CPSC FAX-ON-DEMAND DOCUMENT #8002

May 1999

Foreword

The CPSC Office of Compliance staff prepared this Recall Handbook to assist your company to understand your obligations and responsibilities under the Consumer Product Safety Act. It applies to you if you manufacture, import, distribute, or retail consumer products.

No company likes to recall one of its products, but when a safety problem makes a product recall necessary to prevent injuries and save lives, it is to everyone’s benefit to move quickly and effectively.
Our staff is constantly striving to improve both the timeliness of recalls and the effectiveness of the recall programs negotiated with companies. Our Fast Track Product Recall Program is helping both of these efforts and is highlighted in this revised edition of the Recall Handbook.

The Fast Track program is designed for companies willing and able to move quickly with a voluntary recall of their product. The program, described in detail in Section IV, eliminates some of the procedural steps in the traditional recall process, including the staff preliminary determination that the product contains a defect that presents a substantial product hazard.

Many companies have used the program since CPSC introduced it in August 1995. Now about half of our recalls are done under this streamlined system. In 1998 the CPSC Fast Track Product Recall program was one of three federal winners of the prestigious Innovations in American Government Award. This award is funded by the Ford Foundation and administered by the John F. Kennedy School of Government at Harvard University in partnership with the Council for Excellence in Government.

We welcome your comments on the Fast Track program or any other information in this handbook.

Marc J. Schoem
Director
Recalls and Compliance Division

IX. **Conclusion**
Background

The U.S. Consumer Product Safety Commission (CPSC) is an independent regulatory agency responsible for protecting the public from unreasonable risks of injury and death associated with consumer products. Established by Congress in the Consumer Product Safety Act (CPSA), 15 U.S.C. §§ 2051-2084, the CPSC has jurisdiction over approximately 15,000 different types of products used in and around the home, in schools, and in recreation (“consumer products”).

This handbook is for companies that manufacture, import, distribute, retail, or otherwise sell consumer products. It has three purposes: 1) to familiarize companies with their reporting requirements under sections 15(b) and 37 of the CPSA, 15 U.S.C. § 2064(b) and § 2084, and Section 102 of the Child Safety Protection Act, Pub. L. 103-267, 108 Stat. 722, 6/16/94; 2) to help companies learn how to recognize potentially hazardous consumer products at an early stage; and 3) to assist firms that discover they have manufactured or distributed such products develop and implement "corrective action plans" that address the hazards. The term "corrective action plan" (CAP) generally includes any type of remedial action taken by a firm. A CAP could, for example, provide for the return of a product to the manufacturer or retailer for a cash refund or a replacement product; for the repair of a product; and/or for public notice of the hazard. A CAP may include multiple measures that are necessary to protect consumers. The Commission staff refers to corrective actions as "recalls" because the public and media more readily recognize and respond to that description.

This handbook is not an all-inclusive reference source of information describing how to recall products. The goal of a corrective action plan should be to retrieve as many hazardous products from the distribution chain and from consumers as is possible in the most practical, cost-effective manner. Reaching this goal often requires creative planning. Companies developing specific corrective action plans to address unsafe or potentially unsafe products typically work closely with the Commission staff to take advantage of the staff's expertise in designing and carrying out such plans. This results in greater protection for consumers against injury or death.

---

1 This handbook does not replace the Commission's statutes or interpretative regulations set out in 16 C.F.R. Parts 1115, 1116 and 1117. If there is any discrepancy, the statutes and regulations supersede this handbook. For more information about reporting requirements, see the Commission's Statement of Enforcement Policy, 51 Fed. Reg. 23,410 (1986). This material is available on the CPSC web site at: http://www.cpsc.gov.

2 The Commission does not have general jurisdiction over foods, drugs, cosmetics, medical devices, firearms and ammunition, boats, motor vehicles, aircraft, or tobacco. Specific questions about the
Commission's jurisdiction over particular products should be directed to the Office of the General Counsel.

3This handbook uses the term "recall" to describe any repair, replacement or refund program.

I. Reporting Requirements.

A. Section 15 Reports

Section 15(b) of the Consumer Product Safety Act establishes reporting requirements for manufacturers, importers, distributors and retailers of consumer products. Each must notify the Commission immediately if it obtains information which reasonably supports the conclusion that a product distributed in commerce (1) fails to meet a consumer product safety standard or banning regulation, (2) contains a defect which could create a substantial product hazard to consumers, (3) creates an unreasonable risk of serious injury or death, or (4) fails to comply with a voluntary standard upon which the Commission has relied under the CPSA.4 Companies that distribute products that violate regulations issued under the other laws that the Commission administers -- the Flammable Fabrics Act, 15 U.S.C. § 1193-1204; the Federal Hazardous Substances Act, 15 U.S.C. § 1261-1278; the Poison Prevention Packaging Act, 15 U.S.C. § 1471-1476; and the Refrigerator Safety Act; 15 U.S.C. §1211-1214 -- must also report, if the violations may also constitute product defects that could create a substantial risk of injury to the public or may create an unreasonable risk of serious injury or death. The Commission has issued an interpretive regulation, 16 C.F.R. Part 1115, that further explains a reporting company's obligations.

In enacting section 15(b), Congress intended to encourage the widespread reporting of potential product hazards. In addition to assisting the Commission to discover substantial product hazards, reporting would identify risks of injury that the Commission could address through voluntary or mandatory standards, or information and education.

Although CPSC uses sources other than company reports to identify potentially hazardous products, reporting by companies under section 15 can provide the most timely and effective source of information about such products. This is because firms often learn of potential product safety problems at an early stage. For this reason, companies involved in the manufacture, importation, distribution, or sale of consumer products should develop a system for maintaining and reviewing information about their products that might suggest a product defect or unreasonable risk of serious injury or death. Such information includes consumer complaints, warranty returns, insurance claims or payments, product liability lawsuits, reports of production problems, product testing or other critical analyses of products, and the like.

Reporting a product to the Commission under section 15 does not automatically mean that the Commission will conclude that the product creates a substantial product hazard or that corrective action is necessary. The CPSC staff works with the reporting firm to
determine if corrective action is appropriate. Many of the reports received require no corrective action because the staff concludes that the reported product defect does not create a substantial product hazard.

As of October 1998, there were two such standards -- the voluntary standards for chain saws and for unvented gas space heaters.

1. What and Where to Report

A company should file its report with the Division of Recalls and Compliance. The report may be filed by mail, telephone (301-504-7913), or electronically through the CPSC web site (www.cpsc.gov) or fax (301-504-0359). A company should assign the responsibility of reporting to someone with knowledge of the product and of the reporting requirements of section 15. He or she should have the authority to report to CPSC or to quickly raise the reporting issue to someone who does.

Reporting firms should be prepared to provide the information described below. However, no company should delay a report because some of this information is not yet available. The following information should be transmitted:

- Description of the product.
- Name and address of the company, and whether it is a manufacturer, distributor, importer or retailer.
- Nature and extent of the possible product defect or unreasonable risk of serious injury or death.
- Nature and extent of injury or possible injury associated with the product.
- Name, address and telephone number of the person informing the Commission.
- If available, the other information specified in Section 1115.13(d) of the Commission's regulations interpreting the reporting requirements.
- A timetable for providing information not immediately available.

Retailers and distributors may satisfy their reporting obligations in the manner described above. Alternatively, a retailer or distributor may send a letter to the manufacturer or importer of a product describing the risk of injury or death or the defect associated with the product or its failure to comply with an applicable regulation and forward a copy of that letter to the Division of Recalls and Compliance. A distributor or retailer receiving product hazard information from a manufacturer or importer or other source must report to CPSC unless the firm knows the Commission has been adequately informed of the defect, failure to comply, or risk.

2. When To Report

Section 15 requires firms to report "immediately." This means that a firm should notify the Commission within 24 hours of obtaining information described in section A
A company **must** report to the Commission within 24 hours of obtaining reportable information. The Commission encourages companies to report potential substantial product hazards even while their own investigations are continuing. However, if a company is uncertain whether information is reportable, the firm may spend a reasonable time investigating the matter. That investigation should not exceed ten working days unless the firm can demonstrate that a longer time is reasonable in the circumstances. Absent such circumstances, the Commission will presume that, at the end of ten working days, the firm has received and considered all information which would have been available to it had a reasonable, expeditious, and diligent investigation been undertaken.

The Commission considers a company to have obtained knowledge of product safety related information when that information is received by an employee or official of the firm who may reasonably be expected to be capable of appreciating the significance of that information. Once that occurs, under ordinary circumstances, five working days is the maximum reasonable time for that information to reach the chief executive officer or the official assigned responsibility for complying with the reporting requirements.

The Commission evaluates whether or when a firm should have reported. This evaluation will be based, in part, on what the company actually knew about the hazard posed by the product or **on what a reasonable person, acting under the circumstances, should have known about the hazard while exercising due care**. Thus, a firm is deemed to know what it would have known had it exercised due care in analyzing reports of injury or consumer complaints, or in evaluating warranty returns, reports of experts, in-house engineering analyses, or other information.

### 3. Confidentiality of Reports

The Commission often receives requests for information reported under section 15(b). Section 6(b)(5) of the CPSA, 15 U.S.C. § 2055(b)(5), prohibits the release of such information unless a remedial action plan has been accepted in writing, a complaint has been issued or the reporting firm consents to the release. In addition, a firm claiming that information it has submitted is trade secret or confidential commercial or financial information must mark the information as "confidential" in accordance with section 6(a)(3) of the CPSA, 15 U.S.C. § 2055(a)(3). That should be done when the information is submitted to the Commission. The firm will receive an additional opportunity to claim confidentiality when it receives subsequent notice from the Commission’s Freedom of Information Office that the information may be disclosed to the public in response to a request. If section 6(b)(5) does not apply, the CPSC staff will not treat information as exempt from disclosure to the public under section 6(a) of the CPSA, 15 U.S.C. §
2055(a), and the Freedom of Information Act, absent a specific claim for confidential treatment.

B. Section 37 Reports

Section 37 of the CPSA requires manufacturers of consumer products to report information about settled or adjudicated lawsuits. \(^5\) Manufacturers must report if:

- A particular model of the product is the subject of at least three civil actions filed in federal or state court;
- Each suit alleges the involvement of that particular model in death or grievous bodily injury — mutilation or disfigurement, dismemberment or amputation, the loss of important bodily functions or debilitating internal disorder, injuries likely to require extended hospitalization, severe burns, severe electric shock, or other injuries of similar severity; and
- During one of the following two-year periods specified in the law, each of the three actions results in either a final settlement involving the manufacturer or in a court judgment in favor of the plaintiff:

  - January 1, 1991 – December 31, 1992
  - January 1, 1993 – December 31, 1994
  - January 1, 1995 – December 31, 1996
  - January 1, 1999 – December 31, 2000

  (subsequent periods follow this pattern); and

- The manufacturer is involved in the defense of or has notice of each action prior to the entry of the final order, and is involved in discharging any obligation owed to the plaintiff as a result of the settlement or judgment.

\(^5\)The Commission has issued a rule interpreting the requirements of section 37 at 16 C.F.R. Part 1116. The Commission recommends that manufacturers considering whether they have section 37 reporting obligations refer to that rule, particularly in determining whether products involved in different lawsuits are the same model.

1. What to Report

A report under section 37 must contain:

- The name and address of the manufacturer of the product.
- The model and model number or designation of the product.
• A statement as to whether the civil action alleged death or grievous bodily injury, and in the case of the latter, the nature of the injury. For reporting purposes, the plaintiff’s allegations as to the nature of the injury are sufficient to require a report, even if the manufacturer disagrees with the allegations.

• A statement as to whether the case resulted in a final settlement or a judgment. However, a manufacturer need not provide the amount of a settlement.

• In the case of a judgment in favor of the plaintiff, the name and case number of the case, and the court in which it was filed.

A manufacturer may also provide additional information, if it chooses. Such information might include a statement as to whether the manufacturer intends to appeal an adverse judgment, a specific denial that the information it submits reasonably supports the conclusion that its product caused death or grievous bodily injury, and an explanation why the manufacturer has not previously reported the risk associated with the product under section 15.

2. When and Where to Report

A manufacturer must report within 30 days after a judgment or final settlement in the last of three lawsuits. The same is true of any additional lawsuits involving the same model that are settled or adjudicated in favor of the plaintiff during the same two-year period.

Companies must file Section 37 reports in writing to the Director, Recalls and Compliance Division, Office of Compliance, U.S. Consumer Product Safety Commission, Washington, D.C. 20207.

3. Confidentiality of Reports

Unlike section 15(b) reports, the Commission may not disclose to the general public information reported under section 37 in any circumstances. By law, reporting under section 37 is not an admission of the existence of an unreasonable risk of injury, a defect, a substantial product hazard, an imminent hazard, or any other liability under any statute or common law.

C. Section 102

Section 102 of the Child Safety Protection Act requires that companies report certain choking incidents to the Commission. Each manufacturer, distributor, retailer, and importer of a marble, a ball with a diameter of 1.75" or less ("small ball"), or latex balloon, or a toy or game that contains such a marble, ball, balloon, or other small part must report information that reasonably supports the conclusion:
1) that a child (regardless of age) choked on such a marble, small ball, balloon, or small part; and

2) that, as a result of the incident, the child died, suffered serious injury, ceased breathing for any length of time, or was treated by a medical professional.

---

6 Firms should refer to 16 C.F.R. Part 1117 for more detailed information about this reporting requirement.

1. What to Report

The report should include the name and address of the child who choked and the person who notified the firm of the incident, a detailed identification of the product, a description of the incident and any resulting injuries or medical treatment, information about any changes made to the product involved or its labeling or warnings to address the risk of choking, and the details of any public notice or other corrective action planned. Firms should refer to 16 C.F.R. Part 1117 for more detailed information about this reporting requirement.

2. When and Where to Report

Section 102 reports must be filed within 24 hours of obtaining the information.

A company may file a Section 102 report with the Division of Recalls and Compliance by mail, telephone (301-504-7913), or fax (301-504-0359). Telephone reports must be followed with a written confirmation.

3. Confidentiality of Reports

Section 102 reports receive the same confidentiality treatment as information submitted under section 15 of the CPSA.

II. Identifying a Defect

The Commission's reporting requirements provide information that assists the Commission in evaluating whether some form of remedial action is appropriate. However, in the absence of a regulation that addresses a specific risk of injury, the product in question must contain a defect that creates a substantial risk of injury to the public to warrant such remedial action. The handbook next discusses the considerations that go into determining whether a product defect exists and, if so, whether the risk presented by that defect is substantial.

A defect could be the result of a manufacturing or production error; or it could result from the design of, or the materials used in, the product. A defect could also occur in a
product's contents, construction, finish, packaging, warnings, and/or instructions. (See 16 C.F.R. § 1115.4)

Not all products that present a risk of injury are defective. A kitchen knife is one such example. The blade has to be sharp to allow the consumer to cut or slice food. The knife’s cutting ability is not a product defect, even though some consumers may cut themselves while using the knife.

In determining whether a risk of injury associated with a product could make the product defective, the Commission considers the following:

1. What is the utility of the product? What is it supposed to do?
2. What is the nature of the injury that the product might cause?
3. What is the need for the product?
4. What is the population exposed to the product and the risk of injury?
5. What is the Commission's experience with the product?
6. Finally, what other information sheds light on the product and patterns of consumer use?

If the information available to a company does not reasonably support the conclusion that a defect exists, the firm need not report to the Commission under the defect reporting provision of Section 15(b)(2). However, since a product may be defective even when it is designed, manufactured, and marketed exactly as intended, a company in doubt as to whether a defect exists should still report. Additionally, a firm must report if it has information indicating the product creates an unreasonable risk of serious injury or death. See 15 U.S.C. 2064(b)(3) and 16 C.F.R. § 1115.6.

If the information obtained by a company supports a conclusion that a product has a defect, the company must then consider whether the defect may be serious enough that it could create a substantial product hazard. Generally, a product could create a substantial hazard when consumers are exposed to a significant number of units or if the possible injury is serious or is likely to occur. However, because a company ordinarily does not know the extent of public exposure or the likelihood or severity of potential injury when a product defect first comes to its attention, the company should report to the Commission even if it in doubt as to whether a substantial product hazard exists.

Section 15 lists criteria for determining when a product creates a substantial product hazard. Any one of the following factors could indicate the existence of a substantial product hazard:
- **Pattern of defect.** The defect may stem from the design, composition, content, construction, finish, or packaging of a product, or from warnings and/or instructions accompanying the product. The conditions under which the defect manifests itself must also be considered in determining whether the pattern creates a substantial product hazard.

- **Number of defective products distributed in commerce.** A single defective product could be the basis for a substantial product hazard determination if an injury is likely or could be serious. By contrast, defective products posing no risk of serious injury and having little chance of causing even minor injury ordinarily would not be considered to present a substantial product hazard.

- **Severity of risk.** A risk is considered severe if the injury that might occur is serious, and/or if the injury is likely to occur.

- **Likelihood of injury.** The likelihood is determined by considering the number of injuries that have occurred, or that could occur, the intended or reasonably foreseeable use or misuse of the product, and the population group (such as children, the elderly, or the disabled) exposed to the product.

A substantial product hazard also exists when a product does not comply with an applicable consumer product safety rule, and the failure to comply creates a substantial risk of injury to consumers.

### III. CPSC Evaluation of Section 15 Reports

When a company reports to the Commission, the staff of the Division of Recalls and Compliance undertakes the same product hazard analysis as that requested of firms. First, the staff considers whether the product contains a defect. If the staff believes there is a defect, it then assesses the substantiality of the risk presented to the public, using the criteria listed in section 15 (that is, pattern of defect, number of defective products distributed in commerce, severity of the risk, likelihood of injury and other appropriate data). In determining preliminarily whether the product in question creates a substantial product hazard, the staff applies hazard priority standards to classify the severity of the problem.

The hazard priority system allows the Commission staff to rank defective products uniformly. For example, a Class A hazard rating is reserved for product defects that present a strong likelihood of death or grievous injury or illness to the consumer. Should the staff make a preliminary determination that a product creates a substantial product hazard, the hazard priority system also provides a guide for selecting the level and intensity of corrective action.
The decision is preliminary because only the Commissioners, after a hearing, can make a formal determination that a product is defective and creates a substantial product hazard.

Class A Hazard

 Exists when a risk of death or grievous injury or illness is likely or very likely, or serious injury or illness is very likely.

Class A hazards warrant the highest level of attention. They call for a company to take immediate, comprehensive, and imaginative corrective action measures to identify and notify consumers, retailers and distributors having the defective product and to remedy the defect through repair or replacement of the product, refunds, or other measures.

Class B Hazard

 Exists when a risk of death or grievous injury or illness is not likely to occur, but is possible, or when serious injury or illness is likely, or moderate injury or illness is very likely.

Class C Hazard

 Exists when a risk of serious injury or illness is not likely, but is possible, or when moderate injury or illness is not necessarily likely, but is possible.

Regardless of whether a product defect is classified as a Class A, B or C priority hazard, the common element is that each of these defects creates a substantial product hazard that requires corrective action to reduce that risk of injury.

The priority given to a specific product defect provides a guideline for determining how best to communicate with owners and users of the defective product and to get them to respond appropriately. While some companies have exemplary track records in communicating with consumers independently, it is still to a company’s advantage to work with the Commission staff, using both the company’s and the Commission’s skills and resources to conduct an effective product recall.

IV. Fast Track Product Recall Program

A firm that files a Section 15(b) report may wish to use of an alternative procedure that the Commission has established to expedite recalls. The program is called the “Fast Track Product Recall Program.” If a company reports a potential product defect and, within 20 working days of the filing of the report, implements with CPSC a consumer-level voluntary recall that is satisfactory to the staff, the staff will not make a preliminary determination that the product contains a defect which creates a substantial product hazard.
This program allows the staff and company to work together on a corrective action plan almost immediately, rather than spending the time and other resources necessary to investigate the reported defect further to determine whether it rises to the level of a substantial product hazard.

To participate in this program, companies must:

- Provide all of the information required for a full report (16 C.F.R. § 1115.13(d)).
- Request to participate in the program.
- Submit a proposed corrective action plan with sufficient time for the Commission staff to analyze any proposed repair, replacement or refund offer and to evaluate all notice material before the implementation (announcement) of the CAP which is to occur within 20 working days of the report.

---

V. Putting Together a Corrective Action Plan

A. Preparing For A Product Recall

It is unlikely that any two recall programs will ever be identical. Therefore, companies should be prepared to address issues that invariably arise. For instance:

- What is the defect that causes the product hazard?
- What caused the product defect to occur in the first place?
- Where are the unsafe products? How many are there?
- Did the product fail to comply with government safety regulations? How?
- Was the government or the appropriate regulatory body informed about the defect or lack of compliance?
- Has the company discontinued production and shipments of these products to distributors?
- Has the company notified retailers to stop selling the product and asked them to help identify consumers who own the product?
- Has the company started reviewing existing databases to identify potential product owners, e.g., product registration and customer service records?
Has a press release been prepared announcing the recall? What other forms of public notice are needed?

Has a toll-free telephone service been set up that will be able to handle the number of calls expected after the recall is announced?

What is the company's estimate of the cost of the product recall campaign?

Is the company prepared to deploy manpower and/or fund an effort to provide replacement parts for defective products or to exchange them for new products that do not have the problem?

Has a plan been developed to ship replacement parts or new units to distributors participating in the product recall, or otherwise repair units in their inventory?

Is the company prepared to monitor the product recall and provide timely reports to the Commission on the progress of the recall?

How is the company upgrading its quality control or risk analysis procedures to prevent a similar product recall in the future?

This list addresses administrative and operational functions of a company involved in a product recall. Even if a product recall is merely potential, a company should be prepared to respond to the questions listed above.

B. Elements of a Recall

A company that undertakes a recall should develop a comprehensive plan that reaches throughout the entire distribution chain to consumers who have the product. The company must design each communication to motivate people to respond to the recall and take the action requested by the company.

Once the staff and a company agree on a remedy to correct a product defect, the staff works with the company to put together an effective plan for public notification and implementation of the recall. The information that should be included in a corrective action plan (CAP) is set forth at 16 C.F.R. § 1115.20(a). A plan must include the company's agreement that the Commission may publicize the terms of the plan to the extent necessary to inform the public of the nature of the alleged substantial product hazard and the actions being undertaken to correct that hazard.

The objectives of a recall are:

1. To locate all defective products as quickly as possible;
2. To remove defective products from the distribution chain and from the possession of consumers; and
3. To communicate accurate and understandable information in a timely manner to the public about the product defect, the hazard, and the corrective action. Companies should design all informational material to motivate retailers and media to get the word out and consumers to act on the recall.

In determining what forms of notice to use, the paramount consideration should be the level of hazard that the recalled product presents. Class A hazards warrant the highest level of company and Commission attention. Other considerations include where and how the product was marketed, its user population, the estimated useful life of the product, and how the product is most likely to be maintained and repaired.

A company conducting a recall must take particular care to coordinate the notice portion of the recall so that all participating parties, including retailers, have sufficient advance notice so that they can carry out the actions agreed upon. Notice also needs to be balanced -- the purpose of some elements, such as news releases, press conferences, and video news releases -- is to get the media to publicize information about the recall widely. Other elements, such as advertisements and posters, assure that the information is available to the public throughout the course of the recall and attempts to reach consumers who did not hear the original announcement.

VI. Communicating Recall Information

The Commission encourages companies to be creative in developing ways to reach owners of recalled products and motivate them to respond. The following are examples of types of notice that may be appropriate. This list is meant as a guide only, and is by no means all-inclusive. As new or innovative methods of notice and means of communication become available, such as use of the Internet, the staff encourages their use.

- A joint news release from CPSC and the company;
- Targeted distribution of the news release;
- A dedicated toll-free number and/or fax number for consumers to call to respond to the recall notice;
- Information on company world wide web sites;
- A video news release to complement the written news release;
- A national news conference and/or television or radio announcements;
- Direct notice to consumers known to have the product -- identified through registration cards, sales records, catalog orders, or other means;
- Notices to distributors, dealers, sales representatives, retailers, service personnel, installers, and other persons who may have handled or been involved with the product;
- Purchase of mailing lists of populations likely to use the product;
- Paid notices via television and/or radio;
- Paid notices in national newspapers and/or magazines to reach targeted users of the product;
- Paid notices through local or regional media;
- Incentives such as money, gifts, premiums, or coupons to encourage consumers to return the product;
- Point-of-purchase posters;
- Notices in product catalogs, newsletters, and other marketing materials;
- Posters for display at locations where users are likely to visit, such as stores, medical clinics, pediatricians’ offices, day care centers, repair shops, equipment rental locations, etc.;
- Notices to repair/parts shops;
- Service bulletins;
- Notices included with product replacement parts/accessories.
- Notices to day care centers.
- Notices to thrift stores.

The Compliance staff must review and agree upon each communication that a company intends to use in a product recall before publication or dissemination. It is, therefore, imperative that companies give the staff advance drafts of all notices or other communications to media, customers, and consumers.

Following are some specific suggestions for communicating recall information:

**A. News Releases**

Unless a company can identify all purchasers of a product being recalled and notify them directly, the Commission typically issues a news release jointly with the firm. The Compliance staff develops the wording of the release with the recalling company and in
conjunction with the Commission's Office of Information and Public Affairs. The agreed-upon language for the news release provides the foundation for preparing other notice documents. The Commission discourages unilateral releases issued by companies because they create confusion among the media and public, particularly if CPSC is also issuing a release on the same subject.

The Office of Information and Public Affairs sends the news releases to national wire services, major metropolitan daily newspapers, television and radio networks, and periodicals on the agency's news contact mailing list. News releases from the Commission receive wide media attention and generate a good response rate from consumers.

Each recall news release should use the word "recall" in the heading and should begin, "In cooperation with the U.S. Consumer Product Safety Commission (CPSC)...."

Recall news releases must include the following:

- The name and location of the recalling firm
- The name of the product
- The number of products involved
- A description of the hazard
- The number of deaths, injuries, and incidents involving the product
- Detailed description of the product, including model numbers, colors, sizes, and labeling
- A line drawing or photograph of the product
- Major retailers and where and when the product was sold and retail cost
- Complete instructions for consumers on how to participate in the recall

CPSC posts recall news releases on its Internet web site and requests companies to provide color photographs of recalled products for the web site.

**B. Video News Releases**

A video news release (VNR) is a taped version of the written news release that describes the recall in audio-visual terms. Distributed via satellite to television stations nationwide, it is an effective method to enhance a recall announcement. A VNR increases the chances that television news media will air information about a recall because it effectively provides news of the recall to television news producers in the form that they need.

Commission staff works with firms to produce VNRs announcing recalls. Like news releases, VNRs need to communicate basic information clearly and concisely. VNRs should incorporate the same information as the news release, as well as video images of the product. They often also include brief statements of company officials and/or the Chairman of the Commission. When writing a VNR script, remember that, if this
information is to reach consumers, television networks or local stations must pick it up -- which means that the script must be written for television producers.

A brief guide describing how to produce a VNR is available from the Office of Compliance upon request.

C. Posters

Posters are an effective means of providing continuing notice of recalls to consumers at points of purchase or other locations that they visit. Guidelines for posters and counter cards:

- Keep them BRIEF and eye-catching; in general, a poster requires far fewer words than a news release.
- Describe the hazard and tell consumers what to do.
- Use color to make the poster stand out.
- Use a print font, size, and color that provides a strong contrast to the background color of the poster.
- Include the terms "safety" and "recall" in the heading.
- Use a good quality line drawing or photograph of the product with call outs identifying product information, such as model numbers and date codes.
- The firm’s toll-free telephone number should be in large size type at the bottom of the poster.
- The poster should include "Post until [date at least 120 days from recall announcement]."
- Consider tear-off sheets with each poster with information on the recall for consumers to take home.

A company that chooses to produce posters announcing a recall should contact the firms or individuals that the company wants to display the posters before the recall is announced. The company should explain the reason for the recall and the contribution to public safety that the posters provide. The company should also:

- Advise retailers or other firms to place the posters in several conspicuous locations in their stores or offices where customers will see them, e.g., the area where the product was originally displayed for sale, store entrances, waiting rooms in pediatric clinics, service counters at repair shops.
- Provide sufficient numbers of posters for retailers or others to display them in more than one place in each store or location, and provide a contact for ordering additional posters.

CPSC recommends that posters be 11 x 17 inches, but in no case smaller than 8.5 x 11 inches. These two sizes are easiest to mail in bulk quantities. Larger sizes may be appropriate for repair and service shops. Also, many retailers, particularly large chains,
have specific requirements for posters, including size and some product identification information. To avoid delays and having to reprint, a company producing a recall poster should take care to contact retailers in advance to see if they have any such requirements.

D. Other Forms of Notice

Like news releases and posters, letters, advertisements, bulletins, newsletters, and other communications about a recall need to provide sufficient information and motivation for the reader or listener to identify the product and to take the action you are requesting. They should be written in language targeted to the intended audience.

- Letters or other communications should be specific and concise.
- The words "Important Safety Notice" or "Safety Recall" should appear at the top of each notice and cover letter and should also be on the lower left corner of any mailing envelope.
- Notices to retailers and distributors should explain the reason for the recall, including the hazard, and contain all the instructions needed to tell them how to handle their product inventory, as well as instructions for displaying posters or notices, providing information to consumers, and disposing of returned products.
- All letters and other notices to consumers should explain clearly the reason for the recall, including injury or potential injury information, and provide complete instructions.

E. Toll-Free Numbers

A company conducting a recall should provide a toll-free (800/888/877) telephone number for consumers to respond to the recall announcement. Generally, this number should be dedicated only to the recall. Historically, the Commission staff has found that most company systems for handling consumer relations or for ordering products, repairs, or accessories are unable to respond effectively to callers about recall announcements, particularly during the first few weeks after the initial announcement.

When establishing a telephone system to handle a recall, be over-generous in estimating consumer response, especially during the first several days/weeks. It is easier to cut back than it is to add more capacity once a recall is announced, and consumers who are unable to get through may not keep trying.

Whether you use an automated system or live operators to answer the calls, prepare scripts and instructions for responding to questions. Operators or taped messages should begin by identifying the firm and product and explaining the reason for the recall. Most consumers who hear about a recall by radio, television, or word of mouth will not
remember all the information they initially heard. Again, at its beginning, the message should reinforce the need for listeners to act, particularly if the message is lengthy. CPSC Compliance staff needs to review all scripts before the recall is announced. All automated systems should provide a number for consumers to contact the firm for special problems, e.g., problems completing repairs or installing parts.

VII. Developing a Company Policy and Plan to Identify Defective Products and To Undertake a Product Recall

Companies whose products come under the jurisdiction of the CPSC should consider developing an organizational policy and plan of action if a product recall or similar action becomes necessary, whether it involves the CPSC or another government agency. This policy and any related plans should focus on the early detection of product safety problems and prompt response.

A. Designating A Recall Coordinator

Designating a company official or employee to serve as a "recall coordinator" is a significant step that a firm can take to meet its product safety and defect reporting responsibilities. Ideally, this coordinator has full authority to take the steps necessary (including reporting to the Commission) to initiate and implement all recalls, with the approval and support of the firm's chief executive officer.

The recall coordinator should have the following qualifications and duties:

- Knowledge of the statutory authority and recall procedures of the Consumer Product Safety Commission;
- Ability and authority to function as the central coordinator within the company for receiving and processing all information regarding the safety of the firm's products. Such information includes, e.g., quality control records, engineering analyses, test results, consumer complaints, warranty returns or claims, lawsuits, and insurance claims.
- Responsibility for keeping the company's chief executive officer informed about reporting requirements and all safety problems or potential problems that could lead to product recalls;
- Responsibility for making decisions about initiating product recalls;
- Authority to involve appropriate departments and offices of the firm in implementing a product recall;
- Responsibility for serving as the company's primary liaison person with CPSC.
B. Role Of The Recall Coordinator

At the outset, the recall coordinator should fully review the company's product line to determine how each product will perform and fail under conditions of proper use and reasonably foreseeable misuse or abuse. Through research and analysis, product safety engineers can identify the safety features that could be incorporated into products that present safety risks to reduce their potential for future injury.

The company should institute a product identification system if one is not now in use. Model designations and date-of-manufacture codes should be used on all products, whether they carry the company's name or are privately labeled for other firms. If a product recall is necessary, this practice allows the company to identify easily all affected products without undertaking a costly recall of the entire production. Similarly, once a specific product has been recalled and corrected, a new model number or other means of identification used on new corrected products allows distributors, retailers, and consumers to distinguish products subject to recall from the new items. Until a production change can be made to incorporate a new model number or date code, some companies have used sticker labels to differentiate products that have been checked and corrected from recalled products.

VIII. Records Maintenance

The goal of any product recall is to retrieve, repair, or replace those products already in consumers' hands as well as those in the distribution chain. Maintaining accurate records about the design, production, distribution, and marketing of each product for the duration of its expected life is essential for a company to conduct an effective, economical product recall. Generally, the following records are key both to identifying product defects and conducting recalls:

A. Records of complaints, warranty returns, insurance claims, and lawsuits. These types of information often highlight or provide early notice of safety problems that may become widespread in the future.
B. Production records. Accurate data should be kept on all production runs -- the lot numbers and product codes associated with each run, the volume of units manufactured, component parts or substitutes use, and other pertinent information which will help the company identify defective products or components quickly.
C. Distribution records. Data should be maintained as to the location of each product by product line, production run, quantity shipped or sold, dates of delivery, and destinations.
D. Quality control records. Documenting the results of quality control testing and evaluation associated with each production run often helps companies identify possible flaws in the design or production of the product. It also aids the firm in charting and sometimes limiting the scope of a corrective action plan.
E. **Product registration cards.** Product registration cards for purchasers of products to fill out and return are an effective tool to identify owners of recalled products. The easier it is for consumers to fill out and return these cards, the greater the likelihood the cards will be returned to the manufacturer. For example, some firms provide pre-addressed, postage-paid registration cards that already have product identification information, e.g., model number, style number, special features, printed on the card. Providing an incentive can also increase the return rate. Incentives can be coupons towards the purchase of other products sold by the firm, free accessory products, or entry in a periodic drawing for a product giveaway. The information from the cards then needs to be maintained in a readily retrievable database for use in the event a recall becomes necessary.

**IX. Conclusion**

Consumers no longer view product recalls in a negative light. Millions of products have been recalled over the years. Today, consumers believe they enjoy a safer, better product as a result of a recall conducted responsibly by company. How well a company conducts a timely, reasonable recall of a product can have a strong influence on consumers’ attitude about the firm. Successful product recalls in the past have rewarded companies with continuing consumer support and demand for the firms' products.
