Manufacturer: Rexam Closures & Containers
Model: Jigger
ASTM Type: IB

Description:

This is a one-piece plastic continuously-threaded closure (Figure 1).

The closure is opened by squeezing two sides (see arrow pointing to smooth surfaced squeeze point in Figure 1) of the closure and simultaneously turning it counterclockwise. The side of the closure has uniform piping around its entire circumference, except at the two squeeze points where it has a smooth semicircle at the bottom of the closure (Figure 1). The two squeeze points are 180° apart. The inside of the closure has two vertical lugs 180° apart (see the double-headed arrow in Figure 2), which are 90° away from the squeeze points (single-headed arrow in Figure 2).
The two vertical lugs lock into two bayonets on the bottle neck finish to keep the package closed.

The manufacturer’s instructions on the closure are (Figure 3):
