

Ballot Vote Sheet

TO: The Commission
Alberta E. Mills, Secretary

THROUGH: Austin C. Schlick, General Counsel
Jason K. Levine, Executive Director

FROM: Daniel R. Vice, Assistant General Counsel, Regulatory Affairs
Mary A. House, Attorney, Regulatory Affairs

SUBJECT: Reese's Law Implementation: (1) Commission Determination Regarding UL-4200A-2023 and Draft Direct Final Rule to Establish a Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries in 16 C.F.R. part 1263 and (2) Draft Final Rule to Amend Part 1263 to Establish Labeling Requirements for Button Cell or Coin Battery Packaging

DATE: August 31, 2023

BALLOT VOTE DUE: Friday, September 8, 2023

To eliminate or adequately reduce the risk of serious injury or death from ingestion of button cell or coin batteries by children six years old and younger during reasonably foreseeable use or misuse conditions, the Office of the General Counsel is forwarding for the Commission's consideration a staff briefing package recommending that the Commission implement Reese's Law (Pub. L. No. 117-171; 15 U.S.C. § 2056e) by publishing in the *Federal Register* the following two attached draft documents:

- Commission Determination under section 2(d) of Reese's Law (15 U.S.C. 2056e(d)(1)) that ANSI/UL 4200A, *Standard for Safety for Products Incorporating Button Batteries or Coin Cell Batteries* (UL 4200A-2023), approved on August 30, 2023, meets the performance and labeling requirements in section 2(a) of Reese's Law, and a Direct Final Rule incorporating by reference UL 4200A-2023 as the Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries, to be codified at 16 C.F.R. part 1263; and
- Final Rule to Amend Part 1263 to Establish Labeling Requirements for Button Cell or Coin Battery Packaging.

Please indicate your vote on the following options:

Vote 1: Publication of the Commission’s Determination Regarding UL 4200A-2023 and a Direct Final Rule incorporating by reference UL 4200A-2023 as the Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries

I. Determine that UL 4200A-2023 meets the performance and labeling requirements in section 2(a) of Reese’s Law (15 U.S.C. 2056e(a)) by approving publication of the attached draft *Federal Register* notice containing the Commission’s determination regarding UL 4200A-2023 and a direct final rule incorporating by reference UL 4200A-2023 as the Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries, to be codified at 16 C.F.R. part 1263, as drafted.

(Signature)

(Date)

II. Determine that UL 4200A-2023 meets the performance and labeling requirements in section 2(a) of Reese’s Law (15 U.S.C. 2056e(a)) by approving publication of the attached draft *Federal Register* notice containing the Commission’s determination regarding UL 4200A-2023 and a direct final rule incorporating by reference UL 4200A-2023 as the Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries, to be codified at 16 C.F.R. part 1263, with the following changes:

(Signature)

(Date)

III. Do not determine that UL 4200A-2023 meets the performance and/or labeling requirements in section 2(a) of Reese’s Law (15 U.S.C. 2056e(a)) and direct the staff to submit for the Commission’s consideration a draft final rule to establish a Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries that meets the requirements of section 2 of Reese’s Law.

(Signature)

(Date)

IV. Take other action specified below.

(Signature)

(Date)

Vote 2: Publication of a Final Rule to Amend Part 1263 to Establish Labeling Requirements for Button Cell or Coin Battery Packaging

- I. Approve publication of the attached draft final rule to amend part 1263 to establish labeling requirements for button cell or coin battery packaging in the *Federal Register*, as drafted.

(Signature)

(Date)

- II. Approve publication in the *Federal Register* of the attached draft final rule to amend part 1263 to establish labeling requirements for button cell or coin battery packaging, with the following changes:

(Signature)

(Date)

- III. Do not approve publication of the attached draft final rule to amend part 1263 to establish labeling requirements for button cell or coin battery packaging in the *Federal Register*.

(Signature)

(Date)

- IV. Take other action specified below:

(Signature)

(Date)

Attachments: (1) Draft *Federal Register* Notice containing Commission Determination Regarding UL 4200A-2023 and a Direct Final Rule incorporating by reference UL 4200A-2023 as the Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries, codified at 16 C.F.R. part 1263 and (2) Draft Final Rule to Amend Part 1263 to Establish Labeling Requirements for Button Cell or Coin Battery Packaging

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Parts 1112 and 1263

[CPSC Docket No. 2023-0004]

Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries

AGENCY: Consumer Product Safety Commission.

ACTION: Direct final rule.

SUMMARY: In February 2023, as required by Reese’s Law, the U.S. Consumer Product Safety Commission (CPSC or Commission) issued a notice of proposed rulemaking (NPR) to eliminate or adequately reduce the risk of injury from ingestion of button cell or coin batteries by children six years old and younger. In the NPR the Commission preliminarily determined that no existing voluntary standard met the requirements in Reese’s Law at that time. In this notice, however, the Commission determines that one voluntary standard, substantially revised since publication of the NPR, now meets the requirements in Reese’s Law with respect to performance and labeling requirements for consumer products containing button cell or coin batteries. Reese’s Law states that after a determination of sufficiency by the Commission, such a qualifying voluntary standard is treated as a consumer product safety rule. The Commission is publishing this determination, as required by Reese’s Law, as well as a direct final rule to incorporate the voluntary standard by reference into our regulations. Consumer products subject to performance and labeling requirements in this direct final rule must be tested and certified as compliant with the direct final rule.

DATES: Consumer products containing button cell or coin batteries that are manufactured or imported after [INSERT 30 DAYS AFTER PUBLICATION IN THE

DRAFT

FEDERAL REGISTER] must comply with this direct final rule unless the Commission receives a significant adverse comment by [INSERT DATE 14 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER]. If the Commission receives such a comment, we will publish a notice in the *Federal Register*, withdrawing this direct final rule before its effective date. The incorporation by reference of the publication listed in this rule is approved by the Director of the Federal Register as of [INSERT DATE 30 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER]. The revision to part 1112, adding a Notice of Requirements (NOR) for the new part 1263 and requiring third-party testing of children's products, is effective [INSERT 90 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER]. In recognition of limited testing availability, however, the Commission's Office of Compliance and Field Operations has issued guidance granting a transitional period of enforcement discretion for the new requirements of UL 4200A-2023. That guidance is available at [INSERT LINK].

ADDRESSES: Submit comments, identified by Docket No. CPSC–2023–0004, by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at: <https://www.regulations.gov>. Follow the instructions for submitting comments. CPSC typically does not accept comments submitted by electronic mail (e-mail), except as described below. CPSC encourages you to submit electronic comments by using the Federal eRulemaking Portal.

Mail/Hand Delivery/Courier/Confidential Written Submissions: Submit comments by mail, hand delivery, or courier to: Office of the Secretary, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; telephone: (301) 504-7479. If you wish to submit confidential business information, trade secret information, or other sensitive

DRAFT

or protected information that you do not want to be available to the public, you may submit such comments by mail, hand delivery, or courier, or you may e-mail them to: cpsc-os@cpsc.gov.

Instructions: All submissions must include the agency name and docket number. CPSC may post all comments without change, including any personal identifiers, contact information, or other personal information provided, to: <https://www.regulations.gov>. Do not submit through this website: confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If you wish to submit such information, please submit it according to the instructions for mail/hand delivery/courier/confidential written submissions.

Docket: For access to the docket to read background documents or comments received, go to: <https://www.regulations.gov>, and insert the docket number, CPSC–2023–0004, into the “Search” box, and follow the prompts.

FOR FURTHER INFORMATION CONTACT: William Cusey, Small Business Ombudsman, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; telephone 301-504-7945; email: SBO@CPSC.gov.

SUPPLEMENTARY INFORMATION:¹

On February 9, 2023, pursuant to section 2 of Reese’s Law (Pub. L. No. 117-171, 15 U.S.C. 2056e), the Commission published an NPR to establish a Safety Standard and Notification Requirements for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries. 88 FR 8692. As required by section 2(a) of Reese’s Law, the NPR contained performance and labeling requirements for consumer products containing button cell or coin

¹ To implement Reese’s Law, on September X, 2023, the Commission voted (x-x) to publish this determination and a direct final rule to incorporate by reference, UL 4200A-2023, approved August 30, 2023, as the mandatory standard for consumer products containing button cell or coin batteries.

DRAFT

batteries² and labeling requirements for button cell and coin battery packaging. *See* 15 U.S.C. 2056e(a). The NPR also proposed to require notification of additional point-of-sale performance and technical data related to the safety of button cell or coin batteries using the Commission’s authority under section 27(e) of the Consumer Product Safety Act (CPSA), 15 U.S.C. 2076(e). 88 FR 8709. Based on staff’s assessment of existing voluntary standards, the Commission preliminarily determined in the NPR that no voluntary standard in existence at that time met the performance or labeling requirements of section 2 of Reese’s Law, and requested comment on that preliminary finding. 88 FR 8702, 8705. The Commission received 38 comments during a 30-day comment period ending in March 2023; four of the comments were duplicates. CPSC received two late-filed comments; one is out-of-scope for this rulemaking. We also received nine comments in response to an April 11, 2023 Paperwork Reduction Act (PRA) notice. 88 FR 21652. Tab A of Staff’s Final Rule Briefing Package³ and section III of this preamble summarize and respond to the comments CPSC received.

After consideration of the comments and the relevant existing voluntary standards, the Commission determines that a recent revision of ANSI/UL 4200A, *Standard for Safety for Products Incorporating Button Batteries or Coin Cell Batteries*, published on August 30, 2023 (UL 4200A-2023), does meet the performance and labeling requirements in section 2(a) of Reese’s Law with respect to consumer products containing button cell or coin batteries. 15

² Reese’s Law defines the phrase “consumer product containing button cell or coin batteries” as “a consumer product containing or designed to use one or more button cell or coin batteries, regardless of whether such batteries are intended to be replaced by the consumer or are included with the product or sold separately.” Notes to 15 U.S.C. 2056e,

³ The information in this Commission determination and direct final rule is based on information and analysis provided in the August 31, 2023, Staff Briefing Package: Draft Final Rule to Establish a Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries (Staff’s Final Rule Briefing Package), available at: [insert link](#), and on the January 11, 2023, Staff Briefing Package: Draft Proposed Rule to Establish a Safety Standard and Notification Requirements for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries (Staff’s NPR Briefing Package), available at: <https://www.cpsc.gov/s3fs-public/NoticeofProposedRulemakingSafetyStandardandNotificationRequirementsforButtonCellorCoinBatteriesandConsumerProductsContainingSuchBatteries.pdf?VersionId=kDinNeydktk3T8RRtzN4u1GTXPRjpEl>.

DRAFT

U.S.C. 2056e(a) and (d). Accordingly, under section 2(e) of Reese’s Law, UL 4200A-2023 is treated as a consumer product safety rule promulgated under section 9 of the CPSA (15 U.S.C. 2058) as of the date of the Commission’s determination.⁴ 15 U.S.C. 2056e(e). The Commission is publishing this determination in the *Federal Register*, as required by Reese’s Law. 15 U.S.C. 2056e(d)(2).

This notice of the Commission’s determination includes a direct final rule (DFR) to incorporate by reference UL 4200A-2023 into the Code of Federal Regulations as the mandatory consumer product safety rule for consumer products containing button cell or coin batteries. Consistent with the Administrative Procedure Act (APA), 5 U.S.C. 553, the DFR has an effective date of 30 days after publication. Further, in recognition of limited testing availability the Office of Compliance and Field Operations has issued guidance granting a transitional period of enforcement discretion for the new requirements of UL 4200A-2023. That guidance is available at [\[INSERT LINK\]](#). **[DATES AND LINK TO BE ADDED BEFORE FEDERAL REGISTER PUBLICATION.]**

The Commission is issuing a separate final rule to establish labeling requirements for button cell or coin battery packaging as required by Reese’s Law, because such products are not within the scope of UL 4200A-2023. 15 U.S.C. 2056e(d)(1). Currently the Commission is not finalizing the proposed requirements in the NPR for consumer notification of performance and technical data under section 27(e) of the CPSA; although, the UL 4200A-2023 revision includes some of the notification requirements proposed in the NPR. The name of the rule to be codified

⁴ Reese’s Law states that if the Commission makes a determination with respect to a voluntary standard, the requirements of such voluntary standard shall be treated as a consumer product safety rule promulgated under section 9 of the CPSA (15 U.S.C. 2058) beginning on the later of either (A) the date of the Commission’s determination with respect to the voluntary standard described; or (B) the effective date contained in the voluntary standard. UL 4200A-2023 does not contain an “effective date,” and the Commission is making this determination after publication of the UL 4200A-2023 standard. Accordingly, the later of the two dates in section (e)(2) of Reese’s Law (15 U.S.C. 2056e(e)(2)) is the date of the Commission’s determination.

DRAFT

in 16 CFR part 1263 reflects this change by removing the phrase “and Notification Requirements”; the rule is now entitled “Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries.”

I. Statutory and Regulatory Background

A. *Reese’s Law*

President Biden signed Reese’s Law on August 16, 2022. 15 U.S.C. 2056e. The purpose of Reese’s Law is to protect children six years old and younger against hazards associated with the ingestion of button cell or coin batteries. Section 5 of Reese’s Law broadly defines a “button cell or coin battery” as “(A) a single cell battery with a diameter greater than the height of the battery; or (B) any other battery, regardless of the technology used to produce an electrical charge, that is determined by the Commission to pose an ingestion hazard.”⁵ Thus, the definition of a consumer product with an in-scope battery depends on the shape of the battery (which contributes to the ingestion-related risk) and, as stated in part (B), whether the battery otherwise is associated with an ingestion hazard, which is consistent with the stated purpose in section 2(a)(1) of Reese’s Law.⁶ 15 U.S.C. 2056e(a)(1).

Section 2(a)(1) of Reese’s Law mandates that a rule must include performance requirements for button cell or coin battery compartments on consumer products to secure them in a manner that eliminates or adequately reduces the risk of injury from the ingestion of button cell or coin batteries by children who are six years old or younger, during reasonably foreseeable use or misuse of the product. 15 U.S.C. 2056e(a)(1).

⁵ The definitions in section 5 of Reese’s Law are codified in the Notes to 15 U.S.C. 2056e.

⁶ This direct final rule focuses on addressing button cell and coin batteries under part (A) of the definition because other batteries where the diameter is less than the height, such as AAA cylindrical batteries, do not pose the same type or degree of ingestion hazard as button cell or coin batteries. If CPSC becomes aware of a serious ingestion hazard associated with another battery type that is not adequately addressed by voluntary standards, section 2(g) of Reese’s Law allows the Commission to undertake additional rulemaking to address the hazard. 15 U.S.C. 2056e(g).

DRAFT

Section 2(a)(2) of Reese’s Law mandates warning label requirements in a rule. Warnings are required:

- On the packaging of button cell or coin batteries (15 U.S.C. 2056e(a)(2)(A));
- On the packaging of consumer products containing button cell or coin batteries (15 U.S.C. 2056e(a)(2)(A));
- In any literature, such as a user manual, that accompanies a consumer product containing button cell or coin batteries (15 U.S.C. 2056e(a)(2)(B));
- As practicable, directly on a consumer product that contains button cell or coin batteries in a manner visible to the consumer upon installation or replacement of the button cell or coin battery (15 U.S.C. 2056e(a)(2)(C)(i));
- As practicable, in the case of a product for which the battery is not intended to be replaced or installed by the consumer, directly on the consumer product in a manner that is visible to the consumer upon access to the battery compartment, except that if it is impracticable to label the product, this information shall be placed on the packaging or instructions (15 U.S.C. 2056e(a)(2)(C)(ii)).

Warning labels required by section 2(b) of Reese’s Law must (1) clearly identify the hazard of ingestion and (2) instruct consumers, as practicable, to keep new and used batteries out of the reach of children, to seek immediate medical attention if a battery is ingested, and to follow any other consensus medical advice. 15 U.S.C. 2056e(b).

To address ingestion of button cell or coin batteries, section 2(a) of Reese’s Law requires the Commission to publish a final consumer product safety standard for button cell or coin batteries, and consumer products containing button cell or coin batteries, not later than 1 year after the date of enactment. 15 U.S.C. 2056e(a). However, if the Commission determines before promulgating a rule that an existing voluntary standard meets the performance and labeling

DRAFT

requirements in section 2(a) of Reese’s Law, then under section 2(d)(1) of Reese’s Law the requirement for the Commission to promulgate a rule does not apply. 15 U.S.C. 2056e(d)(1). Instead, the Commission must publish such determination of a voluntary standard’s sufficiency in the *Federal Register*. 15 U.S.C. 2056e(d)(2). As set forth in section IV of this preamble, the Commission determines that UL 4200A-2023 meets the performance and labeling requirements in section 2(a) of Reese’s Law with respect to consumer products containing button cell or coin batteries.

Section 2(e) of Reese’s Law states that the requirements of a voluntary standard the Commission determines to meet section 2(a) of Reese’s Law shall be treated as a consumer product safety rule promulgated under section 9 of the CPSA (15 U.S.C. 2058) beginning on the date that is the later of either the date the Commission makes the determination under section 2(d), or the effective date in the voluntary standard. 15 U.S.C. 2056e(e)(2). The UL standard does not include an “effective date.” Rather, UL standards are published when approved through a consensus process by a majority vote that meets UL’s procedural requirements.⁷ Publication of UL 4200A-2023 occurred before publication of the Commission’s determination, and therefore the date of this publication is the relevant effective date for purposes of section 2(e)(2) of Reese’s Law.

The Commission makes the determination that UL 4200A-2023 meets the requirements of section 2(a) of Reese’s Law with respect to performance and labeling requirements for consumer products that contain button cell or coin batteries; therefore, by operation of law, UL 4200A-2023 is a consumer product safety rule as of the date of this determination. 15 U.S.C.

⁷ See ULSE ANSI Accredited Procedures, Approved December 2, 2022, available at: https://ulstandards.ul.com/wp-content/uploads/2023/03/ULSEANSIAccreditedProcedures_20221202.pdf.

DRAFT

2056e(e)(2).⁸ The Commission additionally is codifying UL 4200A-2023 into a regulation, and the effective date of the DFR is 30 days from publication, as described in section VII of this preamble. As noted, the Commission’s Office of Compliance and Field Operations has issued guidance to industry and the public regarding a transitional period of enforcement discretion. See [\[web link\]](#).

Section 2(f)(1) of Reese’s Law establishes a process for subsequent revision of a voluntary standard the Commission has adopted as a mandatory standard under section 2(d). In addition, section 2(g) of Reese’s Law provides that any time after a voluntary standard is treated as a consumer product safety rule under section 2(e), or a revised voluntary standard becomes enforceable as a consumer product safety rule under section 2(f), the Commission may initiate a rulemaking in accordance with 5 U.S.C 553 to modify the requirements of the standard or revised standard. 15 U.S.C. 2056e(g).

Section 4 of Reese’s Law specifically exempts from the performance and labeling requirements in section 2 of the law, any toy product⁹ that is in compliance with the battery accessibility and labeling requirements in 16 CFR part 1250, Safety Standard Mandating ASTM F963 for Toys. Notes to 15 U.S.C. 2056e. However, children’s products that contain button cell or coin batteries and that are not a “toy product,” are required to meet the performance and labeling requirements in this final rule. An example of such products would be children’s apparel, such as shoes, that light up and use a button cell or coin battery as a power source.¹⁰

⁸ UL 4200A-2023 does not, however, address labeling of battery packaging. Accordingly, in a separate *Federal Register* notice, the Commission is finalizing a rule to require labeling on button cell or coin battery packaging. Notes to 15 U.S.C. 2056e.

⁹ Consistent with 16 CFR part 1250, a “toy product” is defined as “any object designed, manufactured, or marketed as a plaything for children under 14 years of age.” Notes to 15 U.S.C. 2056e.

¹⁰ Section 3 of Reese’s Law requires special packaging for button cell or coin batteries. These requirements, codified in the Notes to 15 U.S.C. 2056e, are self-implementing, and do not require CPSC to issue a rule. Section 3 of Reese’s Law was effective by operation of the statute on February 12, 2023.

DRAFT

B. Description of the NPR

The NPR proposed a rule to address the battery ingestion hazard for children six years of age or younger. The NPR explained that children access button batteries from consumer products that are powered by the batteries, either directly from the battery compartment or because the batteries have escaped from the compartment. 88 FR 8698-99. CPSC has not identified any additional hazard patterns since the NPR. Figure 1 provides examples of button cell and coin batteries, and Figure 2 shows a few examples of consumer products that contain button cell or coin batteries.

		
LR44 button cell, 11.6mm (0.45 inch) diameter x 5.4mm (0.21 inch) thick	LR754 button cell, 7.9 mm (0.31 inch) diameter, 5.4mm (0.21 inch) thick	LR626 button cell, 6.8 mm (0.26 inch) diameter, 2.6mm (0.10 inch) thick
		
CR2032, 20mm (0.787 inch) diameter	CR2025, 20mm (0.787 inch) diameter	CR2450, 24mm (0.945 inch) diameter

Figure 1. Example button cell and coin batteries.

Figure 2. Example products that use button cell or coin batteries.

DRAFT

In accordance with Section 2 of Reese’s Law, the NPR contained performance and labeling requirements for consumer products that contain button cell or coin batteries.

Performance requirements: As required by Reese’s Law, the NPR proposed that consumer products containing button cell or coin batteries require the battery to be secured in a manner that would eliminate or adequately reduce the risk of injury from the ingestion hazard to children during reasonably foreseeable use or misuse conditions. In developing the NPR, the Commission drew upon requirements stated in:

- UL 4200A-2020, *Standard for Safety for Products Incorporating Button or Coin Cell Batteries of Lithium Technologies* (UL 4200A-2020);
- ASTM F963-17 *Standard Consumer Safety Specification for Toy Safety* (ASTM F963);
- Voluntary standards referenced by Australian F2020L01656, including:
 - IEC 62368-1:2018 *Audio/video, information and communication technology equipment-Part 1: Safety requirements* (IEC 62368-1);
 - IEC 62115:2017 *International Standard for Electric Toys – Safety* (IEC 62115);
 - AS/NZS 60065:2018 *Audio, video and similar electronic apparatus-Safety requirements* (AS/NZS 60065:2018); and
 - AS/NZS 60598.1:2017 *Luminaires Part 1: General requirements and tests* (AS/NZS 60598.1:2017).

Table 7 of the NPR summarized the Commission’s analysis of the performance requirements in these voluntary standards. 88 FR 8701. Based on the analysis in Tab D of Staff’s NPR Briefing Package, the Commission preliminarily concluded that none of these voluntary standards alone contained performance requirements that are adequate to address the

DRAFT

requirements in Reese's Law. 88 FR 8701-02. Therefore, to address the performance requirements mandated in Reese's Law, the proposed performance requirements in CPSC's NPR differed from the requirements in the voluntary standards in several ways, including:

- Broader scope to match the scope of products covered by Reese's Law;
- Clarification that a locking mechanism requiring two simultaneous and independent actions does not include actions that can be combined into one single action by a single finger or digit, to address poor locking mechanism designs observed in testing;
- Addition of the compression test from the ASTM F963-17 toy standard, codified in 16 CFR part 1250, to address children pressing on areas of the battery compartment not directly impacted by the drop test;
- Requirement that all products, including products weighing more than 18 kg, be subjected to 10 drops;
- Addition of the torque and tensile tests from the toy standard to address a child grabbing and twisting or pulling on parts of the battery enclosure or tearing apart soft goods with fingers or teeth.

88 FR 8702-04. Tables 8 and 9 in the NPR, 88 FR 8702, summarized CPSC's proposed performance requirements for consumer products with replaceable and non-replaceable button cell or coin batteries.

Warning label requirements: For consumer products containing button cell or coin batteries, Reese's Law requires warnings on:

- The packaging of consumer products;
- Accompanying literature; and
- Consumer products, as practicable.

DRAFT

15 U.S.C. 2056e(a)(2). Reese’s Law also requires warnings on packaging of button cell or coin batteries. *Id.* Warning statements must clearly identify the hazard of ingestion and instruct consumers, as practicable, to keep new and used batteries out of the reach of children, seek immediate medical attention if a battery is ingested, and follow any other consensus medical advice. 15 U.S.C. 2056e(b).

The NPR assessed warning requirements in several voluntary standards, and preliminarily concluded that none of the voluntary standards were adequate to meet the requirements in Reese’s Law. Tab C of Staff’s NPR Briefing Package; 88 FR 8704-05. Tables 10 and 11 in the NPR summarized the Commission’s assessment of the warning label requirements in voluntary standards, in relation to the requirements of Reese’s Law. 88 FR 8705.

Because none of the voluntary standards met the requirements in Reese’s Law at the time of the NPR, the Commission proposed warning requirements for the packaging of consumer products containing button cell or coin batteries, accompanying literature, and, as practicable, consumer products. 88 FR 8706-09. The NPR also proposed warnings requirements for the packaging of button cell or coin batteries, which are being established by the Commission in a separate final rule. 88 FR 8706-07.¹¹

II. Assessment of Performance and Labeling Requirements in UL 4200A-2023

Several pertinent voluntary standards have been revised since the NPR published on February 9, 2023. IEC 62368-1 published a new edition (Edition 4, or IEC 62368-1:2023) in May 2023. In January 2023, ASTM balloted a revision to the battery compartment construction

¹¹ The NPR additionally proposed to require point-of-sale warnings of the ingestion hazard and other battery safety information under section 27(e) of the CPSA to improve safety communication to consumers to address the unreasonable risk of injury and death to children from ingesting or inserting button cell or coin batteries into the body, and other hazards. 88 FR 8709-11. The Commission is not finalizing proposed requirements under section 27(e) of the CPSA at this time.

DRAFT

requirements in ASTM F963. In April 2023, UL balloted a revised version of UL 4200A, which was further revised and reballoted in July 2023, and comment responses were recirculated in August 2023. UL published its most recent revisions on August 30, 2023, as UL 4200A-2023. Tab E of Staff’s Final Rule Briefing Package contains staff’s detailed assessment of ASTM F963, UL 62368-1, and the revised IEC 62368-1:2023. Based on staff’s updated assessment of ASTM F963, UL 62368-1, and IEC 62368-1:2023, the Commission cannot determine that any of these standards is adequate to meet the requirements in section 2(a) of Reese’s Law.

However, for the reasons stated below and further elaborated in Tab E of Staff’s Final Rule Briefing Package, the Commission determines that UL 4200A-2023 meets the performance and labeling requirements in section 2(a) of Reese’s Law as applied to consumer products containing button cell or coin batteries. Table 1a summarizes CPSC’s evaluation of the performance requirements in the updated voluntary standards.

**Table 1a. Assessment of Existing Voluntary Standards’
Performance Requirements for Button Cell or Coin Batteries**

		UL 4200A- 2023	ASTM F963 (Ballot)	UL 62368-1	IEC 62368- 1:2023	IEC 62115

	On consumer product		A				I

*Excludes zinc-air batteries, which are not known to be used in consumer products.

Blank – Does not address requirements, I – Inadequately addresses requirements, A – Adequately addresses requirements

Although, as reflected in these tables, UL 4200A-23 satisfies all performance requirements of Reese’s law section 2(a), and the law’s requirements for labeling of consumer products that contain button cell or coin batteries, this UL standard does not address labeling of battery packaging, for which Reese’s Law also has requirements.

Below, we address in detail two significant aspects in which the former UL 4200A-2020 fell short of Reese’s Law’s requirements, but that the recent revisions to the standard—as we interpret them—do address adequately.

A. Captive Screw Exceptions

Section 5.6 of UL 4200A-2020 included an exception from the requirement for fasteners to remain captive to the battery enclosure for large panel doors on large devices, which are not likely to be discarded or left off the equipment. The Commission did not include such captive

DRAFT

screw exception in the NPR and stated that the range of products to which that exception would apply is unclear. 88 FR 8703.

Section 5.6 of UL 4200A-2023 contains a revised requirement for captive screws. Two related exceptions exist for the requirement, both of which apply only to products containing button cell or coin batteries that are not intended to be replaced by the consumer, and where there are instructions and warnings that clearly state the battery is not to be replaced by the consumer. The first exception applies to products containing button cell or coin batteries “that can only be accessed through the removal of multiple enclosures or panels using a tool.” The second captive screw exception applies to “products only to be opened by a professional service center (where children are not present).”

Regarding the first exception, products designed and labeled to not have the battery replaced by the consumer provide the consumer with less incentive or need to access a button cell or coin battery compartment. The requirement to remove multiple enclosures or panels to reach a button cell or coin battery provides an extra layer of protection that prevents immediate access to batteries, even if screws to those panels are lost or discarded. CPSC is unaware of ingestion incidents involving access to button cell or coin batteries through multiple enclosures on consumer products. Products that might fit into the first exception include desktop and laptop computers, with batteries that frequently last longer than the product itself.

The second exception applies to products “only to be opened by a professional service center (where children are not present).” The text of the UL 4200A-2023 does not further explain this exception. We think it plain, however, that to avoid undermining the safety purpose of the captive screw requirement, the design of the consumer product, as well as its warning language and literature, must be consistent with professional-only access to the battery compartment. Accordingly, we interpret the professional service center exception for captive

DRAFT

screws to only apply to consumer products with design and construction characteristics that are inconsistent with consumers accessing the batteries at home, for example by having a battery compartment that cannot be opened with a common household tool such as a straight-blade screwdriver, Phillips screwdriver, pliers, or a coin. For example, watch battery compartments that require a special professional tool to open would not require captive screws. However, watch battery compartments secured only with a straight blade or Phillips screw would not qualify for this captive screw exception, because such a product could be opened by consumers in their homes with readily available household tools.

B. Drop Test Requirements

To address the accidental liberation of button cell or coin batteries from consumer products, UL 4200A-2020 called for “portable” products to be dropped a total of three cycles in testing, and “hand-held” products a total of 10 cycles. In the NPR, the Commission proposed to require all products within the scope of the rule to be subject to 10 drop cycles. 88 FR 8713.

After reviewing the comments received on the NPR (which are discussed in section III below), the Commission agrees that it is appropriate to distinguish between products that are “portable” and those that are “handheld,” provided those definitions are clear and able to be applied consistently. *See* Tab E of Staff’s Final Rule Briefing Package.

Section 4.3A of UL 4200A-2023 now defines “hand-held product” to mean a product that is “reasonably foreseeable to be used or misused when being held in one or both hands.” This category includes only “[p]roducts specifically designed to be carried easily, with a mass not exceeding 4.5 kg (10 lbs).” Section 4.4 of UL 4200A-2023 revises the definition for “portable device” to mean a “device that is reasonably foreseeable to be routinely carried or lifted as part of its use or misuse but not operated during transit with a mass not exceeding 18 kg (39.7 lb).” The Commission concludes that these definitions reasonably distinguish between handheld

DRAFT

consumer products that are likely to be handled often and dropped frequently (such as a television remote control, for example), and other products that are moveable but not routinely handheld. The 10-drop requirement applies to the former, while a 3-drop requirement applies to the latter. The Commission determines that this framework in UL 4200A-2023 meets the requirements for Reese’s Law section 2(a).

III. Comments on the NPR

CPSC received 38 comments during the comment period (four were duplicates), from February 9 through March 13, 2023, and two late-filed comments (one is out-of-scope for this rulemaking). Also, CPSC received nine comments on a separate PRA notice estimating the burden of the proposed rule. Commenters included medical professionals, standards development associations, consumers, consumer advocates, retail and manufacturing associations, and battery and consumer product manufacturers.

Thirty-three commenters generally supported the safety purpose and scope of Reese’s Law. Commenters noted the potential deadly risk of injury associated with ingestion and insertion of button cell and coin batteries and their ubiquitous use in many different types of consumer products that are accessible to young children. Medical professionals informed the Commission regarding the difficulty in diagnosing an unwitnessed button cell or coin battery ingestion that requires prompt removal of the battery to prevent life-threatening esophageal burns and soft tissue damage, because the symptoms can mimic other health issues such as colds or upset stomach. Commenters generally supported the development of strong performance and labeling requirements for consumer products to prevent the ingestion hazard, as most button cell or coin battery ingestion incidents involve batteries obtained from consumer products.

Many commenters suggested that the CPSC find one of the reviewed voluntary standards adequate to meet Reese’s Law requirements and to adopt a voluntary standard for the rule.

DRAFT

Because many of the comments received are relevant to the Commission's favorable determination on the UL 4200A-23 voluntary standard, we summarize and respond to them here.

Comments in Response to Questions on Performance Requirements

A. Whether any consumer products (as opposed to medical devices, such as hearing aids) contain zinc-air button cell or coin batteries, and whether such products should be required to meet the performance requirements for battery compartments on consumer products.

Comment 1: Other than use in hearing aids, a medical device, no commenters identify any consumer products using zinc-air button cell or coin batteries. An international battery trade association and a coalition of medical and consumer organizations (American Academy of Pediatrics, Consumer Reports, Public Citizen, Consumer Federation of America, Kids In Danger, and U.S. Public Interest Research Group) state that they are unaware of any consumer products (as defined in section 3 of the CPSA, 15 U.S.C. 2052(a)(5)) using zinc-air batteries. The coalition of medical and consumer organizations state that the Commission should reserve the ability to take further action regarding zinc-air button cell and coin batteries.

Response 1: Because the Commission is not aware of any consumer products that contain zinc-air button cell or coin batteries and commenters did not submit information regarding such products, and because such batteries present a low risk of causing an ingestion hazard as described in Tab C of Staff's Final Rule Briefing Package, the NPR proposed that zinc-air button cell or coin batteries, and products that use such batteries, should not be subject to the performance requirements in the final rule. Section 1.2 of UL 4200A-2023 contains a similar zinc-air battery exception.

B. Whether any voluntary standard meets the performance and labeling requirements of Reese's Law.

DRAFT

Comment 2: Multiple commenters argue for Commission determinations that various voluntary standards satisfy the requirements of section 2(a) of Reese’s Law. Five commenters (The Toy Association, Retail Industry Leaders Association (RILA), Permanent European Horological Committee (CPHE), Federation of the Swiss Watch Industry (FH), and American Watch Association (AWA)) recommend that CPSC accept the voluntary standard ASTM F963 as adequate to address the risk of ingestion by children. The commenters generally state that ASTM F963 adequately fulfills the objectives of Reese’s Law, and that no data exists to suggest that the standard creates an accessibility hazard for products containing button cell or coin batteries that comply with the standard. However, a coalition of medical and consumer organizations recommend that the ASTM toy standard subcommittee incorporate some of CPSC’s proposed requirements, such as improving testing for fastener retention and threading to avoid stripped screw holes and other possible scenarios that might lend access to the batteries.

Five commenters (Garmin International Inc. (Garmin)), CPHE, FH, AWA, and TechNet) recommend that CPSC accept the voluntary standard UL 4200A as adequate to address the risk of child ingestion. Four commenters (Japan Electronics and Information Technology Industries Association (JEITA), Consumer Technology Association (CTA), TechNet, and Information Technology Industry Council (ITI)) further state that CPSC should accept IEC 62368-1 or UL 62368-1 as adequate to address the risk of injury for products within the scope of that standard. The Battery Association of Japan (BAJ), Duracell, Energizer, and the National Electrical Manufacturers Association (NEMA) state that CPSC should accept IEC 60086 or ANSI C18 standards as adequate for battery package labeling requirements. Finally, the Power Tool Institute states that the Commission should work with voluntary standards organizations to improve and codify a voluntary standard.

DRAFT

Response 2: Reese’s Law states that the Commission can rely on a voluntary standard, rather than drafting and implementing a rule for covered products, if the Commission determines that: (A) the voluntary standard meets the requirements for a standard promulgated under subsection (a) with respect to the products; and (B) the voluntary standard is in effect at the time of the determination, or will be in effect not later than 180 days after August 16, 2022 (February 12, 2023). 15 U.S.C. 2056e(d)(1). The Commission finds that UL 4200A-2023 meets the requirements of Reese’s Law. As set forth in Staff’s Final Rule Briefing Package and summarized in Tables 1a and 1b, however, the Commission does not find that any other voluntary standard, as described by the commenters, is adequate to meet the requirements of Reese’s Law or to address the risk of injury from child ingestion.

Tabs D and E of Staff’s Final Rule Briefing Package discuss staff’s updated assessments of the voluntary standards based on feedback received from public comments. None of the commenters provide sufficient analysis, critique, or justification for the Commission to make a determination that any voluntary standard, other than UL 4200A-2023, meets the performance or labeling requirements in Reese’s Law.

C. Whether the requirements for accessibility of battery compartments should incorporate test methods commonly used on toy products, such as the torque and tensile tests for parts of the product that can be gripped by a child’s fingers or teeth, or a tensile test for pliable materials.

Comment 3: Two commenters (Landsdowne Labs and a coalition of medical and consumer organizations) support the incorporation of test methods commonly used on toy products.

Response 3: Incorporating test methods such as torque and tensile tests for parts of a consumer product that can be gripped by a child’s fingers or teeth, or a tensile test for pliable

DRAFT

materials, decreases the likelihood of children gaining access to button cell or coin batteries. Based on staff's assessment of these test methods in the ASTM F963 toy standard, the Commission determines that their inclusion in UL 4200A-2023 adequately tests the durability and integrity of battery compartments in products with pliable materials, such as shirts and greeting cards that light up or make sound using batteries. The Commission agrees with the commenters that these requirements will eliminate or adequately reduce the risk of ingestion in pliable products, as required by Reese's Law.

D. For consumer products that use button cell or coin batteries and have large panel doors, what consumer products have such doors, and should the Commission exclude large panel doors from the requirement for captive screws; why or why not (i.e., why does a large panel door represent a different risk of injury from battery access without using captive screws than a smaller battery compartment door does)?

Comment 4: Three commenters (UL Solutions, CTA, and ITI) state that the large panel door exemption from the captive screw requirement exists for products—like desktop computers which commonly use coin batteries on the motherboards to provide backup power—where the panel forms part of system enclosure which is not intended to be opened regularly by the consumer. The commenters state that consumers are unlikely to leave off or discard screws for these large panel doors. ITI notes that UL 62368-1 states that captive screws are for batteries that need to be replaced regularly.

Response 4: Section 5.6 of UL 4200A-2023 states that products containing button cell or coin batteries with large panel doors are excepted from the captive screw requirement as long as the batteries are not intended to be replaced by the consumer. The intent of the captive screw requirement is to prevent consumers from discarding screws securing battery enclosures after battery replacement during the product's lifetime. For products requiring battery replacement,

DRAFT

consumers foreseeably may discard the screws to make replacing the batteries easier, without appreciating the battery ingestion hazard; or consumers may lose the screw and think the product is safe to use without properly securing the battery compartment. However, as explained in section II.A of this preamble, if a product's battery is not meant to be replaced, consumers are unlikely to open large panel doors to access the battery; therefore, requiring captive screws is not reasonably necessary to address the ingestion hazard in Reese's Law.

Exception 1 in section 5.6 of UL 4200A-2023 provides that captive screws are not required for products containing button cell or coin batteries that are not intended to be replaced by the consumer, and that products containing such batteries that can only be accessed through the removal of multiple enclosures or panels using a tool do not need captive screws. UL 4200A-2023 also requires that to meet the exception, such products must have instructions and warnings that clearly state the battery is not to be replaced by the consumer. Such products must also meet use and abuse testing requirements. The Commission determines that the requirements for multiple enclosures in UL 4200A-2023, which can include large panel doors, are adequate to meet the requirements in section 2(a) of Reese's Law.

E. Whether a double-action locking mechanism used to secure battery compartment enclosures, meaning those mechanisms that rely on two independent and simultaneous hand movements to open (versus a screw, for example), should be allowed to secure button cell or coin battery compartments.

Comment 5: Two commenters (RILA and The Toy Association) provide comments on whether double-action locking mechanisms, which are more accurately described as “multi-action” locking mechanisms to reflect that there can be more than two motions, should be allowed to secure button cell or coin battery compartments. RILA supports including the option for multi-action locking mechanisms, especially for products where it may not be feasible to

DRAFT

secure battery compartments with an enclosure that requires a tool. The Toy Association opines that multi-action locking mechanisms are susceptible to be opened by applying forces in a single action or for one or both mechanisms to be disengaged, reducing the safety or efficacy of the mechanism. The Toy Association also comments that multi-action locking mechanisms may present a “false positive” to the consumer, appearing to be closed but susceptible to opening upon product operation.

Response 5: We agree with RILA that multi-action locking mechanisms can be a safe and effective alternative method to securing battery enclosures. Many products that use button cell or coin batteries are small and sometimes may not have enough space in the design to incorporate a screw to secure the battery enclosure. Therefore, providing multi-action locks as an alternative provides industry with some flexibility for designing their products in a safe manner. Staff’s review of consumer products demonstrates a variety of different multi-action locking mechanisms that can be effective.

Moreover, both the NPR and UL 4200A-2023 address the Toy Association’s concerns. To address incidents involving multi-action locks that could be opened with a single action, and to ensure consistent and reliable testing, the NPR specified that “[t]he movements to open cannot be combinable to a single movement with a single finger or digit.” 88 FR 8721. Section 5.5(b) of UL 4200A-2023 also contains this language to clarify requirements for multi-action locking mechanisms. Because the actions must be simultaneous, the first action must be maintained while the second and successive actions are completed for the lock to open. If the design of the mechanism allows the battery compartment to open when the first action disengages, the battery compartment does not comply with the requirements of UL 4200A-2023. Therefore, the requirements of the UL standard and this DFR are intended to prevent the scenario envisioned by the Toy Association.

DRAFT

Additionally, regarding the Toy Association’s comment on multi-action locking mechanisms presenting a “false positive” in which they appear to be closed, this scenario may occur in both multi-action locking enclosures and enclosures secured via screws or other fasteners. After replacing the battery, consumers may inadvertently neglect to screw or retighten a fastener, leaving the enclosure ineffective. To decrease this risk for all products, regardless of their battery compartment securement design, UL 4200A-2023 requires that all products containing a button cell or coin battery include warnings in product instructions to ensure proper securement of the battery enclosure.

Comment 6: Four commenters (coalition of medical and consumer organizations, CTA, the Consumer Safety Consultancy (CSC), and Mark Strauch) recommend adding tests to prove the effectiveness of multi-action locking mechanisms because, for example, locking mechanisms requiring a push and turn could be opened accidentally. CTA opines that specifying independent hand movements cannot be combinable to a single movement is redundant, because if the end point of the first movement is the starting point of the second movement, then the movements would not be independent. CSC recommends that the requirement for multi-action locking mechanisms be revised to require independent and sequential motions rather than independent and simultaneous motions as proposed in the NPR. Strauch comments that the NPR’s clarification that “[t]he movements to open cannot be combinable to a single movement with a single finger or digit” is unnecessary and is an enforcement issue rather than an issue with the standard.

Response 6: Multi-action locking mechanisms that secure button cell or coin battery compartments are adequate to prevent access to children, so long as the actions cannot be combinable into one single action. Through testing, CPSC staff identified multiple products that were designed with the intent of requiring two independent actions to open the battery

DRAFT

compartment that could be defeated by applying a single force to disengage the lock and expose the battery. Accordingly, the NPR included an additional clarification specifying, “[t]he movements to open cannot be combinable to a single movement with a single finger or digit.” This requirement addresses the concerns from the coalition of medical and consumer organizations’ comment that locking mechanisms that require a push and turn could be accidentally opened.

The Commission disagrees with commenters that a final rule should require independent sequential actions, rather than simultaneous actions, because sequential actions can be achieved more easily than simultaneous actions. The requirement for at least two independent and simultaneous actions allows for sequential actions, so long as the first action is held by the consumer while the second action occurs. Independent sequential actions, by contrast, would not require that the first action be held by the consumer while the second action occurs for the battery compartment to open, making the scenario of a child accidentally opening the battery compartment more likely.

UL 4200A-2023, as incorporated into this DFR, requires two independent *and simultaneous* movements that cannot be combined into a single movement. This requirement adequately addresses the risk of opening by young children or inadvertent action by older consumers, and provides testing laboratories with clearer criterion for assessing the adequacy of multi-action locking mechanisms.

F. Whether the proposed secureness test based on UL 4200A-2020 is sufficient to address reasonably foreseeable use and abuse of consumer products containing non-removable batteries.

DRAFT

Comment 7: ITI asked for clarification on how the secureness test is applied to products, questioning whether the force application per the secureness test is to the exterior battery enclosure or to the battery itself.

Response 7: Under §1263.3(f) of the NPR’s proposed rule, the secureness test was applicable only to button cell or coin batteries that are accessible based on proposed § 1263.3(d), which specifies removing “any part of the battery compartment enclosure that can be opened or removed without a tool or that can be opened or removed with anything less than two independent and simultaneous movements.”

Section 6.4 in UL 4200A-2023 contains a similar requirement. After removing any components, testers should apply an accessibility probe to any opening of the battery compartment. If the probe makes contact with any battery, the battery is considered accessible, and the secureness test applies a force, directed outwards, using the test hook on the battery itself at all points where an application of a force is possible. This step is intended to demonstrate that the battery cannot be liberated from the product.

Comment 8: The CTA and ITI comment that the NPR incorrectly states that UL 4200A-2020 and IEC 62368-1 do not require abuse testing for products with button cell or coin batteries “that are held fully captive by soldering, fasteners, or any equivalent means.” The commenters explain that UL 62368-1 requires robustness tests for solid safeguards which address accessibility of other hazards such as shock, fire, mechanical, and burn. The commenters state that these requirements are independent of the button cell or coin batteries because they are general requirements for all solid enclosures or barriers.

Response 8: The commenters are correct. UL 62368-1 requires all products containing solid safeguards to comply with the standard’s relevant robustness tests, which include a steady force test (*i.e.*, small surface compression test), drop test, impact test, and other abuse tests based

DRAFT

on the specific construction materials (such as glass or thermoplastic). These tests are required regardless of whether the product contains a button cell or coin battery. CPSC staff considered these comments in its revised appraisal of UL 62368-1 and concluded that the securement test was otherwise adequately addressed with other requirements in the standard. *See* Briefing Memorandum of Staff's Final Rule Briefing Package.

CPSC's proposed rule required products with non-removable button cell or coin batteries that are secured to the product via soldering, fasteners, or equivalent means to comply with the secureness test in §1263.3(f), and not to the abuse testing in § 1263.3(e). UL 4200A-2023 requires that button cell or coin batteries held fully captive by the use of soldering, fasteners such as rivets, or equivalent means must pass the secureness test in section 6.4 of UL 4200A-2023. This requirement is similar to the NPR's approach and is adequate to meet the requirements in Reese's Law.

G. Whether Test Probe 11 of the Standard for Protection of Persons and Equipment by Enclosures – Probes for Verification, IEC 61032, is adequate to verify accessibility of a button cell or coin battery in a battery compartment.

Comment 9: Three commenters (CTA, ITI, and UL Solutions) recommend applying a 45 N force application with Test Probe 11 per UL 62368-1 and UL 4200A-2020 to determine whether a battery can be liberated from a consumer product by children up to age six. CTA and ITI opine that the 50 N force in the NPR's proposed rule, which was based on IEC 62115, is intended for a scope of children up to 14 years old, and is too great because Reese's law is intended to protect children up to age six. Furthermore, they state the lack of incidents involving products certified to the 45 N requirement is evidence of adequacy. UL Solutions opines that the toy standard containing the 50 N force, IEC 62115, was developed based on the expectation that toys are continually used by children over its lifetime; whereas UL 4200A-2020 was developed

DRAFT

assuming that children would likely come into contact with in-scope products, but not continually over the product's lifetime.

Response 9: Section 6.3.5.1 of UL 4200A-2023 requires the higher force of 50 N based on requirements in IEC 62115 and IEC 61032. We disagree that the 45 N test in UL 4200A-2020 is adequate because the standard was developed for products that are not continuously used by children over a product's lifetime. The 50 N compliance test accounts for reasonable, foreseeable use and abuse over the course of a product's lifetime, presuming that most consumer products are likely to be accessible to children. Indeed, most of the incident data for button cell and coin battery ingestions involve batteries liberated from consumer products by children, including products that are not intended to be used by children. UL 4200A-2023 now relies upon the test probe in IEC 61032, which specifies a force of 50 N. This higher force will adequately protect against children accessing button cell or coin batteries from consumer products during reasonably foreseeable use and misuse conditions, as required by Reese's Law.

H. Whether there are any additional performance requirements that should be considered, either for specific types of products, or in general.

Comment 10: A coalition of medical and consumer organizations recommends adding a test to prove the effectiveness of multi-action locks. They add that small, disc-shaped products that require a push and turn double-action can be mimicked by a child putting their hand on the product, putting the product on the floor, and then turning.

Response 10: As explained in response to comments five and six, we agree that some multi-action locking mechanisms can be defeated by applying a single force, effectively combining the two motions of a double-action lock. For this reason, the proposed rule and UL 4200A-2023 clarify that "[t]he movements to open cannot be combinable to a single movement with a single finger or digit." Based on staff's testing and review of consumer products, the

DRAFT

Commission finds this clarification adequate for test laboratories to determine the effectiveness of multi-action lock designs without additional testing.

Comment 11: Two commenters (a consumer and CTA) discuss the requirement for twist-on enclosures requiring a minimum of 90° rotation to remove. The consumer commenter recommended that a 90° rotation is insufficient whereas CTA considers this requirement adequate.

Response 11: The requirement for minimum rotation angle for twist-on enclosures is based on a requirement in section 5.5(a) of UL 4200A-2020. This requirement is maintained in section 5.5(a) of UL 4300A-2023. Based on staff's testing and the lack of more stringent requirements in any other standards, CPSC does not have any data to support a greater rotation angle to prevent children ages six years and younger from accessing the button cell or coin battery. Accordingly, the Commission finds the 90° rotation angle requirement as set forth in UL 4200A-2023 compliant with Reese's Law section 2(a).

I. Whether one or more performance requirements should be based on IEC 62368-1, in addition to, or instead of, performance requirements based on UL 4200A-2020.

Comment 12: Two commenters (ITI and Garmin) discuss the fastener torque requirements based on Table 20 of UL 60065. ITI comments that the torque requirements in §1263.3(e)(1)(ii) for fasteners based on Table 20 of the *Standard for Audio, Video and Similar Electronic Apparatus – Safety Requirements*, UL 60065, are outdated and superseded by Table 37 of the *Standard for Safety: Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements*, UL 62368-1. Garmin comments that the fastener torque requirements from Table 20 of UL 60065 do not consider small fasteners that cannot withstand the specified torque values.

DRAFT

Response 12: Commission staff advises that Table 20 of UL 60065 is superseded by Table 37 of UL 62368-1 as noted by ITI and Garmin, and recommends updating this reference table. While UL 4200A-2023 does not include this update, the comments do not suggest that this constitutes a failure to satisfy the requirements of Reese’s Law. Further, we disagree with Garmin’s position that Table 20 of UL 60065 (and similarly Table 37 of UL 62368-1) do not account for small fasteners. The torque values in these tables are dependent on the size of the fasteners, with the lowest torque requirement of 0.4 Nm for fasteners up to 2.8 mm in diameter. As discussed in Tab D of Staff’s NPR Briefing Package, fasteners that do not meet the minimum required torque often fail the preconditioning and abuse tests and therefore are inadequate to secure battery compartments and reduce the battery ingestion risk to children.

J. Whether the proposed performance requirements are needed and are likely to eliminate or adequately reduce the ingestion hazard associated with access to button cell or coin batteries from consumer products.

Comment 13: Three commenters (CPHE, FH, and AWA) opine that watches present a significantly lower risk than other products containing button cell or coin batteries. These commenters recommend imposing different requirements for accessing the battery for products designed to be opened by consumers versus those intended to be opened only by professionals. The commenters state that most watches are intended to be opened by professionals because watches cannot be opened without the use of special tool that is not commercially available; therefore, the risk that screws or the battery cover could be lost or discarded by consumers does not exist.

Moreover, the commenters opine that the NPR’s proposed securement requirements are not feasible for watches because of the limited space within the product to implement more complex designs. The Switzerland Federal Department of Economic Affairs, Education and

DRAFT

Research (Switzerland) similarly asks why the NPR does not differentiate the requirements for the removal or replacement of the button cell or coin batteries by the consumer themselves from removal by professionals.

Response 14: The NPR proposed that watches would be required to comply with the requirements of § 1263.3(b) for removable batteries, which requires (1) twist-on covers with minimum torque of 0.5 Nm to open and a minimum angle of rotation of 90°, or (2) fasteners must engage a minimum of two full threads and be held captive to the closure. We agree, however, with the commenters that products containing button cell or coin batteries that require a special tool to access, and can only be replaced by professionals, should have different requirements for battery accessibility than products with consumer-replaceable batteries. In particular, because the risk of discarding or losing an enclosure screw is low for products intended to only be opened by professionals, it is not reasonably necessary to impose a captive screw/fastener requirement for such products to reduce the risk of injury to young children.

Unlike the NPR, UL 4200A-2023 contains different requirements for products with battery compartments only intended to be opened by a professional service center where children are not present. As explained in section II.A of this preamble, CPSC interprets UL 4200A-2023 consistent with its purpose, so that battery compartments intended to only be opened by a professional service center must have both appropriate labeling and inability for the battery compartment to be opened using a common household tool, such as a straight-blade screwdriver, a Phillips screwdriver, pliers, or a coin. Battery compartments that cannot be opened with a common household tool and have warnings stating that the battery is not to be replaced by the consumer are less likely to be opened by a consumer, and therefore do not need to have captive screws to address the ingestion hazard. At the same time, products intended to be opened only by professionals can be opened through reasonable, foreseeable use and abuse, exposing the

DRAFT

button cell or coin battery. Accordingly, UL 4200A-2023 reasonably requires use and abuse testing for these products, to reduce the risk of children under six years old accessing a battery from a battery compartment.

Comment 15: JEITA requests an exemption from the scope of the rule implementing Reese’s Law for products that use button cell or coin batteries that are not intended to be replaced by the user or cannot be removed (*i.e.* user-inaccessible). JEITA notes that IEC 62368-1 does not apply tests and warning label requirements if button cell or coin batteries cannot be removed because such products do not present a battery ingestion risk.

Response 15: Reese’s Law defines “consumer products containing button cell or coin batteries” as “a consumer product containing or designed to use one or more button cell or coin batteries, regardless of whether such batteries are intended to be replaced by the consumer or are included with the product or sold separately.” Notes to 15 U.S.C. 2056e. Therefore, the Commission’s implementing rule must address batteries that are not intended for consumer replacement. Moreover, we disagree with JEITA that all products containing button cell or coin batteries that are not intended to be replaced are adequately safe under Reese’s Law. Consumer products may experience use and abuse during the product’s life that may result in batteries becoming dislodged or otherwise accessible to children, even if the batteries are not intended to be user replaceable. For example, incident narratives collected by CPSC describe products without replaceable batteries that fall apart when dropped. *See* Footnote 1 in Tab A of Staff’s Final Rule Briefing Package.

Comment 16: Two commenters (CTA and ITI) recommend that a drop test with three repetitions is adequate for some products. While the commenters state that they agree that ten total drops, as proposed in the NPR, are appropriate for hand-held products such as remote

DRAFT

controls, they recommend that three drops are adequate for other portable products such as equipment that is transportable but not intended to be held in hand while in use.

Response 16: As explained in section II.B. above, we agree that requiring ten drops for all consumer products is not reasonably necessary to reduce the risk of button battery access to children. UL 4200A-2023 requires a different number of repetitions for the drop test, based on whether a product is considered “hand-held” or “portable.” Per UL 4200A-2023’s drop test requirements, portable products are dropped three times and hand-held products are dropped ten times. The Commission finds that the approach taken in UL 4200A-2023 is reasonable and adequately protective under Reese’s Law.

Comments in Response to Questions on Marking and Labeling Requirements

K. Whether staff’s assessment [in section V.F of the NPR preamble] that virtually all consumer products can accommodate either the full warning or one of the scaled icons is accurate.

Comment 17: Four commenters (The Toy Association, CTA, ITI, and RILA) do not support on-product warning labels, citing limitations due to small product size. Other concerns presented by commenters pertain to textured surfaces, product material, or unspecified “other” limitations. The Toy Association asserts that labeling requirements will add significant costs in terms of timing, tooling, and molding. Four commenters (JEITA, CTA, HCPA, and ITI) request exemptions from on-product labeling where button cell or coin batteries are not accessible and not intended to be replaced by the consumer.

Response 17: Reese’s Law requires that, where practicable, warning labels be placed directly on a consumer product in a manner that is visible to the consumer upon installation or replacement of the battery. Even for products with non-replaceable batteries, Reese’s Law requires warning labels to be placed in a manner that is visible upon access to the battery

DRAFT

compartment, where practicable. As summarized in Table 1b above, UL 4200A-2023 satisfies Reese’s Law’s requirements for warning labels on consumer products and consumer product packaging.

L. Whether the internationally recognized safety alert symbol, as shown in yellow color, indicating the presence of a button cell or coin battery, should be required on all consumer products containing such batteries.

Comment 18: A coalition of medical and consumer organizations, RILA, and Landsdowne Labs support on-products alert symbols as some consumers are not aware that the product uses a button cell or coin battery. JEITA and ITI propose products that do not have user accessible batteries be exempt from requiring an alert. Garmin does not support the use of a color for alert symbol on the product.

Response 18: Reese’s Law requires products containing button cell or coin batteries not intended for consumer replacement to have a warning label on the consumer product in a manner that is visible to the consumer upon access to the battery “as practicable.” 15 U.S.C. 2056e(a)(2)(C)(ii). If it is impracticable to label the product, this information must be placed on the packaging or instructions. *Id.* Section 7 of UL 4200A-2023 meets these requirements. The Commission’s NPR proposed an alternative to the on-product warning label to increase the visibility that a product contains a button cell or coin battery and likelihood for all products to feature an alert where it otherwise may not be practicable. However, based on the comments, the proposed yellow color may not be clear or appropriate in all cases. Section 7B of UL 4200A-2023 does not require use of the yellow color unless the label already uses more than one color.

DRAFT

Comments in Response to Questions on Other Topics Posed in the NPR

M. Whether a later or an earlier effective date would be appropriate to comply with the proposed requirements and to provide specific information to support such a later or an earlier effective date.

Comment 19: Commenters differed in their recommendations for an effective date for a final rule of the Commission, from the proposed 180 days (consumer advocates) to up to 3 years (manufacturer associations). A few commenters provided detailed timelines of the necessary activities (product redesign, testing, certification sourcing, supply chain management, etc.) which ranged from 12 months to 36 months in total. A commenter also contended that additional time is required to accredit third party laboratories for a large variety of product types. Energizer and NEMA request that battery manufacturers be allowed to sell through their existing stocks of child-resistant packaging and labels that were purchased to comply with section 3 of Reese’s Law.

Response 19: Because the Commission determines that UL 4200A-2023, which is currently effective as a voluntary standard, meets the performance and labeling requirements in section 2(a) of Reese’s Law with regard to consumer products containing button cell and coin batteries, section 2(e) of Reese’s Law states that UL 4200A-2023 is treated as a consumer product safety rule as of the date of the Commission’s determination. 15 U.S.C. 2056e(d) and (e). However, because the Commission is codifying its incorporation of UL 4200A-2023 in the Code of Federal Regulations, the DFR provides a 30-day effective date for that new rule. As noted, moreover, the Commission’s Office of Compliance and Field Operations has issued guidance to industry and the public regarding a transitional period of enforcement discretion. See [\[web link\]](#).

DRAFT

N. In the IRFA, the number of small firms impacted and expected cost impact on small firms (as a percentage of annual revenue) of the proposed rule.

Comment 20: One firm commented that staff's estimate of a testing cost of \$150 to \$350 is too low and that a quote received by the firm to perform similar tests exceeded staff's estimate by more than \$1,650 per sample tested. The firm stated this would pose a substantial burden to the firm as they do not possess the necessary skill set or expertise to mitigate these costs by developing a reasonable testing program in lieu of performing third party testing.

Response 20: The Commission's determination regarding UL 4200A-2023 is not required to be done through notice and comment rulemaking, and thus we have no requirement to provide a Final Regulatory Flexibility (FRFA) analysis for this DFR. Nevertheless, staff collected an additional price quotation from an accredited test laboratory and revised the estimated testing cost from \$150 to \$350 per sample to \$150 to \$460 per sample, as presented in Tab F of Staff's Final Rule Briefing Package. Staff's revised estimate is lower than the estimate provided by the commenter, which we do not find credible as a representative cost.

Comment 21: One firm (Nite Ize) commented that CPSC failed to account for potential costs related to patent filing and enforcement. The firm expressed concern that current product patents for novel product lines would need new filings to provide robust intellectual property protection.

Response 21: CPSC has not been provided with sufficient information to assess whether current consumer product patents would lose any or all value due to the implementation of Reese's Law, or whether a new patent filing would be required to legally enforce intellectual property rights. We note, however, that a new patent filing could provide a longer period of protection, which could mitigate any loss in the value of prior patents.

DRAFT

Comment 22: Nite Ize and the Toy Association state that the IRFA’s cost per product line estimates for research, development, and retooling are too low as CPSC failed to account for product lines that require unique solutions.

Response 22: While a FRFA is not required, commenters do not provide specific alternative cost estimates or justification of their view.

Comments Addressing Other Issues

O. International regulations.

Comment 23: Garmin and RILA support harmonization with Australia’s regulations addressing performance and labeling requirements for products containing button cell or coin batteries.

Response 23: Reese’s Law requires the Commission to promulgate a rule that contains a performance standard that will eliminate or adequately reduce the risk of injury from button cell or coin battery ingestion and warning labels. Reese’s Law allows the Commission to rely on a voluntary standard if it determines that a voluntary standard would meet the performance and labeling requirements for a standard issued under section 2(a) of Reese’s Law. 15 U.S.C. 2056e(d)(1). The Australia regulation is not a voluntary standard. However, for the NPR, CPSC staff reviewed the voluntary standards referenced by the Australian regulation, and the Commission preliminarily determined that none of those standards met the requirements of Reese’s Law. Tabs D and E of Staff’s Final Rule Briefing Package, and section II of this preamble, contain updated assessments of the voluntary standards, including UL 4200A-2023, which is adequate to meet the performance and labeling requirements in section 2(a) of Reese’s Law.

DRAFT

P. Silver-oxide battery chemistries.

Comment 24: CPHE, FH, AWA and Renata SA state that silver-oxide button cell and coin batteries should be excluded from a Commission rule implementing Reese’s Law because of a lack of fatal incident data with these batteries and children’s inability to access these batteries in watches. Duracell states that silver-oxide batteries should contain different warnings than lithium batteries because they are lower voltage. Switzerland asks whether silver oxide batteries could be excluded from the rule.

Response 24: As reviewed in Tab C of Staff’s Final Rule Briefing Package, Jatana *et.al.* (2017) found in testing using an animal model that silver-oxide button or coin cell batteries caused severe esophageal injuries. Based on the medical literature, staff does not recommend excepting silver-oxide batteries from the scope of the final rule, and UL 4200A-2023 does not contain such an exception.

Q. Firearm accessories and other household products containing button cell or coin batteries.

Comment 25: Bushnell states that firearm accessories appear to be subject to the proposed requirements, and that the firearm itself is intended to act as the battery door or cover for these products.

Response 25: Modular consumer products or component parts of consumer products containing button cell or coin batteries, like the firearm accessories described by the commenter, must meet the same requirements as other consumer products, independent of their intended use. Modular consumer products can be attached to or installed by a consumer on other products to change the host product’s design or capabilities. A modular consumer product, however, could foreseeably remain unattached from the product(s) it is designed to complement. To eliminate or adequately reduce the risk of injury from battery ingestion, these products must independently

DRAFT

meet the performance requirements in the final rule, to prevent unintended access to button cell or coin batteries by children.

Comment 26: A consumer safety consultant (Mary Toro) and RILA state that some products containing button cell or coin batteries are made of fragile materials (such as glass or ceramic materials) that are likely to break during the proposed testing protocol. RILA states that the testing proposed in the NPR is not appropriate for these products, and that alternative test methods should be allowed for such products.

Response 26: The performance requirements in UL 4200A-2023 are likely to cause products made of materials like glass or ceramic to break. Because it is also reasonably foreseeable that a glass or ceramic product may break if knocked to the ground or dropped, which could make accessible to a child a button cell or coin battery contained inside, the button cell or coin battery could be further contained in a battery compartment that meets the requirements of the final rule. The manufacturer can test its product to ensure the product meets the requirements of the final rule, or use in its product a battery compartment that has already been tested or certified to the requirements, as allowed by 16 CFR part 1109.

R. “Try Me” buttons.

Comment 27: A consumer asks for clarification whether “Try Me” buttons containing button cell or coin batteries, that are used only in stores and not intended for sale, are within the scope of the final rule. UL Solutions states that products can incorporate “Try Me” buttons in retail displays or as part of product packaging, and their disposal should be addressed.

Response 27: “Try Me” buttons are within the scope of the final rule because they are consumer products that are used by consumers. Purchase of a product is unnecessary to be considered a “consumer product” under CPSC’s jurisdiction. 15 U.S.C. 2052(a)(5) (stating, *inter alia*, that a consumer product is for “the personal use, consumption or enjoyment of a consumer

DRAFT

in or around a permanent or temporary household or residence, a school, in recreation, or otherwise.”). Consumers, including children, are subject to hazards associated with “Try Me” buttons. “Try Me” buttons may experience drops, impacts, and other patterns of use and abuse similar to any other product within the scope of the final rule and are therefore subject to the rule. In fact, CPSC is aware of at least one incident involving a coin battery from a “Try Me” button.¹²

S. Use of color in the requirements for marking and labeling.

Comment 28: Several commenters (JEITA, Duracell, Garmin, HCPS and CTA) state that the use of color on packing, instructions, or manuals, and on some consumer products, would be challenging and add costs to the manufacturing and printing process, particularly for those materials that do not already incorporate color. Duracell and Technet also stress that various product safety standards (*e.g.*, ASTM F963, ANSI C18.3, or ANSI Z535 series) do not mandate the use of colors and accept black and white printing or contrasting colors to the background. Commenters state, however, that if color is used for the signal panel, then colors should conform to ANSI Z535.1 safety colors that correspond to the safety message. The Toy Association and RILA state that the use of color may not be reasonable to print on certain product materials, for example, colored or textured plastics.

Response 28: Applying color to some materials (*e.g.*, consumer product packaging, manuals, or other collateral material) that do not already contain color may present a burden to some manufacturers. UL 4200A-2023 requires the use of color when the subject materials already use printed color processing; otherwise, the use of black and white or contrasting colors is acceptable. The use of color is not specified in Reese’s Law; thus this variation from the NPR does not conflict with the statute and is safety neutral because the label or icon will visually align

¹² See Footnote 6 in Tab A of the Staff’s Final Rule Briefing Package.

DRAFT

with other information on the display while ensuring that it is noticeable due to its contrast or color.

T. Text size, icons, and alternative symbols for marking and labeling.

Comment 29: Renata Batteries, ITI, The Toy Association, RILA, BAJ, and Duracell express cost concerns with increased packaging sizes required to accommodate larger warning labels and font sizes, especially for small products. Another commenter states that the minimum letter size requirements for packaging warnings may make other warnings on product packaging less prominent.

Response 29: The NPR proposed that font size requirements for both on-product and on-packaging warning labels be determined based on the size of the principal display panel (generally the front face) of the package or the product display panel (such as the surface area on, near, or in the battery compartment). Reese's Law requires that warning labels clearly identify the hazard of ingestion, and this requirement is met when warning labels are displayed prominently on the principal display panel. For very large products or packages with principal display panels exceeding 400 inch², the required letter size could be larger than standard font sizes usually referenced in other standards.

UL 4200A-2023 contains the same size requirements set forth in the NPR. The minimum letter size is comparable to font sizes in other standards, and therefore of similar prominence when displayed on the same panel. The largest packaging will have ample room for additional warnings that are of comparable size to the requirements in the NPR. This level of prominence is appropriate to inform consumers which products contain button cell or coin batteries and to adequately reduce the risk of injury from ingestion.

Comment 30: A consumer (Fo Xu) asks how to determine the size of the text for consumer products and its packaging and whether it is acceptable to use smaller size labels on

DRAFT

the consumer products. Energizer requests clarification whether CPSC will identify the surface size for which the alternative on-product label can be used, or whether manufacturers can use reasonable judgement.

Response 30: The NPR proposed that consumer products be durably and indelibly marked with a warning label on the product display panel that alerts the consumer of the presence of a button cell or coin battery. “Product display panel” was defined in proposed §1263.2(f). The NPR proposed that text size be determined based on Table 1 in the regulation text, or if on a sticker label, using the minimum size requirements in §1263.4(a)(7). UL 4200A-23 incorporates these requirements from the NPR. The minimum text size is dependent on the size of the principal display panel or the product display panel. Manufacturers can use alternative on-product labels in situations where the full label does not fit in the measured product display panel area, as described in UL 4200A-2023.

Comment 31: The Toy Association recommends that for consumer product packaging and instructions, the "Keep Out of Reach" icon be changed to the safety alert symbol for coin batteries because the intent of the icon is not to keep the consumer product away from children.

Response 31: We agree with the commenter. Some products that contain button cell or coin batteries are intended for use by children, so using the “Keep Out of Reach” icon on those products may confuse consumers by appearing to instruct caregivers to keep the product, rather than the battery, away from children. To prevent consumer confusion, UL 4200A-2023 provides the option of replacing the “Keep Out of Reach” icon on consumer product packaging, as well as instructions, with the safety alert symbol to indicate “Warning: Contains Coin Battery.” Accordingly, manufacturers will have a choice based on the product’s intended user. See Tab D of Staff’s Final Rule Briefing Package for a more detailed discussion of this issue.

DRAFT

Comment 32: CTA states that in the NPR the proposed symbol for “Warning: Contains Coin Battery” has a different aspect ratio and is rotated farther than the internationally accepted symbols for coin and button cell batteries and that the symbol should match internationally recognized symbols.

Response 32: While UL 4200A-2023 includes the icon from the NPR, the button cell or coin battery portion of the symbol can be replaced with other internationally recognized symbols in ISO 7000-W0001 and IEC 60417-6367, to have consistency.

U. Tolerances for values specified in the proposed rule.

Comment 33: ITI comments that the proposed rule did not include tolerances for its specified values and opines that the purpose of tolerances is to give reasonable allowances (*e.g.*, manufacturability and testability) that will not have a significant impact on test results. The commenter contends that eliminating tolerances could force unnecessary retesting or could make it impractical to apply the test without custom test equipment. ITI recommends including tolerances in the rule that align with voluntary standards.

Response 33: Because the Commission is incorporating by reference UL 4200A-2023 as the mandatory standard, tolerances as stated in the UL standard are included in the final rule.

V. Warning label permanency.

Comment 34: RILA states that the permanency requirement for warning labels in the NPR is unclear. One commenter recommends on-product permanency be tested in accordance with the test requirements in UL 62368-1 section F.3.9.

Response 34: We agree with the commenter that on-product warning label permanence should comply with the test requirements in UL 62368-1: F.3.9. This test evaluates the legibility of printed or screened markings and ensures adhesive labels cannot be easily removeable by hand. Section 7D of UL 4200A-2023 includes requirements for label permanence. All warning

DRAFT

statements or icons shall be prominent, legible, easily discernable under normal lighting conditions, and permanently marked; and printed and screened markings are tested in accordance with the label permanency test method adapted from UL 62368-1 section F.3.10 (consistent with the requirements in UL 62368-1: F.3.9).

W. CPSC's statutory authority.

Comment 35: The AWA filed a late comment stating that certain parts of the NPR's proposed rule relating to securement of battery compartments constitute design or construction standards, which are not allowed by the CPSA or Reese's Law.

Response 35: To meet the performance requirements in UL 4200A-2023 for securement of battery compartments, manufacturers may choose to use either any type of fastener that requires a tool of the manufacturers' choice, or a multi-action locking mechanism. The market already employs many different battery compartment enclosure designs that depend on the size, shape, and materials of the consumer product. For example, remote controls include battery compartments that are either secured with screws or that slide out of the base (and typically require two independent and simultaneous actions to do so); many garage door openers require a tool to open but do not use screws or twist-on access covers; and battery compartments in light-up clothing are frequently stitched into the clothing.

Additionally, the UL 4200A-2023 performance requirements specify that battery compartments for replaceable batteries using screws or fasteners are to remain captive to the battery compartment door, cover, or closure when loosened. These performance requirements do not specify how the manufacturer must design the battery compartment to ensure the screw or fastener remains captive. Many possible solutions exist, including a retaining washer, a press fit cap, a tether, or other means.

DRAFT

X. Product categories.

Comment 36: In response to the April 11, 2023 *Federal Register* notice requesting comment on the Paperwork Reduction Act (PRA) burden associated with non-children's products subject to the proposed rule (88 FR 21652), the China National Center of Standards Evaluation and P.R. China suggest that products be categorized by risk level depending on how frequently a child comes into contact with the products, and that CPSC should develop a list of products to which the regulation applies.

Response 36: Although this comment was filed in response to the PRA notice, the comment is about the substance of the rule. The commenters' suggestion to broadly qualify implementation of Reese's Law is contrary to the requirements of the statute, which requires CPSC to promulgate a rule or identify a voluntary standard, with performance and labeling requirements, for all consumer products that contain or are designed to use button cell or coin batteries. The rule or voluntary standard must eliminate or adequately reduces the risk of ingestion to children six years old or younger during foreseeable use and misuse conditions. Accordingly, the Commission will not adopt the commenters' suggestion to exclude from the Commission's implementation of Reese's Law a potentially large number of consumer products that are covered by the law and present at least some degree of ingestion hazard.

Y. Toy products.

Comment 37: In response to the April 11, 2023, *Federal Register* notice requesting comment on the PRA burden associated with non-children's products subject to the proposed rule (88 FR 21652), Switzerland asks why products containing button cell or coin batteries that are subject to Reese's Law must fulfill more stringent requirements than those imposed for toys

DRAFT

that are compliant with the toy standard of ASTM F963, as incorporated by reference in 16 CFR part 1250.

Response 37: Although this comment was filed in response to the PRA notice, the comment is about the substance of the rule and not about the paperwork burden. Section 4 of Reese’s Law, Notes to 15 U.S.C. 2056e, specifically exempts “any toy product that is in compliance with the battery accessibility and labeling requirements” of 16 CFR part 1250. Accordingly, toy products are not within the scope of the rule and are already covered by the existing toy standard. However, we agree with the commenter that the requirements for children’s and non-children’s products that contain button cell or coin batteries that are subject to this final rule are more stringent than those imposed for toys. On March 20, 2023, CPSC staff sent a letter to the ASTM F15.22 toy subcommittee requesting that the subcommittee consider changes to ASTM F963 which would adequately address incidents and hazards involving toys.¹³

Comments Addressing the PRA

Z. The accuracy of CPSC’s estimate of the burden of the proposed collection of information.

Comment 38: ITI, CTA, JEITA, AWA, and RILA believe that the CPSC underestimated the burden of the collection of information proposed in the NPR. ITI believes that the labor rates used may under-represent the burden cost. ITI and RILA request that CPSC provide additional detail on how the PRA burden estimates were derived. While CTA indicates that it is standard practice within the technology sector to include warnings on product labels, the labeling is different enough to warrant additional hourly PRA burden associated with labeling. Relatedly,

¹³ Staff’s letter to the ASTM F15.22 subcommittee can be found here: <https://www.cpsc.gov/s3fs-public/Letter-to-ASTM-F15-22-Reeses-Law-NPR-230320.pdf?VersionId=6ZGPs5nSLhBGIFdoz1IWHF1wo.oOgarH>.

DRAFT

ITI suggests that product labeling should not be considered “usual and customary” and is within the definition of “PRA burden.”

ITI indicates that manufacturers may have more than two product families and therefore the estimate of 15,363 firms with 2 products each understates the number of unique non-children’s products containing coin/button cells on the U.S. market.

Response 38: Based upon the comments received, CPSC is adjusting its burden estimates upward, as shown in Table 6 in this preamble. Additionally, CPSC adopts a higher wage rate to represent total compensation costs for private industry workers in goods producing industries. We provide the substance of this revised PRA burden estimate in section X of this preamble.

AA. Ways to reduce the burden of the collection of information on respondents, including the use of automated collection techniques when appropriate, and other forms of information technology.

Comment 39: JEITA notes that the final rule would impose requirements different from those of international standards, and that this will burden manufacturers as labeling and testing for products intended for use in the United States would need to be completed separately from labeling and testing for other markets.

Response 39: Burdens and potential efficiencies associated with testing to international standards, in addition to CPSC standards, are outside the scope of PRA burden estimates for the proposed rule.

BB. The estimated burden hours associated with labels and hang tags, including any alternative estimates.

Comment 40: ITI, CTA, JEITA, and AWA provide estimates of hourly burden for various industry sectors. See Tab A, Issue 36, in Staff’s Final Rule Briefing Package. CPSC did not receive any detailed estimates on the total number of respondents to which this collection

DRAFT

would apply, but data provided by various commenters on the number of firms to which the collection would apply imply that CPSC has likely overestimated the number of respondents. Commenters provided alternative estimates for the frequency of response based upon the number of product families to which the rule might apply. However, these estimates were not provided at the establishment level and are therefore difficult to compare to CPSC estimates, which are based on U.S. Census Bureau establishment data.

Response 40: Although burdens will vary for different industry sectors and by product as pointed out by commenters, the estimates provided by commenters generally support the Commission's average burden calculations. CPSC assumes, moreover, that industry sectors responding to the public notice likely will experience comparatively large impacts from implementation of Reese's Law.

CC. The estimated respondent cost other than burden hour cost.

Comment 41: JEITA believe that the cost of test samples should be included in the estimated respondent cost.

Response 41: According to guidance provided by the Office of Management and Budget (OMB) and General Services Administration (GSA), the burdens calculated under the PRA typically do not include estimating the cost of test samples. See <https://pra.digital.gov/about/>.

Comments Addressing Out-of-Scope Issues

Tab A of Staff's Final Rule Briefing Package discusses comments received on topics that are out of scope for this rulemaking.

IV. Commission Determination Regarding UL4200A-2023 and Description of the Final Rule's Requirements

After consideration of the public comments summarized in section III of this preamble and Staff's Final Rule Briefing Package, and for the reasons given in this *Federal Register* notice, the Commission determines that UL 4200A-2023 meets the performance and labeling

DRAFT

requirements in section 2(a) of Reese’s Law for consumer products that contain button cell or coin batteries. 15 U.S.C. 2056e(d)(1). The Commission does not make this determination with respect to the labeling of battery packaging, because UL 4200A-2023 does not address the labeling of battery packaging. Pursuant to section 2(e) of Reese’s Law, UL 4200A-2023 is a consumer product safety rule on the date the Commission makes this determination, [insert vote date]. However, because the Commission is codifying the requirements in the Code of Federal Regulations, for purposes of the direct final rule, the rule is effective 30 days after publication in the *Federal Register*. Furthermore, the Commission’s Office of Compliance and Field Operations has announced a transitional period of enforcement discretion. See [WEB LINK].

Table 3 summarizes the performance requirements in UL 4200A-2023 applicable to consumer products with battery compartments for replaceable button cell or coin batteries, and Table 4 summarizes the standard’s performance requirements applicable to consumer products with battery compartments for non-replaceable button cell or coin batteries.

Table 3. Summary of Performance Requirements in UL 4200A-2023 for Consumer Products with Battery Compartments for Replaceable Button Cell or Coin Batteries

Button cell or coin batteries must not become accessible or liberated when tested to these requirements:	
Performance Requirements for Battery Compartment Securement (UL Section 5.2-5.6)	
Battery Compartment Securement Options (UL Section 5.5-5.6)	<p><i>Option 1:</i> Coin, screwdriver, or other tool.</p> <ul style="list-style-type: none"> • Captive screws <ul style="list-style-type: none"> ○ Exceptions for products containing batteries not intended to be replaced by the consumer. Such products shall have instructions and warnings that clearly state the battery is not to be replaced by the consumer. ○ Exception 1: Products that can only be accessed through the removal of multiple enclosures or panels using a tool. ○ Exception 2: Products that are only to be opened by a professional service center (where children are not present). • Two threads engaged or minimum torque + spin angle <p><i>Option 2:</i> At least two independent & simultaneous hand movements.</p> <ul style="list-style-type: none"> • Shall not be combinable to a single movement with a finger or digit.
Accessibility Test (UL Section 5.3-5.4)	Open or remove any part of the compartment not meeting <i>Option 1</i> or <i>Option 2</i> . Apply Tension Test for Seams from ASTM F963 on pliable materials, using a force of 70.0 N (15.7 lbf). Determine whether Test Probe 11 from IEC 61032 can touch the battery.
Preconditioning Requirements (UL Section 6.2)	
Preconditioning in Oven (UL Section 6.2.1)	Thermoplastics - 7 hours at 158°F or greater, based on operational temperature.

DRAFT

Simulated Battery Replacement (UL Section 6.2.2)	Open/Close and remove/install battery 10 times.
Use and Abuse Tests (UL Section 6.3)	
Drop Test (UL Section 6.3.2)	Handheld products are 10 drops while portable products are 3 drops. Each drop is from 1 m (39.4 in) on hardwood, in positions likely to produce maximum force.
Impact Test (UL Section 6.3.3)	3 impacts on battery compartment with steel sphere, 2 J (1.5 ft-lbf) of energy.
Crush Test (UL Section 6.3.4)	330 N ± 5 N (74.2 lbf ± 1.1 lbf) for 10 s, using 100 by 250 mm (3.9 by 9.8 in) flat surface.
Compression Test (UL Section 6.3.4A)	Test from 16 CFR Part 1250, using a force of at least 136 N (30.6 lbf).
Torque Test (UL Section 6.3.4B)	Test from 16 CFR part 1250, using a torque of at least 0.50 Nm (4.4 in.-lbf).
Tension Test (UL Section 6.3.4C)	Test from 16 CFR part 1250, using a force of at least 72.0 N (16.2 lbf).
Probe for Accessibility (UL Section 6.3.5)	Apply 50 N to 60 N (11.2 lbf to 13.4 lbf) with Test Probe 11 from IEC 61032 to confirm compliance.

Table 4. Summary of Performance Requirements in UL 4200A-2023 for Consumer Products with Battery Compartments for Non-Replaceable Button Cell or Coin Batteries

Products that incorporate button cell or coin batteries that are not intended for user removal or replacement shall effectively prevent removal of the battery by the user or children.	
Option 1 – Not Accessible (UL Section 5.7(a))	<ul style="list-style-type: none"> Made inaccessible by an enclosure that meets the same applicable preconditioning and use and abuse test requirements as battery compartments for replaceable batteries.
Option 2 – May be Accessible (UL Section 5.7(b))	<ul style="list-style-type: none"> Secured with soldering, fasteners such as rivets, or equivalent means. Confirmed with secureness test: test hook applies a force of 20 N ± 2 N (4.5 lbf ± 0.4 lbf) directed outwards for 10 s, at all possible points. Battery cannot liberate from the product.

The warning label requirements for consumer products and consumer product packaging in UL 4200A-2023 are substantively similar to the warning label requirements in the NPR (88 FR 8706-09), with the following differences:

- Colored markings must comply with the ISO 3864 series of standards;
- Color is required only when the markings are printed on a label using more than one color;
- Manufacturers may choose to use either the “Keep Out of Reach of Children” icon or the “Warning: Contains Coin Battery” icon on the consumer product packaging label;
- Permanence of markings is tested consistent with the requirements in UL 62368-1 section F.3.9;

DRAFT

- Inclusion of an additional warning statement in instructions and manuals to “Always completely secure the battery compartment. If the battery compartment does not close securely, stop using the product, remove the batteries, and keep it away from children.”
- Removal of requirements for battery package warnings because they are being finalized in a separate final rule, and removal of certain performance and technical data requirements proposed under section 27(e) of the CPSA, which are not being finalized at this time.

In the following discussion, we provide a section-by-section summary of the final rule.

A. Section 1263.1 Scope, purpose, effective date, and exemption.

Final rule § 1263.1(a) explains the scope and purpose of the safety standard required by Reese’s Law, as proposed in the NPR, with two modifications: the removal of the provision for units, which is addressed instead in UL 4200A-2023, and removal of the provision for battery package labeling, which is addressed in a separate final rule. 15 U.S.C 2056e, Public Law No. 117-171. Based on section 2 of Reese’s Law, the scope of the final rule includes consumer products containing button cell or coin batteries, including the packaging of such consumer products and accompanying literature.

Section 1.3 of UL 4200A-2023 provides the scope of the voluntary standard, stating that the requirements apply to consumer products containing button batteries or coin cell batteries.¹⁴ This scope is consistent with Reese’s Law, which defines a “consumer product containing button cell or coin batteries” as “a consumer product containing or designed to use one or more button

¹⁴ Section 1.3 of UL 4200A-2023 also states that the standard does not include “products that by virtue of their dedicated purpose and instructions are not intended to be used in locations where they may be accessed by children, such as products for dedicated professional use or commercial use in locations where children are not normally or typically present.” The Commission interprets this exclusion from the scope of the standard consistent with the Commission’s jurisdictional authority in section 3 of the CPSA. For example, products used solely in professional settings are within the jurisdiction of the Occupational Safety and Health Administration. However, consumer products generally available for use or purchase by consumers are within the Commission’s jurisdiction. 15 U.S.C. 2052(a)(5).

DRAFT

cell or coin batteries, regardless of whether such batteries are intended to be replaced by the consumer or are included with the product or sold separately.”¹⁵ This definition includes products that are not sold with a battery but are designed to use a button cell or coin battery.

Section 1263.1(b) of the final rule establishes the effective date of the direct final rule. Because the Commission determines that UL 4200A-2023 meets the requirements in section 2(a) of Reese’s Law, section 2(e) of Reese’s Law provides that the voluntary standard is treated as a consumer product safety rule as of the date of the Commission’s determination. However, for the direct final rule, the effective date is 30 days after publication, as explained in section VII of this preamble. Consistent with section 6 of Reese’s Law (Notes to 15 U.S.C. 2056e), the rule requires that all consumer products and packaging containing button cell or coin batteries that are subject to the final rule, and that are manufactured or imported 30 days after publication of the final rule in the *Federal Register*, must comply with the requirements of this part. The Commission’s Office of Compliance and Field Operations has announced a transitional period of enforcement discretion. See [\[WEB LINK\]](#).

Final rule § 1263.1(c) describes the exemption in Reese’s Law for toy products that meet ASTM F963, as incorporated into 16 CFR part 1250. UL 4200A-2023 excludes the same products from its scope.

Final rule § 1263.1(d) retains the exception for button cell and coin batteries that do not pose an ingestion hazard as proposed, meaning zinc-air batteries. This exception is also stated in UL 4200A-2023.

¹⁵ Notes to 15 U.S.C. 2056e. The term “consumer product” has the same meaning as that in section 3(a) of the Consumer Product Safety Act (CPSA). 15 U.S.C. 2052(a).

DRAFT

B. Section 1263.2 Definitions.

Final rule § 1263.2 provides applicable definitions as proposed in the NPR, explaining that the definitions in section 3 of the CPSA and section 5 of Reese’s Law also apply to this rule. The final rule codifies several definitions from Reese’s Law relevant to requirements for consumer products containing button cell or coin batteries, such as “button cell or coin battery” and “consumer product containing button cell or coin battery.” Definitions related to battery package labeling are being finalized in a separate final rule.

C. Section 1263.3 Requirements for consumer products containing button cell or coin batteries

Final rule § 1263.3 incorporates by reference the requirements in UL 4200A-2023, approved on August 30, 2023, as the mandatory standard for performance and labeling of consumer products containing button cell or coin batteries. Sections 5 and 6 of UL 4200A-2023 contain performance requirements, and labeling requirements are in sections 7 and 8 of UL 4200A-2023. Tabs D and E of Staff’s Final Rule Briefing Package, and Tables 3 and 4 in this preamble, describe the performance and labeling requirements in UL 4200A-2023 that are incorporated by reference.

V. Testing, Certification, and Notice of Requirements

Section 14(a) of the CPSA includes requirements for certifying that consumer products comply with applicable mandatory standards. 15 U.S.C. 2063(a). Section 14(a)(1) addresses required certifications for non-children’s products, and sections 14(a)(2) and (a)(3) address certification requirements specific to children’s products.

Non-Children’s Products. Section 14(a)(1) of the CPSA requires every manufacturer (which includes importers per 15 U.S.C. 2052(a)(11)) of a non-children’s product that is subject to a consumer product safety rule under the CPSA or a similar rule, ban, standard, or regulation under any other law enforced by the Commission to certify that the product complies with all

DRAFT

applicable CPSC-enforced requirements. 15 U.S.C. 2063(a)(1). Section 14(g) of the CPSA contains content and availability requirements for certificates. 15 U.S.C. 2063(g).

Children's Products. A “children’s product” is a consumer product that is “designed or intended primarily for children 12 years of age or younger.” 15 U.S.C. 2052(a)(2). Section 4 of Reese’s Law specifically exempts from the performance and labeling requirements in section 2 of the law, any toy product that is in compliance with the battery accessibility and labeling requirements in 16 CFR part 1250, the mandatory toy standard. However, all non-toy children’s products that contain button cell or coin batteries are subject to the final rule and must be tested by a CPSC-accepted third party laboratory and certified as compliant.

The following factors are relevant when determining whether a product is a children’s product:

- manufacturer statements about the intended use of the product, including a label on the product if such statement is reasonable;
- whether the product is represented in its packaging, display, promotion, or advertising as appropriate for use by children 12 years of age or younger;
- whether the product is commonly recognized by consumers as being intended for use by a child 12 years of age or younger; and
- the Age Determination Guidelines issued by CPSC staff in January 2020, and any successor to such guidelines.

Id. “For use” by children 12 years and younger generally means that children will interact physically with the product based on reasonably foreseeable use. 16 CFR 1200.2(a)(2).

Children’s products, for example, may be decorated or embellished with a childish theme, be sized for children, or be marketed to appeal primarily to children. *Id.* § 1200.2(d)(1).

DRAFT

Section 14(a)(2) of the CPSA requires the manufacturer or private labeler of a children's product that is subject to a children's product safety rule to certify, based on a third party conformity assessment body's testing, that the product complies with the applicable children's product safety rule. 15 U.S.C. 2063(a)(2). The Commission's requirements for children's product testing and certification are codified in 16 CFR part 1107. Section 14(a) of the CPSA also requires the Commission to publish a notice of requirements (NOR) for a third party conformity assessment body (*i.e.*, testing laboratory) to obtain accreditation to assess conformity with a children's product safety rule. 15 U.S.C. 2063(a)(3)(A). Because some consumer products that contain button cell or coin batteries are children's products, the direct final rule incorporating by reference UL 4200A-2023 is a children's product safety rule, as applied to those products.

The Commission published a final rule, codified at 16 CFR part 1112, entitled *Requirements Pertaining to Third Party Conformity Assessment Bodies*, that established requirements and criteria concerning testing laboratories. 78 FR 15836 (Mar. 12, 2013). Part 1112 includes procedures for CPSC to accept a testing laboratory's accreditation and lists the children's product safety rules for which CPSC has published NORs. When CPSC issues a new NOR, it must amend part 1112 to include that NOR. CPSC did not receive any comments regarding the proposed NOR. Accordingly, this DFR amends part 1112, as proposed, to add the "Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries" to the list of children's product safety rules for which CPSC has issued an NOR.

Testing laboratories that apply for CPSC acceptance to test whether children's products containing button cell or coin batteries comply with the new rule will have to meet the requirements in part 1112. When a laboratory meets the requirements of a CPSC-accepted third party conformity assessment body, the laboratory can apply to CPSC to include 16 CFR part

DRAFT

1263, *Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries*, in the laboratory's scope of accreditation of CPSC safety rules listed on the CPSC website at: www.cpsc.gov/labsearch.

VI. Incorporation by Reference

Section 1263.2 of the direct final rule incorporates by reference UL 4200A-2023. In accordance with regulations of the Office of the Federal Register (OFR), 1 CFR 51.5(b), section IV of this preamble, Commission Determination Regarding UL4200A-2023 and Description of the Final Rule's Requirements, summarizes the provisions of UL 4200A-2023 that the Commission incorporates by reference into 16 CFR part 1263. The standard is reasonably available to interested parties in several ways. You may purchase a copy from Underwriters Laboratories, Inc (UL), 333 Pfingsten Road, Northbrook, IL 60062, or through UL's Web site: www.UL.com. Before incorporation by reference, a read-only copy of UL 4200A-2023 is available for viewing on UL's website at: <https://www.shopulstandards.com/>. After CPSC incorporates the UL standard, a free, read-only copy is also available at: <https://www.ulstandards.com/IBR/logon.aspx>. Finally, interested parties can schedule an appointment to inspect a copy of the standard at CPSC's Office of the Secretary, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814, telephone: 301-504-7479; email: cpsc-os@cpsc.gov.

VII. Direct Final Rule Process and Effective Dates

The Commission is issuing this rule as a direct final rule. Although the Administrative Procedure Act (APA; 5 U.S.C. 551-559) generally requires agencies to provide notice of a rule and an opportunity for interested parties to comment on it, section 553 of the APA provides an exception when the agency "for good cause finds" that notice and comment are "impracticable, unnecessary, or contrary to the public interest." *Id.* 553(b)(B).

DRAFT

Reese's Law states that if the Commission determines that an already-effective voluntary standard meets the requirements in section 2(a) of Reese's Law before promulgating a final rule implementing those same requirements, then the voluntary standard shall be treated as a consumer product safety rule promulgated under section 9 of the CPSA (15 U.S.C. 2058) effective on the date of the Commission's determination, which must be published in the *Federal Register*. 15 U.S.C. 2056e(d)-(e).

The purpose of this direct final rule is to codify in the Code of Federal Regulations the requirements in UL 4200A-2023 as the mandatory standard as for consumer products containing button cell or coin batteries, by incorporating by reference UL 4200A-2023. Although the Commission provided notice and collected comment on similar requirements in the NPR, Reese's Law does not require a rulemaking if the Commission makes a favorable determination on a voluntary standard; therefore, once the Commission makes the determination under section 2(d) with regard to UL 4200A-2023, the voluntary standard is treated as a consumer product safety rule. Accordingly, additional public comments would not lead to substantive changes to the direct final rule. Under these circumstances, notice and comment are unnecessary.

In Recommendation 95-4, the Administrative Conference of the United States (ACUS) endorses direct final rulemaking as an appropriate procedure to expedite rules that are noncontroversial and that are not expected to generate significant adverse comments. *See* 60 FR 43108 (Aug. 18, 1995). ACUS recommends that agencies use the direct final rule process when they act under the "unnecessary" prong of the good cause exemption in 5 U.S.C. 553(b)(B). Consistent with the ACUS recommendation, the Commission is publishing this rule as a direct final rule, because CPSC does not expect any significant adverse comments.

Unless CPSC receives a significant adverse comment within 14 days of this notification, the direct final rule will become effective 30 days after publication, on [INSERT DATE 30

DRAFT

DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER] (subject to a transitional period of enforcement discretion as stated at [\[WEB LINK\]](#)). In accordance with ACUS's recommendation, the Commission considers a significant adverse comment to be "one where the commenter explains why the rule would be inappropriate," including an assertion that undermines "the rule's underlying premise or approach" or a showing that the rule "would be ineffective or unacceptable without change." 60 FR 43108, 43111. As noted, this rule codifies in the CFR a consumer product safety rule created by statute now that the Commission has made a determination under section 2(d) of Reese's Law. 15 U.S.C. 2056e(d).

If the Commission receives a significant adverse comment, the Commission will withdraw this direct final rule. Depending on the comment and other circumstances, the Commission may then incorporate the adverse comment into a subsequent direct final rule.

Section 14(a)(3)(A) of the CPSA, however, requires that certification to an NOR is not effective until 90 days after publication of an NOR. 15 U.S.C. 2063(a)(3)(A). Accordingly, to provide the mandatory period for third party laboratories to become ISO accredited and CPSC-accepted to perform testing to part 1263, third party testing and certification of children's products subject to this rule is not required until on or after [INSERT DATE 90 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER].

VIII. Environmental Considerations

The Commission's regulations address whether the agency is required to prepare an environmental assessment or an environmental impact statement. Under these regulations, certain categories of CPSC actions normally have "little or no potential for affecting the human environment" and therefore do not require an environmental assessment or an environmental impact statement. 16 CFR 1021.5(c)(1). Safety standards providing performance and labeling

DRAFT

requirements for consumer products containing button cell or coin batteries fall within this categorical exclusion.

IX. Regulatory Flexibility Analysis

The Regulatory Flexibility Act (RFA; 5 U.S.C. 601-612) generally requires agencies to review proposed and final rules for their potential economic impact on small entities, including small businesses, and prepare regulatory flexibility analyses. 5 U.S.C. 603, 604. The RFA applies to any rule that is subject to notice and comment procedures under section 553 of the APA. *Id.* Although the Commission prepared an Initial Regulatory Flexibility Act analysis for the NPR to implement Reese’s Law and a Final Regulatory Flexibility Act analysis (*see* Tab F of Staff’s Final Rule Briefing Package) that provides information for the public, the Commission’s determination under section 2(d) of Reese’s Law, 15 U.S.C. 2056e(d), that UL 4200A-2023 meets the performance and labeling requirements of section 2(a) of Reese’s Law, 15 U.S.C. 2056e(a), does not require notice and comment rulemaking. Because the Commission has determined that notice and the opportunity to comment are unnecessary for this DFR to codify UL 4200A-2023 as the mandatory standard for consumer products containing button cell or coin batteries, the RFA does not apply with respect to the subject matter of this rule.

X. Paperwork Reduction Act

This DFR contains information collection requirements that are subject to public comment and review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA; 44 U.S.C. 3501–3521). Under the PRA, an agency must publish the following information:

- A title for the collection of information;
- A summary of the collection of information;

DRAFT

- A brief description of the need for the information and the proposed use of the information;
- A description of the likely respondents and proposed frequency of response to the collection of information;
- An estimate of the burden that will result from the collection of information; and
- Notice that comments may be submitted to OMB.

44 U.S.C. 3507(a)(1)(D). In this DFR, the Commission is amending the collection of information for children's products to add the burden associated with performance and labeling requirements of the final rule, and is establishing an OMB control number for testing, certification, and paperwork retention requirements for general use, non-children's products subject to this final rule. The Commission proposed to amend the children's product collection in the NPR (88 FR 8717), and issued a separate *Federal Register* notice to collect comment on the estimated burden for testing and certification of non-children's products. 88 FR 21652 (April 11, 2023). In accordance with the PRA's requirements, the Commission provides the following information:

Title: (1) Amendment to Third Party Testing of Children's Products, approved previously under OMB Control No. 3041-0159 and (2) creation of new collection for Testing and Labeling of Non-Children's Products Containing or Designed to Use Button Cell or Coin Batteries and Labeling of Button Cell or Coin Battery Packaging.¹⁶

Type of Review: Amendment of existing collection for Third Party Testing of Children's Products, and creation of a new collection of information for testing and labeling of non-children's products containing or designed to use button cell or coin batteries and labeling of

¹⁶ The Commission is finalizing requirements for the labeling of button cell or coin battery packaging in a separate *Federal Register* notice, but for convenience, consistency with the IRFA, and clarity to stakeholders, we include the PRA requirements for all non-children's products subject to performance or labeling requirements for button cell or coin batteries in this single PRA analysis.

DRAFT

button cell or coin battery packaging. Both children's and non-children's products subject to this rule require: (1) testing of products containing or designed to use button cell or coin batteries, including creating a certificate of conformity; however, unlike non-children's products, children's products require third party testing by a laboratory whose accreditation has been accepted by CPSC to conduct such testing; (2) labeling requirements for products and for button cell or coin battery packaging, including, as applicable, warnings on battery compartments, product packaging, accompanying written materials (*i.e.*, instructions, manuals, hangtags, or inserts)); and (3) recordkeeping requirements.

Summary, Need, and Use of Information: Based on the requirements in Reese's Law, 15 U.S.C. 2056e(a) and (b), the proposed consumer product safety standard prescribes performance requirements for child-resistant battery compartments on consumer products, including children's and non-children's products, that contain button cell or coin batteries, and warning requirements for button cell and coin-battery packaging, consumer product packaging, consumer products, and instructions and manuals. These performance and labeling requirements are intended to reduce or eliminate injuries and deaths associated with children six years old and younger ingesting button cell or coin batteries.

Children's Products: Section 4 of Reese's Law specifically exempts from the performance and labeling requirements in section 2 of the law, any toy product¹⁷ that is in compliance with the battery accessibility and labeling requirements in 16 CFR part 1250, Safety Standard Mandating ASTM F963 for Toys. However, some consumer products that are not toys subject to the toy standard are considered children's products. A "children's product" is a consumer product that is "designed or intended primarily for children 12 years of age or

¹⁷ For purposes of Reese's Law, a "toy product" is "any object designed, manufactured, or marketed as a plaything for children under 14 years of age." Notes to 15 U.S.C. 2056e.

DRAFT

younger.” 15 U.S.C. 2052(a)(2). The Commission’s regulation at 16 CFR part 1200 further interprets the term. Section 14 of the CPSA requires that children’s products be tested by a third party conformity assessment body, and that the manufacturer of the product, including an importer, must issue a children’s product certificate (CPC). Based on such third party testing, a manufacturer or importer must attest to compliance with the applicable consumer product safety rule by issuing the CPC. The requirement to test and certify children’s products falls within the definition of “collection of information,” as defined in 44 U.S.C. 3502(3).

The requirements for the CPCs are stated in section 14 of the CPSA, and in the Commission’s regulation at 16 CFR parts 1107 and 1110. Among other requirements, each certificate must identify: the manufacturer or private labeler issuing the certificate; any third party conformity assessment body on whose testing the certificate depends; the date and place of manufacture; the date and place where the product was tested; each party’s name, full mailing address, and telephone number; and contact information for the individual responsible for maintaining records of test results. The certificates must be in English. The certificates must be furnished to each distributor or retailer of the product and to the CPSC, if requested.

The Commission has an OMB control number, 3041-0159, for children’s product testing and certification. This final rule would amend this collection of information to add testing and certification to the performance requirements for child-resistant battery compartments on children’s products (that are not toys) that contain button cell or coin batteries, as well as warnings on the packaging of these children’s products, the battery compartment of these children’s products, and any accompanying instructions and manuals, as set forth in the rule. The Commission did not receive any comment on the NPR’s estimated PRA burden for children’s products subject to this rule. The requirements in UL 4200A-2023 are materially similar to the NPR requirements and do not change the Commission’s PRA burden analysis.

DRAFT

Accordingly, CPSC has submitted the information collection requirements of this final rule for children's products containing button cell or coin batteries to OMB for review in accordance with PRA requirements. 44 U.S.C. 3507(d).

Non-Children's Products: This collection of information is solely for non-children's consumer products, meaning (1) performance and labeling requirements for products that contain or are designed to use button cell or coin batteries and *are not* designed or intended primarily for children 12 years old or younger, and (2) labeling of packages containing button cell or coin batteries. 15 U.S.C. 2052(a)(2); 16 CFR part 1200. Section 14(a) of the CPSA requires that manufacturers (including importers) of non-children's products subject to a rule issue a general certificate of conformity (GCC).

GCCs certify the products as being compliant with applicable regulations and must be based on a test of each product or a reasonable testing program. Unlike children's products, products that have GCCs are not required to undergo third party testing. Section 14(g) and 16 CFR part 1110 state the requirements for GCCs. Among other requirements, each certificate must identify: the manufacturer issuing the certificate; any laboratory conducting testing on which the certificate depends; the date and place of manufacture; the date and place where the product was tested; each party's name, full mailing address, and telephone number; and contact information for the individual responsible for maintaining records of test results. The certificates must be in English. The certificates must be furnished to each distributor or retailer of the product and to the CPSC, if requested.

CPSC received nine comments in response to the estimated PRA burden for non-children's products. Based on the comments, CPSC is increasing the estimated PRA burden as described in this section of the preamble, and will submit these revised estimates to OMB for review.

DRAFT

Respondents and Frequency: Respondents include manufacturers and importers of non-toy children’s products and non-children’s products that contain, or are designed to use, button cell or coin batteries. Manufacturers and importers must comply with the information collection requirements when children’s and non-children’s products that contain button cell or coin batteries are manufactured or imported after the effective date of the rule.

Estimated Burden: CPSC has estimated the respondent burden in hours, and the estimated labor costs to the respondent.

Estimate of Respondent Burden for Non-Toy Children’s Products: The hourly reporting burden imposed on firms that manufacture or import non-toy children’s products that contain button cell or coin batteries include the time and cost to maintain records related to third party testing, the time to issue a CPC, and the time to include required warning labels on children’s product battery compartments, children’s product packaging, and to update instructions or manuals with required warnings.

Table 5: Children’s Products Estimated Annual Reporting Burden.

Burden Type	Total Annual Responses	Length of Response	Annual Burden (hours)
Third-party testing, recordkeeping and record maintenance	6,046	5.0 hours	30,230
Certification and labeling	1,209	1.0 hours	1,209
Total Burden			31,439

Three types of third party testing of children’s products are required: certification testing, material change testing, and periodic testing. Manufacturers must conduct sufficient testing to ensure that they have a high degree of assurance that their children’s products comply with all applicable children’s product safety rules before such products are introduced into commerce. 16 CFR § 1107.20(a). If a manufacturer conducts periodic testing, they are required to keep records that describe how the samples of periodic testing are selected. 16 CFR §§ 1107.21 and .26.

DRAFT

CPSC estimates that 0.4 percent of all children's products sold annually, or 6,046 children's products, are children's products that contain button cell or coin batteries and would be subject to third-party testing under this rule; for each of which 5.0 hours of recordkeeping and record maintenance will be required. Thus, the total hourly burden of the recordkeeping associated with certification is 30,230 hours ($5.0 \times 6,046$). Additionally, battery compartments, product packaging, and instructions and manuals must be updated to include the required warnings statements. We estimate that the time required to make these modifications is about 1 hour per product. Based on an evaluation of a sample of supplier product lines, there are a total of 1,209 affected products; therefore, the estimated burden associated with warnings and labeling is 1,209 hours.

We estimate the hourly compensation of workers in industries that will have PRA-relevant burden imposed by this collection is \$36.80 (U.S. Bureau of Labor Statistics, "Employer Costs for Employee Compensation," Sept. 2022, total compensation for all sales and office workers in goods-producing private industries: https://www.bls.gov/news.release/archives/ecec_12152022.pdf). Therefore, the estimated annual cost to industry associated with the collection burden for non-toy children's products is \$1,156,955 ($\36.80 per hour \times 31,439 hours = \$1,156,955.2). No operating, maintenance, or capital costs are associated with the collection.

This estimate is the largest burden reasonably possible, assuming that every manufacturer had to modify three product labels (battery compartment, packaging, and instructions/manual). However, many non-toy children's products that contain button cell or coin batteries already contain some type of warning on the product or product packaging. Accordingly, product modification for warnings and any associated burden could be much lower than the estimate.

Under the OMB's regulations (5 CFR 1320.3(b)(2)), the time, effort, and financial resources necessary to comply with a collection of information that would be incurred by persons

DRAFT

in the “normal course of their activities” are excluded from a burden estimate, where an agency demonstrates that the disclosure activities required to comply are “usual and customary.” To the extent that warning statements on one or more battery compartments, product packaging, and instructions/manuals are usual and customary for non-toy children’s products that contain button cell or coin batteries, CPSC can estimate that no burden hours are associated with the labeling requirements in the proposed rule. We requested comment on this potential estimate of no burden for warning labels and received no comment with regard to children’s products. The largest possible burden estimate for warning labels for children’s products stated in the NPR was 1,209 hours at a cost of \$44,491 annually. However, because we received no contrary comment on the estimate of no burden for children’s products, CPSC relies on the “usual and customary” exception and finalizes an estimate of no burden.

Estimate of Respondent Burden for Non-Children’s Products: The PRA *Federal Register* notice (88 FR 21652) estimating the hourly reporting burden imposed on firms that manufacture or import non-children’s products that contain button cell or coin batteries, and firms that manufacture or import button cell or coin batteries, included the time and cost to create and maintain records related to testing of consumer products (including issuing a GCC), as well as product labeling, including required warning labels on, as applicable, consumer product battery compartments, product packaging, and accompanying written materials (*i.e.*, instructions, manuals, inserts, or hangtags).

Though data provided by commenters are helpful, commenters have compared one-time burden estimates to annual respondent burden calculated by CPSC. CPSC assumes suppliers will continue to introduce products on a rolling basis, and that up-front costs will diminish over time.

DRAFT

Based on the comments, however, the Commission has revised the estimated burden. We have removed estimates for point-of-sale notices, including for websites offering the sale of button cell or coin batteries, because this requirement is not being adopted at this time. However, based upon the comments received (Comment 38 in section III of this preamble), CPSC is adjusting the burden estimates upward, as shown in Table 6. Additionally, CPSC adopts a higher wage rate to represent total compensation costs for private industry workers in goods producing industries.¹⁸

Table 6. Estimated Annual Respondent Burden (Revisions in bold, italics)

Burden type	Respondents	Frequency of response	Hours per response	Annual burden (hours)	Annual burden (costs)
Labeling	15,363	2	1	30,726	\$1,332,586.62
		3	1.25	57,611.25	2,513,002.72
Testing	15,363	2	3	92,178	\$3,997,759.86
		3	3.5	161,311.5	7,036,407.63
Recordkeeping	15,363	2	1	30,726	\$1,332,586.62
		3	1.25	57,611.25	2,513,002.72
Total Burden				153,630	\$6,662,933.10
				276,534	\$12,062,413.10

CPSC staff used establishment data from the U.S. Census Bureau by NAICS code to estimate the number of entities with at least one product subject to the rule. Then, weights were assigned to each NAICS sector to estimate both the duration of the required response as well as the estimated average number of responses. *See* Table 7. Additionally, CPSC staff obtained estimates from testing laboratories on the costs of certification testing. For non-children’s products, CPSC assumes that firms will test in-house or send the product to a lab for testing, but not both. Children’s products (that are not toys) subject to the rule must be third party tested by a CPSC-accepted laboratory. According to information collected, the cost of third-party testing varies but is consistent with an estimate of \$261.72 per response ($\$12,62,413.10 \div 3 \text{ responses} \div 15,363 \text{ respondents} = \261.72).

¹⁸ The March 2023 hourly total compensation costs for private industry workers in goods producing industries is \$43.62, according to the U.S. Bureau of Labor Statistics, Employer Costs for Employee Compensation (https://www.bls.gov/news.release/archives/ecec_06162023.pdf).

DRAFT

Table 7. Estimates by NAICS Sector

NAICS Code		Industry Weight	Estimated PRA Hours	Estimated Number of Responses
334118	Computer Terminal and Other Computer Peripheral Equipment Manufacturing	0.035099	8	4

339920	Sporting and Athletic Goods Manufacturing	0.061625	2	1
339940	Office Supplies (except Paper) Manufacturing	0.005479	2	1
339999	All Other Miscellaneous Manufacturing	0.037159	2	1
423420	Office Equipment Merchant Wholesalers	0.029336	2	1
423430	Computer and Computer Peripheral Equipment and Software Merchant Wholesalers	0.38266	8	4
423620	Household Appliances, Electric Housewares, and Consumer Electronics Merchant Wholesalers	0.131072	4	2
423690	Other Electronic Parts and Equipment Merchant Wholesalers	0.117874	8	4
423910	Sporting and Recreational Goods and Supplies Merchant Wholesalers	0.060731	2	1
423990	Other Miscellaneous Durable Goods Merchant Wholesalers	0.056308	2	1

Labor Cost of Respondent Burden for Non-Toy Children’s Products. According to the U.S. Bureau of Labor Statistics (BLS), Employer Costs for Employee Compensation, the total compensation cost per hour worked for all private industry workers in goods-producing industries was \$43.62 (March 2023, https://www.bls.gov/news.release/archives/ecec_06162023.pdf). Based on this analysis, CPSC estimates that labor cost of respondent burden would impose a cost to industry of approximately \$12,062,413 annually (276,534 hours as stated in Table 6 × \$43.62 per hour = \$12,062,413.08).

Cost to the Federal Government. The estimated annual cost of the information collection requirements to the Federal Government is approximately \$4,448, which includes 60 staff hours to examine and evaluate the information, as needed, for Compliance activities. This is based on a GS-12, step 5 level salaried employee; the average hourly wage rate for a mid-level salaried GS-12 employee in the Washington, DC metropolitan area (effective as of January 2023) is \$51.15 (GS-12, step 5). This represents 69.0 percent of total compensation (U.S. Bureau of

DRAFT

Labor Statistics, “Employer Costs for Employee Compensation,” September 2022, Table 2., percentage of wages and salaries for all civilian management, professional, and related employees: https://www.bls.gov/news.release/archives/ecec_12152022.pdf). Adding an additional 31.0 percent for benefits brings average annual compensation for a mid-level salaried GS-12 employee to \$74.13 per hour. Assuming that approximately 60 hours will be required annually, this results in an annual cost of \$4,448 ($\$74.13 \text{ per hour} \times 60 \text{ hours} = \$4,447.8$).

CPSC has submitted the information collection requirements of this final rule for both children’s and non-children’s products to OMB for review in accordance with PRA requirements. 44 U.S.C. 3507(d).

XI. Preemption

Section 26(a) of the CPSA, 15 U.S.C. 2075(a), provides that when a consumer product safety standard is in effect and applies to a product, no state or political subdivision of a state may either establish or continue in effect a standard or regulation that prescribes requirements for the performance, composition, contents, design, finish, construction, packaging, or labeling of such product dealing with the same risk of injury unless the state requirement is identical to the Federal standard. Section 26(c) of the CPSA also provides that states or political subdivisions of states may apply to the Commission for an exemption from this preemption under certain circumstances.

Section 2(a) of Reese’s Law requires the Commission to issue a “consumer product safety standard for button cell or coin batteries and consumer products containing button cell or coin batteries.” However, if the Commission makes a determination under section 2(d) of Reese’s Law, determining that an existing voluntary standard meets the requirements in section 2(a) of Reese’s Law, section 2(e)(1) of Reese’s Law states that such voluntary standard shall be treated as a consumer product safety standard promulgated under section 9 of the CPSA (15

DRAFT

U.S.C. 2058). Therefore, the preemption provision of section 26(a) of the CPSA applies to all consumer products that fall within the scope of this DFR.

XII. Congressional Review Act

The Congressional Review Act (CRA; 5 U.S.C. 801-808) states that, before a rule may take effect, the agency issuing the rule must submit the rule, and certain related information, to each House of Congress and the Comptroller General. 5 U.S.C. 801(a)(1). The submission must indicate whether the rule is a “major rule.” The CRA states that the Office of Information and Regulatory Affairs (OIRA) determines whether a rule qualifies as a “major rule.” Pursuant to the CRA, OIRA designated this rule as not a “major rule,” as defined in 5 U.S.C. 804(2). To comply with the CRA, CPSC will submit the required information to each House of Congress and the Comptroller General.

List of Subjects

16 CFR Part 1112

Administrative practice and procedure, Audit, Consumer protection, Reporting and recordkeeping requirements, Third-party conformity assessment body.

16 CFR Part 1263

Administrative practice and procedure, Consumer protection, Batteries, Consumer protection, Imports, Infants and children, Labeling, Law enforcement.

For the reasons discussed in the preamble, the Commission amends chapter II, subchapter B, of title 16 of the Code of Federal Regulations as follows:

PART 1112—REQUIREMENTS PERTAINING TO THIRD PARTY CONFORMITY ASSESSMENT BODIES

1. The authority citation for part 1112 continues to read as follows:

Authority: Pub. L. 110-314, section 3, 122 Stat. 3016, 3017 (2008); 15 U.S.C. 2063.

DRAFT

2. Amend § 1112.15 by adding paragraph (b)(55) to read as follows:

§ 1112.15 When can a third party conformity assessment body apply for CPSC acceptance for a particular CPSC rule or test method?

* * * * *

(b) * * *

(55) 16 CFR part 1263, Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries.

* * * * *

3. Add part 1263 to read as follows:

PART 1263—SAFETY STANDARD FOR BUTTON CELL OR COIN BATTERIES AND CONSUMER PRODUCTS CONTAINING SUCH BATTERIES

Sec.

1263.1 Scope, purpose, effective date, and exemption.

1263.2 Definitions.

1263.3 Requirements for consumer products containing button cell or coin batteries.

Authority: 15 U.S.C. 2052, 2056e.

§ 1263.1 Scope, purpose, effective date, and exemption.

(a) *Scope and purpose.* As required by Reese’s Law (15 U.S.C 2056e, Public Law 117-171), this part establishes performance and labeling requirements for consumer products containing button cell or coin batteries to prevent child access to batteries during reasonably foreseeable use and misuse of the consumer product. The rule is intended to eliminate or adequately reduce the risk of injury and death to children 6 years old and younger from ingesting these batteries. This part also establishes warning label requirements for packaging of consumer products containing

DRAFT

button cell or coin batteries, these consumer products, and instructions and manuals accompanying these consumer products.

(b) *Effective date.* Except as provided in paragraph (c) of this section, all consumer products containing button cell or coin batteries subject to the rule that are manufactured or imported after [INSERT DATE 30 DAYS AFTER PUBLICATION IN THE *FEDERAL REGISTER*] must comply with the requirements of this part.

(c) *Exemption for toy products.* Any object designed, manufactured, or marketed as a plaything for children under 14 years of age that is in compliance with the battery accessibility and labeling requirements of 16 CFR part 1250, Safety Standard Mandating ASTM F963 for Toys, is exempt from the requirements of this part.

(d) *Batteries that do not present an ingestion hazard.* Button cell or coin batteries that the Commission has determined do not present an ingestion hazard are not subject to this rule. These are: zinc-air button cell or coin batteries.

§ 1263.2 Definitions.

In addition to the definitions given in section 3 of the Consumer Product Safety Act (15 U.S.C. 2052) and section 5 of Reese's Law (Notes to 15 U.S.C. 2056e), the following definitions apply for purposes of this part:

Button cell or coin battery means: (1) a single cell battery with a diameter greater than the height of the battery; or (2) any other battery, regardless of the technology used to produce an electrical charge, that is determined by the Commission to pose an ingestion hazard.

Consumer product containing button cell or coin batteries means a consumer product containing or designed to use one or more button cell or coin batteries, regardless of whether such batteries are intended to be replaced by the consumer or are included with the product or sold separately.

DRAFT

Ingestion hazard means a hazard caused by a person swallowing or inserting a button cell or coin battery into their body whereby: (1) the button cell or coin battery can become lodged in the digestive tract or airways; and (2) can potentially cause death or serious injury through choking, generation of hazardous chemicals, leaking of hazardous chemicals, electrical burns, pressure necrosis, or other means.

§ 1263.3 Requirements for consumer products containing button cell or coin batteries.

Each consumer product containing button cell or coin batteries shall comply with ANSI/UL 4200A, *Standard for Safety for Products Incorporating Button Batteries or Coin Cell Batteries*, approved on August 30, 2023. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. This material is available for inspection at the U.S. Consumer Product Safety Commission and at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html. A free, read-only copy of the standard is available for viewing on UL's website at <https://www.ulstandards.com/IBR/logon.aspx>. You may also obtain a copy from Underwriters Laboratories, Inc (UL), 333 Pfingsten Road, Northbrook, IL 60062, or through UL's Web site: www.UL.com.

Alberta E. Mills,

Secretary, Consumer Product Safety Commission.

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Part 1263

[CPSC Docket No. 2023-0004]

**Revision to Safety Standard for Button Cell or Coin Batteries and Consumer Products
Containing Such Batteries**

AGENCY: Consumer Product Safety Commission.

ACTION: Final rule.

SUMMARY: In February 2023, as required by Reese’s Law, the U.S. Consumer Product Safety Commission (CPSC or Commission) issued a notice of proposed rulemaking (NPR) to establish performance and labeling requirements for consumer products containing button cell or coin batteries, and requirements for labeling of button cell or coin battery packages, to eliminate or adequately reduce the risk of injury from ingestion of button cell or coin batteries by children six years old and younger. In a separate *Federal Register* notice, the Commission is publishing a direct final rule to incorporate by reference a voluntary standard as the mandatory standard for consumer products containing button cell or coin batteries. The Commission issues this final rule to complete Reese’s Law requirements for warning labels on the packaging of button cell or coin batteries. Button cell or coin battery packaging subject to this final rule must be certified as compliant with these warning label requirements.

DATES: Button cell or coin battery packaging manufactured or imported after [INSERT DATE 1 YEAR AFTER PUBLICATION IN THE *FEDERAL REGISTER*] must comply with this final rule.

DRAFT

FOR FURTHER INFORMATION CONTACT: William Cusey, Small Business

Ombudsman, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; telephone 301-504-7945; email: sbo@cpsc.gov.

SUPPLEMENTARY INFORMATION:

I. Background and Statutory Authority¹

On February 9, 2023, pursuant to Reese’s Law (Pub. L. No. 117-171, 15 U.S.C. 2056e), the Commission published an NPR to establish a Safety Standard and Notification Requirements for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries. 88 FR 8692. Consistent with section 2(a) of Reese’s Law, the NPR proposed performance and labeling requirements for consumer products containing button cell or coin batteries² and labeling requirements for button cell and coin battery packaging. 15 U.S.C. 2056(a).

CPSC received 38 comments during a 30-day comment period ending in March 2023; four of the comments were duplicates. CPSC received two late-filed comments; one is out-of-scope for this rulemaking. We also received nine comments in response to an April 11, 2023 Paperwork Reduction Act (PRA) notice. 88 FR 21652. Most of the public comments concerned performance and labeling requirements for consumer products, which are addressed in a separate direct final rule establishing 16 CFR part 1263. That direct final rule incorporates by reference ANSI/UL 4200A, *Standard for Safety for Products Incorporating Button Batteries or Coin Cell Batteries*, approved on August 30, 2023 (UL 4200A-2023), as the mandatory standard for consumer products containing button cell or coin batteries.

¹ To implement requirements in Reese’s Law for labeling of button cell or coin battery packaging, on September X, 2023, the Commission voted (x-x) to publish this final rule.

² The Notes of Reese’s Law, 15 U.S.C. 2056e, define the phrase “consumer product containing button cell or coin batteries” as “a consumer product containing or designed to use one or more button cell or coin batteries, regardless of whether such batteries are intended to be replaced by the consumer or are included with the product or sold separately.”

DRAFT

UL 4200A-2023 does not contain warning label requirements for button cell or coin battery packaging. Accordingly, in this notice, pursuant to section 2(a)(2)(A) and 2(b) of Reese’s Law, we review and respond to the public comments related to warning labels for packaging of button cell or coin batteries and finalize a rule for such warning labels. 15 U.S.C. 2056e(a)(2)(A) and (b). As explained in section I.D of this preamble, based on the comments, the final rule contains several modifications to requirements for battery package labeling from the NPR.³

A. *Reese’s Law*

President Biden signed Reese’s Law on August 16, 2022. 15 U.S.C. 2056e. The purpose of Reese’s Law is to protect children six years old and younger against hazards associated with the ingestion of button cell or coin batteries during reasonably foreseeable use or misuse conditions. 15 U.S.C. 2056e(a)(1). Section 5 of Reese’s Law broadly defines a “button cell or coin battery” as “(A) a single cell battery with a diameter greater than the height of the battery; or (B) any other battery, regardless of the technology used to produce an electrical charge, that is determined by the Commission to pose an ingestion hazard.”^{4, 5} Notes to 15 U.S.C. 2056e.

Section 2(a)(2) of Reese’s Law mandates that the Commission establish, by rulemaking, warning label requirements for consumer products containing button cell or coin batteries, and for packaging of button cell or coin batteries. The warning labels required by section 2(a)(2) of

³ The information in this final rule is based on information and analysis provided in the August 31, 2023, Staff Briefing Package: Draft Final Rule to Establish a Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries (Staff’s Final Rule Briefing Package), available at: [insert link](#), and on the January 11, 2023, Staff Briefing Package: Draft Proposed Rule to Establish a Safety Standard and Notification Requirements for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries (Staff’s NPR Briefing Package), available at: <https://www.cpsc.gov/s3fs-public/NoticeofProposedRulemakingSafetyStandardandNotificationRequirementsforButtonCellorCoinBatteriesandConsumerProductsContainingSuchBatteries.pdf?VersionId=kDinNeydtkkt3T8RRtzN4u1GTXPRjpEl>.

⁴ The definitions in section 5 of Reese’s Law are codified in the Notes to 15 U.S.C. 2056e.

⁵ This final rule focuses on addressing button cell and coin batteries under part (A) of the definition because other batteries where the diameter is less than the height, such as AAA cylindrical batteries, do not pose the same type or degree of ingestion hazard as button cell or coin batteries.

DRAFT

Reese's Law must (1) clearly identify the hazard of ingestion, and (2) instruct consumers, as practicable, to keep new and used batteries out of the reach of children, to seek immediate medical attention if a battery is ingested, and to follow any other consensus medical advice. 15 U.S.C. 2056e(b).

In a companion rulemaking notice, the Commission determines that UL 4200A-2023 meets the performance and labeling requirements of section 2(a) of Reese's Law, and issues a direct final rule to incorporate by reference UL 4200A-2023 as the mandatory standard for consumer products containing button cell or coin batteries. As the scope of UL 4200A-2023 is on consumer products, it does not require the warnings mandated by Reese's Law for the packaging of button cell or coin batteries. 15 U.S.C. 2056e(a)(2)(A). Accordingly, we issue this final rule to establish warning label requirements for packaging of button cell or coin batteries to complete implementation of section 2 of Reese's Law.

Section 2(g) of Reese's Law provides that any time after the promulgation of a final consumer product safety standard under section 2(a), the Commission may initiate a rulemaking in accordance with 5 U.S.C. 553 to modify the requirements of the standard or revised standard. 15 U.S.C. 2056e(g). Any rule promulgated under section 2(g) of Reese's Law will also be treated as a consumer product safety rule promulgated under section 9 of the CPSA (15 U.S.C. 2058). *Id.*

Section 3 of Reese's Law requires special packaging, meaning child-resistant packaging, for button cell or coin batteries. These requirements, codified in the Notes to 15 U.S.C. 2056e, are self-implementing, and do not require CPSC to issue a rule. Section 3 of Reese's Law was effective by operation of the statute on February 12, 2023.

Section 4 of Reese's Law, Notes to 15 U.S.C. 2056e, states that the special packaging requirements in section 3(a) do not apply with respect to button cell or coin batteries that are in

DRAFT

compliance with the marking and packaging provisions of the ANSI Safety Standard for Portable Lithium Primary Cells and Batteries (ANSI C18.3M). This exemption does not apply to the requirements for battery package labeling in section 2 of Reese’s Law, which this final rule implements.

B. Updated Incident Data

Based on information in the National Electronic Injury Surveillance System (NEISS), the NPR reflected staff’s estimate that from 2011-2021, approximately 54,300 emergency room visits were associated with human ingestion, impaction, or insertion of button cell or coin batteries. The data show that these incidents occur most often with children aged 4 years or younger. Ingestion of a button battery has caused severe injuries and deaths: based on data in the Consumer Product Safety Risk Management System (CPSRMS), the NPR identified 25 fatalities from 2016 through 2021. 88 FR 8696-98.

Since the NPR, 2 additional deaths of children in the United States associated with ingestion of button or coin cell batteries have been added to the CPSRMS database, for the years 2020-2021. Moreover, reporting to CPSC through May 1, 2023, indicates another 5 more recent deaths of children—3 in 2022 and 2 in the first three months of 2023. Combining all reported deaths since 2011, CPSC staff has identified 32 reported deaths in the United States from button cell or coin battery ingestion for the period January 1, 2011 through March 31, 2023. *See* Tab B of Staff’s Final Rule Briefing Package.

Additionally, Tab C of Staff’s Final Rule Briefing Package updates incident data from the National Capital Poison Center (NCPC). Since the NPR, from June 2022 through May 2023, the NCPC reported 2 additional child deaths due to ingestion of button cell or coin batteries. Both cases were from lithium button cell or coin batteries impacted in the esophagus; one battery was impacted for 25 days, the other for 3 days. The children died of hematemesis and sepsis,

DRAFT

respectively. This brings the total fatal cases tracked by NCPC to 71 since 1977. Also, since the NPR, from June 2022 through May 2023, NCPC reported 13 additional cases of severe injury from button cell or coin battery ingestion, bringing the total since 1977 to 280.

C. Description of Battery Packaging Labeling Requirements in the NPR

The NPR proposed a rule to address the battery ingestion hazard for children six years of age or younger. Children can potentially gain access to button cell or coin batteries from battery packaging and be exposed to the ingestion hazard. Six out of 119 fatal and nonfatal incident narratives in the CPSRMS refer to loose batteries or battery packaging hazards, and staff estimates that at least 7 percent of NEISS incidents involve loose batteries or batteries liberated from the packaging. Figure 1 shows examples of button cell or coin batteries that, when packaged, are subject to this final rule.

		
LR44 button cell, 11.6mm (0.45 inch) diameter x 5.4mm (0.21 inch) thick	LR754 button cell, 7.9 mm (0.31 inch) diameter, 5.4mm (0.21 inch) thick	LR626 button cell, 6.8 mm (0.26 inch) diameter, 2.6mm (0.10 inch) thick
		
CR2032, 20mm (0.787 inch) diameter	CR2025, 20mm (0.787 inch) diameter	CR2450, 24mm (0.945 inch) diameter

Figure 1. Example button cell and coin batteries.

The NPR assessed warnings requirements in several voluntary standards, and preliminarily concluded that none of the voluntary standards were adequate to meet the requirements in Reese’s Law. Tab C of Staff’s NPR Briefing Package. 88 FR 8704-05. Table 11 in the NPR summarizes the Commission’s assessment of warnings requirements in voluntary standards for button cell and coin battery packaging, finding that none of the voluntary standards

DRAFT

adequately address warnings on battery packaging in accordance with Reese’s Law. 88 FR 8705.

Because none of the voluntary standards were deemed to meet the requirements in Reese’s Law, the Commission proposed warnings requirements for button cell and coin battery packaging and packaging of batteries included separately with consumer products , explaining that labeling of button cell or coin battery packaging is intended to reduce the likelihood of loose batteries being liberated from these products and to warn caregivers of the battery ingestion hazards to children. 88 FR 8706-09. The proposed requirements followed the format requirements in ANSI Z535.4, *Product Safety Signs and Labels*, and were based on warnings found in ANSI C18.3M, ASTM F963, UL 4200A-2020, and other voluntary standards. *Id.*

The NPR also defined two terms relevant to placement of warning labels. The “principal display panel” is the display panel for a retail package of button cell or coin batteries or retail package of a consumer product containing such batteries that is most likely to be displayed, shown, presented, or examined under normal or customary conditions of display for retail sale. The principal display panel is typically the front of the package. The “secondary display panel” means a display panel for a retail package of a button cell or coin batteries or retail package of a consumer product containing such batteries that is opposite or next to the principal display panel. The secondary display panel is typically the rear or side panels of the package.

The NPR proposed a warning for the principal display panel of the battery packaging, shown in Figure 2, to meet the requirements in section 2 of Reese’s Law.

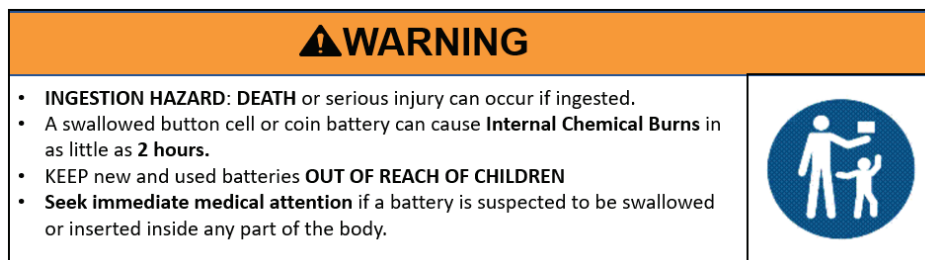

Figure 2. Warning of Ingestion Hazard for Battery Packaging.

DRAFT

The NPR proposed that battery packaging include the following warning statements:

- “**INGESTION HAZARD: DEATH** or serious injury can occur if ingested.” This sentence identifies the hazard of ingestion, as required by section 2(b)(1) of Reese’s Law.
- “A swallowed button cell or coin battery can cause **Internal Chemical Burns** in as little as **2 hours**.” This sentence provides warning label requirements, as stated in Reese’s Law; an effective warning should have an explanation of how and why ingestion of a button cell or coin battery is hazardous.
- “**KEEP** new and used batteries **OUT OF REACH OF CHILDREN**.” This sentence implements language in section 2(b)(2) of Reese’s Law. In addition, use of the icon recognized for keeping items out of children’s reach is intended to quickly convey the required message and direct the reader’s attention to the label.
- “**Seek immediate medical attention** if a battery is suspected to be swallowed or inserted inside any part of the body.” This sentence implements language in section 2(b)(2) of Reese’s Law and informs the consumer what actions should be taken if a button cell or coin battery is ingested or inserted into any part of the body. The warning includes the term “inserted” because insertions into the nose can be aspirated into the trachea and lead to ingestion, with the same risk of injury as oral ingestion.

The NPR proposed that the icon incorporated with the warning must be at least 8 mm (0.31 in.) in diameter for visibility, and that text size be calculated per Table 1 in the regulation text (Table 12 in the NPR preamble at 88 FR 8706). The NPR also stated that if space prohibits the full warning with the icon shown in Figure 2 in accordance with the formatting requirements of Table 1 of the regulation text, packaging is required to use the “Keep out of Reach” icon (Figure 3) on the principal display panel and the warning text must be placed on the secondary

DRAFT

display panel, as shown in Figure 4. 88 FR 8707. The icon must be at least 20 mm (0.79 in.) in diameter for visibility.

Figure 3. “Keep Out of Reach” Icon

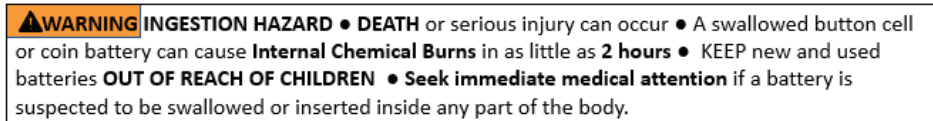

Figure 4. Warning Text Without Icon.

To address the hazard of button cell or coin batteries that become loose or separated from packaging, and to provide critical safety-related information should an ingestion incident occur, the NPR proposed that the following information implementing section 2(b)(2) of Reese’s Law be placed on the secondary display panel of the packaging:

- (1) “Keep in original package until ready to use.” This statement instructs consumers to leave the batteries in child-resistant packaging as a means of keeping new batteries out of the reach of children.
- (2) “Immediately dispose of used batteries and keep away from children. Do NOT dispose of batteries in household trash.” This statement instructs consumers on how to prevent ingestion hazards from used batteries by keeping used batteries out of the reach of children, including out of household trash.
- (3) “Call a local poison control center for treatment information.” This statement makes more actionable the guidance to “immediately seek medical attention” as described in section 2(b)(2) of Reese’s Law, and provides consumers with a resource for obtaining medical advice suitable to their situation.

88 FR 8707.

DRAFT

D. Changes Adopted in the Final Rule

Based on the consideration of comments received and analysis in Staff's Final Rule Briefing Package, the labeling requirements for button cell or coin battery packaging are being finalized as proposed, with three modifications:

- *Warning label colors:* The final rule clarifies that specific colors on warning labels, in accordance with ANSI Z535, are required only if the label is present in more than one color, to allow flexibility in warning label designs and align with existing requirements in relevant voluntary standards.
- *Warning label letter size:* The final rule clarifies that the minimum text size for warning labels must be based on the product display panel size.
- *Treatment information:* To provide specific guidance to consumers on an available contact for treatment information, the final rule requires that button battery packaging display the National Battery Ingestion Hotline phone number. Additionally, the final rule replaces the warning statement "Call a local poison control center for treatment information" with the more actionable presentation of the National Battery Ingestion Hotline phone number.

E. Scope of Battery Packaging Subject to the Final Rule

This rule finalizes the warning label requirements for packaging of button cell or coin batteries, including batteries packaged separately with consumer products. Although section 4 of Reese's Law, Notes to 15 U.S.C. 2056e, states that the special packaging requirements in section 3(a) do not apply with respect to button cell or coin batteries that are in compliance with the marking and packaging provisions of the ANSI Safety Standard for Portable Lithium Primary Cells and Batteries (ANSI C18.3M), this exemption does not apply to the labeling requirements of this rule. Therefore, all packages of button cell or coin batteries that fall within the definition of a "button cell or coin battery," except batteries listed in §1263.1(d) (currently zinc-air

DRAFT

batteries), must comply with the warning label requirements in this rule. Consistent with the NPR, the final rule does not require warning labels on zinc-air batteries. These requirements are consistent with ANSI C18.3M; battery packaging can comply with both the labeling requirements in ANSI C18.3M and this final rule.

F. Assessment of Labeling Requirements for Packaging of Button Cell or Coin Batteries in Existing Voluntary Standards

None of the voluntary standards addressing warning labels on button cell or coin battery packaging have been updated since publication of the NPR. Accordingly, and for the reasons further discussed in Part II below, the Commission adopts the NPR's assessment that no existing voluntary standard meets the warning label requirements that section 2 of Reese's Law establishes for battery packaging.

II. Comments on the NPR

Below we summarize and respond to the comments received in response to the NPR that relate to the proposed requirements for battery package labeling.

Comments in Response to Questions on Marking and Labeling Requirements

A. Whether all button cell or coin battery packaging should include the warning on the principal display panel.

Comment 1: Several commenters, including a coalition of medical and consumer organizations, the Battery Association of Japan (BAJ), Energizer, Duracell, Landsdowne Labs, National Electrical Manufacturers Association (NEMA), and the Consumer Technology Association (CTA), support warning labels on the packaging of button cell and coin battery packaging. The coalition of medical and consumer organizations and Duracell support the use of a conspicuous warning label on the principal display panel, whereas others (BAJ, Energizer, CTA, Information Technology Industry Council (ITI)) request flexibility in the warning label location and the placement of the "KEEP OUT OF REACH" icon, citing limitations of battery

DRAFT

packaging size. Seven commenters support warning label placement as allowed by current voluntary standards, as such standards do not mandate the warning label location. BAJ suggests, however, that the icon be accompanied by the warning “KEEP OUT OF REACH” because the icon may not be well known.

Response 1: Reese’s Law requires warning labels on the packaging of button cell or coin batteries and minimum content requirements. Existing voluntary standards (IEC 60086-4 &-5) do not set forth location requirements, or specify that warnings be on the back of the packaging (ANSI C18.3). Existing voluntary standards often do not specify the content of the warning label. While the use of an icon is permissible in voluntary standards, icon use is based on the diameter of the battery.

Consistent with Reese’s Law and the ANSI standard, the final rule requires battery packaging to identify the hazard, explain how to avoid the hazard, and requires that warnings be conspicuous on the front of the packaging where it is more likely to be seen. The final rule requires a warning label on all button cell and coin battery packages within the scope of the rule, regardless of battery chemistry or battery size. The warning’s content also outlines options for a condensed warning label in the form of an icon on the front with additional text to be placed on the back, to accommodate limited space on the battery packaging. The “KEEP OUT OF REACH” text is not required to accompany the icon; however, manufacturers may choose to include the text voluntarily to clarify the icon’s meaning. The final rule does not include any changes to the warning on the front of the battery packaging as a result of these comments.

B. Whether the requirement for the “Keep Out of Reach” icon to be at least 20 mm in diameter for visibility purposes, when alone on the front of battery packaging, provides a sufficient warning of the ingestion hazard.

DRAFT

Comment 2: Renata SA comments that the 6 mm minimum icon size requirements in the IEC 60086-4 voluntary standard are adequate. BAJ commented that the icon sizes of minimum 20 mm and minimum 8 mm are not necessary because “based on the market results so far” a minimum size of 6 mm icon is sufficient.

Response 2: We do not have the details of the “market results so far” that BAJ references to determine whether the 6 mm icon is sufficiently attention-getting for consumers, recognized by consumers, and adhered to by industry. Based on an evaluation of existing battery packaging, staff assesses in Tab D of Staff’s Final Rule Briefing Package that the recommended sizes of icons in the proposed rule are feasible and likely to get the attention of the consumer. After reviewing a number of battery packages, staff advises that the 20 mm diameter icon is sufficiently large to be visible to most consumers, and sufficiently small to fit on existing battery packaging. The final rule contains no changes in response to these comments.

C. Whether the Commission should require ingestion warnings on zinc-air button cell or coin battery packaging.

Comment 3: Three commenters (Duracell, Energizer, and NEMA) agree that warning labels on zinc-air batteries are not needed regarding the ingestion hazard, citing low risk of injury. Landsdowne Labs Inc., a coalition of medical and consumer organizations, and Dr. Ian Jacobs (Director at the Center for Pediatrics Airway Disorders at the Children’s Hospital of Philadelphia) support warning labels on packaging for zinc-air batteries, because they pose an insertion hazard. BAJ states that labeling on zinc-air batteries should be a recommendation, rather than a requirement, and that if zinc-air batteries are labeled, then they should use the word CAUTION instead of WARNING. Dr. Jacobs and Dr. Jatana (Director of Pediatric Otolaryngology in the Department of Otolaryngology Head and Neck Surgery at Nationwide Children’s Hospital and Wexner Medical Center at Ohio State University) state that zinc-air

DRAFT

batteries pose a risk of injury when inserted into the ear canals and nasal cavities, and should be labeled accordingly.

Response 3: Tab C of Staff's Final Rule Briefing Package reviews the literature and the incident data regarding ingestion of zinc-air batteries. Staff advises that labeling of zinc-air batteries for an ingestion hazard is unnecessary, and may cause consumer confusion, because zinc-air batteries are not associated with an ingestion hazard.

D. Comments addressing silver-oxide battery chemistries.

Comment 4: CPHE, FH, AWA and Renata SA state that silver-oxide batteries should be excluded from a Commission rule implementing Reese's Law because of the lack of data on fatal incidents with these batteries and children's inability to access them from watches. Duracell states that silver-oxide batteries should contain different warnings than lithium batteries because they are lower voltage. Switzerland asks whether silver oxide batteries could be excluded from the rule.

Response 4: Based on the medical literature, staff does not recommend that silver-oxide batteries be removed from the scope of the final rule. As reviewed in Tab C of Staff's Final Rule Briefing Package, Jatana *et.al.* (2017) found in testing using an animal model that silver-oxide button or coin cell batteries caused severe esophageal injuries.

Comments in Response to Questions on Other Topics Posed in the NPR

E. Whether a later or an earlier effective date would be appropriate to comply with the proposed requirements and to provide specific information to support such a later or an earlier effective date.

Comment 5: Commenters differed in their recommendations for an effective date, from the proposed 180 days (consumer advocates) to up to 3 years (manufacturer associations). Multiple manufacturers, trade associations, and Switzerland provided comments stating that a

DRAFT

longer effective date is required to provide compliant products to the U.S. market. A few commenters provided detailed timelines of the necessary activities (product redesign, testing, certification sourcing, supply chain management, *etc.*), which ranged from 12 months to 36 months in total. A commenter also explained that additional time is required to accredit third party laboratories for a large variety of product types. Energizer and NEMA request that battery manufacturers be allowed to sell their existing stock of child-resistant packaging and labels that were purchased to comply with section 3 of Reese's Law.

Response 5: Arguments made by manufacturers for a longer effective date relate primarily to performance and labeling requirements for consumer products, and not to battery package labeling. For example, battery packaging is not a children's product that requires third party testing; manufacturers can self-certify compliance to labeling requirements. However, the Commission recognizes that warning label requirements may compel manufacturers to revise or reprint existing packaging, and manufacturers may want to consult outside laboratories regarding compliance. Nevertheless, changes to labeling of battery packaging does not require extensive product redesign. To provide time for battery manufacturers to comply with this final rule, the Commission is establishing an effective date of one year after publication in the *Federal Register*, the low end of the time frame sought by commenters for the NPR's proposals, generally.

F. Comments addressing the use of color in the requirements for marking and labeling.

Comment 6: Several commenters (JEITA, Duracell, Gramin, HCPS and CTA) state that the use of color on packing, instructions, or manuals, and on some consumer products would be challenging and, in most cases, add costs to the manufacturing and printing process, particularly to those materials that do not already incorporate color. Duracell and Technet also stress that

DRAFT

other product safety standards (*e.g.*, ASTM F963, ANSI C18.3, or ANSI Z535 series) do not mandate the use of colors and accept black and white printing or contrasting colors to the background it is printed on. Commenters state, however, that if color is used for the signal panel, colors should conform to ANSI Z535.1 safety colors that correspond to the safety message. The Toy Association and RILA state that the use of color may not be reasonable for printing on certain product materials, for example, colored or textured plastics.

Response 6: Applying color to some materials (*e.g.*, consumer product packaging, manuals, or other collateral material) that do not already contain color may present a burden to some manufacturers. ANSI Z535.4 provides flexibility for special circumstances that limit the use of colors while preserving the visibility and noticeability of the label by requiring contrast. To address commenter concerns, the final rule requires the use of color when the subject materials already use printed color processing; otherwise, the use of either black and white or contrasting colors is acceptable. The use of color is not specified in Reese's Law, and with this modification the label or icon will visually align with other information on the display while still being noticeable due to its contrast or color.

G. Comments addressing text size, icons, and alternative symbols for marking and labeling.

Comment 7: Renata Batteries, ITI, The Toy Association, RILA, BAJ, and Duracell express cost concerns with increased packaging dimensions required to accommodate larger warning labels and font sizes, especially for small products. Another commenter states that the minimum letter size requirements for packaging warnings may reduce the prominence of other warnings on product packaging.

Response 7: The NPR proposed that font size requirements for both on-product and on-packaging warning labels be determined based on the size of the principal display panel (*e.g.*, the

DRAFT

front face) of the package or the product display panel (e.g., surface area on, near, or in the battery compartment). Reese's Law requires that warning labels clearly identify the hazard of ingestion, and this requirement is met when warning labels are displayed prominently on the principal display panel. For very large products or packages with principal display panels exceeding 400 inch², the required letter size could be larger than standard font sizes usually referenced in other standards. The required letter size in the final rule is proportional to the display panel size and allows easy visibility and noticeability of the label. The minimum letter size is otherwise comparable to font sizes in other standards, and therefore of similar prominence when displayed on the same panel. The largest packaging will have ample room for additional warnings that are of comparable size to the requirements in the final rule. This level of prominence is appropriate to inform consumers which products contain button cell or coin batteries and to adequately reduce the risk of injury from ingestion.

H. Whether the requirement to provide other information related to the safety of button cell or coin batteries is sufficient to address the risk of ingestion and other hazards associated with button cell or coin batteries.

Comment 8: One commenter (Billie Jo Burr) states that labeling should provide consumers with the nationwide poison control center phone number to ease the process of obtaining assistance quickly.

Response 8: We agree with the commenter that providing consumers with an appropriate contact phone number will provide an actionable step that will ease the process of obtaining assistance quickly if a caregiver suspects a button cell or coin battery ingestion. The National Battery Ingestion Hotline (NBIH) is dedicated solely to addressing battery ingestions, and is therefore an immediate and practical resource available to consumers who suspect a battery

DRAFT

ingestion. The final rule adds the contact number for the NBIH, currently 1-(800) 498-8666, on the required warning labels for battery packaging.

Comments Addressing the Paperwork Reduction Act

Tab A of Staff's Final Rule Briefing Package and the companion direct final rule to establish in 16 CFR part 1263 a Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries, provide CPSC's final rule PRA burden estimate for battery package labeling, and summarize and respond to comments related to CPSC's PRA burden estimate in the NPR.

III. Description of the Final Rule

This final rule adds to 16 CFR part 1263 warning label requirements for packaging of button cell or coin batteries, including such batteries packaged separately with a consumer product. Primarily, the final rule adds § 1263.4, requirements for labeling of button cell or coin battery packaging. We also add several provisions in the scope and definitions to fully implement and explain the required warnings.

The final rule amends the last sentence in the NPR's proposed § 1263.1(a) to state that part 1263 establishes warning label requirements for "packaging of button cell or coin batteries, including button cell or coin batteries packaged separately with a consumer product," to ensure that the scope of the rule reflects requirements for battery package labeling. The final rule also amends § 1263.1(b) to add a one-year effective date for battery packaging labeling, as explained in section V of this preamble.

Final rule § 1263.2 adds two definitions for the "principal display panel" and the "secondary display panel." Section 1263.4 uses these definitions to explain requirements for the placement of battery package labeling.

DRAFT

Final rule § 1263.4 adds requirements for warning labels for button cell or coin battery packaging, including for such batteries packaged separately with a consumer product. The NPR's warning label requirements are explained in section I.C of this preamble. They are being finalized with the three modifications explained in section I.D of this preamble.

IV. Testing, Certification, and Notice of Requirements

Section 14(a) of the CPSA includes requirements for certifying that consumer products comply with applicable mandatory standards. 15 U.S.C. 2063(a). Section 14(a)(1) addresses required certifications for non-children's products, and sections 14(a)(2) and (a)(3) address certification requirements specific to children's products. Packages of button cell and coin batteries are unlikely to ever be children's products and therefore do not require third party testing. Manufacturers can self-certify compliance with the labeling requirements in this final rule.

Section 14(a)(1) of the CPSA requires every manufacturer (which includes importers per 15 U.S.C. 2052(a)(11)) of a non-children's product that is subject to a consumer product safety rule under the CPSA, or to a similar rule, ban, standard, or regulation under any other law enforced by the Commission, to certify that the product complies with all applicable CPSC-enforced requirements. 15 U.S.C. 2063(a)(1). Section 14(g) of the CPSA contains content and availability requirements for certificates. 15 U.S.C. 2063(g).

V. Effective Date

The APA generally requires that the effective date of a rule must be at least 30 days after publication of a final rule. 5 U.S.C. 553(d). In the NPR, the Commission proposed that a final rule containing (1) performance and warning label requirements for consumer products containing button cell or coin batteries, and (2) warning label requirements for button cell or coin battery packaging, would become effective 180 days after publication of a final rule in the

DRAFT

Federal Register. Section II.E of this preamble describes comments from multiple manufacturers and trade associations stating that a longer effective date is required to supply compliant products to the U.S. market. Commenters provided detailed timelines of the necessary activities to become compliant, including time for product redesign, testing, certification sourcing, supply chain management, and other issues, with the timeline ranging from 12 months to 36 months in total. A commenter also explained that additional time is required to accredit third party laboratories for a large variety of product types.

The Commission recognizes that the rule's warning label requirements may require manufacturers to revise or reprint existing packaging. However, battery packaging is not a children's product that requires third party testing. Manufacturers can self-certify compliance to labeling requirements. Also, changes to labeling of battery packaging do not require extensive product redesign; revising labeling on battery packaging will not require a lengthy timeframe. To provide time for battery manufacturers to comply with this final rule, the Commission establishes an effective date of one year after publication in the *Federal Register*, the low end of the time frame suggested by commenters with respect to the full set of requirements proposed in the NPR.

VI. Environmental Considerations

The Commission's regulations address whether the agency is required to prepare an environmental assessment or an environmental impact statement. Under these regulations, certain categories of CPSC actions normally have "little or no potential for affecting the human environment," and therefore, do not require an environmental assessment or an environmental impact statement. 16 CFR 1021.5(c)(1). Safety standards providing labeling requirements for packaging of button cell or coin batteries fall within this categorical exclusion.

DRAFT

VII. Regulatory Flexibility Analysis

The Regulatory Flexibility Act (RFA; 5 U.S.C. 601-612) generally requires agencies to review proposed and final rules for their potential economic impact on small entities, including small businesses, and prepare regulatory flexibility analyses. 5 U.S.C. 603, 604. The RFA applies to any rule that is subject to notice and comment procedures under section 553 of the APA. *Id.* However, a regulatory flexibility analysis is not required if an agency certifies that a rule will not have a significant impact on a substantial number of small businesses. Tab H of Staff's Final Rule Briefing Package contains an economic analysis for this final rule establishing labeling requirements for packaging of button cell or coin batteries. Based on the information in that analysis, the Commission certifies that this final rule will not have a significant impact on a substantial number of small businesses.

VIII. Paperwork Reduction Act

This final rule contains information collection requirements that are subject to public comment and review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). For convenience and clarity to stakeholders, section XII of the preamble for the direct final rule, Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries, contains the PRA analysis for both rules implementing Reese's Law, including this rule addressing the labeling of packaging of button cell or coin batteries.

CPSC has submitted the information collection requirements of this final rule for button cell or coin battery package labeling to OMB for review in accordance with PRA requirements. *See* 44 U.S.C. 3507(d).

DRAFT

IX. Preemption

Section 26(a) of the CPSA, 15 U.S.C. 2075(a), provides that when a consumer product safety standard is in effect and applies to a product, no state or political subdivision of a state may either establish or continue in effect a standard or regulation that prescribes requirements for the performance, composition, contents, design, finish, construction, packaging, or labeling of such product dealing with the same risk of injury unless the state requirement is identical to the Federal standard. Section 26(c) of the CPSA also provides that states or political subdivisions of states may apply to the Commission for an exemption from this preemption under certain circumstances.

Section 2(a) of Reese’s Law requires the Commission to issue a “consumer product safety standard for button cell or coin batteries and consumer products containing button cell or coin batteries,” and section 2(c) of Reese’s Law states that a consumer product safety standard promulgated under subsection (a) shall be treated as a consumer product safety rule promulgated under section 9 of the CPSA (15 U.S.C. 2058). Therefore, the preemption provision of section 26(a) of the CPSA applies to all consumer products that fall within the scope of this final rule issued under section 2 of Reese’s Law. 15 U.S.C. 2056e.

X. Congressional Review Act

The Congressional Review Act (CRA; 5 U.S.C. 801-808) states that, before a rule may take effect, the agency issuing the rule must submit the rule, and certain related information, to each House of Congress and the Comptroller General. 5 U.S.C. 801(a)(1). The submission must indicate whether the rule is a “major rule.” The CRA states that the Office of Information and Regulatory Affairs (OIRA) determines whether a rule qualifies as a “major rule.” Pursuant to the CRA, OIRA designated this rule as not a “major rule,” as defined in 5 U.S.C. 804(2). To comply

DRAFT

with the CRA, CPSC will submit the required information to each House of Congress and the Comptroller General.

List of Subjects

16 CFR Part 1263

Administrative practice and procedure, Consumer protection, Batteries, Consumer protection, Imports, Infants and children, Labeling, Law enforcement.

For the reasons discussed in the preamble, the Commission amends 16 CFR chapter II as follows:

PART 1263—SAFETY STANDARD FOR BUTTON CELL OR COIN BATTERIES AND CONSUMER PRODUCTS CONTAINING SUCH BATTERIES

1. The authority citation for part 1263 continues to read as follows:

Authority: 15 U.S.C. 2052, 2056e.

2. Add the following section to the table of contents:

1263.4 Requirements for labeling of button cell or coin battery packaging.

3. Add the following sentence to the end of § 1263.1(a):

“Additionally, this part establishes warning label requirements for packaging of button cell or coin batteries, including button cell or coin batteries packaged separately with a consumer product.”

4. Add the following sentence to the end of § 1263.1(b):

“Packages of button cell or coin batteries manufactured or imported after [INSERT DATE 1 YEAR AFTER PUBLICATION IN THE *FEDERAL REGISTER*] must meet the labeling requirements for battery packaging in § 1263.4.”

5. Add the following definitions to § 1263.2:

DRAFT

Principal display panel means the display panel for a retail package of button cell or coin batteries that is most likely to be displayed, shown, presented, or examined under normal or customary conditions of display for retail sale. The principal display panel is typically the front of the package.

Secondary display panel means a display panel for a retail package of button cell or coin batteries that is opposite or next to the principal display panel. The secondary display panel is typically the rear or side panels of the package.

6. Add the following section to part 1263:

§ 1263.4 Requirements for labeling of button cell or coin battery packaging.

(a) *General Requirements for labeling of button cell or coin battery packaging.* (1) All warning statements must be clearly visible, prominent, legible, and permanently marked.

(2) Warning statements must be in contrasting color to the background onto which the warning statement is printed.

(3) Warning statements must be in English.

(4) The safety alert symbol, an exclamation mark in a triangle, when used with the signal word, must precede the signal word. The base of the safety alert symbol must be on the same horizontal line as the base of the letters of the signal word. The height of the safety alert symbol must equal or exceed the signal word letter height.

(5) The signal word “WARNING” and safety alert symbol must be in black letters on an orange background unless this would conflict with §1263.4(a)(1)-(2) or only one color is present, in which case, the signal word and safety alert symbol must contrast to the background on which they are printed. The signal word must appear in sans serif letters in upper case only.

DRAFT

(6) Certain text in the message panel must be in bold and in capital letters as shown in the example warning labels (Figure 1 to paragraph (b)(1) and Figure 3 to paragraph (b)(2)) to get the attention of the reader.

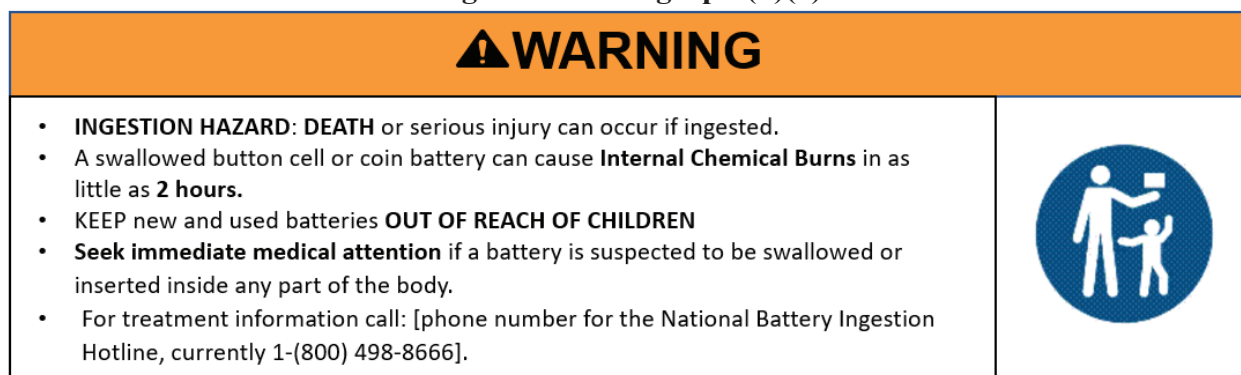

(7) For labels that are required to be on the packaging of button cell and coin batteries, text size must be dependent on the area of the principal display panel. Text size must be determined based on Table 1 to this paragraph (a)(7).

**Table 1 to Paragraph (a)(7)—Letter size for recommended warning labels.
[Information based on 16 CFR part 1500.19(d)(7).]**

Letter size measurements in inches								
<i>Display Area: Inches²</i>	0–2	+2–5	+5–10	+10–15	+15–30	+30–100	+100–400	+400
Signal word (WARNING)	3/64	1/16	3/32	7/64	1/8	5/32	1/4	1/2
Statement of Hazard	3/64	3/64	1/16	3/32	3/32	7/64	5/32	1/4
Other Text	1/32	3/64	1/16	1/16	5/64	3/32	7/64	5/32
Letter size measurements in cm (for reference only)								
<i>Display Area: cm²</i>	0-13	+13-32	+32-65	+65-97	+97-194	+194-645	+645-2,581	+2,581
Signal word (WARNING)	0.119	0.159	0.238	0.278	0.318	0.397	0.635	1.270
Statement of Hazard	0.119	0.119	0.159	0.238	0.238	0.278	0.397	0.635
Other Text	0.079	0.119	0.159	0.159	0.198	0.238	0.278	0.397

(b) *Warning label requirements for button cell or coin battery packaging.* (1) The principal display panel of the packaging must include the warning label in Figure 1 to this paragraph (b)(1). The icon must be at least 8 mm (0.3 inches) in diameter. The text must state the following warnings as shown in Figure 1 to this paragraph (b)(1).

Figure 1 to Paragraph (b)(1)

(2) If space prohibits the full warning label shown in Figure 1 to paragraph (b)(1), place the icon shown in Figure 2 to this paragraph (b)(2) on the principal display panel with the text shown

DRAFT

in Figure 3 to this paragraph (b)(2) on the secondary display panel. The icon must be at least 20 mm in diameter. The text must state the following warnings as shown on Figure 3 to this paragraph (b)(2).

Figure 2 to Paragraph (b)(2)

Figure 3 to Paragraph (b)(2)

▲WARNING **INGESTION HAZARD • DEATH** or serious injury can occur • A swallowed button cell or coin battery can cause **Internal Chemical Burns** in as little as **2 hours** • **KEEP** new and used batteries **OUT OF REACH OF CHILDREN** • **Seek immediate medical attention** if a battery is suspected to be swallowed or inserted inside any part of the body • For treatment information call: [phone number for the National Battery Ingestion Hotline, currently 1-(800) 498-8666].

(3) The following safety-related statements must be addressed on the principal display panel or secondary display panel:

(4) Keep in original package until ready to use.

(5) Immediately dispose of used batteries and keep away from children. Do NOT dispose of batteries in household trash.

(6) For button cell or coin battery packaging included separately with a consumer product, only paragraphs (b)(1) and (2) of this section apply.

Alberta E. Mills

Secretary, Consumer Product Safety Commission.
