Leveraging GDSN for Certificate Compliance

Incorporating GTIN in eFiling

Beginning this fall, CPSC will conduct a Beta Pilot to test the electronic filing of certificate data elements at the time of importation, either via a Full or Reference Message Set with use of a Product Registry.

CPSC aims to test a standards layout necessary to provide the certificate data elements into GDSN and will assess this capability by accepting GTINs from volunteers at the time of importation.

Using data standards already in place in the GDSN Trade Item Implementation Guide, modest additional development would be necessary by Beta Pilot participants, who, on a voluntary basis, could integrate the certificate data elements and publish them upon Entry filing.

If successful, benefits would be a nearly single source for data management, thereby reducing costs to provide data to the government and improving government response for trade facilitation.
