

Manufacturer: ContinentalAFA Dispensing Company
Model: 0176 CR
ASTM Type: IXB(1)

Description:

The package consists of a one piece plastic continuously threaded closure and a plastic trigger pump attached to a container (Figure 1).

Figure 1

The closure is permanently affixed to the container by means of the continuous threads and the continuous ratchets in the closure (left arrow in Figure 2) and two sets of ratchets on the container neck finish (right arrow in Figure 2).

Figure 2

The trigger pump is activated by (1) pressing down on the dot on the top of the trigger, which has a tab connected to it (arrow in Figure 3A); (2) simultaneously turning the nozzle on the front of the trigger counterclockwise so that the tab-dot no longer fits into the nozzle groove (Figure 3B); (3) then squeezing the trigger (Figure 3C). The trigger pump is closed by turning the nozzle on the front of the trigger clockwise so that the tab-dot fits into the nozzle groove.
