response should include, without limitation, the following:

(a) a description of the specific risks of injury that you contend are presented by the Omegas;

(b) a description of the criteria or factors used by the CPSC in determining that each risk allegedly associated with the Omegas constitutes a "substantial risk" within the meaning of 15 U.S.C. § 2064(a)(2); and

(c) an identification of any and all data, survey information, or testing relating to the alleged risks associated with the Omegas.

Response: See Complaint Counsel's Response to Interrogatory No. 77.

131. Describe in detail any and all measures taken by the CPSC to determine the severity of the risk allegedly associated with the Omegas, including, without limitation:

(a) a description of how the CPSC measures the severity of the risk allegedly associated with the Omegas;

(b) a statement of whether the measurement employed by the CPSC incorporates, considers, or is in any way adjusted to reflect the number of products in use and the frequency of use of the Omegas;

(c) a description of all efforts taken by the CPSC to measure the severity of the risk or probability of injury allegedly associated with the Omegas; and

(d) an identification of all data, studies, and reports that quantify or otherwise provide an assessment of the risk or probability of injury allegedly associated with the Omegas.

Response: a) Complaint Counsel objects to this Interrogatory on the ground that the term "measures" is undefined, unclear, vague and ambiguous as used herein. Complaint Counsel also objects to this Interrogatory on the ground that it

calls for a legal conclusion. Without waiving its objection, Complaint Counsel responds that CPSC does not measure severity of the risk created by consumer products as the term "measure" is defined by Webster's Dictionary, to which Respondents point for definition of terms not otherwise defined. Without waiving its objection, Complaint Counsel responds that it determined the severity of the risk posed by Omega sprinklers according to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.12. Pursuant to 15 U.S.C. § 2064(a)(2), severity of the risk is one of the factors the staff may consider in determining whether a product defect creates a substantial risk of injury to the public. According to 16 C.F.R. § 1115.12(g)(1)(iii), a risk is severe if the injury which might occur is serious and/or if the injury is likely to occur. When a sprinkler does not activate in a fire, it cannot suppress or contain the fire, thus exposing the public to the risk of injury and/or death that are both serious and likely to occur.

b) Complaint Counsel objects to this Interrogatory on the ground that the term "measurement" is undefined, unclear, vague and ambiguous, as used herein. Without waiving its objection, and by way of clarification, Complaint Counsel responds that CPSC does not engage in a measurement of the severity of the risk created by consumer products as the term "measurement" is defined by Webster's Dictionary, to which Respondents

point for definition of terms not otherwise defined. Moreover, pursuant to 15 U.S.C. § 2064(a)(2), the number of defective products distributed in commerce is one of the factors the staff may consider in determining whether a product defect creates a substantial risk of injury to the public, and that factor is a distinct factor from the severity of the risk, pursuant to 16 C.F.R. § 1115.12(g)(1). By way of further clarification, Complaint Counsel states that one defective product can present a substantial risk of injury to the public, if the injury which might occur is serious and/or if the injury is likely to occur. 16 C.F.R. § 1115.12(g)(1)(ii).

c) Complaint Counsel reiterates its objections and responses to subparts (a) and (b) of this Interrogatory. Complaint Counsel further objects to this Interrogatory on the ground that it requests information prepared by or for Complaint Counsel in anticipation of litigation, and thus protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel responds that it reviewed Central's test results, and the results of testing of and incidents related to Omegas, by or for UL, FM and CPSC, S.E.A., Hughes Associates, BodyCote Taussig, University of Maryland, governmental entities (Office of the Maryland State Fire Marshall; Farifax County Virginia Fire Prevention Division), independent entities (NFPA) and other third parties.

d) See Response to subpart (c), above. Complaint Counsel objects to this

Interrogatory to the extent that it seeks information provided to Complaint Counsel on a confidential basis by third parties. Complaint Counsel will produce all non-privileged and non-confidential documents pertaining to the tests and fires. Complaint Counsel will produce other responsive documents received by third parties subject to a confidentiality claim upon receipt of permission by those parties, execution of an appropriate confidentiality stipulation by Respondents, and/or protective order by the Presiding Officer.

132. Describe the CPSC's preliminary determination of the alleged risks associated with the Omegas. Your response should include, without limitation, the following:

(a) the date the CPSC Staff issued its preliminary determination of the alleged risks associated with the Omegas;

(b) the identity of all persons involved in the Staff's preliminary determination;

(c) the level of hazard assigned to the Omegas in accordance with the applicable provisions of the CPSC Recall Handbook; and

(d) an identification of all data, studies, reports, and/or testing upon which CPSC relied in making its preliminary determination.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of

admissible evidence. Without waiving its objection, Complaint Counsel responds as follows:

(a) 1/28/98

(b) Complaint Counsel objects to this subpart on the ground that the term "involved in the preliminary determination" is undefined, unclear, vague and ambiguous. Without waiving its objection, Complaint Counsel responds that Marc J. Schoem, Catherine A. Cumberland, and Eric H. Singer signed off on the preliminary determination. Eric Stone, Rohit Khanna, Nicholas Marchica, and Andrew Stadnik were all present for and/or contributed to the decision.

(c) Complaint Counsel objects to this subpart on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this subpart on the ground that it request irrelevant information not likely to lead to the discovery of admissible evidence. Complaint Counsel further objects to this subpart on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not generally publicly disclosed. Without waiving its objections, Complaint Counsel responds that Omegas were classified as a class "a" hazard.

(d) See response to (c), above.

133. **Explain the factual basis underlying the level of hazard assigned to the**

Omegas in the CPSC Staffs preliminary determination of the alleged risks associated with the Omegas. Your response should include a statement of the specific factors considered, and the data or information relied upon, by the CPSC Staff in determining the level of hazard assigned to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "level of hazard assigned" are undefined, unclear, vague and ambiguous. Assuming that Respondents intend to refer to the Agency's internal hazard classification of Omega sprinklers, Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information protected from discovery by the work product and/or attorney client privileges. Complaint Counsel also objects to this Interrogatory on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not publicly disclosed. Without waiving its objections, Complaint Counsel responds that the basis for its hazard classification of Omega sprinklers was the results of testing by four organizations of a total of over 4,800 Omega sprinklers from sites around the nation, which yielded an approximately 40% failure rate, coupled with evidence of six fires in which Omegas reportedly failed to activate, and the fact that Omegas are designed to be a life safety device. When they do not function to suppress or contain a fire, the public is exposed to the risk of death or grievous injury.

134. State whether CPSC's preliminary determination and/or initial assignment of the level of hazard allegedly presented by the Omegas has changed over time. If so, describe any such change and the information or testing giving rise to the change.

Response: Complaint Counsel objects to this Interrogatory on the ground that the terms "initial assignment of the level of hazard" are undefined, unclear, vague and ambiguous. Assuming that Respondents intend to refer to the Agency's internal hazard classification of Omega sprinklers, Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to this Interrogatory on the ground that it calls for a legal conclusion. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information protected from discovery by the work product and/or attorney client privileges. Complaint Counsel also objects to this Interrogatory on the ground that it requests confidential Agency information. The letter category of hazard classification is an internal Agency classification that is not generally publicly disclosed. Without waiving its objections, Complaint Counsel responds that its hazard classification for Omega sprinklers has not changed over time.

135. For the period from 1990 through the present, identify all consumer products classified by the CPSC as presenting a hazard level equal to, or greater than, the hazard level assigned to the Omegas. For example, if the Omegas have been classified as a "Class B" hazard, identify all other consumer products that have been classified as "Class B" hazards and all consumer products identified as "Class A" hazards. For each consumer

product identified in your response, you should provide the following:

(a) the identity of the consumer product by brand name or other description;

(b) the identification of the manufacturer of each such consumer product;

(c) the date of the CPSC's classification of the consumer product as presenting a hazard;

(d) the hazard level assigned each such consumer product;

(e) a description of the hazard presented by each such consumer product;

(f) for each such consumer product, the estimated total number of units manufactured as of the date the CPSC made its determination of the hazard level;

(g) for each such consumer product, the estimated total number of units in the hands of the consumers as of the date the CPSC made its determination of the hazard level;

(h) the number and severity of any and all personal injuries associated with each such consumer product;

(i) the number of deaths associated with each such consumer product; and

(j) the nature and number of property damage reports associated with each such consumer product.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

Information pertaining to other consumer products classified by the staff as presenting a hazard priority level equal to or greater than the hazard level assigned to the Omegas will not lead to the discovery of admissible evidence regarding the hazard presented by the Omegas. Complaint Counsel further objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Complaint Counsel further objects to this Interrogatory on the ground that it seeks confidential and/or trade secret or other information whose disclosure is prohibited pursuant to 15 U.S.C. § 2074 and/or 15 U.S.C. § 2055. Plaintiffs also object to this question to the extent that it seeks information that is protected by the attorney-client and work product privileges. Without waiving its objections, Complaint Counsel will provide all non-privileged and non-confidential information pertaining to other consumer products classified at a level equal to or greater than the hazard level at which Omega sprinklers are classified.

G. Sufficiency of Corrective Action

136. **For each consumer product identified in your response to Interrogatory No. 135, describe any and all corrective action taken with respect to that product. Your response should include, without limitation, the following:**

(a) a statement of the CPSC's role in effecting the corrective action;

(b) a statement of whether the corrective action that was taken was completely voluntary on the part of the manufacturer, retailer, or distributor, was the result of a negotiated corrective action plan with the CPSC, or otherwise was compelled by the CPSC through the initiation of an adjudicative proceeding pursuant to 15 U.S.C. § 2064; and

(c) the identification of all documents evidencing the corrective action taken with respect to each such consumer product.

Response: See response to Interrogatory No. 135.

137. For each consumer product identified in your response to Interrogatory No. 135, describe the nature and extent of the public notice provided as part of the corrective action taken. Your response should include, without limitation, the following:

(a) the specific nature of the notice given (e.g., written notice to consumers and retailers, press releases, bill-boards, posters, etc. . .);

(b) a description of the media coverage associated with the corrective action (e.g., newspaper ads and reports, magazine ads and reports, wire services, other print media, television coverage, radio coverage, and/or internet exposure);

(c) a description of the extent of media coverage and exposure of the corrective action (e.g., a list of all newspapers, magazines, wire services, television stations, radio stations, and internet services that provided notice or otherwise covered the corrective action);

(d) a description of the frequency and amount of media coverage associated with the corrective action (e.g., the number of days newspapers carried a written notice, or the number of days the notice appeared on television); and

(e) a description of any and all point of purchase notification to consumers associated with the corrective action (e.g., posters and notices provided to retailers to

display at stores).

Response: See Response to Interrogatory No. 135.

138. For each consumer product identified in your response to Interrogatory No. 135, describe the nature of the recall component, if any, of the corrective action taken. Your response should include, without limitation, the following:

(a) the number of individual units recalled;

(b) the remedy options offered to consumers (e g., replacement, refund, substitute products);

(c) an assessment of consumer participation in the recall (e g, percentage of units in the hands of consumers that were actually received by the recall);

(d) identification of any and all documents revealing the level of consumer participation in the recall; and

(e) a description of any studies conducted by the manufacturer, distributor, or retailer of the consumer product, or by the CPSC, or by both, or by any other person or entity, assessing the effectiveness of the recall program.

Response: See Response to Interrogatory No. 135.

139. Explain the factual basis of your contention, if any, that the corrective action proposal of Respondents in connection with the Omegas is insufficient to protect the public or otherwise fails to provide adequate remedial measures under 15 U.S.C. § 2064.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Without waiving its objection, and assuming

that Respondents refer to their counsel's latest proposal for a testing-based corrective action program, Complaint Counsel reiterates its explanation in Response to Interrogatory No. 114.

140. Describe in detail the public notice, recall, and/or other remedial measures that you contend are necessary with respect to the Omegas to constitute a sufficient remedy and/or corrective action proposal under 15 U.S.C. § 2064.

Response: Complaint Counsel would seek to impose public notice pursuant to 15 U.S.C. § 2064 (c), including the following: public notice of the defect, including paid advertisements, video news releases, and other necessary and/or appropriate methods under the circumstances; mailing of notice to each person who is a manufacturer, distributor or retailer of Omega sprinklers; notice to every person to whom Respondents know Omega sprinklers were delivered or sold.

141. Identify and describe all efforts taken by the CPSC (including, without limitation, consumer surveys, press surveys, and public opinion polls) to evaluate, test, or otherwise determine the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, and assuming that Respondents refer to their counsel's latest

proposal for a testing-based corrective action program, Complaint Counsel refers Respondents to its Response to Interrogatory No. 114.

142. Identify and describe all criteria and factors considered by the CPSC in measuring the sufficiency of the corrective action proposal of Respondents with respect to the Omegas.

Response: Complaint Counsel objects to this Interrogatory on the ground that it does not specify to which proposal of Respondents it refers. Complaint Counsel further objects to this Interrogatory on the ground that it seeks information prepared by or for Complaint Counsel in anticipation of litigation, and therefore protected from discovery by the work product privilege. Without waiving its objections, Complaint Counsel refers Respondents to its Response to Interrogatory No. 114.

143. Identify all public statements, press releases, or other information released to the public by the CPSC that in any way relates to or otherwise refers to the Omegas and/or Respondents.

Response: March 3, 1998 Administrative Complaint; March 4, 1998 press release and press statement; March 4, 1998 video news release relating to Omega sprinklers; Omega Sprinkler Questionnaire on CPSC web site; Omega Sprinkler Questionnaire on CPSC fax-on-demand service.

H. Initiation of Adjudicative Proceedings

144. For the time period beginning January 1, 1982 to the present, identify all

incidents in which the CPSC has filed an administrative complaint pursuant to Section 15 of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2064. Your response should include, without limitation, the following:

(a) the date the administrative action was filed;

(b) the identity of the manufacturers, distributors, or retailers of the consumer product named as respondents in the administrative action;

(c) the identity of the consumer product at issue;

(d) a description of the alleged "substantial product hazard" at issue in each case; and

(e) a description of the outcome of the administrative action and the nature of the remedy awarded.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Any other administrative litigation relating to any product other than the Omega is irrelevant to the instant action.

145. Identify all persons employed or otherwise retained by the CPSC who in any way participated in the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence.

The propriety of the Commission's decision to initiate the instant adjudicative proceeding against Respondents is not at issue herein. Complaint Counsel further objects to this Interrogatory on the ground that it is unclear, vague and ambiguous, as it fails to define "participated." Complaint Counsel also objects to this Interrogatory on the ground that it is overbroad and unduly burdensome. Without waiving its objections, Complaint Counsel responds that the Commissioners made the decision of whether to initiate the instant adjudicative proceeding, upon consultation with and advice of their staff and the Office of the General Counsel. Alan Schoem, Eric Singer, Eric Stone, Deborah Orlove and Catherine Cumberland could all be said to have participated in the decision to initiate the adjudicative proceeding.

146. **State the date on which the CPSC authorized Complaint Counsel to initiate the instant adjudicative proceeding against the Respondents.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The timing of the Commission's decision to initiate the instant adjudicative proceeding, in relation to the filing of same, is not at issue herein. Without waiving its objections, Complaint Counsel responds that the Commissioners voted on whether to authorize the Complaint by ballot submitted on February 18, 1998, and voted on on February 18, 1998 (Chairman Ann Brown), February 26, 1998 (Commissioner Gall) and March 2, 1998 (Commissioner Moore).

147. **Identify all communications and documents (including internal memoranda and correspondence) relating to the CPSC's decision to initiate the instant adjudicative proceeding against the Respondents.**

Response: Complaint Counsel objects to this Interrogatory on the ground that it requests irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. Complaint Counsel further objects to disclosure of such information on the ground that it seeks information protected from discovery by the work-product and attorney-client privileges.

148. State the reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding against the Respondents.

Response: Complaint Counsel objects to this Interrogatory on the ground that it seeks irrelevant information not reasonably calculated to lead to the discovery of admissible evidence. The reasons for the CPSC's authorization of, and decision to initiate, the instant adjudicative proceeding are irrelevant to this action (though the basis for the staff's recommendation of same have been indicated herein). Complaint Counsel further objects to this Interrogatory on the ground that it calls for speculation on the part of Complaint Counsel as to the thoughts of the Commissioners. Complaint Counsel is unable to speak to the reasons for the individual Commissioner's authorizations of, and decisions to initiate, the instant adjudicative proceeding and, pursuant to proper agency procedure, is prohibited from making inquiry into such matters, other than to state that the Commission authorizes the issuance of administrative complaints upon information and belief that a product or products present a substantial product hazard. Complaint Counsel further responds that the Complaint speaks for itself.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

Re: *In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2
Complaint Counsel's Responses to Respondents' First Discovery Requests

Dear Mr. Hogan:

I am writing in response to your May 1, 1998 and May 4, 1998 correspondence in the above-referenced matter. As you know, I attempted to call you immediately after receiving your fax at 2:00 p.m. last Friday, in which you informed us that you had received our written discovery responses without any attached documents. As your office informed me that you had left for the day, I left you a voice mail message expressing my concern and confusion that you had received our written responses without receiving the box of documents in which they were contained. I trust from your message yesterday, and letter today, that you have the box of documents. As you may have noted, the responses and documents were sent via certified mail, return receipt, to your office on April 27. Pursuant to the applicable regulations, service via certified mail is appropriate and acceptable.

As you know, Complaint Counsel sent a box with over 2000 Bates-stamped pages of documents, as well as a videotape, to Respondents with its discovery responses. As we indicated in those responses, a number of documents that Complaint Counsel has that may be responsive to Respondents' requests were provided to Complaint Counsel by third parties. As you know, Complaint Counsel is prohibited by statute from disclosing any information received from third parties that may be confidential commercial information or trade secret. To ensure speedy disclosure of information to Respondents, and to prevent unnecessarily calling upon the Presiding Officer to resolve such issues, Complaint Counsel has attempted to negotiate with the third parties directly to obtain permission to provide all such information to Central. At this time, we have received such permission from two parties - Marriott and

Sheraton. The Marriott documents were produced in the box of documents forwarded to you last week. Having just received final permission today from counsel for Sheraton, those documents are being Bates stamped and copied at this time, and will be sent to you immediately.

We also have voluminous documents from two testing laboratories, one of which has indicated preliminarily that they will agree to production of their documents as long as there is a protective order preventing public disclosure of same; however, their counsel has requested that it be given until the middle of this week to make a final determination on disclosure. We await review of documents and responses from the other laboratory, and will prepare those documents immediately upon receipt of permission to disclose. If you would prefer a resolution of this matter before the Presiding Officer, however, we would be pleased to copy and provide the documents to him immediately.

You suggested in your letter that the CPSC has been in contact with current Central employees without the presence of Respondents' counsel. CPSC staff has not engaged in any such *ex parte* contacts. As indicated in Complaint Counsel's responses to discovery, Complaint Counsel will submit a document that may be responsive to Respondents' Request for Production #20 to the Presiding Officer for *in camera* review for a determination of whether, and to what extent, this document should be produced.

You also indicated in your correspondence your desire to obtain a copy of the data compilation prepared by Complaint Counsel with respect to Omega failures. Although Complaint Counsel has provided you with the underlying test data upon which its compilation is based, and although the compilation is continually evolving and is Complaint Counsel and its staff's work product, in the interest of full disclosure, Complaint Counsel will produce its compilation as it existed at the time the complaint was filed.

Additionally, Complaint Counsel is in the process of preparing a privilege log of documents received or created that may be responsive to Respondents' requests, and for which a claim of privilege has been made.

We appreciate and share Respondents' perspectives on the importance of full disclosure in this matter, and trust that Respondents will apply such perspectives in responding to Complaint Counsel's discovery requests.

Sincerely,

Deborah S. Orlove

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter responds to your letter of May 6, 1998.

First, regarding the scope of discovery provided by the Staff, your letter fails to address the multiple deficiencies with the Staff's discovery responses raised in my letter of May 4. For example, you still refuse or fail to identify persons with knowledge regarding the key allegations in the Complaint. By failing to provide such information, you completely block Central's ability to take depositions of your witnesses and effectively shut down discovery. Moreover, you fail to address the large number of interrogatories and document requests for which the Staff has provided no response whatsoever. These are only two examples of your letter's failure to address the many deficiencies described in my letter of May 4. It would thus appear that the Staff is refusing to engage in any good faith attempt to resolve this discovery dispute. Therefore, in the absence of full and complete supplemental responses from the Staff as discussed in my letter of May 4, we will be forced to file a motion to compel.

Second, in your letter, you represented that the Staff will provide us with a privilege log. You have not indicated when you will provide it, however. Given the pervasive nature of your privilege objections, the timing requirements established for motions to compel by the CPSC rules of practice, and the fact that such a log already is tardy, we will expect to receive the Staff's privilege log no later than May 8, 1998, as we requested in my letter of May 4.

Your letter also represents that you will begin to provide the Staff's initial test results, but again you do not provide a set date for production. As indicated to you in my letter of May 4, we will expect to receive a full supplemental production by no later than May 8, 1998.

In addition, your letter reiterates a refusal to produce purportedly confidential documents from third parties absent a confidentiality agreement. In my letter to you of May 1, we provided you with a draft Confidentiality Agreement. Despite your stated willingness to produce the referenced documents pursuant to such an agreement, your letter does not comment on or otherwise address the proposed Confidentiality Agreement. In the absence of your comments, we will submit the Confidentiality Agreement for Court approval contemporaneously with any necessary motion to compel. Moreover, please be advised that if you refuse to produce any document for any reason, Central will oppose the admission of that document or class of documents into evidence at the trial of this matter.

Finally, we hereby reiterate our request that the Staff not attempt to engage in any ex parte contacts with the Court.

To date, the Staff has not provided any meaningful discovery to Respondents. Of the 2000 pages of documents produced, approximately 1500 consist of test results provided to you by Central, and many of the remaining 500 consist of publicly available documents. Your discovery provides no meaningful information to Central regarding the bases of your claims and substantially impairs Central's ability to prepare for trial. The Staff cannot and should not be permitted to file a public Complaint, but then refuse to provide the evidence purportedly supporting such claims. We hope that the Staff will choose to take a more reasonable and forthcoming approach going forward in this litigation.

Regards,

Thomas P. Hogan, Jr.

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Complaint Counsel's Responses to Respondents' First Interrogatories and Request for Production of Documents

Dear Mr. Hogan:

I am writing to confirm my receipt of the United States Certified Mail return receipt for the box of documents we forwarded to you on April 27, 1998 in response to Respondents' First Request for Production of Documents. The return receipt confirms that the documents were received by you on Friday, May 1, 1998, and not on Monday, May 4, 1998, as your May 4 correspondence claims.

I am also writing in response to your telecopy of yesterday late afternoon, May 7, 1998, which reached my desk this morning. I assume that your letter was written prior to your receipt of our supplemental discovery, which was forwarded to your office via certified mail, return receipt, yesterday.

In your May 7 letter, you indicate that Respondents are unable to take depositions of Complaint Counsel's witnesses, as Complaint Counsel has "failed to identify persons with knowledge regarding the key allegations in the Complaint." However, please note that Complaint Counsel has identified numerous persons with such knowledge, in response to Interrogatories 106, 111, 113, 115, 132, and 145. As indicated in our responses to Respondents' Interrogatories, Complaint Counsel has not yet determined who it will call as witnesses, either factual or expert, in this matter. As we determine who our witnesses will be, we will be sure to supplement our responses to identify same in accordance with the Rules of Practice.

With respect to your concern regarding *ex parte* communications, please be assured that Complaint Counsel has no intention of engaging in any prohibited communications with the Presiding Officer or anyone else. Complaint Counsel will follow all applicable procedures, and will serve upon Respondents a copy of any and all motions it files regarding discovery and other matters. As you know, Respondents may, by motion, set forth their justification for desiring access to, or disclosure of, *in camera* materials for the preparation and presentation of their case.

Additionally, you stated in your May 7, 1998 letter that my letter of the previous day promised you the Staff's test results. In my letter, I indicated that we would provide the data compilation of test results compiled by the staff -- which you requested in discovery. Although Complaint Counsel considers the compilation its work product, and has provided you with the underlying data upon which the compilation is based, we agreed to (and did, in yesterday's production) provide you with the compilation in the spirit of full and open disclosure.

With respect to your conclusion that the 2200 documents provided by Complaint Counsel in response to Respondents' First Request are not "meaningful," we invite you to again review those documents, which, along with other documents that we are attempting to obtain permission to produce, form the foundation and basis of this case, and demonstrate that the Omega is defective and poses a substantial risk of injury to the public.

Please do not hesitate to contact me if you have any further concerns. Additionally, in order to avoid crossing of correspondence, it may be more effective for all concerned if you would kindly allowing sufficient time for my response and supplement to reach you via first class mail prior to sending further correspondence on the same topic.

Sincerely,

Deborah S. Orlove

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter is written in response to your letter of May 8, 1998.

We have received Complaint Counsel's supplemental production of documents. This production remains deficient, as it provides little more than the naked conclusions of Complaint Counsel regarding test results. Absent the underlying data and methodology, these results provide Central with little relevant information and no opportunity to examining the validity of the results.[1/]

Nevertheless, please clarify whether it is Complaint Counsel's position that you have produced all relevant and responsive documents, including all documents currently in your possession which you intend to introduce at trial. If so, Central will begin to prepare for the trial of this matter based on the documents already produced. For example, based on the test results produced in your supplemental production, this will mean, inter alia, that Complaint Counsel has no information that indicates any failures regarding Omegas using silicone o-rings, and no

---

1/ Contrary to the assertions in your letter, your discovery responses to date have not provided the underlying data supporting these test results, unless such results are compiled almost entirely from Respondents' own test results already produced to Complaint Counsel. In fact, your prior discovery responses and correspondence indicate that you have not produced the underlying data and methodology based on a claim to work product protection.

information that indicates failures in any post-1990 Omegas used in copper or plastic systems. If Complaint Counsel has not produced all relevant documents, please confirm this fact in writing by May 14, so that we can begin to prepare a motion to compel.

Regarding Complaint Counsel's identification of potential witnesses, your letter points to the fact that you have identified "numerous persons with . . . knowledge" in response to six of Respondents' interrogatories. It appears, however, that this represents a selective and incomplete disclosure of "persons with knowledge." Moreover, Complaint Counsel has not provided sufficient documents that would allow Respondents to identify other potential witnesses. If it is Complaint Counsel's position that the persons identified by Complaint Counsel in discovery responses to date represent the universe of potential fact witnesses for Complaint Counsel, please confirm this fact. On the other hand, if Complaint Counsel is aware of other "persons with knowledge" that Complaint Counsel has not disclosed, please confirm this fact in writing by May 14.

In addition, to date, Complaint Counsel continues to ignore several other pressing issues. Complaint Counsel has not addressed the multiple deficiencies in your discovery responses as described in my letters of May 4 and May 7. Moreover, Complaint Counsel has failed to produce a privilege log despite repeated requests from Respondents. Finally, despite several reminders, Complaint Counsel has neither commented on nor responded to the draft Confidentiality Agreement that Respondents sent to you two weeks ago.

Regards,

Thomas P. Hogan, Jr.

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Service of Documents; Complaint Counsel's Responses to Respondents' First Interrogatories and Request for Production of Documents

Dear Mr. Hogan:

I am writing to alert you that I and my co-counsel, Eric Singer and Howard Tarnoff, are the counsel of record in this matter, and that proper service of any pleadings or other documents in this matter requires service to us. As you know, I have been corresponding with you in this case for many weeks now, and have signed all motions since the Complaint issued. The pleading you telecopied only to the Director of the CPSC's Office of Compliance and to the Director of the Legal Division was not properly served, and the method by which it was transmitted cannot be relied upon to reach me and the other counsel of record in a timely manner.

Additionally, we have received conflicting requests from you and your co-counsel with respect to disclosure of our correspondence on these matters to Judge Moran. Yesterday, we received a fax from Gordon Cooney of your office requesting that we not copy the Judge on our correspondence re: discovery, nearly at the same time we received a fax from you to the Judge attaching your correspondence to us on discovery issues.

I am also writing in response to your letter dated May 13, 1998 which discusses Complaint Counsel's supplemental discovery responses. You allege in your letter that our discovery is deficient because the data compilation "provides little more than the naked conclusions of Complaint Counsel regarding test results." However, as you recall, you requested in discovery "all documents identified in the "List and Summary of Documentary Evidence" attached to the Complaint" in this matter. *See* Request No. 1, Respondents' First

Request for Production of Documents and Things. The data compilation was the first item listed by Complaint Counsel in the List and Summary of Documentary Evidence. We initially objected to production of the compilation, choosing only to produce the raw data upon which it was based, as the compilation of the data was Complaint Counsel's work product. You voiced objections, indicating that you cannot defend this case without the documents in the List and Summary. Despite the privileged nature of the compilation, we provided it to you in a supplemental response, in the spirit of full disclosure. We have provided you with what you requested.

In your May 13 letter, you now claim that "absent the underlying data and methodology," the data compilation provides Central "with little relevant information and no opportunity to examining [sic] the validity of the results." However, the test data upon which the compilation is based has been produced to you where claims of confidentiality have not been made or have been waived, and, where such claims still apply, the documents have been submitted to the Presiding Officer for *in camera* review and determination of the circumstances and extent of disclosure. You were served with Complaint Counsel's Request for that determination earlier this week.

In your letter, you also suggest that the staff has "no information that indicates any failures regarding Omegas using silicone o-rings, and no information that indicates failures in any post-1990 Omegas used in copper or plastic systems." Our Interrogatory Responses and document production, as well as the numerous letters we have written to counsel for Central on issues such as the February, 1998 Omega failure, contradict your conclusions. Regardless, we do not intend to argue the evidence in letters; all argument will occur at the appropriate time before the Presiding Officer.

With respect to persons with knowledge, as we have indicated before, all persons whose names are reflected in the documents produced, as well as persons employed by Central, either now or in the past, and all persons who own, install, inspect or otherwise deal with Omega sprinklers may be knowledgeable about the Omega problem, and may be called by Complaint Counsel as fact witnesses. Upon receipt of Central's responses to our discovery, I expect that additional witnesses will be disclosed. Once we determine who we intend to call as witnesses in this matter, both fact and expert, we will make all necessary and appropriate disclosures.

As Complaint Counsel continues its investigation and preparation of this case, we expect that additional information will come to light. We will continue to supplement our discovery responses as required by the applicable rules. To that end, we are producing today under separate cover another supplement of documents responsive to Respondents' discovery requests. Additionally, we will be filing today an amended response to Respondents' Interrogatories in light of new evidence on a significant fire that occurred just last week, and other information that has developed in this case.

Please do not hesitate to contact me should you have any additional questions.

Sincerely,

Deborah S. Orlove, Esq.

Re: Consumer Product Safety Commission v. Central Sprinkler Company;
CPSC Docket No. 98-2

Dear Eric:

As stated in the discovery responses of Central Sprinkler Co. and Central Sprinkler Corp. (collectively, "Central"), we have conducted, and are continuing to conduct, an exhaustive review of Central's documents, both as part of our own due diligence in this matter and in response to Complaint Counsel's Request for Production of Documents. To date, we have identified and are prepared to produce more than 100 boxes of responsive documents and estimate that additional documents encompassing at least another 300 boxes may be responsive. As soon as we complete our review of these additional documents, responsive, non-privileged documents will be produced. During the course of our recent document review and other investigation, we have identified several matters that Central wishes to bring to your attention.

1. In 1990, a patient at Jackson Memorial Hospital in Miami, Florida set fire to herself in an effort to free herself from restraints that had been placed upon her. Although the fire was brought under control, an Omega sprinkler did not activate. Some persons at Central, as well as expert witnesses, believed the non-activation was caused by the sprinkler head being plastered over. At least one Central employee, however, offered his view at the time that the non-activation was caused by exposure of the o-ring to cutting oils. After the incident, the patient who set fire to herself brought suit against the hospital, plaster contractor, sprinkler-installation contractor and Central. After some discovery, Central settled the sizeable claim for $35,000. In seeking approval of

Morgan, Lewis
& Bockius LLP

the settlement from the Court, the guardian ad litem represented that the discovery taken in the case, according to plaintiff's counsel, showed that the inoperation was caused by the presence of plaster in the sprinkler. We are investigating this matter further.

2. As you know, Central has been performing testing of samples taken from various buildings throughout the country. This testing has been performed voluntarily by Central as part of a good faith effort to directly address the concerns of building owners. As a result of this testing, Central has spent to date over $5 million in remediating a large number of buildings. During the course of our review, we have raised questions regarding the accuracy of several reported test results. Central is actively investigating this issue and will take appropriate action, if necessary.

3. As you know, the o-ring in the Flow Control sprinklers was changed from EPDM to silicone in May 1997. The Flow Control valves also contain a diaphragm made out of EPDM material. Although Central intends to change the material in the diaphragm to silicone in the near future, Central did not make that change in 1996 because its engineers did not believe that cutting oil could affect the diaphragm in the Flow Control sprinkler because of the design of that sprinkler. Central therefore determined that such a change to the diaphragm was not warranted at that time.

As we hope you can appreciate, Central, its Board of Directors, its management and all counsel are committed to an appropriate resolution of this matter, and have authorized the issuance of this letter towards that end. Non-privileged documents that are responsive to your Request for Production of Documents, including documents concerning the above matters, will be made available for inspection on a rolling-production basis at a mutually convenient time in our Washington, D.C. office. Moreover, our further investigation may reveal additional information that we may wish to bring to your attention as well.

If you have any questions, please feel free to contact either me or Gordon Cooney.

Very truly yours,

Kathy Sanzo

Re: Consumer Product Safety Commission v. Central Sprinkler Company; CPSC Docket No. 98-2

Dear Eric and Deborah:

Pursuant to your request and as a courtesy, attached is a copy of our index to the documents that respondents currently are able to produce. The first two pages correspond to the first 57 boxes of documents that were specifically gathered for purposes of responding to your document requests in this matter. Although there is a gap in the sequence between box 46 and box 133, the remaining boxes will be made available in the near future once they have been gathered and reviewed. Due to the extremely broad nature of your requests, copies of the documents are being produced as they are kept in the ordinary course of business, as specifically permitted by prevailing practice, including the Federal Rules of Civil Procedure. The index sets forth the department from which each box of documents was taken and also includes a Bates range for each box of documents.

The third page sets forth our index for documents that were retrieved for purposes of the Hart class action. They also are responsive to your requests. Although we believe the description of the applicable departments is reasonably accurate with this group of boxes, in all candor, there may be some errors in attribution. Obviously, if you have questions regarding the origins of documents in this group, we will endeavor to answer them to the best of our abilities.

As we stated during our telephone call yesterday, we are prepared to begin to make Central's documents available for your inspection, once we resolve issues regarding the confidentiality agreement that we forwarded on May 1, 1998.

Very truly yours,

J. Gordon Cooney, Jr.

Re: First Set of Discovery Responses

Dear Mr. Cooney:

Given the strident rhetoric of Mr. Hogan's letters to Complaint Counsel regarding its responses to discovery, Respondents' first round of discovery responses were astounding. Those responses are completely inadequate and do not comport with the Commission's Rules of Practice. We request that you take immediate steps to remedy the defects enumerated below or the staff will file appropriate motions with the Presiding Officer.

Respondents' responses are inadequate

The Commission's Rules of Practice require that a party respond to each interrogatory separately and *fully*, under oath within 30 days. 16 CFR § 1025.32. The rules permit Respondent to respond by providing *specified* business records *when the burden on the parties of ascertaining the answer is the same.* 16 CFR § 1025.32(d). Respondents' response to every one of Complaint Counsels' interrogatories is incomplete and inadequate under the Commission rules as are its responses to every request for production of documents.

This letter will not discuss Respondent's litany of spurious objections. Rather, our primary concern is that Respondent did not make a complete substantive response to any one of Complaint

Counsel's interrogatories.[1] Respondents could have easily provided answers to many of our inquiries based on the personal knowledge of Mr. Schiavone, other corporate officers and officials, and counsel (particularly Mr. Fenningham). Instead, Respondents directed Complaint Counsel to a largely undefined mass of documents, placing an unnecessary--and perhaps impossible--burden on Complaint Counsel to divine the answers.

When Complaint Counsel inquired about why Respondents had not specified documents that were responsive to each of our requests for production and interrogatories, you assured us these documents were indexed. As you know the "index" you submitted provides no useful information regarding the location of responsive documents. Based on what you have provided to date, it appears that documents that might have been accessible have been agglomerated into boxes in a manner that made them as inaccessible as possible. If Respondents do not take action to immediately remedy this situation, Complaint Counsel will have no option but to seek remedies from the Presiding Officer.

Respondents' conditions for examining the documents are unacceptable

Respondents have suggested that the documents may be reviewed on a "rolling" basis, but provide no time-frame for completing its production. Respondents also have created a condition precedent for examination of its documents that is inconsistent with the Commission's rules. Essentially, Respondents have demanded that Complaint Counsel agree to maintain the confidentiality of documents that may not be confidential. Complaint Counsel cannot and will not do so.

As you know, the Commission's laws strictly forbid the release of confidential commercial information and provide procedural safeguards governing that release. This provides adequate protection for any information that deserves protection. Further, the administrative law judge has the authority to provide protection for documents that truly require such protection. 16 CFR § 1025.45. Complaint counsel has used that procedure where potential confidential information exists.

Proposed Alternative Approach

This proceeding promises to be complex and difficult. The

---

[1]Although Respondents occasionally provided brief--and usually unresponsive--commercials for their positions, Respondents directed Complaint Counsel to an amorphous bulk of several hundred boxes of materials rather than answering our questions.

Complaint Counsel wishes to continue to play a constructive role in moving this litigation to a speedy conclusion. We hope you will join us in that approach. In that spirit, we offer the following suggestions.

Interrogatories--Respondents should immediately supplement its responses by providing all information readily available to Respondents and their counsel. Further, Respondents must provide all responses that are not readily ascertainable by a search of existing documents, e.g. information recalled by corporate officials and employees that was not reduced to written form.

Production of Documents--Complaint Counsel requests that Respondents provide a meaningful index to its boxes of documents. Further, Complaint Counsel requests that you immediately provide the following documents for copying (many of which the staff requested months ago and should have been reported under section 15(b) of the CPSA and 16 CFR § 1115.13(d)):[2]

(1) all engineering drawings, engineering change notices and requests for change, first article releases, and bills of materials,

(2) all return authorizations, diagnostic reports, and any other service department records regarding the failure of the sprinklers to function in overheating or fire situations,

(3) all documents regarding allegations of fire involving Central Sprinkler Omega sprinklers,

(4) all documents or records of pressure testing of Omega sprinklers, and analysis of the reasons for failure conducted since your last submission of such documents to the staff on in April 1997. Please include computerized records, if any.

Privilege index--Complaint Counsel suggests that we jointly review your privilege index in order to insure that there are no disagreements about the applicability of privileges to any

---

[2]Complaint Counsel expects Respondents to make all appropriate claims for confidentiality to protect its interests in the documents provided.

documents for which you have made claims.

We look forward to your prompt response.

Sincerely,

Eric L. Stone

Re: In the Matter of Central Sprinkler Corp. and Central Sprinkler Co. (Docket No. 98-2)

Dear Mr. Stone:

This letter responds to your letter of June 3, 1998.

In your letter, you raised several general complaints regarding Respondents' discovery responses. Respondents have undertaken a labor-intensive and expensive document search in response to Complaint Counsel's extremely broad discovery requests. This effort will result in Respondents' offering you access to approximately 400 boxes of documents. By way of contrast, Complaint Counsel has produced to Respondents less than one box of documents. As a result, we do not find your concerns to be compelling or appropriate. However, we will make every effort to address your concerns, and hope that Complaint Counsel will provide similarly substantive discovery in the near future.

First and foremost, you will need to provide greater precision regarding your concerns with Respondents' discovery responses. Your letter states that you "will not discuss Respondent's [sic] litany of spurious objections." This appears to be a simple attempt to avoid addressing the merits of these well-founded objections. If you have a concern about an objection, please inform us so that we may discuss it. Absent such a reasonable attempt to resolve discovery issues, we believe any motion to compel would be premature and an inappropriate burden on the Court.

As you are aware, when addressing the deficiencies with Complaint Counsel's discovery responses, Respondents provided Complaint Counsel with a detailed description of objections and responses which we viewed as problematical. See Letters of May, 1, 4, 7, and 13. Respondents explained in great detail, with supporting legal authority, the problems with Complaint Counsel's responses and objections. Without such precision, it is impossible to engage in fruitful discussions on this issue. Therefore, we respectfully suggest that you provide us with a detailed list of Respondents' responses and objections regarding which you have questions, the particular nature of the alleged problem, and any legal authority supporting your position. In the absence of such efforts, we do not believe that Complaint Counsel will have engaged in good faith discussions to resolve this discovery dispute.

Your letter complains about the fact that Respondents have provided Complaint Counsel access to approximately 400 boxes of documents, and have referred Complaint Counsel to such business records as a response to Complaint Counsel's interrogatories. As an initial matter, we do not understand how you can actually fault Respondents for taking Complaint Counsel's incredibly broad discovery requests seriously by producing responsive documents. Moreover, in providing your own discovery responses, Complaint Counsel neither responded to the majority of Respondents' interrogatories nor provided responsive documents from which such responses could be ascertained. Thus, we believe Complaint Counsel is hard-pressed to complain.

Nevertheless, we refer you to 16 C.F.R. § 1025.32(d), which clearly permits Respondents to produce business records in response to Complaint Counsel's interrogatories. Respondents obviously prefer to rely upon the hard information and facts provided by those records, which speak for themselves, rather than have a representative attempt to speculate about what might be in them.

Moreover, producing the documents as kept in the ordinary course of business is both prudent and proper.[1/] Given the large volume of documents, the tremendous number of discovery requests from Complaint Counsel, and the very short discovery deadlines contemplated by the administrative rules, it is not feasible, economical, or practical to attempt to segregate the documents or identify the documents based on specific discovery requests from Complaint Counsel. Complaint Counsel has served a total of 218 separate discovery requests, most with multiple subparts. Respondents estimate that they will be making available to Complaint

---

1/ Respondents are producing the documents as they were kept in the ordinary course of business, not "agglomerated into boxes in a manner that made them as inaccessible as possible," as suggested in your letter.

Counsel approximately 450,000 pages of documents. Therefore, attempting to identify which documents might be responsive to which discovery requests would literally take months, and the burden on Complaint Counsel in doing so is no greater than the burden on Respondents. Respondents believe our efforts should be directed toward preparing for trial, not attempting to match and segregate approximately 450,000 pages of documents to correspond to each of Complaint Counsel's 218 discovery requests.

In addition, you have failed to bring to our attention and we are unaware of any CPSC rule of practice requiring Respondents to identify documents as responsive to specific discovery requests, nor did Complaint Counsel's discovery requests ask for such identification. By way of comparison, Respondents' discovery requests specifically asked for such an identification, and this instruction was not objected to by Complaint Counsel. Moreover, such an identification was rather simple for Complaint Counsel, because you produced less than one box of documents.

Your letter also complains about the fact that Respondents have conditioned production of the documents on Complaint Counsel entering into an appropriate Confidentially Agreement. As we are sure you are aware, Respondents' position is fully consistent with standard practice. Moreover, your position once again lacks credibility because Complaint Counsel demanded the same condition in its discovery responses. See, e.g., Complaint Counsel's Document Responses, Nos. 1 and 5. In addition, Respondents proposed a Confidentiality Agreement to you three weeks before serving Respondents' discovery responses, but Complaint Counsel refused to agree to or even comment on this proposal. Therefore, Respondents were forced to submit the Confidentiality Agreement to the Presiding Officer as a proposed protective order. That protective order is pending before the Presiding Officer -- Complaint Counsel can either notify the Presiding Officer that the Confidentiality Agreement is acceptable to them and begin reviewing documents immediately, or Complaint Counsel can wait for the Presiding Officer to rule.

Your letter also raises the issue of Respondents producing the documents on a "rolling basis." This procedure was necessitated by the huge volume of documents requested by Complaint Counsel's extremely broad discovery requests. Complaint Counsel should not be heard to complain that is has received what it requested.

Regarding a proposed completion date for this "rolling" production, we anticipate being able to make all responsive documents available by approximately June 24, 1998. However, given the fact that Respondents have offered to make approximately 100 boxes immediately available for review, it does not appear that Complaint Counsel is currently lacking in a sufficient number of documents to review.

Finally, your letter requests an immediate production of a more narrow range of documents than initially requested, essentially demanding that Respondents go through the approximately 400 boxes of documents again to segregate this material. Frankly, if this is the information you truly wanted, it would have been far simpler and less expensive to our client if you had made such requests at the outset. Rather than doing so, however, you made a very broad set of requests that generated a huge volume of paper. Unfortunately, the realities of a large-scale document production do not provide for this sort of ex post request. Our team already is committed to reviewing the additional 300 boxes of documents so as to produce them to you as quickly as possible. It makes no sense for Respondents to interrupt this process, re-review and segregate documents from the 100 boxes already reviewed, and create two separate files for the remaining 300 boxes. If Complaint Counsel had made narrow, particularized requests from the beginning, this problem could have been avoided. As a result of Complaint Counsel's incredibly broad requests, however, the burden is now on them to create their own working files out of the documents produced by Respondents.

In conclusion, Respondents suggest the following course of action:

(1) provide us with a detailed list of the discovery responses and objections from Respondents regarding which Complaint Counsel has any concerns, the specific nature of the concern, and any legal support for Complaint Counsel's position;

(2) notify us and the Presiding Officer whether the Confidentiality Agreement submitted by Respondents is acceptable;

(3) provide us with dates when you anticipate being able to begin inspecting the documents produced; and

(4) if you have any questions regarding Respondents' Privilege Log, notify us of and describe those questions.

Regards,

Thomas P. Hogan, Jr.

Re: ***In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, CPSC Docket No. 98-2**
Service of Documents; Respondents' Responses to Complaint Counsel's First Interrogatories and First Requests for Production of Documents

Dear Gordon:

I am writing in response to your letter of June 9, 1998, and Mr. Hogan's letter of June 8, 1998.

In our prior conversations, Respondents had promised to submit to Complaint Counsel an index of the documents contained in Respondents' approximately 400 boxes of documents that may be responsive to Complaint Counsel's discovery herein. Respondents forwarded an index of documents that stated merely "operations" next to Boxes 1-29 (approximately 40,000 Bates pages); "purchasing" with respect to Boxes 30 - 46 (approximately 6500 Bates pages); "accounting" for boxes 133 - 140 (and no explanation of where boxes 47 - 132 are, or what is in them); "customer service" (boxes 220; boxes 1 - 5 second set); and other such broad descriptions as "engineering," "customer service," "quality control," "production" and "operations." As I am sure you understand, these terms provide no useful information that would point Complaint Counsel to which boxes of documents, and which Bates pages, are responsive to which of Complaint Counsel's Interrogatories and Requests for Production.

As Mr. Stone highlighted in his June 3, 1998 letter to you, the rules applicable to this proceeding provide that Respondents may only submit business records in response to Interrogatories if the burden of ascertaining the answer to the interrogatory from the business record is the same for the party serving the interrogatory as for the party served. Mr. Hogan stated in his June 8 letter that Respondents have conducted a "labor-intensive" and

"expensive" document search. Your index indicates that you have Bates-stamped each of the documents in the 400 boxes at issue. Respondents have also made claims of confidentiality and trade secret for some of the documents (though without specifying to which documents these claims apply). These representations indicate that Respondents have reviewed the documents, and that the issue of equal burden is moot -- the burden of discerning the response is much greater on Complaint Counsel than on Respondents (particularly without the benefit of a proper index), as Respondents have already reviewed the documents.

Your discovery responses were due to us on May 26th. It is now June 11, and we still have not received an appropriate index of documents, much less any documents, from Respondents. Considerable time has been lost. In light of the seriousness of the issues at hand, and of the hazards associated with defective fire sprinklers, we cannot afford to take any additional time to argue with Respondents about the improprieties of their discovery techniques. Additionally, as I am sure you understand, we also cannot agree to unnecessarily overbroad confidentiality stipulations such as that which you have proposed. We are a government agency whose mandate is to protect the public. Our processes and procedures are purposefully made public, and we cannot and will not block from the public information that pertains to a product that is neither privileged nor confidential, merely because Respondents would prefer it to be so. The Commission's rules regarding confidential financial and trade secret information are clear -- if you wish documents to be kept confidential and excluded from the public record, you must submit the documents with a request to the Presiding Officer for *in camera* treatment. 16 C.F.R. § 1025.45(b).

We request that you immediately submit those documents for which you make confidentiality and trade secret claims to the Presiding Officer for determination of whether and to what extent the information should be placed in the public record. In the interim, while we await a determination by the Presiding Officer, please forward a proper index of documents, as well as all responsive documents, to us under the attached confidentiality agreement in which we agree not to disclose them, except to counsel, our employees and our consultants, pending a decision by the Presiding Officer. We would be pleased to arrange for pickup of the index and the documents from your D.C. office, where I understand they are being held, this afternoon or on Monday, June 15. Please indicate what day and time you prefer, and to whom our drivers should report for the pickup.

Until we are able to examine the documents, we cannot provide you with a detailed proposed discovery and litigation schedule. However, in the interest of cooperation, we have attached a preliminary proposed schedule for your review.

Additionally, on June 2, 1998, we received a fax copy of a letter to Ms. Sadye Dunn, Secretary of the Commission, that purported to enclose the following documents: (1) Respondents' Opposition To Complaint Counsel's Motion for Protective Order Regarding Anonymous Letter; (2) Proposed Protective Order and Opposition of Respondents to

Complaint Counsel's Submission of Documents *In Camera*; (3) Respondents' Motion to Compel Full and Complete Responses to Interrogatories and Documents Requests (which the letter indicates was served May 20, 1998); (4) Respondents' Responses and Objections to Complaint Counsel's First Request for Production of Documents and Things; (5) Respondents' Responses and Objections to Complaint Counsel's First Set of Interrogatories; and (6) Respondents' Privilege Log. Our copy of the letter came without any of the documents purportedly sent to the Secretary for filing. The letter indicates that all the documents sent to Ms. Dunn for filing were previously served upon us. We therefore assume that the Motion to Compel filed June 2 with the letter is the same Motion to Compel that was served upon Complaint Counsel on or about May 20, 1998, and that it was filed on June 2 to cure the fact that it was never filed when originally served. If, however, you intended the June 2 filing to be a "resubmission" of your Motion to Compel, as requested by the Judge during our teleconference, please advise us immediately of such intention, and properly serve us with the refiled Motion at once.

Lastly, please be advised that we have received preliminary notice that a hotel guest suffered a heart attack when the Omega sprinkler in the guest's hotel room improperly and spontaneously activated. According to the information received by the staff, Central responded to this and other incidents by sending teams of employees to inject "Locktite" into over 12,000 Omega sprinklers to prevent leakage and premature activation. We are investigating this incident and others, and intend to supplement our responses to Respondents' Interrogatories with same. We would expect Respondents to have provided this information (and copies of the complaints filed against Central relating thereto) in submissions to the staff, and in response to Complaint Counsel's Interrogatories (including, but not limited to, Nos. 26, 30, 38, 49, 66, 110, 111, 113 and 114) and Requests for Production (including, but not limited to, Nos. 2, 13, 17, 21, 22, 27, 44, 62, 96, 97, 99 and 101) in this matter. We cannot afford to lose any additional time before reviewing Respondents' documents, and request immediate responses to our Interrogatories on these and all other issues addressed.

Please contact me at your earliest convenience regarding your document production.

Sincerely,

Deborah S. Orlove

INTERIM CONFIDENTIALITY STIPULATION

This interim confidentiality stipulation is entered into this date between Complaint Counsel for the staff of the Consumer Product Safety Commission and the undersigned counsel for Respondents, Central Sprinkler Corp. and Central Sprinkler Co.

WHEREAS the undersigned represent litigants in the action *In the Matter of Central Sprinkler Corp. and Central Sprinkler Co.*, pending before the Commission as Docket No. 98-2; and

WHEREAS Complaint Counsel served upon Respondents its First Interrogatories and First Requests for Production of Documents on April 20, 1998;

WHEREAS Respondents' responses to Complaint Counsel's First Interrogatories and First Requests for Production of Documents were due on May 26, 1998;

WHEREAS Respondents wish to provide business records in lieu of responses to Complaint Counsel's Interrogatories, and assuming that Respondents' provision of such records complies with 16 C.F.R. 1025.32(d); and

WHEREAS Respondents claim that certain documents responsive to Complaint Counsel's Interrogatories and Requests for Production contain confidential financial information and trade secret information regarding or belonging to Respondents;

THEREFORE Complaint Counsel and Respondents agree that:

1) Respondents will submit within five days of the date of this agreement all responsive documents that they claim contain confidential financial and trade secret information to the Presiding Officer for determination of whether and to what extent those documents shall be placed in the public record; and

2) Respondents will immediately provide to Complaint Counsel a proper index of all documents responsive to Complaint Counsel's Requests for Production and Interrogatories; and

3) Respondents will immediately provide to Complaint Counsel all responsive documents for which no claims of confidential financial information or trade secret are being made; and

4) Respondents will immediately provide to Complaint Counsel all responsive documents for which claims of confidential financial information or trade secret are being made, clearly indicating on those documents that such claims are made. Pending a determination on the claims by the Presiding Officer (see No. 1, above), Complaint Counsel agrees that it will not share the documents for which such claims are indicated with anyone but counsel, its employees, and consultants in this matter. Once a determination is made by the Presiding Officer as to the claims, Complaint Counsel will be bound by that determination; and

5) By signing this agreement and accepting documents from Respondents for review, Complaint Counsel does not in any way waive or limit any right it has or may have to object to any claims of confidentiality or trade secret Respondents make or may make with respect to the responsive documents. By signing this agreement and accepting documents from Respondents for review, Complaint Counsel does not in any way waive or limit any right it has or may have to move to compel Respondents to provide complete and proper responses to Complaint Counsel's discovery requests in this matter.

COMPLAINT COUNSEL'S PRELIMINARY PROPOSED DISCOVERY AND LITIGATION SCHEDULE

Having not received any documents in discovery from Respondents, Complaint Counsel submits to Counsel for Respondents this Preliminary Proposed Discovery and Litigation Schedule:

Production of Documents by Respondents to Complaint Counsel:

immediately (by June 15, 1998)

Respondents' Submission of Complete (and Meaningful) Index of Documents to Complaint Counsel:

immediately (by June 15, 1998)

Preliminary Disclosures of Fact Witnesses:

to be exchanged 14 days after receipt of all documents by Complaint Counsel (June 29, 1998), and supplemented thereafter in accordance with the rules of discovery

Depositions of fact witnesses:

to commence 45 days after documents are produced to Complaint Counsel (July 30, 1998), and continue for 60 days thereafter (ending September 28, 1998)

Preliminary Disclosure of Expert Witnesses:

(in accordance with applicable rules) to be exchanged 75 days after documents are produced to Complaint Counsel (Sat., August 29; therefore, Monday, August 31)

Depositions of expert witnesses:

to commence the day after the period for depositions of fact witnesses expires (Sept. 29, 1998), and continue for 30 days thereafter (October 29, 1998)

Motions in Limine: Due on or before November 10, 1998

Dispositive Motions: Due on or before November 25, 1998

Exchange of Final Exhibit Lists: November 25, 1998

Exchange of Final Witness Lists: November 25, 1998

Submission of Expert Testimony to be used at Trial:

December 1, 1998

Submission of Final Pre-Hearing Briefs:

December 1, 1998

Final Pre-Hearing Conference: December 7, 1998

Trial: to commence December 14, 1998
to take place in Washington, DC

ANSWER AND AFFIRMATIVE DEFENSES OF RESPONDENTS CENTRAL SPRINKLER COMPANY AND CENTRAL SPRINKLER CORPORATION

Respondents Central Sprinkler Company ("Central") and Central Sprinkler Corporation ("CSC"), through their undersigned attorneys, hereby respond to the Complaint filed in the above matter. Respondents submit this Answer pursuant to the requirements of 16 C.F.R. § 1025.12, which mandates the filing of an answer within 20 days after the service of the Complaint, and without prejudice to their Motion to Dismiss the Complaint which is being filed contemporaneously with this Answer. In response to the numbered paragraphs of the Complaint, Respondents aver as follows:

1. Admitted in part and denied in part. It is admitted only that this is an administrative proceeding pursuant to Section 15 of the Consumer Product Safety Act ("CPSA"), 15 U.S.C. § 2064, and that the proceeding is governed in part by the Rules of Practice for Adjudicative Proceedings before the Consumer Product Safety Commission, 15 C.F.R. Part 1025. The remaining allegations of this paragraph are denied.

2. Denied. Respondents specifically deny that the Consumer Product Safety Commission ("CPSC") has jurisdiction over the products at issue. To the contrary, the CPSC lacks jurisdiction over the products at issue because they are not consumer products within the meaning of the CPSA. By way of further answer, Respondents have filed simultaneously with this Answer a Motion to Dismiss the Complaint that raises the jurisdictional issues with greater specificity. Moreover, the allegations of this paragraph constitute legal conclusions to which no responsive pleading is required and they are therefore deemed denied.

3. Admitted.

4. Admitted.

5. Denied. It is specifically denied that respondent CSC manufactures any products of any kind. Moreover, although respondent Central manufactures products distributed in commerce, Respondents deny that the products at issue are consumer products within the meaning of the CPSA. By way of further answer, Respondents have filed simultaneously with this Answer a Motion to Dismiss the Complaint that raises the jurisdictional issues with greater specificity. Moreover, the allegations of this paragraph constitute legal conclusions to which no responsive pleading is required and they are therefore deemed denied.

6. Admitted in part and denied in part. It is admitted only that Central has manufactured various models of Omega-brand automatic fire sprinkler heads, including model numbers C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control, and that these devices are designed to be incorporated into an automatic fire-sprinkler system to suppress and/or extinguish fire. The remaining allegations of this

paragraph are denied. Moreover, the allegation that Omegas are consumer products is a legal conclusion to which no responsive pleading is required and it is therefore deemed denied.

7. Respondents incorporate paragraphs 1 through 6 of their Answer as though fully set forth at length.

8. Admitted in part and denied in part. It is admitted that Standard for Safety UL 199 has been adopted by Underwriters Laboratories, Inc. ("UL") as a standard for determining whether new, uninstalled sprinkler heads can be listed by UL for installation in automatic fire sprinkler systems, and that Omega sprinkler heads are designed to be installed in sprinkler systems that conform to, inter alia, National Fire Protection Association ("NFPA") Standard 13. It is further admitted that the Omega heads at issue have been, and continue to be, listed by UL for installation in automatic fire sprinkler systems. The remaining allegations of this paragraph are denied.

9. Denied as stated. In the Omega sprinkler heads, a fusible alloy pellet is compressed with a bearing disc into a copper housing by a ball plunger. Heat is absorbed by the heat collecting fins and conducted to the alloy pellet. At the rated temperature, the alloy melts, causing the ball plunger to drop, freeing balls from a retaining groove. This movement allows system water pressure to force the orifice sealing mechanism and deflector assembly open. Water is then discharged in a designed flow pattern.

10. Denied. Upon information and belief, the allegation that Omegas do not and will not function in a significant percentage of instances is based on a hypothetical testing standard that is not intended to and does not predict whether, in fact, the tested sprinkler heads will fail in a fire in the actual buildings from which the tested heads were taken. Moreover, the allegations

of this paragraph do not comply with 16 C.F.R. § 1025.11(b)(3), which requires a "clear and concise statement of the charges, sufficient to inform each respondent with reasonable definiteness of the factual basis or bases of the allegations of violation or hazard." By way of further answer, Respondents have filed simultaneously with this Answer a Motion to Dismiss the Complaint that raises with greater specificity the failure of the Complaint to meet the requirements of 16 C.F.R. § 1025.11(b)(3). Finally, the allegation that Omegas are defective pursuant to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4 is a legal conclusion to which no responsive pleading is required and it is therefore deemed denied.

11. Respondents incorporate paragraphs 1 through 10 of their Answer as though fully set forth at length.

12. Denied. The allegations of this paragraph are mere speculation to which no responsive pleading is required and they are therefore deemed denied. It is true as a matter of hypothetical logic that if a single Omega sprinkler head does not activate in a fire, that head will not suppress or extinguish the fire. By way of further answer, an Omega sprinkler head may not activate because of a number of reasons that cannot plausibly be considered a "defect," including, but not limited to, because the fire was not sufficiently significant to activate the head, the head was subject to misuse and abuse, or prohibited substances were introduced into the sprinkler system. Moreover, sprinkler systems generally are designed with redundancies so that if one sprinkler head does not operate, an adjacent head may and ordinarily does suppress or extinguish a fire.

13. Denied. The allegations of this paragraph are mere speculation to which no responsive pleading is required and they are therefore deemed denied. It is true as a matter of

hypothetical logic that if an Omega sprinkler head does not function, an occupant of a building may be exposed to a fire that will not be controlled by that particular sprinkler head. Respondents deny that an Omega sprinkler head creates a substantial risk of injury to the public, and, indeed, to this date there have been absolutely no injuries to any member of the public that have been caused by an alleged failure of an Omega sprinkler head to operate. By way of further answer, Respondents incorporate paragraph 12 of their Answer as though fully set forth at length. The remaining allegations of this paragraph are denied.

14. Denied. By way of further answer, the allegations of this paragraph include legal conclusions to which no responsive pleading is required and they are therefore deemed denied.

15. Denied. By way of further answer, the allegations of this paragraph constitute legal conclusions to which no responsive pleading is required and they are therefore deemed denied.

16. Denied. By way of further answer, the allegations of this paragraph constitute legal conclusions to which no responsive pleading is required and they are therefore deemed denied.

AFFIRMATIVE DEFENSES

17. The Commission lacks jurisdiction over the products at issue in the Complaint because they are not consumer products within the definition of the CPSA.

18. Respondent CSC is not a manufacturer of the products at issue in the Complaint.

19. The Complaint fails to state a claim upon which relief may be granted.

20. Omega fire sprinkler heads do not create a substantial risk of injury to the public.

21. At all times, Omega sprinkler heads have conformed to the then-existing state of the art.

22. Basing any recall order on a standard of performance or design or knowledge that was not developed at the time of manufacture would deprive Respondents of their rights under the United States Constitution, including their rights under the due process and takings clauses of the Constitution.

23. The Complaint fails to comply with 16 C.F.R. § 1025.11(b)(3), which requires: (a) a clear and concise statement of the charges, sufficient to inform Respondents with reasonable definiteness of the factual bases of the allegations of hazard; and (b) a list and summary of the documentary evidence supporting the charges.

24. The Staff of the Commission did not act in good faith to resolve the matters alleged in the Complaint and did not make a good-faith effort to agree with Respondents to an appropriate remedy prior to the institution of this action.

25. Without conceding that any remedy is legally required, the remedial and testing program offered by Central adequately protects the public from substantial risk of harm.

26. Without conceding that any remedy is legally required, any remedy that may be imposed must reflect that purchasers may have had use and value from the products at issue for periods of time prior to the institution of this action.

27. Any actual inoperation of, or increased activation pressure by, an Omega head was caused by abuse of the sprinkler head, use of prohibited substances in the sprinkler system, or other acts committed by persons not within Respondents' control.

WHEREFORE, Respondents respectfully request that the Commission:

A. Determine that it lacks jurisdiction over the products at issue in this matter;

B. Determine that respondent Central Sprinkler Corporation is not a proper party to this action;

C. Determine that the products at issue do not present a "substantial product hazard" within the meaning of 15 U.S.C. § 2064;

D. Determine that the corrective action plan adopted by respondent Central Sprinkler Company is reasonable and satisfies 15 U.S.C. § 2064;

E. Determine that respondent Central Sprinkler Company need not cease manufacturing for sale, offering for sale or distributing in commerce Omega fire sprinkler heads;

F. Determine that the Complaint should be dismissed; and

G. Take such other and further relief in favor of Respondents as may be appropriate.

Respectfully submitted,

In the Matter of	)	
CENTRAL SPRINKLER CORP., a Corporation, 451 North Cannon Avenue Lansdale, PA 19446	)	CPSC DOCKET NO. 98- 2
and	)	
CENTRAL SPRINKLER CO., a Corporation, 451 North Cannon Avenue Lansdale, PA 19446,	)	
Respondents	)	

COMPLAINT

Nature of Proceedings

1. This is an administrative proceeding pursuant to Section 15 of the Consumer Product Safety Act (CPSA), 15 U.S.C. § 2064, for public notification and remedial action to protect the public from substantial risk of injury presented by a brand of automatic fire sprinklers. This proceeding is governed by the Rules of Practice for Adjudicative Proceedings before the Consumer Product Safety Commission, 16 C.F.R. Part 1025.

Jurisdiction

2. This proceeding is instituted pursuant to the authority contained in sections 15(c), (d), and (f) of the CPSA, 15 U.S.C. §§ 2064(c), (d), and (f).

Parties

3. Complaint Counsel is the staff of the Legal Division of the Office of Compliance of the U.S. Consumer Product Safety Commission, an independent regulatory commission established by Section 4 of the CPSA. 15 U.S.C. § 2053.

4. Respondents Central Sprinkler Corporation and Central Sprinkler Company ("the Central entities") are Pennsylvania corporations with their principal place of business located at 451 North Cannon Avenue, Lansdale, Pennsylvania 19446.

5. The Central entities are "manufacturers" of consumer products distributed in commerce pursuant to 15 U.S.C. § 2052(a)(4).

The Consumer Product

6. The "Omega" series automatic fire sprinklers ("Omega" or "Omegas") is a line of automatic fire sprinklers manufactured by the Central entities and designed to suppress and/or extinguish fire. Omegas are installed in homes, apartment buildings, schools, nursing homes, and athletic facilities, among other places. Omegas are "consumer products" under 15 U.S.C. § 2052(a)(1). There are various Omega models, including, but not limited to: C-1; C-1A; C-1A PRO; C-1A PRO ID; EC-20; EC-20A; EC-20 AID; HEC-12; HEC-12 ID; HEC-12 PRO; HEC-12A PRO; HEC-12 RES; HEC-20; HEC-20 ID; R-1; R-1A; R-1M; AC; M; and Flow Control. Approximately ten million Omegas, which Respondents have produced and sold since approximately 1982, are in service in the United States.

Defect or Defects

7. Paragraphs 1 through 6 are incorporated as though set forth in full text.

8. Omegas are designed to perform in accordance with Underwriters Laboratories, Inc.'s

Standard for Safety UL 199 ("Standard for Automatic Sprinklers for Fire Protection Service"), and National Fire Protection Association ("NFPA") Standard 13, when exposed to certain temperatures.

9. At the Omega's triggering temperature, a fusible pellet is supposed to melt, causing a plunger to release, which in turn frees several ball bearings from a retaining groove. With the aid of two springs, the plunger housing is then supposed to release. When the Omega is connected to a sprinkler system, water is then supposed to be released in a particular spray pattern. The plunger housing is sealed with an o-ring.

10. Omegas do not and will not function in a significant percentage of instances. Because of this failure to operate, Omegas are defective pursuant to 15 U.S.C. § 2064(a)(2) and 16 C.F.R. § 1115.4.

Substantial Risk of Injury

11. Paragraphs 1 through 10 are incorporated as though set forth in full text.

12. When the Omega fails to activate when exposed to heat from a fire, the sprinkler fails to suppress or extinguish the fire.

13. Failure of the Omega to function exposes the public to bodily injury and/or death.

14. All of the approximately 10 million Omegas, manufactured from 1982 through the present and sold to, used or enjoyed by the public, could fail to function as the result of the defect referenced above. Omegas are likely to fail in fire situations, and members of the public may suffer bodily injury and/or death as a result.

15. The defect or defects in the Omegas create a substantial risk of injury to the public within the meaning of section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2).

16. Omegas present a substantial product hazard as described in sections 15(a)(2), (c) and (d) of the CPSA, 15 U.S.C. §§ 2064(a)(2), (c) and (d), and action under these provisions is in the public interest.

Relief Sought

Wherefore, in the public interest, Complaint Counsel requests that the Commission:

A. Determine that Respondents' Omega presents a "substantial product hazard" within the meaning of section 15 of the CPSA, 15 U.S.C. § 2064.

B. Determine that public notification under section 15(c) of the CPSA, 15 U.S.C. § 2064(c), is required in order to adequately protect the public from the substantial product hazard presented by Omegas, and order Respondents to:

(1) Give prompt public notice of the defect in the Omegas, the severe risk of injury they pose to the public, and the available remedies to remove the risk of injury;

(2) Mail notice to each person who is or has been a manufacturer, distributor or retailer of the Omega;

(3) Mail notice to every person to whom Respondents know the Omega was delivered or sold; and

(4) Include in the notice required by (1), (2) and (3) above a complete description of the hazard presented, a warning to have Omegas replaced immediately, and clear instructions for having Omegas replaced by Respondents. The form and content of the notice will be specified by the Commission;

C. Determine that action under section 15(d) of the CPSA, 15 U.S.C. § 2064(d) is in the public interest and order Respondents to:

(1) Cease immediately manufacturing for sale, offering for sale, and distributing in commerce Omega series fire sprinklers;

(2) Cease requiring "performance" testing of Omegas by all building owners as any pre-condition to remedial action;

(3) Elect to repair all Omegas so they will perform properly; to replace all Omegas with a like or equivalent product which performs properly; or to refund to consumers the purchase price of the Omegas;

(4) Make no charge to consumers and to reimburse them for any foreseeable expenses incurred in availing themselves of any remedy provided under any order issued in this matter;

(5) Reimburse distributors and sprinkler contractors for expenses in connection with carrying out any Commission Order issued in this matter, including the costs of removal and replacement;

(6) Submit a plan satisfactory to the Commission, within ten (10) days of service of the final Order, directing that actions specified in paragraphs B(1) through B(4) and C(1) through C(5) above be taken in a timely manner;

(7) Keep records of all actions taken to comply with paragraphs C(1) through C(6), above; and supply these records to the Commission, at the Commission's request, for a period of three (3) years after entry of a Final Order issued by the Commission requiring notice and remedial action, for the purpose of monitoring compliance with the Final Order;

(8) Notify the Commission at least 60 days prior to any change in its business (such as incorporation, dissolution, assignment, sale, or petition for bankruptcy) that results in, or is intended to result in, the emergence of successor ownership, the creation or dissolution of

subsidiaries, going out of business, or any other change that might affect its financial or operational ability to comply with the final Order and the corrective action plan submitted and approved pursuant to the Order; and

(9) Take such other and further actions as the Commission deems necessary to protect the public health and safety and to comply with the CPSA.

Issued by Order of the Commission.

LIST AND SUMMARY OF DOCUMENTARY EVIDENCE

Pursuant to 16 C.F.R. § 1025.11(b)(3) of the Commission's Rules of Practice for Adjudicative Proceedings, the following is a list and summary of documentary evidence supporting the charges in this matter. Complaint Counsel reserves the right to offer additional evidence during the course of the proceedings.

1. Data compilations depicting over 40% failure rates in testing of Central's Omega brand fire sprinklers.

2. Documents evidencing failure of Omega fire sprinklers in actual fire situations.

RESPONDENTS' OPPOSITION TO COMPLAINT COUNSEL'S MOTION TO COMPEL

I. INTRODUCTION

Presently before the Presiding Officer is Complaint Counsel's Motion To Compel Answers To Interrogatories ("Complaint Counsel's Motion"). Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") hereby respond to and oppose Complaint Counsel's Motion.

Complaint Counsel's Motion should be denied for two principal reasons. First, the interrogatories served by Complaint Counsel on Central are improperly burdensome and overly broad. Complaint Counsel has posed a total of 1,482 questions in the form of interrogatories, most requesting extremely detailed information. There is no precedent in any court permitting such voluminous and burdensome discovery requests, particularly in a proceeding with as expeditious a discovery period as contemplated here. Under such circumstances, the Presiding

Officer should deny Complaint Counsel's Motion either by upholding Central's objections to such interrogatories or granting Central a protective order regarding such interrogatories.

Second, Complaint Counsel's Motion should be denied because the interrogatory responses provided to date by Central conform with the CPSC rules of practice. Because the burden of ascertaining responses to Complaint Counsel's voluminous interrogatories by reviewing documents is substantially equal for Complaint Counsel and Central, Central has chosen to produce business records in response to the interrogatories pursuant to 16 C.F.R. § 1025.32(d). Central has produced or is in the process of producing approximately 400 boxes of documents and a highly detailed index of those documents to Complaint Counsel. This monumental effort on behalf of Central meets and exceeds the discovery requirements of the CPSC rules of practice. Complaint Counsel does not challenge the fact that all of the information sought in their interrogatories is contained in these documents. Instead, Complaint Counsel appears to be requesting that Central do Complaint Counsel's work in putting together a case for Complaint Counsel by analyzing and compiling information from these documents. However, the rules of discovery do not permit Complaint Counsel to place such a burden on Central.

II. PROCEDURAL AND FACTUAL BACKGROUND

The procedural and factual background underlying Complaint Counsel's Motion are extremely important in understanding the nature of that motion. Therefore, Central briefly summarizes the relevant factual and procedural points below.

A. **Complaint Counsel's Interrogatories**

On April 29, 1998, Complaint Counsel served Complaint Counsel's First Set of Interrogatories to Respondents ("Complaint Counsel's Interrogatories"), attached to Complaint Counsel's Motion as Exhibit "A". Complaint Counsel's Interrogatories consisted of 117 numbered interrogatories. These 117 interrogatories included subparts that posed a total of 1,482 questions. Thus, Complaint Counsel effectively served almost 1,500 interrogatories on Central.

The subjects covered in Complaint Counsel's Interrogatories were extremely broad. Just by way of example, Complaint Counsel requested information regarding: (1) an identification and numerical breakdown of how, where, in what type of piping system, and in what type of building the alleged 10 million Omegas have been installed across the United States and the world (Interrogatory Nos. 10-12); (2) the identity, position held, term of employment, and salary of all Central employees, agents, or consultants at any time in sales, marketing, product design, engineering, customer service, public relations, product manufacturing, product sales, mergers, quality assurance, and/or any Central divisions dealing with Omegas (Interrogatory No. 15); (3) detailed financial information about Central for the past 15 years (Interrogatory No. 9); (4) the identity of all officers, directors, and shareholders in the history of Central (Interrogatory No. 3); and (5) other equally detailed, equally broad requests for information.

The level of detail requested and broad sweep of Complaint Counsel's Interrogatories can be demonstrated best simply by quoting verbatim several of these interrogatories. Indeed, Complaint Counsel's Motion seeks to have the Court ignore the actual text of their interrogatories and obtain a broad, sweeping order against Central. Significantly, in an apparent effort to obscure the incredibly oppressive and detailed nature of their interrogatories from the

Presiding Officer, Complaint Counsel's Motion failed to quote even once the entirety of any of its own interrogatories. The following sampling of Complaint Counsel's Interrogatories provides a much more accurate picture of the burdens imposed by such interrogatories:

> **INTERROGATORY NO. 109:** Indicate whether you have attended or been present at any meetings or discussions, or issued or received any communications, in which the following were discussed:
>
> a) failure of Omega sprinklers to activate in testing or in a fire;
> b) dezincification as a cause or possible cause of Omega non-activation in testing or in a fire;
> c) stop leak or other leak prevention substance as a cause or possible cause of Omega non-activation in testing or in a fire;
> d) "o" ring swelling as a cause or possible cause of Omega non-activation in testing or in a fire;
> e) "o" ring adhesion as a cause or possible cause of Omega non-activation in testing or in a fire;
> f) excessive hydrocarbons as a cause or possible cause of Omega non-activation in testing or in a fire;
> g) improper system design as a cause or possible cause of Omega non-activation in testing or in a fire;
> h) UL listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
> i) FM listing or certification of any Omega sprinkler or sprinkler assistive device such as the "helper spring;"
> j) NFPA 13 requirements or applicability with respect to fire sprinklers or sprinkler systems;
> k) NFPA 25 requirements or applicability with respect to fire sprinklers or sprinkler systems;
> l) UL 199 requirements or applicability with respect to fire sprinklers or sprinkler systems;
> m) UL 1626 requirements or applicability with respect to fire sprinklers or sprinkler systems.
>
> If so, for each such meeting, discussion, and communication, provide:
>
> i) the date on which the meeting, discussion or communication took place;
> ii) the persons and/or entities to and from whom the communication was directed or, if a meeting or discussion, identify all persons who were present and/or participated;
> iii) the nature and content of the communication;

See Interrogatory No. 109.

INTERROGATORY NO. 15: Identify all of your employees, agents, representatives or consultants who have held a supervisory, managerial, or executive position or role in the following areas of your company at any time:

1) sales;
2) marketing;
3) product design and/or development;
4) engineering and/or technical services;
5) customer service/customer relations;
6) public and/or governmental relations;
7) product manufacturing and/or production;
8) product sales, marketing and/or distribution;
9) corporate mergers and/or acquisitions;
10) quality assurance/control;
11) any divisions, subdivisions or areas that deal or dealt with Omega automatic fire sprinklers and/or any component parts of Omega automatic fire sprinklers.

For each employee, agent, representative or consultant, please state the position(s) and title(s) of those position(s), term(s) of employment, and salary. If the person is no longer in your employ, please indicate their reason for leaving and, if known, provide their current address and telephone number.

See Interrogatory No. 15.

INTERROGATORY NO. 21: Describe in detail the procedures and specifications for the manufacture of each different make and/or model Omega sprinkler, including any changes in such procedures and/or specifications over time. Specify and describe all tools, chemicals and substances used, including when, how and in what amount they are used.

INTERROGATORY NO. 22: For each change in procedure or specification identified in your response to Interrogatory No. 21:

a) explain the differences between the procedure or specification and its predecessor(s);
b) explain the reasons for the change;
c) identify all persons and/or entities involved in bringing about the change, and explain their role in same;
d) identify all persons and/or entities who implemented the change;
e) indicate whether any tests were done on the models before or after the change occurred. If so:
    i) describe the tests and provide a detailed protocol;
    ii) identify the persons and entities involved in setting up and/or conducting the tests;
    iii) describe and explain the results of the tests, including all observations and conclusions;

iv) identify the persons and entities involved in evaluating the test results.

See Interrogatory Nos. 21-22.

INTERROGATORY NO. 46: Are you aware or have you ever been notified of an Omega sprinkler from a copper or plastic piping system that did not exhibit dezincification, and that when exposed to temperatures at and/or in excess of its activation/triggering temperature, did not activate (1) at a pressure at or below 7 psig in testing; and/or (2) in a field test; and/or (3) in a fire? If so:

a) identify the Omega;
b) describe the circumstances under which the Omega did not activate;
c) indicate at what pressure, if any, the Omega activated (or if it failed to activate altogether, indicate the highest pressure to which the Omega was subjected);
d) identify the person and/or entity (including your employees and/or consultants) who notified you of the Omega and/or its nonactivation under the circumstances above;
e) indicate how and when you became aware or received notification of the nonactivation under the circumstances described above;
f) indicate on what basis and by what criteria it was determined whether dezincification was present;
g) detail your response to the notification or awareness;
h) indicate whether you or anyone else of whom you are aware examined and/or tested the affected sprinkler and/or other sprinklers from that site. If so:
    i) identify the Omega;
    ii) describe all such tests and/or examinations, and provide a detailed protocol;
    iii) identify the persons and entities involved in setting up and/or conducting each test and/or examination;
    iv) describe and explain the results of each test and/or examination, including all observations and conclusions;
    v) identify the persons and entities involved in evaluating the test results;
i) identify and describe all communications regarding or relating in any way to the Omega and/or its nonactivation, and/or tests and/or examinations relating thereto, indicating:
    i) the date on which the communication took place;
    ii) the persons and/or entities to and from whom the communication was directed;
    iii) the nature and content of the communication;
    iv) identify all persons and/or entities present during the communication.
j) explain in full detail why the Omega did not activate.

See Interrogatory No. 46.

Thus, Complaint Counsel's Interrogatories were extremely voluminous, requested a broad scope of information, and requested an extremely detailed compilation of that information. In essence, Complaint Counsel requested all information related in any way to Omega sprinkler heads from the time the Omegas were initially conceived through the present, and Complaint Counsel requested that Central assess that information, evaluate over half a million pages of documents, conduct employee interviews, and provide detailed textual responses regarding literally thousands of questions.

B. Central's Efforts To Respond To Complaint Counsel's Interrogatories

In order to respond to Complaint Counsel's discovery requests, Central has engaged in an enormous amount of labor and incurred tremendous expenses. Central gathered responsive documents from 127 Central employees, 17 different departments within Central, and six different storage facilities. See Declaration of Stephanie A. Graboyes, attached hereto as Exhibit "A". Because of the broad scope of Complaint Counsel's discovery requests, Central gathered a broad collection of all documents that refer or relate to the Omega line of sprinklers. Id. This document sweep resulted in a compilation of more than 600,000 pages of documents.[1/] Id. This initial effort took a total of 1,490 hours of work by Central's counsel and employees. Id.

Central then reviewed these documents for privileged information and confidential documents. Id. Central also has been creating a privilege log for these documents. Id. The responsive documents, totaling approximately 600,000 pages in 400 boxes, were then Bates-

---

1/ Because of the enormous expense involved, only one copy of the documents was made. Id. The copying costs for this single set has exceeded $100,000. Id. The original documents, many of which are used on a daily basis by Central employees, were returned to the employees or departments from which they were gathered. Id.

labeled. Id. In order to complete this task in a timely fashion, Central was forced to use 16 lawyers, who have worked a total of 1,346 hours on this phase of the document production.

In addition, pursuant to the order of the Presiding Officer, Central has begun to prepare a detailed index of the documents for Complaint Counsel. Id. Central has completed this index for the first 100 boxes of documents. Id. In one week, this effort has required 19 attorneys and a corresponding number of support staff to work in excess of 1000 hours. Id. Preparation of the remaining portions of the index will be correspondingly labor-intensive.

Thus, to date, approximately 20 lawyers and over 20 administrative staff members have expended over 3,700 hours gathering information in an attempt to satisfy Complaint Counsel's discovery requests. Moreover, Central's efforts have not yet concluded, as it still must complete the index required by the Presiding Officer.

C. Central's Responses To Complaint Counsel's Interrogatories

On May 26, 1998, Central served Respondents' Responses And Objections To Complaint Counsel's First Set of Interrogatories ("Central's Interrogatory Responses"), attached to Complaint Counsel's Motion at Exhibit "D." Central objected both generally and specifically to the majority of the interrogatories on the ground that Complaint Counsel's Interrogatories were overly broad and unduly burdensome.

Nevertheless, Central made every effort to provide meaningful responses. Where reasonably possible, Central provided narrative textual responses. See, e.g., Central's Interrogatory Responses, Nos. 1, 2, 4, 5, 6. However, given the broad scope and detailed nature of the information requested, Central relied extensively on referring Complaint Counsel to the business records to be produced by Central, pursuant to 16 C.F.R. 1025.32(d). Because Central

was producing approximately 400 boxes containing approximately 600,000 documents, Central believed that it was providing all responsive information requested by Complaint Counsel. Where possible, Central referred to specific types of documents as responsive to particular interrogatories. See, e.g., Central's Interrogatory Responses, Nos. 22, 26, 61. Complaint Counsel concedes that Central made such specific references to 88 out 117 of the separately numbered interrogatories. See Complaint Counsel's Motion, p. 2.

In addition, as ordered by the Presiding Officer, Central has been compiling a highly detailed index of the 600,000 documents produced. See Phase I and II of Central's Index, attached hereto as Exhibits "B" and "C".[2/] For each of the approximately 400 boxes produced, the index has identified or will identify the box and breaks down the contents of the box into groups of documents. Id. For each of these groups, the index provides specific information regarding the Bates range of the documents described, the source of the documents (i.e., the employee who was in possession of the documents), the department from which the documents originated, and a detailed description of each discrete group of documents. Id. The descriptions of the documents can be matched to the specific types of documents identified by Central in response to separate interrogatories.

D. Complaint Counsel's Motion

Despite the extensive and highly detailed efforts of Central to provide meaningful discovery to Complaint Counsel, Complaint Counsel decided to file a motion to attempt to compel even further discovery responses. Complaint Counsel's Motion argues that Central has

---

2/ Exhibits "B" and "C" represent the first two installments of this index, which is still being created as further documents are reviewed and produced.

not sufficiently answered the interrogatories because Central allegedly improperly relies on the option to produce business records pursuant to 16 C.F.R. § 1025.32(d). See Complaint Counsel's Motion, pp. 4-15. Complaint Counsel also alleges that Central's objections are "overly general and unsupported." Id. at pp. 15-16.[3/]

III. ARGUMENT

Complaint Counsel's Motion should be denied for either of two reasons:

- Complaint Counsel's 1,482 interrogatories, requesting compilations of highly detailed information, are improperly burdensome and unduly broad.
- Pursuant to 16 C.F.R. § 1025.32(d), Central has adequately responded to Complaint Counsel's Interrogatories by producing approximately 600,000 business records, referencing specific categories of documents in response to particular interrogatories, and providing Complaint Counsel with a highly detailed index to interpret the business records.

Each of these reasons is discussed at greater length below.

A. Complaint Counsel's Interrogatories Are Overly Burdensome And Unduly Broad.

> [I]nterrogatories are not to be used in an oppressive manner. An adverse party should not be required to perform burdensome labor or to execute difficult and expensive tasks, in searching for facts and classifying and

---

3/ Complaint Counsel's Motion also appends Central's Responses to Complaint Counsel's Document Requests (at Exhibit "C") and Central's Privilege Log (at Exhibit "E"), but then does not discuss these aspects of Central's discovery responses in the substance of Complaint Counsel's Motion.

> compiling data. A litigant may not compel his adversary to go to work for him.

Aktiebolaget Vargos v. Clark, 8 F.R.D. 635, 636 (D.D.C. 1949).

In the instant case, Complaint Counsel has served 1,482 questions via interrogatories on Central. These interrogatories cover an extremely broad scope, require a fact-intensive analysis and compilation of information, and many are of extremely marginal relevance. Such interrogatories are overly burdensome and unduly broad. Therefore, the Court should deny Complaint Counsel's Motion to compel responses to these interrogatories, either by upholding Central's burdensomeness objections to the interrogatories or by granting a protective order to Central pursuant to 16 C.F.R. § 1025.31(d)(1).[4/]

A party is not required to answer interrogatories that are unduly burdensome, unreasonable, or oppressive. See In Re U.S. Financial Securities Litigation, 74 F.R.D. 497, 498 (S.D. Cal. 1975); Breeland v. Yale and Towne Manuf. Co., 26 F.R.D. 119, 121 (E.D.N.Y. 1960). Interrogatories should be "relatively few and limited to important facts rather than numerous and concerned with minor evidentiary details." Krantz v. United States, 56 F.R.D. 555, 558 (W.D. Va. 1972). "Excessively long interrogatories have been ruled an undue burden and abuse of the discovery process." In Re U. S. Financial, 74 F.R.D. at 498 (collecting cases). Where excessively burdensome interrogatories have been served, a court may relieve the interrogated party from providing responses either by upholding burdensomeness objections to the interrogatories or by granting a protective order regarding the discovery. See, e.g., Riss & Co. v.

4/ 16 C.F.R. § 1025.31(d)(1) permits the Presiding Officer to order that "discovery shall not be had" where such discovery would cause, inter alia, "oppression, or undue burden or expense."

Assoc. of American Railroads, 23 F.R.D. 211, 213, (D.D.C. 1959) (upholding burdensomeness objections); Krantz, 56 F.R.D. at 558 (granting protective order).

In the instant case, Complaint Counsel's interrogatories are patently objectionable. Complaint Counsel has served 1,482 interrogatory questions regarding a broad scope of subjects covering a period of more than 15 years. This approach is simply oppressive. Accordingly, Central has objected to Complaint Counsel's Interrogatories as being unduly broad and overly burdensome.

The Presiding Officer has stated that he will turn to the Federal Rules of Civil Procedure for guidance in this case. By way of comparison to Complaint Counsel's almost 1,500 interrogatories, the Federal Rules of Civil Procedure now set a presumptive limit of 25 interrogatories, including subparts. See Fed. R. Civ. P. 33(a), Subdivision (a). The stated reason for this limitation is that "experience . . . has confirmed that limitations on the number of interrogatories are useful and manageable . . . . because the device can be costly and used as a means of harassment." See Advisory Committee Notes to Rule 33, 1993 Amendments. Indeed, there are certain of Complaint Counsel's numbered interrogatories that exceed the limitations of Fed. R. Civ. P. 33 in "one" interrogatory. See, e.g., Complaint Counsel's Interrogatory No. 35 (consisting of 35 separate subparts).

Relevant precedent makes clear that Complaint Counsel's 1,482 interrogatories are excessive. Even prior to the limitations created by Fed. R. Civ. P. 33(a), courts consistently held that interrogatories in excess of 200 are unreasonable and overly burdensome. See, e.g., Breeland, 26 F.R.D. at 121 (party not required to answer 200 plus interrogatories); Frost v. Williams, 46 F.R.D. 484, 485 (D. Md. 1969) (200 plus interrogatories are unreasonable, party

not required to answer); Krantz, 56 F.R.D. at 558 (1500 discovery requests are "unreasonable, harsh, oppressive and unnecessary"); United States v. Proctor & Gamble Co., 25 F.R.D. 252, 254 (D.N.J. 1960) (even in antitrust case, requiring party to respond to 2,500 interrogatories would be unduly burdensome and unnecessary). In fact, at least one court has held sua sponte that excessively numerous interrogatories are "unduly burdensome and oppressive," and thus need not be answered. See In Re U.S. Financial, 74 F.R.D. at 498 (2,736 interrogatories).

Complaint Counsel's almost 1,500 interrogatories fall squarely within the definition of unduly burdensome, oppressive, and abusive. This huge number of interrogatories is extremely disproportionate to the time allotted to discovery in this case. Therefore, Central respectfully requests that the Presiding Officer uphold Central's burdensomeness objections to the interrogatories or grant an appropriate protective order pursuant to 16 C.F.R. § 1025.31(d)(1).

In addition to the sheer volume of Complaint Counsel's Interrogatories, such interrogatories are objectionable because of the excessive level of detail that they are seeking. As pointed out supra, Complaint Counsel has attempted to mask the incredibly detailed nature of their interrogatories by not even once quoting the full length of a single interrogatory in the course of Complaint Counsel's Motion. Nevertheless, even a cursory review of Complaint Counsel's interrogatories reveals that they would require Central to go to enormous lengths at tremendous costs in order to attempt to reconstruct events or compile evidence entirely for Complaint Counsel's benefit.

For instance, Interrogatory No. 15 requests that Central identify all employees in the history of the company who have held a supervisory or management position in 11 different areas, and for each of those employees to provide their position/title, term of employment, salary,

reason for leaving, current address, and telephone number. Interrogatory No. 109 purports to require a detailed description of every communication during the history of Central concerning almost anything to do with Omegas or fire sprinklers in general, including the date of all such communications, all persons present, and the exact content of the communications.

In order to respond to such interrogatories, Central would be required literally to interview every employee who ever worked at Central and to transcribe potentially millions of pages of half-recalled discussions. Moreover, for each separate interrogatory, Central would be required to review all 600,000 pages of documents produced and compile information out of those documents that Complaint Counsel is seeking to support its own case. Providing detailed responses to such interrogatories would probably take a team of five or six lawyers at least one year of intensive labor.

In such circumstances, courts have repeatedly held that parties are not required to respond to such excessively detailed interrogatory requests, especially where the interrogating party is seeking to have an adverse party do such work for the interrogator's benefit. See Halder v. Int'l Telephone and Telegraph Co., 75 F.R.D. 657, 658 (E.D.N.Y. 1977) (party not required to answer interrogatories identifying and describing all applicants and employees in particular area over eight year period); Riss, 23 F.R.D. at 213 (party not required to answer interrogatories that would necessitate analysis of 5,000,000 documents to compile detailed information for benefit of adversary). As the Riss court succinctly stated, "[T]he court should not require an interrogated party to search its own records in order to compile and correlate information for the benefit of its adversary where the adversary has the right to inspect the records themselves." 23 F.R.D. at 213;

see also Proctor & Gamble, 25 F.R.D. at 255 (party not required to respond to highly detailed interrogatories where opposing party can glean details from documents already produced).

Finally, the Court should not require Central to provide further responses to Complaint Counsel's Interrogatories because many of such interrogatories simply have no or very little relevance to the instant dispute. For instance, one interrogatory requests an identification of all shareholders, officers, or directors of Central at any time. See Interrogatory No. 3. It is difficult to comprehend what purpose, besides creating work for Central, providing such an historical list of shareholders, directors, and officers would serve. Similarly, requiring extensive and detailed lists and background descriptions of nearly all of Central's current and former employees (Interrogatory No. 15) is of dubious relevance at best.

In short, Complaint Counsel's Interrogatories are plainly burdensome and oppressive. The interrogatories are excessively long, seek overly detailed compilations of information, and request irrelevant information. If Complaint Counsel wanted to make constructive use of the opportunity to ask interrogatories, they should have propounded a few, highly focused questions. Instead, Complaint Counsel propounded 1,482 questions, seeking an enormous amount of highly detailed information. Under such circumstances, Central should not be required to provide further responses to Complaint Counsel's Interrogatories; Complaint Counsel's Motion should be denied. Therefore, Central respectfully requests that the Court uphold Central's objections to Complaint Counsel's interrogatories, and/or grant an appropriate protective order pursuant to 16 C.F.R. § 1025.31(d)(1).

B. Central's Discovery Responses Are Appropriate And Exceed The Requirements Of the CPSC Rules of Practice.

Even if Complaint Counsel had served acceptable, non-burdensome interrogatories, Central's responses to the interrogatories are sufficient to satisfy the CPSC rules of practice. Because Complaint Counsel served incredibly voluminous interrogatories seeking highly detailed information, Central invoked 16 C.F.R. § 1025.32 to refer Complaint Counsel to business records produced by Central as containing the detailed information responsive to Complaint Counsel's Interrogatories. Moreover, Central specified in 88 out of 117 numbered interrogatories particular types or categories of documents that were responsive to the individual interrogatory. Finally, Central is providing Complaint Counsel with a detailed index of the documents produced, giving Complaint Counsel a "road map" to determine where information responsive to their interrogatories can be found in Central's documents. Thus, Central has far exceeded the requirements of the CPSC rules of practice in responding to Complaint Counsel's Interrogatories.

Because of the incredibly detailed nature and broad scope of the requests for information contained in Complaint Counsel's Interrogatories, it was literally not possible to provide narrative answers to many of the interrogatories. Any individual attempting to provide such answers would have been making, at best, an educated guess regarding the information sought. Under such circumstances, the interrogatory responses could not have been verified under oath by anybody.

Therefore, for certain interrogatories, pursuant to 16 C.F.R. § 1025.32(d), Central referred Complaint Counsel to the business records produced by Central, from which such responsive

information could be derived. For example, in Interrogatory No. 66, Complaint Counsel requested as follows:

> **INTERROGATORY NO. 66:** Identify and describe all tests and/or examinations conducted by you or anyone on your behalf of Omega sprinklers. For each test:
> a) identify the sprinklers tested;
> b) describe the tests and provide a detailed protocol and the date on which each test was conducted;
> c) identify the persons and entities involved in:
> i) drafting and/or conceiving the protocol;
> ii) setting up and/or conducting the tests;
> d) describe and explain the results of the tests, including all observations and conclusions;
> e) identify the persons and entities involved in evaluating the test results;
> f) identify and describe all communications relating in any way to any such tests and/or test results, indicating:
> i) the date on which the communication took place;
> ii) the persons and/or entities to and from which the communications was directed;
> iii) the nature and content of the communication;
> iv) identify all persons and/or entities present during the communication.

See Interrogatory No. 66.

As Complaint Counsel is well aware, Central has tested thousands of Omega sprinklers and the burden of providing the detailed textual answers sought by Complaint Counsel with respect to each test would be overwhelming. Accordingly, pursuant to 16 C.F.R. § 1025.32(d), Central's Interrogatory Response No. 66 appropriately referred Complaint Counsel to: "quality control manuals and reports, testing and diagnostic reports, [and] engineering reports," which can be located readily using the detailed index being supplied to Complaint Counsel by Central. Requiring Central to analyze, synthesize, and provide detailed information regarding thousands of test results which are already available in documentary form is precisely the sort of burden that the rules permitting the option of producing business records was drafted to avoid. As

demonstrated by this example, Central also specified, where possible, particular categories of documents that would contain responsive information.[5/] Complaint Counsel now argues that Central's reliance on 16 C.F.R. § 1025.32 was inappropriate, and that Central must provide further interrogatory responses. See Complaint Counsel's Motion, pp. 4-15.

Section 1025.32(d) of the CPSC rules of practice provides:

> Where the answer to an interrogatory may be derived or ascertained from the business records of the party upon whom the interrogatory has been served, or from an examination, audit, or inspection of such business records or from a compilation, abstract, or summary of those records, and the burden of deriving the answer is substantially the same for the party serving the interrogatory as for the party served, it is a sufficient answer to the interrogatory to specify the records from which the answer may be derived or ascertained and to afford to the party serving the interrogatory reasonable opportunity to examine, audit, or inspect such records and to make copies, compilations, abstracts, or summaries.

16 C.F.R. § 125.32(d). This provision is modeled on Fed. R. Civ. P. 33(d). Such provisions were created in order to give "the party an option to make the records available and place the burden of research [on] the party who seeks the information . . . [thereby placing] the burden of discovery upon its potential benefitee." See Advisory Committee Notes to Fed. R. Civ. P. 33, 1970 Amendments, Subdivision (c) [now (d)] (internal quotations omitted).

There should be little doubt that Central's Interrogatory Responses meet the requirements of Section 1025.32(d). As an initial matter, the documents provided to Complaint Counsel do provide the information sought by Complaint Counsel's Interrogatories. Complaint Counsel's Motion does not contest this basic point. Thus, at the most fundamental level, the purpose of

---

5/ Central only made such a reference where responsive documents actually exist; contrary to the suggestion of Complaint Counsel's Motion, Central did not simply indicate that responsive documents "might" exist. See Complaint Counsel's Motion, p. 11 n.1.

Section 1025.32(d) has been satisfied -- Central has provided Complaint Counsel with the necessary documents to respond to the interrogatories, and now the burden is on Complaint Counsel to do the research in order to segregate out the information they seek. See, e.g., Halder, 75 F.R.D. at 658 (when highly detailed interrogatories are served and plaintiff can ascertain responses from documents produced, plaintiff must "assume burden of locating and assimilating the information he desires"); Broadway Delivery Corp. v. United Parcel Service of America, Inc., 27 Fed. R. Serv. 2d 622, 625 (S.D.N.Y. 1979) (same); Concept Industries, Inc. v. Carpet Factory, Inc., 59 F.R.D. 546, 548-50 (E.D. Wis. 1973) (same); Triangle Mfg. Co. v. Paramount Bay Mfg. Co., 35 F.R.D. 540, 543 (E.D.N.Y 1964) (same).

Moreover, the "burden of deriving the answer" from the documents produced is substantially the same in the instant case for Central and Complaint Counsel. Regarding this issue, Complaint Counsel has the burden of proof to demonstrate that Central might have a lesser burden to ascertain answers in the instant case, otherwise a court must hold that the requirements of Section 1025.32(d) have been met. See Petroleum Ins. Agency, Inc. v. Hartford Accident and Indem. Co., 11 F.R.D. 318, 320-21 (D. Mass. 1983). In the instant case, Complaint Counsel has produced no "evidence" of Central having a lesser burden, whether by affidavit or otherwise, only unsubstantiated arguments. Therefore, Complaint Counsel has not carried its burden of challenging Central's use of 16 C.F.R. § 1025.32(d). Id.

Central, on the other hand, can easily demonstrate that the burdens are "substantially the same." Central's documents are not ordinarily kept in any type of organizational order by overall subject matter that correspond to Complaint Counsel's discovery requests; the documents generally are kept by individual employees or departments, and divided up according to subject

matter by each employee and/or department. See Declaration of Stephanie A. Graboyes, Exhibit "A". Nor does Central customarily keep an overall index of all of these documents in the ordinary course of business. Id. Finally, in reviewing the 400 boxes of documents currently produced, Central did not (and given the time constraints in this matter could not) segregate the documents according to the nearly 1,500 subject matters in Complaint Counsel's interrogatories. Instead, Central properly focused its efforts on gathering together all documents related to the Omegas so that they could be produced to Complaint Counsel as expeditiously as possible. Id. Thus, rather than having the comprehensive understanding of the half a million pages of documents suggested by Complaint Counsel, Central's document review process focused on ensuring that responsive documents had been gathered and privileged documents were not being produced.[6/]

Thus, Complaint Counsel and Central would have to perform the exact same tasks to extract precise responsive information from the documents produced. Either party would be

---

6/ Complaint Counsel argues that the burden would be less for Central because the documents originally came from Central, and thus Central is more familiar with them. See Complaint Counsel's Motion, pp. 12-13. This argument is both circular and unsupported. First, if a party was viewed as having greater familiarity with the details of its documents merely because that party originally produced the documents, then Section 1025.32(d) never could be invoked. Moreover, because the focus of the review conducted by Central was to ascertain whether documents were privileged and/or were "documents regarding or referring to Omegas," the mere fact that Central initially reviewed the documents does not evidence the degree of familiarity with the detailed contents of the documents as they relate to Complaint Counsel's Interrogatories that would warrant imposing this burden on Respondents. Indeed, because Complaint Counsel is more familiar with the specific subjects in which they are most interested, it would be substantially easier for Complaint Counsel to derive that information from Central's documents.

required to painstakingly go over all of the documents for each interrogatory, attempting to match specific data contained in the documents to particular subparts of each interrogatory.

It is correct that this will be a difficult and time-consuming prospect. However, the mere fact that it will take Complaint Counsel a long time to compile the information from the documents does not change the analysis. See Mid-America Facilities, Inc. v. Argonaut Ins. Co., 78 F.R.D. 497, 498 (E.D. Wis. 1978) (reference to business records appropriate even where it would take plaintiff a lengthy period of time to find relevant information, where burden is same for both parties).

There are three simple responses to Complaint Counsel's lament that ascertaining all of the information requested will be difficult and time consuming. First, the burden is substantially similar for either party. Second, it was Complaint Counsel who propounded such expansive, voluminous, and detailed interrogatories; Complaint Counsel's own burden would be less if they instead had served more narrow and focused interrogatories.[7/] Third, since the compilations of information requested in Complaint Counsel's Interrogatories are for the purpose of advancing Complaint Counsel's own case, it makes sense the Complaint Counsel bear the burden of research to determine the information. See Halder, 75 F.R.D. at 658; Broadway Delivery, 27 Fed. R. Serv. 2d at 625. Indeed, this was the very reason that the provision permitting the option to produce business records was created. See Advisory Committee Notes to Fed. R. Civ. P. 33, 1970 Amendments, Subdivision (c).

7/ Indeed, one suspects that when Complaint Counsel is faced with the burden they currently are attempting to impose on Central, Complaint Counsel will substantially narrow and focus the scope of its inquiry regarding the documents produced.

In fact, one of the cases cited by Complaint Counsel in support of their position speaks plainly and eloquently to the instant case. See Petroleum Ins. Agency, Inc. v. Hartford Accident and Indem. Co., 111 F.R.D. 318 (D. Mass. 1983) (cited in Complaint Counsel's Motion, at p. 13). In Petroleum Ins., plaintiffs moved to compel textual responses to interrogatories after defendant elected to produce business records. The court held:

> The bottom line, as I see it, is that the plaintiffs want this discovery but do not want to expend the effort and expense in procuring it. *But the stated purpose of the Rule is to require the party seeking the discovery to expend the effort and expense to procure it.* See Advisory Committee Note to 1970 Amendment, quoted supra. What plaintiffs are saying is that they do not like the Rule; however, like it or not, it was enacted, and the Court is duty bound to follow it.

111 F.R.D. at 320 (emphasis in original).

Complaint Counsel has cited numerous cases allegedly in support of their arguments. However, all of these cases are distinguishable on one plain point -- Complaint Counsel's cases discuss responses to just a few interrogatories, a relatively simple matter. See Sabel v. Mead Johnson and Co., 110 F.R.D. 553 (D. Mass. 1986) (10 interrogatories); Wilbur v. Arkuszewski, 52 F.R.D. 291 (M.D. Alabama 1971) (31 interrogatories); Pascale v. G.D. Searle & Co., 90 F.R.D. 55 (D.R.I. 1981) (43 interrogatory responses challenged); T.N. Taube Corp. v. Maine Midland Mort. Corp., 136 F.R.D. 449 (W.D.N.C. 1991) (5 interrogatory responses challenged).[8/] By contrast, in the instant case, Complaint Counsel is seeking detailed responses to almost 1,500

8/ In the only other case cited in support by Complaint Counsel, Rainbow Pioneer No. 44-18-04A v. Hawaii-Nevada Investment Corp., 711 F.2d 902 (9th Cir. 1983), the opposing party never ever produced the documents to permit an inspection.

interrogatories. Central respectfully submits that the only accurate and truthful manner to respond to such a detailed request is by reference to documents.

The final aspect of Section 1025.32(d) that must be satisfied in producing records is to "specify the records from which the answer may be derived." 16 C.F.R. § 1025.32(d). The responding party is not required to specify particular pages, just to describe the responsive documents. See Milsen Co. v. Southland Corp., 16 Fed. R. Serv. 2d 116, 117 (N.D. Ill. 1972) (forcing defendant to specify pages would create an undue burden).

In the instant case, Central has gone to great lengths to identify responsive documents for Complaint Counsel. As conceded by Complaint Counsel, Central has provided specific descriptions of responsive documents in 88 out of the 117 individually numbered interrogatories. See Complaint Counsel's Motion, p. 2. In response to specific interrogatories, Central has identified specific categories of documents, such as product catalogues, engineering drawings, test results, cut sheets, sales reports, price books, annual reports, employees status reports, bills of material, sub-assembly drawings, work instructions, etc. . . . See, e.g., Interrogatory Nos. 5, 6, 8, 9, 15, 17. All of these categories of documents are easily identifiable by Complaint Counsel upon reviewing the documents produced by Central. Thus, Central's Interrogatory Responses satisfy the "specificity" requirement of Section 1025.32(d).

Moreover, pursuant to the order of the Presiding Officer, Central has significantly exceeded the "specificity" requirement of Section 1025.32(d) in the instant case by producing a highly detailed index of the documents produced by Central. See Exhibits "B" and "C".[9/]

9/ Central has produced the first two volumes of the Index to Complaint Counsel. The (continued...)

Although such an index is not required by any rule, regulation, law, or even Complaint Counsel's discovery requests, Central has been creating and providing to Complaint Counsel a detailed description of all of the documents produced. As detailed in the Declaration of Ms. Graboyes, the creation of this index has been tremendously time-consuming and expensive. See Exhibit "A". For each box produced, this index provides the Bates-number range of each discrete set of documents within each box, the employee who is the source of the documents, the department relevant to such documents, and a detailed description of the documents. See Exhibits "B" and "C". These descriptions not only correspond to the categories of documents described in Central's Interrogatory Responses, they provide even more detail regarding the enclosed documents. Thus, Central has provided Complaint Counsel with a veritable "road map" to describe the documents produced and the manner in which they are responsive to Complaint Counsel's Interrogatories. There should be little doubt that this index satisfies the requirement to "specify the documents" included in Section 1025.32(d).[10/]

9/(...continued)
remaining volumes are still being created and will be produced shortly.

10/ Moreover, to the extent that Complaint Counsel now wants Central to engage in yet further efforts to assemble data or compile information, the Court should reject the request because it would unfairly divert Central from preparing its defense. Although Central believes that the burden should be on Complaint Counsel to review the documents for this information, if the Court were somehow inclined to impose this burden on Central, Complaint Counsel should be required to reimburse Central for the expenses incurred in such efforts. Where a party invokes the right to produce business records in response to interrogatories, a court has the power "in appropriate cases, to require that the interrogating party reimburse the respondent for the expense of assembling his records and making them intelligible." Advisory Committee Notes to Fed. R. Civ. P. 33, 1970 Amendments, Subdivision (c); see also Concept Industries, Inc. v. Carpet Factory, Inc., 59 F.R.D. 546, 549-50 (E.D. Wis. 1973) (requiring interrogating (continued...)

Under all of these circumstances, Central has appropriately and properly invoked 16 C.F.R. § 1025.32(d) in responding to Complaint Counsel's Interrogatories. The documents provided by Central contain the highly detailed information sought by Complaint Counsel. The burden of ascertaining such information from the documents is substantially similar for both parties, and thus is properly borne by the party seeking the information and benefits thereof -- Complaint Counsel. Finally, by both identifying specific categories of responsive documents in the interrogatory responses and providing a detailed index of the documents produced to Complaint Counsel, Central has met and exceeded the specificity requirements of 16 C.F.R. § 1025.32(d). Therefore, Complaint Counsel's Motion is without merit, and should be denied by the Presiding Officer.[11/]

10/(...continued)
party to post $10,000 bond if requesting that respondent assemble data out of documents already produced). Central already has expended well in excess of $200,000 in making the current discovery available to Complaint Counsel. See Declaration of Stephanie A. Graboyes, Exhibit "A". As a result of such expenses incurred in the current litigation and business concerns related to this litigation, Central is suffering potentially dire financial problems. Under such circumstances, as permitted by the rule creating the option to produce business records, the equities demand that Complaint Counsel pay Central for any reasonable expenses incurred in producing any further interrogatory responses to Central. If Complaint Counsel is willing to review the documents and assemble the data to support their case on their own, such expenses will not be incurred. On the other hand, if Central is required to review 600,000 documents in order to compile information and provide full narrative responses to all of Complaint Counsel's 1,482 interrogatories, an extremely conservative estimate of the expenses to be incurred by Central is $100,000. Therefore, if Complaint Counsel wishes Central to engage in such efforts, the Presiding Officer should require Complaint Counsel to post a bond in that amount. See Concept Industries, 59 F.R.D. at 549-50.

11/ Complaint Counsel also has included a half-hearted attack regarding all of Central's objections, claiming such objections are "overly general and unsupported." See
(continued...)

IV. CONCLUSION

For all of the foregoing reasons, Central respectfully requests that Complaint Counsel's Motion be denied.

Respectfully submitted,

Complaint Counsel's Motion, pp. 15-16. However, a detailed review of Central's responses reveals that the objections vary specifically to fit the particular interrogatory. Moreover, Complaint Counsel has failed to explain why any specific objection to any particular discovery response is improper. In the absence of such specific explanations and criticisms, such as those provided in Respondents' Renewed Motion to Compel Full And Complete Responses To Interrogatories And Document Requests, such an argument cannot be sustained.

DECLARATION OF STEPHANIE A. GRABOYES

I, Stephanie A. Graboyes, hereby execute this declaration in support of Respondent's Opposition To Complaint Counsel's Motion To Compel. In support thereof, I hereby swear and affirm as follows:

1. I am an associate with the law firm of Morgan, Lewis & Bockius, LLP, located at 2000 One Logan Square, Philadelphia, PA 19103. My telephone number is 215-963-5000.

2. On behalf of Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively "Central"), I have been extensively involved in gathering, reviewing, and organizing documents, and providing discovery responses in the above-captioned matter. I have personal knowledge of all of the facts described in this declaration.

3. In order to respond to Complaint Counsel's discovery requests, Central conducted an initial document sweep. In this initial sweep, Central attempted to gather all documents that might relate or refer to the Omega line of sprinkler heads.

4. The initial document sweep was conducted by counsel, legal staff members, and Central employees. Documents were gathered from 127 different Central employees, 17 departments within Central, and six separate storage facilities.

5. The initial document sweep gathered in excess of 600,000 documents.

6. Central made one copy of the documents gathered in the initial document sweep. The originals were returned to Central employees or the departments from which they were gathered for the ordinary operations of Central's business. The total cost of copying for this set of documents exceeded $100,000.

7. The initial document sweep required a total of 1,490 hours of work by Central's counsel and employees.

8. After the initial document sweep, Central's counsel reviewed the compiled documents for privilege information and confidential documents. The privileged documents were removed and a privilege log was created for such documents. The confidential documents were designated, in order to be stamped "Confidential" at a later date. The responsive documents were then Bates-labeled.

9. Central has produced or is producing approximately 600,000 pages of documents to Complaint Counsel, contained in approximately 400 boxes.

10. In order to complete this second phase of responding to Complaint Counsel's discovery requests, Central used 16 lawyers, who worked a total of 1,346 hours.

11. Pursuant to the order to the Presiding Officer, Central has begun to prepare an index of the responsive documents. For the first 100 boxes of documents, compiling this index has required 19 attorneys and over 20 legal staff members to work approximately 1,000 hours.

12. In the ordinary course of its business, Central does not organize and maintain its documents by subject matter. Documents are kept by individual employees.

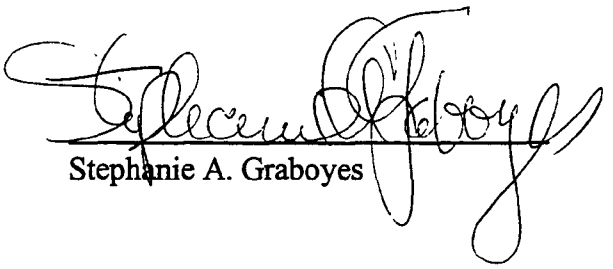
13. In the ordinary course of its business, Central does not keep an overall index of documents that it has retained.

14. In order to produce the 600,000 pages of documents to Complaint Counsel as expeditiously as possible, while creating a privilege log and index, Central has not attempted to segregate the documents according to specific discovery requests from Complaint Counsel.

15. To date, Central has expended in excess of $200,000 to assemble and make documents available to Complaint Counsel.

The foregoing information is true and correct, to the best of my knowledge, information and belief.

Date: July 1, 1998



Stephanie A. Graboyes

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
23	Robert Bandura	Engineering	CS032701-CS032758	UL certification file for the Model M head ½ inch horizontal sidewall with quick response feature.
23	Robert Bandura	Engineering	CS032759-CS032771	UL certification file for the Model M ½ inch intermediate level head.
23	Robert Bandura	Engineering	CS032772-CS032890	Complete UL test report for Model M dated 12/26/85 with all revisions, including UL test reports, revisions, Central Sprinkler Bill of Materials for Model M, engineering drawings for Model M, correspondence with UL re: Model M.
23	Robert Bandura	Engineering	CS032891-CS032896	UL certification file for the Model M ½ inch & 3/8 inch SSP, SSU, MSW with alternate spring washer.
23	Robert Bandura	Engineering	CS032897-CS032911	UL certification file for the Model M ½ inch horizontal sidewall EC & QREC, letter report dated 8/23/89.
23	Robert Bandura	Engineering	CS032912-CS033015	UL certification file for the C-1 Omega ½ residential sprinkler head.
23	Robert Bandura	Engineering	CS033016-CS033057	UL certification file for the ½ inch EC-20 & HEC-12 Omega pendant extended coverage sprinkler head.
23	Robert Bandura	Engineering	CS033058-CS033064	UL certification file for the ½ Omega C-1, EC-20, HEC-12, & HEC-20 with Model M heat corrector.
23	Robert Bandura	Engineering	CS033065-CS033093	UL certification file for the C1A & EC-20A adjustable pendant style sprinklers/commercial.
23	Robert Bandura	Engineering	CS033094-CS033095	UL file for removal of Model M, SSP, SSU & HSW sprinklers from UL testing & FUS.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
23	Robert Bandura	Engineering	CS033096-CS033142	UL certification file for the EC-20A, 160°F, 12ft. x 12ft. vented/unvented sprinkler.
23	Robert Bandura	Engineering	CS033143-CS033148	UL certification file for the EC-20A, ½ inch pendant residential alternate deflector material & 7/16 inch pendant residential alternate deflector material.
23	Robert Bandura	Engineering	CS033149-CS033180	UL certification file for the EC-20A pendant style residential ½ inch sprinkler head.
23	Robert Bandura	Engineering	CS033181-CS033203	UL certification file for the EC-20A ½ inch pendant commercial alternate deflector material.
23	Robert Bandura	Engineering	CS033204-CS033210	UL certification file for the C-1A ½ inch residential pendant alternate deflector material.
23	Robert Bandura	Engineering	CS033211-CS033263	UL certification file for the C-1A ½ inch residential pendant sprinkler head.
23	Robert Bandura	Engineering	CS033264-CS033279	UL certification file for the 3/8 inch C-1 adjustable Omega commercial sprinkler head.
23	Robert Bandura	Engineering	CS033280-CS033334	UL certification file for the R-1M 3/8 inch pendant adjustable sprinkler head.
23	Robert Bandura	Engineering	CS033335-CS033390	UL certification file for the R-1A 7/16 inch residential pendant adjustable K = 4.1 12ft. spacing sprinkler head.
23	Robert Bandura	Engineering	CS033391-CS033431	UL certification file for the R-1A residential pendant adjustable 7/16 inch K = 4.1 sprinkler head.
23	Robert Bandura	Engineering	CS033432-CS033437	UL certification file for the R-1 3/8 inch residential pendant alternate deflector materials sprinkler head.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
23	Robert Bandura	Engineering	CS033438-CS033526	UL certification file for the 3/8 inch residential Omega sprinkler head.
23	Robert Bandura	Engineering	CS033527-CS033544	UL certification file for the FX auxiliary ejection spring retrofit kit for C-1A, C-1, EC-20, & EC-20A sprinkler heads.
23	Robert Bandura	Engineering	CS033545-CS033554	UL certification file for the Omega RES heads with silicone O-ring, Teflon grease, and brass dust cover.
23	Robert Bandura	Engineering	CS033555-CS033566	UL certification file for the commercial Omega style sprinklers with silicone O-rings, Teflon grease, heavy springs and brass dust covers.
23	Robert Bandura	Engineering	CS033567-CS033585	UL certification file for the AC Omega Adjustable Concealed sprinkler head with silicone O-rings, Teflon grease, heavy springs, and brass dust covers.
23	Robert Bandura	Engineering	CS033586-CS033587	UL certification file for the C-1A, C01AID, HEC-12, and HEC-12ID; 200°F rated quick response sprinkler head.
23	Robert Bandura	Engineering	CS033588-CS033594	UL certification file for the HEC-12 and HEC-20 horizontal side wall extended coverage sprinklers with alternative deflector material.
23	Robert Bandura	Engineering	CS033595-CS033625	UL certification file for the ½ inch Omega horizontal extended coverage HEC-12 and HEC-20 sprinkler heads.
23	Robert Bandura	Engineering	CS033626-CS033642	UL certification file for the EC-20A pendant residential ½ and 7/16 inch sprinkler head with alloy (35330) plunger housing material.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
23	Robert Bandura	Engineering	CS033643-CS033646	UL certification file for the FC Flow Control flush sprinkler head.
23	Robert Bandura	Engineering	CS033647-CS033703	UL certification file for the ½ Omega series commercial sleeve solder joint type sprinkler.
23	Robert Bandura	Engineering	CS033704-CS033746	UL certification file for the FC pendant and flush sprinkler head with dye or sand cast body and M style heat collector.
23	Robert Bandura	Engineering	CS033747-CS033803	UL certification file for the ½ Omega series commercial sleeve solder joint type sprinkler.
23	Robert Bandura	Engineering	CS033804-CS033809	UL certification file for the HEC-12 PRO EC and QREC sprinkler heads.
23	Robert Bandura	Engineering	CS033810-CS033889	UL certification file for the EC-20A pendant style residential 7/16 inch and recessed pendant sprinkler.
23	Robert Bandura	Engineering	CS033890-CS033897	UL certification file for O-ring tests.
23	Robert Bandura	Engineering	CS033898-CS033901	UL certification file for the Omega S.S. guide pin.
23	Robert Bandura	Engineering	CS033902-CS033934	UL certification file for the ½ Omega pendant commercial sprinkler head.
23	Robert Bandura	Engineering	CS033935-CS033942	UL certification file for the A, AA, and AC Concealed with prepainted plastic coated cover plates.
23	Robert Bandura	Engineering	CS033943-CS033948	UL certification file for the C-1A ½ inch alternate deflector material.
23	Robert Bandura	Engineering	CS033949-CS033953	UL certification file for the C-1A ½ with alloy (35330) plunger housing material.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
23	Robert Bandura	Engineering	CS033954-CS033959	UL certification file for the C-1A 160° pendant, 4 inch below ceiling operation, cold soldering and sensitivity.
23	Robert Bandura	Engineering	CS033960-CS033999	UL certification file for the Model M LO sprinkler head.
23	Robert Bandura	Engineering	CS034000-CS034009	UL certification file for the ½ inch pendant extended coverage sprinkler.
23	Robert Bandura	Engineering	CS034010-CS034015	UL certification file for Omega Locktite 290 to secure retaining nut.
23	Robert Bandura	Engineering	CS034016-CS034021	UL certification file for the Ident-A-Fire.
23	Robert Bandura	Engineering	CS034022-CS034027	UL certification file for the Ident-A-Fire FC, C-1A, AC, C-1A PRO, EC-20A, HEC-12, HEC-12 PRO, QR, and HEC-20.
23	Robert Bandura	Engineering	CS034028-CS034060	UL certification file for the HEC-12 ½ inch residential horizontal sidewall sprinkler.
23	Robert Bandura	Engineering	CS034061-CS034065	UL certification file for the HEC-12 ½ inch residential horizontal sidewall with alternate reflector material.
23	Robert Bandura	Engineering	CS034066-CS034079	UL certification file for the HEC-12 residential ½ inch horizontal sidewall with modified deflector (re-ex).
23	Robert Bandura	Engineering	CS034080-CS034120	UL certification file for the C-1A PRO recessed pendant Prohibitor HEC-12 PRO sidewall Prohibitor (commercial only).
23	Robert Bandura	Engineering	CS034121-CS034130	UL certification file for the prohibitor-C1-PRO, EC-20 PRO, and HEC-12 PRO ½ inch sprinkler.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
23	Robert Bandura	Engineering	CS034131-CS034133	UL certification file for the C-1A PRO & HEC-12 PRO quick response.
23	Robert Bandura	Engineering	CS034134-CS034151	UL certification file for Omega residential heads with painted heat collector.
23	Robert Bandura	Engineering	CS034152-CS034155	UL certification file for the R-1, HEC-12, C-1A, EC-20A, HEC-20 with light painted finish for decorative purposes.
23	Robert Bandura	Engineering	CS034156-CS034162	UL certification file for the ceramic bearing disc.

29	Closed Files	Engineering	CS044469-CS044479	"Omega notes" file, containing handwritten notes on Omega model, engineering drawings, Engineering Change Notices.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS044480-CS044521	"R-1A" file, containing memorandum on R-1A, R-1M, correspondence with UL concerning R-1A, R-1M, trip report, sprinkler model designation revision, engineering drawings, correspondence with UL, new model designation for RX Omega, RX Omega listing status, minutes of R-1 alternative meeting dated April 17, 1991, memorandum dated April 12, 1991 concerning R-1M Omega listing project, April 11, 1991 memorandum concerning R-1 salvage retrofit, residential sprinkler comparison chart, engineering drawings.
29	Closed Files	Engineering	CS044522-CS044529	"Omega plunger housing" file, containing memorandum concerning Omega plunger housings, correspondence with UL, correspondence pertaining to proposed material alternatives.
29	Closed Files	Engineering	CS044530-CS044547	"Omega half inch commercial" file, containing correspondence with UL.
29	Closed Files	Engineering	CS044548-CS044582	UL report on residential Omega HEC-12 sidewall sprinkler.
29	Closed Files	Engineering	CS044583-CS044610	UL report on model C-1 quick response sprinklers for fire protection and UL report on automatic sprinklers.
29	Closed Files	Engineering	CS044611	Miscellaneous file folder.
29	Closed Files	Engineering	CS044612-CS044624	"C-1 Omega" file, containing correspondence with UL on model C-1A adjustable pendant style sprinklers.
29	Closed Files	Engineering	CS044625-CS044630	"Indent-A-Fire" file, containing correspondence with UL re: investigation of Omega model HEC-12.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS044631-CS044634	"Omega guide pins" file, containing correspondence with UL.
29	Closed Files	Engineering	CS044635-CS044665	"Half inch Omega horizontal HEC-12 residential" file, containing 1983 UL report on residential sidewall sprinkler.
29	Closed Files	Engineering	CS044666-CS044724	"Half inch Omega horizontal extended coverage HEC-12 and HEC-20" file, containing UL report of July 1983 on automatic sprinklers, correspondence in 1986 concerning Omega quick response listings, 1983 UL report on automatic sprinklers, March 1984 correspondence with UL.
29	Closed Files	Engineering	CS044725-CS044740	"Half inch Omega horizontal sidewall Prohibitor" file, containing correspondence with UL.
29	Closed Files	Engineering	CS044741-CS044769	"Half inch model M" file, containing correspondence with UL and UL report on automatic sprinklers.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS044770-CS044876	Flow Control file, containing handwritten notes with diagrams and computations, handwritten memorandum regarding Currie and Warner Nozzle Cost Reduction, engineering drawings, UL 1983 report (revised 1988) on Automatic and Open Sprinklers, memorandum dated 10/02/90 from Chuck Lukens to Rich Hobbs concerning Currie and Warner Cost Reduce Nozzle for Flow Control Heads, handwritten notes, UL memorandum dated 05/09/91, Technician Service Request dated May 1991, engineering drawings, expense report.
29	Closed Files	Engineering	CS044877-CS044927	R-1 Trip file, containing correspondence with UL dated June 1991 regarding Omega residential sprinklers, residential sprinkler fire test data printout, residential sprinkler discharge distribution test printout, data sheet regarding perimeter collection, correspondence with UL dated 07/16/91 regarding Omega style residential pendent sprinkler.
29	Closed Files	Engineering	CS044928-CS044934	Correspondence with HEB Manufacturing Company, engineering drawings, notes.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS044935-CS044988	Model M file, containing memorandum from Chuck Lukens to Rich Hobbs dated December 1990 regarding M head release testing, handwritten notes, engineering drawings, Engineering Change Notice, Model M sprinklers, Bill of Material, handwritten notes regarding M head test program, 01/07/91 U.L. Non-Conforming Follow-up Test Results on Model M, October 1990 memorandum regarding M sprinklers, correspondence with UL, October 1990 regarding Non-Conforming Follow-Up Test Results on Model M, handwritten notes on Model M sprinklers.
29	Closed Files	Engineering	CS044989-CS045013	Omega Sidewall Anti-Movement Plates file, containing Assembly Procedures, Bill of Material, product information for Omega sprinkler wrench, installation data for Omega sprinkler wrench, engineering drawings, handwritten drawings with computations.
29	Closed Files	Engineering	CS045014-CS045030	AC/C-1A Projects File, containing memorandum from Michael Fries to George Polan, dated August 1990, regarding C-1A UL re-ex results, memorandum to Rich Hobbs dated June 1990, regarding Close-out of engineering projects.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045031-CS045056	Omega file, containing product information for Omega EC-20A residential pendent automatic sprinkler, Omega seal mechanism load calculations simplified, engineering drawings, assembly procedure, memorandum dated 06/07/89 from George Polan concerning residential Omegas, engineering drawings, handwritten drawings with computations, chart detailing sprinkler style listing temperature rating, body number and revision number, guide pin deflector and plunger housing, Non-Conformance Report, Chubb Fire Export Fixed Temperature Detector Type product information.
29	Closed Files	Engineering	CS045057-CS045059	C-1A file, containing memorandum dated July 1991 concerning residential C-1A product.
29	Closed Files	Engineering	CS045060-CS045100	FC leakage file, containing correspondence dated December 1987 to Factory Mutual Research, regarding examination of FC sprinklers, Flow Control sprinkler fusable element sheet, Incoming Inspection Reports, test results, engineering drawings, memorandum dated March 1986, regarding Flow Control sprinkler snap disc specification, Non-Conformance Report, handwritten notes concerning water pressure, memorandum dated 06/15/89 concerning physical testing, memorandum dated December 1988 concerning New Jersey Bell Flow Control issues.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045101-CS045147	XP Omega file, containing XP Omega module assembly drawings, notes, drawings and calculations for load reduction, half inch Omega seal mechanism load calculations simplified, technical drawings, memorandum dated August 1990 from George Polan to William Pardue, regarding Omega bodies 3/8 and 1/2, memorandum dated 08/23/90 from Rich Hobbs to George Polan concerning Omega bodies, new seal mechanism for Omega style sprinklers, engineering drawings with notations, handwritten notes, Omega residential sprinkler cost comparison, dated July 1990, United States Patent No. 4,465,141 dated 08/14/84.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045148-CS045223	Ident-A-Fire file, containing memorandum dated September 1989 pertaining to technical specifications, copy of catalog of wire specifications, engineering drawings, Engineering Change Notice, correspondence with UL dated October 1990 concerning Omega Ident-A-Fire automatic sprinklers, special order for C-1A Ident-A-Fire, C-1A Ident-A-Fire Bill of Material, UL Listing card for Central Sprinkler Co., correspondence with UL, January 1989, concerning Omega style sprinklers with Ident-A-Fire switches, handwritten drawings with computations and notes, Electro-Mech Assembly quotation dated August 1988, Material Transfer slip, company information from Electro-Mech Assembly, Cutler Hammer catalog page for commercial push-button switches, catalog page for miniature switch kit, PV Series panel switches, memorandum dated September 1989 regarding Ident-A-Fire style sprinklers, Article 770 from the National Electric Code regarding optical fiber cables, Article 760 from the National Electric Code regarding fire protective signaling systems, special order Omega HEC-12 sidewall Ident-A-Fire Bill of Material, handwritten drawing with computations and notations, CNK catalog, for sub-miniature push-button switches.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045224-CS045237	Pendent file, containing correspondence with UL dated November 1987, regarding Quick Response Model M, correspondence with UL, regarding Model M sprinklers using pendent deflector, UL correspondence February 1987, regarding investigation of Model M sprinklers using modified pendent deflector, Material Transfer dated November 1986, Model M pendent chart, sprinkler location versus frame arms, memorandum dated November 1986 to UL, regarding Model M sprinkler with new pendent deflector.
29	Closed Files	Engineering	CS045238-CS045241	HEC-12 file, containing test results, memo regarding HEC-12.
29	Closed Files	Engineering	CS045242-CS045292	"Omega style ding" file, containing memo dated December 1990, regarding Omega heat collector damage issue, memorandum dated November 1990, regarding Model M heat collector assemblies, handwritten notes, Procedure to Change Heat Fins on Damaged Omega Heads, M Sprinkler water pressure release test notes, chart of sorted heads for return by manufacture, Material Transfer, sprinkler liquid bath test log sheets for July to November 1990, handwritten list of products that may have heat collector issues, time-to-release chart, bath test results, handwritten notes.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045293-CS045325	R-1M New Fix file, containing memorandum, regarding leakage test on Central R-1M sprinklers, Engineering Change Notice for control manifold, engineering drawings for control manifold, Final Assembly and Bill of Materials, memorandum dated 05/07/93, regarding Reported Field Problems with Shortened Omega R-1M Threads, Engineering Diagnostic Report, engineering drawings with handwritten revisions, November 1992 memorandum regarding R-1M wrenches, November 1992 memorandum regarding R-1M body rework, November 1992 memorandum regarding R-1M body rework, Engineering Change Notice and R-1M new style Omega sprinkler, engineering drawing, Final Assembly and Bill of Materials.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045326-CS045457	R-1M trip file, containing correspondence with UL regarding Model R-1M Omega residential sprinkler, memorandum, July 1991, regarding design requirements for residential applications, R-1M Omega cut sheet, product information for Omega R-1M, installation diagram for Omega R-1M, Technician Service Request for R-1M, engineering drawings for R-1 Omega, R-1 retrofit drawings, Project Proposal Form for R-1 salvage retrofit, correspondence with UL regarding Omega listing project, April 1991, handwritten charts of 16 ft. by 16 ft. floor collection, residential sprinkler discharge distribution test, data sheet, cold soldering, data sheet, perimeter collection data sheet, residential sprinkler fire test data, 16 ft. by 16 ft. coverage test results, handwritten notes, sales information regarding R-1A versus R-1M, CEP price quote for deflectors, data sheet, perimeter collection, First Article Inspection Report, Engineering Non-Conformance Log, engineering drawings, Non-Conformance Report for deflector of R-1M.
29	Closed Files	Engineering	CS045458-CS045475	"Half inch Omega new version modified assembly" file, containing February 1985 requisition for purchase order, engineering drawings with handwritten notes, notations, and computations, engineering drawings, handwritten drawings with notes, computations.
29	Closed Files	Engineering	CS045476-CS045532	Omega heat collector file, containing handwritten drawings, engineering drawings with handwritten notes, voided drawings, handwritten drawings with notations and computations, revised engineering drawings.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045533-CS045544	3/8 Versus 7/16 Omega file, containing water distribution test notes, August 1984, water distribution tests, revised July 1981, installation guide for Omega residential sprinklers, water distribution tests, August 1984, Omega head discharge at pressure levels, engineering drawings.
29	Closed Files	Engineering	CS045545-CS045548	LO Omega file, containing engineering drawings, R.D. Brass and APM Simco Quote, handwritten engineering drawing for Central Sprinkler Co.
29	Closed Files	Engineering	CS045549-CS045571	Omega file, containing July 1986 memorandum regarding steel guide pins, UL, report regarding half inch Omega model listing as a quick response sprinkler, Vanguard Plastics memorandum regarding Omega sprinklers thread engagement, general product information for Omega residential fire sprinklers pendent and sidewall Models R-1, C-1, EC-20 and HEC-12 dated March 1984, commercial versus residential type Omega sprinklers recognition criteria, dated March 1984.
29	Closed Files	Engineering	CS045572-CS045581	Dezincification file, containing memo dated September 1994, regarding dezincification, Internal Movement Card, August 1994 memorandum to Advanced Fire Protection regarding Omega dezincification, August 1994 memo regarding dezincification, May 1994 memo to Advanced Fire Protection.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045582-CS045605	Omega fittings leakage file, containing December 1985 memo from Culligan Fire Protection, handwritten note regarding Culligan Fire Protection, handwritten notes, Omega sprinkler hydrostatic test,, November 1985 memorandum regarding Omega head fitting leakage, handwritten note regarding Culligan Fire Protection, October 1985 memorandum regarding Omega head fitting leakage, October 1985 memorandum regarding Omega sprinkler leakage issue, October 1985 memorandum regarding leakage, memorandum October 1985 regarding Omega heads leakage issue, handwritten notes.
29	Closed Files	Engineering	CS045606-CS045625	Omega material file, containing correspondence to UL concerning proposed material change for Omega sprinklers, handwritten engineering drawings, UL final bill.
29	Closed Files	Engineering	CS045626-CS045636	3/8 inch Orifice file, containing UL form for cost limit increase, correspondence with UL concerning 3/8 inch orifice sprinklers, UL notice of completion of engineering investigation, UL cost limit increase for project Material Transfer sheets, correspondence with UL regarding Model M 3/8 inch orifice sprinkler.
29	Closed Files	Engineering	CS045637-CS045638	Model M Res file, containing correspondence with UL, regarding Model M with 7/16 orifice bushing.

BOX #	SOURCE	DEPARTMENT	BATES RANGE	DESCRIPTION
29	Closed Files	Engineering	CS045638-CS045649	Omega activation file, containing April 1988 memo regarding Omega M heat collector assembly machine, pellet squeezing operation log sheet, engineering drawing.
29	Closed Files	Engineering	CS045650-CS045706	Model M upright file, containing correspondence with UL regarding modified Model M sprinklers, Material Transfer sheets, handwritten notes regarding Model M sprinkler, release test results, UL costs limit increase forms, UL acknowledgment dated October 1986, internal memorandum regarding Model M ½ inch orifice upright sprinkler, price quote from M.D. Hubbard and H.K. Metalcraft regarding computer simulation profile of spring washer, engineering drawings, correspondence with UL referring to non-conforming follow-up test results, October 1988 M Style seal mechanism diagnostic review, correspondence with UL concerning modified Model M sprinklers.

PROPOSED PROTECTIVE ORDER AND OPPOSITION OF RESPONDENTS TO COMPLAINT COUNSEL'S SUBMISSION OF DOCUMENTS IN CAMERA

Complaint Counsel has filed two motions within the past several days submitting documents for an in camera review by the Court.[1/] In Complaint Counsel's In Camera Submissions, Complaint Counsel has submitted to the Court for consideration purportedly confidential and trade secret material previously supplied to Complaint Counsel by third parties. Complaint Counsel admits that this material is responsive to Respondents' discovery requests.

It is utterly inappropriate for Complaint Counsel to engage in this course of conduct. Complaint Counsel is simply attempting to submit its "evidence" to the Court piece-meal, without permitting Respondents an opportunity to oppose, comment on, or even review the material. In its most recent submission, Complaint Counsel has not even revealed to

---

1/ Complaint Counsel's In Camera Submission of Documents in Response to Discovery and Request for Disclosure Determination, filed May 15, 1998; and Complaint Counsel's Notice of In Camera Submission of Documents in Response to Discovery, filed May 18, 1998 (collectively, "Complaint Counsel's In Camera Submissions"). Complaint Counsel's in camera submission of an anonymous letter is addressed by Respondents separately from this memorandum. See Respondents' Opposition To Complaint Counsel's Motion For Protective Order Regarding Anonymous Letter.

Respondents the nature or source of the documents submitted to the Court. In essence, Complaint Counsel is attempting to conduct an ex parte trial of this matter. Such conduct is antithetical to the nature of due process and creates a strong appearance of impropriety.

As an initial matter, the material submitted for in camera review by Complaint Counsel is subject to discovery. Title 15 U.S.C. § 2055(a)(8) provides that material obtained by the CPSC from third parties is discoverable. Specifically, the statute provides: "The provisions of paragraphs (2) through (6) [regarding material obtained from third parties] shall not prohibit the disclosure of information . . . when relevant in any administrative proceedings under this Act or in judicial proceedings to which the Commission is a party." 15 U.S.C. § 2055(a)(8) (emphasis added). Because the instant case in an "administrative proceeding under this Act," the documents provided by the third parties are discoverable.

In addition, Complaint Counsel has submitted no evidence that the third parties have refused to permit discovery of the documents provided. Complaint Counsel has not provided any affidavits, sworn statements, or verifications from the third parties in question stating that they would not permit discovery. Instead, the third parties merely requested "prior notification of any intended release . . . so that [the third party] may prepare a response. . . ." See Exhibits "A" and "B" to Complaint Counsel's In Camera Submission of Documents In Response to Discovery and Request for Disclosure Determination. Thus, the appropriate and normal course of action should have been for Complaint Counsel to notify the affected third parties and, if requested by the third parties, seek a negotiated confidentiality agreement with Respondents. The appropriate course of action for Complaint Counsel clearly was not to submit the documents to the Court for an in camera, ex parte review.

Moreover, Complaint Counsel's stated concern about confidentiality and trade secrets is a thinly veiled excuse to present the documents in camera. Over two weeks ago, on May 1, 1998, in response to Complaint Counsel's stated request for a confidentiality agreement in its discovery responses, Respondents provided a draft Confidentiality Agreement to Complaint Counsel. See Letter of May 1, 1998 with attached Confidentiality Agreement, attached hereto as Exhibit "A". This Confidentiality Agreement provided confidential documents produced to the CPSC by third parties with a large degree of protection from public disclosure, while permitting discovery in this case to proceed.

Complaint Counsel did not comment on or respond to this proposed Confidentiality Agreement. Respondents sent follow-up letters on May 7 and 13, requesting comments or agreement from Complaint Counsel regarding this Confidentiality Agreement. See Letters of May 7 and 13, 1998, attached hereto as Exhibits "B" and "C". Complaint Counsel still provided no response. Instead, with no prior notice, Complaint Counsel unilaterally began to submit documents for in camera review by the Court.

Respondents now submit the draft Confidentiality Agreement for Court approval as a Protective Order Regarding Confidentiality, attached hereto as Exhibit "D". The Court has the authority to enter the Protective Order Regarding Confidentiality pursuant to 16 C.F.R. § 1025.31(d). The Protective Order Regarding Confidentiality will protect the interests of both parties and non-parties regarding trade secrets or other confidential research, development, or commercial information. It also will obviate the need for the Court to review all potentially confidential documents on an in camera basis prior to production, and will permit discovery to proceed in this case.

Based on all of the foregoing, Respondents respectfully request that the Court: (1) deny Complaint Counsel's request to withhold from discovery the documents submitted in camera ; and (2) enter the attached Protective Order Regarding Confidentiality.

Respectfully submitted,

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

On Wednesday, April 29, 1998, we received Complaint Counsel's written discovery responses. However, to date, we still have not received any documents. Please immediately address this matter. In addition, in the future, please arrange for prompt and reliable service of any documents and/or pleadings.

Regarding your discovery responses, a quick reading reveals that these responses are highly deficient. In essence, the Staff has failed to provide any evidence or requested information supporting the Complaint in this matter. We will provide a detailed analysis of the deficiencies in the Staff's discovery responses once we receive the documents you are producing, and hope that you will make a good faith attempt to provide meaningful supplemental responses. In the absence of such supplemental responses, we will be forced to file a motion to compel.

There are several preliminary matters regarding the Staff's discovery responses which must be addressed immediately. First, regarding all claims of documents or information allegedly protected by the attorney-client privilege or work product doctrine, please immediately produce a privilege log as required by the discovery requests and applicable practice and procedure. Given the expedited nature of these proceedings, we will expect to receive such a log no later than May 8, 1998.

Second, the Staff has delayed providing certain documents pending the entry of a Confidentiality Agreement. Unfortunately, you did not choose to raise this issue with us prior to raising such an objection, nor have you suggested any agreement. To remedy this problem, attached is a draft Confidentially Agreement. Please provide me with any comments by the end of the day on May 5, 1998. In the absence of any comments, given the expedited nature of these proceedings, we will submit the Confidentiality Agreement for Court approval.

Third, your discovery responses reveal that the CPSC has been in contact with not only former Central employees, but also current Central employees. Such ex parte contacts are a clear breach of ethical obligations and are contrary to the Staff's prior written representations that no such contacts had occurred. Please immediately produce all evidence related to such contacts, which clearly cannot be considered privileged in any manner. Under no circumstances should the Staff engage in ex parte contacts with the Court regarding these contacts, which appears to be the course of action you suggest in your discovery responses. In this regard, please immediately confirm that you will not make any ex parte submissions to Judge Moran without substantial prior notice that would give us an opportunity to object to any such one-sided factual submissions to the Court.

Regards,

Thomas P. Hogan, Jr.

CONFIDENTIALITY AGREEMENT

Respondents Central Sprinkler Corporation and Central Sprinkler Company (collectively, "Central") and Petitioner the Consumer Product Safety Commission (the "CPSC"), through undersigned counsel, hereby agree:

1. Petitioner and Respondents shall have the right to limit access to any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness, to the undersigned outside counsel for the parties.

2. Such documents or other tangible items must be designated by conspicuously stamping the words "OUTSIDE COUNSEL ONLY" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may limit access to such testimony to the undersigned outside counsel by notifying the other party of the portion of testimony to be designated on the record at the deposition or in writing no later than two days after the transcript is received.

3. Information designated for "OUTSIDE COUNSEL ONLY" shall not be disclosed or disseminated to anyone, except:

a. the undersigned outside counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purposes of assisting in the preparation of this litigation, provided, however, that no such information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person, entity, or firm with the prior written consent of all parties.

4. Petitioner and Respondents shall have the right to designate as CONFIDENTIAL any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness.

5. Such documents or other tangible items must be designated by conspicuously stamping the words "CONFIDENTIAL" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may designate portions of the record CONFIDENTIAL by notifying the other party on the record at the deposition or in writing no later than two days after the transcript is received.

6. Information designated "CONFIDENTIAL" shall not be disclosed or disseminated to anyone, except:

a. a party, counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purpose of assisting in the preparation of this litigation, provided, however, that no CONFIDENTIAL information shall be disseminated to any expert who is employed by a direct business competitor of Central or its affiliates; or

c. any person who was involved in the preparation of the document or information; or

d. any other person, entity, or firm with the prior written consent of all parties.

7. Any party that provides documents or other discovery obtained from the other party in the course of this litigation to any person (other than the Court, court personnel, and court reporters) will first obtain from such person, prior to any such dissemination, a written statement in the form attached as Exhibit "A" hereto, that such person agrees to be bound by this Confidentiality Agreement. The undersigned counsel shall maintain a list of all such persons along with the written agreement of each person. Upon request of any party at any time, counsel in possession of the written agreements shall immediately either: (a) provide copies of the written agreements to the requesting party; or (b) submit the written agreements to the Court to determine whether any aspect of the written agreements are protected from discovery by any privilege.

8. When any document or information designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY," or other pleadings or papers disclosing or referring to such information are used in connection with any motion, hearing, filing or other submission to the Court, they shall be filed in an envelope under seal pursuant to the rules of this Court and shall be marked as follows:

> CONFIDENTIAL/RESTRICTED:
> The contents of this envelope are not to be revealed to anyone except the Court, or with the prior consent of all the parties herein, or pursuant to any other Order of this Court. If the contents are thus revealed, they shall thereafter be resealed.

9. a. Nothing in this Agreement shall preclude any party from challenging a designation of "CONFIDENTIAL" OR "OUTSIDE COUNSEL ONLY" by another party. If any party elects to challenge a designation of any document, deposition testimony, or

information pursuant to this order, that party must provide at least five days advance notice to afford the designating party an opportunity to remove voluntarily such designation.

b. If, after the five-day period has expired, the designating party has not agreed to remove the designation and the parties are otherwise unable to resolve the challenge to the designation, the challenging and designating parties shall contact the Court for a determination of whether the challenged designation is appropriate. The challenging party shall provide the Court with one copy of each document, response, or portion of transcript challenged. The challenging party has the burden of proving the inapplicability and/or incorrectness of any designation.

c. If the challenge is not resolved by agreement, or by voluntary removal, and if the Court is not contacted, then the designation shall remain in effect and shall continue to apply to such document or information.

10. All documents and other discovery produced or obtained in the course of this litigation, whether designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" or not, shall be used for the sole and limited purpose of preparation for and trial of this action and shall not be used for any other purpose. "For purposes of preparation and trial of this action," as used in this Order, means that individuals obtaining access to discovery: (i) can read and review such discovery to become knowledgeable about this litigation; and (ii) can comment on such discovery to counsel for the parties if they so choose. All other uses, including but not limited to (1) making such discovery available to any person who has not signed Exhibit "A" hereto and (2) causing such discovery to be published in any trade journal, newspaper, or other written

publication other than filings with this Court connected with this litigation, shall fall outside the definition of "For purposes of preparation for and trial of this action." Nothing in this Confidentiality Agreement shall preclude persons wishing to use discovery from this litigation for purposes other than "For purposes of preparation for and trial of this action" from moving this Court, upon reasonable notice to the parties, for appropriate relief.

11. Within thirty days of the close of this litigation for any reason, each party shall retrieve all copies of materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" from his or its own files, and from experts or other persons to whom he or it has provided such materials consistent with this Confidentiality Agreement, and shall do one of the following: (1) return to the designating party all such materials, including all copies thereof, produced by such designating party during this action; or (2) certify in writing to the designating party that all materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" produced by such other party during this action have been destroyed. All material protected by this Confidentiality Agreement which has been placed in any computer databank, hard drive, or disk shall be completely erased, and any documents listing or summarizing information protected by this Confidentiality Agreement shall be destroyed within the same period.

12. Nothing herein contained shall be construed to preclude or limit any party from opposing any discovery on any grounds that would otherwise be available. This Agreement shall not, in and of itself, prejudice any contention of any party upon any motion, nor shall this Agreement constitute a waiver of any right to seek relief from the Court from any and all of the provisions hereof or other modifications of the terms hereof. This Agreement shall not limit any party's

right to seek judicial review or to seek further and additional protection against or limitation upon production or dissemination of information and documents or their contents.

13. Nothing herein shall be construed to preclude or limit the presence of any individual at any hearings in or the trial of this action.

EXHIBIT "A" TO CONFIDENTIALITY AGREEMENT

I hereby certify that I have read the CONFIDENTIALITY AGREEMENT entered into by the parties in the above-captioned litigation. I hereby agree to be bound by the terms of the CONFIDENTIALITY AGREEMENT and to submit personally to the jurisdiction of the Administrative Law Judge assigned to this action for purposes of enforcing my agreement to be bound by the terms of the CONFIDENTIALITY AGREEMENT.

I hereby agree that I will use any documents or other discovery produced or provided by a party in the above-captioned litigation for the sole and limited purposes of preparation for and trial of the above-captioned litigation.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter responds to your letter of May 6, 1998.

First, regarding the scope of discovery provided by the Staff, your letter fails to address the multiple deficiencies with the Staff's discovery responses raised in my letter of May 4. For example, you still refuse or fail to identify persons with knowledge regarding the key allegations in the Complaint. By failing to provide such information, you completely block Central's ability to take depositions of your witnesses and effectively shut down discovery. Moreover, you fail to address the large number of interrogatories and document requests for which the Staff has provided no response whatsoever. These are only two examples of your letter's failure to address the many deficiencies described in my letter of May 4. It would thus appear that the Staff is refusing to engage in any good faith attempt to resolve this discovery dispute. Therefore, in the absence of full and complete supplemental responses from the Staff as discussed in my letter of May 4, we will be forced to file a motion to compel.

Second, in your letter, you represented that the Staff will provide us with a privilege log. You have not indicated when you will provide it, however. Given the pervasive nature of your privilege objections, the timing requirements established for motions to compel by the CPSC rules of practice, and the fact that such a log already is tardy, we will expect to receive the Staff's privilege log no later than May 8, 1998, as we requested in my letter of May 4.

Your letter also represents that you will begin to provide the Staff's initial test results, but again you do not provide a set date for production. As indicated to you in my letter of May 4, we will expect to receive a full supplemental production by no later than May 8, 1998.

In addition, your letter reiterates a refusal to produce purportedly confidential documents from third parties absent a confidentiality agreement. In my letter to you of May 1, we provided you with a draft Confidentiality Agreement. Despite your stated willingness to produce the referenced documents pursuant to such an agreement, your letter does not comment on or otherwise address the proposed Confidentiality Agreement. In the absence of your comments, we will submit the Confidentiality Agreement for Court approval contemporaneously with any necessary motion to compel. Moreover, please be advised that if you refuse to produce any document for any reason, Central will oppose the admission of that document or class of documents into evidence at the trial of this matter.

Finally, we hereby reiterate our request that the Staff not attempt to engage in any ex parte contacts with the Court.

To date, the Staff has not provided any meaningful discovery to Respondents. Of the 2000 pages of documents produced, approximately 1500 consist of test results provided to you by Central, and many of the remaining 500 consist of publicly available documents. Your discovery provides no meaningful information to Central regarding the bases of your claims and substantially impairs Central's ability to prepare for trial. The Staff cannot and should not be permitted to file a public Complaint, but then refuse to provide the evidence purportedly supporting such claims. We hope that the Staff will choose to take a more reasonable and forthcoming approach going forward in this litigation.

Regards,

Thomas P. Hogan, Jr.

Re: In the Matter of Central Sprinkler Corp., et al. (CPSC Docket No. 98-2)

Dear Ms. Orlove:

This letter is written in response to your letter of May 8, 1998.

We have received Complaint Counsel's supplemental production of documents. This production remains deficient, as it provides little more than the naked conclusions of Complaint Counsel regarding test results. Absent the underlying data and methodology, these results provide Central with little relevant information and no opportunity to examining the validity of the results.[1/]

Nevertheless, please clarify whether it is Complaint Counsel's position that you have produced all relevant and responsive documents, including all documents currently in your possession which you intend to introduce at trial. If so, Central will begin to prepare for the trial of this matter based on the documents already produced. For example, based on the test results produced in your supplemental production, this will mean, inter alia, that Complaint Counsel has no information that indicates any failures regarding Omegas using silicone o-rings, and no

---

1/ Contrary to the assertions in your letter, your discovery responses to date have not provided the underlying data supporting these test results, unless such results are compiled almost entirely from Respondents' own test results already produced to Complaint Counsel. In fact, your prior discovery responses and correspondence indicate that you have not produced the underlying data and methodology based on a claim to work product protection.

information that indicates failures in any post-1990 Omegas used in copper or plastic systems. If Complaint Counsel has not produced all relevant documents, please confirm this fact in writing by May 14, so that we can begin to prepare a motion to compel.

Regarding Complaint Counsel's identification of potential witnesses, your letter points to the fact that you have identified "numerous persons with . . . knowledge" in response to six of Respondents' interrogatories. It appears, however, that this represents a selective and incomplete disclosure of "persons with knowledge." Moreover, Complaint Counsel has not provided sufficient documents that would allow Respondents to identify other potential witnesses. If it is Complaint Counsel's position that the persons identified by Complaint Counsel in discovery responses to date represent the universe of potential fact witnesses for Complaint Counsel, please confirm this fact. On the other hand, if Complaint Counsel is aware of other "persons with knowledge" that Complaint Counsel has not disclosed, please confirm this fact in writing by May 14.

In addition, to date, Complaint Counsel continues to ignore several other pressing issues. Complaint Counsel has not addressed the multiple deficiencies in your discovery responses as described in my letters of May 4 and May 7. Moreover, Complaint Counsel has failed to produce a privilege log despite repeated requests from Respondents. Finally, despite several reminders, Complaint Counsel has neither commented on nor responded to the draft Confidentiality Agreement that Respondents sent to you two weeks ago.

Regards,

Thomas P. Hogan, Jr.

PROTECTIVE ORDER REGARDING CONFIDENTIALITY

AND NOW, pursuant to 16 C.F.R. § 1025.31(d), for good cause shown, the Court hereby ORDERS that the following terms and conditions shall apply as a protective order in the above-referenced matter.

1. Petitioner and Respondents shall have the right to limit access to any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness, to the undersigned outside counsel for the parties.

2. Such documents or other tangible items must be designated by conspicuously stamping the words "OUTSIDE COUNSEL ONLY" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may limit access to such testimony to the undersigned outside counsel by notifying the other party of the portion of testimony to be designated on the record at the deposition or in writing no later than two days after the transcript is received.

3. Information designated for "OUTSIDE COUNSEL ONLY" shall not be disclosed or disseminated to anyone, except:

a. the undersigned outside counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purposes of assisting in the preparation of this litigation, provided, however, that no such information shall be disseminated to any expert who is employed by a direct business competitor of Respondents or its affiliates; or

c. any person, entity, or firm with the prior written consent of all parties.

4. Petitioner and Respondents shall have the right to designate as CONFIDENTIAL any document or other item relevant to this litigation, including without limitation answers to interrogatories and any portion of deposition testimony or other testimony by a witness.

5. Such documents or other tangible items must be designated by conspicuously stamping the words "CONFIDENTIAL" on each page of the designated material or by notifying the other party in writing of the material to be considered so designated. With regard to testimony, a party may designate portions of the record CONFIDENTIAL by notifying the other party on the record at the deposition or in writing no later than two days after the transcript is received.

6. Information designated "CONFIDENTIAL" shall not be disclosed or disseminated to anyone, except:

a. a party, counsel for any party, and the employees of such counsel to whom it is necessary that the information be disclosed for purposes of this litigation only; or

b. any expert engaged by a party for the purpose of assisting in the preparation of this litigation, provided, however, that no CONFIDENTIAL information shall be disseminated to any expert who is employed by a direct business competitor of Respondents or its affiliates; or

c. any person who was involved in the preparation of the document or information; or

d. any other person, entity, or firm with the prior written consent of all parties.

7. Any party that provides documents or other discovery obtained from the other party in the course of this litigation to any person (other than the Court, court personnel, and court reporters) will first obtain from such person, prior to any such dissemination, a written statement in the form attached as Exhibit "A" hereto, that such person agrees to be bound by this Confidentiality Agreement. Petitioners and Respondents shall maintain a list of all persons to whom they have provided such documents along with the written agreement of each person. Upon request of any party at any time, counsel in possession of the written agreements shall immediately either: (a) provide copies of the written agreements to the requesting party; or (b) submit the written agreements to the Court to determine whether any aspect of the written agreements are protected from discovery by any privilege.

8. When any document or information designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY," or other pleadings or papers disclosing or referring to such information are used in connection with any motion, hearing, filing or other submission to the Court, they shall be filed in an envelope under seal pursuant to the rules of this Court and shall be marked as follows:

> CONFIDENTIAL/RESTRICTED:
> The contents of this envelope are not to be revealed to anyone except the Court, or with the prior consent of all the parties herein, or pursuant to any other Order of this Court. If the contents are thus revealed, they shall thereafter be resealed.

9. a. Nothing in this Agreement shall preclude any party from challenging a designation of "CONFIDENTIAL" OR "OUTSIDE COUNSEL ONLY" by another party.

If any party elects to challenge a designation of any document, deposition testimony, or information pursuant to this order, that party must provide at least five days advance notice to afford the designating party an opportunity to remove voluntarily such designation.

b. If, after the five-day period has expired, the designating party has not agreed to remove the designation and the parties are otherwise unable to resolve the challenge to the designation, the challenging and designating parties shall contact the Court for a determination of whether the challenged designation is appropriate. The challenging party shall provide the Court with one copy of each document, response, or portion of transcript challenged. The challenging party has the burden of proving the inapplicability and/or incorrectness of any designation.

c. If the challenge is not resolved by agreement, or by voluntary removal, and if the Court is not contacted, then the designation shall remain in effect and shall continue to apply to such document or information.

10. All documents and other discovery produced or obtained in the course of this litigation, whether designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" or not, shall be used for the sole and limited purpose of preparation for and trial of this action and shall not be used for any other purpose. "For purposes of preparation and trial of this action," as used in this Order, means that individuals obtaining access to discovery: (i) can read and review such discovery to become knowledgeable about this litigation; and (ii) can comment on such discovery to counsel for the parties if they so choose. All other uses, including but not limited to (1) making such discovery available to any person who has not signed Exhibit "A" hereto and (2)

causing such discovery to be published in any trade journal, newspaper, or other written publication other than filings with this Court connected with this litigation, shall fall outside the definition of "For purposes of preparation for and trial of this action." Nothing in this Protective Order shall preclude persons wishing to use discovery from this litigation for purposes other than "For purposes of preparation for and trial of this action" from moving this Court, upon reasonable notice to the parties and, if applicable, the non-party who originally provided the documents, for appropriate relief.

11. Within thirty days of the close of this litigation for any reason, each party shall retrieve all copies of materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" from his or its own files, and from experts or other persons to whom he or it has provided such materials consistent with this Protective Order, and shall do one of the following: (1) return to the designating party all such materials, including all copies thereof, produced by such designating party during this action; or (2) certify in writing to the designating party that all materials designated "CONFIDENTIAL" or "OUTSIDE COUNSEL ONLY" produced by such other party during this action have been destroyed. All material protected by this Protective Order which has been placed in any computer databank, hard drive, or disk shall be completely erased, and any documents listing or summarizing information protected by this Protective Order shall be destroyed within the same period.

12. Nothing herein contained shall be construed to preclude or limit any party from opposing any discovery on any grounds that would otherwise be available. This Protective Order shall not, in and of itself, prejudice any contention of any party upon any motion, nor shall this Protective Order constitute a waiver of any right to seek relief from the Court from any and all of the

provisions hereof or other modifications of the terms hereof. This Protective Order shall not limit any party's right to seek judicial review or to seek further and additional protection against or limitation upon production or dissemination of information and documents or their contents.

13. Nothing herein shall be construed to preclude or limit the presence of any individual at any hearings in or the trial of this action.

BY THE COURT:

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of	)	
CADET MANUFACTURING COMPANY,	)	CPSC Docket No. 99-1
Respondent	)	

CONSENT AGREEMENT

This Consent Agreement is made by and between the staff of the Consumer Product Safety Commission, and Respondent, Cadet Manufacturing Company, a domestic corporation, to settle the above-captioned administrative action. The parties agree as follows:

Parties

1. The "staff" is the staff of the Consumer Product Safety Commission ("CPSC" or "the Commission"), an independent regulatory agency of the United States of America, established by Congress pursuant to Section 4 of the Consumer Product Safety Act ("CPSA"), 15 U.S.C. § 2053, as amended.

2. Respondent Cadet Manufacturing Company ("Cadet") is a corporation organized and existing under the laws of the State of Washington, with its principal place of business located at 2500 West Fourth Plain Boulevard, Vancouver, Washington 98660. Cadet manufactures and distributes in-wall electric heaters among other heating products.

Subject Matter

3. Since approximately 1978, Cadet has manufactured and sold and/or distributed in commerce in-wall electric heaters for use in homes and residences under the brand names "Cadet" and "Encore." These include all models and variants within each model of the series FW (including models FW-051, FW-101, FW-122, FW-202, and FW-751), manufactured between 1978 and 1987; series FX (including models FX-051, FX-052, FX-071, FX-072, FX-101, FX-102, FX-122, FX-151, FX-152, FX-202, and FX-242), manufactured between 1985 and 1994; series LX (including models LX-242, LX-302, LX-402, and LX-482), manufactured between 1985 and 1994; series TK (including models TK-051, TK-071, TK-072, TK-101, TK-102, TK-151, and TK-152), manufactured between 1984 and 1998; series ZA (including models ZA-051, ZA-052, ZA-071, ZA-072, ZA-101, ZA-102, ZA-122, ZA-151, ZA-152, ZA-202, and ZA-242), manufactured between 1985 and 1999; series Z (including models Z-072, Z-101, Z-102, Z-151, Z-152, Z-202,and Z-208), manufactured between 1993 and 1999; and all series and models of the same or functionally identical heaters manufactured and distributed by Cadet under the Encore brand name, including series RX (including models RX-072, RX-101, RX-102, RX-151, RX-152, RX-202, and RX-242), manufactured between 1985 and 1994; series RLX (including models RLX-302, RLX-402, and RLX-482) manufactured between 1985 and 1994; series RK (including models RK-101 and RK-102), manufactured between 1984 and 1998; series RA (including models RA-101, RA-102, RA-151, RA-152, and RA-202), manufactured between 1985 and 1994; and series ZC (including models ZC-072, ZC-101, ZC-102, ZC-151, ZC-152, ZC-202, and ZC-208), manufactured between 1993 and 1999. For each of these heaters, the variants signified by the suffix T (with thermostat), W (white color), and TW (with thermostat and white color) found after the model number are

included. These heaters shall hereinafter be collectively referred to as "the Heaters." Cadet manufactured approximately 1,950,000 of the Heaters for sale to consumers principally in the States of California, Idaho, Montana, Oregon, and Washington.

4. On January 14, 1999, the staff filed an Administrative Complaint ("Complaint") against Cadet, seeking a determination that certain of the Heaters present a substantial product hazard within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2), and public notice and a recall of certain of the Heaters pursuant to Sections 15(c) and (d) of the CPSA, 15 U.S.C. §§ 2064(c) and (d). The Complaint alleges that certain of the Heaters are defective and present a substantial product hazard within the meaning of Section 15(a)(2) of the CPSA, 15 U.S.C. § 2064(a)(2), because their design and/or manufacture causes them to overheat, fail, and catch fire; and/or allow lint, dirt, or debris to build up within the heaters and catch fire. The Complaint also alleges that the design of certain of the Heaters can cause the Heaters to spew flames and/or burning or molten particles, or eject sparks into the living space of a home or residence, or energize the Heaters creating a risk of electric shock.

5. To date, the staff has received information alleging at least 264 instances of electrical fire or malfunction involving the Heaters: 115 units of series FX; 32 units of series FW; 5 units of series LX; 74 units of series ZA; 3 units of series TK; and 35 units of series Z; including 134 heaters that allegedly smoked, sparked, caught fire, emitted flame, and/or ejected burning particles as the result of the alleged defects identified and described in Paragraphs 8 through 10 of the Complaint. These incidents have allegedly caused or contributed to three deaths and two serious thermal burn injuries, and the staff also contends that the Heaters may cause serious electric shock injury and death.

6. Cadet denies each and all of the staff's allegations in the Complaint that Cadet's heaters are defective. Cadet contends that its heaters (other than Cadet's models Z152 and Z202) are safe when properly installed, maintained, and used. Cadet further denies generally and specifically any allegation that Cadet's heaters present a substantial risk of injury to the public, or present a substantial product hazard.

Agreement of the Parties

7. It is the express purpose of the parties entering this Consent Agreement to protect the public safety by carrying out the recall and replacement of the Heaters.

8. The parties intend for this Consent Agreement and the attached Order (hereinafter "Order" or "the Order"), which is hereby incorporated by reference, to resolve all of the staff's allegations and requests for relief relating to the Heaters.

9. The Heaters are "consumer products" within the meaning of Section 3(a)(1) of the CPSA, 15 U.S.C. § 2052(a)(1).

10. Cadet is a "manufacturer" of "consumer product[s]," which are "distributed in commerce," as those terms are defined in Sections 3(a)(1), (4), and (11) of the CPSA, 15 U.S.C. §§ 2052(a)(1), (4), and (11).

11. The CPSC has jurisdiction over Cadet and the Heaters under Sections 3(a)(1), (4), and (11) and Section 15 of the CPSA, 15 U.S.C. §§ 2052(a)(1), (4), and (11), and § 2064.

12. For purposes of this settlement only, Cadet agrees not to contest the allegations in the Complaint that the Heaters contain a "defect which creates a substantial product hazard," as those terms are defined in Section 15(a) of the CPSA, 15 U.S.C. § 2064(a).

13. This Consent Agreement and Order shall take effect upon its final acceptance by the CPSC and final approval by the United States Bankruptcy Court for the Western District of Washington at Tacoma (hereinafter, "the Bankruptcy Court"). The date of final approval by the Bankruptcy Court shall hereinafter be referred to as "the Effective Date."

14. Upon acceptance by the CPSC of this Consent Agreement, and entry of the incorporated Order, and final approval by the Bankruptcy Court, Cadet knowingly, voluntarily, and completely waives and relinquishes any past, present, and/or future right or rights in this matter: (a) to an administrative or judicial hearing and to all further procedural steps, including findings of fact, conclusions of law, and/or further determination of whether the Heaters contain a defect which creates a substantial product hazard within the meaning of Section 15 of the CPSA; (b) to seek judicial review or otherwise challenge or contest the validity of this Consent Agreement and Order as issued and entered; (c) to seek judicial review of this or any past orders, findings, and/or determinations of the CPSC or the Presiding Officer in this matter, except as set forth in Paragraphs 23 and 25 of this Consent Agreement; and (d) to file any claim or to seek any remedy under the Equal Access to Justice Act.

15. Cadet agrees to fulfill all requirements of the incorporated Order.

16. The incorporated Order is issued under Sections 15(c) and (d) of the CPSA, 15 U.S.C. §§ 2064(c) and (d), and a violation of this Consent Agreement and the incorporated Order is a prohibited act within the meaning of Section 19(a)(5) of the CPSA, 15 U.S.C. § 2068(a)(5), and may subject Cadet to civil and/or criminal penalties under Sections 20 and 21 of the CPSA, 15 U.S.C. §§ 2069 and 2070.

17. Cadet acknowledges that any interested person may bring an action pursuant to Section 24 of the CPSA, 15 U.S.C. § 2073, in any United States District Court in which Cadet is found or transacts business to enforce the Order and to obtain appropriate injunctive relief.

18. The CPSC, the staff, and/or Cadet may disclose terms of this Consent Agreement and Order to the public.

19. This Consent Agreement and incorporated Order shall be binding upon the parties hereto and their successors, assigns, and any operating bankruptcy trustees or receivers. If, prior to the termination of this Consent Agreement and Order, Cadet merges with any other business entity or sells, assigns, or otherwise transfers substantially all of its assets, Cadet shall provide reasonable prior notice to the surviving corporation or the purchaser, assignee, or transferee of substantially all of Cadet's assets, of this Consent Agreement and Order, and of its binding effect upon said surviving corporation, purchaser, assignee, or transferee. The existence of this Consent Agreement and Order and its binding effect shall be noted in any agreement between Cadet and such surviving corporation, purchaser, assignee, or transferee. It shall be a condition of any such merger, sale, assignment, or transfer that the surviving corporation or the purchaser, assignee, or transferee shall execute a document agreeing to be bound by the provisions of this Consent Agreement and Order and shall submit to the jurisdiction of the CPSC for purposes of enforcement of this Consent Agreement and Order. In the event of any merger or sale, assignment, or transfer of substantially all of Cadet's assets, Cadet shall provide written notice to the staff no later than sixty (60) days prior to any such merger or asset sale, assignment, or transfer, except in the case of extenuating circumstances, in which

case Cadet shall notify the staff as soon as reasonably possible.

20. This Consent Agreement and Order have been negotiated by the parties. Cadet is not relying on the advice of the staff, nor anyone associated with the staff, as to legal, tax, or other consequences of any kind arising out of this Consent Agreement and Order, and Cadet specifically assumes the risk of all legal, tax, and other consequences.

21. For all purposes, this Consent Agreement and Order shall constitute an enforceable judgment obtained in an action or proceeding by a governmental unit to enforce its police and regulatory power. Cadet acknowledges and agrees that this Consent Agreement and Order are pursuant to the CPSC's police and regulatory power to remedy the alleged risk created by the Heaters, and that, once Cadet, with the proper authorization from the Bankruptcy Court, signs the Consent Agreement and incorporated Order, the Consent Agreement and the incorporated Order are not subject to an automatic stay in any bankruptcy proceeding involving Cadet.

22. The CPSC, at its sole discretion and upon reasonable notice to Cadet, may void, suspend, or rescind all, or any part, of this Consent Agreement and Order if Cadet has made material misrepresentations regarding, but not limited to, its financial condition as of the date of this Consent Agreement and Order; the projected manufacturing costs, service and handling costs, freight costs, notification costs, and factory set-up costs for replacement heaters; and/or the estimated number of the Heaters remaining to be remediated, and the staff has relied upon those misrepresentations in entering into this Consent Agreement.

23. If, after the Effective Date hereof, any provision of this Consent Agreement and Order is held to be illegal, invalid, or unenforceable under present or future laws

effective during the term of this Consent Agreement and Order, such provision shall be fully severable. The rest of the Consent Agreement and Order shall remain in full effect, unless the CPSC determines that severing the provision materially impacts the remediation program set forth in this Consent Agreement and Order. The CPSC determination shall constitute the final agency decision and shall be subject to judicial review, such review to be based upon the record of any such CPSC proceeding and according to law.

24. Cadet acknowledges that this Consent Agreement and Order have been negotiated between unrelated, sophisticated, and knowledgeable parties acting in their own self-interest and represented by counsel, and the provisions of this Consent Agreement and Order shall not be interpreted or construed against any person or entity because that person or entity or any of its attorneys or representatives drafted or participated in drafting this Consent Agreement and Order.

25. The provisions of this Consent Agreement and Order shall be interpreted in a reasonable manner to effect its purpose to remedy the alleged hazard that the Heaters pose. In the event of a dispute between the parties arising under this Consent Agreement and Order, the parties agree to submit the issue for determination by the CPSC. The CPSC determination shall constitute the final agency decision and shall be subject to judicial review, such review to be based upon the record of any such CPSC proceeding and according to law.

26. The existence of a dispute between the staff and Cadet over any provision of this Consent Agreement and Order shall not excuse, toll, or suspend any obligation or deadline imposed upon Cadet under this Consent Agreement and Order.

27. This Consent Agreement and Order shall not be waived, changed, amended,

modified, or otherwise altered, except in writing executed by the parties and approved by the CPSC.

28. This Consent Agreement and Order contain the entire agreement, understanding, representation, and interpretation of the parties herein, and nothing else may be used to vary or contradict its terms.

29. Cadet and the staff consent to the entry of the Order attached hereto.

Counsel for Respondent
Cadet Manufacturing Company

Richard E. Anderson
Chairman and CEO
Cadet Manufacturing Company

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of	)	
CADET MANUFACTURING COMPANY,	)	CPSC Docket No. 99-1
Respondent	)	

ORDER

UPON CONSIDERATION of the Administrative Complaint ("Complaint") filed against Respondent Cadet Manufacturing Company ("Cadet") on January 14, 1999, and the Consent Agreement between the parties; and

The Consumer Product Safety Commission ("CPSC" or "the Commission") having jurisdiction over the subject matter and Cadet;

IT IS HEREBY ORDERED THAT:

1. The Consent Agreement between Cadet and the staff of the CPSC (hereinafter, "the staff") is accepted, and Cadet shall comply with all obligations of the Consent Agreement and this Order, upon final approval by the United States Bankruptcy Court for the Western District of Washington at Tacoma ("the Bankruptcy Court"). The date of final approval by the Bankruptcy Court shall hereinafter be referred to as "the Effective Date."

2. All allegations of the Complaint are resolved by this Consent Agreement and Order. Based on the Consent Agreement, including Cadet's agreement not to contest the allegations of the Complaint for settlement purposes, the CPSC finds that

the Consent Agreement and this Order are necessary to protect the public from the alleged hazard presented by Cadet's series FW, FX, LX, TK, ZA, and Z in-wall electric heaters, and the functionally identical heaters manufactured and distributed by Cadet under the Encore brand name, including series RX, RLX, RK, RA, and ZC. These heaters shall hereinafter be collectively referred to as "the Heaters."

3. Cadet shall immediately cease and desist manufacturing for sale, offering for sale, distributing in commerce, and/or importing into the customs territory of the United States any of the Heaters, whether by itself or through its subsidiaries, affiliates, Cadet-owned distribution centers, or any other persons or entities over whom Cadet has control.

4. To remedy the substantial product hazard allegedly created by the Heaters, Cadet shall perform the following remedial actions:

a. Cadet shall provide replacement heaters, at the prices set forth in Appendix A of this Order, to persons who purchased the Heaters, current Heater owners, and parties with the legal capacity to act on behalf of Heater owners who make a written request for removal and replacement of the Heaters and who provide to Cadet reasonable proof of ownership of the Heaters (a receipt, serial number, date code, or other evidence of ownership, but not the receipt alone) within twenty-four (24) months after the Effective Date of this Order. These persons shall hereinafter be collectively referred to as "Heater Claimants." The series and models of the replacement heaters and the prices for the replacement heaters are set forth in Appendix A of this Order.

b. Cadet shall provide to Heater Claimants, at Cadet's cost plus ten percent (10%), any fittings, fixtures, and/or appurtenances (hereinafter, collectively

"replacement parts") necessary for proper replacement of the Heaters with replacement heaters.

c. Except as otherwise agreed by Cadet, the purchase price for replacement heaters and replacement parts shall be paid to Cadet by Heater Claimants concurrently with shipment by Cadet.

d. Cadet shall manufacture the replacement heaters in a manner that is consistent with the following provisions:

1) the replacement heaters shall utilize over temperature limit control switches that are equivalent or better than the specifications of Therm-O-Disc, Inc.'s 60T over temperature limit control switches;

2) the replacement heaters shall contain an audible alarm or manual reset switch that will be triggered when the over temperature limit control switch is tripped;

3) to the extent feasible, the replacement heaters shall utilize a one-piece blower wheel;

4) the replacement heaters shall be assembled utilizing the minimum practicable amount of in-house crimping;

5) the replacement heaters shall contain labeling that will warn users of the hazards and risks associated with airflow that is impeded or reduced by lint, dirt, or debris, and/or objects that are placed too close to the heaters (this labeling shall be in substantially the same form as set forth in Appendix B of this Order); and

6) the replacement heaters shall contain installation instructions that: (a) alert owners and installers that the replacement heaters must not be installed in

insulated walls; and (b) inform owners how to clean and maintain the replacement heaters.

e. Cadet shall undertake the following quality assurance program for the manufacture of its replacement heaters, which shall include statistically valid sampling of all incoming components and finished heaters:

1) Cadet shall train all appropriate manufacturing personnel in component handling and shall require all appropriate manufacturing personnel to undertake a periodic review of handling methods;

2) Cadet shall implement a quality control inspection process of all incoming components, including the over temperature limit control switches, elements, blower wheels, and wire assemblies;

3) Cadet shall create written wire assembly/terminal crimping instructions and unit assembly instructions, and copies of the instructions shall be provided to all appropriate manufacturing personnel;

4) Cadet shall confirm that the crimping process of terminal wire combinations conforms to the manufacturing specifications;

5) Cadet shall undertake increased inspections of the crimping equipment and associated tooling; and

6) Cadet shall implement a statistically valid inspection and sampling program for all of its finished replacement heaters.

f. Cadet shall provide the capacity, in accordance with the production schedule attached hereto as Appendix C, to produce at least 225,000 fan heaters per twelve (12) month period to meet the demand for replacement heaters, until such time as the recall program is completed.

g. If Cadet receives requests for replacement heaters at a rate that exceeds its monthly capacity to manufacture the replacement heaters, as specified by the production schedule attached hereto as Appendix C, Cadet shall devise a plan for prioritizing replacement heater distribution. Cadet's plan for replacement heater distribution shall be submitted to the staff for approval prior to implementation. In the event the staff disagrees with Cadet's plan for replacement heater distribution, Cadet shall implement a feasible plan as amended or devised by the staff.

5. Cadet shall enter into an Escrow Agreement which provides for the creation and administration of an Escrow Account. The Escrow Agreement shall be in a form and content acceptable to the staff and shall be approved by the staff prior to execution. The Escrow Agreement shall be consistent with the terms of this Consent Agreement and Order and shall contain such terms as are customary and are acceptable to the staff, including the following provisions:

a. The Escrow Account shall be established pursuant to this Consent Agreement and Order. The Escrow Account shall not be part of Cadet's bankruptcy estate. Cadet and/or Cadet's estate shall have no interest, whether legal, equitable, or otherwise, in the funds in the Escrow Account.

b. The Escrow Account shall remain in effect until the earlier of seventy-three (73) months from the Effective Date of this Order, or until all claims arising from the removal and replacement of the Heaters have been paid in full and all expenses of the Escrow Account have been paid in full. Upon termination of the Escrow Account, all remaining funds in the Escrow Account that were originally deposited by Cadet shall be distributed to CPSC-approved designees.

c. The staff shall appoint the Disbursing Agent for the Escrow Account, who shall have appropriate experience as a claims administrator. The staff shall identify the Disbursing Agent as soon as possible after entry of this Order, and in no event later than the effective date of the plan of reorganization in Cadet's bankruptcy case.

d. Commencing on the Effective Date of this Order, Cadet shall deposit into the Escrow Account fifty percent (50%) of all proceeds, including punitive and treble damages, recovered by Cadet or its successors or assigns (hereinafter, "the Proceeds"), after deduction of actual costs and attorney's fees, from claims and lawsuits against its insurers or other third parties relating to alleged defects in the Heaters, but not including claims to recover accounts receivable generated upon sale of the Heaters, (hereinafter, "the Claims"), regardless of whether such Proceeds are paid directly to Cadet, its attorneys, agents, and/or representatives. However, Cadet shall deposit into the Escrow Account sixty percent (60%) of the Proceeds, after deduction of actual costs and attorney's fees, from claims and lawsuits against the manufacturer(s) of the heating elements used in the series Z heaters, regardless of whether such Proceeds are paid directly to Cadet, its attorneys, agents, and/or representatives. These deposits shall hereinafter be referred to as the "Claim Recovery Deposits." Cadet shall continue to make such deposits until the earlier of seventy-two (72) months after the Effective Date of this Order, or until all replacement heaters have been shipped and paid in full and all expenses of the Escrow Account have been paid in full.

e. The staff or Cadet may cause additional amounts to be deposited into the Escrow Account by third parties who contributed to the manufacture, sale, distribution, installation, exportation, and importation of the Heaters.

f. The Disbursing Agent shall pay to Cadet from the Escrow Account Eleven Dollars ($11.00) per replacement heater shipped by Cadet. These payments from the Escrow Account shall be made to Cadet weekly or monthly (at Cadet's option), based upon the number of replacement heaters shipped by Cadet during the preceding week or month. Cadet shall furnish, in a timely manner, to the Disbursing Agent all information necessary for the Disbursing Agent to properly administer and disburse the funds in the Escrow Account, including, but not limited to, a list of the names and addresses of the Heater Claimants, the number of replacement heaters covered by each request, and verification of the quantities of replacement heaters that are shipped pursuant to those requests. Cadet may receive advances from the Escrow Account solely for the purpose of financing Cadet's commencement of the Heater replacement program, upon receiving written approval from the staff.

6. Cadet shall provide replacement heaters, at the prices set forth in Appendix A of this Order, to any Heater Claimant who makes a written request for removal and replacement of Heaters and who provides to Cadet reasonable proof of ownership of the Heaters (a receipt, serial number, date code, or other evidence of ownership, but not the receipt alone) on or before the date that is twenty-four (24) months after the Effective Date of this Order.

7. Those Heater Claimants who, on or after October 23, 1997, but prior to the Effective Date of this Order, (a) already removed and replaced or contracted to remove and replace their Heaters; and (b) provide the Disbursing Agent, within twenty-four (24) months of the Effective Date of this Order, with verification of removal and replacement of the Heaters (e.g., work order, bill, receipt, or other documentation from the person or

company replacing the Heaters), shall be entitled to receive a payment of Twenty-Five Dollars ($25.00) per replaced Heater from the Disbursing Agent.

8. Cadet shall provide notice to the public, its customers, and Heater Claimants of the alleged risks and hazards posed by the Heaters and the remedy to which Heater Claimants are entitled under this Order. All notices shall be in a form and content acceptable to the staff and shall be approved by the staff prior to dissemination. Cadet must conduct the following notice program:

a. By the Effective Date of this Order, Cadet shall have an adequately staffed, operational toll-free recall information telephone line (hereinafter, "Recall Hotline"). The Recall Hotline shall provide a general overview of the alleged risks and hazards associated with the Heaters and shall provide the details of Cadet's Heater replacement program. Cadet shall make available trained customer service representatives to help callers participate in the recall, to provide assistance for callers with questions and problems regarding the recall, and to enable Heater Claimants to check the status of their claims. The Recall Hotline shall operate from 7:00 A.M. until 7:00 P.M. Pacific Standard Time, Monday through Friday, for the first six weeks after it becomes operational. Staffing and hours of operation may be reassessed by Cadet in consultation with the CPSC staff after week six.

b. By the Effective Date of this Order, Cadet shall have an operational website (hereinafter, "the Recall Website") which notifies the public of the alleged risks and hazards associated with the Heaters and provides the details of Cadet's Heater replacement program. The Recall Website shall contain a summary of the recall, the requirements for participation, a question and answer document incorporating a list of

commonly asked questions about the recall, a list of the series and models of the replacement heaters and the prices for the replacement heaters (as set forth in Appendix A of this Order), a hyper-link to the CPSC press release announcing the recall, and such other information as the staff and Cadet find necessary to inform the public adequately about the recall.

c. Cadet shall obtain the names and addresses of purchasers and owners of the Heaters and occupants of residences and homes that contain the Heaters from all available sources, including consumer complaints, warranty records, registration cards, dealer and distributor lists, and previous recall records. Within ten (10) days after the Effective Date of this Order, and for as long as new additions to this list become available, Cadet shall mail the staff-approved notice to these people and entities.

d. Within ten (10) days after the Effective Date of this Order, Cadet shall mail the staff-approved notice to its old and current distributors, dealers, and wholesale customers.

e. Within ten (10) days after the Effective Date of this Order, Cadet shall mail the staff-approved notice to *ASHRAE Journal, Buildings Magazine, Building Operating Management, Commercial Property News, Consulting Specifying Engineer, Electrical Contractor Magazine, Engineered Systems, Facilities Design and Management, Journal of Property Management, National Real Estate Investor, NFPA Journal, Reeves Journal, The ASHI Reporter,* and *The Air Conditioning Heating and Refrigeration News*.

f. Within ten (10) days after the Effective Date of this Order, Cadet shall mail the staff-approved notice to the state fire marshals in all fifty States of the United States of America and all local fire marshals or Authorities Having Jurisdiction ("AHJ's") in

the States of Idaho, Montana, Oregon, and Washington.

g. Within ten (10) days after the Effective Date of this Order, and again between one hundred and eighty (180) and one hundred and eighty-five (185) days thereafter, Cadet shall mail the staff-approved notice to all electric utility companies in the States of California, Idaho, Montana, Oregon, and Washington.

h. Within ten (10) days after the Effective Date of this Order, Cadet shall mail the staff-approved notice to selected homeowner and property insurance companies (e.g., Allstate, Prudential, State Farm, Travelers).

i. Within ten (10) days after the Effective Date of this Order, Cadet shall mail the staff-approved notice to the American Homeowners Association (AHA), the American Society of Heating Refrigeration Air Conditioning Engineers (ASHRAE), the American Society of Home Inspectors, Inc. (ASHI), the American Subcontractors Association, the Building Officials and Code Administrators (BOCA), the Building Owners and Managers Association (BOMA), Consumer Federation of America, Consumers Union, Independent Electrical Contractors Inc. (IEC), the International Association of Electrical Inspectors (IAEI), the International Conference of Building Officials (ICBO), the National Association of Homebuilders (NAHB), the National Association of Realtors, the National Electrical Contractors Association (NECA), and the National Fire Protection Association (NFPA).

j. Within ten (10) days after the Effective Date of this Order, and again between one hundred and eighty (180) and one hundred and eighty-five (185) days thereafter, Cadet shall purchase space for publication of three column x 7.5" advertisements of the staff-approved notice in newspapers ~~(as listed in Appendix F of this~~

~~Order)~~ in the States of California, Idaho, Montana, Oregon, and Washington.

9. Within five (5) days after the Effective Date of this Order, Cadet shall request that Underwriters Laboratories, Inc., 333 Pfingsten Road, Northbrook, IL, withdraw its listing of approval for the Heaters. Cadet shall also purge from its Underwriters Laboratories' listings all in-wall electric heater designs that are not currently in use.

10. Cadet shall not, without first both notifying and consulting with the staff ninety (90) calendar days in advance, manufacture for sale, offer for sale, distribute in commerce, and/or import into the customs territory of the United States, whether by itself or through its subsidiaries, affiliates, Cadet-owned distribution centers, or any other persons or entities over whom Cadet has control, any in-wall electric heaters containing either of the following components: (a) an over-temperature limit control switch encased within a nominal one-half (1/2) inch or smaller diameter phenolic (plastic) housing; or (b) a zig-zag fine wire heater element.

11. Cadet shall devise procedures to encourage the destruction of the Heaters. Cadet shall destroy all finished goods inventory of the Heaters and returned Heaters, from whatever source, and will not use any component parts of any returned or finished goods for the manufacture or sale of any other product. Cadet shall provide to the staff a quarterly accounting, in a format acceptable to the staff, of all returned and destroyed Heaters after the Effective Date of this Order, until the earlier of thirty-six (36) months from the Effective Date of this Order or when the staff agrees with Cadet that further reports are unnecessary.

12. Cadet shall generate and maintain in a database information that includes and is retrievable by: (a) Heater Claimant name, address, and telephone number; (b) date

of receipt of each order for replacement heaters; (c) quantity, series, and model of each Heater being replaced; (d) quantity, series, and model of each replacement heater; (e) inclusive production dates of each replacement heater; (f) date of shipment of each replacement heater; (g) date of the completed fulfillment of each order for replacement; (h) if applicable, reason(s) why a replacement heater order is delayed or could not be fulfilled; and (i) such other data as is reasonably necessary for the staff to monitor the effectiveness of the Heater replacement program. This information shall be immediately available to the staff and the Disbursing Agent, upon request.

13. Beginning with the Effective Date of this Order, and by 5:00 P.M. Eastern Standard Time on the tenth (10^{th}) business day of every month thereafter for the first six (6) months and quarterly thereafter, Cadet shall provide to the staff a cumulative status report in a format acceptable to the staff. The status reports shall be made until the earlier of seventy-three (73) months from the Effective Date of this Order, or when the staff agrees with Cadet that further reports are unnecessary. This status report shall include:

a. a cumulative report of pending and completed replacement heater orders that contains the data specified in Paragraph 12 above, sorted by date, and accompanied by a copy of the complete computer database file(s) on electronic media that contains the data specified in Paragraph 12 above;

b. a complete and accurate statement of the reason(s) for any failure by Cadet to produce replacement heaters in at least ninety percent (90%) of the quantities that are specified in the production schedule attached hereto as Appendix C, or to ship replacement heaters during the month following the month in which they were produced; and

c. the status of the Claims described in Paragraph 5.d. of this Order.

14. Cadet shall immediately notify the staff in writing if:

a. Underwriters Laboratories, Inc. (UL) withdraws or discontinues its approval or listing, no longer approves or lists, modifies its approval or listing, or issues a Variation Notice for any of the replacement heaters at any time, for any reason whatsoever; ~~and~~or

b. Cadet obtains information with respect to the replacement heaters that is reportable under Section 15(b) of the CPSA, 15 U.S.C. § 2064(b).

15. Cadet shall provide to the staff a copy of all filings it makes with the Bankruptcy Court within three (3) business days of making such filings. Cadet shall provide to the staff any and all of its quarterly or annual financial statements (audited and unaudited) within five (5) business days of completion or receipt from the auditor. Cadet shall notify the staff in writing of any planned changes in corporate officers and directors at least thirty (30) days before such changes occur, except in the case of extenuating circumstances, in which case Cadet shall notify the staff as soon as reasonably possible. Cadet shall also notify the staff in writing of any merger or sale, assignment, or transfer of substantially all of Cadet's assets at least sixty (60) days prior to such event, except in the case of extenuating circumstances, in which case Cadet shall notify the staff as soon as reasonably possible.

16. Cadet shall allow the CPSC and/or the staff to inspect any and all records regarding the replacement heaters, remediation program, any class action lawsuits regarding the Heaters, any bankruptcy proceedings involving Cadet, and any claims or lawsuits against Cadet's insurers or other third parties relating to the Heaters, and to

inspect all manufacturing, design, receiving, and/or inventory facilities regarding the replacement heaters at any time during normal business hours, upon reasonable notice.

17. In addition to any penalty it may incur pursuant to Paragraph 16 of the Consent Agreement, if Cadet fails to make timely contributions to the Escrow Account as required by Paragraph 5 of this Order, Cadet shall be liable for additional contributions to the Escrow Account. Such additional contributions shall include the following:

a. Interest at the percentage rate established by the Department of the Treasury pursuant to 31 U.S.C. § 3717, for any period after the due date; and

b. A five percent (5%) per month penalty charge if the deposit is not made within thirty (30) days after the due date.

18. Cadet and the staff shall evaluate the effectiveness of the Heater replacement program, as prescribed by this Consent Agreement and Order, on an on-going basis. Cadet shall undertake such additional notice or corrective actions as the staff and Cadet determine are necessary to make the Heater replacement program as effective as possible.

19. This Order, and all of the obligations it imposes upon Cadet, shall terminate in its entirety when Cadet has completely fulfilled all obligations under the Consent Agreement and Order and upon the final distribution of all funds to be placed in the Escrow Account pursuant to Paragraphs 5-7 of this Order, whichever is later.

BY ORDER OF THE CONSUMER PRODUCT SAFETY COMMISSION

DOCKET NO. 8849

INITIAL DECISION

Donald R. Moore, Administrative Law Judge

James Manos
New York, New York
Counsel Supporting the Complaint. 1/

Weil, Gotshal & Manges, New York, New York,
by Irving Scher and Herbert M. Hellman,
Counsel for Respondent.

PRELIMINARY STATEMENT

The complaint in this proceeding, charging violation of the Flammable Fabrics Act, as amended (15 U.S.C. §1191 et seq.), and of the Federal Trade Commission Act (15 U.S.C. 45), in connection with the sale of fabrics, was issued by the Federal Trade Commission on June 30, 1971, and was thereafter duly served on respondent. Respondent filed answer on August 17, 1971, and denied generally any violation of law.

1/ Robert G. Smith and Charles F. Canavan served as counsel supporting the complaint during most of the trial stage of this proceeding but by reason of transfer and retirement, respectively, withdrew from the case before its completion.

After a series of prehearing conferences and various prehearing procedures, hearings were held in January, April, and September 1972. (The intervals between hearings were accounted for by various procedural matters, including interlocutory appeals to the Commission.) The record was closed for the reception of evidence on October 20, 1972.

At the hearings, testimony and other evidence were offered in support of and in opposition to the allegations of the complaint. The parties were represented by counsel and were afforded full opportunity to be heard, to examine and to cross-examine witnesses, and to introduce evidence bearing on the issues. The testimony and evidence presented, comprising nearly 1400 pages of transcript and more than 30 exhibits, have been duly recorded and filed.

After the presentation of evidence, counsel for both parties filed proposed findings of fact and conclusions of law and a proposed form of order, together with briefs in support thereof, and also filed reply briefs. In this initial decision, those proposed findings not adopted, either in the form proposed or in substance, are rejected as lacking support in the record or as involving immaterial matters.

As required by Section 3.51(b)(1) of the Commission's Rules of Practice, the findings of fact include references to the principal supporting items of evidence in the record. Such references are intended to serve as convenient guides to the testimony and to the exhibits supporting the findings of fact, but they do not necessarily represent complete summaries of the evidence considered in arriving at such findings. Where references are made to proposed findings submitted by the parties, such references are intended to include their citations to the record unless otherwise indicated.

References to the record are made in parentheses, and certain abbreviations are used as follows:

CPF - "Proposed Findings, Conclusions of Law, Arguments in Support thereof, and Order of Counsel Supporting the Complaint."

CPF-A - Arguments in Support of Complaint Counsel's Findings and Conclusions (contained in CPF).

CRB - Reply Brief of Complaint Counsel ("Complaint Counsel's Exceptions and Argument in Support Thereof to the Respondent's Proposed Findings and Brief").

CX - Commission Exhibit.

RB - Respondent's Brief ("Brief in Support of Respondent's Proposed Findings of Fact, Conclusions of Law, and Order").

RPF - Respondent's "Proposed Findings of Fact, Conclusions of Law, and Order."

RRB - Respondent's Reply Brief ("Reply to Complaint Counsel's Proposed Findings, Conclusions of Law, Arguments in Support Thereof, and Order").

RX - Respondent's Exhibit.

Tr. - Transcript.

References to the proposed findings of counsel are to paragraph numbers and page numbers, preceded by one of the abbreviations listed above. References to the briefs and arguments of counsel are to page numbers, preceded by one of the abbreviations listed above. References to testimony sometimes cite the name of the witness and the transcript page number without the abbreviation "Tr." -- for example, Sierichs 371.

Having heard and observed the witnesses and having carefully reviewed the entire record in this proceeding, together with the proposed findings and briefs filed by the parties, the administrative law judge makes findings of fact, enters his resulting conclusions, and issues an order as follows:

FINDINGS OF FACT

Respondent J. J. Newberry Co. ("Newberry" or "respondent") is a corporation organized, existing, and doing business under and by virtue of the laws of the State of Delaware, with its office and principal place of business located at 245 Fifth Avenue, New York, New York.

Respondent has more than 500 retail stores located throughout the United States engaged in the sale of various consumer goods, including various textile fiber products.

Respondent is now and for many years has been engaged in the sale and offering for sale, in commerce, and in the importation into the United States, and has introduced, delivered for introduction, transported and caused to be transported in commerce, and has sold or delivered after sale or shipment in commerce, fabrics, as the terms "commerce" and "fabric" are

defined [redacted] the Flammable Fabrics Act, as amended. Respondent's gross purchase volume of all fabrics for the year 1969 was $32 million. For the year 1971, the total was $40 million. Curtain and drapery fabric constituted approximately two percent of Newberry's total purchases of fabric for each of the two years 1969 and 1971.

(Record references: Complaint and Answer, ¶1, 2; CX 1, ¶1-3; CX 14 A; Porter 686-878)

This case is the outgrowth of a routine inspection of a Newberry store in Culver City, California. The inspection was made on May 8, 1969 by Miss Helen Sierichs, an investigator assigned to the Los Angeles regional office of the Federal Trade Commission. (CX 1, ¶10; Tr. 316, 327)

The fabric that is the subject of this proceeding (CX 8) came to her attention when she saw a customer draping a sample of the fabric on a small child. It was a sheer, rose-pink fabric with a white design. She purchased approximately a half yard of the fabric and submitted it to Washington headquarters of the Commission for testing as to flammability. (Sierichs 327, 349)

This sample failed the minimum flammability requirements of Commercial Standard 191-53, which standard is applicable only "for the testing of articles of wearing apparel and for fabrics intended for use or which may reasonably be expected to be used in wearing apparel." (CX 1, ¶11; CX 4)

The subject fabric (CX 8) was a sheer fabric with a fiber content of approximately 80% acetate and 20% nylon. It was designated by the manufacturer as Style No. 78150 and was also known as "Spangle." (CX 1, ¶4; Chace 834, 840)

Newberry had purchased 23,390 yards of the subject fabric from Memblatt & Haas Textile Co., 11 West 25th Street, New York, New York, for $11,111. Memblatt & Haas had purchased the subject fabric from the manufacturer, Berkshire-Hathaway, Inc., 97 Cove Street, New Bedford, Massachusetts. (CX 1, ¶5; CX 2; RX 11, Maxson 925-26; Memblatt 869-70; Heely 1082, 1087; Chace 834-35) The fabric was distributed to 82 Newberry stores (CX 1, ¶7; CX 14; Maxson 932).

On May 19, 1969, which was prior to any notice received by Newberry's headquarters office from its Culver City store, an investigator from the Commission's New York regional office visited Newberry's office and advised Newberry officials that the Commission was investigating the marketability of the subject fabric under the Act (CX 1, ¶12; Nash 1229; Sherman 741-45).

Newberry immediately tested the subject fabric in its laboratory for compliance with Commercial Standard 191-53, and the fabric was found to fail that standard for the testing of articles of wearing apparel and for fabrics intended for use or which may reasonably be expected to be used in wearing apparel. On May 20 or 21, 1969, a copy of the test report prepared by Newberry's laboratory (CX 5) was voluntarily supplied to the Commission investigator (CX 1, ¶13; Nash 1230-36; Sherman 741-45).

On May 20, 1969, Newberry voluntarily prepared and immediately distributed a notice to the managers of each of the 82 Newberry stores to which the subject fabric had been delivered. The notice stated that tests of the subject fabric had shown it to be highly flammable and that it should be removed from sale immediately and held for return to Memblatt & Haas. After receiving this notice, each store immediately removed the subject fabric from sale and subsequently returned the subject fabric to Memblatt & Haas for credit to Newberry's account. (CX 1, ¶14; CX 6; RX 18)

Although there is no question as to the good-faith effort of respondent to remove the questioned fabric from sale, the parties disagree as to the exact amount that may have been sold before the recall notice. Respondent contends that of the 23,390 yards that it purchased, approximately 21,000 to 22,000 yards were "destroyed or returned" (RPF, ¶91, p. 52). Complaint counsel contends that the yardage returned amounted to only about 19,400 yards, leaving nearly 4,000 yards unaccounted for and presumably sold (CPF, ¶14-16, page 11; CPF-A, pp. 38-40). The testimony regarding the amount of fabric returned is somewhat confused (Heely Tr. 1082-1129; CX 14; RX 12; Memblatt 870-76), but there is a substantial basis for finding that 3,983 yards were not returned and may have been sold (Heely 1128-29). 2/ The record does not support respondent's contention that any of the fabric was destroyed by Newberry stores.

2/ The yardage figures were calculated by dividing the cost per yard (47.5 cents) into the dollar amount purchased and the dollar amount returned. The discrepancy arises from the fact that Newberry's return invoices from the stores totaled $9,218.76, whereas Memblatt & Haas gave Newberry a credit of $10,259.01 (Heely 1083). Despite testimony to the contrary, it appears that the larger figure may have included freight and handling charges. (See Heely 1093-97; compare Heely 1083-84)

At Newberry's Culver City store -- the only store selling the subject fabric that was investigated by the Commission -- the subject fabric was immediately removed from sale. As a result, of the $138.58 worth of the subject fabric distributed to the Culver City store, $124.99 was returned. Thus, $13.59 worth or approximately 28 1/2 yards of the subject fabric was sold by that store. (Kent 1256-57; Heely 1084)

Aside from the disagreement as to the yardage returned, the foregoing basic facts are undisputed. The primary issue in determining whether Newberry thereby violated the Flammable Fabrics Act is whether the subject fabric was properly subject to the flammability standard (Commercial Standard 191-53) applicable to articles of wearing apparel or fabrics intended for use or which may be reasonably expected to be used in wearing apparel. This issue was created by Newberry's denial answer (¶2) and also incorporated in its First Affirmative Defense. A further issue is whether Newberry intended or could have reasonably expected that the subject fabric would be used in wearing apparel. 3/

Before considering the evidence bearing on these issues, it is necessary to review briefly the statutory basis for this case.

Whereas the original 1953 statute (15 U.S.C. § 1191(e)) related to fabric "which is intended or sold for use in wearing apparel," the 1967 amendment, among other things, made the prohibition applicable to fabric "which is intended for use or which may reasonably expected to be used" in any article of wearing apparel (15 U.S.C. § 1191(f),(h)). 4/ The amendment thus extended the applicability of the statute beyond fabrics that were intended or sold by the seller for use in wearing apparel to fabrics "which may reasonably be expected to be used" in wearing apparel. Thus, the fact that a seller did not intend the fabric to be used in wearing apparel and did not sell it for such purpose no longer provides a defense. If

---

3/ Although "interior furnishing" products, including curtains and draperies and fabrics intended for curtain and drapery use, are within the coverage of the amended Flammable Fabrics Act (15 U.S.C. § 1191(e),(f),(h), the Secretary of Commerce has not promulgated a flammability standard for such products.

4/ Compare original text in 15 U.S.C.A. (1963 ed.) with amended text in 1972 Pocket Part.

a fabric may reasonably be expected to be used in wearing apparel, then the flammability standard applies.

At the outset, we may rule out any question as to the intent or actual expectation of Newberry concerning the use of the fabric. It purchased the fabric as curtain and drapery fabric and intended that its retail stores would display it, promote it, and sell it as curtain and drapery fabric. The evidence supports a finding that it was the intent and expectation of the manufacturer of the subject fabric, of the jobber who sold it to Newberry, and of Newberry that it would be sold for use as curtain and drapery fabric (Chace 835-38, 858, 861; Memblatt 869; Maxson 925). It was identified on Newberry's purchase order ("common order") that was sent to each of the 82 stores receiving the subject fabric as follows:

> "Expensive Sheer Flocked Drapery Fabric, Perfect for Drapes, Cafes or Tailored Curtains.... Sheer Flocked Drapery & Curtain Fabric...." (CX 1, ¶8; CX 2)

However, there is also substantial evidence to support a finding that the fabric was of such a nature that it might reasonably be expected to be used in wearing apparel. Seven witnesses unequivocally testified to this effect, and the record reflects their competence to so testify. Four were Commission employees -- the Consumer Protection Specialist who investigated the case and three textile technologists employed in the Commission's testing laboratory. The other three were fabric buyers employed by retail stores in Washington, D. C. By education and experience, including in several instances, years of experience as purchasers of fabric for home sewing, they were qualified to testify as to the reasonably probable use of the fabric here in question. The fact that some of them recognized that the subject fabric might also be used as curtain and drapery fabric does not detract from their testimony as to its probable alternative use in wearing apparel. Several of the witnesses emphasized that purchasers of fabric used such fabric in a manner they thought most suitable, regardless of the purpose for which the fabric may have been advertised, promoted, and sold. (Sierichs 311-12, 361-62, 369-70; Brophy 422-25, 427, 433-34, 449-50; Neily 476-82, 486-89; Jones 492-97, 500-02; Ficke 464-66; Green 515-18, 523-28; Barovick 551)

The contrary testimony of a Newberry executive (Sherman 764-66, 786, 819) that the subject fabric was not suitable for use in wearing apparel is not sufficient to overcome this evidence. As a matter of fact, the fabric was actually used by another purchaser in the manufacture of dresses (Chace 846-48).

The evidence that the subject fabric might reasonably be expected to be used in wearing apparel was supplemented by the testimony of Miss Helen Sierichs, a Commission investigator, that at Newberry's Culver City store (the only store receiving the fabric that was investigated by the Commission), the subject fabric was on a table with other fabrics suitable for use in wearing apparel; that it was not designated as curtain and drapery fabric, either by a label on the bolt or by a sign on the table; and that she saw a customer draping the fabric on a small child, which supports an inference that this customer was at least considering using the fabric as apparel for a child (Tr. 327, 344-45, 350-51, 356-61, 376, 381, 400-01).

Miss Sierichs also testified that curtain and drapery fabric was not identified as such in two other Newberry stores in the Los Angeles area (which had not received the subject fabric). (Tr. 360, 382-83, 392-93, 398-400) She further testified that the managers of the Culver City store and of the Venice Boulevard store both told her that they did not use signs designating the intended use of the fabrics they sold (Tr. 357, 360-61, 397-401). The Venice Boulevard store manager confirmed his statement in writing:

> "We do not specify what the fabric we sell to consumers is to be used for. They may purchase any type fabric in our store and use as they wish." (CX 13)

His explanation on the witness stand that this statement was intended to mean only that customers were not orally told how to use fabrics that they purchased and was not intended to refer to the absence of signs (Ostrander 1009-10, 1030-33) is not persuasive. If respondent had the strict policy claimed and if this policy had been strictly enforced, it is inconceivable that a store manager would have made a contemporaneous statement to a Commission investigator contradicting such policy and practice.

Finally, although the manager of the Rodeo Road store told her that curtain and drapery fabrics were identified by appropriate signs in his store and so stated in writing (RX 20), Miss Sierichs testified that she did not see any such signs (Tr. 360, 397-400).

The undersigned rejects respondent's argument that the testimony of Miss Sierichs regarding the lack of signs should not be credited (RPF, ¶85, pp. 48-49; RB, pp. 24-30; RRB, pp. 6-13). The undersigned does not agree that her testimony

contains inconsistencies and contradictions that make it unworthy of belief or that the contrary statements of Newberry personnel should be credited instead. In crediting the testimony of the Commission investigator in the face of Newberry's evidence on the policies and practices of its stores, the undersigned has taken into account the lack of motivation on the part of the investigator to fabricate her testimony and also the generalized and self-serving nature of respondent's evidence.

In its attempt to discredit the testimony of the Commission investigator, respondent cites the testimony of Harvey Kent, who was manager of Newberry's Culver City store at the time of the Commission investigation (Tr. 1250-1327). Noting that Mr. Kent had not been employed by Newberry since 1971, respondent argues that his testimony lacks any self-interest and is entitled to considerable weight (RB, p. 25). However, the reliability of his testimony, including his failure of memory as to any contact with the Commission investigator, may be tested by reference to an affidavit that he signed (but did not prepare) on February 25, 1970 (CX 16), in which he referred to the visit by an FTC investigator. He did not deny that the conversations testified to by Miss Sierichs took place but merely stated that he did not recall (Tr. 1257, 1266, 1270-74, 1316, 1323-26). As to the sale of the subject fabric, both his testimony and his affidavit simply express Mr. Kent's assumptions as to the manner of display, etc.

Neither is the testimony of Miss Sierichs discredited by the fact that she did not recall the exact layout of the fabric department in the Culver City store, including the number of tables (RRB, p. 9; compare CX 7 with CX 17 and CX 16 C; Sierichs 319-25, 377-78; Kent 1286-89, 1308).

In addition to presenting testimony tending to contradict Miss Sierichs' testimony regarding the use of curtain and drapery fabric signs in the three Los Angeles stores (Kent 1251-56, 1285; CX 16; Ostrander 991-92, 999-1001, 1021; MacIsaac 1061-62, 1067-71), respondent presented extensive testimony and evidence designed to show, first, that there was no basis for any reasonable expectation on its part that the subject fabric might be used in wearing apparel and, secondarily, that even if it could have reasonably expected that the subject fabric would be used in wearing apparel, it took appropriate steps to avoid such use (RPF, ¶ 9-52, pp. 14-36). Respondent's evidence supports a finding that, in general, Newberry and its stores had a policy and practice of segregating curtain and drapery fabrics from wearing apparel fabrics, including the use of signs identifying curtain and drapery fabrics as such (Porter 665-69, 711; Sherman 748-49; Maxson 898-913, 919-925, 932; RX 8 A-C; RX 9; RX 13 A-Z31; RX 16; Ostrander 989-1034; MacIsaac 1052-78; Endicott 1151-65; Crowe 1170-82; Rahlfs 1184-94; Kent 1250-1327).

Moreover, Newberry has had its own testing laboratory, where it tests fabrics for flammability. Before the investigation that led to this proceeding, Newberry required flammability tests only for products it considered subject to the Flammable Fabrics Act -- articles of wearing apparel and fabrics for use in wearing apparel. It did not consider curtain and drapery fabric to be subject to the Act. Since May 20, 1969, as a result of this proceeding, all fabric, regardless of its intended or expected use, is subjected to flammability testing. (Porter 679-81, 709; Sherman 723, 727-29, 794, 820; Maxson 893, 927, 938, 940)

In the opinion of the undersigned, respondent's generalized evidence is not sufficient to overcome the specific testimony of the Commission investigator as to the merchandising of curtain and drapery fabrics in the Culver City store and in two other Los Angeles stores that she inspected. Whatever may have been the policy of Newberry and the practices of other stores with respect to the segregation of curtain and drapery fabric and its identification as such by counter signs, there is substantial evidence that the subject fabric was on a table with other fabrics suitable for use in wearing apparel and that there were no signs designating these fabrics as curtain or drapery fabrics. The evidence indicates that Newberry headquarters did not furnish signs for the subject fabric (Maxson 958; Porter 699; Sherman 756-58; Kent 1282).

Even if the segregation and sign policy had been followed in the Culver City store and the other two Los Angeles stores, this would not necessarily absolve Newberry from a finding of violation. In the view taken by the undersigned, the policy and practice of Newberry with respect to the segregation and identification of curtain and drapery fabrics are not controlling. Although such evidence is relevant to the intent of Newberry, it does not resolve the question of its "reasonable expectation" as to the use to which customers might put the fabric that it sold. 5/ Neither counsel has cited any legislative history as to the intent of Congress in amending the definition of "fabric" to include (subject to certain exceptions not applicable here) any material "which may reasonably be expected to be used" in "any article of wearing apparel." However, if any interpretation is needed, an analogy may be found in the concept of "foreseeability" in the law of negligence. For example, American Jurisprudence states that "in order to impute knowledge of a dangerous thing or

---

5/ This is contrary to the opinion expressed by the Commission investigator (Sierichs 407-08).

place, the danger therefrom must have been such as is recognized by common experience or by the special experience of the actor, or such as might reasonably have been expected by a person of ordinary prudence and of ordinary foresight. The risk reasonably to be perceived defines the duty to be obeyed...." (38 Am. Jur., Negligence § 24, pp. 669-70; footnotes omitted) Similarly, Corpus Juris Secundum states that a basic question for determination in a negligence case is "whether or not the injurious consequences that resulted from such negligence are such as should reasonably have been foreseen, or anticipated...." (65 A C.J.S. Negligence § 264, p. 923; see also 65 CJS. Negligence § 109.)

Thus, the concept of "reasonable expectation" embodied in the statute is a concept firmly established in general law. Accordingly, the test of liability here is not whether Newberry actually intended or expected the subject fabric to be used in wearing apparel but whether it could reasonably have foreseen the likelihood of such use. As a retailer engaged in the sale of fabrics, Newberry is chargeable with knowledge that purchasers may use fabrics for purposes other than that intended by the seller -- specifically, that they may use drapery and curtain fabrics to make wearing apparel (supra, p. 7). 6/

Support for the foregoing interpretation is found in the case of Brown v. Chapman, 304 F.2d 149 (9th Cir. 1962). This was a suit against the seller of a hula skirt which ignited while being worn by plaintiff. The case did not directly involve the Flammable Fabrics Act but turned on the question whether there was a breach of an implied warranty as to the suitability of the skirt for the purpose sold. The Court upheld the jury instruction of the District Court that the scope of the implied warranty was such as to include uses "which the seller should reasonably have anticipated at the time of sale."

The knowledge or reasonable expectation imputed to the defendant seller in the Brown case provides a precedent for holding here that the subject fabric was of such a nature that its use in wearing apparel could have been and should have been reasonably expected by Newberry.

In view of the fact that Newberry could have and should have reasonably expected that the fabrics might be used in wearing apparel, the question then arises whether Newberry took

---

6/ One former store manager recognized the existence of "dual purpose" fabrics (Kent 1320-22), and another manager referred specifically to the possible use of the subject fabric in wearing apparel (Ostrander 1016-17).

appropriate steps to avoid such use. The undersigned finds that it did not. Although there is credible testimony, albeit self-serving, that Newberry sought to segregate curtain and drapery fabric from wearing apparel fabric, the emphasis that its headquarters personnel and its store managers placed on this policy and practice in their testimony appears to have been colored by hindsight in the light of this litigation.

The difficulty with respondent's position is that it has equated "reasonable expectation" with its subjective intent or expectation. To apply the standard of "reasonable expectation" is not to impose absolute liability, as respondent argues. If respondent's position were to be accepted, it would result in a weakening of the statute rather than the strengthening of the statute obviously intended by the Congress.

Contrary to the position taken by respondent (RB, p. 30), complaint counsel did not have the "burden of proving that the subject fabric was intended or reasonably expected by Newberry to be used in wearing apparel." The question is not whether Newberry actually expected the subject fabric to be used in wearing apparel but whether Newberry could have or should have reasonably expected it to be used for that purpose.

Although respondent argues (RB, p. 9) that the amendment "eliminated the previous subjective standard, and substituted a standard susceptible to proof through objective criteria," it nevertheless undertakes to substitute for the "reasonable expectation" standard the seller's subjective standard, as indicated by the manner in which fabric is purchased, distributed, advertised and placed for sale. Although these are factors to be taken into account, they are not controlling in making a determination as to the seller's knowledge, actual or imputed, concerning the uses to which a given fabric may be put by retail purchasers -- that is, the uses that "may reasonably be expected."

The policy of Newberry respecting the display and identification of its fabrics was a merchandising policy of convenience and of practicality. It is true that Newberry personnel testified that one reason for displaying curtain and drapery fabric separate and apart from wearing apparel fabric was the fact that the former was not subject to the Flammable Fabrics Act whereas the latter was subject to the Act (Porter 669; Sherman 748-49). However, there appear to be no contemporaneous documents expressing this rationale to store managers or to store employees -- no indication whatsoever that the policy was designed to avoid the propensity of consumers to use curtain and drapery fabric in wearing apparel or to put such consumers on notice as to the flammability hazards that might be involved.

There was no recognition by respondent or its personnel that curtain and drapery fabric might be used by purchasers to make wearing apparel. Until the institution of the investigation that led to this proceeding, there appeared to be no recognition on the part of Newberry personnel of the change effected by the 1967 amendment. Newberry continued to operate on the basis that the Flammable Fabrics Act was applicable only to articles of wearing apparel and fabric "which is intended or sold for use in wearing apparel." There is no evidence that any Newberry personnel gave consideration to any change in corporate policy or practice to take account of the 1967 amendment. (Porter 703-06, 709, 715; Sherman 742-43, 778-82, 805-09, 820-25; Maxson 927, 938, 968) In other words, there is no showing in this record that Newberry personnel took any special precaution with respect to any fabric -- including the subject fabric -- which might "reasonably be expected to be used" in wearing apparel.

Even during the course of trial, one of its officials primarily responsible for compliance with federal and state law seemed to be of the view that if Newberry neither intended nor expected that fabric that it sold was for use in wearing apparel, then the Flammable Fabrics Act was not applicable. And this was reflected in Newberry's flammability testing program (supra). Mr. Sherman scoffed at the idea that Newberry had to take into account what purchasers might actually do with fabrics purchased from Newberry, provided only that Newberry did not sell or promote the sale of the fabrics as wearing apparel fabrics, kept such fabrics segregated from wearing apparel fabrics, and designated them by appropriate signs as intended for use other than in wearing apparel. (Sherman 742-43, 778-82, 805-09, 820-25) Notwithstanding this narrow interpretation of the amended statute, once Newberry was alerted to a broader interpretation, immediate steps were taken to subject all fabrics to flammability testing (supra, p. 10).

On the basis of the foregoing findings of fact and legal principles, it is concluded that:

1. Respondent J. J. Newberry Co., a corporation, has sold and offered for sale in commerce and has introduced, delivered for introduction, transported, and caused to be transported in commerce, and has sold or delivered after sale or shipment in commerce, fabrics as the terms "commerce" and "fabric" are defined in the Flammable Fabrics Act, as amended, which fabrics failed to conform to an applicable standard or regulation continued in effect, issued, or amended under the provisions of the Flammable Fabrics Act, as amended.

2. The fabric so sold, offered for sale, etc., was a fabric that respondent J. J. Newberry Co. could and should reasonably have expected to be used in wearing apparel, although it did not intend it to be used for such purposes. Such fabric was a material which may reasonably be expected to be used in wearing apparel and was, therefore, subject to Commercial Standard 191-53, duly established by the Secretary of Commerce pursuant to the Flammable Fabrics Act.

3. The acts and practices of respondent, as herein found, were in violation of the Flammable Fabrics Act, as amended, and the rules and regulations promulgated thereunder, and constituted unfair methods of competition and unfair and deceptive acts and practices in commerce within the intent and meaning of the Federal Trade Commission Act.

CONCLUSIONS

A violation of the Flammable Fabrics Act and of the Federal Trade Commission Act having been found, a cease and desist order is the usual corollary. However, the administrative law judge has concluded that, as a matter of discretion, this complaint should be dismissed without the entry of an order to cease and desist. In view of this disposition, it is not necessary to reach respondent's Second, Third, and Fourth Affirmative Defenses. 7/ Certain elements contained in these defenses have been taken into account, but dismissal is not being ordered on the grounds stated therein.

The primary reason for ordering dismissal is that the basic objectives of this proceeding have already been achieved by the voluntary actions of respondent:

7/ The First Affirmative Defense has been dealt with previously (supra, p. 6). Dismissal makes moot respondent's Request for a Decision Pursuant to Section 3.38(a)(5) of the Commission's Rules of Practice filed on October 24, 1972 (revised copy filed on November 6, 1972), since it relates entirely to the Fourth Affirmative Defense. If a ruling should be required, the administrative law judge would deny the motion for a finding that respondent has established its Fourth Affirmative Defense, although certain subsidiary motions related thereto would be granted.

1. [redacted]ngerously flammable fabric being sold [redacted] respondent was immediately withdrawn from sale.

2. Steps were immediately taken to ensure that respondent will not sell in the future any fabric that fails the applicable flammability standards established under the Flammable Fabrics Act, whether or not such fabric is technically within the coverage of the statute.

Immediately upon being advised that curtain and drapery fabric being sold in 82 of its stores had been found to be dangerously flammable, respondent not only stopped the sale of such fabric and otherwise cooperated fully with the Commission in its investigation (Nash 1230-31, 1235-36 A; Finch 1373), but it expanded its testing program so that all fabric that it sells is subjected to testing for flammability, regardless of the purpose for which it may be sold (supra, p. 10). This action is more than is required under the statute at the present time.

Moreover, in December 1969, respondent executed and submitted an Assurance of Voluntary Compliance (RX 6 A-C).

The violation here found was an inadvertent one under what was at the time a relatively new amendment to the Flammable Fabrics Act. This is a case of first impression in applying the Flammable Fabrics Act to a fabric sold by a retailer for use other than in wearing apparel but of such a nature that it might reasonably be expected to be used in wearing apparel.

In that connection, the administrative law judge has taken into account that the Commission generally has not instituted formal proceedings against retailers for engaging in the sale of flammable fabrics (Tr. 286-88). This has been true even in instances where the articles in question were articles of wearing apparel or fabric intended or sold for use in wearing apparel, so that there was no doubt whatever as to the applicability of the flammability standard prescribed by the Flammable Fabrics Act. This is not to embrace the contention in respondent's Fourth Affirmative Defense that it was improperly singled out for an adjudicative proceeding, but it is a factor properly to be taken into account in determining the necessity for an order to cease and desist herein.

The Commission has stated that "only the most unusual set of facts ... would lead to the conclusion that a cease-and-desist order is not necessary to safeguard the public in the future where it has been shown that a violation of the Flammable Fabrics Act has occurred." This statement was made

in dismissing CCM:Arts and Crafts, Inc., Docket No. 8817 (Final Order, February 16, 1972). Although the instant case is not on all fours with the CCM case, there is present in this case such an "unusual set of facts" as to warrant similar action here. The practice complained of has been stopped and surely stopped without any cognizable likelihood of resumption. Since there is no reason to believe that the respondent will violate the Flammable Fabrics Act in the future, no useful purpose would be served by issuing an order to cease and desist.

Accordingly, upon the basis of the entire record, the administrative law judge concludes that:

1. The Federal Trade Commission has jurisdiction of the subject matter of this proceeding and of the respondent.

2. The complaint herein states a cause of action, and this proceeding is in the public interest.

3. The record herein supports all the allegations of the complaint.

4. The acts and practices of the respondent, as herein found, were in violation of the Flammable Fabrics Act, as amended, and the rules and regulations promulgated thereunder, and as such, constituted unfair methods of competition and unfair and deceptive acts and practices in commerce, within the intent and meaning of the Federal Trade Commission Act.

5. As a matter of discretion, no cease-and-desist order should issue herein because the purposes of this proceeding have already been achieved by the voluntary acts of the respondent.

ORDER

IT IS ORDERED that the complaint herein be, and it hereby is, dismissed.

Donald R. Moore,
Administrative Law Judge

January 22, 1973

UNITED STATES OF AMERICA
CONSUMER PRODUCT SAFETY COMMISSION

In the matter of NEIL ROSE, an individual doing business as QUICKSILVER KITES	CPSC DOCKET NO. 75-18

ORDER

This Order is issued under Section 15(c) and Section 15(d) of the Consumer Product Safety Act, 15 U.S.C. 2064(c) and 2064(d). The Consumer Product Safety Commission accepts the attached Consent Agreement entered into by Neil Rose and the Commission Staff.

I.

IT IS THEREFORE ORDERED that the allegations of the Notice of Enforcement issued in this matter be and they hereby are resolved by this Order and the attached Consent Agreement.

II.

IT IS FURTHER ORDERED that Neil Rose never manufacture for sale, sell, or offer for sale in commerce or in any manner affecting commerce, either individually or doing business as Quicksilver Kites or under any other name or names, the aluminized, striped "Dragon" kite, the aluminized striped "Dragon Cub" kite, or any other metallized kite with tail.

III.

IT IS FURTHER ORDERED that Neil Rose shall give notice, as hereinafter set forth, such notice to begin no later than ten days after service on him of this Order. This notice shall state:

> The Staff of the United States Consumer Product Safety Commission believes that polyester film kites having tails of 25 feet to 45 feet, bearing stripes of aluminum coating, which kites were previously manufactured

and sold by Quicksilver Kites, 1622 Castro Street, San Francisco, California 94114, between March 1, 1975 and May 31, 1975, present a severe shock hazard if entangled in high voltage wires. Neil Rose offers to replace the kites with nonmetallized kites or to refund the purchase price upon proof of purchase of said kites manufactured by Quicksilver Kites. Neil Rose will reimburse consumers who accept this offer for any reasonable or foreseeable expense incurred by them in availing themselves of this offer.

This notice shall not state that anyone else holds a belief contrary to that of the Staff.

IV.

IT IS FURTHER ORDERED that Neil Rose shall take the following actions:

A. Mail a certified letter to each distributor and retailer to whom subject kites were sold by Quicksilver Kites.

B. Mail a press release containing the notice set forth in Paragraph III, supra, to a newspaper in each area where the subject kites were sold.

C. Cause the notice set forth in Paragraph III, supra, to be placed in the classified advertising section of Kite Tales, a magazine published by Kitefilers Publications, Inc., 315 North Bayard Street, Silver City, New Mexico.

D. Cause, by securing free time or by paying for advertising time, the notice to be read a minimum of four times on one or more radio stations in one or more of the areas where the subject kites were sold.

V.

IT IS FURTHER ORDERED that the Staff shall set forth and mail to Neil Rose, on stationery with Commission letterhead, its approval of the notice required by Paragraph III, supra.

VI.

IT IS FURTHER ORDERED that Neil Rose shall recall the metallized polyester film kites with tails that he manufactured. This recall shall commence no later than ten days after service on him of this Order. In effecting this recall, he shall not charge any person (other than a manufacturer, distributor, or retailer) who avails himself of this recall for any reasonable and foreseeable expenses incurred by such person in availing himself of this recall. To effect this recall, Neil Rose shall offer to:

Replace each metallized striped polyester film kite with tail with a nonmetallized polyester film kite similar to the sample sent the Staff of the Commission pursuant to the attached Consent Agreement; or

Refund the purchase price of each metallized striped polyester film Quicksilver kite with tail upon proof of purchase.

VI.

IT IS FURTHER ORDERED that Neil Rose shall file two reports with the Commission in which he shall detail fully and specifically what he has done to comply with this Order. The first report shall be filed with the Commission thirty days after service of this Order on Neil Rose. The second report shall be filed sixty days after service of this Order.

VII.

IT IS FURTHER ORDERED that Neil Rose shall for one year from the date of issuance of this Order:

Notify the Commission at least thirty days prior to any change in his business such as incorporation, dissolution, assignment, or sale which would result in the emergence of a successor partnership or corporation, the creation or dissolution of subsidiaries, or any other change which might affect compliance obligations arising out of this Order; and

Notify the Commission of the discontinuance of his present business or employment or his affiliation with a new business or employment. Such notice shall include a description of his current business or employment as well as a description of his new duties and responsibilities.

By direction of the Commission.

Dated: April 20, 1976

UNITED STATES OF AMERICA
BEFORE THE CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of MAURICE A. DWECK, an individual trading as M. A. DWECK	DOCKET NO. 8893 WHEN BEFORE THE FEDERAL TRADE COMMISSION CPSC DOCKET NO. 75-4

INITIAL DECISION ON FURTHER HEARING

By David H. Allard, Administrative Law Judge:

Leonard H. Goldstein,
Counsel in Support of the Complaint.

Herbert S. Shapiro,
Miami Beach, Florida,
Counsel for Respondent.

CONSUMER PRODUCT SAFETY COMMISSION
MAY 13 3 01 PM '75

PRELIMINARY STATEMENT

Pursuant to an order of the Commission dated July 23, 1975, this matter was remanded to the undersigned. In that order the Commission determined it is "clear that the Federal Trade Commission utilized a test procedure that differs from that specified in the CPSC's clarification of November 13, 1973." The CPSC believing "that the garments that are the subject of this proceeding should be tested in accordance with the provisions of CS 191-53 as clarified by the Consumer Product Safety Commission on November 13, 1973, and that Administrative Law Judge David H. Allard should render an initial decision in this matter on the basis of those test results." The Commission then ordered the Consumer Product Safety Commission staff to test the garments in accordance with the provisions of CS 191-53, as clarified by Federal Register notice of November 13, 1973 (38 FR 31289); and ordered the matter remanded to the Judge "so that a decision may be issued as to whether the garments violate the provisions of CS 191-53 and the Flammable Fabrics Act on the basis of the CPSC tests."

FINDINGS OF FACT

Pursuant to Section 3.24 of the Federal Trade Commission Rules of Practice and the Motion for Summary Decision filed by Enforcement Counsel[1] with supporting affidavit and test reports,[2] the Administrative Law Judge makes the following findings of fact:

(1). On September 30, 1975, the Commission's Atlanta Area Office staff obtained from the Respondent samples of garments that are subject to this proceeding, consisting of thirty (30) boys' cardigan sweatshirts and thirty (30) nylon scarves.

(2). A total of twenty (20) of said boys' cardigan sweatshirts and twenty (20) of said nylon scarves were tested for flammability in the Commission's laboratory in accordance with the provisions of CS 191-53 as clarified by FEDERAL REGISTER notice of November 13, 1973 (38 FR 31289). Said testing was performed by or under the direction of Commission textile technologist Elaine Brophy. See Ms. Brophy's affidavit, CX-25.[3]

---

[1] Oral argument on the motion was held on April 7, 1976, at Miami, Florida, for the convenience of Respondent. Earlier attempts by the Judge to resolve the matters informally were fruitless. Moreover, even at the hearing in Miami on April 7, 1976, it appeared that the equivalent of a consent agreement could be agreed to by the parties. TR 82-85. If that course of action were practicable, the parties clearly understood that such a document must reach the Judge's office by May 10, 1976. (Tr. 86.) The Judge ordered that if this were not accomplished by May 10 "I will forthwith issue an initial decision in this proceeding." (Tr. 86.) Such documents were not filed.

[2] The exhibits marked and received into evidence are the following. CX-25: Ms. Brophy's affidavit; CX-26A and B through CX-64A and B: Reports of testing performed on the subject garments by the Commission laboratory in accordance with the provisions of CS 191-53 as clarified by FEDERAL REGISTER notice of November 13, 1973, 38 FR 31289; CX-65A and B through CX-66A and B, and CX 67 through CX-81: Laboratory tests on the subject garments performed by U. S. Testing Co., Inc. and Better Fabrics Testing Bureau, Inc.; CX-82A through CX 82E: Affidavit of Elaine Brophy dated April 1, 1976, outlining procedures and describing the equipment utilized by Consumer Product Safety Commission laboratory personnel in conducting tests for flammability under Commercial Standard 191-53; CX-83: Photograph of brushing device manufactured by United States Testing Co., and used by the Consumer Product Safety Commission in preparing raised surface fabrics for testing for flammability under Commercial Standard 191-53; CX-84: Photograph of flammability tester manufactured by United States Testing Co., and used by the Consumer Product Safety Commission in conducting tests for flammability under Commercial Standard 191-53; and CX-85: Copy of Clarification of CS 191-53 published in the Federal Register on November 13, 1973.

[3] A test report for one of the twenty boys' cardigan sweatshirts was not included only because the laboratory data sheet with the only record of test results for that particular test was misplaced before the test was completed.

(3). Because the test procedure previously utilized by the Federal Trade Commission appears to differ from those utilized by the Consumer Product Safety Commission, the procedures utilized herein when the garments were tested in accordance with the provisions of CS 191-53, as clarified by the Consumer Product Safety Commission on September 13, 1973, are set out in Appendix I. Appendix II is a photograph of the brushing device manufactured by United States Testing Co. which device is utilized by the Consumer Product Safety Commission in preparing raised surface fabrics for testing for flammability under Commercial Standard 191-53. (CX-83.) Appendix III is a photograph of the flammability tester manufactured by United States Testing Co., and utilized by the Consumer Product Safety Commission in conducting tests for flammability under Commercial Standard 191-53. (CX-84.)

(4). Results of testing said boys' cardigan sweatshirts in the Commission laboratory show that eight (8) garments were Class 3 (failing), six (6) garments were Class 2 (intermediate flammability), and five (5) garments were Class 1 (passing).

(5). Results of testing said nylon scarves in the Commission laboratory show that eleven (11) scarves were Class 3 (failing) and nine (9) scarves were Class 1 (passing).

(6). In addition to the testing performed in the Commission laboratory, the staff sent five (5) boys' cardigan sweatshirts and five (5) nylon scarves to both U. S. Testing Co., Inc., Hoboken, New Jersey and Better Fabrics Testing Bureau, Inc., New York, N. Y. to be tested in accordance with CS 191-53, as clarified on November 13, 1973. CX-65A and B through CX-66A and B, and CX-67 through CX-81.

(7). Results of testing said boys' cardigan sweatshirts in the above independent laboratories show that six (6) garments were Class 3 (failing), two (2) garments were Class 2 (intermediate flammability) and two (2) garments were Class 1 (passing). Better Fabrics Testing Bureau, Inc. tested the garments on both the inner surface and outer surface. The results on the outer surface were all passing, whereas three (3) of five (5) garments tested on the inner surface failed. The Administrative Law Judge earlier found that the cardigan sweatshirts have the capacity to be worn with the raised surface (inner surface) exposed.4/ No new or additional probative evidence was adduced to form a rational basis in fact or law to reverse that finding. Such garments properly were tested on the inner surface.

4/ Finding of fact 2B, initial decision of April 13, 1973.

(8). Results of testing said nylon scarves in the above independent laboratories show that four (4) scarves were Class 3 (failing) and six (6) scarves were Class 1 (passing).

The Administrative Law Judge, therefore, necessarily finds that there is no genuine issue as to any material fact in this matter,[5/] and that the garments which are the subject of this proceeding fail to conform to the provisions of CS 191-53 as clarified by FEDERAL REGISTER Notice of November 13, 1973 (38 FR 31289). Since the Flammable Fabrics Act, as amended, addresses itself to protecting the public from bodily harm, the Consumer Product Safety Commission must "be allowed effectively to close all roads to the prohibited goal, so that its order may not be by-passed with impunity." Federal Trade Commission v. Ruberoid Co., 343 U.S. 470, 473 (1952). The remedy in the accompanying order has a reasonable relationship to the unlawful practice here found to exist. It is the only reasonable action which could be calculated to preclude a revival of the illegal practices. Accordingly, the Administrative Law Judge issues the following Order:

ORDER

IT IS ORDERED that respondent Maurice A. Dweck, individually and trading as M. A. Dweck, or under any other name or names, his successors and assigns, and respondent's representatives, agents and employees, directly or through any corporation, subsidiary, division or other device, do forthwith cease and desist from manufacturing for sale, selling, offering for sale, in commerce, or importing into the United States, or introducing, delivering for introduction, transporting or causing to be transported in commerce, or selling or delivering after sale or shipment in commerce, any product, fabric, or related material; or selling or offering for sale, any product made of fabric or related material which has been shipped or received in commerce, as "commerce", "product", "fabric" and "related material"

[5/] Further hearing TR. 23.

are defined in the Flammable Fabrics Act, as amended, which product, fabric, or related material fails to conform to an applicable standard or regulation issued, amended or continued in effect, under the provisions of the aforesaid Act.

IT IS FURTHER ORDERED that respondent notify all of his customers who have purchased or to whom have been delivered the products which gave rise to the complaint, of the flammable nature of said products and effect the recall of said products from such customers.

IT IS FURTHER ORDERED that the respondent herein either process the products which gave rise to this complaint so as to bring them into conformance with the applicable standard of flammability under the Flammable Fabrics Act, as amended, or destroy said products.

IT IS FURTHER ORDERED that the respondent shall, within ten (10) days after service upon him of this Order, file with the Commission a special report in writing setting forth the respondent's intentions as to compliance with this Order. This special report shall also advise the Commission fully and specifically concerning (1) the identity of the products which gave rise to the complaint, (2) the number of said products in inventory, (3) any action taken and any further actions proposed to be taken to notify customers of the flammability of said products and effect the recall of said products from customers, and of the results thereof, (4) any disposition of said products since February 23, 1971 and (5) any action taken or proposed to be taken

to bring said products into conformance with the applicable standard of flammability under the Flammable Fabrics Act, as amended, or destroy said products and the results of such action. Such report shall further inform the Commission as to whether or not respondent has in inventory any product, fabric, or related material having a plain surface and made of paper, silk, rayon and acetate, nylon and acetate, rayon, cotton or any other material or combinations thereof in a weight of two ounces or less per square yard, or any product, fabric, or related material having a raised fiber surface. Respondent shall submit samples of not less than one square yard in size of any such product, fabric, or related material with this report.

IT IS FURTHER ORDERED that respondent notify the Commission at least thirty (30) days prior to any proposed sale of respondent's business, any proposed change in the name under which respondent does business, any change in the form of respondent's business such as incorporation or formation of a business partnership, or the entry of respondent into any other business individually or through a corporation, business partnership, or other form of doing business, or other change in respondent's business status which may affect compliance obligations arising out of this Order.

CPSC DOCKET NO. 75-4

APPENDIX I

UNITED STATES OF AMERICA

BEFORE CONSUMER PRODUCT SAFETY COMMISSION

AFFIDAVIT OF ELAINE BROPHY

City of Washington)
) ss
District of Columbia)

ELAINE BROPHY, being duly sworn, deposes states that:

I am a citizen of the United States over the age of twenty-one, residing at 16111 Dorset Road, Laurel, Maryland 20810.

I am the supervisory textile technologist for the Flammability Branch of the Bureau of Engineering Sciences Laboratory Division, within the Consumer Product Safety Commission (Commission). I have held this position with the Commission since its inception in May, 1973. Prior to that I was a textile technologist with the Federal Trade Commission (FTC). My term of employment with the FTC was from June 1970 to May 1973. In preparation of the technologist position, I received a Bachelor of Science degree in textiles from the University of Maryland in 1970. The course work required for this degree covered many aspects of the textile industry with an emphasis on testing procedures.

As supervisory technologist I am responsible for the management and the maintenance of the Flammability Branch, including maintenance of present testing equipment and purchase of new equipment. I am responsible for the performance of all technologists in the laboratory including their training, assignments and evaluation of work. I supervise and/or perform flammability tests on items subject to the Flammable Fabrics Act and the Federal Hazardous Substances Act.

Samples to be tested are packaged and prepared by investigators in the field offices. This involves packing individual samples in plastic bags or boxes and attaching an official CPSC seal (CPSC form 164) across the opening of the package. The following information is recorded on the seal; sample number, date and signature of investigator. Attached to each sample is a sample Collection Report which is completed by the investigator. All samples are sent to the sample custodian and then distributed to the appropriate laboratory within the Commission.

Samples that are submitted to the laboratory are logged in. Each sample then receives a laboratory number in addition to the sample number assigned by the investigator. These two numbers are placed on the sample and each paper associated with that sample. At this time a Test Request Form and a Data Sheet are prepared for each sample.

When all recordkeeping procedures are completed, the sample is then ready to be prepared for testing under the requirements of CS 191-53 (sometime hereinafter "Standard"). The required specimen size is 2" x 6". In the case of plain surface fabrics, two specimens are cut, one in each direction (horizontally and vertically). These preliminary specimens are tested to determine if there is a difference in burning characteristics which is dependent on the direction of the fabric. After completion of these preliminary tests, five specimens are cut in the direction of the fastest burning. If the samples to be tested have a raised fiber surface, the preliminary specimens are not necessary and five specimens are prepared and "the direction of the lay of the surface fibers shall be parallel with the long dimension of the specimens."* (*CS 191-53)

The specimens are then mounted individually in metal specimen holders. The specimen holders consist of two metal plates which support the specimen and are held together by means of clamps. To aid in the support of a specimen during the mounting procedure, it is placed on a carriage equipped with a metal template. In accordance with CPSC's Clarification of Flammability Standard for Clothing Textiles (CS 191-53) published in the Federal Register on November 13, 1973, the measurement of the template is 1/8" thick. Plain surface fabrics are mounted in the specimen holder and then placed in a rack which allows approximately five individual specimens to rest in a horizontal position and handled in a convenient and efficient manner. For raised surfaced fabrics the additional step of brushing the specimen must be performed. This is accomplished by using a brushing device. (Refer to photograph of the brushing device which accompanies this affidavit) The device consists of a base over which the carriage is drawn. A specified brush is hinged to the rear of the base. The mounted specimen is placed on the carriage, the carriage is pushed to the rear of the device, the brush is lowered and the carriage is then moved forward by hand, thereby allowing the bristles to brush the surface of the specimen. The specimens are mounted so that the brushing procedure allows the nap to be raised, i.e., the specimens are brushed against

the lay of the nap. The brushing devices used in the CPSC laboratory were purchased from United States Testing Company, Hoboken, N.J. This brushing procedure is done once for each specimen with a raised fiber surface. These specimens are then stacked horizontally in a rack. By virtue of the thickness of the clamps, the specimens are provided with air space between them when held in the rack.

In accordance with CS 191-53, the specimens are placed in an oven for drying purposes. They are dried for 30 minutes at 105°C. They are then removed from the oven and each rack is placed in a separate desiccator. The desiccators are air tight and moisture tight chambers which allow the samples to cool without regaining moisture. The moisture is controlled by use of silica gel as the desiccant. The specimens remain in the desiccator for 55 minutes at which time they are sufficiently cooled for handling.

A picture of the flammability test chamber used in performing tests under CS 191-53 also accompanies this affidavit. The equipment used by the CPSC laboratory for this test has been purchased from United States Testing Company of Hoboken, N.J. On occassion, repairmen from the manufacturer have serviced the equipment in addition to maintenance provided by CPSC laboratory personnel.

The test is conducted in a draft free environment which is accomplished by means of a sliding glass door which can be shut. The entire assembly, excluding the butane gas supply, is housed in a hood equipped with facilities for removing smoke and fumes after testing. Basically the test chamber consists of a specimen rack which allows the specimen to be held at a 45° angle. A stop cord originates from a spool mounted on the right interior wall of the tester. The thread specified in the Standard is size 50 mercerized, cotton thread. The cord is strung through thread guides on the specimen holder and on the walls and ceiling of the chamber. The first thread guide to be used is the "sky hook" supported from the ceiling; the cord is then threaded through two guides on the specimen holder which allows the thread to be parallel and 3/8" from the specimen holder. The next thread guide is located on the rear wall, and the final guide is on the left wall of the chamber. A weight, which is provided with the equipment at the time of purchase, is applied to the cord as it passes through the final thread guide. The test chamber is also equipped with an automatic one second impingement mechanism which allows the technologist to impinge the flame on the surface of the fabric for one second and record the time of flame spread.

At the end of the conditioning period the samples are tested in the test chamber described above. The gas supply required by the Standard for this test is butane. After the air has been bled from the lines, the gas is ignited and the flame is adjusted to 5/8" from the top of the nozzle to the tip of the flame. The measurement of the flame is checked by a flame measuring device periodically throughout testing and adjusted accordingly. Periodic adjustments are also made of the specimen rack to allow the proper positioning.

The test is now ready to begin. The stop watch which is part of the impingement mechanism is set at 0. The specimens are removed from the desiccator one at a time and placed in the test chamber at a 45° angle. The stop cord is strung through the thread guides as explained above and the weight is attached. The door of the test chamber is closed. The starting lever is activated which simultaneously impinges the flame for one second and starts the mechanism of the stop watch. If the specimen does not burn from the one second impingement, notations to this effect are recorded on the data sheet. If it does burn the length of the specimens, the flame will, in most cases, sever the cord directly above the specimen, thereby releasing the weight which in turn, stops the stop watch. The time is then recorded on the data sheet. If raised fiber surfaced fabrics are being tested, additional observations are made and this information is also recorded. These observations are made on the burning characteristics of the napped surface, the most important one being base fabric ignition or fusion. A partial criteria of a failure in raised fiber surfaced fabrics is base fabric ignition and it must be determined how that ignition was initiated. The base fabric ignition that is required for a failure must be a result of the "propagating surface flame and not the igniting flame."* (*Clarification)

After testing of the five specimens has been completed, an average time of flame spread is computed. Under CS 191-53, the following criteria are provided with regard to test results. Plain surface textiles, Class 1, normal flammability, are those whose average is 3.5 seconds or above. Class 3, rapid and intense burning, are those fabrics whose average is 3.4 seconds or below.

Raised fiber surface fabric, Class 1, is (a) one whose average is above 7.0 seconds or (b) one whose average is 0 - 7.0 seconds with less than 2 specimens having a base fabric ignition. Class 2, intermediate flammability, is a class designated for raised fiber surface textiles only. It includes those fabrics whose average is 4.0 seconds to 7.0 seconds with 2 or more base fabric ignitions. A Class 3 raised fiber surface fabric is one whose average is 3.9 seconds or lower with 2 or more base fabric ignitions.

After the averages have been computed a Class determination is made. If any fabrics are Class 3, an additional 5 specimens are cut in the same direction, prepared and tested according to the steps outlined above. At the end of this phase of testing, a total average is computed. A final determination of failure is made on an average of 10 specimens.

The test is now complete for any fabrics determined to be Class 3. For those fabrics that are Class 1 or 2, they must undergo a dry cleaning and a washing procedure, which is specified in CS 191-53, and the entire process of preparing and testing samples is repeated. After determining the Class of a fabric or garment after laundering, the final result will be based on whichever classification is lowest, the test in the original state or the test after dry cleaning and washing.

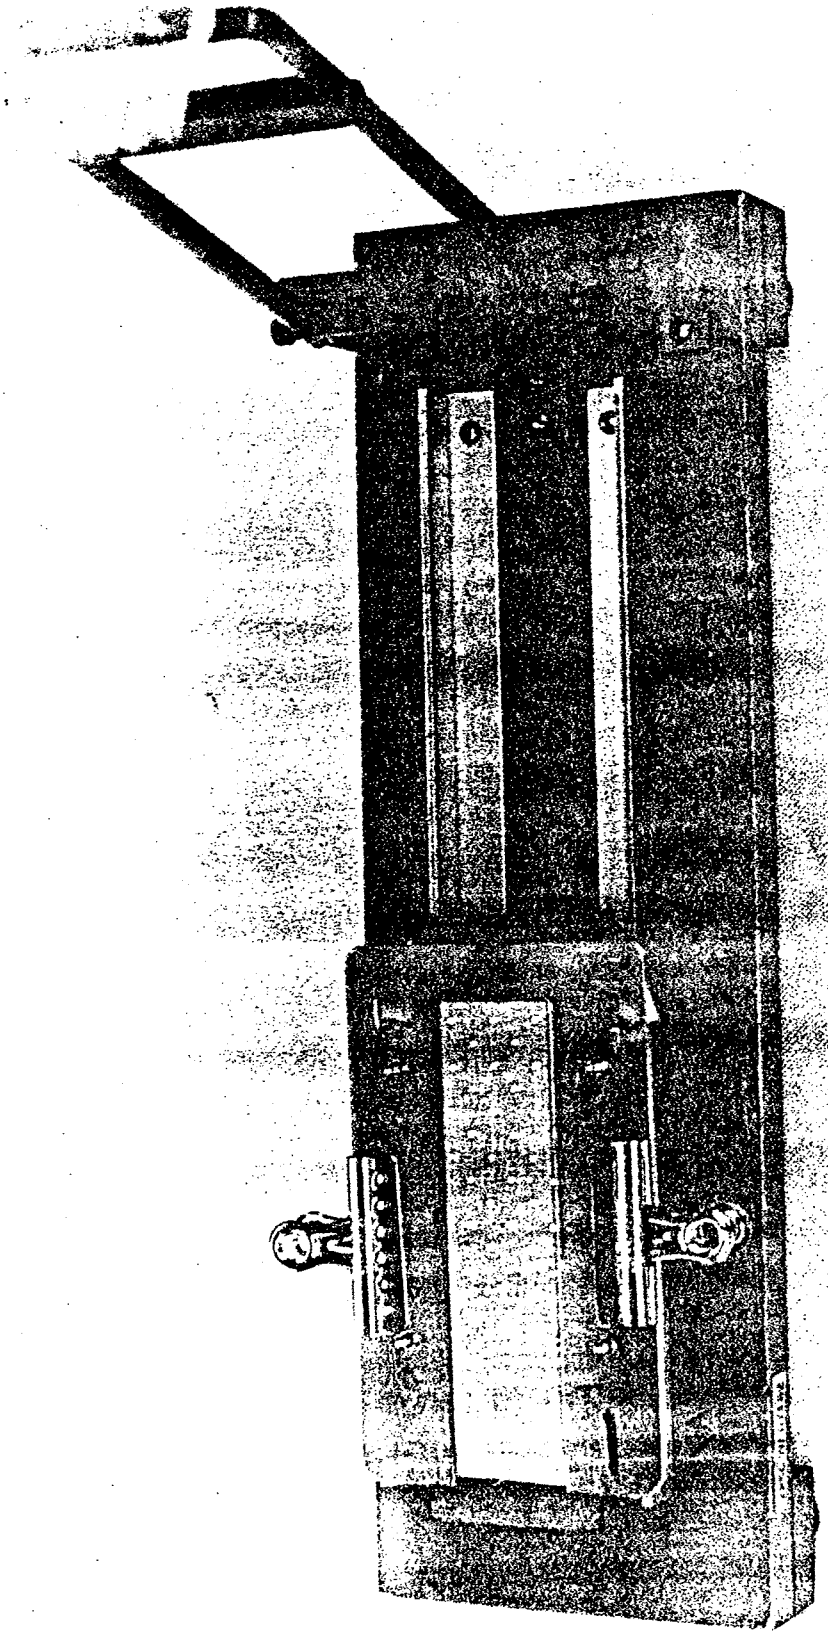
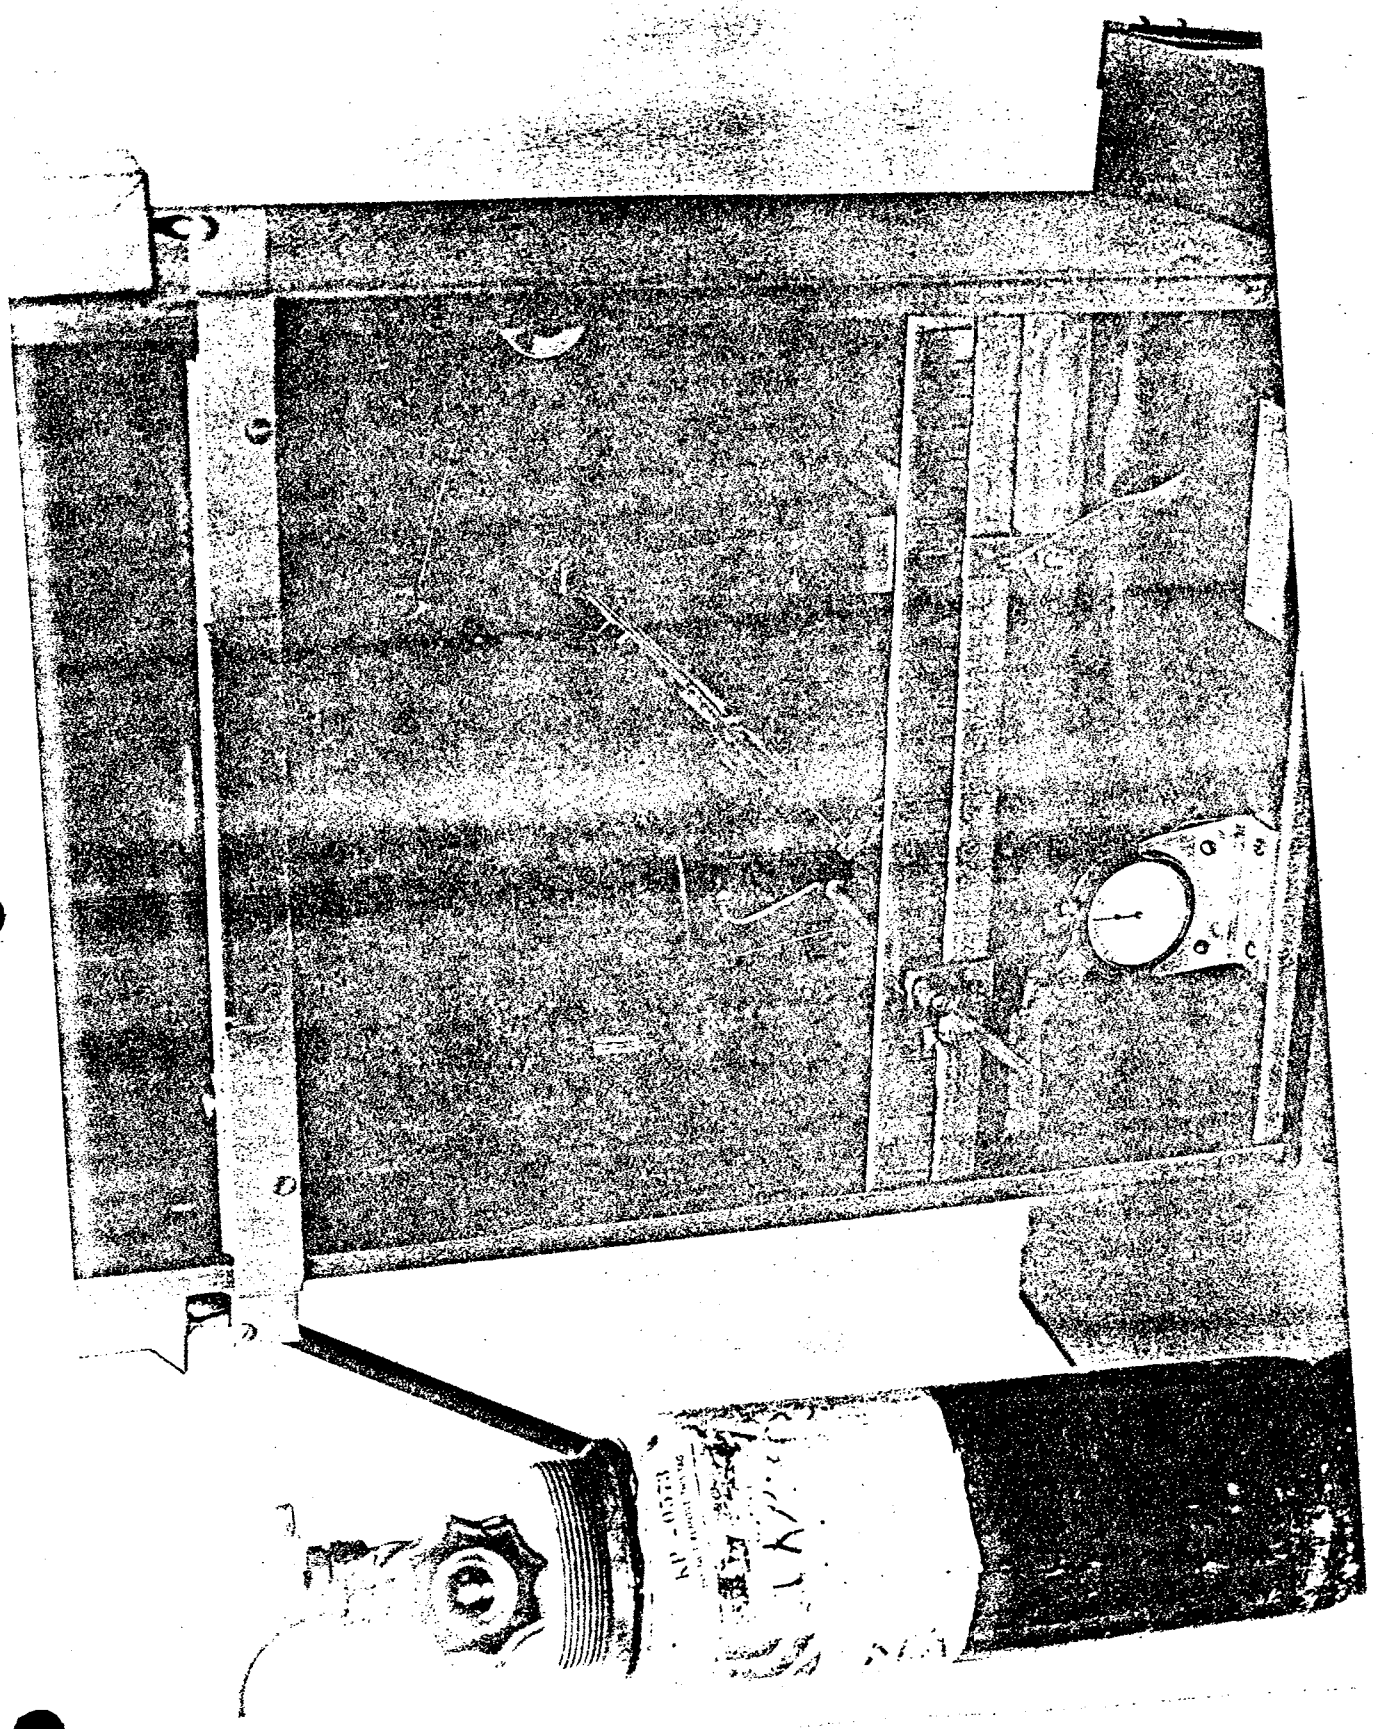
My Commission Expires July 14, 1979

APPENDIX II





UNITED STATES OF AMERICA
BEFORE THE CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of CONGOLEUM INDUSTRIES, INC., a corporation	75-3 DOCKET NO. 8896 WHEN BEFORE FEDERAL TRADE COMMISSION OPINION OF THE COMMISSION

COMMISSIONERS: Barbara Franklin, Lawrence Kushner, Constance Newman, R. David Pittle. This matter is before the Commission upon the appeal of respondent from the initial decision of the Administrative Law Judge issued November 12, 1974. In this decision, the Administrative Law Judge held that respondent manufactured, transported and sold quantities of a particular style carpet in interstate commerce which failed to conform to the requirements of the Standard for the Surface Flammability of Carpets and Rugs (DOC FF 1-70), and which violated the Flammable Fabrics Act (15 U.S.C. 1191 et seq.). He entered an order to cease and desist the unlawful practices and to obtain a sample from every roll of the violative style of carpet not previously tested by the Federal Trade Commission for testing by the Consumer Product Safety Commission. Oral arguments were held in this matter on May 20, 1975.

The Commission, having considered the oral arguments of counsel, their briefs and the record in this matter, has concluded that the findings and conclusions of the Administrative Law Judge in the initial decision adequately and correctly dispose of all issues in this case and that the order to cease and desist included in the initial decision is appropriate and proper in all respects.

One issue that was raised during the course of the proceeding was the extent of the Commission's authority to require notification and recall of items that fail to conform to Standards issued under the Flammable Fabrics Act. Part III of the order of the Administrative Law Judge requires that, where samples from rolls of carpet Endureze 9113 are tested under the order and fail to meet the Standard, the respondent must notify purchasers of carpets from those rolls of the flammable nature of the carpet and endeavor in good faith to recall carpet from such rolls when it has not been installed. Carpet from

such rolls that is in the possession of respondent or is returned to respondent must be reprocessed, so as to bring it into conformity with the Standard, or be destroyed by respondent.

The Flammable Fabrics Act is a public safety statute. Its purpose is to protect the public against the unreasonable risk of the occurrence of fire leading to death, personal injury, or significant property damage. Section 3 of the Act provides that, among other things, the manufacture for sale, transportation, or sale of items which fail to conform to a flammability standard issued under section 4 of the Act are unlawful and an unfair method of competition and an unfair and deceptive act or practice in commerce under the Federal Trade Commission Act. Under section 4 of the Act, the Commission may promulgate flammability standards for wearing apparel and interior furnishings when such standards are needed to adequately protect the public. The Flammable Fabrics Act is enforced as provided in section 5 of the Act:

> (b) The Commission is authorized and directed to prevent any person from violating the provisions of section 3 of this Act in the same manner, by the same means and with the same jurisdiction, powers and duties as though all applicable terms and provisions of the Federal Trade Commission Act were incorporated into and made a part of this Act; and any such person violating any provision of section 3 of this Act shall be subject to the penalties and entitled to the privileges and immunities provided in said Federal Trade Commission Act as though the applicable terms and provisions of the said Federal Trade Commission Act were incorporated into and made a part of this Act.

Thus, the "cease and desist" orders provided for in section 5 of the Federal Trade Commission Act (15 U.S.C. 45) are available to the Commission in enforcement of the Flammable Fabrics Act. In addition, section 6 of the Flammable Fabrics Act authorizes the extraordinary remedies of seizure and injunction in appropriate cases.

Neither the Flammable Fabrics Act nor the Federal Trade Commission Act expressly provide the authority to require notification and recall as to items that fail to conform to standards issued under the Flammable Fabrics Act. However, the Commission considers this authority to be inherent. In order to effectively enforce the Flammable Fabrics Act and to carry out the will of Congress, the Commission must be able to be sure, to the greatest extent possible, that the public is not exposed to items that do not comply with flammability standards. In orders to cease and desist from future violations of the Flammable Fabrics Act, in addition to prohibiting the manufacture, sale or transportation of violative items in the future, the Commission must be able to protect consumers and the general public from the continuing risk of injury that is presented by the violative items. The Commission can only adequately protect the public from serious personal injury, death, or property damage associated with the violative items if it can ensure that, to the extent practicable, the public is notified of the flammable nature of the items and that the items are recalled to

the fullest extent practicable from consumers, distributors, and retailers.

By requiring notification and recall, the Commission prevents the continuing danger to the public from items that have been found to violate the Flammable Fabrics Act. If it were otherwise, innocent consumers would be subjected in the future to harmful effects of the past violations of the Act.

The purpose of the notification and recall provisions is not punitive. Although recall and notification may entail some cost to the respondent, the cost involved is only incidental to the need to protect the public.

For the foregoing reasons, the Commission believes that it is appropriate to require notification and recall in this case. Accordingly,

IT IS ORDERED, that respondent's appeal from the initial decision of the Administrative Law Judge be, and it hereby is, denied.

IT IS ORDERED, that the initial decision of the Administrative Law Judge be, and it hereby is, adopted by the Commission as its final decision; and that the order contained in the initial decision be, and it hereby is, adopted and issued by the Commission as its final order;

IT IS FURTHER ORDERED, that the respondent shall, within sixty (60) days after service upon it of this order, file with the Consumer Product Safety Commission, a report, in writing, setting forth in detail the manner and form of its compliance with Part I of the order.

By the Commission.

RECEIVED
AUG 23 1973
Consumer Product
Safety Commission
Office of the Secretary

STATEMENT OF THE PROCEEDINGS

The complaint in this matter issued by the Federal Trade Commission on October 4, 1972 charges the respondent with violation of the Flammable Fabrics Act, as amended, and the Rules and Regulations promulgated thereunder and as such constituted and now constitutes unfair methods of competition and unfair acts and practices in commerce, within the intent and meaning of the Federal Trade Commission Act.

The Consumer Product Safety Commission under date of May 24, 1973 ordered that Eldon P. Schrup, the undersigned Administrative Law Judge of the Federal Trade Commission be designated and appointed to continue this proceeding before the Consumer Product Safety Commission as provided by Public Law 92-573. The proceeding was ordered to be conducted pursuant to the Rules of Practice of the Federal Trade Commission currently in effect until modified, terminated, superseded, or repealed by this Commission, by a court of competent jurisdiction or by operation of law.

Prehearing conferences were held on November 27, 1972, January 4, January 23 and February 8, 1973. Evidentiary hearings were held on February 20, 21, 26, 27; April 9, 10, 11, 12, 13; May 15, 17; June 12, 13 and 14, 1973.

The official record transcript consists of some 1561 pages of testimony and numerous documentary exhibits, many of complicated technical content. The qualifications of the respective witnesses testifying are set forth in the record transcript of their testimony. Complaint counsel have submitted proposed findings of fact, conclusions, brief and order, together with a reply brief. Counsel for the respondent have submitted proposed findings of fact, conclusions, brief and order, together with a reply brief. A stenographically reported oral argument was held in this matter on August 9, 1973.

All counsel were afforded full opportunity to be heard, to examine and cross-examine all witnesses presented, and to introduce such evidence as provided for under Section 3.43(b) of the Rules of Practice for Adjudicative Proceedings.

The demeanor and the credibility to be accorded all witnesses testifying have been observed and determined in the findings of fact and conclusions made in this Initial Decision.

Proposed findings of fact and conclusions, orders and supporting legal memoranda, replies thereto and oral argument thereon by respective counsel for the parties have been fully considered. All pending motions by the parties not heretofore ruled upon or not granted in substance in this Initial Decision are hereby denied.

Proposed findings of fact and conclusions submitted by the respective parties and not adopted in form or substance in this Initial Decision are hereby rejected as being either irrelevant, immaterial, not necessary of determination and disposition under the pertinent issues, being unduly cumulative, or of insufficient support contra to the greater weight of the substantial credible and reliable factual testimony and exhibits of record in this matter.

After carefully reviewing the entire record in this matter as hereinbefore described and based on said record and the observation of all witnesses testifying, the following findings of fact and conclusions therefrom are made and the following order issued:

FINDINGS OF FACT

1. Respondent Cone Mills Corporation is a corporation organized, existing and doing business under and by virtue of the laws of the State of North Carolina, with its principal place of business located at 1201 Maple Street, Greensboro, North Carolina (Complaint, Para. One; Ans., Para. One).

2. Respondent is engaged in the manufacture, sale and distribution, in commerce, of textile fabrics including but not limited to 100% cotton flannelette Eureka style fabrics, with its principal place of business located at 1201 Maple Avenue, Greensboro, North Carolina (Complaint, Para. One; Answer, Para. One).

3. Respondent is now and for some time last past has been engaged in the manufacture for sale, the sale and offering for sale, in commerce, and has introduced, delivered for introduction, transported and caused to be transported in commerce, and has sold or delivered after sale or shipment in commerce, fabrics, as "commerce" and "fabric", are defined in the Flammable Fabrics Act, as amended, which fabrics are subject to an applicable standard or regulation continued in effect, issued or amended under the provisions of the Flammable Fabrics Act, as amended. Between January 1, 1971 and February 1, 1972 respondent has shipped approximately 29 million yards of Eureka style fabric (CX 242).

This charge of the complaint has been specifically limited to Eureka style cotton flannelette fabric manufactured by respondent prior to February 1, 1972 (Response to Respondent's Motion for More Definite Statement Filed October 25, 1972; statement by complaint counsel at first prehearing conference, November 27, 1972, Tr. 14). In its answer, respondent denied, inter alia, that said fabrics failed to conform to an applicable standard or regulation continued in effect, issued or amended under the provisions of the Flammable Fabrics Act, as amended.

4. The complaint, as so limited by complaint counsel, further alleges that said acts and practices of respondent were in violation of the Flammable Fabrics Act, as amended, and the Rules and Regulations promulgated thereunder, and as such constituted unfair methods of competition and unfair and deceptive acts and practices in commerce, within the intent and meaning of the Federal Trade Commission Act (Complaint, Para. Three). This allegation was denied by respondent in its answer (Answer, Para. Three).

5. The Flammable Fabrics Act (hereinafter referred to as the "Act") was enacted by Congress on June 10, 1953 (67 Stat. 111; 15 U.S.C. 1191). The Act was amended on August 23, 1954 (68 Stat. 770) and again on December 14, 1967 (81 Stat. 568). The 1954 amendment, supra, was enacted to provide for a change in the time of flame spread for plain surface fabrics, as set forth in paragraphs 3.1.1.1 and 3.1.3.1 of Commercial Standard 191-53 which are unrelated to the particular type fabric in this proceeding. The 1967 amendment, supra, amended and revised the Act with the primary purpose being to transfer the power

to amend existing standards or promulgate new standards directly to the Secretary of Commerce. The amended Act also contained a section which continued in effect those standards of flammability existing prior to December 14, 1967. It reads:

> "Sec. 11. Notwithstanding the provisions of this Act, the standards of flammability in effect under the provisions of the Flammable Fabrics Act, as amended, on the day preceding the date of enactment of this Act, shall continue in effect for the fabrics and articles of wearing apparel to which they are applicable until superseded or modified by the Secretary of Commerce pursuant to the authority conferred by the amendments made by this Act." (81 Stat. 574)

6. The Federal Trade Commission was charged by Congress with the responsibility of enforcing and administering the Flammable Fabrics Act, as amended (81 Stat. 568). Section 30(b) of the Consumer Product Safety Act, supra, transferred the enforcement and administration of the Flammable Fabrics Act to the Consumer Product Safety Commission. Until May 24, 1973 the Federal Trade Commission was and the Consumer Product Safety Commission is now the enforcement agency under the Flammable Fabrics Act.

7. The Flammable Fabrics Act. Section 3(b) of the Flammable Fabrics Act (15 U.S.C. 1192; 67 Stat. 111, approved June 30, 1953), under which this proceeding was instituted, provides:

> "The sale or the offering for sale, in commerce, or the importation into the United States, or the introduction, delivery for introduction, transportation or causing to be transported in commerce or for the purpose of sale or delivery after sale in commerce, of any fabric which under the provisions of section 4 of this Act is so highly flammable as to be dangerous when worn by individuals, shall be unlawful and shall be an unfair method of competition and an unfair and deceptive act or practice in commerce under the Federal Trade Commission Act."

Section 4(a) of the Act provides in pertinent part:

> "Any fabric or article of wearing apparel shall be deemed so highly flammable within the meaning of section 3 of this Act as to be dangerous when worn by individuals if such fabric or any uncovered or exposed part of such article of wearing apparel exhibits rapid and intense burning when tested under the conditions and in the manner prescribed in the Commercial Standard promulgated by the Secretary of Commerce effective January 30, 1953, and identified as 'Flammability of Clothing Textiles, Commercial Standard 191-53,' . . . ." (15 U.S.C. 1193; 67 Stat. 112)

8. Commercial Standard 191-53 (CX 214) (hereinafter referred to as CS 191-53), adopted on January 30, 1953, was brought into the Act on June 30, 1953 as a mandatory standard, prescribing the method of testing the flammability of clothing textiles.

Commercial Standard 191-53. To fall within the proscription of the Act, a fabric must be classified as "Rapid and intense burning, Class 3" under Commercial Standard 191-53 */ (CX 214, para. 3.1.3, p. 4). Napped fabrics or other textiles having a raised-fiber surface may be so classified only under the provisions of Paragraph 3.1.3.2, which is as follows:

> "3.1.3.2 Napped, pile, tufted, flocked or other textiles having raised-fiber surface. -- Such textiles in their original state and/or after being dry-cleaned and washed as described in 4.4 and 4.5, when tested as described in section 4, shall be classified as Class 3, rapid and intense burning,

*/ The parties have stipulated that CX 214, certified by the Department of Commerce to be a true copy of Commercial Standard 191-53, is the governing standard in this proceeding (Tr. 348). All references herein to Commercial Standard 191-53 (hereinafter sometimes referred to as "CS 191-53" or "the Standard"), shall be to CX 214.

when the time of flame spread is less than 4 seconds and when the intensity of flame is such as to ignite or fuse the base fabric."

9. Test Reports Relied Upon by Complaint Counsel. In support of the allegations in the complaint, complaint counsel have introduced a number of reports of tests conducted in the Federal Trade Commission laboratory */ and in other laboratories **/ in which some of respondent's cotton flannelette was classified as Class 3 under the Standard. ***/ Of the fabric tested, only that tested in the Federal Trade Commission laboratory was shown by complaint counsel to have been introduced into or transported in interstate commerce (CX 1).

---

*/ CX 5, 8, 11, 14, 16, 19, 22, 24, 27, 30, 34, 36, 38, 41, 43, 46, 49, 52, 55, 58, 60, 62, 66, 69, 72, 78, 81, 84, 87, 89, 92, 94, 96, 98, 100, 102, 105, 107, 110, 110A, 112, 115, 118, 121, 124; 124A, 127, 130, 132, 135, 137, 137A, 140, 143, 145, 148, 151, 154, 157, 159, 159A, 162, 165, 167, 170, 172, 177, 183, 183A, 185, 187, 192, 198, 205, 205A, 207, 207A, 210, 213, 213A. [In addition complaint counsel introduced as part of their rebuttal certain experimental tests performed in the Commission laboratory: CX 247-255.]

**/ Better Fabrics Testing Bureau, Inc., CX 239-241; United States Testing Company, Inc., CX 215(c) and (d), 231-238; Cone Mills Corporation, CX 215-230.

***/ Some of these reports, however, include a number of "Class 1" ("normal flammability" [Para. 3.1.1]) and "Class 2" ("intermediate flammability" [para. 3.1.2]) results, neither of which constitute violations of the Standard. See, for example, CX 222, which sets forth 29 Class 1 results and only 1 Class 3 result. Respondent has also introduced into evidence 320 reports by these 4 laboratories with Class 1 or 2 results: Commission laboratory: RX 9-226; Better Fabrics Testing Bureau, Inc.: RX 255-330; United States Testing Company, Inc.: RX 331-345; Cone Mills Corporation, RX 236-346. A summary of the results of both sets of tests by the Commission laboratory, Better Fabrics Testing Bureau, Inc. and United States Testing Company, Inc. (except for the experimental tests in the Commission laboratory) is set forth in Table I following.

10.

Notes:

1. Experimental tests by F.T.C. laboratory using sky hook excluded (Stam, Tr. 1495).

2. Including three tests (CX 239, 239(a) and 239(b)) in which Class 3 results were recorded even though less than 10 specimens were tested (Stam, Tr. 1496).

3. "DNI" - Did Not Ignite (Stam, Tr. 1497); "SFI" - Surface Flash at point of Impingement only (Stam, Tr. 1498).

4. "SF only" - Untimed Surface Flash without base burning (Stam, Tr. 1502).

(cont'd --)

5. "TSF" - Timed Surface Flash without base burning (Stam, Tr. 1502).

6. "SFBB" - Untimed Surface Flash with Base Burning (Stam, Tr. 1499).

7. "TSFBB" - Timed Surface Flash with Base Burning (Stam, Tr. 1498).

11. The laboratories upon whose test reports complaint counsel have relied in support of their case (with the exception noted below) made no distinction between the two types of base fabric ignition:

(1) Federal Trade Commission. The laboratory technologists did not distinguish between a base burn caused by the tester flame and an ignition over a wide area caused by the surface flash (Neily, Tr. 262). No records were kept as to the type of base burning which may have occurred (id., Tr. 263). The test reports themselves do not disclose which of these phenomena may or may not have occurred (id.).

(2) Better Fabrics Testing Bureau. All base fabric ignitions were counted as base burns in reporting test results whether such ignitions resulted from the tester flame or the surface flash (CX 242(a)-(b); Baker, Tr. 558-59; Rounds, Tr. 1375). Better Fabrics Testing Bureau did not distinguish between the two types of base burning, though it had made this distinction at the time when the Standard was adopted (Buck, Tr. 1464-65). Mr. Baker, its Director of Research and Development (Baker, Tr. 862-63, 881) and Mrs. Rounds, its Director of Flammability Testing (Rounds, Tr. 1368-69, 1375), each independently concluded that such distinction should be made, but stated that such was not done because the staff at the Federal Trade Commission did not make this distinction in conducting its tests (Baker, Tr. 558-59, 881; Rounds, Tr. 1375). Dr. Buck stated that in his opinion the independent laboratories (Better Fabrics Testing Bureau and United States Testing Company) "have to lean over backwards so that they can't be accused of not doing something that the FTC may also have been doing wrong" (Tr. 1465).

In conducting three of the seven tests reported by Better Fabrics Testing Bureau as failures (CX 239, 239(a) and 239(b)) (all of the tests reporting failures which she conducted), Mrs. Rounds did in fact make the distinction in question between the two types of base burning and kept notes in which she recorded the results of her observations (Tr. 1371), even though she did not indicate such conclusions on the test reports themselves. In the case of all three tests, she concluded that the tester flame, not the surface flash, had been the cause of base fabric ignition whenever there had been a timed surface flash accompanied by base fabric ignition (Tr. 1371-74).

(3) United States Testing Company. No distinction was made in reporting the results of the tests between base fabric ignitions caused by the surface flash and base fabric ignitions caused by the tester flame (CX 242(a)-(b)), even though such distinctions had been made by this company at the time when the Standard was adopted (Buck, Tr. 1464-65).

(4) Cone Mills Corporation. No distinction was made in reporting test results between base fabric ignition caused by the surface flash and base fabric ignition caused by the tester flame (Canter, Tr. 1062-63, 1076-77).

12. CS 191-53, Appendix, pages 14, 15 and 17, states in pertinent part:

> II. Paragraphs 3.1.1.2, 3.1.2.1, and 3.1.3.2
>
> * * * * *
>
> When a fabric having a napped, pile, tufted, or other raised-fiber surface burns, two things may occur: (1) A flame may move across the raised fibers, generally rapidly, and (2) the base fabric itself may be ignited, if the flaming of the raised fibers is of sufficient intensity to cause that effect. However, in some cases, the igniting flame itself may set fire to the base material, causing it to burn rather slowly after the surface flashing of the material has terminated. In such a case there exists a combination of two types of burning which are generally considered to constitute no

unusual hazard. There is a nonhazardous surface flash which has not enough intensity to ignite the base fabric itself, and there is a rather slow burning, or normal combustion of the fabric resulting from ignition by the flame of the tester. The real danger from a fabric with a raised-fiber surface results from a rapidly spreading flame which has sufficient intensity to cause the fabric to ignite the base structure over a wide area. This latter effect can easily be observed in the tester, and should not be confused with occasional freak ignitions of the base fabric as described above, where the surface flash may have little volume or intensity.

The intent can be seen in paragraph 3.1.1.2, where the final clause reads "provided the intensity of the flame is so low . . ."; as well as in the similar clause in paragraph 3.1.3.2.

Therefore, in testing fabrics as directed in paragraphs 3.1.1.2, 3.1.2.1, and 3.1.3.2, the observation of flame intensity should be to establish the fact of whether or not the flaming of the raised-fiber surface causes the base fabric to ignite.

IV. Paragraph 4.7.6

As noted, the intensity or volume of flame in a burning textile fabric was recognized by the standing committee to be one of the important factors relating the manner in which the fabric burns to its potential hazard when used as a garment. It was felt that a flame which had insufficient intensity or volume to ignite the base material itself would not transmit sufficient heat or flame through the fabric to the body. Therefore, the committee provided that, to be considered hazardous, a fabric must not only exhibit rapid flame spread, but also must show sufficient intensity or volume of flame so that the basic fabric structure itself will be ignited by that flame.

* * * * *

In summary, the purpose of 4.7.6 is to require the notation of whether the fabric is ignited or fused by the spreading surface flame to a point where the damage is apparent on the surface of the specimen opposite to that which was ignited.

* * * * *

CLARIFICATION OF "NOTE" ON PAGE 3

* * * * *

The committee further wishes it to be understood that this use of visual observation of flame intensity is a temporary expedient effective until the results of investigations now in progress produce a more scientific and definite test procedure.

13. The principal issue in this case is whether the tests in the reports relied upon by complaint counsel in support of the allegations in the complaint were conducted "under the conditions and in the manner prescribed in" Commercial Standard 191-53. Respondent's position is that material and substantial departures from the Standard were made in conducting and reporting each of these tests, and therefore that none of such tests may properly be used as a basis for a finding of violation. The following are the principal deviations from the Standard cited by respondent:

(1) Failure to determine and record the cause of base fabric ignition;

(2) Excessive brushing resulting from the use of an improper "template" in the brushing device;

(3) Failure to maintain the stop cord in the proper position.

14. Turning to respondent's contention that the tests in the Federal Trade Commission laboratory were not conducted under the conditions and in the manner prescribed in Commercial Standard 191-53 in that there was:

(1) Failure to determine and record the cause of base fabric ignition.

There is in evidence a two-page letter (CX 246A & B) dated November 4, 1966 from Mamie Hardy, Project Manager, Product Standards Section, National Bureau of Standards, U.S. Department of Commerce, to the members of the Standing Committee for CS 191-53, Flammability of Clothing Textiles, for approval of a provision (termed Section 9.3.3) which would discard in a testing procedure a timed surface flash with accompanying base burns caused only by the impingement of the tester flame alone. The letter reads in pertinent part:

> The objection of the Federal Trade Commission is based on the Committee's action in approving a provision (Section 9.3.3) which would discard timed surface flashes with accompanying base burns caused by the impingement of the flame. The National Bureau of Standards agrees that this provision would not be in the public interest inasmuch as it would cause a relaxation in the requirements concerning the flammability of clothing textiles. The Federal Trade Commission is of the opinion that it is not possible in every instance to determine if base burns are caused by the surface flash or by the impingement of the flame.

This letter states only the opinion of the staff employees of the Federal Trade Commission and the National Bureau of Standards and the record does not disclose any official position of approval or disapproval taken on this particular point by the Federal Trade Commission itself, then charged with the enforcement of the Act. This letter further states that the objection was voiced by Mr. Stringer of the Federal Trade Commission while attending a Standing Committee meeting. Mr. Stringer was not made available for direct testimony and cross-examination as to the opposing views attributed to him and his expert qualifications are unknown.

Further, the disapproving views attributed to the employees of the National Bureau of Standards in 1966 were not adopted by the National Bureau of Standards or by the U.S. Department of Commerce (Mackay, Tr. 1272).

The statement that the proposed provision (Section 9.3.3) would not be in the public interest inasmuch as it would cause a relaxation in the requirements concerning the flammable fabrics is open to question. It presupposes that the alleged relaxation stated to follow and adoption of Section 9.3.3 would be improper because CS 191-53 provides for the inclusion of base burns caused by the impinging tester flame rather than by only the surface flash itself. This is one of the points to be determined in this proceeding.

15. The "visual observation" necessary to make the distinction between the two forms of base burning is specifically suggested by the Standard. The Note at the beginning of the Standard suggests that a "visual observation of flame intensity" be made to permit determining the three classes into which a fabric should be placed (CX 214, p. 3). While the Committee noted that "this use of visual observation of flame intensity is a temporary expedient effective until the results of investigations now in progress produce a more scientific and definite test procedure" ("Clarification", CX 214, p. 17), the Standard has never been amended to obviate the need for this observation.

Complaint counsel has sought to rule out the need for making the distinction between tester flame ignition and surface flash ignition on the grounds that it is "difficult" or "impossible" and requires a supposedly "subjective" determination. This Standard, like other standards, requires that a number of judgments must be made by the operator (Buck, Tr. 1460; Rounds, Tr. 1378).

16. At the commencement of the presentation of its case in defense, respondent showed a film depicting various types of ignition of cotton flannelette and other fabrics (RX 1). One sequence showed a timed surface flash followed by base fabric ignition starting at the point of tester flame impingement (described by Mr. Baker at Tr. 536-37 and 553). Another sequence showed a timed surface flash followed by base fabric ignition over a wide area (described by Mr. Baker at Tr. 537). The distinction between the two scenes was obvious, even to the untrained eye. In the first, as Mr. Baker testified, after the surface flash, "the flame proceed[ed] to burn relatively slowly up the fabric, starting at the point where the [tester] flame impinged . . . the flame gradually spreading" (Tr. 536). In the

second, as Mr. Baker narrated the scene, "The burning is general. In other words, from the surface flash itself the entire fabric ignited along its length, not just at the point of flame impingement. */ Notice the blackening here and here, showing the entire back of the material is afire. . . . [T]he entire sample burns up caused by the heat of the surface flash itself" (Tr. 537).

The record transcript of testimony at pages 600-601 shows the following with regard to the testimony of respondent's witness Dr. Sandholzer with 29 years experience at the National Bureau of Standards:

> Q. When you compute your average where you have surface flashes as base burnings, do you make any distinction between a base burn which is caused by the surface flash and a base burn which is caused by the impinging flame?
>
> A. I find it very difficult to make any distinction.
>
> Q. Just because it starts at the base of the fabrics, base burn does not necessarily mean it is the impinging flame that did it. Mostly I do not find it easy to tell which -- whether the impinging flame did it or the surface flash. Of course, if it begins to burn further up the sample, it is obvious. When the base burn begins at the bottom of a specimen, I think it is difficult to tell what started it.
>
> JUDGE SCHRUP: You mean when it starts down adjacent to the impinging flame, then it is very difficult to determine whether ---
>
> THE WITNESS: Whether it is the impinging flame or the burning surface. A few cases it might be clear, but mostly I find it difficult to distinguish which started it.

---

*/ Finding No. 32 proposed by complaint counsel reads: That the film made by respondent for demonstration purposes (RX-1) showed examples of base burns which were clearly caused by the surface flash (Baker, Tr. 861).

By Miss Buxbaum:

Q. Would it make any difference if you did know for a fact that it was the impinging flame that ignited the base fabrics?

A. Well, I suppose that depends on how you read the standard.

Q. Under the standard?

A. If you read the standard without the appendix and consider that statement of the flame is sufficient to burn the base fabric, if you will restrict your interpretation of that flame to the surface flame, it would make a difference.

Q. I don't understand. Under the standard itself, excluding the appendix, would it make any difference whether the base fabric were ignited with the surface flame or the impinging flame?

A. I don't think it is stated very clearly in the standard.

17. Table I set forth in preceding Finding No. 10 herein, records the number of "TSFBB" - Timed Surface Flash with Base Burning found as Class 3 or failing tests in Federal Trade Commission laboratory tests and by the United States Testing Company and the Better Fabrics Testing Bureau. Table I reflects that in a total of 2574 tests conducted in the Federal Trade Commission laboratory, 24.9% were found as failing specimens; of a total of 1750 tests conducted by the United States Testing Company, 8.8% were found as failing specimens; of a total of 840 tests conducted by the Better Fabrics Testing Bureau, 6.3% were found as failing specimens. Table I does not reflect whether or not these failing tests were due to impinging tester flame or the surface flash alone. In this connection, see preceding Finding No. 11 herein.

According to respondent's witnesses Canter, Baker and Buck, in the "vast majority" of tests of cotton flannelette in which there is base fabric ignition, such base fabric ignition is caused not by the surface flash but by the tester flame (Canter, Tr. 1064). Mr. Baker testified that in his experience "the major portion, up to say 98 percent" of base fabric ignition is caused by the tester flame rather than the surface flash (Tr. 859), since "there is not enough surface nap present under ordinary circumstances" for the spreading flame of the nap to ignite the base fabric (Tr. 861). Dr. Buck testified that "in the fabrics I have seen, I would say the proportion of base fabric ignitions stemming from the impinging flame is somewhere over 80 percent, maybe 90 percent" (Tr. 1387). Unless the person conducting the test makes and records his observations as to the cause of base fabric ignition, there is no way in which a determination can subsequently be made that in any case such ignition was caused by the surface flash (Buck, Tr. 1394).

Other than the opinion estimates as expressed by respondent's witnesses, the record does not disclose any confirmed specific figures as to the number of failing or Class 3 results disclosed on Table I which were due solely to the impinging tester flame alone. Neither does the record disclose any confirmed specific figures as to the number of failing or Class 3 results disclosed on Table I which are due only to the surface flash alone.

Section 3.43 of the Federal Trade Commission's Rules of Practice for Adjudicative Proceedings reads:

> §3.43 Evidence.--(a) Burden of proof.--Counsel representing the Commission, or any person who has filed objections sufficient to warrant the holding of an adjudicative hearing pursuant to §3.13, shall have the burden of proof, but the proponent of any factual proposition shall be required to sustain the burden of proof with respect thereto.

18. Respondent's second contention reads:

(2) Excessive brushing resulting from the use of an "improper" template in the brushing device.

Pages 7 and 8, 4.3 "Brushing device" of CS 191-53 state:

4.3.1 This device consists of a baseboard over which a smaller carriage is drawn. This carriage runs on parallel tracks attached to the edges of the upper surface of the baseboard. The brush is hinged with pin hinges at the rear edge of the baseboard and rests on the carriage vertically with a pressure of 150 grams.

4.3.2 The brush consists of two rows of stiff nylon bristles mounted with the tufts in a staggered position. The bristles are 0.016 inch in diameter and 0.75 inch in length. There are 20 bristles per tuft and 4 tufts per inch. A clamp is attached to the forward edge of the movable carriage to permit holding the specimen on the carriage during the brushing operation.

4.3.3 After the specimen has been put in place on the carriage and fastened by means of the clamp, the brush is raised, the carriage pushed to the rear, and the brush lowered to the face of the specimen. The carriage is then drawn forward by hand at a uniform rate.

Figure 3 at page 8 pictures a Brushing device.

No statement providing for a "template" appears in CS 191-53 or its Appendix. No statement appears in the Appendix relating to the "Brushing device." There is a conflict between the picture, Figure 3, at page 8 of CS 191-53 showing the brush resting in part on the specimen holder and the text of 4.3.3 above, which states the brush is to be lowered to the face of the specimen. The Federal Trade Commission laboratory adopted the text of 4.3.3 above.

The 1/8 of an inch template used in the brushing device by the Federal Trade Commission since July 1971 (formerly a template of lower height was used) positions the specimen so that the brush will rest on the "face of the specimen" as prescribed in the text of Section 4.3.3 of CS 191-53 (Neily, Tr. 638-41; Ryan, Tr. 1132). The brushing of a specimen in a position other than by the lowering of the brush "to the face of the specimen" as prescribed in Section 4.3.3 of CS 191-53 and as followed by the Commission in its use of the 1/8 inch template would appear to result in a more severe standard than that portrayed by the picture Figure 3, Brushing device.

During the period between May 25 and September 25, 1972 (Neily, Tr. 1194-95), the Federal Trade Commission laboratory utilized a ragged and uneven brush in its laboratory (Buck, Tr. 677, 698; Baker, Tr. 868; Canter, Tr. 1047-48). The use of this brush had "a gross effect on the amount of napping that took place during the brushing operation" (Baker, Tr. 869), thereby significantly increasing the likelihood of failure (Buck, Tr. 677, 699-700; Baker, Tr. 868-69) in the tests conducted during that period. Of the 80 failing tests conducted by the Federal Trade Commission laboratory during this time period, however, only five and possibly six failing tests were conducted using the ragged and uneven brush (Neily, Tr. 1194-95). Complaint counsel have not proposed a finding of Class 3 results on these tests, respectively CX 110 and CX 110A, CX 145, CX 148, CX 177.

The purpose of brushing is to raise the nap or raised fibers (Buck, Tr. 774), to attempt to reproduce the conditions of normal wear (RX 349(a); Baker, Tr. 1323-24).

At the time when the Standard was adopted, the carriages in the brushing devices sold by United States Testing Company and then in use contained 1/16 inch or 3/32 inch "templates". Mr. Baker testified that the brushing devices then in use had 1/16 inch templates, including that used by United States Testing Company, by whom he was then employed (Tr. 870, 1326), as well as Better Fabrics Testing Bureau (Tr. 870, 1327). The carriage in the brushing device obtained by the Federal Trade Commission "when the standard was promulgated" (Neily, Tr. 638), however, had a template of .091 inch (Buck, Tr. 684), or slightly less than 3/32 inch (.09375 inch).

The witness Buck testified that there was no basis "in the language of the Standard, in the pictures in the Standard, in the practices that were followed when the Standard was adopted or anywhere else for using the template that is an eighth of an inch thick" (Tr. 1440). Similarly, the witness Baker testified that the intent of placing the specimens in the specimen holder for brushing was to recondition the upper surface of the specimens (Tr. 1318), while preventing the brush "from creating new nap" (Tr. 1324). He concluded that the 1/16 inch template was the correct one to be used under the Standard (Tr. 871).

A number of years after the adoption of the Standard, United States Testing Company began to substitute and market a 1/8 inch template for the thinner templates previously placed on the carriages in the brushing device, although there was no official authorization for this modification of the equipment (Ryan, Tr. 1155; Buck, Tr. 691, 1440, 1442).

The 1/8 inch template was first used in the Federal Trade Commission laboratory in July 1971 (Neily, Tr. 638), a few months before the Commission laboratory began to conduct the tests on respondent's product upon which complaint counsel is relying on in this case. There is no evidence in the record that the Commission laboratory in the period of some 17 years in which the lesser height template was used, had ever recorded a Class 3 or failing result on respondent's Eureka style cotton flannelette fabric. */

In the use of the 1/16 inch or 3/32 inch template, the brush brushes the nap and not the base fabric structure (Buck, Tr. 687): "[T]he brush just catches the top layer of nap and loosens the surface fibers only slightly" (RX 348(b)). The effect is "to recondition the upper surface

---

*/ See pages 1686-1688 of oral argument held herein on August 9, 1973. These pages deal with the change by the Federal Trade Commission laboratory from the lower height template to the use of the greater height 1/8 inch template.

of the fibrous surface of the textile specimens prior to testing" (Baker, Tr. 1318). Figure 3, page 8 of CS 191-53 shows the ends of the brush to rest partially on the frame of the specimen holder. In response to an inquiry asked of Dr. Buck whether the fact that the ends of the brush rest on the frame, does that take a little pressure off the brushing of the specimen? Dr. Buck answered: "Definitely. It brushes just the nap and not the basic fabric structure" (Tr. 778), thus brushing the raised fibers and not creating any new nap (Buck, Tr. 795; Baker, Tr. 1324).

The 1/8 inch template causes the fabric to be brushed more severely, it makes it more likely that a surface flash will occur; it increases the likelihood that a surface flash will ignite the stop cord; and it increases the possibility that due to increased intensity of the surface flash base burns may more often occur (Buck, Tr. 688). The increase in the severity of the brushing is particularly significant in fabric such as cotton flannelette in which brushing is a sensitive matter (Buck, Tr. 691).

The use of the 1/8 inch template, as opposed to one of the thinner templates, increases the likelihood of failure in a test of cotton flannelette performed under the Standard (Buck, Tr. 689, 1441, 1443, 1452-53; Baker, Tr. 871; Canter, Tr. 1057; Stam, Tr. 1526). The comparable effect of the use of the 1/8 inch template as opposed to the thinner template is set forth in Table I (RX 357). The results shown may be further affected by an incorrect or faulty positioning of the stop cord (RX 357).

The results tabulated on Table I demonstrate that the use of the 1/8 inch template is likely to result in more test failures than the thinner template. The reported test failure rate of the Federal Trade Commission laboratory and United States Testing Company was 27.3% for the former and 14.3% for the latter as opposed to a rate of but 8.5% at Better Fabrics Testing Bureau using the lesser height template. These results appear confirmed by the witness Stam's analysis of the results of the tests of individual specimens by the three laboratories appearing on Table I (Neily, Tr. 638; Buck, Tr. 684; Stam, Tr. 1522-26).

19. Respondent's third contention reads:

(3) Failure to maintain the stop cord in the proper position.

Section 4.2.7 of CS 191-53 states:

4.2.7 Stop cord (G, fig. 2).--This cord, stretched from the spool (P, fig. 2) through suitable thread guides provided on the specimen frame and chamber walls, permits the lacing of the cord in the proper position exactly 5 inches from the point where the center of the ignition flame impinges on the test specimen. The stop cord consists of a No. 50 mercerized sewing thread and measures the rise and spread of the flame from the test specimen.

There is no definition in CS 191-53 or its Appendix of the terms "suitable thread guides" or "the proper position of the stop cord" other than that it must be exactly 5 inches from the point where the center of the ignition flame impinges on the test specimen.

Two forms of thread guides are in use. The Federal Trade Commission laboratory uses "rounded" specimen holder thread guides (Baker, Tr. 875). The National Bureau of Standards (Sandholzer, Tr. 580), the two leading independent laboratories (Baker, Tr. 875-76; CX 242(b)), and apparently every other laboratory performing tests under the Standard (Baker, Tr. 875) use specimen holder thread guides which have the shape of an inverted letter L. This guide is bent at a right angle (Sandholzer, Tr. 580), whereas the guide in use in the Federal Trade Commission laboratory is curved. In addition, the National Bureau of Standards (Sandholzer, Tr. 582-83; Ryan, Tr. 1172) and the two leading independent laboratories (CX 242(b)) use an additional thread guide, known as the "sky hook", for the purpose and with the effect of maintaining the stop cord in a uniform position parallel to the specimen at the top of the thread guides (Sandholzer, Tr. 582-83; RX 2(b)).

It has been stipulated that the rounded thread guides, which are shown in both Figure 2 (p. 6) and Figure 3 (p. 8) of the Standard (CX 214) and which were apparently in use when the Standard was adopted, meet the requirements of the Standard, and that the Standard does not require the use of a sky hook (Tr. 814-15, 828-30). Mrs. Neily testified, and the witnesses who observed test demonstrations in the Federal Trade Commission's laboratory agreed that in the tests conducted in such laboratory the stop cord is located at the top of the "rear" thread guide, precisely 5/16ths of an inch from the specimen holder, but that the position on the "front" thread guide is "variable". Sometimes it is "near the bottom" of the front thread guide; sometimes it is "near the middle" (Neily, Tr. 239). Mr. Baker referred to "the random location of the stop cord in the performance of the test itself" in the Commission laboratory (Baker, Tr. 871). "It varied essentially from zero to three-eighths of an inch [from the specimen] on the near side or operator side of the equipment, to three-eighths on the far side" to form a "triangular configuration" (Baker, Tr. 871-72). Accord: Buck, Tr. 724; Canter, Tr. 1038. Mrs. Neily expressed the opinion that the stop cord is always in the proper position "no matter what the height", be it the top, middle or bottom on the near or front side (Tr. 240).

Dr. Sandholzer of the National Bureau of Standards testified as follows to tests performed in the laboratory of the National Bureau of Standards at Transcript pages 581-84; 589-90; 592-93; 602-03:

> Q. In the tests which you conduct under CS-191-53 where is the stop cord positioned on the thread guide?
>
> A. It is at the top of the thread guides that we have on the sample holders now and it is three-eights of an inch above the top plate, I believe, now.
>
> Q. Is it in a parallel position?
>
> A. Yes.

Q. What is the reason that it is placed in that position at the top of the thread guides in a parallel position?

A. We believe that that is the intent of the standard, that it should be parallel.

Q. What is the basis for that opinion?

A. Because the guides were made the same height, one on each side, at the same height, and in any of the meetings or discussions of the standard that I ever heard no discussion was ever brought up about it not being at the top and I am certain that they intended it to be level across, in a level position across the specimen.

* * * * *

Q. Dr. Sandholzer, in the tests which you conduct how do you make sure the stop cord is maintained at the top of the thread guides?

A. We at present have a hook in the end of our cabinet which is above the top of the specimen holder in the back, so that the cord comes down to the specimen holders from above, which keeps it at the top of the pin.

Q. In your opinion is the use of that device consistent with the standards?

A. Yes.

Q. In your opinion are the tests run with the use of that device in accordance with the standard?

A. Yes.

Q. In your experience, Dr. Sandholzer, can the stop cord be kept at the top of the thread guides parallel to the specimen without the use of this extra hook?

A. With enough care, yes.

* * * * *

JUDGE SCHRUP: The absence of the sky hook, would that invalidate the test procedure?

THE WITNESS: Well, no. Not according to the standards because it was not stated definitely in the standard just where the thread had to be positioned. But I am sure they assumed it would be at the top.

* * * * *

Q. You said also that you do not believe it can be parallel without the L-shaped hooks?

A. Yes, I do. I said with enough care you can make it parallel.

JUDGE SCHRUP: In the absence of the skyhook?

THE WITNESS: Yes.

By Miss Buxbaum:

Q. When did you begin to use a skyhook and the L-shaped hooks?

A. As for date I cannot give you an exact date, but when we observed sometimes it slipped down one side a little.

Q. You observed that?

A. If we were not very careful, we found it was inclined to slip down on one side.

JUDGE SCHRUP: You are talking about the stop cord, without the use of appropriate care it could not be exactly parallel to the specimen?

THE WITNESS: That's right. It might not.

* * * * *

JUDGE SCHRUP: Let me ask you this again and maybe the witness can answer this, but I would like to be informed. Now there are occasions apparently where the stop cord is parallel to the specimen and other cases where it is not parallel to the specimen. What difference does that make in the validity of the test?

MISS BUXBAUM: I would like to ask the witness to answer that question.

THE WITNESS: For most of the fabrics, probably it would not make any difference in actual practice. I think there would probably be occasions when it might make a difference.

JUDGE SCHRUP: What type of fabric would that involve?

THE WITNESS: Raised surface fabric.

JUDGE SCHRUP: Is that the type of fabric involved in this proceeding?

THE WITNESS: I believe so.

Mr. Ryan, also of the National Bureau of Standards, testified that in his opinion, "the correct interpretation of the Standard is to position the 'stop cord' parallel to the specimen surface and at the top of the guides" (Tr. 608-09).

There is in evidence RX 2, being a letter dated September 22, 1972 from Richard O. Simpson, Acting Assistant Secretary for Science and Technology, U.S. Department of Commerce, providing information to the Honorable Sam J. Ervin, Jr., Chairman, Committee on Government Operations, U.S. Senate, in response to an inquiry made by the Senator relative to the flammability testing of cotton flannel produced by Cone Mills Corporation. The letter from Mr. Simpson reads in pertinent part:

> Question 1: "To the best of your knowledge, is there a difference in either the method or equipment used in the FTC laboratory in making flammability

tests on cotton flannel from the methods and equipment used by -- (a) The Bureau of Standards; (b) The United States Testing Company, the Better Fabrics Testing Bureau; or (c) The textile industry generally?"

(a) Testing at the National Bureau of Standards is usually conducted using the "sky hook" referred to in the Cone Mills letters. It is our understanding that the Federal Trade Commission does not use this modification. The "sky hook" provides a more reproducible string-up in that the thread is positioned at the top of the thread guide on the specimen holder and parallel to the specimen surface. We also understand that the FTC does not position the "stop cord" parallel to the specimen surface, but positions the "stop cord" in a triangular configuration. Although CS 191-53 is ambiguous on correct "stop cord" positioning (see paragraph 4.7.4 of CS 191-53 (copy enclosed)) and several "stop cord" positions could result from this ambiguity, it is our opinion that the correct interpretation of the standard is to position the "stop cord" parallel to the specimen surface and at the top of the guides.

(b) (c) We have no valid information for comparing FTC equipment or procedures to those used by the United States Testing Company, the Better Fabrics Testing Bureau; or the textile industry in general.

Question 2: "In testing cotton flannel for flammability in the Bureau of Standards, is the 'stop cord' positioned parallel to the specimen?"

Yes, parallel and at the top of the guides.

Question 3: "If the 'stop cord' is not in a parallel position, is the likelihood of test failures increased in the case of cotton flannel?"

> Conducting a test in the CS 191-53 apparatus with the "stop cord" not parallel to the surface of the specimen could either increase or decrease the likelihood of failure, depending on the nature of the fabric being tested. More important than parallelism is the distance the "stop cord" is away from the fabric surface. Neither of these parameters is specified in CS 191-53. Because of this and several other ambiguous features CS 191-53, we have initiated the development of a revision and clarification of this standard.
>
> Cotton flannel (and other napped fabrics) frequently exhibit a low but rapidly spreading flame (surface flash). Such flames have been observed to pass under and not burn the "stop cord" where the latter is parallel and at the maximum possible height from the fabric. Putting the "stop cord" nearer to the surface, either parallel and near all across or not parallel and nearest at one end, increases the likelihood that such flames will burn the "stop cord". If the fabric base burns rather than surface flashes, the precise positioning of the "stop cord" for this type fabric, will probably have little effect on the test results.

Dr. Buck testified "There is absolutely no possible shadow of doubt in my opinion that the cord must be parallel to the surface of the specimen holder and the specimen and at that full distance, 3/8ths of an inch from the base of the top specimen holder" (Tr. 732). Dr. Buck further pointed out that "No one in his right mind would devise a test in which one of the critical parameters could be varied up or down, thereby giving you a spread of results" (Tr. 1453).

Mr. Baker testified that the correct position of the stop cord is at the top of the guides, parallel to the face of the fabric (Tr. 872), and that this was also the intent of the other members of the committee which developed the

Standard (Tr. 874). He testified that the reason for having a thread guide of a certain height was to put the stop cord at that height (Tr. 872-73). In his opinion, it could not have been the intent of the Standard or of the committee which developed the Standard either "that the stop cord be placed near the bottom of one of the thread guides" or "that the stop cord be placed in variable positions so that it would not be in the same position each time" (Tr. 875).

20. Complaint counsel's contention in support of the variable position followed in the Commission laboratory appears to be that since it is allegedly impossible to maintain the stop cord at the very top of the rounded thread guides in use in the Commission laboratory without the aid of a "sky hook", no effort must be made to keep it as close to the top as possible, and consequently that the cord may be allowed to slip down to the very bottom of the front thread guide. It is by no means clear that it is in fact "impossible" to maintain the stop cord at the apex of the rounded thread guide in a parallel position, even without a sky hook.

If it is not in fact possible to maintain the stop cord at the absolute top of the rounded thread guides without a sky hook, it by no means follows that the stop cord should be permitted to slip down to the middle or the absolute bottom of the front thread guide, or that the stop cord should be permitted to rest in a different position each time.

Dr. Buck testified that it could be kept "very near" to a parallel position (Tr. 817). Mr. Canter agreed that the stop cord could be kept "essentially in a parallel position" (Tr. 1053). Mrs. Neily testified that the highest she could place the cord was 3/16 of an inch from the specimen holder (Tr. 1196). Mr. Baker testified to having observed that Mrs. Neily had been in fact able to maintain the cord essentially at the top of the near guide in a demonstration performed by her which he had witnessed (Tr. 879).

The record does not show the exact position of the stop cord or how it may have varied in the number of the actual tests conducted in the Federal Trade Commission laboratory on the respondent's Eureka style fabrics.

Mr. Ryan, although stating that "it is theoretically impossible for the thread to stay at the top of a rounded guide" (Tr. 1137) (the position, he testified, was "correct" under the Standard [Tr. 608-09]), conceded that the thread could be placed somewhere in the upper 1/8 of an inch and possibly within the upper 1/16 (Tr. 1168). The difference between the absolute top and the position in which Mr. Ryan believed the cord could be maintained is only 1/16 or at the most 1/8 of an inch, in contrast to a "possible difference of five-sixteenths of an inch" (Ryan, Tr. 618) between the top of the thread guide and the bottom, where it is sometimes allowed to lie in the Commission laboratory.

Assuming that the stop cord cannot be maintained at the top of the rounded guides without a sky hook, it would clearly appear that the stop cord should be uniformly maintained. Only in this way will consistent, reproducible results be achieved and will the intent of the framers of the Standard be realized.

Mr. Canter stated that he agreed with complaint counsel's statement on cross-examination that it was "a fact that you would get more failures if the thread were closer to the fabric" than at the top of the thread guides parallel to the specimen (Tr. 1098). (See also, Tr. 1054-55). He also testified that in demonstration tests which he had observed in the Commission laboratory, in which the stop cord had been "practically touching the test specimen" (Tr. 1038), some "low volume surface flashes . . . were actually burning that stop cord" (Tr. 1039).

As shown in RX 357, Table I, of the specimens tested in the Commission laboratory, there were 1,387 which had timed surface flashes (746 timed surface flashes only [TSF] and 641 timed surface flash plus base burning [TSFBB]). (Stam, Tr. 1527) This constitutes 54% of the total of 2,574 specimens tested in the Commission laboratory (id.) In the United States Testing Company laboratory, there were only 457 timed surface flashes (303 TSF and 154 TSFBB) or 26% of the Total of 1,750 specimens tested (id.) The rate of timed surface flashes in the Commission laboratory, which did not maintain the stop cord in the proper position, was over twice as high as the rate at United States Testing Company which did. In terms of final test results, 14.3% of the tests in the United States Testing Company laboratory were recorded as failures, whereas 27.3% were alleged to be failures in the Federal Trade Commission laboratory (RX 357; Table I).

21. Complaint counsel's proposed Finding No. 36 reads:

> 36. That Commission laboratory test reports identified as CX-5, CX-8, CX-11, CX-14, CX-16, CX-19, CX-22, CX-24, CX-27, CX-30, CX-34, CX-36, CX-38, CX-41, CX-43, CX-46, CX-49, CX-52, CX-55, CX-58, CX-60, CX-62, CX-66, CX-69, CX-72, CX-78, CX-81, CX-84, CX-87, CX-89, CX-92, CX-94, CX-96, CX-100, CX-102, CX-105, CX-107, CX-112, CX-115, CX-118, CX-121, CX-124, CX-127, CX-130, CX-132, CX-135, CX-137, CX-140, CX-143, CX-151, CX-154, CX-157, CX-159, CX-162, CX-167, CX-170, CX-172, CX-183, CX-185, CX-187, CX-192, CX-198, CX-205, CX-207, CX-210 and CX-213 all showed Class III results and were performed in accordance with CS 191-53 in all material respects.

The record in this proceeding refutes and does not permit a finding that "All showed Class III results and were performed in accordance with CS 191-53 in all material respects." For one, among other examples, see Findings Nos. 7, 8, 9, 10, 11, 12, 15, 16,17, supra.

Respondent's three principal contentions are:

> (1) Failure to determine and record the cause of base fabric ignition;
>
> (2) Excessive brushing resulting from the use of an improper "template" in the brushing device;
>
> (3) Failure to maintain the stop cord in the proper position.

If respondent's three contentions are accepted as being adequately supported by the credible, reliable record evidence, it follows that the Class 3 results reported on respondent's Eureka Style fabrics have been shown to be faulty and erroneous. If that be so, it further follows that the dictate of Section 3(b) of the Flammable Fabrics Act has not been violated and the complaint in this proceeding should be dismissed for failure of proof.

Section 3(b) of the Flammable Fabrics Act prohibits "any fabric which under the provisions of Section 4 of this Act is so highly flammable as to be dangerous when worn by individuals." Section 4(a) of the Flammable Fabrics Act makes mandatory the employment of Commercial Standard 191-53 under which fabrics of "rapid and intense burning, Class 3" may be so classified and prohibited. Complaint counsel have the burden of proof to show that the interpretation given CS 191-53 by the laboratory staff of the Federal Trade Commission is not only correct, but further, that the test procedures used are free of material fault and erroneous conclusions in making the classification that respondent's Eureka style flannelette fabric is of "rapid and intense burning, Class 3." This required showing is not supported by the preponderant credible and reliable evidence of record.

The stenographically reported oral argument held on August 9, 1973 discloses various points raised by complaint counsel and counsel for respondent. Respondent's principal three contentions were fully discussed by counsel for the parties at pages 1634-75 of the transcript. Full consideration was given to the oral argument on the facts at these pages in the making of all the findings of fact herein.

The so-called variability factor which may occur in the structure of the fabrics tested may influence the end results as to whether or not a fabric is to be classified as "rapid and intense burning, Class 3." The presence or absence of this factor, however, does not excuse the nonemployment of proper testing procedures prescribed as mandatory by Commercial Standard 191-53. This problem is discussed in the oral argument by counsel for the parties and appears at pages 1684-85; 1688-94 of the transcript.

CONCLUSIONS

1. The Federal Trade Commission had and the Consumer Product Safety Commission now has jurisdiction over the parties and the subject matter and this proceeding is in the public interest.

2. Based on the findings of fact made in this proceeding, the complaint must be dismissed for failure of proof under the Federal Trade Commission Rules of Practice for Adjudicative Proceedings, Section 3.43 Evidence.--(a) Burden of proof.

ORDER

IT IS ORDERED that the complaint in this proceeding be, and it hereby is, dismissed for failure of proof.

Eldon P. Schrup
Administrative Law Judge

August 28, 1973
