

Manufacturer: Berry Plastics Corporation
Model: 211NSR
ASTM Type: VIIA

Description:

This package consists of a one-piece plastic aerosol overcap, which fits over the rim of an aerosol container (Figure 1).

Figure 1

Inside the overcap there is a cup designed to fit over the spray valve area of the container (Figure 2A). The cup inside the overcap has two rectangular cutouts 180° apart, which match up with two squeeze tabs 180° apart on the outside of the overcap. The two squeeze tabs 180° apart on the outside of the overcap have a series of straight lines associated with them and are slotted on three of their four sides to distinguish them from the rest of the overcap (Figure 2B).

Figure 2A

Figure 2B

The aerosol package is opened by squeezing the two tabs and simultaneously pulling off the overcap (Figure 3).

The manufacturer's instructions on the closure are (Figure 3):

(A picture of a hand squeezing two tabs that are 180° apart and simultaneously pulling off the overcap.)
